DISCLAIMER

This report was prepared as an account of work sponsored by an agency of the United States Government. Neither the United States Government nor any agency Thereof, nor any of their employees, makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information, apparatus, product, or process disclosed, or represents that its use would not infringe privately owned rights. Reference herein to any specific commercial product, process, or service by trade name, trademark, manufacturer, or otherwise does not necessarily constitute or imply its endorsement, recommendation, or favoring by the United States Government or any agency thereof. The views and opinions of authors expressed herein do not necessarily state or reflect those of the United States Government or any agency thereof.

DISCLAIMER

Portions of this document may be illegible in electronic image products. Images are produced from the best available original document.

DISTRIBUTION

This report has been distributed according to the categories "Reactor Technology" and "Physics" as given in "Standard Distribution Lists for Unclassified Scientific and Technical Reports" TID 4500 (18th Ed.), August 31, 1962. A total of 700 copies was printed.

ABSTRACT

This report is a bibliography of literature pertaining to nuclear reactor kinetics, control, and stability published prior to the autumn of 1962. The purpose of this bibliography is to provide a ready source of references by which analysis of the dynamic behavior of SNAP reactor systems can be planned, guided, and evaluated. As a result, the emphasis is on theory and calculation. A broader coverage of reactor kinetics is given in NAA-SR-3808, a bibliography of all papers on the subject published through July, 1958.
