TITLE LIST

1963, 1964, 1965, and 1966

March 1967

PREFACE

This title list includes Sandia Corporation (SC) series "R" reports published during the years 1963 through 1966. The "R" series includes reprints of published articles and speeches; monographs or treatises issued by Sandia on specialized topics; research colloquium papers and symposium collections of interest to the public; bibliographies of more than local interest; and other technical papers printed for release to the public.

The first section of this two-part listing is indexed by SCR (or SC-R) number, from SCR-472 to SC-R-66-1010. The "66" in the series number for the last paper follows a practice begun in 1964 of making the year a part of the number designator. Persons ordering documents should use the complete information from this numerical listing, including the full number, title, and the author's name (names).

The user may locate documents within subject-matter areas by using the machine-set "permuted-title" list which makes up the second part of this bibliography. The permuted title index lists each significant word in a title alphabetically along a center column within the context of the title. Thus the title "A Hypersonic Plasma Power Generator" appears in the index four times, separated so that it would appear alphabetically at "Generator," "Hypersonic," "Plasma," and "Power." A user locating the paper by any of the four key words would then use the reference number given (SC-R-65-883) to locate the paper in the number listing; there he will find the author and all information necessary to order the paper.

The permuted title section has important limitations: It does not index reports released in 1963 or earlier (in general, numbers below SCR-630); also missing are report numbers assigned in 1966 but not actually published until 1967. The permuted title list does not index every word of a title; certain adjectives, nouns, connectives, and other words not considered significant are automatically eliminated. Since the effectiveness of this subject indexing depends so much on accuracy and completeness of title, certain subject words have been added to titles which appeared inadequate.

Persons outside Sandia wishing reports listed should send written requests to:
