U.S. DEPARTMENT OF ENERGY
under Contract No. DE-AC05-00OR22725

DOCUMENT AVAILABILITY

Reports produced after January 1, 1996, are generally available free via the U.S. Department of Energy (DOE) Information Bridge:

Web site: <http://www.osti.gov/bridge>

Reports produced before January 1, 1996, may be purchased by members of the public from the following source:

National Technical Information Service
5285 Port Royal Road
Springfield, VA 22161
Telephone: 703-605-6000 (1-800-553-6847)
TDD: 703-487-4639
Fax: 703-605-6900
E-mail: info@ntis.fedworld.gov
Web site: <http://www.ntis.gov/support/ordernowabout.htm>

Reports are available to DOE employees, DOE contractors, Energy Technology Data Exchange (ETDE) representatives, and International Nuclear Information System (INIS) representatives from the following source:

Office of Scientific and Technical Information
P.O. Box 62
Oak Ridge, TN 37831
Telephone: 865-576-8401
Fax: 865-576-5728
E-mail: reports@adonis.osti.gov
Web site: <http://www.osti.gov/contact.html>

This report was prepared as an account of work sponsored by an agency of the United States Government. Neither the United States government nor any agency thereof, nor any of their employees, makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information, apparatus, product, or process disclosed, or represents that its use would not infringe privately owned rights. Reference herein to any specific commercial product, process, or service by trade name, trademark, manufacturer, or otherwise, does not necessarily constitute or imply its endorsement, recommendation, or favoring by the United States Government or any agency thereof. The views and opinions of authors expressed herein do not necessarily state or reflect those of the United States Government or any agency thereof.

Users of the *Transportation Energy Data Book* are encouraged to comment on errors, omissions, emphases, and organization of this report to one of the persons listed below. Requests for additional complementary copies of this report, additional data, or information on an existing table should be referred to Ms. Stacy Davis, Oak Ridge National Laboratory.

TABLE OF CONTENTS

FOREWORD	xvii
ACKNOWLEDGMENTS	xix
ABSTRACT	xxi
INTRODUCTION	xxiii
CHAPTER 1	PETROLEUM	1-1
Table 1.1	World Fossil Fuel Potential	1-2
<i>Figure 1.1</i>	<i>World Fossil Fuel Potential</i>	<i>1-2</i>
Table 1.2	World Crude Oil Production, 1960–2009	1-3
Table 1.3	World Petroleum Production, 1973–2009	1-4
Table 1.4	World Petroleum Consumption, 1960–2009	1-5
<i>Figure 1.2</i>	<i>World Oil Reserves, Production and Consumption, 2008</i>	<i>1-6</i>
Table 1.5	World Oil Reserves, Production and Consumption, 2008	1-6
<i>Figure 1.3</i>	<i>World Natural Gas Reserves, Production and Consumption, 2008</i>	<i>1-7</i>
Table 1.6	World Natural Gas Reserves, Production and Consumption, 2008.....	1-7
Table 1.7	U.S. Petroleum Imports by World Region of Origin, 1960–2009	1-8
<i>Figure 1.4</i>	<i>Oil Price and Economic Growth, 1970–2009</i>	<i>1-9</i>
<i>Figure 1.5</i>	<i>Costs of Oil Dependence to the U.S. Economy, 1970–2009</i>	<i>1-10</i>
Table 1.8	Summary of Military Expenditures for Defending Oil Supplies from the Middle East	1-11
<i>Figure 1.6</i>	<i>Refinery Gross Output by World Region, 1999 and 2009</i>	<i>1-12</i>
Table 1.9	U.S. Refinery Input of Crude Oil and Petroleum Products, 1987–2008.....	1-13
Table 1.10	Refinery Yield of Petroleum Products from a Barrel of Crude Oil, 1978–2009.....	1-14
Table 1.11	United States Petroleum Production, Imports and Exports, 1950–2009	1-15

Table 1.12	Petroleum Production and Consumption and Some Important Percent Shares, 1950–2009	1–16
<i>Figure 1.7</i>	<i>United States Petroleum Production and Consumption – All Sectors, 1973–2035.....</i>	<i>1–17</i>
<i>Figure 1.8</i>	<i>United States Petroleum Production, Transportation and Consumption, 1970–2035.....</i>	<i>1–18</i>
Table 1.13	Consumption of Petroleum by End-Use Sector, 1973–2009	1–19
Table 1.14	Highway Transportation Petroleum Consumption by Mode, 1970–2008	1–20
Table 1.15	Nonhighway Transportation Petroleum Consumption by Mode, 1970–2008	1–21
Table 1.16	Transportation Petroleum Use by Mode, 2007–2008	1–22
CHAPTER 2	ENERGY	2–1
<i>Figure 2.1</i>	<i>World Consumption of Primary Energy, 2007</i>	<i>2–2</i>
Table 2.1	U. S. Consumption of Total Energy by End-Use Sector, 1973–2009	2–3
Table 2.2	Distribution of Energy Consumption by Source, 1973 and 2009	2–4
Table 2.3	Alternative Fuel and Oxygenate Consumption, 2003–2008.....	2–5
Table 2.4	Ethanol Consumption, 1995–2008.....	2–6
Table 2.5	Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2008	2–7
Table 2.6	Transportation Energy Use by Mode, 2007–2008.....	2–8
Table 2.7	Highway Transportation Energy Consumption by Mode, 1970–2008.....	2–9
Table 2.8	Nonhighway Transportation Energy Consumption by Mode, 1970–2008.....	2–10
Table 2.9	Off-highway Transportation-related Fuel Consumption from the NonRoad Model, 2008	2–11
Table 2.10	Fuel Consumption from Lawn and Garden Equipment, 2008.....	2–12
Table 2.11	Highway Usage of Gasoline and Special Fuels, 1973–2008	2–13
Table 2.12	Passenger Travel and Energy Use, 2008.....	2–14
Table 2.13	Energy Intensities of Highway Passenger Modes, 1970–2008.....	2–15

Table 2.14	Energy Intensities of Nonhighway Passenger Modes, 1970–2008.....	2–16
<i>Figure 2.2</i>	<i>Energy Intensity of Light Rail Transit Systems, 2008.....</i>	<i>2–17</i>
<i>Figure 2.3</i>	<i>Energy Intensity of Heavy Rail Systems, 2008.....</i>	<i>2–18</i>
<i>Figure 2.4</i>	<i>Energy Intensity of Commuter Rail Systems, 2008.....</i>	<i>2–18</i>
Table 2.15	Intercity Freight Movement and Energy Use in the United States, 2007 and 2008.....	2–19
Table 2.16	Energy Intensities of Freight Modes, 1970–2008.....	2–20
CHAPTER 3	ALL HIGHWAY VEHICLES AND CHARACTERISTICS	3–1
Table 3.1	Car Registrations for Selected Countries, 1960–2008.....	3–2
Table 3.2	Truck and Bus Registrations for Selected Countries, 1960–2008	3–3
Table 3.3	U.S. Cars and Trucks in Use, 1970–2008.....	3–5
<i>Figure 3.1</i>	<i>Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 1998 and 2008).....</i>	<i>3–6</i>
Table 3.4	Vehicles per Thousand People in Other Countries, 1998 and 2008	3–8
Table 3.5	Vehicles per Thousand People in the United States, 1990–2008	3–9
Table 3.6	Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970–2008.....	3–10
Table 3.7	Cars in Operation and Vehicle Travel by Age, 1970 and 2001	3–11
Table 3.8	Trucks in Operation and Vehicle Travel by Age, 1970 and 2001	3–12
Table 3.9	U.S. Average Vehicle Age, 1995–2009.....	3–13
Table 3.10	New Retail Vehicle Sales, 1970–2009.....	3–14
Table 3.11	Car Scrappage and Survival Rates, 1970, 1980 and 1990 Model Years	3–15
Table 3.12	Light Truck Scrappage and Survival Rates	3–16
Table 3.13	Car and Light Truck Survivability Rates and Lifetime Miles	3–17
CHAPTER 4	LIGHT VEHICLES AND CHARACTERISTICS	4–1
Table 4.1	Summary Statistics for Cars, 1970–2008.....	4–2

Table 4.2	Summary Statistics for Two-Axle, Four-Tire Trucks, 1970–2008.....	4–3
Table 4.3	Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks	4–4
Table 4.4	Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989–1999.....	4–4
Table 4.5	New Retail Car Sales in the United States, 1970–2009.....	4–5
Table 4.6	New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970–2009	4–6
Table 4.7	Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975–2009.....	4–7
Table 4.8	Definition of Wagons in Model Year 2009	4–8
Table 4.9	Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975–2009	4–9
Table 4.10	Light Vehicle Market Shares by Size Class, Model Years 1975–2009.....	4–10
<i>Figure 4.1</i>	<i>Light Vehicle Market Shares, Model Years 1975–2009</i>	<i>4–11</i>
Table 4.11	Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975–2009	4–12
Table 4.12	Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975–2009	4–13
Table 4.13	Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975–2009	4–14
Table 4.14	Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977–2009	4–15
Table 4.15	Average Material Consumption for a Light Vehicle, Model Years 1995, 2000, and 2008.....	4–16
Table 4.16	New Light Vehicle Dealerships and Sales, 1970–2008.....	4–17
Table 4.17	Conventional Refueling Stations, 1993–2008	4–18
Table 4.18	Reformed and Unreformed Light Truck Corporate Average Fuel Economy Standards, MY 2008–2011	4–19
Table 4.19	Fuel Economy and Carbon Dioxide Emissions Standards, MY 2012–2016	4–20

Table 4.20	Fuel Economy and Carbon Dioxide Targets for Model Year 2016.....	4–21
Table 4.21	Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2010	4–22
Table 4.22	Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2010	4–23

FOREWORD

Welcome to this 29th edition of the Transportation Energy Data Book. Twenty-one of these editions have been produced by Stacy Davis. DOE is grateful for the dedication and the skill she has brought to this effort.

We would like to bring to your attention some of the data that are new in this edition:

Figure 2.4: Commuter Rail Transit Energy Intensity

Data for an additional 10 systems has been added. These data show the variation in commuter rail energy intensity across 17 metropolitan areas in the U.S.

Table 2.9: Off-highway Transportation-related Fuel Consumption from the NonRoad Model, 2008

These data for off-highway vehicles all come from a single EPA source now.

Table 3.9: U.S. Average Vehicle Age, 1995-2009

This replaces a table that had median vehicle ages which Polk no longer makes available.

Table 3.10: New Retail Vehicle Sales, 1970-2008

These summary data were never shown before.

Tables 3.11 and 3.12: Car Scrappage and Survival Rates and Light Truck Scrappage and Survival Rates

These data have been added to this edition.

Table 4.19: Fuel Economy and Carbon Dioxide Emissions Standards, MY 2012-2016

This table shows that the combined 2016 standard is 34.1 MPG, not the 35.5 MPG often quoted in the press.

Table 4.20: Fuel Economy and Carbon Dioxide Targets for Model Year 2016

New CAFE standards

Table 7.7: Federal Government Vehicles by Agency, FY 2009

GSA owned over 150,000 vehicles in 1994, but owned only 1,221 vehicles in 2009.

We hope you find value in this data book. We welcome suggestions on how to improve it.

ACKNOWLEDGMENTS

The authors would like to express their gratitude to the many individuals who assisted in the preparation of this document. First, we would like to thank Phil Patterson, Jacob Ward, and the Vehicle Technologies Program staff for their continued support of the Transportation Energy Data Book project. We would also like to thank Jamie Payne for the cover design and Patricia Hu for her guidance and mentoring. Finally, this book would not have been possible without the dedication of Debbie Bain, who masterfully prepared the manuscript.

ABSTRACT

The *Transportation Energy Data Book: Edition 29* is a statistical compendium prepared and published by Oak Ridge National Laboratory (ORNL) under contract with the U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Vehicle Technologies Program. Designed for use as a desk-top reference, the Data Book represents an assembly and display of statistics and information that characterize transportation activity, and presents data on other factors that influence transportation energy use. The purpose of this document is to present relevant statistical data in the form of tables and graphs. The latest edition of the Data Book is available to a larger audience via the Internet (cta.ornl.gov/data).

This edition of the Data Book has 12 chapters which focus on various aspects of the transportation industry. Chapter 1 focuses on petroleum; Chapter 2 – energy; Chapter 3 – highway vehicles; Chapter 4 – light vehicles; Chapter 5 – heavy vehicles; Chapter 6 – alternative fuel vehicles; Chapter 7 – fleet vehicles; Chapter 8 – household vehicles; Chapter 9 – nonhighway modes; Chapter 10 – transportation and the economy; Chapter 11 – greenhouse gas emissions; and Chapter 12 – criteria pollutant emissions. The sources used represent the latest available data. There are also three appendices which include detailed source information for some tables, measures of conversion, and the definition of Census divisions and regions. A glossary of terms and a title index are also included for the reader's convenience.

INTRODUCTION

In January 1976, the Transportation Energy Conservation (TEC) Division of the Energy Research and Development Administration contracted with Oak Ridge National Laboratory (ORNL) to prepare a Transportation Energy Conservation Data Book to be used by TEC staff in their evaluation of current and proposed conservation strategies. The major purposes of the Data Book were to draw together, under one cover, transportation data from diverse sources, to resolve data conflicts and inconsistencies, and to produce a comprehensive document. The first edition of the TEC Data Book was published in October 1976. With the passage of the Department of Energy (DOE) Organization Act, the work being conducted by the former Transportation Energy Conservation Division fell under the purview of the DOE's Office of Transportation Programs.

Policymakers and analysts need to be well-informed about activity in the transportation sector. The organization and scope of the data book reflect the need for different kinds of information. For this reason, Edition 29 updates much of the same type of data that is found in previous editions.

In any attempt to compile a comprehensive set of statistics on transportation activity, numerous instances of inadequacies and inaccuracies in the basic data are encountered. Where such problems occur, estimates are developed by ORNL. To minimize the misuse of these statistics, an appendix (Appendix A) is included to document the estimation procedures. The attempt is to provide sufficient information for the conscientious user to evaluate the estimates and to form their own opinions as to their utility. Clearly, the accuracy of the estimates cannot exceed the accuracy of the primary data, an accuracy which in most instances is unknown. In cases where data accuracy is known or substantial errors are strongly suspected in the data, the reader is alerted. In all cases it should be recognized that the estimates are not precise.

The majority of the statistics contained in the data book are taken directly from published sources, although these data may be reformatted for presentation by ORNL. Consequently, neither ORNL nor DOE endorses the validity of these data.

Chapter 1

Petroleum

Summary Statistics from Tables/Figures in this Chapter

	<i>Other</i>	21.0% 18.0%
Table 1.12	U.S. transportation petroleum use as a percent of U.S. petroleum production, 2009	179.4%
Table 1.12	Net imports as a percentage of U.S. petroleum consumption, 2009	51.9%
Table 1.13	Transportation share of U.S. petroleum consumption, 2009	71.4%
Table 1.16	Highway share of transportation petroleum consumption, 2008	84.9%
Table 1.16	Light vehicle share of transportation petroleum consumption, 2008	66.0%

In this document, petroleum is defined as crude oil (including lease condensate) and natural gas plant liquids.

^a Because other liquids and processing gain are not included, the world total is smaller than world petroleum consumption.

Although the world has consumed about 40% of estimated conventional oil resources, the total fossil fuel potential is huge. Methane hydrates—a potential source of natural gas—are included in the “additional occurrences” of unconventional natural gas, and constitute the largest resource.

Table 1.1
World Fossil Fuel Potential
(gigatonnes of carbon)

	Consumption (1860-1998)	Reserves	Resources	Additional occurrences
Oil				
Conventional	97	120	121	0
Unconventional	6	102	305	914
Natural Gas				
Conventional	36	83	170	0
Unconventional	1	144	364	14,176
Coal	155	533	4,618	^a

Figure 1.1 World Fossil Fuel Potential

Source:

See Table 1.1

^a Data are not available.

In 2009, the Organization of Petroleum Exporting Countries (OPEC) accounted for more than 40% of world oil production. Responding to low oil prices in early 2000, Mexico, Norway, Russia, and Oman joined OPEC in cutting production. This group of oil countries, referred to here as OPEC+, account for almost 65% of world oil production.

Source:

U.S. Department of Energy, Energy Information Administration, *Monthly Energy Review*, March 2010, Washington, DC, 2010, Table 11.1a and 11.1b. (Additional resources: www.eia.doe.gov)

^a Includes lease condensate. Excludes natural gas plant liquids.

^b See Glossary for membership.

^c OPEC+ includes all OPEC nations plus Russia, Mexico, Norway and Oman.

^d See Glossary for Persian Gulf Nations.

This table shows petroleum production, which includes both crude oil and natural gas plant liquids. Because other liquids and processing gain are not included, the world total is smaller than world petroleum consumption (Table 1.4). The United States was responsible for 9.0% of the world's petroleum production in 2009 and 7.3% of the world's crude oil production (Table 1.2).

Note: Reserves as of April 2010. Production data are dry gas production.

The share of petroleum imported to the United States can be calculated using total imports or net imports. Net imports, which is the preferred data, rose to 50% of U.S. petroleum consumption for the first time in 1998, while total imports reached 50% for the first time in 1993. OPEC share of net imports has been below 50% since 1993.

Major oil price shocks have disrupted world energy markets five times in the past 30 years (1973-74, 1979-80, 1990-91, 1999-2000, 2008). Most of the oil price shocks were followed by an economic recession in the United States.

Figure 1.4. Oil Price and Economic Growth, 1970–2009

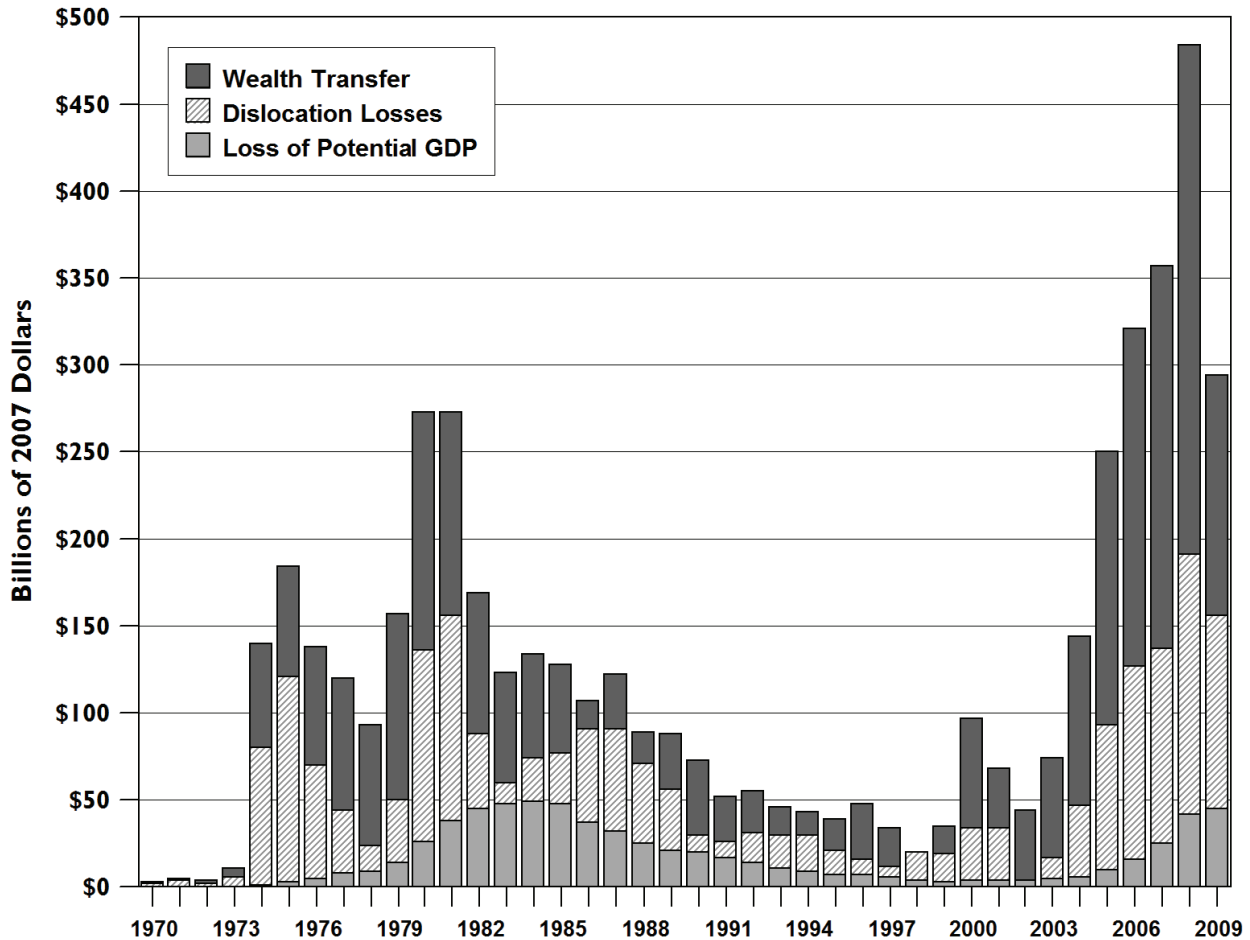

Source:

Greene, D.L. and N. I. Tishchishyna, *Costs of Oil Dependence: A 2000 Update*, Oak Ridge National Laboratory, ORNL/TM-2000/152, Oak Ridge, TN, 2000, and data updates, 2010. (Additional resources: www.cta.ornl.gov/publications)

The United States has long recognized the problem of oil dependence and the economic problems that arise from it. According to Oak Ridge National Laboratory (ORNL) researchers Greene and Hopson, oil dependence is a combination of four factors: (1) a noncompetitive world oil market strongly influenced by the OPEC cartel, (2) high levels of U.S. imports, (3) the importance of oil to the U.S. economy, and (4) the lack of economical and readily available substitutes for oil. ORNL developed a model to estimate the historical cost of oil dependence and analyze the potential effectiveness of policies on likely future costs. The most recent study using this model shows that the U.S. economy suffered the greatest losses in 2008 when wealth transfer and GDP losses (combined) amounted to approximately half a trillion dollars. However, when comparing oil dependence to the size of the economy, the year 1980 is the highest. Oil dependence costs were almost 4.5% of GDP in 1980, but were under 3.5% in 2008.

Figure 1.5. Costs of Oil Dependence to the U.S. Economy, 1970–2009

Source:

Greene, David L., and Janet L. Hopson, “The Costs of Oil Dependence 2009,” Oak Ridge National Laboratory Memorandum, 2010.

Notes:

Wealth Transfer is the product of total U.S. oil imports and the difference between the actual market price of oil (influenced by market power) and what the price would have been in a competitive market.

Dislocation Losses are temporary reductions in GDP as a result of oil price shocks.

Loss of Potential Gross Domestic Product (GDP) results because a basic resource used by the economy to produce output has become more expensive. As a consequence, with the same endowment of labor, capital, and other resources, our economy cannot produce quite as much as it could have at a lower oil price.

Estimates of military expenditures for defending oil supplies in the Middle East range from \$6 to \$60 billion per year. This wide range in estimates reflects the difficulty in assigning a precise figure to the military cost of defending the U.S. interests in the Middle East. The two main reasons for the difficulty are 1) the Department of Defense does not divide the budget into regional defense sectors and 2) it is difficult to determine how much of the cost is attributable to defending Persian Gulf oil.

^a Includes jet kerosene and other kerosene.

^b Includes motor gasoline, jet gasoline, and aviation gasoline.

^c Organization for Economic Cooperation and Development. See Glossary for membership.

Oxygenate refinery input increased significantly in 1995, most certainly due to the Clean Air Act Amendments of 1990 which mandated the sale of reformulated gasoline in certain areas beginning in January 1995. The use of MTBE has declined in recent years due to many states banning the additive. The other hydrocarbons and liquids category includes unfinished oils, motor gasoline blending components and aviation gasoline blending components. In 2005 the gasoline blending components rose significantly.

^a Methyl tertiary butyl ether (MTBE).

^b Includes methanol and other oxygenates.

^c Reported in “Other” category in this year.

^d Data are not available.

When crude oil and other hydrocarbons are processed into products that are, on average, less dense than the input, a processing volume gain occurs. Due to this gain, the product yield from a barrel of crude oil is more than 100%. The processing volume gain has been growing over the years.

^a Includes aviation gasoline (0.1%), kerosene (0.1%), residual fuel oil (4.0%), naphtha and other oils for petrochemical feedstock use (1.0%), other oils for petrochemical feedstock use (1.0%), special naphthas (0.2%), lubricants (1.0%), waxes (0.1%), petroleum coke (5.3%) asphalt and road oil (2.4%), still gas (4.3%), and miscellaneous products (0.5%).

^b Products sum greater than 100% due to processing gain. The processing gain for years 1978 to 1980 is assumed to be 4 percent.

Most of the petroleum imported by the United States is in the form of crude oil. The United States does export small amounts of petroleum, mainly refined petroleum products which go to Canada and Mexico.

U.S. Department of Energy, Energy Information Administration, *Monthly Energy Review*, March 2010, Tables 3.1 and 3.3b.

^a Total domestic production includes crude oil, natural gas plant liquids and small amounts of other liquids.

The U.S. share of the world's petroleum consumption is approximately one-quarter. The United States relies heavily on imported petroleum. Imports accounted for nearly 52% of U.S. petroleum consumption in 2009.

U.S. Department of Energy, Energy Information Administration, *Monthly Energy Review*, March 2010, Tables 2.5, 3.1, and A3. (Pre-1973 data from the *Annual Energy Review*). World petroleum consumption - U.S. Department of Energy, Energy Information Administration, *International Petroleum Monthly*, March 2010, Table 1.7 and annual. (Additional resources: www.eia.doe.gov)

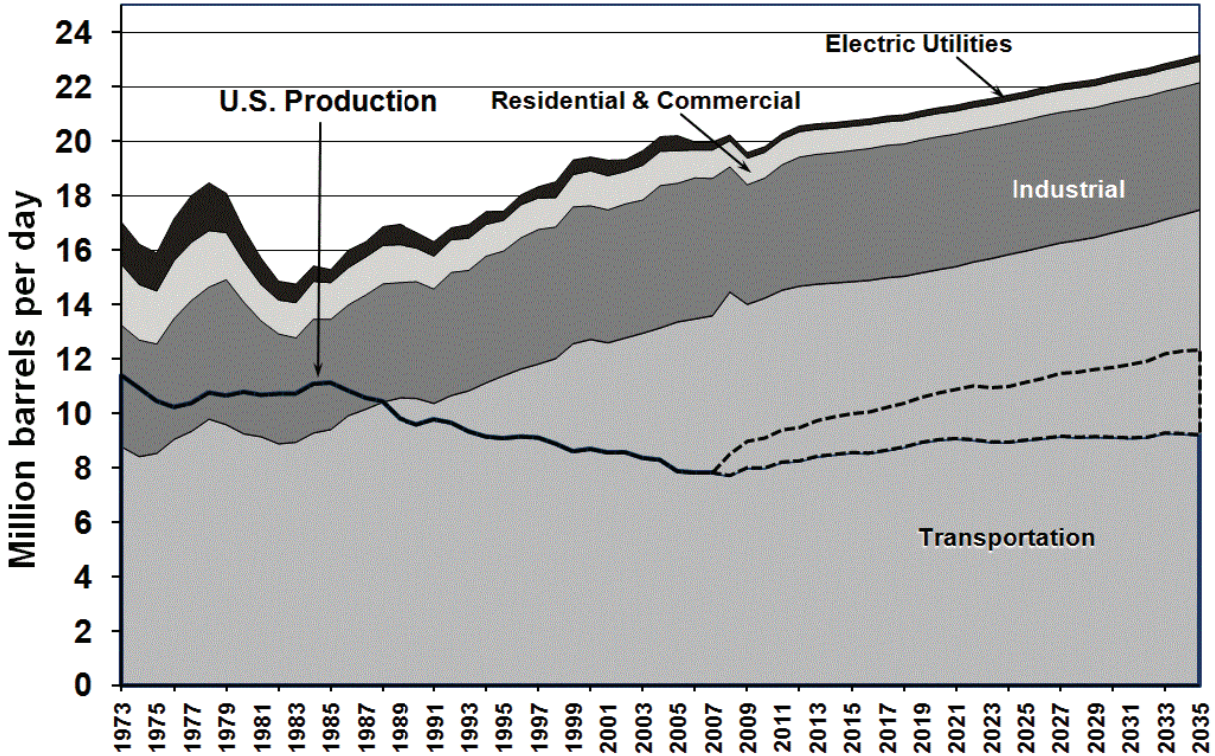

^a Total domestic production includes crude oil, natural gas plant liquids and small amounts of other liquids.

^b Data are not available.

Before 1989 the U.S. produced enough petroleum to meet the needs of the transportation sector, but was still short of meeting the petroleum needs of all the sectors, including industrial, residential and commercial, and electric utilities. In 1973 the gap between what the U.S. produced and what was consumed was 5.6 million barrels per day. By 2035, the gap is expected to be at least 10.8 million barrels per day if all sources of petroleum are included or 13.9 million barrels per day if only conventional petroleum sources are used.

Figure 1.7. United States Petroleum Production and Consumption – All Sectors, 1973–2035

Source:

See Tables 1.12 and 2.6. Projections are from the Energy Information Administration, *Annual Energy Outlook 2010*, March 2010.

Notes: The U.S. Production has two lines after 2005. The solid line is conventional sources of petroleum, including crude oil, natural gas plant liquids, and refinery gains. The dashed line adds in other non-petroleum sources, including ethanol, biomass, liquids from coal, other blending components, other hydrocarbons, and ethers.

The sharp increase in values between 2007 and 2008 are caused by the data change from historical to projected values.

In 1989 the transportation sector petroleum consumption surpassed U.S. petroleum production for the first time, creating a gap that must be met with imports of petroleum. By the year 2035, transportation petroleum consumption is expected to grow to more than 17 million barrels per day; at that time, the gap between U.S. production and transportation consumption will be about 5 million barrels per day (when including the non-petroleum sources).

Figure 1.8. United States Petroleum Production, Transportation and Consumption, 1970–2035

Source:

See Tables 1.12 and 2.6. Projections are from the Energy Information Administration, *Annual Energy Outlook 2010*, March 2010.

Notes: The U.S. Production has two lines after 2005. The solid line is conventional sources of petroleum, including crude oil, natural gas plant liquids, and refinery gains. The dashed line adds in other non-petroleum sources, including ethanol, biomass, liquids from coal, other blending components, other hydrocarbons, and ethers.

The sharp increase in values between 2007 and 2008 are caused by the data change from historical to projected values.

Transportation accounted for more than 70% of the U.S. petroleum use in 2009. Total petroleum consumption reached more than 20 million barrels per day from 2004 to 2007, but has decreased for the last two years.

See Appendix A for Highway Energy Use.

^a Each gallon of petroleum product was assumed to equal one gallon of crude oil. The oil used to produce electricity is also estimated. See Appendix A, p. 18 for details.

^b Total transportation figures do not include military and off-highway energy use and may not include all possible uses of fuel for transportation (e.g., snowmobiles).

Although about 20% of transportation energy use is for nonhighway modes, only 16% of transportation petroleum use is for nonhighway. This is because some nonhighway modes, such as pipelines and transit rail, use electricity. An estimate for the petroleum used to make electricity is included in the data. See Table 2.8 for nonhighway transportation energy use in trillion Btu.

Petroleum accounted for 36% of the world's energy use in 2007. Though petroleum is the dominant energy source for both OECD countries and non-OECD countries, the non-OECD countries rely on coal, natural gas, and hydroelectric power more than OECD countries do.

Figure 2.1. World Consumption of Primary Energy, 2007

Source:

U.S. Department of Energy, Energy Information Administration, *International Energy Statistics Database*, May 2010. (Additional resources: www.eia.doe.gov)

Total energy use was 99.6 quads in 2009 with transportation using 27.1%. The Energy Information Administration includes renewable energy in each sector.

^a Electrical energy losses have been distributed among the sectors.

In transportation, the alcohol fuels blended into gasoline to make gasohol (10% ethanol or less) are counted under “renewables” and are not in with petroleum. The petroleum category, however, still contains other blending agents, such as MTBE, that are not actually petroleum, but are not broken out into a separate category.

Table 2.2
Distribution of Energy Consumption by Source, 1973 and 2009

Note: Numbers may not add due to rounding.

^a In transportation, the petroleum category contains some blending agents which are not petroleum.

^b Includes supplemental gaseous fuels. Transportation sector includes pipeline fuel and natural gas vehicle use.

^c Includes electrical system energy losses.

Oxygenates are blended with gasoline to be used in conventional vehicles. The amount of oxygenate use dwarfs the alternative fuel use. Gasoline-equivalent gallons are used in this table to allow comparisons of different fuel types.

Table 2.3
Alternative Fuel and Oxygenate Consumption, 2003–2008

(Additional resources: www.eia.doe.gov)

^a Consumption includes gasoline portion of the mixture.

^b Vehicle consumption only; does not include power plant inputs.

^c Methyl Tertiary Butyl Ether. This category includes a very small amount of other ethers, primarily Tertiary Amyl Methyl Ether (TAME) and Ethyl Tertiary Butyl Ether (ETBE).

Ethanol is used as an oxygenate, blended with gasoline to be used as gasohol in conventional vehicles. The amount of ethanol used in gasohol dwarfs the amount used in E85. Production of E95 ended in 2000.

Table 2.4
Ethanol Consumption, 1995–2008
(thousand gallons)

	Ethanol blends		Ethanol in gasohol	Total

<http://www.eia.doe.gov/cneaf/alternate/page/atftables/afv-atf2008.pdf>, Table C1. (Additional resources: www.eia.doe.gov)

Note: Gallons of E85, E95 and Ethanol in gasohol, do not include the gasoline portion of the blended fuel.

As data about alternative fuel use become available, an attempt is made to incorporate them into this table. Sometimes assumptions must be made in order to use the data. Please see Appendix A for a description of the methodology used to develop these data. See Table 1.16 for transportation petroleum use in thousand barrels per day.

See Appendix A for Energy Use Sources.

^a Civilian consumption only. Totals may not include all possible uses of fuels for transportation (e.g., snowmobiles).

^b Two-axle, four-tire trucks.

The highway sector is by far the largest part of transportation energy use. Light truck energy use has increased at the greatest rate, due to their increased use as personal passenger vehicles. Light trucks include pick-ups, minivans, sport-utility vehicles, and vans. See Table 1.14 for highway petroleum use in thousand barrels per day.

Table 2.7
Highway Transportation Energy Consumption by Mode, 1970–2008

See Appendix A for Highway Energy Use.

Note: Totals may not add due to rounding.

^a Total transportation figures do not include military and off-highway energy use and may not include all possible uses of fuel for transportation (e.g., snowmobiles). These data have been revised due to a new data series for recreational boats.

About 20% of transportation energy use is for nonhighway modes. Air travel accounts for over 45% of nonhighway energy use. See Table 1.15 for nonhighway petroleum use in thousand barrels per day.

See Appendix A for Nonhighway Energy Use.

Note: Totals may not add due to rounding.

^a Total transportation figures do not include military and off-highway energy use and may not include all possible uses of fuel for transportation (e.g., snowmobiles).

The Environmental Protection Agency's NONROAD2008a model estimates fuel use for different types of equipment and off-highway vehicles. Most of these vehicles/equipment use diesel fuel. Recreational equipment, such as off-highway motorcycles, snowmobiles, and ATVs, are mainly fueled by gasoline.

Table 2.9
Off-highway Transportation-related Fuel Consumption from the NonRoad Model, 2008
(trillion Btus)

	Gasoline	Diesel	LPG	CNG	Total
Agricultural Equipment <i>Tractors, mowers, combines, balers, and other farm equipment which has utility in its movement.</i>	8.3	531.8	0.0	0.0	540.1
Airport Ground Equipment	0.3	13.2	0.2	^a	13.7

U.S. Environmental Protection Agency, NONROAD2008a Model, www.epa.gov/otaq/nonrdmdl.htm.

^a Includes equipment such as aerators, dethatchers, sod cutters, hydro-seeders, turf utility vehicles, golf course greens mowers, and sand trap groomers.

^b Includes equipment not otherwise classified such as augers, sickle-bar mowers, and wood splitters.

The Federal Highway Administration (FHWA) cautions that data from 1993 on may not be directly comparable to earlier years. Some states have improved reporting procedures in recent years, and the estimation procedures were revised in 1994. The definition of gasohol was expanded in 1993 to include blends that are less than 10%. Now, the FHWA does not publish separate estimates of gasohol or ethanol used in gasohol. See Table 2.3 for details on oxygenate usage.

Table 2.11
Highway Usage of Gasoline and Special Fuels, 1973–2008
(billion gallons)

Year	Gasoline	Gasohol	Ethanol used in gasohol ^a	Total gasoline and gasohol	Diesel ^b	Percent diesel	Total highway fuel use

U.S. Department of Transportation, Federal Highway Administration, *Highway Statistics 2008*, Washington, DC, 2009, Table MF-21 and annual. (Additional resources: www.fhwa.dot.gov)

^a Estimated for 1980–92 and 2002 as 10% of gasohol consumption.

^b Consists primarily of diesel fuel, with small quantities of liquefied petroleum gas.

^c Data for gasoline and gasohol cannot be separated in this year.

^d Gasohol data is no longer published by the Federal Highway Administration.

Great care should be taken when comparing modal energy intensity data among modes. Because of the inherent differences among the transportation modes in the nature of services, routes available, and many additional factors, it is not possible to obtain truly comparable national energy intensities among modes. These values are averages, and there is a great deal of variability even within a mode.

Chapter 3

All Highway Vehicles and Characteristics

Summary Statistics from Tables in this Chapter

Source		
Table 3.1	U.S. share of world car registrations, 2008	20.3%
Table 3.2	U.S. share of world truck & bus registrations, 2008	41.8%
Table 3.3	Number of U.S. cars, 2008 (thousands)	135,882
Table 3.3	Number of U.S. trucks, 2008 (thousands)	114,357
Table 3.6	Vehicle miles traveled, 2008 (million miles)	2,973,509
	<i>Cars</i>	53.2%
	<i>Two-axle, four-tire trucks</i>	36.5%
	<i>Combination trucks</i>	4.7%
	<i>Other single-unit trucks</i>	2.8%
	<i>Motorcycles</i>	0.5%
	<i>Buses</i>	0.2%
Table 3.9	Average age of vehicles, 2009	
	<i>Cars (years)</i>	10.6
	<i>Light trucks (years)</i>	9.6
	<i>All trucks (years)</i>	10.2

The 1997 data in this series were never published. Use caution comparing historical data because of disconnects in data series, such as China in 1998. Also, the United States is unique in how many light trucks (SUVs, minivans, pickups) are used for personal travel. Those light trucks are not included on this table. The U.S. share of world cars has been declining since 1998. The growth in the World total comes mainly from developing countries, like China and India.

Table 3.1
Car Registrations for Selected Countries, 1960–2008

VEHICLES IN USE

Both the Federal Highway Administration (FHWA) and The Polk Company report figures on the car and truck population each year. The two estimates, however, differ by as much as 11.2% (1981). The differences can be attributed to several factors:

- The FHWA data include all vehicles which have been registered at any time throughout the calendar year. Therefore, the data include vehicles which were retired during the year and may double count vehicles which have been registered in different states or the same states to different owners. The Polk Company data include only those vehicles which are registered on July 1 of the given year.
- The classification of mini-vans, station wagons on truck chassis, and utility vehicles as cars or trucks causes important differences in the two estimates. The Polk Company data included passenger vans in the car count until 1980; since 1980 all vans have been counted as trucks. Recently, the Federal Highway Administration adjusted their definition of cars and trucks. Starting in 1993, some minivans and sport utility vehicles that were previously included with cars were included with trucks. This change produced a dramatic change in the individual percentage differences of cars and trucks. The difference in total vehicles has been less than 5% each year since 1990 and does not appear to be significantly affected by the FHWA reclassifications.
- The FHWA data include all non-military Federal vehicles, while The Polk Company data include only those Federal vehicles which are registered within a state. Federal vehicles are not required to have State registrations, and, according to the General Services Administration, most Federal Vehicles are not registered.

According to The Polk Company statistics, the number of cars in use in the United States declined from 1991 to 1992. This is the first decline in vehicle stock since the figures were first reported in 1924. However, the data should be viewed with caution. A redesign of Polk's approach in 1992 allowed a national check for duplicate registrations, which was not possible in earlier years. Polk estimates that, due to processing limitations, its vehicle population counts may have been inflated by as much as 1½ percent. Assuming that percentage is correct, the number of cars in use would have declined from 1991 to 1992 under the previous Polk method. The growing popularity of light trucks being used as passenger vehicles could also have had an impact on these figures.

In the early 1980's, researchers had to make a conscience choice of which data series to use, since they differed by as much as 11%. In 2008 the two sources differed by about 1%. The FHWA series shows a slight decrease in the number of trucks from 2007 to 2008, while The Polk Company data show a slight increase.

The graphs below show the number of motor vehicles per thousand people for various countries. The data for the United States are displayed in the line which goes from 1900 to 2008. The points labeled on that line show data for the other countries/regions around the world and how their vehicles per thousand people compare to the United States at two different points in time, 1998 and 2008. For instance, the graph shows that in 1998, Western Europe's vehicles per thousand people was about where the United States was in 1968, but by 2008 it is about where the United States was in 1972. The lower part of the graph (1900-1940) is shown enlarged on the facing page.

Figure 3.1. Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 1998 and 2008)

Source:
See Tables 3.4 and 3.5.

Though some countries are listed separately in this table, those countries are also included in the regional total. For instance, China is listed separately, but is also included in the Asia, Far East region.

Table 3.4
Vehicles per Thousand People in Other Countries, 1998 and 2008

Country/Region	Vehicles per 1,000 people	
	1998	2008
Africa	22.8	27.2
Asia, Far East	50.4	135.8
Asia, Middle East	68.0	102.7
Brazil	106.9	140.0
Canada	585.5	623.0
Central & South America	48.5	127.9
China	9.0	35.7
Europe, East	157.2	300.0

The number of vehicles per thousand people in the United States has grown significantly from 1900 to 2008. From 2007 to 2008, however, the number decreased for the first time since 1997.

Total vehicle-miles traveled decreased slightly from 2007 to 2008. It is the first decline since 1980. The trend of using two-axle, four-tire trucks, such as pickups, vans, and sport-utility vehicles, for personal travel is evident in these data; two-axle, four-tire trucks account for 26.2% more travel in 2008 than in 1970, and cars account for 28.3% less travel in that time period.

Table 3.6
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970–2008

Year	Automobiles	Motorcycles	Two-axle, four-tire trucks	Other single-unit trucks	Combination trucks	Buses	Total vehicle-miles traveled (million miles)

Domestic and import data – 1970-97: American Automobile Manufacturers Association, *Motor Vehicle Facts and Figures*, 1998, Detroit, MI, 1998, p. 15 and annual. 1997 data from *Economic Indicators*, 4th Quarter 1997. 1998-2008: Ward's Communication, *Ward's Automotive Yearbook*, Detroit, MI, 2009, p. 109. 2009: Ward's Communications, www.wardsauto.com.

Using current registration data and a scrappage model by Greenspan and Cohen, [1996 paper: <http://www.federalreserve.gov/pubs/feds/1996/199640/199640pap.pdf>], ORNL calculated new automobile scrappage rates. The expected median lifetime for a 1990 model year automobile is 16.9 years. These data are fitted model values which assume constant economic conditions.

Schmoyer, Richard L., unpublished study on scrappage rates, Oak Ridge National Laboratory, Oak Ridge, TN, 2001.

- ^a Light trucks are trucks less than 10,000 lbs. gross vehicle weight.
^b It was assumed that scrappage for vehicles less than 4 years old is 0.
^c The percentage of light trucks which will be retired from use during the year.
^d The percentage of light trucks which will be in use at the end of the year.

A typical car will travel 152,137 miles in a lifetime, while a typical light truck will travel 179,954 miles.

Source:

U.S. Department of Transportation, Federal Highway Administration, *Highway Statistics 2008*, Washington, DC, 2009, Table VM-1 and annual. (Additional resources: www.fhwa.dot.gov)

^a This number differs from R.L. Polk's estimates of "number of cars in use." See Table 3.3.

^b Fuel economy for car population.

^c Beginning in this year the data were revised to exclude minivans, pickups and sport utility vehicles which may have been previously included.

The Federal Highway Administration released revised historical data back to 1985 which better reflected two-axle, four-tire trucks. The definition of this category includes vans, pickup trucks, and sport utility vehicles. The number of two-axle, four-tire trucks registered in the United States decreased from 2007 to 2008, as did vehicle travel and fuel use.

Table 4.2
Summary Statistics for Two-Axle, Four-Tire Trucks, 1970–2008

Year	Registrations (thousands)	Vehicle travel (million miles)	Fuel use (million gallons)	Fuel economy (miles per gallon)
1970	14,211	123,286	12,313	10.0

^a Beginning in this year the data were revised to include all vans (including mini-vans), pickups and sport utility vehicles.

Because data on Class 2b trucks are scarce, the U.S. DOE funded a study to investigate available sources of data. In the final report, four methodologies are described to estimate the sales of Class 2b trucks. Until another study is funded, the 1999 data are the latest available.

Table 4.3
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks

	CY 1999 truck sales (millions)	MY 2000 truck population (millions)	Percent diesel trucks in population	Average age (years)	Estimated annual miles ^a (billions)	Estimated fuel use (billion ^a gallons)	Estimated fuel economy (miles per gallon)
Class 1	5.7	49.7	0.3%	7.3	672.7	37.4	18.0
Class 2a	1.8	19.2	2.5%	7.4	251.9	18	14.0

1999	5,707	1,845	521	8,073
		<i>Percent change</i>		
1989–1999	72.3%	101.0%	37.5%	75.1%

Source:

Davis, S.C. and L.F. Truett, *Investigation of Class 2b Trucks (Vehicles of 8,500 to 10,000 lbs GVWR)*, ORNL/TM-2002/49, March 2002, Table 1.

Note: These data were calculated using Methodology 4 from the report.

^a Estimates derived using 2000 population data and 1997 usage data. See source for details.

Car sales in 2009 dropped below 6 million. In 1980, the Big 3 (Chrysler, Ford and General Motors) held 73.8% of the market; by 2009, that had dropped to 31.8%.

Table 4.5

^a Includes all trucks of 10,000 pounds gross vehicle weight and less sold in the United States.

^b Excluding transplants.

^c Big 3 includes Chrysler, Ford and General Motors. Beginning in 1998, Ford includes Land Rover and Volvo light trucks and GM includes Saab. Trucks include light, medium and heavy trucks.

^d Based on model year factory installations.

^e Light-duty vehicles include cars and light trucks.

^f Indicates less than 1 percent.

The sales-weighted fuel economy of cars increased dramatically from 1975 (15.4 mpg) to 1990 (26.2 mpg), but has risen only about 3.1 mpg since then.

^a The fuel economy data on this table are EPA laboratory test values.

^b No vehicles in this category were sold in this model year.

The term “wagon” conjures up images of the station wagons from the 1960's. However, most of the cars that are now classified as wagons have little in common with those station wagons. The wagons below make up the category “wagon” on Tables 4.7 through 4.14.

Sales of light trucks in 2009 are almost four times that of 1975. Similar to the car trend, the sales-weighted fuel economy of light trucks increased substantially during the late '70's and '80's, but has increased slowly since then.

U.S. Environmental Protection Agency, *Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 Through 2009*, November 2009. (Additional resources: www.epa.gov/otaq/fetrends.htm)

Note: Includes light trucks of 8,500 lbs. or less.

^a The fuel economy data on this table are EPA laboratory test values.

^b No vehicles in this category were sold in this model year.

Back in 1975 only 19% of new light vehicle sales were light trucks. Because of the boom in sales of minivans, sport utility vehicles, and pick-up trucks, today almost half of light vehicle sales are light trucks.

Table 4.10

Note: Includes light trucks of 8,500 lbs. or less.

Light trucks were gaining market share from the early 1980s until 2004, mainly due to increases in the market share of sport utility vehicles (SUVs) and pickup trucks.

Figure 4.1. Light Vehicle Market Shares, Model Years 1975–2009

Sources:

Conventional refueling stations: National Petroleum News Survey, 2008.

Conventional vehicles: The Polk Company, Detroit, MI, FURTHER REPRODUCTION PROHIBITED.

Notes: The County Business Patterns (CBP) data published by the Bureau of the Census tells the number of establishments by North American Industry Classification System (NAICS). NAICS is an industry classification system that groups establishments into industries based on the activities in which they are primarily engaged. NAICS 447 represents gasoline stations. However, the CBP gasoline station data differ from the National Petroleum News Survey data by as much as 30% (117,189 stations in 2005); the CBP may not include every gasoline retail outlet due to the classification of the primary activity of the business.

Alternative Fuel Refueling Stations are listed in Chapter 6.

In 2006 the National Highway Traffic Safety Administration (NHTSA) established new requirements for the light truck Corporate Average Fuel Economy (CAFE) standards. In the new rule, there are Unreformed CAFE standards for model years (MY) 2008 through 2010 using the same CAFE calculations as in the past, and there are Reformed CAFE standards for those years as well, using a new methodology for the calculation of CAFE. For MY 2008 through 2010, the manufacturers can choose either standard. See Table 4.19 for details on the Reformed CAFE calculation. Another change with the Reformed CAFE standards is that larger passenger vans and sport utility vehicles (8,500-10,000 lbs gross vehicle weight) are included, whereas they are not included in the Unreformed CAFE calculations.

For MY 2011, new standards for cars and light trucks were established on March 30, 2009, using a methodology similar to the Reformed light truck standards. NHTSA is currently researching future standards.

Table 4.18
Reformed and Unreformed Light Truck Corporate Average
Fuel Economy Standards, MY 2008-2011

Model Year	CAFE Standard (miles per gallon)		Estimated Fuel Savings (billions of gallons)	
	Unreformed	Reformed	Unreformed	Reformed
Light trucks

Federal Register, Vol. 74, No. 59, March 30, 2009.

The National Highway Traffic Safety Administration and the Environmental Protection Agency issued joint rulemaking in March 2010 to establish a new National Program to regulate fuel economy and greenhouse gas emissions for model year 2012-2016 cars and light trucks.

Table 4.19
Fuel Economy and Carbon Dioxide Emissions Standards, MY 2012-2016

Year	Cars	Light Trucks	Combined Cars and Light Trucks
Average Required Fuel Economy (miles per gallon)			
2012	33.3	25.4	29.7
2013	34.2	26.0	30.5
2014	34.9	26.6	31.3
2015	36.2	27.5	32.6
2016	37.8	28.8	34.1
Average Projected Emissions Compliance Levels under the Footprint-based Carbon Dioxide Standards (grams per mile)			
2012	263	346	295
2013	256	337	286
2014	247	326	276
2015	236	312	263
2016	225	298	250

Federal Register, Vol. 74, No. 186, September 2009. (Additional resources:
www.nhtsa.dot.gov/portal/fueleconomy.jsp)

Note: The required fuel economy, along with projections of CO₂ emissions, are shown here.

The target levels for the proposed fuel economy and carbon dioxide emission standards for vehicles manufactured in model years 2012-2016 are assigned based on a vehicle's "footprint." Each footprint has a different target. The vehicle footprint is calculated as:

$$\text{footprint} = \text{track width} \times \text{wheelbase},$$

where

track width = lateral distance between the centerlines of the base tires at ground, and

wheelbase = longitudinal distance between the front and rear wheel centerlines.

Table 4.20
Fuel Economy and Carbon Dioxide Targets for Model Year 2016

Vehicle type	Example models	Example model footprint (square feet)	CO ₂ emissions target (grams per mile)	Fuel economy target (miles per gallon)
Example Passenger Cars				
Compact car	Honda Fit	40	214	41.4
Midsized car	Ford Fusion	46	237	37.3
Fullsize car	Chrysler 300	53	270	32.8
Example Light-Duty Trucks				
Small SUV	4WD Ford Escape	44	269	32.8
Midsized crossover	Nissan Murano	49	289	30.6
Minivan	Toyota Sienna	55	313	28.2
Large pickup truck	Chevy Silverado	67	358	24.7

Source:

Federal Register, Vol. 74, No. 186, September 28, 2009.

Note: Examples use model year 2008 vehicle specifications.

The Corporate Average Fuel Economy standards were established by the U.S. Energy Policy and Conservation Act of 1975 (PL94-163). These standards must be met at the manufacturer level. Some manufacturers fall short of meeting the standards while others exceed them. Legislation passed in December 2007 will change the CAFE standards beginning in the 2011 model year. The new standards have a target of combined fleet fuel economy of 35 mpg by 2020, for all cars and light trucks.

^a Only vehicles with at least 75 percent domestic content can be counted in the average domestic fuel economy for a manufacturer.

^b Model year as determined by the manufacturer on a vehicle by vehicle basis.

^c All CAFE calculations are sales-weighted.

The Corporate Average Fuel Economy standards for light trucks are lower than the car standards. Light trucks include pickups, minivans, sport utility vehicles and vans. New legislation passed in December 2007 will change the CAFE standards beginning in the 2011 model year. The new standards have a target of combined fleet fuel economy of 35 mpg by 2020, for all cars and light trucks.

^a Only vehicles with at least 75% domestic content can be counted in the average domestic fuel economy for a manufacturer.

^b Represents two- and four-wheel drive trucks combined. Gross vehicle weight of 0-6,000 pounds for model year 1978-1979 and 0-8,500 pounds for subsequent years.

^c Model year as determined by the manufacturer on a vehicle by vehicle basis.

^d All CAFE calculations are sales-weighted.

^e Standards were set for two-wheel drive and four-wheel drive light trucks, but no combined standard was set in this year.

^f Data are not available.

^g Unreformed standards. See Table 4.18 for reformed standards.

Manufacturers of cars and light trucks whose vehicles do not meet the CAFE standards are fined. Data from the National Highway Traffic Safety Administration show CAFE fine collection dropped under \$25 million in 2002 and 2003; this was due to several factors, including the CAFE credit system, manufacturer mergers, and fines not being paid in the same year they were assessed.

^a These are fines which are actually collected. Fines which are assessed in certain year may not have been collected in that year.

^b Adjusted using the Consumer Price Inflation Index.

Consumers must pay the Gas Guzzler Tax when purchasing a car that has an Environmental Protection Agency (EPA) fuel economy rating (combined city and highway) less than that stipulated in the table below. The Gas Guzzler Tax doubled in 1991 after remaining constant from 1986 to 1990. The tax has not changed since 1991. This tax does not apply to light trucks such as pickups, minivans, sport utility vehicles, and vans.

Source:

Internal Revenue Service, Form 6197, (Rev. 10-05), "Gas Guzzler Tax." (Additional resources: www.irs.ustreas.gov)

Consumers continue to demand gas guzzling cars. The IRS collected over \$172 million in 2008 from those buying cars with combined city/highway fuel economy less than 22.5 miles per gallon. This tax does not apply to light trucks such as pickups, minivans, sport utility vehicles, and vans. It is worthy to note that total revenue from fines paid by consumers to purchase gas-guzzling vehicles greatly exceeds the overall fines paid by manufacturers whose vehicles fail to meet CAFE standards (see Table 4.23).

^a Adjusted using the Consumer Price Inflation Index.

The Powertrain System Analysis Toolkit (PSAT) provides vehicle simulations for a variety of research purposes. It is used by the Department of Energy to evaluate the fuel efficiency potential of advanced powertrain configurations for different driving conditions. Recently, PSAT was used to develop data on the relationship between speed and fuel economy.

The two earlier studies by the Federal Highway Administration (FHWA) indicate maximum fuel efficiency was achieved at speeds of 35 to 40 mph. The recent FHWA study indicates greater fuel efficiency at higher speeds. Note that the 1973 study did not include light trucks.

^a PFI = port fuel injection. TBI = throttle- body fuel injection.

Of the tested vehicles, the 1994 Oldsmobile Olds 88 had the greatest fuel economy loss from 55 mph to 75 mpg. The 1997 Toyota Celica tested fuel economy was slightly better at 65 mph than at 55 mph.

Table 4.29
Steady Speed Fuel Economy for Vehicles Tested in the 1997 Study
(miles per gallon)

Speed (mph)	1988 Chevrolet Corsica	1993 Subaru Legacy	1994 Oldsmobile Olds 88	1994 Oldsmobile Cutlass	1994 Chevrolet Pickup	1994 Jeep Grand Cherokee	1994 Mercury Villager	1995 Geo Prizm	1997 Toyota Celica
5	10.0	14.5	10.5	5.1	7.9	8.2	12.3	18.1	19.1

Note: For specifications of the tested vehicles, please see Table 4.27.

This table shows the new methodology that the Environmental Protection Agency (EPA) used to determine fuel economy ratings for new vehicles beginning in model year 2008. In addition to the Urban Driving Cycle and the Highway Driving cycle, the EPA will also use three additional tests to adjust fuel economy ratings to account for higher speeds, air conditioner use, and colder temperatures. Though the EPA uses a complex combination of these five cycles to determine the fuel economy that will be posted on a new vehicle window sticker, the manufacturer's Corporate Average Fuel Economy is still calculated using only the city and highway driving cycles. To know more about new vehicle fuel economy ratings, visit www.fueleconomy.gov.

Table 4.30
Driving Cycle Attributes

	Test Schedule				
	City	Highway	High Speed	AC	Cold Temp
Trip type	Low speeds in stop-and-go urban traffic	Free-flow traffic at highway speeds	Higher speeds; harder acceleration & braking	AC use under hot ambient conditions	City test w/colder outside temperature
Top speed	56 mph	60 mph	80 mph	54.8 mph	56 mph
Average speed	20 mph	48 mph	48 mph	22 mph	20 mph
Max. acceleration	3.3 mph/sec	3.2 mph/sec	8.46 mph/sec	5.1 mph/sec	3.3 mph/sec
Simulated distance	11 mi.	10 mi.	8 mi.	3.6 mi.	11 mi.
Time	31 min.	12.5 min.	10 min.	9.9 min.	31 min.
Stops	23	None	4	5	23
Idling time	18% of time	None	7% of time	19% of time	18% of time
Engine startup ^a	Cold	Warm	Warm	Warm	Cold
Lab temperature	68-86° F	68-86° F	68-86° F	95° F	20° F
Vehicle air conditioning	Off	Off	Off	On	Off

Source:

U.S. Department of Energy and U.S. Environmental Protection Agency, Fuel Economy Web site, www.fueleconomy.gov.

^a A vehicle's engine doesn't reach maximum fuel efficiency until it is warm.

These driving cycles simulate the performance of an engine while driving in the city and on the highway. Once the city cycle is completed, the engine is stopped, and then started again for the 8.5 minute hot start cycle. Three additional cycles also influence new vehicle fuel economy ratings beginning with the 2008 model year.

Figure 4.6. Cold Temperature (Cold FTP) Driving Cycle

Source:
 U.S. Department of Energy and Environmental Protection Agency, Fuel Economy Web site,
www.fueleconomy.gov.

Beginning with the 2008 model year, this cycle influences the new vehicle fuel economy ratings. The US06 driving cycle was originally developed as a supplement to the Federal Test Procedure. It is a short-duration cycle (600 seconds) which represents hard-acceleration driving.

Figure 4.7. High-Speed (US06) Driving Cycle

Source:

U.S. Department of Energy and Environmental Protection Agency, Fuel Economy Web site, www.fueleconomy.gov.

The Environmental Protection Agency also uses other driving cycles to test new vehicles (although these do not affect the fuel economy ratings). The New York Test Cycle was developed in the 1970's in order to simulate driving in downtown congested areas. The Representative Number Five Test Cycle was developed in the 1990's to better represent actual on-road driving by combining modern city and freeway driving.

Figure 4.8. New York City Driving Cycle

Figure 4.9. Representative Number Five Driving Cycle

Source:

Data obtained from Michael Wang, Argonne National Laboratory, Argonne, IL, 1997.

Researchers at Argonne National Laboratory have estimated the fuel economy of a midsize car using driving cycles from different countries. These results illustrate the difference in fuel economy which can be obtained from the same vehicle using different test cycles.

Table 4.31
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles

Driving Cycle	Projected fuel economy for a 1995 composite midsize vehicle ^a
Japanese 10/15 mode test cycle	17.5 mpg
New European Driving Cycle (NEDC)	22.0 mpg
U.S. EPA city cycle (LA4)	19.8 mpg
U.S. EPA highway cycle	32.1 mpg
U.S. Corporate Average Fuel Economy cycle	23.9 mpg

Source:

Santini, D., A. Vyas, J. Anderson, and F. An, *Estimating Trade-Offs along the Path to the PNGV 3X Goal*, presented at the Transportation Research Board 80th Annual Meeting, Washington, DC, January 2001.

Note: China and India both use the European Driving Cycle, though India uses a modified version called the Modified Indian Driving Cycle which accounts for lower maximum speeds that better represent driving conditions in India.

^a The 1995 composite midsize vehicle is an average of a Chevrolet Lumina, Chrysler Concord, and Ford Taurus. The fuel economies were projected using the National Renewable Energy Laboratory's Advanced Vehicle Simulator (ADVISOR) model.

When comparing data between countries, one must realize that different countries have different testing cycles to determine fuel economy and emissions. This table compares various statistics on the European, Japanese, and U.S. testing cycles [for fuel economy measurements, the United States uses the formula, $1/\text{fuel economy} = (0.55/\text{city fuel economy}) + (0.45/\text{highway fuel economy})$]. Most vehicles will achieve higher fuel economy on the U.S. test cycle than on the European or Japanese cycles.

Table 4.32
Comparison of U.S., European, and Japanese Driving Cycles

	Time (seconds)	Percent of time stopped or decelerating	Distance (miles)	Average speed (mph)	Maximum speed (mph)	Maximum acceleration (mph/s)
Japanese 10/15 mode test cycle	631	52.3	2.6	14.8	43.5	1.8
New European Driving Cycle (NEDC)	1,181	24.9	6.84	20.9	74.6	2.4
U.S. EPA city cycle (LA4) ^a	1,372	43.2	7.5	19.5	56.7	3.3
U.S. EPA highway cycle	765	9.3	17.8	48.2	59.9	3.3
U.S. Corporate Average Fuel Economy cycle	2,137	27.9	10.3	29.9	59.9	3.3

Source:

Santini, D., A. Vyas, J. Anderson, and F. An, *Estimating Trade-Offs along the Path to the PNGV 3X Goal*, presented at the Transportation Research Board 80th Annual Meeting, Washington, DC, January 2001.

Note: China and India both use the European Driving Cycle, though India uses a modified version called The Modified Indian Driving Cycle which accounts for lower maximum speeds that better represent driving conditions in India.

^a The actual Federal Procedure (FTP), which is also the test for emissions certification, repeats the first 505 seconds of the Federal Urban Driving Simulation cycle, hot started, after a 10 minute hot soak. Starting with Model Year 2001, the emissions test-but not the fuel economy test-incorporates a supplemental cycle that simulates aggressive urban driving, coupled with an added air conditioning load.

Demand response (also called paratransit or dial-a-ride) are widely used by transit agencies. In 2007, the data changed substantially due to improved estimation methodologies. Unfortunately, those data are no longer comparable to the rest of the historical series.

Table 4.33
Summary Statistics on Demand Response Vehicles, 1994–2008^a

Year	Number of active vehicles	Vehicle-miles (millions)	Passenger-miles (millions)	Energy use (trillion Btu)
1994	31,090	490	781	9.8
1995	31,773	538	856	9.6

Note: *Highway Statistics 1999* data were not used.

Combination trucks include all trucks designed to be used in combination with one or more trailers. The average vehicle travel of these trucks (on a per truck basis) far surpasses the travel of other trucks due to long-haul freight movement.

Table 5.2
Summary Statistics for Combination Trucks, 1970–2008

Year	Registrations (thousands)	Vehicle travel ^a (million miles)	Fuel use (million gallons)	Fuel economy (miles per gallon)

Note: *Highway Statistics 1999* data were not used.

^a The Federal Highway Administration changed the combination truck travel methodology in 1993.

Truck sales in 2009 continued to decline in every class. Trucks under 10,000 lbs. continue to dominate truck sales.

Table 5.3
New Retail Truck Sales by Gross Vehicle Weight, 1970–2009^a

Vehicle Inventory and Use Survey

The Vehicle Inventory and Use Survey (VIUS), which was formerly the Truck Inventory and Use Survey (TIUS), provides data on the physical and operational characteristics of the Nation's truck population. It is based on a probability sample of private and commercial trucks registered (or licensed) in each state. In 1997, the survey was changed to the Vehicle Inventory and Use Survey due to future possibilities of including additional vehicle types. The 2002 VIUS, however, only includes trucks. Copies of the 2002 VIUS report or CD may be obtained by contacting the U.S. Bureau of the Census, Transportation Characteristics Surveys Branch (301) 457-2797. Internet site:

www.census.gov/svsd/www/tiusview.html

Since 1987, the survey has included minivans, vans, station wagons on truck chassis, and sport utility vehicles in addition to the bigger trucks. The 1977 and 1982 surveys did not include those vehicle types. The estimated number of trucks that were within the scope of the 2002 VIUS and registered in the United States as of July 1, 2002, was 85.2 million. These trucks were estimated to have been driven a total of 1,115 billion miles during 2002, an increase of 6.8% from 1997. The average annual miles traveled per truck was estimated at 13,100 miles.

In the 2002 VIUS, there are several ways to classify a truck by weight. The survey respondent was asked the average weight of the vehicle or vehicle-trailer combination when carrying a typical payload; the empty weight (truck minus cargo) of the vehicle as it was usually operated; and the maximum gross weight at which the vehicle or vehicle-trailer combination was operated. The Census Bureau also collected information on the Gross Vehicle Weight Class of the vehicles (decoded from the vehicle identification number) and the registered weight of the vehicles from the State registration files. Some of these weights are only provided in categories, while others are exact weights. Since all these weights could be quite different for a single truck, the tabulations by weight can be quite confusing. In the tables presented here, the Gross Vehicle Weight Class was used.

The Census Bureau has discontinued the Vehicle Inventory and Use Survey; it was not conducted in 2007. The 2002 data remain the latest available.

Table 5.4
Truck Statistics by Gross Vehicle Weight Class, 2002

Manufacturer's gross vehicle weight class	Number of trucks	Percentage of trucks	Average annual miles per truck	Harmonic mean fuel economy	Percentage of fuel use
1) 6,000 lbs and less	51,941,389	61.0%	11,882	17.6	42.7%

Estimates are based on data provided on the following public use files: U.S. Department of Commerce, Bureau of the Census, Census of Transportation, Washington, DC, *1992 Truck Inventory and Use Survey*, 1995; *1997 Vehicle Inventory and Use Survey*, 2000, and *2002 Vehicle Inventory and Use Survey*, 2005. (Additional resources: www.census.gov/svsd/www.tiusview.html)

Note: Based on average fuel economy as reported by respondent.

As expected, most light trucks travel within 50 miles of their home base and refuel at public stations. About sixty percent of heavy trucks travel over 50 miles from their home base and 36% of them refuel at central company-owned refueling stations.

U.S. Department of Commerce, Bureau of the Census, *2002 Vehicle Inventory and Use Survey*, Microdata File on CD, 2005. (Additional resources: www.census.gov/svsd/www/tiusview.html)

The figure below shows the distribution of annual travel the two types of Class 7 and 8 vehicles—combination units (separate tractor and trailer) and single units (tractor and trailer on a single chassis). This information is for vehicles two years old or less and comes from the 2002 VIUS. Combination trucks, dominated by box-type trailers, display the greatest amount of annual travel of all heavy vehicle types, as is evidenced both by the range of annual use which is up to 250,000 miles per year, and the peaking that occurs in the 100,000 to 140,000-mile segments. Most of the single-unit trucks in the survey travel 40,000 miles per year or less.

Figure 5.1. Distribution of Trucks over 26,000 lbs. Less than Two Years Old by Vehicle-Miles Traveled

Source:

U.S. Department of Commerce, Bureau of the Census, 2002 Vehicle Inventory and Use Survey, Microdata File on CD, 2005. (Additional resources: www.census.gov/svsd/www/tiusview.html)

Note: Heavy trucks (class 7 & 8) are greater than 26,000 pounds gross vehicle weight based on the manufacturer’s rating.

The latest *Vehicle Inventory and Use Survey* asked truck owners if the truck had certain features as permanent equipment on the truck. Some of the features asked about were onboard computers, idle-reduction devices, navigational systems, and Internet access. Of the 2.3 million heavy trucks (class 7 & 8) in the United States, nearly 10% were equipped with onboard computers that had communication capabilities and another 5% had onboard computers without communication capabilities. Six percent of heavy trucks were equipped with idle-reducing technology. Navigational systems and Internet access were available in less than one percent of heavy trucks.

Figure 5.2. Share of Heavy Trucks with Selected Electronic Features, 2002

Source:

U.S. Department of Commerce, Bureau of the Census, *2002 Vehicle Inventory and User Survey*, Microdata File on CD, 2005.

Note: Heavy trucks (class 7 & 8) are greater than 26,000 pounds gross vehicle weight based on the manufacturer's rating.

Fuel Economy Study for Class 8 Trucks

As part of a long-term study sponsored by the U.S. Department of Energy (DOE) Office of Vehicle Technologies (OVT), the Oak Ridge National Laboratory (ORNL) in conjunction with several industry partners has collected data and information related to heavy-truck operation in real-world highway environments. The primary objective of the project was to collect real-world performance and spatial data for long-haul operations of Class 8 tractor-trailers from a fleet engaged in normal freight operations. Six model year 2005 Class 8 trucks from the selected fleet, which operates within a large area of the country extending from the east coast to Mountain Time Zone and from Canada to the US-Mexican border, were instrumented and 60 channels of data were collected for over a year at a rate of 5 Hz (or 5 readings per second). Those channels included information such as instantaneous fuel rate, engine speed, gear ratio, vehicle speed, and other information read from the vehicle's databus; weather information (wind speed, precipitation, air temperature, etc.) gathered from an on-board weather station; spatial information (latitude, longitude, altitude) acquired from a GPS (Global Positioning System) device; and instantaneous tractor and trailer weight obtained from devices mounted on the six participating tractors and ten trailers. Three of the six instrumented tractors and five of the ten instrumented trailers were mounted with New Generation Single Wide-Based Tires and the others with regular dual tires. Over the duration of this phase of the project (just over a year) the six tractors traveled nearly 700,000 miles.

To find out more about this project, contact Oscar Franzese, franzeseo@ornl.gov, 865-946-1304. The final report on this project is available on-line at:
cta.ornl.gov/cta/Publications/Reports/ORNL_TM_2008-122.pdf.

The type of terrain a truck is traveling on can cause significant differences in fuel efficiency. This study (see page 5-13 for project description) shows fuel economy on severe upslopes is less than half that on flat terrain. On severe downslopes, the fuel economy was three times higher than on flat terrain.

Table 5.10
Effect of Terrain on Class 8 Truck Fuel Economy

Type of Terrain	Share of Data Records	Average Fuel Efficiency (mpg)				Difference between Dual and Single Tires (percent)
		All Trucks	Tractors with Dual Tires	Tractors with Single (wide) Tires		
Severe upslope (>4%)	0.7%	2.90	2.86	2.94	2.91%	
Mild upslope (1% to 4%)	13.2%	4.35	4.25	4.44	4.35%	
Flat terrain (1% to 1%)	72.4%	7.33	7.08	7.58	7.13%	
Mild downslope (-4% to -1%)	12.6%	15.11	14.64	15.57	6.36%	
Severe downslope (<-4%)	1.1%	23.5	21.82	25.3	15.97%

Capps, Gary, Oscar Franzese, Bill Knee, M.B. Lascrain, and Pedro Otaduy. *Class-8 Heavy Truck Duty Cycle Project Final Report*, ORNL/TM-2008/122, Oak Ridge National Laboratory, Oak Ridge, TN, December 2008.

Table 5.10 presents a distribution of distance traveled, fuel consumed, and fuel economy by speed and by type of tires for the vehicles participating in the project (see page 5-13 for project description). The speed bins are divided into 5-mile intervals, going from 0+ mph (i.e., speed > 0.00 mph) to 85 mph, while the four main columns of Table 5.10 are organized by the type of tires that were mounted on the tractor and trailers. The first row of the table contains information about fuel consumed while the vehicle was idling (i.e., the vehicle was static with the engine on) with the following rows presenting information about the distance traveled, fuel consumed, and fuel economy for each one of the speed intervals. The next-to-the-last row shows the totals for both traveled distances and fuel consumed as well as the overall fuel economy for each tire-combination category. The latter are then used to compute the percentage difference in terms of fuel economy from dual tire tractors and trailers, which is the most common tire setup for large trucks at the present time.

Table 5.11
Fuel Economy for Class 8 Trucks as Function of Speed
and Tractor-Trailer Tire Combination

Speed (mph)	Dual Tire Tractor – Dual Tire Trailer			Dual Tire Tractor – Single (Wide) Tire Trailer			Single (Wide) Tire Tractor – Dual Tire Trailer			Single (Wide) Tire Tractor – Single (Wide) Tire Trailer

Percent increase in fuel economy from dual tire trac/trail			0.00%			5.93%			6.53%			9.20%

Source:

Capps, Gary, Oscar Franzese, Bill Knee, M.B. Lascrain, and Pedro Otaduy. *Class-8 Heavy Truck Duty Cycle Project Final Report*, ORNL/TM-2008/122, Oak Ridge National Laboratory, Oak Ridge, TN, December 2008.

Note: These data were not adjusted to account for the effects of terrain. The increase in fuel economy for speeds above 70 mph is likely due to the vehicle achieving high speeds while traveling down slope. Therefore, this increase in fuel economy is not expected to be characteristic of all travel at these higher speeds.

^a Total Fuel Consumed does not include fuel consumed while idling.

The fuel economy information presented in Table 5.10 is on the upper limits of today's large-truck fleets and is mostly a result of driver training and the extensive vehicle maintenance (including constant tire pressure) to which the fleet company participating in this project adheres. Nevertheless, the results of this extensive test indicate that there are substantial gains in terms of fuel economy for large trucks when single (wide) tires are used in combination with dual tires or alone (best case). Figure 5.3 shows the information from Table 5.10 in a graphical form (bars) and also displays for each speed bin the percentage of the total distance that is traveled at that speed (line). It is possible to observe that above 80% of the distance traveled by long-haul Class 8 trucks is done at speeds above 55 mph. Therefore, any gains in fuel economies at these speeds derived from a given tire combination would have a very large impact on the overall fuel economy of these type of trucks. Figure 5.3 shows that, except for the D-S combination within the 65+ to 70 mph, the combinations with all single (wide) tires perform better and, therefore, obtain the largest overall fuel economy.

Figure 5.3. Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed

NOT ADJUSTED FOR TERRAIN: See note below.

Source:

Capps, Gary, Oscar Franzese, Bill Knee, M.B. Lascrain, and Pedro Otaduy. *Class-8 Heavy Truck Duty Cycle Project Final Report*, ORNL/TM-2008/122, Oak Ridge National Laboratory, Oak Ridge, TN, December 2008.

Note: D = Dual tire. S = Single (wide) tire.

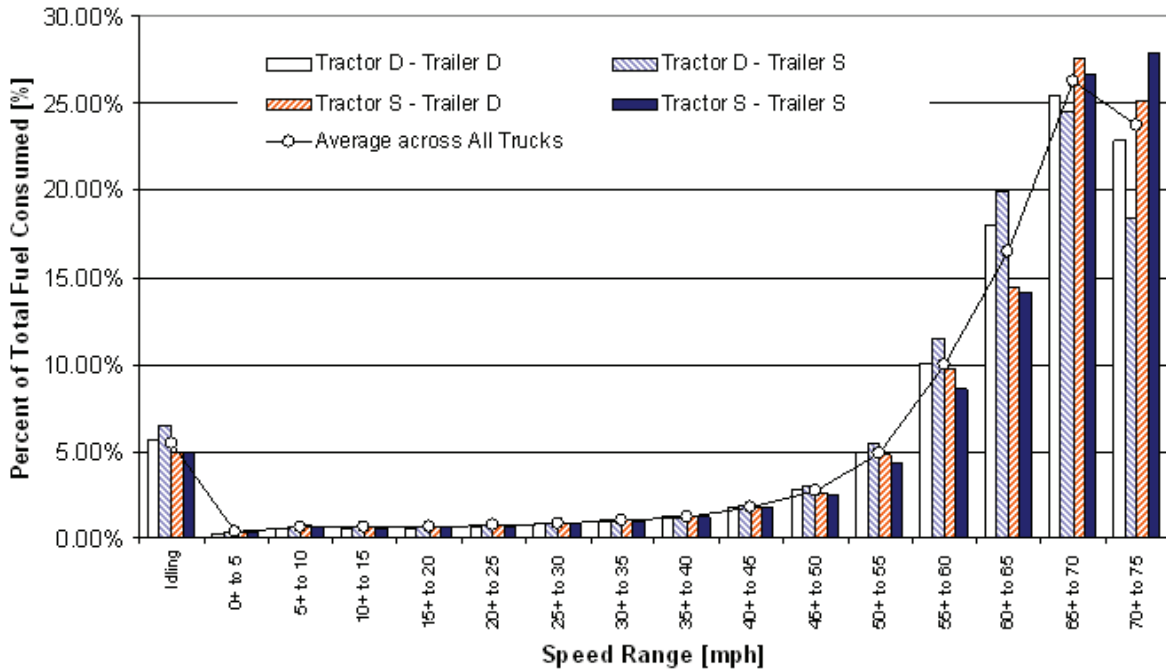

These data were not adjusted to account for the effects of terrain. The increase in fuel economy for speeds above 70 mph is likely due to the vehicle achieving high speeds while traveling down slope. Therefore, this increase in fuel economy is not expected to be characteristic of all travel at these higher speeds.

This graph presents for each one of the four tire-combination categories the percent of total fuel that is consumed when traveling at different speeds (bars) as well as the average percent of fuel consumed for each speed bin (line). As opposed to Table 5.10, the total fuel consumed on this graph includes the fuel consumed while idling.

Figure 5.4. Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination

NOT ADJUSTED FOR TERRAIN: See note below.

Source:

Capps, Gary, Oscar Franzese, Bill Knee, M.B. Lascrain, and Pedro Otaduy. *Class-8 Heavy Truck Duty Cycle Project Final Report*, ORNL/TM-2008/122, Oak Ridge National Laboratory, Oak Ridge, TN, December 2008.

Note: D = Dual tire. S = Single (wide) tire.

These data were not adjusted to account for the effects of terrain. The increase in fuel economy for speeds above 70 mph is likely due to the vehicle achieving high speeds while traveling down slope. Therefore, this increase in fuel economy is not expected to be characteristic of all travel at these higher speeds.

A typical class 8 truck tractor weighs about 17,000 lbs. The powertrain is nearly a quarter of the weight (24%) while the truck body structure is 19%.

Table 5.12
Class 8 Truck Weight by Component

	Pounds	Share of Total
Wheels and tires	1,700	10%
Chassis/frame	2,040	12%
Drivetrain and suspension	2,890	17%
Misc. accessories/systems	3,060	18%
Truck body structure	3,230	19%
Powertrain	4,080	24%
Total	17,000	100%

Source:

National Academy of Sciences, *Technologies and Approaches to Reducing the Fuel Consumption of Medium and Heavy-Duty Vehicles*, prepublication copy, March 2010, p. 5-42.

Notes:

- Powertrain includes engine and cooling system, transmission and accessories.
- Truck body structure includes cab-in-white, sleeper unit, hood and fairings, interior and glass.
- Miscellaneous accessories/systems include batteries, fuel system, and exhaust hardware.
- Drivetrain and suspension includes drive axles, steer axle, and suspension system.
- Chassis/frame includes frame rails and crossmembers, fifth wheel and brackets. Wheels and tires include a set of 10 aluminum wheels, plus tires.

The gross weight of a vehicle (GVW) is the weight of the empty vehicle plus the weight of the maximum payload that the vehicle was designed to carry. In cars and small light trucks, the difference between the empty weight of the vehicle and the GVW is not significantly different (1,000 to 1,500 lbs). The largest trucks and tractor-trailers, however, have a payload capacity share of 200%, which means they can carry 200% of their empty weight. The medium-sized trucks (truck classes 3-6) have payload capacity shares between 50% and 100%.

Table 5.13
Gross Vehicle Weight vs. Empty Vehicle Weight

Vehicle Description	Truck Class	Gross Vehicle Weight Range (pounds)	Empty Vehicle Weight Range (pounds)	Maximum Payload Capacity (pounds)	Payload Capacity Share (Percent of Empty Weight)
Cars		3,200-6,000	2,400-5,000	1,000	20%
Minivans, Small SUVs, Small Pick-Ups	1	4,000-2,400	3,200-4,500	1,500	33%
Large SUVs, Standard Pick-Ups	2a	6,001-8,500	4,500-6,000	2,500	40%
Large SUVs, Standard Pick-Ups	2b	8,501-10,000	5,000-6,300	3,700	60%
Utility Van, Multi-Purpose, Mini-Bus, Step Van	3	10,001-14,000	7,650-8,750	5,250	60%
City Delivery, Parcel Delivery, Large Walk-in, Bucket, Landscaping	4	14,001-16,000	7,650-8,750	7,250	80%
City Delivery, Parcel Delivery, Large Walk-in, Bucket	5	16,001-19,500	9,500-10,000	8,700	80%
City Delivery, School Bus, Large Walk-in, Bucket	6	19,501-26,000	11,500-14,500	11,500	80%
City Bus, Furniture, Refrigerated, Refuse, Fuel Tanker, Dump, Tow, Concrete, Fire Engine, Tractor-Trailer	7	26,001-33,000	11,500-14,500	18,500	125%
Refuse, Concrete, Furniture, City Bus, Tow, Fire Engine (straight trucks)	8a	33,001-80,000	20,000-26,000	54,000	200%
Tractor-Trailer: Van, Refrigerated, Bulk Tanker, Flat Bed (combination trucks)	8b	33,001-80,000	20,000-26,000	54,000	200%

Source:

National Academy of Sciences, *Technologies and Approaches to Reducing the Fuel Consumption of Medium and Heavy-Duty Vehicles*, prepublication copy, March 2010, pp. 2-2 and 5-42.

According to weigh-in-motion data collected by fifteen states, the majority of 5-axle tractor-trailers on the road weigh between 33,000 and 73,000 lbs. Eleven percent of the tractor-trailers had weight recorded around 72,800 lbs and 10% around 68,300 lbs. Another 10% of tractor-trailers were on the lighter end of the scale – around 37,500 lbs. These data show that only a small percent of trucks on the road are near the maximum roadway gross vehicle weight of 80,000 lbs. Thus, most trucks are filling the trailer space to capacity (cubing-out) before they reach the maximum weight limit (weighing-out).

National Academy of Sciences, *Technologies and Approaches to Reducing the Fuel Consumption of Medium and Heavy-Duty Vehicles*, prepublication copy, March 2010, p. 5-45. Original source: Federal Highway Administration, Vehicle Travel Information System, 2008.

Note: Data are from these 15 States: California, Connecticut, Florida, Georgia, Hawaii, Iowa, Minnesota, Missouri, Montana, North Carolina, Oregon, Pennsylvania, South Dakota, Texas, and Washington.

Commodity Flow Survey

The Commodity Flow Survey (CFS) is designed to provide data on the flow of goods and materials by mode of transport. The 1993, 1997, 2002, and 2007 CFS are a continuation of statistics collected in the Commodity Transportation Survey from 1963 through 1977, and include major improvements in methodology, sample size, and scope. The 2007 CFS covers business establishments with paid employees that are located in the United States and are classified using the North American Industry Classification System (NAICS) in mining, manufacturing, wholesale trade, and select retail trade industries, namely, electronic shopping and mail-order houses. Establishments classified in services, transportation, construction, and most retail industries are excluded from the survey. Farms, fisheries, foreign establishments, and most government-owned establishments are also excluded.^a

The 1993, 1997, 2002, and 2007 CFS differ from previous surveys in their greatly expanded coverage of intermodalism (i.e., shipments which travel by at least two different modes, such as rail and truck). Earlier surveys reported only the principal mode. Route distance for each mode for each shipment was imputed using methodologies developed by Oak Ridge National Laboratory. Distance, in turn, was used to compute ton-mileage by mode of transport.

The data can be viewed at: www.bts.gov/publications/commodity_flow_survey.

^a Bureau of Transportation Statistics and U.S. Bureau of the Census, 2007 Economic Census, *2007 Commodity Flow Survey*, December 2008.

Industries covered by the 2007 Commodity Flow Survey (CFS) shipped over 12 billion tons of goods worth over \$11 trillion. Compared to the 1997 CFS, the value of shipments is up 1.3% per year and tons shipped are up 1.6% per year. By value, intermodal shipments increased 4.7% per year from 1997 to 2007.

Chapter 6

Alternative Fuel and Advanced Technology Vehicles and Characteristics

Summary Statistics from Tables in this Chapter

Source		
Table 6.1	Alternative fuel vehicles in use, 2008	775,664
	<i>LPG</i>	151,049
	<i>CNG</i>	113,973
	<i>E85</i>	450,327
	<i>Electric</i>	56,901
	<i>M85</i>	0
	<i>LNG</i>	3,101
Table 6.4	Number of alternative fuel refuel sites, 2010	6,497
	<i>LPG</i>	2,410
	<i>CNG</i>	827
	<i>Biodiesel</i>	679
	<i>Electric</i>	506
	<i>Hydrogen</i>	57

Fuel type abbreviations are used throughout this chapter.

B20 = 20% biodiesel, 80% petroleum diesel

CNG = compressed natural gas

E85 = 85% ethanol, 15% gasoline

E95 = 95% ethanol, 5% gasoline

H₂ = hydrogen

LNG = liquified natural gas

LPG = liquified petroleum gas

M85 = 85% methanol, 15% gasoline

M100 = 100% methanol

Alternative Fuels

The Energy Policy Act of 1992 defines alternative fuels and allows the U.S. Department of Energy (DOE) to add to the list of alternative fuels if the fuel is substantially nonpetroleum, yields substantial energy security benefits, and offers substantial environmental benefits. DOE currently recognizes the following as alternative fuels:

- methanol, ethanol, and other alcohols,
- blends of 85% or more of alcohol with gasoline,
- natural gas and liquid fuels domestically produced from natural gas,
- liquefied petroleum gas (propane),
- coal-derived liquid fuels
- hydrogen and electricity
- biodiesel,
- P-series.

Alternative Fuels & Advanced Vehicles Data Center

DOE established the Alternative Fuels Data Center (AFDC) in 1991 to support its work aimed at fulfilling the Alternative Motor Fuels Act directives. Since then, the AFDC has expanded its focus to include all advanced transportation fuels, vehicles, and technologies. It has been renamed the Alternative Fuels & Advanced Vehicles Data Center to reflect this broader scope. The AFDC is operated and managed by the National Renewable Energy Laboratory (NREL) in Golden, Colorado.

The purposes of the AFDC are:

- to gather and analyze information on the fuel consumption, emissions, operation, and durability of alternative fuel vehicles, and
- to provide unbiased, accurate information on alternative fuels and alternative fuel vehicles to government agencies, private industry, research institutions, and other interested organizations.

Much of the AFDC data can be obtained through their Web site: www.eere.energy.gov/afdc. Several tables and graphs in this chapter contain statistics which were generated by the AFDC. Below are some links to specific areas of the AFDC Web site.

Alternative & Advanced Fuels - www.eere.energy.gov/afdc/fuels/index.html

Alternative Fueling Station Locator - www.eere.energy.gov/afdc/fuels/stations_locator.html

Alternative & Advanced Vehicles - www.eere.energy.gov/afdc/vehicles/index.html

Fleet Information - www.eere.energy.gov/afdc/fleets/index.html

State & Federal Incentives & Laws - www.eere.energy.gov/afdc/incentives_laws.html

Data Analysis & Trends - www.eere.energy.gov/afdc/data/index.html

There are over 775,000 alternative fuel vehicles in the United States, not including flex-fuel E85 vehicles which operate mainly on gasoline. The E85 vehicles in this table are those believed to be regularly fueled with E85.

Table 6.1
Estimates of Alternative Fuel Vehicles in Use^a, 1995–2008

Year	LPG	CNG	LNG	M85	M100	E85 ^b	E95	Electricity ^c	Hydrogen	Total

U. S. Department of Energy, Energy Information Administration, *Alternatives to Traditional Transportation Fuels*, 2008, Washington, DC, April 2010, Table VI. 1995-2006, *Annual Energy Review*, Table 10.4. Estimated Number of Alternative-Fueled Vehicles in Use and Replacement Fuel Consumption. (Additional resources: www.eia.doe.gov/emeu/aer/renew.html and www.eere.energy.gov/afdc/data/vehicles.html)

^a Vehicles in Use represent accumulated acquisitions, less retirements, as of the end of each calendar year. They do not include concept and demonstration vehicles.

^b Includes only those E85 vehicles believed to be used as alternative-fuels vehicles (AFVs), primarily fleet-operated vehicles; excludes other vehicles with E85-fueling capability. In 1997, some vehicle manufacturers began including E85-fueling capability in certain model lines of vehicles. For 2007, the Energy Information Administration (EIA) estimates that the number of E85 vehicles that are capable of operating on E85, motor gasoline, or both, is about 7.1 million. Many of these AFVs are sold and used as traditional gasoline-powered vehicles.

^c Excludes HEVs.

Table 6.2
Alternative Fuel Vehicles Available by Manufacturer, Model Year 2009

Model	Fuel	Type	Emission Class
Chrysler: 1-800-999-FLEET; www.fleet.chrysler.com

Clean Cities is a locally-based government/industry partnership, coordinated by the U.S. Department of Energy to expand the use of alternatives to gasoline and diesel fuel. By combining the decision-making with voluntary action by partners, the "grass-roots" approach of Clean Cities departs from traditional "top-down" Federal programs.

Vehicle Technologies Program

www.eere.energy.gov/vehiclesandfuels

The Vehicle Technologies Program is administered by the Department of Energy's Office of Energy Efficiency and Renewable Energy. The mission of this program is to develop more energy efficient and environmentally friendly highway transportation technologies that enable America to use less petroleum. The long-term aim is to develop "leap frog" technologies that will provide Americans with greater freedom of mobility and energy security, with lower costs and lower impacts on the environment. For additional information about the Vehicle Technologies Program, visit the Web site listed above.

Hydrogen Analysis Resource Center

hydrogen.pnl.gov/

The Hydrogen Analysis Resource Center was developed to provide reliable data and information for hydrogen-related analytical activities. The Center's Web site includes:

- Hydrogen Data Book - contains a wide range of factual information on hydrogen and fuel cells. hydrogen.pnl.gov/cocoon/morf/hydrogen/article/103
- Related Sites - provides links to other sites with data relevant to hydrogen and fuel cell analysis.
- Guidelines and Assumptions for DOE Hydrogen Program Analysis - contains guidelines for conducting analysis (under development) and assumptions.
- Calculator Tools - provides tools to perform conversions of hydrogen and other calculations relevant to hydrogen and fuel cells.
- Analysis Tools - provides links to models and other tools relevant to hydrogen and fuel cells, such as H2A, GREET, PSAT, VISION, MOVES, and other transportation and energy models.

	<i>Light trucks</i>	5,802
	<i>Ambulances</i>	5,556
Table 7.4	Federal government vehicles, FY 2009	651,703
	<i>Light trucks (<8,500 lbs. GVW)</i>	280,735
	<i>Cars and other passenger vehicles</i>	239,814
	<i>Medium trucks (8,500–26,000 lbs. GVW)</i>	89,052
	<i>Heavy trucks (>26,000 lbs. GVW)</i>	32,629
	<i>Buses and ambulances</i>	9,473

Vehicles in fleets of 15 or more are counted as fleet vehicles, as well as vehicles in fleets where five or more vehicles are purchased annually. Historical data on fleets are not available due to definitional changes of what constitutes a fleet.

Figure 7.1. Fleet Vehicles in Service as of January 1, 2009

^a Taxi category includes vans.

^b Rental category includes vans and sports utility vehicles under cars, not trucks.

^c Fleets of 15 or more in operation or 5 or more fleet vehicles purchased annually.

Rental companies made the largest light fleet vehicle registrations in 2008 buying nearly 2.0 million vehicles, most of them cars (57.9%). Over 60% of the commercial fleet vehicles registrations were pickups.

Table 7.1
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2008

	Commercial	Rental	Government	Total
Cars	27.3%	57.9%	38.8%	47.3%
Light trucks	64.7%	41.1%	53.9%	49.1%
Medium trucks	8.0%	1.0%	7.3%	3.6%
Total	822,864	1,779,805	293,639	2,896,308

Chapter 8

Household Vehicles and Characteristics

Summary Statistics from Tables/Figures in this Chapter

Source		
Table 8.2	Vehicles per capita, 2008	0.822
Table 8.3	Average household transportation expense, 2008	17.0%
Table 8.4	Share of households owning 3 or more vehicles	
	<i>1960</i>	<i>2.5%</i>
	<i>1970</i>	<i>5.5%</i>
	<i>1980</i>	<i>17.5%</i>
	<i>1990</i>	<i>17.3%</i>
	<i>2000</i>	<i>18.3%</i>
Table 8.5	Vehicles per licensed driver, 2009	1.03
Figure 8.1	Average occupancy rates by vehicle type, 2009	
	<i>Pickup Truck</i>	<i>1.49</i>
	<i>Car</i>	<i>1.59</i>
	<i>Sports Utility</i>	<i>1.92</i>
	<i>Van</i>	<i>2.35</i>
Table 8.9	Average annual miles per household vehicle, 2009	10,100
Table 8.15	Share of workers who car pooled, 2000	11.2%
Table 8.20	Long-distance trips in the United States, 2001	
	<i>Person-trips</i>	<i>2,554 million</i>
	<i>Person-miles</i>	<i>1,138 billion</i>

The number of vehicles in the United States is growing faster than the population. The growth in vehicle-miles has slowed in recent years. See Table 8.2 for vehicles per capita and vehicle-miles per capita.

Table 8.1
Population and Vehicle Profile, 1950–2008

Year	Resident population ^a (thousands)	Total households (thousands)	Number of vehicles in operation (thousands)	Total vehicle-miles (millions)	Number of licensed drivers (thousands)	Number of civilian employed persons (thousands)

^a Public assistance monies are included in reported income. Data for those reporting income.

^b Percentages may not sum to totals due to rounding.

^c Includes alcoholic beverages.

^d Includes personal care, reading, education, tobacco and smoking supplies, cash contributions, and miscellaneous items.

^e The term household refers to a “consumer unit,” which is defined differently than households on Table 8.1.

Household vehicle ownership shows a dramatic increase from 1960 to 1990. In 1960, nearly 79% of households owned less than two vehicles; by 1990, it declined to 45%. Census data prior to 1990 indicated that the majority of households owned one vehicle; in 1990 that changed to two vehicles.

Table 8.4
Household Vehicle Ownership, 1960–2000 Census
(percentage)

	No vehicles	One vehicle	Two vehicles	Three or More vehicles	Total vehicles ^a
1960	21.53%	56.94%	19.00%	2.53%	54,766,718
1970	17.47%	47.71%	29.32%	5.51%	79,002,052
1980	12.92%	35.53%	34.02%	17.52%	129,747,911
1990	11.53%	33.74%	37.35%	17.33%	152,380,479
2000	9.35%	33.79%	38.55%	18.31%	179,417,526

^a Estimates using Census Bureau data; these data on the total number of vehicles do not match the figures on Table 8.1. The figures on Table 8.1, from R.L. Polk and Company, are the preferred data.

2001 National Household Travel Survey Daily Trip Data

The Department of Transportation (DOT) collected data on daily trips in 1969, 1977, 1983, 1990 and 1995 via the Nationwide Personal Transportation Survey (NPTS). Data on longer trips were collected in 1977 and 1995 via the American Travel Survey (ATS). For 2001, the DOT combined the collection of long trip and daily trip data into one survey – the 2001 National Travel Household Travel Survey (NHTS).

The NHTS is the nation's inventory of daily and long-distance travel. The survey includes demographic characteristics of households, people, vehicles, and detailed information on daily and longer-distance travel for all purposes by all modes. NHTS survey data are collected from a sample of U.S. households and expanded to provide national estimates of trips and miles by travel mode, trip purpose, and a host of household attributes.

The Nationwide Household Travel Survey was conducted in 2008 but the data have not been released. The 2001 survey data are the latest available at the current time.

The NHTS was designed to continue the NPTS and ATS series, but as with all data surveys, caution should be used when comparing statistics from one survey to another due to changes in terminology, survey procedures, and target population. The 2001 survey collected data on trips of children under 5 years of age, while the previous NPTS did not. Improved methodologies first used in the collection of trip information in the 1995 NPTS make it difficult to compare these data with past NPTS survey data. Thus, the 1990 NPTS trip data have been adjusted to make it comparable with the later surveys.

Table 8.5
Demographic Statistics from the 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS

	1969	1977	1983	1990	1995	2001	2009	Percent change 1969–2009
Persons per household	3.16	2.83	2.69	2.56	2.63	2.58	2.66	-16%
Vehicles per household	1.16	1.59	1.68	1.77	1.78	1.89	1.92	66%
Workers per household	1.21	1.23	1.21	1.27	1.33	1.35	1.26	4%
Licensed drivers per household	1.65	1.69	1.72	1.75	1.78	1.77	1.87	13%
Vehicles per worker	0.96	1.29	1.39	1.40	1.34	1.39	1.52	59%
Vehicles per licensed driver	0.70	0.94	0.98	1.01	1.00	1.06	1.03	47%
Average vehicle trip length (miles)	8.89	8.34	7.90	8.98	9.06	9.87	10.14	14%

Sources:

U.S. Department of Transportation, Federal Highway Administration, *1990 Nationwide Personal Transportation Survey: Summary of Travel Trends*, FHWA-PL-92-027, Washington, DC, March 1992, Table 2. Data for 1995, 2001 and 2009 (preliminary) were generated from the Internet site *nhts.ornl.gov*. (Additional resources: www.fhwa.dot.gov)

Note: Average vehicle trip length for 1990 and 1995 is calculated using only those records with trip mileage information present. The 1969 survey does not include pickups and other light trucks as household vehicles.

Due to methodology improvements in collecting trip information, the 2001 and 1995 data should be compared only to the 1990 adjusted data. The original 1990 data are comparable to all previous surveys; however, comparisons should always be made with caution because of differing survey methodologies.

U.S. Department of Transportation, Federal Highway Administration, *1990 Nationwide Personal Transportation Survey: Summary of Travel Trends*, FHWA-PL-92-027, Washington, DC, March 1992, Table 7. 1990 adjusted data - Oak Ridge National Laboratory, Oak Ridge, TN, August 1998. 1995 NPTS, 2001, 2009 (preliminary) NHTS data were generated from the Internet site nhts.ornl.gov. (Additional resources: www.fhwa.dot.gov, www.cta.ornl.gov/npts)

^a It is believed that the methodology changes in the 1995 NPTS did not affect journey-to-work trips; therefore, no adjustment is necessary.

In 2001 and 2009 vehicle-miles traveled (vmt) for a three-person household is over 28,000 miles. The number of drivers in a household makes a big difference in vmt, as does the presence of children in the household. Households with children have about 75% more vmt than households without children.

Note: The "All" category for average trip length and duration includes records for which trip purpose was not identified.

While car occupancy stayed constant from 1995 to 2009, most other vehicle types showed increased occupancy. Vans and sport utility vehicles have higher vehicle occupancies than cars.

Figure 8.1. Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS

Sources:

U.S. Department of Transportation, Federal Highway Administration, 1995 Nationwide Personal Transportation Survey, Washington, DC, 1997, and 2009 National Household Travel Survey, Washington, DC. 2009 data are preliminary. (Additional resources: www.fhwa.dot.gov, nhts.ornl.gov)

The average vehicle occupancy, calculated as person-miles per vehicle-mile, is highest for social and recreational purposes. The highest vehicle occupancy levels for all purposes were in 1977. The increase in number of vehicles per household and the decrease in average household size could have contributed to the decline since then.

**Figure 8.2. Average Vehicle Occupancy by Trip Purpose
1977 NPTS and 2009 NHTS**

Sources:

U.S. Department of Transportation, Federal Highway Administration, *1990 Nationwide Personal Transportation Survey: Summary of Travel Trends*, FHWA-PL-92027, Washington, DC, March 1992, Figure 6. Data from 2009 NHTS were generated from the Internet site nhts.ornl.gov, February 2010. 2009 data are preliminary. (Additional resources: www.fhwa.dot.gov, nhts.ornl.gov)

The 1990 household survey reports the highest average annual miles per vehicle and the 2009 survey reports the lowest. The low average in 2009 is evidence that the vehicle-miles are growing at a slower rate than the number of vehicles. These data show that younger vehicles are typically driven more miles than older vehicles.

Table 8.9
Average Annual Miles per Household Vehicle by Vehicle Age

Vehicle age (years)	1983 self-reported	1990 self-reported	1995 self-reported	2001 self-reported	2009 self-reported
Under 1	8,200	19,600	15,900	15,500	12,800

Richard Kuzmyak, COMSIS Corporation, *Personal Travel in the United States, Volume 1: 1983–84 Nationwide Personal Travel Study*, prepared for the U.S. Department of Transportation, Washington, DC, August 1986, Table 4-22, p.4-21. 1990: Generated from the 1990 Nationwide Personal Transportation Study Public Use Tape, March 1992. 1995, 2001 and 2009: Generated from the Internet site: nhts.ornl.gov. 2009 data are preliminary. (Additional resources: www.fhwa.dot.gov, www.eia.doe.gov)

Note: Data include all household vehicles, and have been rounded to the nearest hundred.

Historically, the data from the Nationwide Personal Transportation Survey (NPTS) are based on estimates reported by survey respondents. For the 1995 NPTS and the 2001 National Household Travel Survey (NHTS), odometer data were also collected. The 1995 data indicate that respondents overestimate the number of miles they drive in a year, but the 2001 data do not show that same trend.

Table 8.10
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS

Vehicle age (years)	1995 self-reported	1995 odometer	2001 self-reported	2001 odometer

According to the U.S. Census data, the percentage of workers who car pooled has dropped from 19.7% in 1980 to 11.2% in 2000. The percent of workers using public transit declined from 6.4% to 5.3% in the ten-year period between 1980 and 1990, but stayed relatively the same from 1990 to 2000 (5.2%). The average travel time increased by 2.6 minutes from 1980 to 2000.

^a Physical problems include problems with plumbing, heating, electric, upkeep, and/or hallways. For detailed definitions of "moderate" and "severe" physical problems, see *American Housing Survey for the United States, 2007*, pages A-20 and A-21.

More than half of workers had 15-29 minute commutes in 1990, but that dropped to 35% by 2000. The share of workers commuting less than 15 minutes increased the most in the ten-year period (14 percentage points), but the share of workers commuting 30 minutes or more also saw small increases.

Table 8.18
Workers by Commute Time, 1990 and 2000 Census

Commute time	1990	2000
Less than 15 minutes	15.9%	30.1%
15–29 minutes	51.6%	36.3%
30–39 minutes	14.7%	15.7%

Sales of bicycles with wheel sizes of 20 inches and over have grown at an average annual rate of 1.5% from 1981 to 2008. The largest growth in bicycle sales, however, were bicycles with wheel sizes over 20 inches which grew at an average annual rate of 1.9% from 1998 to 2008.

U.S. Department of Transportation, Federal Highway Administration, 2009 National Household Travel Survey Web site: nhts.ornl.gov. The 2009 data are preliminary.

In 2009 only data on daily trips were collected in the NHTS. The 2001 data are still the latest available on long-distance trips.

Long Distance Trips – 2001 National Household Travel Survey

The 2001 National Household Travel Survey (NHTS) collected data on long-distance trips as well as everyday travel. The everyday travel data is a continuation of the Nationwide Personal Transportation Survey (NPTS), while the long-distance travel data is a continuation of the American Travel Survey (ATS) which was collected in 1977 and 1985. The survey collected trip-related data such as mode of transportation, duration, distance and purpose of trip. It also gathered demographic, geographic, and economic data for analysis purposes.

A long-distance trip is defined as a trip of 50 miles or more, one-way. Long-trip data from the 2001 NHTS were released in the summer of 2004. For additional information about the 2001 NHTS data, contact the Bureau of Transportation Statistics at 202-366-3282 or visit the following Internet site: www.bts.gov/programs/national_household_travel_survey.

1970–76 Energy Use - Department of Transportation, Civil Aeronautics Board, *Fuel Cost and Consumption*, Washington, DC, 1981, and annual.

^a Data are for all U.S. air carriers reporting on Form 41.

^b Available seats per aircraft is calculated as the ratio of available seat-miles to revenue aircraft-miles.

^c Passenger load factor is calculated as the ratio of revenue passenger-miles to available seat-miles for scheduled and nonscheduled services.

^d Energy use includes fuel purchased abroad for international flights.

General aviation includes: (1) aircraft operating under general operating and flight rules; (2) not-for-hire airplanes with a seating capacity of 20 or more or a maximum payload capacity of 6,000 lbs. or more; (3) rotocraft external load operations; (4) on-demand and commuter operations not covered under Federal Aviation Regulations Part 121; and (5) agricultural aircraft operations.

^a Active fixed-wing general aviation aircraft only.

^b Includes rotocraft.

In the early seventies, domestic waterborne commerce accounted for over 60% of total tonnage, but by 1994 foreign tonnage grew to more than half of all waterborne tonnage. Total foreign and domestic tons shipped was almost 2.5 billion tons in 2008.

U.S. Environmental Protection Agency, NONROAD2008a model, downloadable file from <http://www.epa.gov/otaq/nonrdmdl.htm>.

The Interstate Commerce Commission designates Class I railroads on the basis of annual gross revenues. In 2008, seven railroads were given this designation. The number of railroads designated as Class I has changed considerably in the last 30 years; in 1976 there were 52 railroads given Class I designation.

Table 9.7
Class I Railroad Freight Systems in the United States
Ranked by Revenue Ton-Miles, 2008

Railroad	Revenue ton-miles (billions)	Percent
Burlington Northern and Santa Fe Railway Company	664	37.4%
Union Pacific Railroad Company	563	31.7%
CSX Transportation	248	14.0%
Norfolk Southern Railway	195	11.0%
Canadian National, Grand Trunk Corporation	53	3.0%
Kansas City Southern Railway Company	30	1.7%
Soo Line Railroad Company	24	1.4%
Total	1,777	100.0%

Source:

Association of American Railroads, *Railroad Facts, 2009 Edition*, Washington, DC, November 2009, p. 66.
 (Additional resources: www.aar.org)

Revenue ton-miles for Class I freight railroads was over 1.7 trillion in 2008. Though there are many regional and local freight railroads, the Class I freight railroads accounted for 94% of the railroad industry's freight revenue in 2008 and 67% of the industry's mileage operated. The energy intensity of Class I railroads hit an all-time low of 305 btu/ton-mile in 2008.

^a Does not include self-powered units.

^b Does not include private or shipper-owned cars. Beginning in 2001, Canadian-owned U.S. railroads are excluded.

^c Tons originated is a more accurate representation of total tonnage than revenue tons. Revenue tons often produces double-counting of loads switched between rail companies.

^d Data represent total locomotives used in freight and passenger service. Separate estimates are not available.

According to the 2002 Commodity Flow Survey, 5% of all freight ton-miles are rail intermodal shipments (truck/rail or rail/water). See Table 5.13 for details. The number of trailers and containers moved by railroads has increased almost seven-fold from 1965 to 2008. Containerization has increased in recent years, evidenced by the 293% increase in the number of containers from 1988 to 2008.

Energy use - Personal communication with the Amtrak, Washington, DC. (Additional resources: www.amtrak.com, www.aar.org)

^a Data are not available.

^b Energy use for 1994 on is not directly comparable to earlier years. Some commuter rail energy use may have been inadvertently included in earlier years.

Commuter rail, which is also known as regional rail or suburban rail, is long-haul rail passenger service operating between metropolitan and suburban areas, whether within or across state lines. Commuter rail lines usually have reduced fares for multiple rides and commutation tickets for regular, recurring riders.

Table 9.11
Summary Statistics for Commuter Rail Operations, 1984–2008

American Public Transportation Association, *2010 Public Transportation Fact Book*, Washington, DC, April 2010, Tables 5, 6, 8, and 9. (Additional resources: www.apta.com)

This table on transit rail operations includes data on light rail and heavy rail systems. Light rail vehicles are usually single vehicles driven electrically with power drawn from overhead wires. Heavy rail is characterized by high speed and rapid acceleration of rail cars operating on a separate right-of-way.

Energy use - See Appendix A for Rail Transit Energy Use.

^a Heavy rail and light rail. Series not continuous between 1983 and 1984 because of a change in data source by the American Public Transit Association (APTA). Beginning in 1984, data provided by APTA are taken from mandatory reports filed with the Urban Mass Transit Administration (UMTA). Data for prior years were provided on a voluntary basis by APTA members and expanded statistically.

^b 1970–79 data represents total passenger rides; after 1979, data represents unlinked passenger trips.

^c Estimated for years 1970–76 based on an average trip length of 5.8 miles.

^d Calculated as the ratio of passenger-miles to passenger trips.

^e Large system-to-system variations exist within this category.

^f Data are not available.

^g Average annual percentage change is calculated for years 1980–2007.

The Transportation Services Index (TSI) was created by the U.S. Department of Transportation Bureau of Transportation Statistics (BTS). It is an index that measures the movement of freight and passengers. The Freight TSI consists of:

- for-hire trucking (parcel services are not included);
- freight railroad services (including rail-based intermodal shipments such as containers on flat cars); inland waterway traffic;
- pipeline movements (including principally petroleum and petroleum products and natural gas);
- and air freight.

The index does not include international or coastal steamship movements, private trucking, courier services, or the United States Postal Services.

The index does not include intercity bus, sightseeing services, taxi service, private automobile usage, or bicycling and other nonmotorized means of transportation.

The average price for a gallon of gasoline in China was 16 cents cheaper than in the United States in 2008. Those in France, the United Kingdom, and Germany paid, on average, more than seven dollars per gallon.

Note: Comparisons between prices and price trends in different countries require care. They are of limited validity because of fluctuations in exchange rates; differences in product quality, marketing practices, and market structures; and the extent to which the standard categories of sales are representative of total national sales for a given period.

^a Prices represent the retail prices (including taxes) for automotive diesel fuel for non-commercial (household) use.

^b Data are not available.

^c These estimates are for international comparisons only and do not necessarily correspond to gasoline price estimates in other sections of the book.

^d Adjusted by the U.S. Consumer Price Inflation Index.

In 2008 more than sixty percent of the cost of gasoline in France, Germany, and the United Kingdom went for taxes. Of the listed countries, the United States has the lowest percentage of taxes.

(Additional resources: www.iea.org.)

Though the cost of crude oil certainly influences the price of gasoline, it is not the only factor which determines the price at the pump. Processing cost, transportation cost, and taxes also play a major part of the cost of a gallon of gasoline. The average price of a barrel of crude oil (in constant 2009 dollars) increased by 68% from 2000 to 2009, while the average price of a gallon of gasoline increased 23% in this same time period.

Table 10.3

^a Adjusted by the Consumer Price Inflation Index.

At the end of 2009, only four states offered tax exemptions to encourage the use of gasohol for transportation purposes. This list is quite short compared to the 30 states which offered gasohol tax exemptions twenty years ago.

Table 10.7
State Tax Exemptions for Gasohol, 2008

State	Exemption (cents/gallon of gasohol)
Idaho	2.5
Iowa	2.0
Maine	5.4
South Dakota	2.0

^a Includes Clean Fuel Initiatives and Pollution Prevention.

The average price of a new car in 2008 (\$23,051) was very close to the average price in 1916 (\$21,348) when adjusted for inflation. Average new car prices were at their lowest in 1940 (\$11,941). Since 1914 the highest average price was in the year 1998 (\$26,898).

Raff, D.M.G. & Trajtenberg, M. (1995), "Quality-Adjusted Prices for the American Automobile Industry: 1906-1940," National Bureau of Economic Research, Inc.; Gordon, R.J. (1990), *The Measurement of Durable Goods Prices*, National Bureau of Economic Research, Inc.; and U.S. Department of Commerce, Bureau of Economic Analysis (2010), National Income and Product Accounts.

Note: Estimations were used for years 1941-1946.

In current dollars, import cars, on average, were less expensive than domestic cars until 1982. Since then, import prices have tripled, while domestic prices have doubled (current dollars).

^a Includes transplants.

^b Adjusted by the Consumer Price Inflation Index.

The total cost of operating a car is the sum of the fixed cost (depreciation, insurance, finance charge, and license fee) and the variable cost (gas and oil, tires, and maintenance), which is related to the amount of travel. The gas and oil share of total cost was 14.3% in 2009.

^a Not seasonally adjusted.

The total number of employees involved in the manufacture of motor vehicles decreased by almost 48% from 1990 to 2009 and by about 36% for those involved in the manufacturer of motor vehicle parts. In 2008, the share of production workers fell below 80% for manufacturers of both vehicles and parts.

^a OECD is the Organization for Economic Cooperation and Development. See Glossary for included countries.

Global Warming Potentials (GWP) were developed to allow comparison of the ability of each greenhouse gas to trap heat in the atmosphere relative to carbon dioxide. Extensive research has been performed and it has been discovered that the effects of various gases on global warming are too complex to be precisely summarized by a single number. Further understanding of the subject also causes frequent changes to estimates. Despite that, the scientific community has developed approximations, the latest of which are shown below. Most analysts use the 100-year time horizon.

Table 11.2
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide
(kilogram of gas per kilogram of carbon dioxide)

Gas	Lifetime (years)	Global warming potential direct effect for time horizons of		
		20 years	100 years	500 years
Carbon Dioxide (CO ₂)	5-200 ^a	1	1	1
Methane (CH ₄)	12	72	25	8
Nitrous Oxide (N ₂ O)	114	289	298	153
HFCs ^b , PFCs ^c , and Sulfur Hexafluoride				
HFC-23	270	12,000	14,800	12,200

Solomon, S. et al., "Technical Summary," in *Climate Change 2007: The Physical Science Basis*, Contribution of Working Group I to the Fourth Assessment Report of the Intergovernmental Panel on Climate Change, Cambridge University Press, Cambridge, United Kingdom and New York, NY, USA, 2007.

Note: The typical uncertainty for global warming potentials is estimated by the Intergovernmental Panel on Climate Change \pm 35 percent.

^a No single lifetime can be defined for carbon dioxide due to different rates of uptake by different removal processes.

^b Hydrofluorocarbons

^c Perfluorocarbons

Carbon dioxide emissions in 2008 were 16% higher than in 1990. Carbon dioxide accounts for the majority of greenhouse gases.

Table 11.3
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990–2008
(million metric tonnes carbon dioxide equivalent^a)

Source:

U.S. Department of Energy, Energy Information Administration, *Emissions of Greenhouse Gases in the United States, 2008*, Washington, DC, December 2009, Table 1. (Additional resources: www.eia.doe.gov)

Note: This greenhouse gas emissions inventory includes two “adjustments to energy consumption” which make the data different from Table 11.5. The adjustments are as follows:

- 1) Emissions from U.S. Territories are included.
- 2) International bunker fuels and military bunker fuels are excluded from the U.S. total.

^a Carbon dioxide equivalents are computed by multiplying the weight of the gas being measured by its estimated Global Warming Potential (See Table 11.2).

^b GWP = Global warming potential. Includes HFC-hydrofluorocarbons; PFC-perfluorocarbons; and SF₆-sulfur hexafluoride.

Though the transportation sector accounts for the largest share of carbon dioxide emissions, the industrial sector accounts for the largest share of total greenhouse gas emissions.

Table 11.4
Total U.S. Greenhouse Emissions by End-Use Sector, 2008
(million metric tonnes carbon dioxide equivalent^a)

Greenhouse gas and source	Residential	Commercial	Industrial	Transportation	Total
Carbon dioxide	1,230.3	1,084.1	1,760.1	1,818.8	5,839.2
Methane	4.8	203.2	524.8	4.6	737.4
Nitrous oxide	4.6	6.9	239.9	48.8	300.2

Other hydrofluorocarbons, perfluorocarbons/perfluoropolyether	0.0	7.1	0.0	0.0	7.1
Sulfur hexafluoride	4.5	4.3	7.0	0.0	15.8
Total greenhouse gas emissions	1,244.1	1,352.8	2,509.8	1,945.8	7,052.6

Source:

U.S. Department of Energy, Energy Information Administration, *Emissions of Greenhouse Gases in the United States, 2008*, Washington, DC, December 2009, and annual. (Additional resources: www.eia.doe.gov)

Note: This greenhouse gas emissions inventory includes two “adjustments to energy consumption” which make the data different from Table 11.5. The adjustments are as follows:

- (1) Emissions from U.S. Territories are included.
- (2) International bunker fuels and military bunker fuels are excluded from the U.S. total.

^a Carbon dioxide equivalents are computed by multiplying the weight of the gas being measured by its estimated Global Warming Potential (See Table 11.2).

Gases which contain carbon can be measured in terms of the full molecular weight of the gas or just in terms of their carbon content. This table presents carbon dioxide gas. The ratio of the weight of carbon to carbon dioxide is 0.2727. The transportation sector accounts for approximately one-third of carbon emissions.

Table 11.5
U.S. Carbon Emissions from Fossil Energy Consumption
by End-Use Sector, 1990–2008^a
(million metric tonnes of carbon dioxide)

	End Use Sector				Transportation Percentage	CO ₂ From All Sectors

The Greenhouse Gases, Regulated Emissions, and Energy Use in Transportation (GREET) Model

http://www.transportation.anl.gov/modeling_simulation/GREET/

Sponsored by the U.S. Department of Energy's Office of Energy Efficiency and Renewable Energy (EERE), Argonne has developed a full life-cycle model called GREET (Greenhouse gases, Regulated Emissions, and Energy use in Transportation). It allows researchers and analysts to evaluate energy and emission impacts of various vehicle and fuel combinations on a full fuel-cycle/vehicle-cycle basis. The first version of GREET was released in 1996. Since then, Argonne has continued to update and expand the model. The most recent GREET versions are GREET 1.8c.0 version for fuel-cycle analysis and GREET 2.7 version for vehicle-cycle analysis.

Figure 11.1. GREET Model

For a given vehicle and fuel system, GREET separately calculates the following:

- Consumption of total energy (energy in non-renewable and renewable sources), fossil fuels (petroleum, natural gas, and coal together), petroleum, coal and natural gas.
- Emissions of CO₂-equivalent greenhouse gases - primarily carbon dioxide (CO₂), methane (CH₄), and nitrous oxide (N₂O).

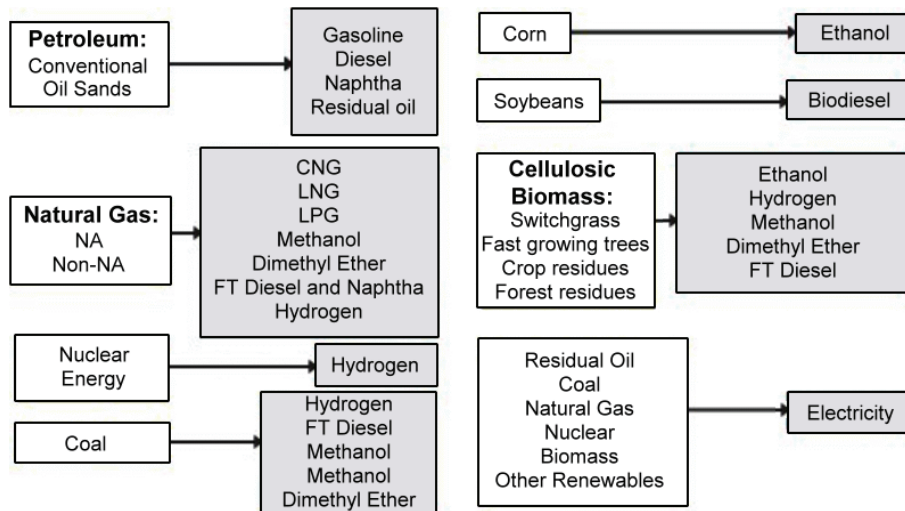

- Emissions of six criteria pollutants: volatile organic compounds (VOCs), carbon monoxide (CO), nitrogen oxide (NO_x), particulate matter with size smaller than 10 micron (PM₁₀), particulate matter with size smaller than 2.5 micron (PM_{2.5}), and sulfur oxides (SO_x).

REET includes more than 100 fuel production pathways and more than 70 vehicle/fuel systems.

These vehicle/fuel systems cover all major vehicle technologies in the market and R&D arena:

- Conventional spark-ignition engines
- Direct-injection, spark-ignition engines
- Direct injection, compression-ignition engines
- Grid-independent hybrid electric vehicles
- Grid-connected (or plug-in) hybrid electric vehicles
- Battery-powered electric vehicles
- Fuel-cell vehicles

Figure 11.2. REET Model Feedstocks and Fuels

To address technology improvements over time, REET simulates vehicle/fuel systems over the period from 1990 to 2020, in five-year intervals.

For additional information about the REET model, see the REET Web site, or contact:

Carbon Footprint

The carbon footprint measures a vehicle's impact on climate change in tons of carbon dioxide (CO₂) emitted annually. The following three tables show the carbon footprint for various vehicle classes. The sales-weighted average fuel economy rating for each vehicle class, based on 45% highway and 55% city driving, is used to determine the average annual carbon footprint for vehicles in the class. An estimate of 15,000 annual miles is used for each vehicle class and for each year in the series. The equation to calculate carbon footprint uses results of the GREET model version 1.8.

$$\text{CarbonFootprint} = \left(CO_2 \times LHV \times \frac{\text{AnnualMiles}}{\text{CombinedMPG}} \right) + (CH_4 + N_2O) \times \text{AnnualMiles}$$

where:

CO₂ = (Tailpipe CO₂ + Upstream Greenhouse Gases) in grams per million Btu

LHV = Lower (or net) Heating Value in million Btu per gallon

CH₄ = Tailpipe CO₂ equivalent methane in grams per mile

N₂O = Tailpipe CO₂ equivalent nitrous oxide in grams per mile

The carbon footprint for all classifications of cars declined between 1975 and 2009. Midsize cars have experienced the greatest reduction in carbon footprint with a decrease of almost 57%.

Calculated using fuel economy from the U.S. Environmental Protection Agency, *Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends: 1975 Through 2009*, November 2009. See page 11-10 for details.

^a Annual carbon footprint is based on 15,000 miles of annual driving.

^b Data are not available.

The amount of carbon dioxide released into the atmosphere by a vehicle is primarily determined by the carbon content of the fuel. However, there is a small portion of the fuel that is not oxidized into carbon dioxide when the fuel is burned. The Environmental Protection Agency (EPA) has published information on carbon dioxide emissions from gasoline and diesel which takes the oxidation factor into account and is based on the carbon content used in EPA's fuel economy analyses. The other fuels listed come from the Energy Information Administration.

Table 11.11
Carbon Dioxide Emissions from a Gallon of Fuel

	Grams per gallon	Kilograms per gallon	Pounds per gallon
Gasoline	8,788	8.8	19.4
Diesel	10,084	10.1	22.2
LPG	5,805	5.8	12.8
Propane	5,760	5.8	12.7

Chapter 12

Criteria Air Pollutants

Summary Statistics from Tables in this Chapter

Source	
Table 12.1	Transportation's share of U.S. emissions, 2008
	<i>CO</i> 73.2%
	<i>NO_x</i> 57.9%
	<i>VOC</i> 37.7%
	<i>PM-2.5</i> .2%
	<i>SO₂</i> 4.5%
	<i>PM-10</i> 3.2%

Transportation accounts for the majority of carbon monoxide and nitrogen oxide emissions. Highway vehicles are responsible for the largest share of transportation emissions.

Table 12.1
Total National Emissions of the Criteria Air Pollutants by Sector, 2008
 (millions of short tons/percentage)

Sector	CO	NO_x	VOC	PM-10	PM-2.5	SO₂

^a The sums of subcategories may not equal total due to rounding.

Though gasoline-powered light vehicles continue to be responsible for the majority of carbon monoxide emissions from highway vehicles, the total pollution from light vehicles in 2005 is about a third of what it was in 1970. This is despite the fact that there were many more light vehicles on the road in 2005.

Note: After 2003, Tier 1 and TLEV standards were eliminated. LDT1 = light truck (6,000 lbs. or less GVWR) up through 3,750 lbs. loaded vehicle weight; LDT2 = light truck (6,000 lbs. or less GVWR) greater than 3,750 lbs. loaded vehicle weight.

^a THCE for methanol vehicles. Does not apply to CNG vehicles.

^b THCE for Tier 0 methanol vehicles. NMHCE for other alcohol vehicles.

^c NMHC for diesel-fueled vehicles.

^d Diesel-fueled vehicles only.

APPENDIX A

SOURCES & METHODOLOGIES

SOURCES & METHODOLOGIES

This appendix contains documentation of the estimation procedures used by ORNL. The reader can examine the methodology behind the estimates and form an opinion as to their utility. The appendix is arranged by subject heading. Only tables which contain ORNL estimations are documented in Appendix A; all other tables have sources listed at the bottom of the table. Since abbreviations are used throughout the appendix, a list of abbreviations is also included.

Contents of Appendix A

List of Abbreviations Used in Appendix A	A-4
Energy Use Sources	A-5
Highway energy use	A-5
Off-highway energy use	A-10
Nonhighway energy use	A-11
Passenger Travel and Energy Use	A-21
Highway Passenger Mode Energy Intensities	A-25
Nonhighway Mode Energy Intensities	A-27
Freight Movement and Energy Use	A-28
Freight Mode Energy Intensities	A-29

List of Abbreviations Used in Appendix A

AAMA	American Automobile Manufacturers Association
AAR	Association of American Railroads
APTA	American Public Transportation Association
Amtrak	National Railroad Passenger Corporation
Btu	British thermal unit
DOC	Department of Commerce
DOE	Department of Energy
DOT	Department of Transportation
EIA	Energy Information Administration
EPA	Environmental Protection Agency
FAA	Federal Aviation Administration
FHWA	Federal Highway Administration
GSA	General Services Administration
gvw	gross vehicle weight
lpg	liquefied petroleum gas
mpg	miles per gallon
NHTS	National Household Travel Survey
NHTSA	National Highway Traffic Safety Administration
NPTS	Nationwide Personal Transportation Survey
NVPP	National Vehicle Population Profile
ORNL	Oak Ridge National Laboratory
pmt	passenger-miles traveled
RECS	Residential Energy Consumption Survey
RTECS	Residential Transportation Energy Consumption Survey
TIUS	Truck Inventory and Use Survey
TSC	Transportation Systems Center
VIUS	Vehicle Inventory and Use Survey
vmt	vehicle-miles traveled

Energy Use Sources

Highway energy use

Automobiles

Fuel use in gallons from: DOT, FHWA, *Highway Statistics 2008*, Table VM-1 and annual editions back to 1996; DOT, FHWA, *Highway Statistics Summary* to 1995. Fuel use was distributed among fuel types using the percentages shown in Table A.1. The Federal Highway Administration discontinued publication of gasohol data in 2005. Therefore, a new methodology was developed using data from EIA, *Alternatives to Traditional Transportation Fuels*, 2006, Table C1.

Table A.1
Automobile Fuel Use and Fuel Type Shares for Calculation of Energy Use

Year	Fuel use (million gallons)	Source for Gasohol shares	Source for gasoline/diesel shares	Shares by fuel type

Note: CNG is reported in diesel-gallon equivalents.^a Data are not available.

Intercity and School:

Eno Transportation Foundation, *Transportation in America, 2001, Nineteenth Edition*, 2003, Washington, DC, pp. 20–23. School bus fuel was assumed to be 90% diesel fuel and 10% gasoline based on estimates from the National Association of State Directors of Pupil Transportation Services. Intercity bus fuel was assumed to be 100% diesel.

Off-highway energy use

U.S. Environmental Protection Agency, NONROAD2008a model, results generated April 2010. Gallons of fuel by fuel type were produced for agricultural equipment, airport equipment, construction and mining equipment, industrial equipment, lawn and garden equipment, logging equipment, railroad maintenance equipment, and recreational equipment. Some non-transportation-related equipment, such as generators, chain saws, compressors, and pumps, were excluded from the data.

Nonhighway energy use

Air

General Aviation:

DOT, FAA, *General Aviation Activity and Avionics Survey: Annual Summary Report Calendar Year 2008*, Table 5.1, and annual.

Domestic and International Air Carrier:

DOT, Bureau of Transportation Statistics, "Fuel Cost and Consumption Tables," www.bts.gov/xml/fuel/report/src/index.xml. The table below shows all international fuel use. Because the data for international include fuel purchased abroad, for the tables in Chapter 2, the international total was divided in half to estimate domestic fuel use for international flights.

Table A.8
Air Carrier Fuel Use

Year	Domestic (thousand gallons)	International (thousand gallons)	Total (thousand gallons)
1970			10,085,000
1971			10,140,000

Pipeline

The sum of natural gas, crude petroleum and petroleum product, and coal slurry and water.

Natural Gas:

The amount of natural gas used to transport natural gas was defined as "pipeline fuel" as reported in DOE, EIA, *Natural Gas Annual 2008*, Table 1. Cubic feet were converted to Btu using 1,031 Btu/ft³. Electricity use was estimated using the following procedure as reported on p. 5-110 of J. N. Hooker et al., *End Use Energy Consumption DataBase: Transportation Sector*. The energy consumption of a natural gas pipeline was taken to be the energy content of the fuel used to drive the pumps. Some 94% of the installed pumping horsepower was supplied by natural gas. The remaining 6% of the horsepower was generated more efficiently, mostly by electric motors. The energy consumed by natural gas pipeline pumps that were electrically powered was not known. In order to estimate the electricity consumed, the Btu of natural gas pipeline fuel consumed was multiplied by a factor of 0.015. From this computed value, electricity efficiency and generation loss must be taken into account. The electricity energy use in Btu must be converted to kWhr, using the conversion factor 29.305×10^{-5} kWhr/Btu. Electricity generation and distribution efficiency was 29%. When generation and distribution efficiency are taken into account, 1 kWhr equals 10,339 Btu.

Crude petroleum and petroleum product:

J. N. Hooker, *Oil Pipeline Energy Consumption and Efficiency*, ORNL-5697, ORNL, Oak Ridge, TN, 1981. (Data held constant; Latest available data.)

Coal slurry and water:

W. F. Banks, Systems, Science and Software, *Energy Consumption in the Pipeline Industry*, LaJolla, CA, October 1977. (Data held constant; Latest available data.)

Table A.11
Pipeline Fuel Use

Year	Natural gas (million cubic feet)	Estimated natural gas pipeline electricity use (million kWhr)	Electricity constant (btu)
1970	722,166	3,272.9	212.1

2006	62,463	548,856
2007	61,824	577,864
2008	63,428	582,022
Heat content used for conversion to Btu	138,700 Btu/gallon	10,339 Btu/kWhr

Calculation of Million Barrels per Day Crude Oil Equivalent

One gallon of gasoline, diesel fuel, or lpg is estimated to be the equivalent of one gallon of crude oil. Petroleum used for electricity was calculated using the following formula:

$$\left(\frac{BTU * S}{G * P} \right) / 365 / 1000$$

- BTU = Btus of electricity from Table 2.4
 S = Share of petroleum used in making primary electricity (Calculated from Table 2.6 from the EIA, Monthly Energy Review)
 G = Electricity generation and distribution (assumed 29%)
 P = Btus per barrel of petroleum product (Table A3 from the EIA, Monthly Energy Review).

Passenger Travel and Energy Use

Automobiles

Number of vehicles, vehicle-miles – DOT, FHWA, *Highway Statistics, 2008*, Table VM-1. Data series shown in Table 4.1.

Passenger-miles – Vehicle-miles multiplied by an average load factor.

Load factor – 2009 NHTS shows automobile load factor as 1.59 persons per vehicle (preliminary).

Energy intensities –

Btu per vehicle-mile – Automobile energy use divided by vehicle-miles.

Btu per passenger-mile – Automobile energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-4. Data series shown in Table 2.7.

Light trucks

Number of vehicles, vehicle-miles – DOT, FHWA, *Highway Statistics 2008*, Table VM-1. Data by truck type were multiplied by the shares of trucks/truck travel which are for personal use (Table A.16).

Passenger-miles – Vehicle-miles multiplied by an average load factor.

Load factor – 2009 NHTS shows personal light truck load factor as 1.84 persons per vehicle (preliminary).

Energy intensities -

Btu per vehicle-mile – Personal light truck energy use divided by personal light truck vehicle-miles.

Btu per passenger-mile – Personal light truck energy use divided by personal light truck passenger-miles.

Energy use – See Energy Use Sources, p. A-7, A-8 (light trucks, medium/heavy trucks). Data by truck type were multiplied by the shares of truck fuel use which are for personal use (Table A.16) which were derived by ORNL from the 2002 VIUS Micro Data File on CD.

Table A.16
Share of Trucks, Truck Travel,
and Fuel Use for Personal Travel

Personal trucks	
85.6%	2-axle, 4-tire trucks
26.9%	Other single-unit and combination trucks
Personal truck travel	
80.9%	2-axle, 4-tire trucks
13.1%	Other single-unit and combination trucks
Personal truck fuel use	
78.0%	2-axle, 4-tire trucks
6.0%	Other single-unit and combination trucks

Note: Since these shares come from the 2002 VIUS, they may underestimate the amount of personal trucks, truck travel, and energy use for 2008.

Motorcycles

Number of vehicles, vehicle-miles – DOT, FHWA, *Highway Statistics 2008*, Table VM-1.

Passenger-miles – Vehicle-miles multiplied by an average load factor.

Load factor - 2009 NHTS shows motorcycle load factor as 1.18 persons per vehicle (preliminary).

Energy intensities –

Btu per vehicle-mile – Motorcycle energy use divided by vehicle-miles.

Btu per passenger-mile – Motorcycle energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-6. Data series shown in Table 2.7.

Demand Response

Number of vehicles, vehicle-miles, passenger-miles – APTA, *2010 Public Transportation Fact Book*, Washington, DC, 2010.

Load factor – Passenger-miles divided by vehicle-miles.

Energy intensities –

Btu per vehicle-mile – Energy use divided by vehicle-miles.

Btu per passenger-mile – Energy use divided by passenger-miles.

Energy use – APTA, *2010 Public Transportation Fact Book*, Washington, DC, 2010.

Vanpool

Number of vehicles, vehicle-miles, passenger-miles – APTA, *2010 Public Transportation Fact Book*, Washington, DC, 2010.

Load factor – Passenger-miles divided by vehicle-miles.

Energy intensities –

Btu per vehicle-mile – Energy use divided by vehicle-miles.

Btu per passenger-mile – Energy use divided by passenger-miles.

Energy use – APTA, *2010 Public Transportation Fact Book*, Washington, DC, 2010.

Buses

Transit

Number of vehicles, vehicle-miles, passenger-miles – APTA, *2010 Public Transportation Fact Book*, Washington, DC, 2010. Data series shown on Table 5.16.

Load factor – Passenger-miles divided by vehicle-miles.

Energy intensities –

Btu per vehicle-mile – Transit bus energy use divided by transit bus vehicle-miles.

Btu per passenger-mile – Transit bus energy use divided by transit bus passenger-miles.

Energy use – See Energy Use Sources, p. A-6. Data series shown in Table 5.16.

Intercity

Energy use – See Energy Use Sources, p. A-7. Because the 2001 and 2002 data are not available, the rate of change in bus VMT from FHWA, *Highway Statistics 2008*, was used to estimate the change in energy use.

School

Number of vehicles – DOT, FHWA, *Highway Statistics 2008*, Table MV-10.

Energy use – See Energy Use Sources, p. A-7. Because the data past 2000 are not available, the rate of change in bus VMT from FHWA, *Highway Statistics 2008*, was used to estimate the change in energy use.

Air

Certificated air carriers

Aircraft-miles, passenger-miles – DOT, BTS, *Air Carrier Traffic Statistics*, www.bts.gov/programs/airline_information/air_carrier_traffic_statistics, Washington, DC.

Load factor – Passenger-miles divided by aircraft-miles.

Energy intensities –

Btu per passenger-mile – Certificated air carrier energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-11. All of domestic fuel use and half of international fuel use was considered to be domestic use.

Note: These data differ from the data in Table 9.2 because that table contains data on ALL domestic AND international air carrier energy use and passenger-miles.

General aviation

Number of vehicles – DOT, FAA, *General Aviation Activity and Avionics Survey: Calendar Year 2008*, Data series shown in Table 9.3.

Energy intensities –

Btu per passenger-mile – General aviation energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-11. Data series shown in Table 9.3.

Recreational boating

Number of vehicles and energy use – U.S. EPA, NONROAD2008a model.

Rail

Intercity

Number of vehicles, vehicle-miles, passenger-miles – AAR, *Railroad Facts, 2009 Edition*, Washington, DC, 2009.

Load factor – Passenger-miles divided by vehicle-miles.

Energy Intensities –

Btu per vehicle-mile – Intercity rail energy use divided by vehicle-miles.

Btu per passenger-mile – Intercity rail energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-20. Data series shown in Table 9.10.

Transit

Number of vehicles, vehicle-miles, passenger-miles – APTA, *2010 Public Transportation Fact Book*, Washington, DC, 2010. Sum of light and heavy rail transit. Data series shown on Table 9.12.

Load factor – Passenger-miles divided by vehicle-miles.

Energy intensities –

Btu per vehicle-mile – Light and heavy transit rail energy use divided by vehicle-miles.

Btu per passenger-mile – Light and heavy transit rail energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-19. Data series shown in Table 9.12.

Commuter

Number of vehicles, vehicle-miles, passenger-miles – APTA, *2010 Public Transportation Fact Book*, Washington, DC, 2010. Data series shown on Table 9.11.

Load factor – Passenger-miles divided by vehicle-miles.

Energy intensities –

Btu per vehicle-mile – Commuter rail energy use divided by vehicle-miles.

Btu per passenger-mile – Commuter rail energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-18. Data series shown in Table 9.11.

Highway Passenger Mode Energy Intensities

Automobiles

Btu per vehicle-mile – Automobile energy use divided by automobile vehicle miles of travel.

Energy use – See Energy Use Sources, p. A-5. Data series shown in Table 2.7.

Vehicle-miles – DOT, FHWA, *Highway Statistics 2008*, Table VM-1 and annual editions back to 1996; DOT, FHWA, *Highway Statistics Summary to 1995*. Data series shown in Table 4.1.

Btu per passenger-mile – Automobile energy use divided by automobile passenger-miles.

Energy use – See Energy Use Sources, p. A-5. Data series shown in Table 2.7.

Passenger miles – Vehicle miles multiplied by an average load factor.

Vehicle-miles – DOT, FHWA, *Highway Statistics 2008*, Table VM-1 and annual editions back to 1996; DOT, FHWA, *Highway Statistics Summary to 1995*. Data series shown in Table 4.1.

Load factor – NPTS 1969, 1977, 1983/84, 1990, and 1995; NHTS 2001 and 2009.

Table A.17
Automobile Load Factor used to calculate Passenger-Miles

Year	Source	Load Factor
1970	1969 NPTS	1.90
1971	Interpolated	1.90
1972	Interpolated	1.90
1973	Interpolated	1.90

2004	2001 NHTS	1.57
2005	2001 NHTS	1.57
2006	2001 NHTS	1.57
2007	2001 NHTS	1.57
2008	2009 NHTS	1.59

Light trucks

Btu per vehicle-mile – Light truck energy use divided by light truck vehicle miles of travel.

Energy use – See Energy Use Sources, p. A-8. Data series shown in Table 2.7.

Vehicle-miles – DOT, FHWA, *Highway Statistics 2008*, Table VM-1 and annual editions back to 1996; DOT, FHWA, *Highway Statistics Summary to 1995*. Data series shown in Table 4.2.

Buses

Transit

Btu per vehicle-mile – Transit bus energy use divided by transit bus vehicle-miles.

Energy use – See Energy Use Sources, p. A-6. Data series shown in Table 5.16.

Vehicle-miles – APTA, *2010 Public Transportation Fact Book*, Washington, DC, 2010. Data series shown on Table 5.16.

Btu per passenger-mile – Transit bus energy use divided by transit bus passenger-miles.

Energy use – See Energy Use Sources, p. A-6. Data series shown in Table 5.16.

Passenger-miles – APTA, *2010 Public Transportation Fact Book*, Washington, DC, 2010. Data series shown on Table 5.16.

Intercity

Btu per passenger-mile – Intercity bus energy use divided by intercity bus passenger-miles.

Energy use – See Energy Use Sources, p. A-7. Because the data past 2000 are not available, the rate of change in bus VMT from FHWA, *Highway Statistics 2008*, was used to estimate the change in energy use.

Passenger-miles – (Data past 2000 are not available.) Eno Foundation for Transportation, *Transportation in America 2001*, Nineteenth edition, Washington, DC.

Nonhighway Mode Energy Intensities

Air

Certificated air carriers

Btu per passenger-mile – Certificated air carrier energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-12. All of domestic fuel use and half of international fuel use was considered to be domestic use.

Passenger-miles – DOT, BTS, *Air Carrier Traffic Statistics*, Washington, DC, www.bts.gov/programs/airline_information/air_carrier_traffic_statistics. Pre-1994 data are from various editions of the *FAA Statistical Handbook of Aviation* (no longer published). Scheduled service passenger-miles of domestic air carriers and half of international air carriers were used to coincide with fuel use.

Note: These data differ from the data in Table 9.2 because that table contains data on ALL domestic AND international air carrier energy use and passenger-miles.

General aviation

Btu per passenger-mile – General aviation energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-11. Data series shown in Table 9.3.

Passenger-miles – (Data past 2000 not available.) Eno Foundation for Transportation, *Transportation in America 2001*, Nineteenth edition, Washington, DC.

Rail

Intercity

Btu per passenger-mile – Intercity rail energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-20. Data series shown in Table 9.10.

Passenger-miles – AAR, *Railroad Facts, 2009 Edition*, and previous annual editions.

Transit

Btu per passenger-mile – Transit rail energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-19. Data series shown in Table 9.12.

Passenger-miles – APTA, *2010 Public Transportation Fact Book*, Washington, DC, 2010. Data series shown on Table 9.12.

Commuter

Btu per passenger-mile – Commuter rail energy use divided by passenger-miles.

Energy use – See Energy Use Sources, p. A-18. Data series shown in Table 9.11.

Passenger-miles – APTA, *2010 Public Transportation Fact Book*, Washington, DC, 2010. Data series shown on Table 9.11.

Freight Movement and Energy Use

Rail

Number of locomotives, ton-miles, tons shipped, average length of haul – AAR, *Railroad Facts, 2009 Edition*, Washington, DC, 2009. Data series shown in Table 9.8.

Energy intensity – Class I rail energy use divided by freight car-miles.

Energy use – See Energy Use Sources, p. A-16. Data series shown in Table 9.8.

Water

Number of vehicles – U.S. Department of the Army, Army Corps of Engineers, *Waterborne Transportation Lines of the United States, Calendar Year 2008, Volume 1—National Summaries*, New Orleans, LA, 2009.

Ton-miles, tons shipped, average length of haul – U.S. Department of the Army, Army Corps of Engineers, *Waterborne Commerce of the United States, Calendar Year 2008, Part 5: National Summaries*, New Orleans, LA, 2009. Data series shown in Table 9.5.

Btu per ton-mile – Domestic waterborne commerce energy use divided by ton-miles.

Energy use – See Energy Use Sources, p. A-12. Data series shown in Table 9.5.

Freight Mode Energy Intensities

Truck

Btu per vehicle-mile – Heavy single-unit and combination truck energy use divided by vehicle miles

Energy use – See Energy Use Sources (medium/heavy trucks), p. A-9.

Vehicle-miles – DOT, FHWA, *Highway Statistics 2008*, Table VM-1 and annual editions back to 1996; DOT, FHWA, *Highway Statistics Summary to 1995*. Data series is the total of vehicle travel data on Tables 5.1 and 5.2.

Rail

Btu per freight car-mile – Class I rail energy use divided by freight car-miles.

Energy use – See Energy Use Sources, p. A-17. Data series shown in Table 9.8.

Freight car miles – AAR, *Railroad Facts, 2009 Edition*, Washington, DC, 2009. Data series shown in Table 9.8.

Btu per ton-mile – Class I rail energy use divided by ton-miles.

Energy use – See Energy Use Sources, p. A-16. Data series shown in Table 9.8.

Ton-miles – AAR, *Railroad Facts, 2009 Edition*, Washington, DC, 2009. Data series shown in Table 9.8.

Water

Btu per ton-mile – Domestic waterborne commerce energy use divided by ton-miles.

Energy use – See Energy Use Sources, p. A-13. Data series shown in Table 9.5.

Ton-miles – U.S. Department of the Army, Army Corps of Engineers, *Waterborne Commerce of the United States, Calendar Year 2008*, Part 5: National Summaries, New Orleans, LA, 2009. Data series shown in Table 9.5.

APPENDIX B

CONVERSIONS

CONVERSIONS

A Note about Heating Values

The heat content of a fuel is the quantity of energy released by burning a unit amount of that fuel. However, this value is not absolute and can vary according to several factors. For example, empirical formulae for determining the heating value of liquid fuels depend on the fuels' American Petroleum Institute (API) gravity. The API gravity varies depending on the percent by weight of the chemical constituents and impurities in the fuel, both of which are affected by the combination of raw materials used to produce the fuel and by the type of manufacturing process. Temperature and climatic conditions are also factors.

Because of these variations, the heating values in Table B.4 may differ from values in other publications. The figures in this report are representative or average values, not absolute ones. The gross (higher) heating values used here agree with those used by the Energy Information Administration (EIA).

Heating values fall into two categories, usually referred to as “higher” (or gross) and “lower” (or net). If the products of fuel combustion are cooled back to the initial fuel-air or fuel-oxidizer mixture temperature and the water formed during combustion is condensed, the energy released by the process is the higher (gross) heating value. If the products of combustion are cooled to the initial fuel-air temperature, but the water is considered to remain as a vapor, the energy released by the process is the lower (net) heating value. Usually the difference between the gross and net heating values for fuels used in transportation is around 5 to 8 percent; however, it is important to be consistent in their use.

Table B.1
Hydrogen Heat Content

1 kilogram hydrogen =	
Higher heating value	Lower heating value
134,200 Btu	113,400 Btu
39.3 kWhr	33.2 kWhr
141,600 kJ	119,600 kJ
33,800 kCal	28,560 kCal

Table B.4
Heat Content for Various Fuels

Conventional gasoline	125,000 Btu/gal (gross) = 115,400 Btu/gal (net)
Hydrogen	134,200 Btu/kg (gross) = 113,400 Btu/kg (net)
Diesel motor fuel	138,700 Btu/gal (gross) = 128,700 Btu/gal (net)
Biodiesel	126,200 Btu/gal (gross) = 117,100 Btu/gal (net)
Methanol	64,600 Btu/gal (gross) = 56,600 Btu/gal (net)
Ethanol	84,600 Btu/gal (gross) = 75,700 Btu/gal (net)
Gasohol	120,900 Btu/gal (gross) = 112,400 Btu/gal (net)
E85	90,700 Btu/gal (gross) = 81,600 Btu/gal (net)
Aviation gasoline	120,200 Btu/gal (gross) = 112,000 Btu/gal (net)
Liquefied petroleum gas (LPG)	91,300 Btu/gal (gross) = 83,500 Btu/gal (net)
Butane	103,000 Btu/gal (gross) = 93,000 Btu/gal (net)
Jet fuel (naphtha)	127,500 Btu/gal (gross) = 118,700 Btu/gal (net)
Jet fuel (kerosene)	135,000 Btu/gal (gross) = 128,100 Btu/gal (net)
Lubricants	144,400 Btu/gal (gross) = 130,900 Btu/gal (net)
Waxes	131,800 Btu/gal (gross) = 120,200 Btu/gal (net)
Asphalt and road oil	158,000 Btu/gal (gross) = 157,700 Btu/gal (net)
Liquefied natural gas (LNG)	84,800 Btu/gal (gross) = 74,700 Btu/gal (net)
Compressed natural gas (CNG)	22,500 Btu/gal (gross) = 20,300 Btu/gal (net)
Crude petroleum	138,100 Btu/gal (gross) = 131,800 Btu/gal (net)
Fuel Oils	
Residual	149,700 Btu/gal (gross) = 138,400 Btu/gal (net)
Distillate	138,700 Btu/gal (gross) = 131,800 Btu/gal (net)
Coal	
Anthracite – Consumption	21.711 x 10 ⁶ Btu/short ton
Bituminous and lignite – Consumption	21.012 x 10 ⁶ Btu/short ton
Production average	21.352 x 10 ⁶ Btu/short ton
Consumption average	21.015 x 10 ⁶ Btu/short ton

Table B.5
Fuel Equivalents

1 million bbl crude oil/day	= 0.365 billion bbl crude oil/year = 2.117 quadrillion Btu/year = 105.914 million short tons coal/year = 96.085 million metric tons coal/year = 2.059 trillion ft ³ natural gas/year = 2,233 petajoules/year

Table B.14
SI Prefixes and Their Values

	Value	Prefix	Symbol
One million million millionth	10^{-18}	atto	a
One thousand million millionth	10^{-15}	femto	f
One million millionth	10^{-12}	pico	p
One thousand millionth	10^{-9}	nano	n
One millionth	10^{-6}	micro	μ
One thousandth	10^{-3}	milli	m
One hundredth	10^{-2}	centi	c
One tenth	10^{-1}	deci	
One	10^0		
Ten	10^1	deca	
One hundred	10^2	hecto	
One thousand	10^3	kilo	k
One million	10^6	mega	M
One billion ^a	10^9	giga	G
One trillion ^a	10^{12}	tera	T
One quadrillion ^a	10^{15}	peta	P
One quintillion ^a	10^{18}	exa	E

^aCare should be exercised in the use of this nomenclature, especially in foreign correspondence, as it is either unknown or carries a different value in other countries. A "billion," for example, signifies a value of 10^{12} in most other countries.

Table B.15
Metric Units and Abbreviations

Quantity	Unit name	Symbol
Energy	joule	J
Specific energy	joule/kilogram	J/kg
Specific energy consumption	joule/kilogram•kilometer	J/(kg•km)
Energy consumption	joule/kilometer	J/km
Energy economy	kilometer/kilojoule	km/kJ
Power	kilowatt	kW
Specific power	watt/kilogram	W/kg
Power density	watt/meter ³	W/m ³
Speed	kilometer/hour	km/h
Acceleration	meter/second ²	m/s ²
Range (distance)	kilometer	km
Weight	kilogram	kg
Torque	newton•meter	N•m
Volume	meter ³	m ³
Mass; payload	kilogram	kg
Length; width	meter	m
Brake specific fuel consumption	kilogram/joule	kg/J
Fuel economy (heat engine)	liters/100 km	L/100 km

Table B.16
Carbon Coefficients, 2002
(Million metric tons carbon per quadrillion Btu)

Fuel Type	
Coal	
Coal (residential)	26.04
Coal (commercial)	26.04
Coal (industrial coking)	25.63
Coal (industrial other)	25.74
Coal (electric utility)	25.98
Natural gas	
Natural gas (pipeline)	14.47
Natural gas (flared)	14.92
Petroleum	
Asphalt and road oil	20.62
Aviation gasoline	18.87
Crude oil	20.30
Distillate fuel	19.95
Jet fuel	19.33
Kerosene	19.72
LPG	16.99
Lubricants	20.24
Motor gasoline	19.34
Petrochemical feed.	19.37
Petroleum coke	27.85
Residual fuel	21.49
Waxes	19.81

Note: All coefficients based on Higher Heating (Gross Calorific) Value and assume 100 percent combustion.

Conversion of Constant Dollar Values

Many types of information in this data book are expressed in dollars. Generally, constant dollars are used—that is, dollars of a fixed value for a specific year, such as 1990 dollars. Converting current dollars to constant dollars, or converting constant dollars for one year to constant dollars for another year, requires conversion factors (Table B.17 and B.18). Table B.17 shows conversion factors for the Consumer Price Index inflation factors. Table B.18 shows conversion factors using the Gross National Product inflation factors.

Table B.17
Consumer Price Inflation (CPI) Index

Figure C.3. Map of Places where Reformulated Gasoline is Sold

Source:

U.S. Environmental Protection Agency, www.epa.gov/otaq/rfg/whereyoulive.htm.

Note: Reformulated gasoline is a motor gasoline specially formulated to achieve significant reductions in vehicle emissions of ozone-forming and toxic air pollutants. The Clean Air Act of 1990 mandates reformulated gasoline use in areas with ozone-air pollution problems.

GLOSSARY

Acceleration power – Measured in kilowatts. Pulse power obtainable from a battery used to accelerate a vehicle. This is based on a constant current pulse for 30 seconds at no less than 2/3 of the maximum open-circuit-voltage, at 80% depth-of-discharge relative to the battery's rated capacity and at 20° C ambient temperature.

Air Carrier – The commercial system of air transportation consisting of certificated air carriers, air taxis (including commuters), supplemental air carriers, commercial operators of large aircraft, and air travel clubs.

Certificated route air carrier: An air carrier holding a Certificate of Public Convenience and Necessity issued by the Department of Transportation to conduct scheduled interstate services. Nonscheduled or charter operations may also be conducted by these carriers. These carriers operate large aircraft (30 seats or more, or a maximum payload capacity of 7,500 pounds or more) in accordance with Federal Aviation Regulation part 121.

Domestic air operator: Commercial air transportation within and between the 50 States and the District of Columbia. Includes operations of certificated route air carriers, Pan American, local service, helicopter, intra-Alaska, intra-Hawaii, all-cargo carriers and other carriers. Also included are transborder operations conducted on the domestic route segments of U.S. air carriers. Domestic operators are classified based on their operating revenue as follows:

- Majors - over \$1 billion
- Nationals - \$100-1,000 million
- Large Regionals - \$10-99.9 million
- Medium Regionals - \$0-9.99 million

International air operator: Commercial air transportation outside the territory of the United States, including operations between the U.S. and foreign countries and between the U.S. and its territories and possessions.

Supplemental air carrier: A class of air carriers which hold certificates authorizing them to perform passenger and cargo charter services supplementing the scheduled service of the certificated route air carriers. Supplemental air carriers are often referred to as nonscheduled air carriers or "nonskeds."

Alcohol – The family name of a group of organic chemical compounds composed of carbon, hydrogen, and oxygen. The molecules in the series vary in chain length and are composed of a hydrocarbon plus a hydroxyl group. Alcohol includes methanol and ethanol.

Amtrak – See Rail.

Anthropogenic – Human made. Usually used in the context of emissions that are produced as the result of human activities.

Automobile size classifications – Size classifications of automobiles are established by the Environmental Protection Agency (EPA) as follows:

- Minicompact – less than 85 cubic feet of passenger and luggage volume.
- Subcompact – between 85 to 100 cubic feet of passenger and luggage volume.
- Compact – between 100 to 110 cubic feet of passenger and luggage volume.
- Midsize – between 110 to 120 cubic feet of passenger and luggage volume.
- Large – more than 120 cubic feet of passenger and luggage volume.

Two seater – automobiles designed primarily to seat only two adults.
Station wagons are included with the size class for the sedan of the same name.

Aviation – See *General aviation*.

Aviation gasoline – All special grades of gasoline for use in aviation reciprocating engines, as given in the American Society for Testing and Materials (ASTM) Specification D 910. Includes all refinery products within the gasoline range that are to be marketed straight or in blends as aviation gasoline without further processing (any refinery operation except mechanical blending). Also included are finished components in the gasoline range which will be used for blending or compounding into aviation gasoline.

Barges – Shallow, nonself-propelled vessels used to carry bulk commodities on the rivers and the Great Lakes.

Battery efficiency – Measured in percentage. Net DC energy delivered on discharge, as a percentage of the total DC energy required to restore the initial state-of-charge. The efficiency value must include energy losses resulting from self-discharge, cell equalization, thermal loss compensation, and all battery-specific auxiliary equipment.

Btu – British thermal unit. The amount of energy required to raise the temperature of 1 pound of water 1 degree Fahrenheit at or near 39.2 degrees Fahrenheit. An average Btu content of fuel is the heat value per quantity of fuel as determined from tests of fuel samples.

Bunker – A storage tank.

Bunkering fuels – Fuels stored in ship bunkers.

Bus –

Intercity bus: A standard size bus equipped with front doors only, high backed seats, luggage compartments separate from the passenger compartment and usually with restroom facilities, for high-speed long distance service.

Motor bus: Rubber-tired, self-propelled, manually-steered bus with fuel supply on board the vehicle. Motor bus types include intercity, school, and transit.

School and other nonrevenue bus: Bus services for which passengers are not directly charged for transportation, either on a per passenger or per vehicle basis.

Transit bus: A bus designed for frequent stop service with front and center doors, normally with a rear-mounted diesel engine, low-back seating, and without luggage storage compartments or restroom facilities.

Trolley coach: Rubber-tired electric transit vehicle, manually-steered, propelled by a motor drawing current, normally through overhead wires, from a central power source not on board the vehicle.

Calendar year – The period of time between January 1 and December 31 of any given year.

Captive imports – Products produced overseas specifically for domestic manufacturers.

Carbon dioxide (CO₂) – A colorless, odorless, non-poisonous gas that is a normal part of the ambient air. Carbon dioxide is a product of fossil fuel combustion.

Carbon monoxide (CO) – A colorless, odorless, highly toxic gas that is a by-product of incomplete fossil fuel combustion. Carbon monoxide, one of the major air pollutants, can be harmful in small amounts if breathed over a certain period of time.

Car-mile (railroad) – A single railroad car moved a distance of one mile.

Cargo ton-mile – See *Ton-mile*.

Certificated route air carriers – See *Air carriers*.

Class I freight railroad – See *Rail*.

Coal slurry – Finely crushed coal mixed with sufficient water to form a fluid.

Combination trucks – Consist of a power unit (a truck tractor) and one or more trailing units (a semi-trailer or trailer). The most frequently used combination is popularly referred to as a "tractor-semitrailer" or "tractor trailer".

Commercial sector – An energy-consuming sector that consists of service-providing facilities of: businesses; Federal, State, and local governments; and other private and public organizations, such as religious, social or fraternal groups. Includes institutional living quarters.

Commuter railroad – See *Rail*.

Compact car – See *Automobile size classifications*.

Constant dollars – A time series of monetary figures is expressed in constant dollars when the effect of change over time in the purchasing power of the dollar has been removed. Usually the data are expressed in terms of dollars of a selected year or the average of a set of years.

Consumer Price Index (CPI) – An index issued by the U.S. Department of Labor, Bureau of Labor Statistics. The CPI is designed to measure changes in the prices of goods and services bought by wage earners and clerical workers in urban areas. It represents the cost of a typical consumption bundle at current prices as a ratio to its cost at a base year.

Continuous discharge capacity – Measured as percent of rated energy capacity. Energy delivered in a constant power discharge required by an electric vehicle for hill climbing and/or high-speed cruise, specified as the percent of its rated energy capacity delivered in a one hour constant-power discharge.

Corporate Average Fuel Economy (CAFE) Standards – CAFE standards were originally established by Congress for new automobiles, and later for light trucks, in Title V of the Motor Vehicle Information and Cost Savings Act (15 U.S.C.1901, et seq.) with subsequent amendments. Under CAFE, automobile manufacturers are required by law to produce vehicle fleets with a composite sales-weighted fuel economy which cannot be lower than the CAFE standards in a given year, or for every vehicle which does not meet the standard, a fine of \$5.00 is paid for every one-tenth of a mpg below the standard.

Crude oil – A mixture of hydrocarbons that exists in the liquid phase in natural underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities. Crude oil production is measured at the wellhead and includes lease condensate.

Crude oil imports – The volume of crude oil imported into the 50 States and the District of Columbia, including imports from U.S. territories, but excluding imports of crude oil into the Hawaiian Foreign Trade Zone.

Curb weight – The weight of a vehicle including all standard equipment, spare tire and wheel, all fluids and lubricants to capacity, full tank of fuel, and the weight of major optional accessories normally found on the vehicle.

Current dollars – Represents dollars current at the time designated or at the time of the transaction. In most contexts, the same meaning would be conveyed by the use of the term "dollars." See also constant dollars.

Demand Response – A transit mode that includes passenger cars, vans, and small buses operating in response to calls from passengers to the transit operator who dispatches the vehicles. The vehicles do not operate over a fixed route on a fixed schedule. Can also be known as paratransit or dial-a-ride.

Diesel fuel – See *Distillate fuel oil*.

Disposable personal income – See *Income*.

Distillate fuel oil – The lighter fuel oils distilled off during the refining process. Included are products known as ASTM grades numbers 1 and 2 heating oils, diesel fuels, and number 4 fuel oil. The major uses of distillate fuel oils include heating, fuel for on-and off-highway diesel engines, and railroad diesel fuel.

Domestic air operator – See *Air carrier*.

E85 – 85% ethanol and 15% gasoline.

E95 – 95% ethanol and 5% gasoline.

Domestic water transportation – See *Internal water transportation*.

Electric utilities sector – Consists of privately and publicly owned establishments which generate electricity primarily for resale.

Emission standards – Standards for the levels of pollutants emitted from automobiles and trucks. Congress established the first standards in the Clean Air Act of 1963. Currently, standards are set for four vehicle classes—automobiles, light trucks, heavy-duty gasoline trucks, and heavy-duty diesel trucks.

Energy capacity – Measured in kilowatt hours. The energy delivered by the battery, when tested at C/3 discharge rate, up to termination of discharge specified by the battery manufacturer. The required acceleration power must be delivered by the battery at any point up to 80% of the battery's energy capacity rating.

Energy efficiency – In reference to transportation, the inverse of energy intensiveness: the ratio of outputs from a process to the energy inputs; for example, miles traveled per gallon of fuel (mpg).

Energy intensity – In reference to transportation, the ratio of energy inputs to a process to the useful outputs from that process; for example, gallons of fuel per passenger-mile or Btu per ton-mile.

Ethanol (C₂H₅OH) – Otherwise known as ethyl alcohol, alcohol, or grain-spirit. A clear, colorless, flammable oxygenated hydrocarbon with a boiling point of 78.5 degrees Celsius in the anhydrous state. In transportation, ethanol is used as a vehicle fuel by itself (E100 – 100% ethanol by volume), blended with gasoline (E85 – 85% ethanol by volume), or as a gasoline octane enhancer and oxygenate (10% by volume).

Fixed operating cost – See *Operating cost*.

Fleet vehicles –

Private fleet vehicles: Ideally, a vehicle could be classified as a member of a fleet if it is:

- a) operated in mass by a corporation or institution,
- b) operated under unified control, or
- c) used for non-personal activities.

However, the definition of a fleet is not consistent throughout the fleet industry. Some companies make a distinction between cars that were bought in bulk rather than singularly, or whether they are operated in bulk, as well as the minimum number of vehicles that constitute a fleet (i.e. 4 or 10).

Government fleet vehicles: Includes vehicles owned by all Federal, state, county, city, and metro units of government, including toll road operations.

Foreign freight – Movements between the United States and foreign countries and between Puerto Rico, the Virgin Islands, and foreign countries. Trade between U.S. territories and possessions (e.g. Guam, Wake, American Samoa) and foreign countries is excluded. Traffic to or from the Panama Canal Zone is included.

Gas Guzzler Tax – Originates from the 1978 Energy Tax Act (Public Law 95-618). A new car purchaser is required to pay the tax if the car purchased has a combined city/highway fuel economy rating that is below the standard for that year. For model years 1986 and later, the standard is 22.5 mpg.

Gasohol – A mixture of 10% anhydrous ethanol and 90% gasoline by volume; 7.5% anhydrous ethanol and 92.5% gasoline by volume; or 5.5% anhydrous ethanol and 94.5% gasoline by volume. There are other fuels that contain methanol and gasoline, but these fuels are not referred to as gasohol.

Gasoline – See *Motor gasoline*.

General aviation – That portion of civil aviation which encompasses all facets of aviation except air carriers. It includes any air taxis, commuter air carriers, and air travel clubs which do not hold Certificates of Public Convenience and Necessity.

Gross National Product – A measure of monetary value of the goods and services becoming available to the nation from economic activity. Total value at market prices of all goods and services produced by the nation's economy. Calculated quarterly by the Department of Commerce, the Gross National Product is the broadest available measure of the level of economic activity.

Gross vehicle weight (gvw) – The weight of the empty truck plus the maximum anticipated load weight.

Gross vehicle weight rating (gvwr) – The gross vehicle weight which is assigned to each new truck by the manufacturer. This rating may be different for trucks of the same model because of certain features, such as heavy-duty suspension. Passenger cars do not have gross vehicle weight ratings.

Heavy-heavy truck – See *Truck size classifications*.

Household – Consists of all persons who occupy a housing unit, including the related family members and all unrelated persons, if any, who share the housing unit.

Housing unit – A house, apartment, a group of rooms, or a single room occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which have either (1) direct access from the outside of the building or through a common hallway intended to be used by the occupants of another unit or by the general public, or (2) complete kitchen facilities for the exclusive use of the occupants. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements.

Hydrocarbon (HC) – A compound that contains only hydrogen and carbon. The simplest and lightest forms of hydrocarbon are gaseous. With greater molecular weights they are liquid, while the heaviest are solids.

Income –

Disposable personal income: Personal income less personal tax and non-tax payments.

National income: The aggregate earnings of labor and property which arise in the current production of goods and services by the nation's economy.

Personal income: The current income received by persons from all sources, net of contributions for social insurance.

Industrial sector – Construction, manufacturing, agricultural and mining establishments.

Inertia weight – The curb weight of a vehicle plus 300 pounds.

Intercity bus – See *Bus*.

Internal water transportation – Includes all local (intraport) traffic and traffic between ports or landings wherein the entire movement takes place on inland waterways. Also termed internal are movements involving carriage on both inland waterways and the water of the Great Lakes, and inland movements that cross short stretches of open water that link inland systems.

International air operator – See *Air carrier*.

International freight – See *Foreign freight*.

Jet fuel – Includes both naphtha-type and kerosene-type fuels meeting standards for use in aircraft turbine engines. Although most jet fuel is used in aircraft, some is used for other purposes such as generating electricity in gas turbines.

Kerosene-type jet fuel: A quality kerosene product with an average gravity of 40.7 degrees API and 10% to 90% distillation temperatures of 217 to 261 degrees centigrade. Used primarily as fuel for commercial turbojet and turboprop aircraft engines. It is a relatively low freezing point distillate of the kerosene type.

Naphtha-type jet fuel: A fuel in the heavy naphtha boiling range with an average gravity of 52.8 degrees API and 10% to 90% distillation temperatures of 117 to 233 degrees centigrade used for turbojet and turboprop aircraft engines, primarily by the military. Excludes ramjet and petroleum.

Kerosene – A petroleum distillate in the 300 to 500 degrees Fahrenheit boiling range and generally having a flash point higher than 100 degrees Fahrenheit by the American Society of Testing and Material (ASTM) Method D56, a gravity range from 40 to 46 degrees API, and a burning point in the range of 150 to 175 degrees Fahrenheit. It is a clean-burning product suitable for use as an illuminant when burned in wick lamps. Includes grades of kerosene called range oil having properties similar to Number 1 fuel oil, but with a gravity of about 43 degrees API and an end point of 625 degrees Fahrenheit. Used in space heaters, cooking stoves, and water heaters.

Kerosene-type jet fuel – See Jet fuel.

Large car – See *Automobile size classifications*.

Lease Condensate – A liquid recovered from natural gas at the well or at small gas/oil separators in the field. Consists primarily of pentanes and heavier hydrocarbons (also called field condensate).

Light duty vehicles – Automobiles and light trucks combined.

Light truck – Unless otherwise noted, light trucks are defined in this publication as two-axle, four-tire trucks. The U.S. Bureau of Census classifies all trucks with a gross vehicle weight less than 10,000 pounds as light trucks (See Truck size classifications).

Light-heavy truck – See *Truck size classifications*.

Liquified petroleum gas (lpg) – Consists of propane and butane and is usually derived from natural gas. In locations where there is no natural gas and the gasoline consumption is low, naphtha is converted to lpg by catalytic reforming.

Load factor – Total passenger miles divided by total vehicle miles.

Low emission vehicle – Any vehicle certified to the low emission standards which are set by the Federal government and/or the state of California.

M85 – 85% methanol and 15% gasoline.

M100 – 100% methanol.

Medium truck – See *Truck size classifications*.

Methanol (CH₃OH) – A colorless highly toxic liquid with essentially no odor and very little taste. It is the simplest alcohol and boils at 64.7 degrees Celsius. In transportation, methanol is used as a vehicle fuel by itself (M100), or blended with gasoline (M85).

Midsize car – See *Automobile size classifications*.

Minicompact car – See *Automobile size classifications*.

Model year – In this publication, model year is referring to the "sales" model year, the period from October 1 to the next September 31.

Motor bus – See *Bus*.

Motor gasoline – A mixture of volatile hydrocarbons suitable for operation of an internal combustion engine whose major components are hydrocarbons with boiling points ranging from 78 to 217

degrees centigrade and whose source is distillation of petroleum and cracking, polymerization, and other chemical reactions by which the naturally occurring petroleum hydrocarbons are converted into those that have superior fuel properties.

Regular gasoline: Gasoline having an antiknock index, i.e., octane rating, greater than or equal to 85 and less than 88. Note: Octane requirements may vary by altitude.

Midgrade gasoline: Gasoline having an antiknock index, i.e., octane rating, greater than or equal to 88 and less than or equal to 90. Note: Octane requirements may vary by altitude.

Premium gasoline: Gasoline having an antiknock index, i.e., octane rating, greater than 90. Note: Octane requirements may vary by altitude.

Reformulated gasoline: Finished motor gasoline formulated for use in motor vehicles, the composition and properties of which meet the requirements of the reformulated gasoline regulations promulgated by the U.S. Environmental Protection Agency under Section 211(k) of the Clean Air Act. For details on this clean fuel program see <http://www.epa.gov/otaq/rfg.htm>. Note: This category includes oxygenated fuels program reformulated gasoline (OPRG) but excludes reformulated gasoline blendstock for oxygenate blending (RBOB).

MTBE – Methyl Tertiary Butyl Ether—a colorless, flammable, liquid oxygenated hydrocarbon containing 18.15 percent oxygen.

Naphtha-type jet fuel – See *Jet fuel*.

National income – See *Income*.

Nationwide Personal Transportation Survey (NPTS) – A nationwide survey of households that provides information on the characteristics and personal travel patterns of the U.S. population. Surveys were conducted in 1969, 1977, 1983, 1990, and 1995 by the U.S. Bureau of Census for the U.S. Department of Transportation.

Natural gas – A mixture of hydrocarbon compounds and small quantities of various non-hydrocarbons existing in the gaseous phase or in solution with crude oil in natural underground reservoirs at reservoir conditions.

Natural gas, dry: Natural gas which remains after: 1) the liquefiable hydrocarbon portion has been removed from the gas stream; and 2) any volumes of nonhydrocarbon gases have been removed where they occur in sufficient quantity to render the gas unmarketable. Dry natural gas is also known as consumer-grade natural gas. The parameters for measurement are cubic feet at 60 degrees Fahrenheit and 14.73 pounds per square inch absolute.

Natural gas, wet: The volume of natural gas remaining after removal of lease condensate in lease and/or field separation facilities, if any, and after exclusion of nonhydrocarbon gases where they occur in sufficient quantity to render the gas unmarketable. Natural gas liquids may be recovered from volumes of natural gas, wet after lease separation, at natural gas processing plants.

Natural gas plant liquids: Natural gas liquids recovered from natural gas in processing plants and from natural gas field facilities and fractionators. Products obtained include ethane, propane, normal butane, isobutane, pentanes plus, and other products from natural gas processing plants.

Nitrogen oxides (NO_x) – A product of combustion of fossil fuels whose production increases with the temperature of the process. It can become an air pollutant if concentrations are excessive.

Nonattainment area – Any area that does not meet the national primary or secondary ambient air quality standard established by the Environmental Protection Agency for designated pollutants, such as carbon monoxide and ozone.

Oil Stocks – Oil stocks include crude oil (including strategic reserves), unfinished oils, natural gas plant liquids, and refined petroleum products.

Operating cost –

Fixed operating cost: In reference to passenger car operating cost, refers to those expenditures that are independent of the amount of use of the car, such as insurance costs, fees for license and registration, depreciation and finance charges.

Variable operating cost: In reference to passenger car operating cost, expenditures which are dependent on the amount of use of the car, such as the cost of gas and oil, tires, and other maintenance.

Organization for Economic Cooperation and Development (OECD) – Consists of Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, South Korea, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States. Total OECD includes the United States Territories (Guam, Puerto Rico, and the U.S. Virgin Islands). Total OECD excludes data for Czech Republic, Hungary, Mexico, Poland, and South Korea which are not yet available.

OECD Europe: Consists of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Poland, Portugal, Spain, Sweden, Switzerland, Turkey, and United Kingdom. OECD Europe excludes data for Czech Republic, Hungary, and Poland which are not yet available.

OECD Pacific: Consists of Australia, Japan, and New Zealand.

Organization for Petroleum Exporting Countries (OPEC) – Includes Saudi Arabia, Iran, Venezuela, Libya, Indonesia, United Arab Emirates, Algeria, Nigeria, Ecuador, Gabon, Iraq, Kuwait, and Qatar. Data for Saudi Arabia and Kuwait include their shares from the Partitioned Zone (formerly the Neutral Zone). Angola joined OPEC in December 2006, thus, beginning in 2007, data on OPEC will include Angola.

Arab OPEC – Consists of Algeria, Iraq, Kuwait, Libya, Qatar, Saudi Arabia and the United Arab Emirates.

Other single-unit truck – See *Single-unit truck*.

Oxygenate – A substance which, when added to gasoline, increases the amount of oxygen in that gasoline blend. Includes fuel ethanol, methanol, and methyl tertiary butyl ether (MTBE).

Particulates – Carbon particles formed by partial oxidation and reduction of the hydrocarbon fuel. Also included are trace quantities of metal oxides and nitrides, originating from engine wear, component degradation, and inorganic fuel additives. In the transportation sector, particulates are emitted mainly from diesel engines.

Passenger-miles traveled (PMT) – One person traveling the distance of one mile. Total passenger-miles traveled, thus, give the total mileage traveled by all persons.

Passenger rail – See *Rail*, "*Amtrak*" and "*Transit Railroad*".

Persian Gulf countries – Consists of Bahrain, Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Emirates.

Personal Consumption Expenditures (PCE) – As used in the national accounts, the market value of purchases of goods and services by individuals and nonprofit institutions and the value of food, clothing, housing, and financial services received by them as income in kind. It includes the rental value of owner-occupied houses but excludes purchases of dwellings, which are classified as capital goods (investment).

Personal income – See *Income*.

Petroleum – A generic term applied to oil and oil products in all forms, such as crude oil, lease condensate, unfinished oil, refined petroleum products, natural gas plant liquids, and non-hydrocarbon compounds blended into finished petroleum products.

Petroleum consumption: A calculated demand for petroleum products obtained by summing domestic production, imports of crude petroleum and natural gas liquids, imports of petroleum products, and the primary stocks at the beginning of the period and then subtracting the exports and the primary stocks at the end of the period.

Petroleum exports: Shipments of petroleum products from the 50 States and the District of Columbia to foreign countries, Puerto Rico, the Virgin Islands, and other U.S. possessions and territories.

Petroleum imports: All imports of crude petroleum, natural gas liquids, and petroleum products from foreign countries and receipts from Guam, Puerto Rico, the Virgin Islands, and the Hawaiian Trade Zone. The commodities included are crude oil, unfinished oils, plant condensate, and refined petroleum products.

Petroleum inventories: The amounts of crude oil, unfinished oil, petroleum products, and natural gas liquids held at refineries, at natural gas processing plants, in pipelines, at bulk terminals operated by refining and pipeline companies, and at independent bulk terminals. Crude oil held in storage on leases is also included; these stocks are known as primary stocks. Secondary stocks—those held by jobbers, dealers, service station operators, and consumers—are excluded. Prior to 1975, stock held at independent bulk terminals were classified as secondary stocks.

Petroleum products supplied: For each petroleum product, the amount supplied is calculated by summing production, crude oil burned directly, imports, and net withdrawals from primary stocks and subtracting exports.

Processing Gain – The amount by which the total volume of refinery output is greater than the volume of input for given period of time. The processing gain arises when crude oil and other hydrocarbons are processed into products that are, on average, less dense than the input.

Processing Loss – The amount by which the total volume of refinery output is less than the volume of input for given period of time. The processing loss arises when crude oil and other hydrocarbons are processed into products that are, on average, more dense than the input.

Proved Reserves of Crude Oil – The estimated quantities of all liquids defined as crude oil, which geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions.

Quad – Quadrillion, 10^{15} . In this publication, a Quad refers to Quadrillion Btu.

Rail –

Amtrak (American Railroad Tracks): Operated by the National Railroad Passenger Corporation of Washington, DC. This rail system was created by President Nixon in 1970, and was given the responsibility for the operation of intercity, as distinct from suburban, passenger trains between points designated by the Secretary of Transportation.

Class I freight railroad: Defined by the Interstate Commerce Commission each year based on annual operating revenue. A railroad is dropped from the Class I list if it fails to meet the annual earnings threshold for three consecutive years.

Commuter railroad: Those portions of mainline railroad (not electric railway) transportation operations which encompass urban passenger train service for local travel between a central city and adjacent suburbs. Commuter railroad service—using both locomotive-hauled and self-propelled railroad passenger cars—is characterized by multi-trip tickets, specific station-to-station fares, and usually only one or two stations in the central business district. Also known as suburban railroad.

Transit railroad: Includes "heavy" and "light" transit rail. **Heavy transit rail** is characterized by exclusive rights-of-way, multi-car trains, high speed rapid acceleration, sophisticated signaling, and high platform loading. Also known as subway, elevated railway, or metropolitan railway (metro). **Light transit rail** may be on exclusive or shared rights-of-way, high or low platform loading, multi-car trains or single cars, automated or manually operated. In generic usage, light rail includes streetcars, trolley cars, and tramways.

Reformulated gasoline (RFG) – See *Motor gasoline*.

RFG area – An ozone nonattainment area designated by the Environmental Protection Agency which requires the use of reformulated gasoline.

Residential sector – An energy consuming sector that consists of living quarters for private households. Excludes institutional living quarters.

Residential Transportation Energy Consumption Survey (RTECS) – This survey was designed by the Energy Information Administration of the Department of Energy to provide information on how energy is used by households for personal vehicles. It has been conducted five times since 1979, the most recent being 1991.

Residual fuel oil – The heavier oils that remain after the distillate fuel oils and lighter hydrocarbons are boiled off in refinery operations. Included are products known as ASTM grade numbers 5 and 6 oil, heavy diesel oil, Navy Special Fuel Oil, Bunker C oil, and acid sludge and pitch used as refinery fuels. Residual fuel oil is used for the production of electric power, for heating, and for various industrial purposes.

Rural – Usually refers to areas with population less than 5,000.

Sales period – October 1 of the previous year to September 30 of the given year. Approximately the same as a model year.

Sales-weighted miles per gallon (mpg) – Calculation of a composite vehicle fuel economy based on the distribution of vehicle sales.

Scrapage rate – As applied to motor vehicles, it is usually expressed as the percentage of vehicles of a certain type in a given age class that are retired from use (lacking registration) in a given year.

School and other nonrevenue bus – See *Bus*.

Single-unit truck – Includes two-axle, four-tire trucks and other single-unit trucks.

Two-axle, four-tire truck: A motor vehicle consisting primarily of a single motorized device with two axles and four tires.

Other single-unit truck: A motor vehicle consisting primarily of a single motorized device with more than two axles or more than four tires.

Special fuels – Consist primarily of diesel fuel with small amount of liquified petroleum gas, as defined by the Federal Highway Administration.

Specific acceleration power – Measured in watts per kilogram. Acceleration power divided by the battery system weight. Weight must include the total battery system.

Specific energy – Measured in watt hours per kilogram. The rated energy capacity of the battery divided by the total battery system weight.

Subcompact car – See *Automobile size classifications*.

Supplemental air carrier – See *Air carrier*.

Test weight – The weight setting at which a vehicle is tested on a dynamometer by the U.S. Environmental Protection Agency (EPA). This weight is determined by the EPA using the inertia weight of the vehicle.

Ton-mile – The movement of one ton of freight the distance of one mile. Ton-miles are computed by multiplying the weight in tons of each shipment transported by the distance hauled.

Transmission types –

- A3 – Automatic three speed
- A4 – Automatic four speed
- A5 – Automatic five speed
- L4 – Automatic lockup four speed
- M5 – Manual five speed

Transit bus – See *Bus*.

Transit railroad – See *Rail*.

Transportation sector – Consists of both private and public passenger and freight transportation, as well as government transportation, including military operations.

Truck Inventory and Use Survey (TIUS) – Survey designed to collect data on the characteristics and operational use of the nation's truck population. It is conducted every five years by the U.S. Bureau of the Census. Surveys were conducted in 1963, 1967, 1972, 1977, 1982, 1987, and 1992. For the 1997 survey, it was renamed the Vehicle Inventory and Use Survey in anticipation of including additional vehicle types. However, no additional vehicle types were added to the 1997 survey.

Trolley coach – See *Bus*.

Truck size classifications – U.S. Bureau of the Census has categorized trucks by gross vehicle weight (gvw) as follows:

Light – Less than 10,000 pounds gvw (Also see Light Truck.)

Medium – 10,001 to 20,000 pounds gvw

Light-heavy – 20,001 to 26,000 pounds gvw

Heavy-heavy – 26,001 pounds gvw or more.

Two-axle, four-tire truck – See *Single-unit truck*.

Two seater car – See *Automobile size classifications*.

Ultra-low emission vehicle – Any vehicle certified to the ultra-low emission standards which are set by the Federal government and/or the state of California.

Urban – Usually refers to areas with population of 5,000 or greater.

Vanpool – A transit mode made up of vans and sometimes small buses operating as a ridesharing arrangement to provide transportation to a group of individuals traveling directly between their homes and a regular destination within the same geographical area. Most vanpools are privately-operated, are not available to the public, and are not considered public transportation. Vanpool data in this report are for vanpools that are owned, purchased or leased by a public entity and are publicly available.

Variable operating cost – See *Operating cost*.

Vehicle Inventory and Use Survey – See *Truck Inventory and Use Survey*.

Vehicle-miles traveled (vmt) – One vehicle traveling the distance of one mile. Total vehicle miles, thus, is the total mileage traveled by all vehicles.

Zero-emission vehicle – Any vehicle certified to the zero emission standards which are set by the Federal government and/or the state of California. These standards apply to the vehicle emissions only.

TITLE INDEX

Acquisitions	
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002– 2009	7–6

Summary Statistics for Cars, 1970–2008	4–2
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975–2009	4–7
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975–2009.....	4–14
Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975–2009.....	4–12
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977–2009.....	4–15
The Gas Guzzler Tax on New Cars.....	4–25
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975-2009	11–12
U.S. Tier 2 Emission Standards for Cars and Light Trucks	12–13
California Cars and Light Trucks Emission Certification Standards	12–15
Census	
Household Vehicle Ownership, 1960–2000 Census	8–5
Means of Transportation to Work, 1980, 1990 and 2000 Census	8–19
Workers by Commute Time, 1990 and 2000 Census	8–21
Certificated	
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970–2008	9–3
Certification	
California Cars and Light Trucks Emission Certification Standards	12–15
Characteristics	
Light Vehicles and Characteristics.....	4–1

Characteristics (continued)	
Heavy Vehicles and Characteristics	5-1
Alternative Fuel and Advanced Technology Vehicles and Characteristics.....	6-1
Fleet Vehicles and Characteristics.....	7-1
Household Vehicles and Characteristics	8-1
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8-20
Housing Unit Characteristics, 2007.....	8-20
Long-Distance Trip Characteristics, 2001 NHTS	8-25
Cities	
Clean Cities Coalitions	6-7
City	
City Driving Cycle	4-33
New York City Driving Cycle.....	4-36
Class	
Light Vehicle Market Shares by Size Class, Model Years 1975-2009.....	4-10
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2009	4-13
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975-2009	4-14
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977-2009	4-15
Truck Statistics by Gross Vehicle Weight Class, 2002.....	5-6
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002.....	5-6
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975-2009.....	11-12
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2009	11-13
Class 1	
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks.....	4-4
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989-1999.....	4-4
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton-Miles, 2008.....	9-8
Summary Statistics for Class I Freight Railroads, 1970-2008.....	9-9
Class 2a	
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks.....	4-4
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989-1999.....	4-4
Class 2b	
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks.....	4-4
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989-1999.....	4-4
Class 8	
Effect of Terrain on Class 8 Truck Fuel Economy.....	5-14
Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination	5-15

Class 8 (continued)	
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed	5-16
Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination	5-17
Class 8 Truck Weight by Component	5-18
Classification	
Average Annual Carbon Footprint by Vehicle Classification, 1975 and 2009	11-14
Clean	
Clean Cities Coalitions	6-7
Coalitions	
Clean Cities Coalitions	6-7
Cold	
Cold Temperature (Cold FTP) Driving Cycle	4-34
Collected	
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2008	4-24
Combination	
Summary Statistics for Combination Trucks, 1970-2008.....	5-3
Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination	5-15
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed	5-16
Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination	5-17
Combined	
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2008	9-3
Commerce	
Tonnage Statistics for Domestic and International Waterborne Commerce, 1970-2008	9-5
Summary Statistics for Domestic Waterborne Commerce, 1970-2008.....	9-6
Commodity	
Growth of Freight in the United States: Comparison of the 2007, 2002 and 1997 Commodity Flow Surveys	5-22
Growth of Freight Miles in the United States: Comparison of the 2007, 2002 and 1997 Commodity Flow Surveys.....	5-23
Commute	
Workers by Commute Time, 1990 and 2000 Census	8-21

Commuter	
Energy Intensity of Commuter Rail Systems, 2008	2-18
Summary Statistics for Commuter Rail Operations, 1984-2008	9-12
Compared	
Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 1998 and 2008)	3-6
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide	11-3
Comparison	
Comparison of U.S., European, and Japanese Driving Cycles.....	4-38
Growth of Freight in the United States: Comparison of the 2007, 2002 and 1997 Commodity Flow Surveys	5-22
Growth of Freight Miles in the United States: Comparison of the 2007, 2002 and 1997 Commodity Flow Surveys.....	5-23
Component	
Class 8 Truck Weight by Component	5-18
Compounds	
Total National Emissions of Volatile Organic Compounds, 1970-2008	12-7
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-2005	12-8
Conditioning	
Air Conditioning (SC03) Driving Cycle	4-34
Consumed	
Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination	5-17
Fuel Consumed by Federal Government Fleets, FY 2000-2009	7-6
Consumer	
Consumer Price Indices, 1970-2009	10-18
Consumption	
World Petroleum Consumption, 1960-2009	1-5
World Oil Reserves, Production and Consumption, 2008.....	1-6
World Natural Gas Reserves, Production and Consumption, 2008	1-7
Petroleum Production and Consumption and Some Important Percent Shares, 1950-2009.....	1-16
United States Petroleum Production and Consumption – All Sectors, 1973-2035	1-17
United States Petroleum Production, Transportation and Consumption, 1970-2035	1-18
Consumption of Petroleum by End-Use Sector, 1973-2009.....	1-19
Highway Transportation Petroleum Consumption by Mode, 1970-2008.....	1-20
Nonhighway Transportation Petroleum Consumption by Mode, 1970-2008.....	1-21
World Consumption of Primary Energy, 2007.....	2-2
U. S. Consumption of Total Energy by End-Use Sector, 1973-2009	2-3
Distribution of Energy Consumption by Source, 1973 and 2009.....	2-4
Alternative Fuel and Oxygenate Consumption, 2003-2008	2-5
Ethanol Consumption, 1995-2008	2-6

Consumption (continued)	
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2008	2-7
Highway Transportation Energy Consumption by Mode, 1970-2008.....	2-9
Nonhighway Transportation Energy Consumption by Mode, 1970-2008.....	2-10
Off-highway Transportation-related Fuel Consumption from the NonRoad Model, 2008	2-11
Fuel Consumption from Lawn and Garden Equipment, 2008.....	2-12
Average Material Consumption for a Light Vehicle, Model Years 1995, 2000, and 2008.....	4-16
Personal Consumption Expenditures, 1970-2009.....	10-18
U.S. Carbon Emissions from Fossil Energy Consumption by End-Use Sector, 1990-2008	11-6
Conventional	
Conventional Refueling Stations, 1993-2008	4-18
Properties of Conventional and Alternative Fuels.....	6-9
Conversions	
Appendix B. Conversions.....	B-1
Corporate	
Reformed and Unreformed Light Truck Corporate Average Fuel Economy Standards, MY 2008-2011	4-19
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2010	4-22
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2010	4-23
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2008	4-24
Corporation	
Summary Statistics for the National Railroad Passenger Corporation (Amtrak), 1971-2008	9-11
Cost	
Car Operating Cost per Mile, 1985-2009	10-16
Costs	
Costs of Oil Dependence to the U.S. Economy, 1970-2009.....	1-10
Fixed Car Operating Costs per Year, 1975-2009.....	10-17
Countries	
Car Registrations for Selected Countries, 1960-2008.....	3-2
Truck and Bus Registrations for Selected Countries, 1960-2008.....	3-3
Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 1998 and 2008)	3-6
Vehicles per Thousand People in Other Countries, 1998 and 2008.....	3-8
Gasoline Prices for Selected Countries, 1990-2008	10-3
Diesel Fuel Prices for Selected Countries, 1998-2008	10-4
Gasoline Prices for Selected Countries, 1990 and 2008.....	10-5
Diesel Prices for Selected Countries, 1990 and 2008.....	10-6
Criteria	
Criteria Air Pollutants	12-1

Criteria (continued)	
Total National Emissions of the Criteria Air Pollutants by Sector, 2008.....	12-2
Crude	
World Crude Oil Production, 1960–2009	1-3
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987–2008	1-13
Refinery Yield of Petroleum Products From a Barrel of Crude Oil, 1987–2008	1-14
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978–2009.....	10-7
Curb	
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975–2009	4-14
Cycle	
Driving Cycle Attributes	4-32
City Driving Cycle	4-33
Highway Driving Cycle.....	4-33
Air Conditioning (SC03) Driving Cycle	4-34
Cold Temperature (Cold FTP) Driving Cycle.....	4-34
High Speed (US06) Driving Cycle.....	4-35
New York City Driving Cycle.....	4-36
Representative Number Five Driving Cycle	4-36
Cycles	
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles.....	4-37
Comparison of U.S., European, and Japanese Driving Cycles.....	4-38
Daily	
Average Daily Miles Driven (per Driver), 2009 NHTS	8-16
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS.....	8-17
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS	8-17
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8-18
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8-20
Dealerships	
New Light Vehicle Dealerships and Sales, 1970–2008	4-17
Defending	
Summary of Military Expenditures for Defending Oil Supplies from the Middle East	1-11
Definition	
Definition of Wagons in Model Year 2009	4-8
Demand	
Summary Statistics on Demand Response Vehicles, 1994–2008	4-39
Demographic	
Demographic Statistics from the 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8-6

Density	
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8-20
Dependence	
Costs of Oil Dependence to the U.S. Economy, 1970-2009	1-10
Diesel	
Diesel Fuel Prices for Selected Countries, 1998-2008	10-4
Diesel Prices for Selected Countries, 1990 and 2008	10-6
Refiner Sales Prices for Propane and No. 2 Diesel, 1978-2009	10-9
Dioxide	
Fuel Economy and Carbon Dioxide Emissions Standards, MY 2012-2016	4-20
Fuel Economy and Carbon Dioxide Targets for Model Year 2016	4-21
World Carbon Dioxide Emissions, 1990 and 2006	11-2
Carbon Dioxide Emissions from a Gallon of Fuel	11-15
Distance	
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed	5-16
Share of Vehicle Trips by Trip Distance, 2009 NHTS	8-14
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS	8-14
Long-Distance Trip Characteristics, 2001 NHTS	8-25
Distribution	
Distribution of Energy Consumption by Source, 1973 and 2009	2-4
Distribution of Trucks over 26,000 lbs. Less than Two Years Old by Vehicle-Miles Traveled	5-11
Distribution of Five-Axle Tractor-Trailers by On-Road Vehicle Weight, 2008	5-20
Domestic	
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2008	2-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2009	4-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2009	4-9
Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975-2009	4-12
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2009	4-13
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975-2009	4-14
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977-2009	4-15
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2009	7-4
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2008	9-3
Tonnage Statistics for Domestic and International Waterborne Commerce, 1970-2008	9-5
Summary Statistics for Domestic Waterborne Commerce, 1970-2008	9-6

Domestic (continued)	
Average Price of a New Car (Domestic and Import), 1970–2008	10–15
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975-2009	11–12
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2009	11–13
Driven	
Average Daily Miles Driven (per Driver), 2009 NHTS	8–16
Driver	
Average Daily Miles Driven (per Driver), 2009 NHTS	8–16
Driving	
Driving Cycle Attributes	4–32
City Driving Cycle	4–33
Highway Driving Cycle.....	4–33
Air Conditioning (SC03) Driving Cycle	4–34
Cold Temperature (Cold FTP) Driving Cycle.....	4–34
High Speed (US06) Driving Cycle.....	4–35
New York City Driving Cycle.....	4–36
Representative Number Five Driving Cycle	4–36
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles.....	4–37
Comparison of U.S., European, and Japanese Driving Cycles.....	4–38
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8–20
Dwelling	
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8–20
East	
Summary of Military Expenditures for Defending Oil Supplies from the Middle East.....	1–11
Economic	
Oil Price and Economic Growth, 1970–2009.....	1–9
Economies	
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975–2009	4–7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975–2009	4–9
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles.....	4–37
Economy	
Costs of Oil Dependence to the U.S. Economy, 1970–2009.....	1–10
Reformed and Unreformed Light Truck Corporate Average Fuel Economy Standards, MY 2008–2011	4–19
Fuel Economy and Carbon Dioxide Emissions Standards, MY 2012–2016.....	4–20
Fuel Economy and Carbon Dioxide Targets for Model Year 2016.....	4–21
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2010	4–22

Economy (continued)

Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2010	4–23
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983–2008	4–24
Fuel Economy by Speed, PSAT Model Results	4–27
Fuel Economy by Speed, 1973, 1984, and 1997 Studies	4–28
Steady Speed Fuel Economy for Vehicles Tested in the 1997 Study	4–31
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002	5–6
Effect of Terrain on Class 8 Truck Fuel Economy	5–14
Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination	5–15
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed	5–16
Transportation and the Economy	10–1

Effect

Effect of Terrain on Class 8 Truck Fuel Economy	5–14
Light Vehicle Exhaust Emission Standards in Effect in 2009 when U.S. Tier 2 Standards are Final	12–14

Electric

Hybrid Electric Vehicles Available by Manufacturer, Model Year 2009	6–5
---	-----

Electronic

Share of Heavy Trucks with Selected Electronic Features, 2002	5–12
---	------

Emission

Light Vehicle Exhaust Emission Standards in Effect in 2009 when U.S. Tier 2 Standards are Final	12–14
California Cars and Light Trucks Emission Certification Standards	12–15

Emissions

Fuel Economy and Carbon Dioxide Emissions Standards, MY 2012–2016	4–20
Greenhouse Gas Emissions	11–1
World Carbon Dioxide Emissions, 1990 and 2006	11–2
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990–2008	11–4
Total U.S. Greenhouse Emissions by End-Use Sector, 2008	11–5
U.S. Carbon Emissions from Fossil Energy Consumption by End-Use Sector, 1990–2008	11–6
U.S. Carbon Emissions from Energy Use in the Transportation Sector, 1990–2008	11–7
Carbon Dioxide Emissions from a Gallon of Fuel	11–15
Total National Emissions of the Criteria Air Pollutants by Sector, 2008	12–2
Total National Emissions of Carbon Monoxide, 1970–2008	12–3
Emissions of Carbon Monoxide from Highway Vehicles, 1970–2005	12–4
Total National Emissions of Nitrogen Oxides, 1970–2008	12–5
Emissions of Nitrogen Oxides from Highway Vehicles, 1970–2005	12–6
Total National Emissions of Volatile Organic Compounds, 1970–2008	12–7
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970–2005	12–8
Total National Emissions of Particulate Matter (PM-10), 1970–2008	12–9
Emissions of Particulate Matter (PM-10) from Highway Vehicles, 1970–2005	12–10

Emissions (continued)	
Total National Emissions of Particulate Matter (PM-2.5), 1990–2008.....	12–11
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990–2005.....	12–12
U.S. Tier 2 Emission Standards for Cars and Light Trucks	12–13
Employment	
Transportation-related Employment, 1999 and 2009	10–19
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990–2009.....	10–20
Empty	
Gross Vehicle Weight vs. Empty Vehicle Weight	5–19
End-Use	
Consumption of Petroleum by End-Use Sector, 1973–2009.....	1–19
U. S. Consumption of Total Energy by End-Use Sector, 1973–2009	2–3
Total U.S. Greenhouse Emissions by End-Use Sector, 2008.....	11–5
U.S. Carbon Emissions from Fossil Energy Consumption by End-Use Sector, 1990–2008	11–6
Energy	
World Consumption of Primary Energy, 2007.....	2–2
U. S. Consumption of Total Energy by End-Use Sector, 1973–2009	2–3
Distribution of Energy Consumption by Source, 1973 and 2009.....	2–4
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2008	2–7
Transportation Energy Use by Mode, 2007–2008.....	2–8
Highway Transportation Energy Consumption by Mode, 1970–2008.....	2–9
Nonhighway Transportation Energy Consumption by Mode, 1970–2008.....	2–10
Passenger Travel and Energy Use, 2008	2–14
Energy Intensities of Highway Passenger Modes, 1970–2008	2–15
Energy Intensities of Nonhighway Passenger Modes, 1970–2008	2–16
Energy Intensity of Light Rail Transit Systems, 2008	2–17
Energy Intensity of Heavy Rail Systems, 2008.....	2–18
Energy Intensity of Commuter Rail Systems, 2008	2–18
Intercity Freight Movement and Energy Use in the United States, 2007 and 2008	2–19
Energy Intensities of Freight Modes, 1970–2008	2–20
Nonhighway Energy Use Shares, 1970–2008	9–2
Recreational Boat Energy Use, 1970–2008.....	9–7
U.S. Carbon Emissions from Fossil Energy Consumption by End-Use Sector, 1990–2008	11–6
U.S. Carbon Emissions from Energy Use in the Transportation Sector, 1990–2008.....	11–7
Engine	
Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975–2009	4–12
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975–2009	4–13
Equipment	
Fuel Consumption from Lawn and Garden Equipment, 2008.....	2–12
Estimates	
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989–1999.....	4–4

Estimates (continued)	
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2010	4–22
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2010	4–23
Estimates of Alternative Fuel Vehicles in Use, 1995–2008	6–3
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide	11–3
Ethanol	
Ethanol Consumption, 1995–2008	2–6
European	
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles.....	4–37
Comparison of U.S., European, and Japanese Driving Cycles.....	4–38
Excise	
Federal Excise Taxes on Motor Fuels, 2008	10–11
Exemptions	
State Tax Exemptions for Gasohol, 2008.....	10–11
Exhaust	
Light Vehicle Exhaust Emission Standards in Effect in 2009 when U.S. Tier 2 Standards are Final	12–14
Expenditures	
Summary of Military Expenditures for Defending Oil Supplies from the Middle East.....	1–11
Average Annual Expenditures of Households by Income, 2008.....	8–4
Personal Consumption Expenditures, 1970–2009.....	10–18
Exports	
United States Petroleum Production, Imports and Exports, 1950–2009	1–15
Facility	
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002	5–9
Share of Trucks by Major Use and Primary Fueling Facility, 2002.....	5–10
Features	
Share of Heavy Trucks with Selected Electronic Features, 2002	5–12
Federal	
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2009	7–4
Federal Government Vehicles, 2001–2009	7–5
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002– 2009	7–6
Fuel Consumed by Federal Government Fleets, FY 2000–2009	7–6
Federal Government Vehicles by Agency, FY 2009.....	7–7
Federal Excise Taxes on Motor Fuels, 2008	10–11
Federal and State Alternative Fuel Incentives, 2010.....	10–12
Federal and State Advanced Technology Incentives, 2010.....	10–13
Feedstocks	
GREET Model Feedstocks and Fuels.....	11–10

Final	
Light Vehicle Exhaust Emission Standards in Effect in 2009 when U.S. Tier 2 Standards are Final	12-14
Fines	
Corporate Average Fuel Economy (CAFE) Fines Collected, 1983-2008	4-24
Fiscal	
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002- 2009	7-6
Fuel Consumed by Federal Government Fleets, FY 2000-2009.....	7-6
Federal Government Vehicles by Agency, FY 2009.....	7-7
Five	
Representative Number Five Driving Cycle	4-36
Distribution of Five-Axle Tractor-Trailers by On-Road Vehicle Weight, 2008	5-20
Fixed	
Fixed Car Operating Costs per Year, 1975-2009.....	10-17
Fleet	
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002	5-9
Fleet Vehicles and Characteristics.....	7-1
Fleet Vehicles in Service as of January 1, 2009	7-2
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2008.....	7-3
Average Length of Time Business Fleet Vehicles are in Service, 2008	7-3
Average Annual Vehicle-Miles of Travel for Business Fleet Vehicles, 2008.....	7-3
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002- 2009	7-6
Fleets	
Fuel Consumed by Federal Government Fleets, FY 2000-2009	7-6
Flow	
Growth of Freight in the United States: Comparison of the 2007, 2002 and 1997 Commodity Flow Surveys	5-22
Growth of Freight Miles in the United States: Comparison of the 2007, 2002 and 1997 Commodity Flow Surveys.....	5-23
Footprint	
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975-2009	11-12
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2009	11-13
Average Annual Carbon Footprint by Vehicle Classification, 1975 and 2009	11-14
Fossil	
World Fossil Fuel Potential	1-2
U.S. Carbon Emissions from Fossil Energy Consumption by End-Use Sector, 1990-2008	11-6
Four-Tire	
Summary Statistics for Two-Axle, Four-Tire Trucks, 1970-2008.....	4-3

Freight

Intercity Freight Movement and Energy Use in the United States, 2007 and 2008	2-19
Energy Intensities of Freight Modes, 1970-2008	2-20
Growth of Freight in the United States: Comparison of the 2007, 2002 and 1997 Commodity Flow Surveys	5-22
Growth of Freight Miles in the United States: Comparison of the 2007, 2002 and 1997 Commodity Flow Surveys.....	5-23
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton-Miles, 2008.....	9-8
Summary Statistics for Class I Freight Railroads, 1970-2008.....	9-9

FTP

Cold Temperature (Cold FTP) Driving Cycle.....	4-34

Gross	
Refinery Gross Output by World Region, 1999 and 2009	1–12
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970–2009	4–6
New Retail Truck Sales by Gross Vehicle Weight, 1970–2009	5–4
Truck Statistics by Gross Vehicle Weight Class, 2002	5–6
Gross Vehicle Weight vs. Empty Vehicle Weight	5–19
Growth	
Oil Price and Economic Growth, 1970–2009	1–9
Growth of Freight in the United States: Comparison of the 2007, 2002 and 1997 Commodity Flow Surveys	5–22
Growth of Freight Miles in the United States: Comparison of the 2007, 2002 and 1997 Commodity Flow Surveys	5–23
Guzzler	
The Gas Guzzler Tax on New Cars	4–25
Guzzlers	
Tax Receipts from the Sale of Gas Guzzlers, 1980–2008	4–26
Harmonic	
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002	5–6

Heavy	
Energy Intensity of Heavy Rail Systems, 2008.....	2-18
Heavy Vehicles and Characteristics	5-1
Summary Statistics for Heavy Single-Unit Trucks, 1970-2008	5-2
Share of Heavy Trucks with Selected Electronic Features, 2002	5-12
High	
High Speed (US06) Driving Cycle.....	4-35
Highway	
Highway Transportation Petroleum Consumption by Mode, 1970-2008.....	1-20
Highway Transportation Energy Consumption by Mode, 1970-2008.....	2-9
Highway Usage of Gasoline and Special Fuels, 1973-2008.....	2-13
Energy Intensities of Highway Passenger Modes, 1970-2008	2-15
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970-2008.....	3-10
Highway Driving Cycle.....	4-33
Emissions of Carbon Monoxide from Highway Vehicles, 1970-2005.....	12-4
Emissions of Nitrogen Oxides from Highway Vehicles, 1970-2005.....	12-6
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-2005	12-8
Emissions of Particulate Matter (PM-10) from Highway Vehicles, 1970-2005.....	12-10
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990-2005.....	12-12
Household	
Household Vehicles and Characteristics	8-1
Household Vehicle Ownership, 1960-2000 Census	8-5
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per	
Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8-7
Average Number of Vehicles and Vehicle Travel per Household,	
1990 NPTS and 2001 and 2009 NHTS.....	8-8
Average Annual Miles per Household Vehicle by Vehicle Age.....	8-12
Household Vehicle Trips, 2009 NHTS	8-16
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the	
Household, 2009 NHTS.....	8-17
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle	
in a Household, 2009 NHTS.....	8-17
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8-18
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS.....	8-18
Households	
Average Annual Expenditures of Households by Income, 2008.....	8-4
Housing	
Housing Unit Characteristics, 2007.....	8-20
Hybrid	
Hybrid Electric Vehicles Available by Manufacturer, Model Year 2009	6-5
Import	
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New	
Domestic and Import Cars, Selected Model Years 1975-2009	4-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New	
Domestic and Import Light Trucks, Model Years 1975-2009	4-9

Import (continued)	
Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975–2009	4–12
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975–2009	4–13
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975–2009	4–14
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977–2009	4–15
Average Price of a New Car (Domestic and Import), 1970–2008	10–15
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975–2009	11–12
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975–2009	11–13
Important	
Petroleum Production and Consumption and Some Important Percent Shares, 1950–2009	1–16
Imports	
U.S. Petroleum Imports by World Region of Origin, 1960–2009	1–8
United States Petroleum Production, Imports and Exports, 1950–2009	1–15
Incentives	
Federal and State Alternative Fuel Incentives, 2010	10–12
Federal and State Advanced Technology Incentives, 2010	10–13
Income	
Average Annual Expenditures of Households by Income, 2008	8–4
Index	
Transportation Services Index, January 1990–January 2010	10–2
Indices	
Consumer Price Indices, 1970–2009	10–18
Input	
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987–2008	1–13
Intensities	
Energy Intensities of Highway Passenger Modes, 1970–2008	2–15
Energy Intensities of Nonhighway Passenger Modes, 1970–2008	2–16
Energy Intensities of Freight Modes, 1970–2008	2–20
Intensity	
Energy Intensity of Light Rail Transit Systems, 2008	2–17
Energy Intensity of Heavy Rail Systems, 2008	2–18
Energy Intensity of Commuter Rail Systems, 2008	2–18
Intercity	
Intercity Freight Movement and Energy Use in the United States, 2007 and 2008	2–19

Interior	
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977–2009	4–15
Intermodal	
Intermodal Rail Traffic, 1965–2008	9–10
International	
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970–2008	9–3
Tonnage Statistics for Domestic and International Waterborne Commerce, 1970–2008	9–5
Japanese	
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles	4–37
Comparison of U.S., European, and Japanese Driving Cycles	4–38
Jet	
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978–2009	10–10
Lawn	
Fuel Consumption from Lawn and Garden Equipment, 2008	2–12
Length	
Average Length of Time Business Fleet Vehicles are in Service, 2008	7–3
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8–7
Lifetime	
Car and Light Truck Survivability Rates and Lifetime Miles	3–17
Light	
Energy Intensity of Light Rail Transit Systems, 2008	2–17
Light Truck Scrappage and Survival Rates	3–16
Car and Light Truck Survivability Rates and Lifetime Miles	3–17
Light Vehicles and Characteristics	4–1
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks	4–4
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989–1999	4–4
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975–2009	4–9
Light Vehicle Market Shares by Size Class, Model Years 1975–2009	4–10
Light Vehicle Market Shares, Model Years 1975–2009	4–11
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975–2009	4–13
Average Material Consumption for a Light Vehicle, Model Years 1995, 2000, and 2008	4–16
New Light Vehicle Dealerships and Sales, 1970–2008	4–17
Reformed and Unreformed Light Truck Corporate Average Fuel Economy Standards, MY 2008–2011	4–19
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2010	4–23
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2008	7–3

Light (continued)	
Sales-Weighted Annual Carbon Footprint of New Domestic and Import	
Light Trucks by Size Class, Model Years 1975-2009	11-13
U.S. Tier 2 Emission Standards for Cars and Light Trucks	12-13
Light Vehicle Exhaust Emission Standards in Effect in 2009 when	
U.S. Tier 2 Standards are Final	12-14
California Cars and Light Trucks Emission Certification Standards	12-15
Long-Distance	
Long-Distance Trip Characteristics, 2001 NHTS	8-25
Manufacturer	
Alternative Fuel Vehicles Available by Manufacturer, Model Year 2009.....	6-4
Hybrid Electric Vehicles Available by Manufacturer, Model Year 2009	6-5
Manufacturing	
U.S. Employment for Motor Vehicles and Motor Vehicle Parts	
Manufacturing, 1990-2009.....	10-20
Major	
Percentage of Trucks by Size Ranked by Major Use, 2002	5-8
Share of Trucks by Major Use and Primary Fueling Facility, 2002.....	5-10
Maps	
Appendix C. Maps.....	C-1
Market	
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New	
Domestic and Import Cars, Selected Model Years 1975-2009	4-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New	
Domestic and Import Light Trucks, Model Years 1975-2009	4-9
Light Vehicle Market Shares by Size Class, Model Years 1975-2009.....	4-10
Light Vehicle Market Shares, Model Years 1975-2009	4-11
Material	
Average Material Consumption for a Light Vehicle, Model Years 1995, 2000,	
and 2008.....	4-16
Matter	
Total National Emissions of Particulate Matter (PM-10), 1970-2008	12-9
Emissions of Particulate Matter (PM-10) from Highway Vehicles, 1970-2005	12-10
Total National Emissions of Particulate Matter (PM-2.5), 1990-2008.....	12-11
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990-2005.....	12-12
Mean	
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002	5-6
Means	
Means of Transportation to Work, 1980, 1990 and 2000 Census	8-19
Methodologies	
Appendix A. Sources & Methodologies.....	A-1

Middle	
Summary of Military Expenditures for Defending Oil Supplies from the Middle East	1-11
Mile	
Car Operating Cost per Mile, 1985–2009	10-16
Miles	
Car and Light Truck Survivability Rates and Lifetime Miles	3-17
Distribution of Trucks over 26,000 lbs. Less than Two Years Old by Vehicle-Miles Traveled	5-11
Growth of Freight Miles in the United States: Comparison of the 2007, 2002 and 1997 Commodity Flow Surveys.....	5-23
Average Annual Vehicle-Miles of Travel for Business Fleet Vehicles, 2008.....	7-3
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2009	7-4
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8-7
Average Annual Miles per Household Vehicle by Vehicle Age.....	8-12
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS	8-13
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS	8-15
Average Daily Miles Driven (per Driver), 2009 NHTS	8-16
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS.....	8-17
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS	8-17
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8-18
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS.....	8-18
Military	
Summary of Military Expenditures for Defending Oil Supplies from the Middle East	1-11
Mode	
Highway Transportation Petroleum Consumption by Mode, 1970–2008.....	1-20
Nonhighway Transportation Petroleum Consumption by Mode, 1970–2008.....	1-21
Transportation Petroleum Use by Mode, 2007–2008.....	1-22
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2008	2-7
Transportation Energy Use by Mode, 2007–2008.....	2-8
Highway Transportation Energy Consumption by Mode, 1970–2008.....	2-9
Nonhighway Transportation Energy Consumption by Mode, 1970–2008.....	2-10
Transportation Greenhouse Gas Emissions by Mode, 1990 and 2008	11-8
Model	
Off-highway Transportation-related Fuel Consumption from the NonRoad Model, 2008	2-11
Car Scrappage and Survival Rates, 1970, 1980 and 1990 Model Years	3-15
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975–2009	4-7
Definition of Wagons in Model Year 2009	4-8
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975–2009	4-9

Model (continued)	
Light Vehicle Market Shares by Size Class, Model Years 1975–2009.....	4–10
Light Vehicle Market Shares, Model Years 1975–2009	4–11
Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975–2009	4–12
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975–2009	4–13
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975–2009	4–14
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977–2009	4–15
Average Material Consumption for a Light Vehicle, Model Years 1995, 2000, and 2008.....	4–16
Fuel Economy and Carbon Dioxide Targets for Model Year 2016.....	4–21
Fuel Economy by Speed, PSAT Model Results.....	4–27
Alternative Fuel Vehicles Available by Manufacturer, Model Year 2009.....	6–4
Hybrid Electric Vehicles Available by Manufacturer, Model Year 2009	6–5
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2008.....	7–3
REET Model.....	11–9
REET Model Feedstocks and Fuels.....	11–10
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975–2009	11–12
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975–2009	11–13
Modes	
Energy Intensities of Highway Passenger Modes, 1970–2008	2–15
Energy Intensities of Nonhighway Passenger Modes, 1970–2008	2–16
Energy Intensities of Freight Modes, 1970–2008	2–20
Nonhighway Modes	9–1
Monoxide	
Total National Emissions of Carbon Monoxide, 1970–2008	12–3
Emissions of Carbon Monoxide from Highway Vehicles, 1970–2005.....	12–4
Motor	
Retail Prices for Motor Fuel, 1978–2009	10–8
Federal Excise Taxes on Motor Fuels, 2008	10–11
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990–2009.....	10–20
Movement	
Intercity Freight Movement and Energy Use in the United States, 2007 and 2008	2–19
National	
Summary Statistics for the National Railroad Passenger Corporation (Amtrak), 1971–2008	9–11
Total National Emissions of the Criteria Air Pollutants by Sector, 2008.....	12–2
Total National Emissions of Carbon Monoxide, 1970–2008	12–3
Total National Emissions of Nitrogen Oxides, 1970–2008.....	12–5
Total National Emissions of Volatile Organic Compounds, 1970–2008	12–7
Total National Emissions of Particulate Matter (PM-10), 1970–2008	12–9
Total National Emissions of Particulate Matter (PM-2.5), 1990–2008.....	12–11

Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS	8-17
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8-18
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS.....	8-18
Walk and Bike Trips by Trip Purpose, 2009 NHTS.....	8-23
Long-Distance Trip Characteristics, 2001 NHTS	8-25

Nitrogen

Total National Emissions of Nitrogen Oxides, 1970-2008.....	12-5
Emissions of Nitrogen Oxides from Highway Vehicles, 1970-2005.....	12-6

Nonhighway

Nonhighway Transportation Petroleum Consumption by Mode, 1970-2008.....	1-21
Nonhighway Transportation Energy Consumption by Mode, 1970-2008.....	2-10
Energy Intensities of Nonhighway Passenger Modes, 1970-2008	2-16
Nonhighway Modes	9-1
Nonhighway Energy Use Shares, 1970-2008	9-2

NonRoad

Off-highway Transportation-related Fuel Consumption from the NonRoad Model, 2008	2-11
---	------

NPTS

Demographic Statistics from the 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8-6
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8-7
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS.....	8-8
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS	8-10
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS	8-11
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS	8-13

Number

Representative Number Five Driving Cycle	4-36
Number of Alternative Refuel Sites by State and Fuel Type, 2010	6-6
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS.....	8-8
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS.....	8-17
Refiner Sales Prices for Propane and No. 2 Diesel, 1978-2009	10-9

Numerical

Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide	11-3
---	------

Occupancy

Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS	8-10
---	------

Occupancy (continued)	
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS	8-11
Odometer	
Self-Reported vs. Odometer Average Annual Miles, 1995 NPTS and 2001 NHTS	8-13
Off-highway	
Off-highway Transportation-related Fuel Consumption from the NonRoad Model, 2008	2-11
Oil	
World Crude Oil Production, 1960-2009	1-3
World Oil Reserves, Production and Consumption, 2008.....	1-6
Oil Price and Economic Growth, 1970-2009.....	1-9
Summary of Military Expenditures for Defending Oil Supplies from the Middle East.....	1-11
Refinery Yield of Petroleum Products From a Barrel of Crude Oil, 1987-2008.....	1-14
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978-2009.....	10-7
On-Road	
Distribution of Five-Axle Tractor-Trailers by On-Road Vehicle Weight, 2008.....	5-20
Organic	
Total National Emissions of Volatile Organic Compounds, 1970-2008.....	12-7
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-2005.....	12-8
Origin	
U.S. Petroleum Imports by World Region of Origin, 1960-2009.....	1-8
Operating	
Car Operating Cost per Mile, 1985-2009	10-16
Fixed Car Operating Costs per Year, 1975-2009.....	10-17
Operation	
Cars in Operation and Vehicle Travel by Age, 1970 and 2001.....	3-11
Trucks in Operation and Vehicle Travel by Age, 1970 and 2001.....	3-12
Operations	
Summary Statistics for Commuter Rail Operations, 1984-2008	9-12
Summary Statistics for Rail Transit Operations, 1970-2008.....	9-13
Other	
Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 1998 and 2008)	3-6
Output	
Refinery Gross Output by World Region, 1999 and 2009	1-12
Ownership	
Household Vehicle Ownership, 1960-2000 Census	8-5

Oxides	
Total National Emissions of Nitrogen Oxides, 1970–2008.....	12–5
Emissions of Nitrogen Oxides from Highway Vehicles, 1970–2005.....	12–6
Oxygenate	
Alternative Fuel and Oxygenate Consumption, 2003–2008	2–5
Particulate	
Total National Emissions of Particulate Matter (PM–10), 1970–2008	12–9
Emissions of Particulate Matter (PM–10) from Highway Vehicles, 1970–2005.....	12–10
Total National Emissions of Particulate Matter (PM-2.5), 1990–2008.....	12–11
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990–2005.....	12–12
Parts	
U.S. Employment for Motor Vehicles and Motor Vehicle Parts	
Manufacturing, 1990–2009.....	10–20
Passenger	
Passenger Travel and Energy Use, 2008	2–14
Energy Intensities of Highway Passenger Modes, 1970–2008	2–15
Energy Intensities of Nonhighway Passenger Modes, 1970–2008	2–16
Summary Statistics for the National Railroad Passenger Corporation	
(Amtrak), 1971–2008.....	9–11
People	
Vehicles per Thousand People: U.S. (Over Time) Compared to Other	
Countries (in 1998 and 2008)	3–6
Vehicles per Thousand People in Other Countries, 1998 and 2008	3–8
Vehicles per Thousand People in the United States, 1990–2008	3–9
Percent	
Petroleum Production and Consumption and Some Important Percent	
Shares, 1950–2009.....	1–16
Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and	
Tractor-Trailer Tire Combination.....	5–17
Percentage	
Percentage of Trucks by Size Ranked by Major Use, 2002	5–8
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002	5–9
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire	
Combination and Percentage of Total Distance Traveled as a Function	
of Speed	5–16
Period	
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New	
Domestic and Import Cars, Selected Model Years 1975–2009	4–7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New	
Domestic and Import Light Trucks, Model Years 1975–2009	4–9
Personal	
Personal Consumption Expenditures, 1970–2009.....	10–18

Petroleum	
World Petroleum Production, 1973–2009	1–4
World Petroleum Consumption, 1960–2009	1–5
U.S. Petroleum Imports by World Region of Origin, 1960–2009.....	1–8
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987–2008	1–13
Refinery Yield of Petroleum Products From a Barrel of Crude Oil, 1987–2008	1–14
United States Petroleum Production, Imports and Exports, 1950–2009	1–15
Petroleum Production and Consumption and Some Important Percent Shares, 1950–2009.....	1–16
United States Petroleum Production and Consumption – All Sectors, 1973–2035	1–17
United States Petroleum Production, Transportation and Consumption, 1970–2035	1–18
Consumption of Petroleum by End-Use Sector, 1973–2009.....	1–19
Highway Transportation Petroleum Consumption by Mode, 1970–2008.....	1–20
Nonhighway Transportation Petroleum Consumption by Mode, 1970–2008.....	1–21
Transportation Petroleum Use by Mode, 2007–2008.....	1–22
PM-10	
Total National Emissions of Particulate Matter (PM-10), 1970–2008	12–9
Emissions of Particulate Matter (PM-10) from Highway Vehicles, 1970–2005.....	12–10
PM-2.5	
Total National Emissions of Particulate Matter (PM-2.5), 1990–2008.....	12–11
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990–2005.....	12–12
Pollutants	
Criteria Air Pollutants	12–1
Total National Emissions of the Criteria Air Pollutants by Sector, 2008.....	12–2
Population	
Population and Vehicle Profile, 1950–2008.....	8–2
Potential	
World Fossil Fuel Potential	1–2
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990–2008	11–4
Potentials	
Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide	11–3
Pounds	
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970–2009	4–6
Distribution of Trucks over 26,000 lbs. Less than Two Years Old by Vehicle- Miles Traveled	5–11
Price	
Oil Price and Economic Growth, 1970–2009.....	1–9
Average Price of a New Car (Domestic and Import), 1970–2008	10–15
Consumer Price Indices, 1970–2009.....	10–18
Prices	
Gasoline Prices for Selected Countries, 1990–2008	10–3

Prices (continued)	
Diesel Fuel Prices for Selected Countries, 1998–2008	10–4
Gasoline Prices for Selected Countries, 1990 and 2008.....	10–5
Diesel Prices for Selected Countries, 1990 and 2008.....	10–6
Prices for a Barrel of Crude Oil and a Gallon of Gasoline, 1978–2009.....	10–7
Retail Prices for Motor Fuel, 1978–2009	10–8
Refiner Sales Prices for Propane and No. 2 Diesel, 1978–2009	10–9
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978–2009.....	10–10
Average Price of a New Car, 1906–2008.....	10–14
Primary	
World Consumption of Primary Energy, 2007.....	2–2
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002	5–9
Share of Trucks by Major Use and Primary Fueling Facility, 2002.....	5–10
Production	
World Crude Oil Production, 1960–2009	1–3
World Petroleum Production, 1973–2009	1–4
World Oil Reserves, Production and Consumption, 2008.....	1–6
World Natural Gas Reserves, Production and Consumption, 2008	1–7
United States Petroleum Production, Imports and Exports, 1950–2009	1–15
Petroleum Production and Consumption and Some Important Percent Shares, 1950–2009.....	1–16
United States Petroleum Production and Consumption – All Sectors, 1973–2035	1–17
United States Petroleum Production, Transportation and Consumption, 1970–2035	1–18
Products	
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987–2008	1–13
Refinery Yield of Petroleum Products From a Barrel of Crude Oil, 1987–2008.....	1–14
Profile	
Population and Vehicle Profile, 1950–2008.....	8–2
Projected	
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles.....	4–37
Properties	
Properties of Conventional and Alternative Fuels.....	6–9
Propane	
Refiner Sales Prices for Propane and No. 2 Diesel, 1978–2009	10–9
PSAT	
Fuel Economy by Speed, PSAT Model Results.....	4–27
Purpose	
Trip Statistics by Trip Purpose, 2001 and 2009 NHTS.....	8–9
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS.....	8–11
Walk and Bike Trips by Trip Purpose, 2009 NHTS.....	8–23

Rail	
Energy Intensity of Light Rail Transit Systems, 2008	2-17
Energy Intensity of Heavy Rail Systems, 2008	2-18
Energy Intensity of Commuter Rail Systems, 2008	2-18
Intermodal Rail Traffic, 1965-2008	9-10
Summary Statistics for Commuter Rail Operations, 1984-2008	9-12
Summary Statistics for Rail Transit Operations, 1970-2008	9-13
Railroad	
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton-Miles, 2008	9-8
Summary Statistics for the National Railroad Passenger Corporation (Amtrak), 1971-2008	9-11
Railroads	
Summary Statistics for Class I Freight Railroads, 1970-2008	9-9
Ranked	
Percentage of Trucks by Size Ranked by Major Use, 2002	5-8
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton-Miles, 2008	9-8
Rates	
Car Scrapage and Survival Rates, 1970, 1980 and 1990 Model Years	3-15
Light Truck Scrapage and Survival Rates	3-16
Car and Light Truck Survivability Rates and Lifetime Miles	3-17
Receipts	
Tax Receipts from the Sale of Gas Guzzlers, 1980-2008	4-26
Recreational	
Recreational Boat Energy Use, 1970-2008	9-7
Refiner	
Refiner Sales Prices for Propane and No. 2 Diesel, 1978-2009	10-9
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978-2009	10-10
Refinery	
Refinery Gross Output by World Region, 1999 and 2009	1-12
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987-2008	1-13
Refinery Yield of Petroleum Products From a Barrel of Crude Oil, 1987-2008	1-14
Reformed	
Reformed and Unreformed Light Truck Corporate Average Fuel Economy Standards, MY 2008-2011	4-19
Refuel	
Number of Alternative Refuel Sites by State and Fuel Type, 2010	6-6
Refueling	
Conventional Refueling Stations, 1993-2008	4-18

Region	
U.S. Petroleum Imports by World Region of Origin, 1960–2009.....	1–8
Refinery Gross Output by World Region, 1999 and 2009	1–12
Registrations	
Car Registrations for Selected Countries, 1960–2008.....	3–2
Truck and Bus Registrations for Selected Countries, 1960–2008.....	3–3
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2008.....	7–3
Representative	
Representative Number Five Driving Cycle	4–36
Reserves	
World Oil Reserves, Production and Consumption, 2008.....	1–6
World Natural Gas Reserves, Production and Consumption, 2008	1–7
Response	
Summary Statistics on Demand Response Vehicles, 1994–2008	4–39
Results	
Fuel Economy by Speed, PSAT Model Results.....	4–27
Retail	
New Retail Vehicle Sales, 1970–2009	3–14
New Retail Car Sales in the United States, 1970–2009	4–5
New Retail Truck Sales by Gross Vehicle Weight, 1970–2009.....	5–4
Retail Prices for Motor Fuel, 1978–2009	10–8
Revenue	
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton–Miles, 2008	9–8
Route	
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970–2008	9–3
Sale	
Tax Receipts from the Sale of Gas Guzzlers, 1980–2008.....	4–26
Sales	
New Retail Vehicle Sales, 1970–2009	3–14
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989–1999.....	4–4
New Retail Car Sales in the United States, 1970–2009	4–5
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975–2009	4–7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975–2009	4–9
Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975–2009	4–12
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975–2009	4–13
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975–2009	4–14

Sales (continued)

Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977–2009	4–15
New Light Vehicle Dealerships and Sales, 1970–2008	4–17
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2010	4–22
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2010	4–23
New Retail Truck Sales by Gross Vehicle Weight, 1970–2009.....	5–4
Bicycle Sales, 1981–2008	8–22
Refiner Sales Prices for Propane and No. 2 Diesel, 1978–2009	10–9
Refiner Sales Prices for Aviation Gasoline and Jet Fuel, 1978–2009.....	10–10
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975–2009	11–12
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975–2009	11–13

Scrappage

Car Scrappage and Survival Rates, 1970, 1980 and 1990 Model Years	3–15
Light Truck Scrappage and Survival Rates	3–16

Stations

Conventional Refueling Stations, 1993–2008	4–18
--	------

Statistics

Summary Statistics for Cars, 1970–2008	4–2
Summary Statistics for Two-Axle, Four-Tire Trucks, 1970–2008.....	4–3
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks	4–4
Summary Statistics on Demand Response Vehicles, 1994–2008	4–39
Summary Statistics for Heavy Single-Unit Trucks, 1970–2008	5–2
Summary Statistics for Combination Trucks, 1970–2008.....	5–3
Truck Statistics by Gross Vehicle Weight Class, 2002	5–6
Truck Statistics by Size, 2002	5–7
Summary Statistics on Transit Buses and Trolleybuses, 1994–2008	5–24
Demographic Statistics from the 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8–6
Trip Statistics by Trip Purpose, 2001 and 2009 NHTS.....	8–9

Statistics (continued)

Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970–2008	9–3
Summary Statistics for General Aviation, 1970–2008	9–4
Tonnage Statistics for Domestic and International Waterborne Commerce, 1970–2008	9–5
Summary Statistics for Domestic Waterborne Commerce, 1970–2008	9–6
Summary Statistics for Class I Freight Railroads, 1970–2008	9–9
Summary Statistics for the National Railroad Passenger Corporation (Amtrak), 1971–2008	9–11
Summary Statistics for Commuter Rail Operations, 1984–2008	9–12
Summary Statistics for Rail Transit Operations, 1970–2008	9–13

Steady

Steady Speed Fuel Economy for Vehicles Tested in the 1997 Study	4–31
---	------

Studies

Fuel Economy by Speed, 1973, 1984, and 1997 Studies	4–28
---	------

Study

Vehicle Specifications for Vehicles Tested in the 1997 Study	4–30
Steady Speed Fuel Economy for Vehicles Tested in the 1997 Study	4–31

Summary

Summary of Military Expenditures for Defending Oil Supplies from the Middle East	1–11
Summary Statistics for Cars, 1970–2008	4–2
Summary Statistics for Two-Axle, Four-Tire Trucks, 1970–2008	4–3
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks	4–4
Summary Statistics on Demand Response Vehicles, 1994–2008	4–39
Summary Statistics for Heavy Single-Unit Trucks, 1970–2008	5–2
Summary Statistics for Combination Trucks, 1970–2008	5–3
Summary Statistics on Transit Buses and Trolleybuses, 1994–2008	5–24
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970–2008	9–3
Summary Statistics for General Aviation, 1970–2008	9–4
Summary Statistics for Domestic Waterborne Commerce, 1970–2008	9–6
Summary Statistics for Class I Freight Railroads, 1970–2008	9–9
Summary Statistics for the National Railroad Passenger Corporation (Amtrak), 1971–2008	9–11
Summary Statistics for Commuter Rail Operations, 1984–2008	9–12
Summary Statistics for Rail Transit Operations, 1970–2008	9–13

Supplies

Summary of Military Expenditures for Defending Oil Supplies from the Middle East	1–11
---	------

Surveys

Growth of Freight in the United States: Comparison of the 2007, 2002 and 1997 Commodity Flow Surveys	5–22
Growth of Freight Miles in the United States: Comparison of the 2007, 2002 and 1997 Commodity Flow Surveys	5–23

Survivability	
Car and Light Truck Survivability Rates and Lifetime Miles	3-17
Survival	
Car Scrappage and Survival Rates, 1970, 1980 and 1990 Model Years	3-15
Light Truck Scrappage and Survival Rates	3-16
Systems	
Energy Intensity of Light Rail Transit Systems, 2008	2-17
Energy Intensity of Heavy Rail Systems, 2008	2-18
Energy Intensity of Commuter Rail Systems, 2008	2-18
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton-Miles, 2008	9-8
Targets	
Fuel Economy and Carbon Dioxide Targets for Model Year 2016.....	4-21
Tax	
The Gas Guzzler Tax on New Cars	4-25
Tax Receipts from the Sale of Gas Guzzlers, 1980-2008	4-26
State Tax Exemptions for Gasohol, 2008.....	10-11
Taxes	
Federal Excise Taxes on Motor Fuels, 2008	10-11
Technology	
Alternative Fuel and Advanced Technology Vehicles and Characteristics.....	6-1
Federal and State Advanced Technology Incentives, 2010.....	10-13
Temperature	
Cold Temperature (Cold FTP) Driving Cycle.....	4-34
Terrain	
Effect of Terrain on Class 8 Truck Fuel Economy.....	5-14
Tested	
Vehicle Specifications for Vehicles Tested in the 1997 Study.....	4-30
Steady Speed Fuel Economy for Vehicles Tested in the 1997 Study.....	4-31
Tier 2	
U.S. Tier 2 Emission Standards for Cars and Light Trucks	12-13
Light Vehicle Exhaust Emission Standards in Effect in 2009 when U.S. Tier 2 Standards are Final	12-14
Time	
Average Length of Time Business Fleet Vehicles are in Service, 2008	7-3
Workers by Commute Time, 1990 and 2000 Census	8-21
Tire	
Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination	5-15

Tire (continued)

- Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed 5-16
- Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination 5-17

Ton-Miles

- Class I Railroad Freight Systems in the United States Ranked by Revenue Ton-Miles, 2008 9-8

Tonnage

- Tonnage Statistics for Domestic and International Waterborne Commerce, 1970-2008 9-5

Total

- U. S. Consumption of Total Energy by End-Use Sector, 1973-2009 2-3
- Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed 5-16
- Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination 5-17
- Total U.S. Greenhouse Emissions by End-Use Sector, 2008 11-5
- Total National Emissions of the Criteria Air Pollutants by Sector, 2008 12-2
- Total National Emissions of Carbon Monoxide, 1970-2008 12-3
- Total National Emissions of Nitrogen Oxides, 1970-2008 12-5
- Total National Emissions of Volatile Organic Compounds, 1970-2008 12-7
- Total National Emissions of Particulate Matter (PM-10), 1970-2008 12-9
- Total National Emissions of Particulate Matter (PM-2.5), 1990-2008 12-11

Totals

- Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970-2008 9-3

Tractor-Trailer

- Fuel Economy for Class 8 Trucks as Function of Speed and Tractor-Trailer Tire Combination 5-15
- Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed 5-16
- Class 8 Truck Percent of Total Fuel Consumed as a Function of Speed and Tractor-Trailer Tire Combination 5-17
- Distribution of Five-Axle Tractor-Trailers by On-Road Vehicle Weight, 2008 5-20

Traffic

- Intermodal Rail Traffic, 1965-2008 9-10

Transit

- Energy Intensity of Light Rail Transit Systems, 2008 2-17
- Summary Statistics on Transit Buses and Trolleybuses, 1994-2008 5-24
- Summary Statistics for Rail Transit Operations, 1970-2008 9-13

Transportation

United States Petroleum Production, Transportation and Consumption, 1970–2035	1–18
Highway Transportation Petroleum Consumption by Mode, 1970–2008.....	1–20
Nonhighway Transportation Petroleum Consumption by Mode, 1970–2008.....	1–21
Transportation Petroleum Use by Mode, 2007–2008.....	1–22
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2008	2–7
Transportation Energy Use by Mode, 2007–2008.....	2–8
Highway Transportation Energy Consumption by Mode, 1970–2008.....	2–9
Nonhighway Transportation Energy Consumption by Mode, 1970–2008.....	2–10
Off-highway Transportation-related Fuel Consumption from the NonRoad Model, 2008.....	2–11
Means of Transportation to Work, 1980, 1990 and 2000 Census	8–19
Transportation and the Economy.....	10–1
Transportation Services Index, January 1990–January 2010	10–2
Transportation-related Employment, 1999 and 2009	10–19
U.S. Carbon Emissions from Energy Use in the Transportation Sector, 1990–2008.....	11–7
Transportation Greenhouse Gas Emissions by Mode, 1990 and 2008.....	11–8

Travel

Passenger Travel and Energy Use, 2008	2–14
Cars in Operation and Vehicle Travel by Age, 1970 and 2001.....	3–11
Trucks in Operation and Vehicle Travel by Age, 1970 and 2001.....	3–12
Average Annual Vehicle-Miles of Travel for Business Fleet Vehicles, 2008.....	7–3
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS.....	8–8
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS.....	8–15
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS.....	8–17
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS.....	8–17
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8–18
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS.....	8–18

Traveled

Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970–2008.....	3–10
Distribution of Trucks over 26,000 lbs. Less than Two Years Old by Vehicle- Miles Traveled	5–11
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed	5–16

Trip

Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8–7
Trip Statistics by Trip Purpose, 2001 and 2009 NHTS.....	8–9
Average Vehicle Occupancy by Trip Purpose, 1977 NPTS and 2009 NHTS	8–11
Share of Vehicle Trips by Trip Distance, 2009 NHTS.....	8–14
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS	8–14
Walk and Bike Trips by Trip Purpose, 2009 NHTS.....	8–23
Long-Distance Trip Characteristics, 2001 NHTS	8–25

Trips

Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8-7
Share of Vehicle Trips by Trip Distance, 2009 NHTS.....	8-14
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS	8-14
Household Vehicle Trips, 2009 NHTS	8-16
Walk and Bike Trips by Trip Purpose, 2009 NHTS.....	8-23

Trolleybuses

Summary Statistics on Transit Buses and Trolleybuses, 1994-2008	5-24
---	------

Truck

Truck and Bus Registrations for Selected Countries, 1960-2008.....	3-3
Light Truck Scrappage and Survival Rates	3-16
Car and Light Truck Survivability Rates and Lifetime Miles	3-17
Reformed and Unreformed Light Truck Corporate Average Fuel Economy Standards, MY 2008-2011	4-19
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978-2010	4-23
Truck Statistics by Gross Vehicle Weight Class, 2002	5-6
Truck Harmonic Mean Fuel Economy by Size Class, 1992, 1997, and 2002	5-6
Truck Statistics by Size, 2002	5-7
Effect of Terrain on Class 8 Truck Fuel Economy.....	5-14
Class 8 Truck Fuel Economy as a Function of Speed and Tractor-Trailer Tire Combination and Percentage of Total Distance Traveled as a Function of Speed	5-16
Class 8 Truck Weight by Component	5-18

Trucks

U.S. Cars and Trucks in Use, 1970-2008	3-5
Trucks in Operation and Vehicle Travel by Age, 1970 and 2001	3-12
Summary Statistics for Two-Axle, Four-Tire Trucks, 1970-2008.....	4-3
Summary Statistics on Class 1, Class 2a, and Class 2b Light Trucks	4-4
Sales Estimates of Class 1, Class 2a, and Class 2b Light Trucks, 1989-1999.....	4-4
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970-2009	4-6
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2009	4-9
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2009	4-13
Summary Statistics for Heavy Single-Unit Trucks, 1970-2008	5-2
Summary Statistics for Combination Trucks, 1970-2008.....	5-3
Percentage of Trucks by Size Ranked by Major Use, 2002	5-8
Percentage of Trucks by Fleet Size and Primary Fueling Facility, 2002	5-9
Share of Trucks by Major Use and Primary Fueling Facility, 2002.....	5-10
Distribution of Trucks over 26,000 lbs. Less than Two Years Old by Vehicle-Miles Traveled	5-11
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975-2009	11-13
U.S. Tier 2 Emission Standards for Cars and Light Trucks	12-13
California Cars and Light Trucks Emission Certification Standards	12-15

Two-Axle	
Summary Statistics for Two-Axle, Four-Tire Trucks, 1970–2008.....	4–3
Type	
Domestic Consumption of Transportation Energy by Mode and Fuel Type, 2008	2–7
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970–2008.....	3–10
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2008.....	7–3
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2009	7–4
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002– 2009	7–6
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS	8–10
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8–20
Unit	
Summary Statistics for Heavy Single-Unit Trucks, 1970–2008	5–2
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8–20
Housing Unit Characteristics, 2007.....	8–20
United	
U.S. Petroleum Imports by World Region of Origin, 1960–2009.....	1–8
Costs of Oil Dependence to the U.S. Economy, 1970–2009.....	1–10
U.S. Refinery Input of Crude Oil and Petroleum Products, 1987–2008	1–13
United States Petroleum Production, Imports and Exports, 1950–2009	1–15
United States Petroleum Production and Consumption – All Sectors, 1973–2035	1–17
United States Petroleum Production, Transportation and Consumption, 1970–2035	1–18
U. S. Consumption of Total Energy by End-Use Sector, 1973–2009	2–3
Intercity Freight Movement and Energy Use in the United States, 2007 and 2008	2–19
U.S. Cars and Trucks in Use, 1970–2008	3–5
Vehicles per Thousand People in the United States, 1990–2008	3–9
U.S. Average Vehicle Age, 1995–2009	3–13
New Retail Car Sales in the United States, 1970–2009	4–5
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970–2009.....	4–6
Projected Fuel Economies from U.S., European, and Japanese Driving Cycles.....	4–37
Comparison of U.S., European, and Japanese Driving Cycles.....	4–38
Growth of Freight in the United States: Comparison of the 2007, 2002 and 1997 Commodity Flow Surveys	5–22
Growth of Freight Miles in the United States: Comparison of the 2007, 2002 and 1997 Commodity Flow Surveys.....	5–23
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8–20
Summary Statistics for U.S. Domestic and International Certificated Route Air Carriers (Combined Totals), 1970–2008	9–3
Class I Railroad Freight Systems in the United States Ranked by Revenue Ton–Miles, 2008.....	9–8
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990–2009.....	10–20
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990–2008	11–4

United (continued)	
Total U.S. Greenhouse Emissions by End-Use Sector, 2008	11-5
U.S. Carbon Emissions from Fossil Energy Consumption by End-Use Sector, 1990-2008	11-6
U.S. Carbon Emissions from Energy Use in the Transportation Sector, 1990-2008	11-7
U.S. Tier 2 Emission Standards for Cars and Light Trucks	12-13
Unreformed	
Reformed and Unreformed Light Truck Corporate Average Fuel Economy Standards, MY 2008-2011	4-19
Usage	
Highway Usage of Gasoline and Special Fuels, 1973-2008	2-13
Use	
Transportation Petroleum Use by Mode, 2007-2008	1-22
U. S. Consumption of Total Energy by End-Use Sector, 1973-2009	2-3
Transportation Energy Use by Mode, 2007-2008	2-8
Passenger Travel and Energy Use, 2008	2-14
Intercity Freight Movement and Energy Use in the United States, 2007 and 2008	2-19
U.S. Cars and Trucks in Use, 1970-2008	3-5
Percentage of Trucks by Size Ranked by Major Use, 2002	5-8
Share of Trucks by Major Use and Primary Fueling Facility, 2002	5-10
Estimates of Alternative Fuel Vehicles in Use, 1995-2008	6-3
Nonhighway Energy Use Shares, 1970-2008	9-2
Recreational Boat Energy Use, 1970-2008	9-7
U.S. Carbon Emissions from Energy Use in the Transportation Sector, 1990-2008	11-7
US06	
High Speed (US06) Driving Cycle	4-35
Vehicle	
Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970-2008	3-10
Cars in Operation and Vehicle Travel by Age, 1970 and 2001	3-11
Trucks in Operation and Vehicle Travel by Age, 1970 and 2001	3-12
U.S. Average Vehicle Age, 1995-2009	3-13
New Retail Vehicle Sales, 1970-2009	3-14
New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970-2009	4-6
Light Vehicle Market Shares by Size Class, Model Years 1975-2009	4-10
Light Vehicle Market Shares, Model Years 1975-2009	4-11
Average Material Consumption for a Light Vehicle, Model Years 1995, 2000, and 2008	4-16
New Light Vehicle Dealerships and Sales, 1970-2008	4-17
New Retail Truck Sales by Gross Vehicle Weight, 1970-2009	5-4
Truck Statistics by Gross Vehicle Weight Class, 2002	5-6
Gross Vehicle Weight vs. Empty Vehicle Weight	5-19
Distribution of Five-Axle Tractor-Trailers by On-Road Vehicle Weight, 2008	5-20
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2008	7-3
Average Annual Vehicle-Miles of Travel for Business Fleet Vehicles, 2008	7-3
Average Miles per Domestic Federal Vehicle by Vehicle Type, 2009	7-4
Federal Fleet Vehicle Acquisitions by Fuel Type, FY 2002- 2009	7-6

Vehicle (continued)

Population and Vehicle Profile, 1950–2008.....	8–2
Household Vehicle Ownership, 1960–2000 Census	8–5
Average Vehicle Occupancy by Vehicle Type, 1995 NPTS and 2009 NHTS.....	8–10
Average Annual Miles per Household Vehicle by Vehicle Age.....	8–12
Share of Vehicle Trips by Trip Distance, 2009 NHTS.....	8–14
Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS	8–14
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS.....	8–15
Household Vehicle Trips, 2009 NHTS	8–16
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS.....	8–17
Daily and Annual Vehicle Miles of Travel and Average Age for Each Vehicle in a Household, 2009 NHTS.....	8–17
Daily Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS	8–18
Annual Vehicle Miles of Travel for Each Vehicle in a Household, 2009 NHTS.....	8–18
Characteristics of U.S. Daily per Vehicle Driving vs. Dwelling Unit Type and Density	8–20
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990–2009.....	10–20
Average Annual Carbon Footprint by Vehicle Classification, 1975 and 2009	11–14
Light Vehicle Exhaust Emission Standards in Effect in 2009 when U.S. Tier 2 Standards are Final.....	12–14

Vehicle-Miles

Shares of Highway Vehicle-Miles Traveled by Vehicle Type, 1970–2008.....	3–10
Distribution of Trucks over 26,000 lbs. Less than Two Years Old by Vehicle- Miles Traveled	5–11
Average Annual Vehicle-Miles of Travel for Business Fleet Vehicles, 2008.....	7–3
Vehicles and Vehicle-Miles per Capita, 1950–2008	8–3
Average Annual Vehicle-Miles, Vehicle Trips and Trip Length per Household 1969, 1977, 1983, 1990, 1995 NPTS and 2001, 2009 NHTS	8–7

Vehicles

Vehicles per Thousand People: U.S. (Over Time) Compared to Other Countries (in 1998 and 2008)	3–6
Vehicles per Thousand People in Other Countries, 1998 and 2008.....	3–8
Vehicles per Thousand People in the United States, 1990–2008	3–9
Light Vehicles and Characteristics.....	4–1
Vehicle Specifications for Vehicles Tested in the 1997 Study.....	4–30
Steady Speed Fuel Economy for Vehicles Tested in the 1997 Study.....	4–31
Summary Statistics on Demand Response Vehicles, 1994–2008	4–39
Heavy Vehicles and Characteristics	5–1
Alternative Fuel and Advanced Technology Vehicles and Characteristics.....	6–1
Estimates of Alternative Fuel Vehicles in Use, 1995–2008	6–3
Alternative Fuel Vehicles Available by Manufacturer, Model Year 2009.....	6–4
Hybrid Electric Vehicles Available by Manufacturer, Model Year 2009	6–5
Fleet Vehicles and Characteristics.....	7–1
Fleet Vehicles in Service as of January 1, 2009.....	7–2
Average Length of Time Business Fleet Vehicles are in Service, 2008	7–3
Average Annual Vehicle-Miles of Travel for Business Fleet Vehicles, 2008.....	7–3
Federal Government Vehicles, 2001–2009	7–5
Federal Government Vehicles by Agency, FY 2009.....	7–7

Vehicles (continued)

Household Vehicles and Characteristics	8-1
Vehicles and Vehicle-Miles per Capita, 1950-2008	8-3
Average Number of Vehicles and Vehicle Travel per Household, 1990 NPTS and 2001 and 2009 NHTS	8-8
Share of Vehicles by Annual Miles of Travel and Vehicle Age, 2009 NHTS	8-15
Daily Vehicle Miles of Travel (per Vehicle) by Number of Vehicles in the Household, 2009 NHTS	8-17
U.S. Employment for Motor Vehicles and Motor Vehicle Parts Manufacturing, 1990-2009	10-20
Emissions of Carbon Monoxide from Highway Vehicles, 1970-2005	12-4
Emissions of Nitrogen Oxides from Highway Vehicles, 1970-2005	12-6
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-2005	12-8
Emissions of Particulate Matter (PM-10) from Highway Vehicles, 1970-2005	12-10
Emissions of Particulate Matter (PM-2.5) from Highway Vehicles, 1990-2005	12-12

Volatile

Total National Emissions of Volatile Organic Compounds, 1970-2008	12-7
Emissions of Volatile Organic Compounds from Highway Vehicles, 1970-2005	12-8

Wagons

Definition of Wagons in Model Year 2009	4-8
---	-----

Walk

Walk and Bike Trips by Trip Purpose, 2009 NHTS	8-23
--	------

Warming

Numerical Estimates of Global Warming Potentials Compared with Carbon Dioxide	11-3
U.S. Emissions of Greenhouse Gases, based on Global Warming Potential, 1990-2008	11-4

Waterborne

Tonnage Statistics for Domestic and International Waterborne Commerce, 1970-2008	9-5
Summary Statistics for Domestic Waterborne Commerce, 1970-2008	9-6

Weight

New Retail Sales of Trucks 10,000 Pounds GVW and Less in the United States, 1970-2009	4-6
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975-2009	4-14
New Retail Truck Sales by Gross Vehicle Weight, 1970-2009	5-4
Truck Statistics by Gross Vehicle Weight Class, 2002	5-6
Class 8 Truck Weight by Component	5-18
Gross Vehicle Weight vs. Empty Vehicle Weight	5-19
Distribution of Five-Axle Tractor-Trailers by On-Road Vehicle Weight, 2008	5-20

Weighted

Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975-2009	4-7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975-2009	4-9

Weighted (continued)

Sales-Weighted Engine Size of New Domestic and Import Cars by Size Class, Model Years 1975–2009	4–12
Sales-Weighted Engine Size of New Domestic and Import Light Trucks by Size Class, Model Years 1975–2009	4–13
Sales-Weighted Curb Weight of New Domestic and Import Cars by Size Class, Model Years 1975–2009	4–14
Sales-Weighted Interior Space of New Domestic and Import Cars by Size Class, Model Years 1977–2009	4–15
Car Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2010	4–22
Light Truck Corporate Average Fuel Economy (CAFE) Standards versus Sales-Weighted Fuel Economy Estimates, 1978–2010	4–23
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars by Size Class, Model Years 1975–2009	11–12
Sales-Weighted Annual Carbon Footprint of New Domestic and Import Light Trucks by Size Class, Model Years 1975–2009	11–13

Work

Share of Vehicle Trips to Work by Trip Distance, 2009 NHTS	8–14
Means of Transportation to Work, 1980, 1990 and 2000 Census	8–19

Workers

Workers by Commute Time, 1990 and 2000 Census	8–21

World

World Fossil Fuel Potential	1–2
World Crude Oil Production, 1960–2009	1–3
World Petroleum Production, 1973–2009	1–4
World Oil Reserves, Production and Consumption, 2008.....	1–6
World Natural Gas Reserves, Production and Consumption, 2008	1–7
U.S. Petroleum Imports by World Region of Origin, 1960–2009.....	1–8
Refinery Gross Output by World Region, 1999 and 2009	1–12
World Consumption of Primary Energy, 2007.....	2–2
World Carbon Dioxide Emissions, 1990 and 2006	11–2

Year

Definition of Wagons in Model Year 2009	4–8
Fuel Economy and Carbon Dioxide Targets for Model Year 2016.....	4–21
Hybrid Electric Vehicles Available by Manufacturer, Model Year 2009	6–5
New Light Fleet Vehicle Registrations by Vehicle Type, Model Year 2008.....	7–3
Federal Government Vehicles by Agency, FY 2009.....	7–7
Fixed Car Operating Costs per Year, 1975–2009.....	10–17

Years

Car Scrapage and Survival Rates, 1970, 1980 and 1990 Model Years	3–15
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Cars, Selected Model Years 1975–2009	4–7
Period Sales, Market Shares, and Sales-Weighted Fuel Economies of New Domestic and Import Light Trucks, Model Years 1975–2009	4–9
Light Vehicle Market Shares by Size Class, Model Years 1975–2009.....	4–10
Light Vehicle Market Shares, Model Years 1975–2009	4–11

Years (continued)

Sales-Weighted Engine Size of New Domestic and Import Cars
 by Size Class, Model Years 1975–2009 4–12

Sales-Weighted Engine Size of New Domestic and Import Light Trucks
 by Size Class, Model Years 1975–2009 4–13

Sales-Weighted Curb Weight of New Domestic and Import Cars
 by Size Class, Model Years 1975–2009 4–14

Sales-Weighted Interior Space of New Domestic and Import Cars
 by Size Class, Model Years 1977–2009 4–15

Average Material Consumption for a Light Vehicle, Model Years 1995, 2000,
 and 2008..... 4–16

Distribution of Trucks over 26,000 lbs. Less than Two Years Old by Vehicle-
 Miles Traveled 5–11

Sales-Weighted Annual Carbon Footprint of New Domestic and Import Cars
 by Size Class, Model Years 1975-2009 11–12

Sales-Weighted Annual Carbon Footprint of New Domestic and Import
 Light Trucks by Size Class, Model Years 1975-2009 11–13

Yield

Refinery Yield of Petroleum Products From a Barrel of Crude Oil, 1987–2008 1–14
