PREFACE

This report is a bibliographic reference to technical information developed at the Oak Ridge National Laboratory during 1966. About half the entries listed have appeared in technical journals or technical reports. Papers presented at professional society meetings are listed so that those interested in certain areas of research can contact authors working in similar fields if they wish. Books, portions of books, and theses prepared by members of the Laboratory staff are listed also.

Reprints of most of the articles appearing in technical journals are available from the authors, and copies of the reports can be purchased from the Clearinghouse for Federal Scientific and Technical Information, Springfield, Virginia 22151. Although reprints of sections of some books are available, in general, books must be purchased from dealers or the publishers. Copies of a thesis must be obtained from the university or from the author. When a thesis has been published as a Laboratory report, it is also included in the report listing.

A secondary contribution of this report is that it summarizes publications productivity at the Oak Ridge National Laboratory according to the divisions of the Laboratory.

The contributions of Margaret Passiakos, Central Research Library; Margaret Herring, Laboratory Records; and G. C. Battle, Jr., Technical Publications are acknowledged; many others at the Laboratory also aided by checking their division's entries for accuracy.

INTRODUCTION

This document lists the titles of written and oral scientific information originating at the Oak Ridge National Laboratory during 1966. It is the sixth document (volume 6) bearing the number ORNL-3300; this number will be continued for the corresponding publication in future years.

MAIN LISTING

This section lists references for information originating at the Laboratory. Each of the division lists is divided into five categories: books, journal articles, papers at professional meetings, reports, and theses. To the right of each entry is a code number used for indexing. An explanation of this code number will aid in the use of the indexes described later:

Division Number. — This number shows the author's division. A list of the division names for these numbers is given inside the back cover. Papers and presentations with multiple authors have been listed according to the regular division of the first author. An employee may actually have been on loan to some other division at the time the work was done. In the case of material presented by members of the administrative staff of the Laboratory, the entries have been made, for the most part, under the division in which the subject matter is most applicable.

Coauthors. — Since coauthors are sometimes from a Laboratory division different from that of the first author, a number(s) has been added indicating the regular division(s) of coauthors. This number (the same division designations as given inside the back cover) is printed following the names of the authors. Also under each division is a coauthor listing which gives the complete code number to locate entries for which the division supplied a coauthor. The coauthor listing under Directors Division (05) also includes material by individual administrative staff members which was entered elsewhere on the basis of subject matter.

Type of Entry. — A mnemonic designation has been used to indicate the type of entry. This should be particularly useful when consulting the Key Word or Author Indexes. The designation B (book) is straightforward — ordinary books as available from publishers or dealers. The J (journal) entries cover information published in periodicals and serials. Proceedings of meetings and special supplements are

included under journals, *if* they were issued under the name of the journal, with volume and issue numbers. The listing P (papers at professional meetings) covers only unclassified, scientific meetings, regional or larger, which are open to the public. Papers presented by staff members under the ORNL Traveling Lecture Program, at universities, civic clubs, or local section meetings of professional societies are *not* included. Reports (R) include documents issued by the Laboratory or a governmental agency; in most cases, copies of the document are available for purchase by the public. The T (theses) list covers theses or dissertations written at the Oak Ridge National Laboratory in cooperation with a university as partial fulfillment of the requirements for an advanced degree granted by the university. This is part of the Laboratory's Educational Assistance Program.

Year. — Since it is intended to continue the numbering system used in this document in future years, the last digit of the calendar year is included in the code number.

File Number. — These are simply file numbers, assigned one to each entry, needed to permit indexing and to aid in requesting reprints of specific articles. Since material for this document was collected in three locations, there are three groups of numbers (roughly, 1400, 3100–3600, and 11,000–11,900).

The group by which a particular entry has been numbered has no significance.

Abbreviations Used. — In order to conserve space, the names of journals and of professional meetings have been abbreviated according to the listing in *Chemical Abstracts, List of Periodicals*. The names of journals and meetings not abstracted by *Chemical Abstracts* have been abbreviated with the aid of the "Journal Title Word Abbreviations" appearing at the front of the *List of Periodicals*.

The names of book publishers and sales agencies have been shortened as is done in *Chemical Abstracts*.

The names of states have been omitted for the largest cities in the United States, and the names of countries have been omitted for some major foreign cities.

KEY WORD INDEX

After the main listing is a Key Word Index in which the key words from each title in the main list have been arranged alphabetically down the center of the page. Thus each title will appear in the index as many times as there are key words in the title. To the right of each of these lines is the code number for locating the complete listing in the first section of this document. (Here the code number will identify the entry to the user as a book, journal article, paper at meeting, report, or thesis.)

Some of the limitations in such a title word index prepared by a computer must be noted:

When the length of a title is such that it cannot be given on one line, a diagonal (/) indicates where the title is broken. If more of the title is needed to identify the research, it will be necessary to use the code number and inspect the complete title listed in the first section.

Numerical entries contained in the title appear after the alphabetical sequence.

A Roman number following an element indicates the valence. Isotope mass numbers are indicated by a hyphen and an Arabic number following the element, as in URANIUM-238. To provide some additional useful entries, many words are divided into shorter words; for example, dimethylether is divided into di, methyl, and ether. The computer has no lower-case type; therefore, Greek letters, chemical symbols, formulas, elements, and compounds are written out in full.

AUTHOR INDEX

The Author Index, the third part of this document, provides an alphabetical listing of all authors whose names appear in the main listing. By each name is the code number for locating the complete listing in the first section. No distinction is made for entries with multiple authors — each author is listed separately and the code number given.

All of the authors listed are not necessarily at the Oak Ridge National Laboratory; however, the work listed was done at the Laboratory or in cooperation with a member of the Laboratory staff. Editors of books as listed are members of the Laboratory staff.

REQUESTS FOR REPRINTS

Reprints are available of many of the journal articles and a few of the sections of books. If reprints are available from the Laboratory, the word REPRINT appears at the end of the entry. NO REPRINT, of course, means that none are available.

Requests for reprints of articles listed under all divisions except the Biology Division should be addressed to:

Name of author
Oak Ridge National Laboratory
P.O. Box X
Oak Ridge, Tennessee 37830, U.S.A.

Requests for reprints of articles listed under Biology should be addressed to:

Biology Division
Oak Ridge National Laboratory
P.O. Box Y
Oak Ridge, Tennessee 37830, U.S.A.

Requests will be filled subject to supply and without cost. Please note that reprints are available only for articles marked REPRINT.

For information regarding papers presented at professional meetings, the author should be contacted.

Documents listed as reports are available for use at the Atomic Energy Commission Depository Libraries, or copies may be purchased (if a price is indicated) from:

Clearinghouse for Federal Scientific
and Technical Information
5285 Port Royal Road
Springfield, Virginia 22151, U.S.A.

The document number (ORNL-, TID-, etc.) must be used for orders to the Clearinghouse for Federal Scientific and Technical Information. They do not use the indexing code numbers assigned to the documents listed here.
