INDEXES TO 563 UNCLASSIFIED DOCUMENTS ON CIVIL DEFENSE

Joanne S. Levey, Ann S. Klein*, and Bobbie-Jean Hatcher, Editors

INTRODUCTION

Five hundred and sixty-three unclassified, unlimited-distribution documents** from the Civil Defense Research Library are provided with four indexes: Bibliographic, Key Word, Corporate Author, and Author. They are described below.

Description of Indexes

Bibliographic

The Bibliographic Index lists the 563 documents according to the 22 subject fields and 188 groups provided by the COSATI¹ Subject Category List (DOD--Modified).² To begin to meet the special categorizing needs of the civil defense research literature, a twenty-third subject field and its five sublisted groups³ have been included.

In addition to the self-explanatory features (author, title, corporate author, etc.), each entry includes the following explanatory information.

*Technical Information Division

**Indexes to the Civil Defense Research Library's classified and unclassified-limited-distribution documents will appear initially as ORNL-CD-3 and subsequently as ORNL-CD-odd number documents. They will carry the security classification CONFIDENTIAL

¹Committee on Scientific and Technical Information of the Federal Council on Science and Technology

²COSATI Subject Category List (DOD--Modified), Defense Documentation Center, Defense Supply Agency, Alexandria, Virginia (1965)

³Devised by Claire Nader, ORNL

1 Field	D Data Source, Handbook
2 Group	E Research (Theoretical)
3 Arbitrary Sequence Number	F Research (Experimental)
4 Descriptors	G General, Nontechnical
5 Document Form ⁴	H Historical, Mainly
B Book	I Computers
J Journal	L Social Science Research
K Government Material	N News, Press Report
M Memorandum, Letters	O Other
P Patent	S Symposium, Meeting Coverage
Q Preprint	T Topical Subject
R Report	U Progress Report
X Other	V State-of-the-Art Review
Z Brochure	Y Trip Report
6 Document Content	7 Security Classification
A Bibliography	U Unclassified Unlimited
C Calculations	

⁴ Codes for Document Form and Document Content are adapted from the Document Types List of the Nuclear Fuel Technology Information Center (NUFTIC) at Oak Ridge National Laboratory

For vocabulary control and compatibility with comparable systems, the descriptors added to the titles are selected to conform with those in three already existing thesauruses: Defense Documentation Center's Thesaurus of ASTIA Descriptors,⁵ Research Triangle Institute's Thesaurus of Civil Defense Descriptors,⁶ and the Engineers Joint Council's Thesaurus of Engineering Terms.⁷

Key Word

The second index is a permuted Key Word Index (KWIC). Each significant word in the title of a document, together with each descriptive term by which the title has been extended, is printed in alphabetical order down the center of the page. Thus every title will appear in the index as many times as there are key words in the title.

When the title (with descriptors) is too long to fit on one line, the computer indicates the location of the omitted words by a slash (/). The user may quickly locate the complete title by checking the document number at the far right against that of the bibliographic entry in the first section.

Corporate Author

The third index lists alphabetically the names of the Corporate Authors which appear in the main bibliography. The user may link the corporate author (or installation) with the entire bibliographic entry through the number at the right.

⁵Thesaurus of ASTIA Descriptors, Second Edition, Armed Services Technical Information Agency, Arlington, Virginia (1962)

⁶W. T. Herzog and J. E. Jenkins, A Thesaurus of Civil Defense Descriptors, Appendix E of Final Report (Volume II) Civil Defense Information Systems Analysis, Research Triangle Institute, Durham, North Carolina

⁷Thesaurus of Engineering Terms, Engineers Joint Council, New York (1964)

Author

The fourth index lists the Authors whose names appear in the main bibliography. Again, as with the installations, the user may check the number at the right of each author against that of the bibliographic entry for a more complete description of the document.

Suggested Uses for the Indexes

Bibliographic Index

1. To provide a rudimentary micro-abstract of the contents of the document through the use of descriptors attached to the title.
2. To indicate at a glance the length and date of the document as well as its form (report, journal, etc.) and nature (historical, bibliographical, etc.).

Key Word Index

1. To serve as a subject index to the 563 documents listed and -- when joined to subsequent indexes in the series -- to serve as a subject index to the entire ORNL civil defense research document collection.
2. To indicate the current research interests of the Civil Defense Research Project staff and -- over a period of time -- the scope of the Project's coverage.⁸
3. To furnish descriptors which can serve as stepping stones to the collection of information in a given area. (For example, to help explore a subject as fully as possible, a selective list of the descriptors in the subject can be sent to an information center which specializes in this particular area, if such an information center exists.)

⁸The index does not represent adequately the research interests of the Project's social scientists, who use books, monographs, and journals more frequently than documents. Also, the Civil Defense library occasionally receives a considerable number of documents in a research area as yet relatively unexplored by any member of the staff. The descriptor Biological-Blast-Effects is an example of one such area.

Corporate Author Index

To indicate the installations actively engaged in research relevant to civil defense and to provide the nucleus for a referral-oriented information center on civil defense

Author Index

To indicate the individuals actively engaged in research relevant to civil defense

Acquisition

Since the ORNL Civil Defense Research Library is at present principally for the use of Project members, copies of the documents listed are not normally furnished to outside requestors. However, members of the library staff will gladly provide qualified users with information on how to obtain a document.
