NOTE 1

The accumulator bakeout GPIB interface could either be a CAMAC 080/MULTIBUS system or a CAMAC 488 system. Final decision will have to wait for an accurate determination of bakeout memory requirements. The CAMAC 080/MULTIBUS system is currently expected to be required.

NOTE 2

The MAIN RING RF controls for the bunch coalescing cavities are nearly completely installed in service building F0. These controls consist of:

CAMAC 071	2 (?) AT 1000	=	2000
CAMAC 181	3 AT 400	=	1200
CAMAC 182	1 AT 400	=	400
CAMAC 154	1 AT 500 (?)	=	500
CAMAC 053	1 AT 500	=	500
CAMAC 190	EXISTING		-
MADC	EXISTING		-

TOTAL = \$4600

EXPLANATION OF 12-BIT MADC COUNT

At present, the allocation of MADC channels for beamline magnet power supplies, ring and beamline correction elements and shunts does not include reference (digitizing the dac output) channels. Since these supplies are not ramped supplies, it is expected that reference channels will find little utility. Experience from the operation of similar equipment in Switchyard shows that the control room procedure when a problem with a power supply exists is to drive out to the supply with a replacement camac card and change the card, and then see if the problem is corrected.

The following table summarizes MADC usage:

CATEGORY LOCATION	MAGNETS	VACUUM	RF	STOCHASTIC	TARGET	DIAGNOSTIC	OTHER	SPARE	TOTAL
AP10	3	0	1	1	0	0	0	0	5
AP30	2	0	0	1	0	0	0	0	3
AP50	2	0	5	0	0	0	0	0	7
F27	1	0	0	0	0	0	0	0	1
APT8	1	0	0	0	2	0	0	0	3
F23	1	0	0	0	0	0	0	0	1
BSE	1	0	0	0	0	0	0	0	1
UNKNOWN	0	0	0	0	0	0	3	0	3
SPARE	0	0	0	0	0	0	0	2	2
TOTAL	11	0	6	2	2	0	3	2	26

$$21 \text{ UNITS} + \underset{\substack{\text{reference} \\ \text{expansion}}}{3 \text{ UNITS}} + 2 \text{ SPARES} = 26 \text{ UNITS}$$

TABLE NOTES

- (1) Diagnostic category has 108 distributed (BPM/BLM System) mADC channels counted in the Magnet and RF categories.
- (2) Stochastic cooling use of MADC channels is for thermocouples, 60 channels in AP10 and 20 channels in AP30.
- (3) As per Dixon Bogert request, 3 MADC units (other category) are included in the count should the need ever arise to provide reference channels. The required capacity easily exists in the Target building, F23, F27, and BSE. One unit would be required in buildings 10, 30, and 50, thus the 3 "other" units.
