FOREWORD

These volumes represent the fruition of more than a dozen years of personal devotion to an objective that arose from the recognition of a gap and a need. It is only necessary to read the compiler's introduction to sense the trials and frustrations that attended the preparation of this compendium, the problems of locating the literature, of abstracting it, and of devising a system of arrangement which would enable an interrogator to find his way profitably through the accumulated information. These volumes are a tribute to the perseverance with which Dr. Marylou Ingram followed through with her chosen task.

It is perhaps unique that a branch of science should have the essential literature of its first half dozen decades of life so well represented in annotated form, as the Division of Technical Information has done with Dr. Ingram's work through the year 1957, and with Mr. Charles M. Pierce's work for the years 1958-60 (TID-3098). The rapidly expanding number of research reports in radiation biology since 1960 adds no small degree of urgency to the continuation of this program. The efforts of the Division of Technical Information to find compilers to further the program are to be commended.

Charles L. Dunham, M.D., Director
Division of Biology and Medicine
U.S. Atomic Energy Commission

INTRODUCTION AND DESCRIPTION OF CONTENTS

Originally, a review of the literature on both biological and chemical effects of ionizing radiation was begun by the compiler and Dr. W. B. Mason in preparation for a general review article which they wrote in collaboration with Dr. G. Hoyt Whipple Jr., and Dr. J. W. Howland. This review was distributed as a UR report (UR-196, 1952) and used as a general reference for students in the Department of Radiation Biology at Rochester for several years. Apparently the need for a literature review had been common to many investigators in Radiation Biology, for a surprising number of inquiries were received about the status of the literature review and its availability. As a result of such inquiries and requests for bibliographic material, the compiler (continuing to add references to the collection) agreed to make the review reasonably comprehensive (but limited to biological effects) and to publish and distribute it through the AEC's Division of Technical Information Extension (DTIE), Oak Ridge, Tennessee (formerly the Technical Information Service).

The association with the group at Oak Ridge has been a felicitous one although, in many respects, the staff of the Division of Technical Information Extension at Oak Ridge and the compiler seemed related to each other in the manner of the bread and gravy that never came out even. During long periods when the bibliography was largely an extracurricular activity of the compiler, or when the work on it was suspended entirely, the staff at Oak Ridge would often have time and facilities to handle much more than the trickle of material received from Rochester. On other occasions, chiefly during summers when academic duties were lighter and additional help could be hired on a temporary basis in Rochester, the compiler proposed a serious effort to complete the bibliography for references published up to the period ending about one year previously, only to learn that the Oak Ridge staff had just been made responsible for completing some other project quickly, hence forced to curtail work on the bibliography. By the end of each cycle more references would have been added to the bibliography, and a new proposed cutoff date for references selected. The final decision was to include references published through 1957.

This bibliography has never had a formal budget nor a permanent "home" in the Atomic Energy Project at Rochester. It has the distinction of having been nearly always the first project to be uprooted from its temporary position and shunted to another in the unflagging efforts of the AEP staff to assuage the thirst for space. In this respect, the bibliography has come to share certain characteristics usually associated with such disparate sets as orphans and bootleg activities.

In deciding about pertinence of references included in the bibliography it was sometimes necessary to be fairly arbitrary. The decisions were made on the basis of the following major criteria

1. The subject matter was restricted to the biological effects of *ionizing radiation*. Literature about the effects of non-ionizing radiation was included only if it referred to ionizing radiation, as, for example, when effects of the two types of energy were compared.

2. The subject was restricted to *biological effects*. This automatically eliminated many studies in which

radioactive isotopes were used as tracers and were assumed to have no effect in themselves. Not all tracer studies could be eliminated, however, for often they contained discussions of possible effects of the tracer, or reported studies on metabolic systems that would greatly influence the absorption, distribution or excretion of the radioisotope and therefore have important implications with respect to biological effects of doses larger than tracer doses. Many of these references are included in the section of the subject index on "Quantitative Aspects of Changes Induced by Ionizing Radiation in Living Systems."

Chemical studies carried out *in vitro* and not oriented toward biological effects have been excluded.

3. Many references in the field of Health Physics were excluded because they were concerned solely with problems of physical measurement rather than biological effects. These references, however, like the tracer study references, could not be excluded automatically. Those discussing biological effects likely to occur following exposures under conditions where radiometry was carried out were usually included.

4. Decisions about pertinence of references concerned with radiation therapy were among the most difficult. For example, reports of five year survival studies representing a group of patients receiving radiation therapy for a given kind of tumor in contrast to survival among a similar group treated by some other method, e.g., surgery, were usually excluded. Radiation therapy reports that included discussions of the mechanism of effect of radiation have been considered pertinent.

In general the search for references was less exhaustive in the area of tracer studies and clinical radiation therapy than in other areas. Bibliographies covering these subjects are included in the section, Reviews and Bibliographies in the present compilation

An extensive bibliography, *The Effects of Radiation and Radioisotopes on the Life Processes* covering literature published during 1958-1959 and 1960 has been compiled by Charlie M. Pierce and indexed by William E. Bost, Helen L. Ward and Hugh E. Voress. It is available as TID-3098 from the USAEC, Division of Technical Information, to official Government requesters. Public Availability is from the Clearinghouse for Federal Scientific and Technical Information, U. S. Department of Commerce, Springfield Virginia, 22151 for \$15.00 per copy.

It has not been possible to read all references in the original although most references in English, French or German have been read or consulted in the original. References in these and other languages may be misclassified, or inappropriately included or excluded on the basis of information contained in an abstract when that was the only information available to the compiler.

The notations at the end of many of the abstracts refer to the source in which the reference was originally found when that source was *Biological Abstracts*, *Chemical Abstracts*, or *Nuclear Science Abstracts*. The abstracts themselves of course are not the same as those in the abstract journals, except for many abstracts from *Nuclear Science Abstracts* which have been used with the permission of the Division of Technical Information Extension, Oak Ridge,

Tennessee.* The notations indicating the abstract journals have proved helpful and time saving to the compiler on countless occasions when some question about the accuracy of the reference notations arose, as, for example, when an article was not found in the volume indicated by our reference card when the article was sought in the library. In such cases a preliminary check with the abstract journal frequently showed that a simple typographical or copying error had been made in working up the reference, in which case the correction could be made and the article found promptly. The abstract journal notations are included for the convenience of users of the bibliography who may encounter similar errors when attempting to find the original articles. The letters refer to the abstract journal, CA for *Chemical Abstracts* BA for *Biological Abstracts* and NSA for *Nuclear Science Abstracts*. The first numbers indicate the abstract volume number and the last set of numbers the abstract number in the volume. For example, BA 1-1000 would be abstracted in *Biological Abstracts*, Volume 1, abstract number 1000.

The subject index for the most part represents the literature as it exists, not necessarily as one might wish it to be. An early attempt to make an outline first and fit the references to it was totally unsuccessful. For this reason, development of the subject outline was deferred until several thousand references had been collected. These were then sorted and re-sorted until a workable outline, the subject index, emerged, based on the material *per se*. Outlines of areas with which the compiler is less familiar have been outlined to the best of her ability. All sections reflect the material available.

Some decisions about the pertinence of references may appear strange, even ludicrous, to experts in the fields represented. Blame this on the limitations of the compiler's scholarship. In other instances, entirely pertinent references may have been omitted simply because they escaped the dragnet of the literature search. In no instance

was a reference excluded because of personal opinion about its scientific merit, for—as any investigator learns sooner or later—the main value of a reference to one scientist may lie in some part of the work that the author (or reviewer) considered incidental. In any event, the bibliography is not intended to be editorial in any sense.

In many instances, reasons for the subject classifications of references are not obvious from the abstract or title, and it will be necessary to consult the original article before the pertinence of the material to a particular subject heading is apparent.

Serious effort has been made to cross reference all items as completely as possible using all available information about the total contents of each publication. Indeed, this is a major reason for compiling the bibliography in its present form, *viz*, to permit one to find a large proportion of available pertinent references by searching under a few main headings without having to flip back and forth interminably between a simple alphabetical subject index and a set of abstracts. Nevertheless, it has been necessary to restrict, to some extent, the degree of subdivision of the subject index in order to keep the publication manageable in size. The outline form should be reasonably adaptable to change or addition, however. Those wishing to subdivide further certain subjects of special interest should find it relatively easy to do so by listing additional subheadings and the appropriate reference accession numbers which would all be found under the present main headings.

An obvious alternative to this type of classification of bibliographic material is a computer-contrived index. Such an index (KWIC) has been prepared for this bibliography by the Division of Technical Information Extension at Oak Ridge using titles (rewritten as necessary) as guides to the contents of the articles. Also included in this index are key words from titles appearing in the previously mentioned bibliography, *The Effects of Radiation and Radioisotopes on the Life Processes* (TID-3098). This combined index is published as TID-3099 and is also available from the Clearinghouse for Federal Scientific and Technical Information, U. S. Department of Commerce, Springfield, Virginia, 22151. This will permit comparison of the two methods of classifying bibliographic material. Perhaps, in the interest of rigorous comparison, the computer-contrived index should be based on the original title or title rewritten with the benefit only of the abstract supplied by the various abstract journals. In any event, the experiment should be something of a pioneering effort in the comparison of two systems of information storage and retrieval.

*Note by AEC DTIE Staff

Although it is not the intent to use the original abstract from other announcement journals except NSA (and it is our belief this practice has been stringently adhered to), the AEC Division of Technical Information Extension has received from the editors of *Biological Abstracts* an indication of their willingness to permit the use of BA abstracts in the original. For their generosity and cooperative spirit, the Division of Technical Information Extension is very grateful.

HOW TO USE THE BIBLIOGRAPHY

The bibliography is comprised of subject indices, in the index volume, and references in the abstract volume. References and their accompanying abstracts are arranged from references 1 through 12,726 in numerical order of accession numbers. The accession numbers were assigned according to the order in which the references were added to the bibliography. This number is the identification number used whenever an abstract is referred to in the subject outline volume.

The subject index is of a hierarchical type consisting of general categories, each followed by one or more subdivisions. Papers of comprehensive or general nature are listed under Reviews and Bibliographies. This category is further subdivided into Reviews of General Biological Effects, Reviews of the Effects on Microorganisms, Reviews on the Effects on Multicellular Plants, etc. Familiarity with this general classification scheme is essential to optimum utilization of the bibliography. The detailed subject index as well as author indices comprise the remainder of the index volume.

Under each subheading of the subject outline, references containing pertinent information are listed in order of accession number. Most references contain information pertinent to more than one classification, hence are listed under various classifications to which the compiler considered them pertinent.

To find references on a given subject, first consult the condensed subject index and then the appropriate sections of the detailed subject index. Look up the references in the reference volume(s) according to accession numbers shown under the appropriate headings and subheadings in the subject index.

For example, suppose one wished to find references pertinent to effects of acute and chronic x-irradiation of the skin. This is a broad classification and references would be found in the sections on (1) Reviews (skin), (2) Bib-

liography (skin), Morphological Effects (skin); Physiological Effects (skin), Biochemical Effects (skin), and Late Effects (skin). If one is also interested in other aspects of effects on skin, for example, studies comparing radiation effects on skin of various species, he should find all these references under the same subheadings since they would be listed according to the topic considered, regardless of what other classes they belonged to. If one is interested *only* in the comparative study, he could avoid reviewing the references on other aspects of radiation effects on skin by consulting instead the section on "differences inherent in species" under "Quantitative Aspects of Factors Influencing the Response to Irradiation," selecting only those references that pertain to skin.

If one wished to include studies on *in vitro* effects of ionizing radiation on skin, he would consult references listed under the subheading, *skin*, in sections on "Morphological Effects After *In Vitro* Irradiation" and "Physiological Effects After *In Vitro* Irradiation." On the other hand, if one wished to find *only* those references to studies in which the effects of *in vitro* irradiation of skin were compared with *in vivo* irradiation, he would consult first the subsection on *In Vitro* vs. *In Vivo* Effects, under the main heading, "Quantitative Aspects of Factors Influencing the Response to Irradiation."

Some section headings in the subject outline are followed by a notation referring to other sections that are particularly likely to contain additional pertinent references. These reminders are not substitutes for cross referencing, they are simply for the convenience of users who are not thoroughly familiar with the general outline.

In many instances the pertinence of the reference to the subject classification may not be apparent from the title or abstract presented and it will be necessary to consult the original article to find the information on which the classification was based.

ACKNOWLEDGMENTS

Many persons have assisted in the compilation of this bibliography at one time or another. Some were students working during the summer or on a part-time basis during the academic year; others were full-time employees who assisted during the course of their regular duties. The invaluable assistance of the following persons is acknowledged gratefully and with sincere pleasure: Philip Cooper, Elizabeth Crahan, Arpad Galocy, Rita Gertzog, Jacqueline Griggs, Lynn Katz, Barbara Martin, Bernice Morehouse, Kathleen Parkin, William Quinlan, Mary Schneider, Mary Schroeder, Betty Smith and Alice Struthers.

Mr. Norman Zaichick, Argonne National Laboratory, very kindly permitted me to check this bibliography against an extensive bibliography he was compiling on radioactive isotopes.

Without the encouragement, assistance and support of Mr. Hugh Voress, Dr. Helen Ward, William E. Bost, and M. Madge Spencer and their colleagues at the Division of Technical Information Extension, Oak Ridge, this bibliography would never have been distributed beyond my own card file.

This work was supported by the Atomic Energy Commission through the Atomic Energy Project at the University of Rochester, Rochester, New York.

Marylou Ingram, M D

IRRADIATION, MULTICELLULAR ANIMALS, AND FOLLOWING IN
VITRO IRRADIATION

BIOCHEMICAL CHANGES FOLLOWING TOTAL OR PARTIAL BODY
IRRADIATION, MULTICELLULAR ANIMALS, AND FOLLOWING
IN VITRO IRRADIATION; LISTED ACCORDING TO TYPE OF
EFFECT

Comparison of biochemical changes following
exposure to ionizing radiation with changes
following exposure to chemical or physical
agents or non-ionizing radiation.

AUTHOR INDEX

A number of conventions have been employed in this computer-prepared index in an attempt to collect all papers under the names of the proper authors.

Author variants have been minimized by key-punching only the initials of all names other than surnames. This has undoubtedly caused some excessive merging, but this should not result in a serious problem for the user.

Transliteration of surnames has been reconciled using the best available authority.

Surnames that appear without initials reflect the fact that many early papers were published in which the authors were only identified by their last names.

BIOLOGICAL EFFECTS OF IONIZING RADIATION

An Annotated Bibliography

Abstracts

Compiled by:
MARYLOU INGRAM, M.D.

UNITED STATES ATOMIC ENERGY COMMISSION
Division of Technical Information

LEGAL NOTICE

The AEC reports listed in this document are accounts of Government sponsored work. Neither the United States, nor the Commission, nor any person acting on behalf of the Commission:

A. Makes any warranty or representation, expressed or implied, with respect to the accuracy, completeness, or usefulness of the information contained in these reports, or that the use of any information, apparatus, method, or process disclosed in these reports may not infringe privately owned rights; or

B. Assumes any liabilities with respect to the use of, or for damages resulting from the use of any information, apparatus, method, or process disclosed in these reports.

As used in the above, "person acting on behalf of the Commission" includes any employee or contractor of the Commission, or employee of such contractor, to the extent that such employee or contractor of the Commission, or employee of such contractor prepares, disseminates, or provides access to, any information pursuant to his employment or contract with the Commission, or his employment with such contractor.

Printed in USA. This bibliography consists of 2 bindings, total price \$~~12.00~~. Available from the Clearinghouse for Federal Scientific and Technical Information, National Bureau of Standards, U. S. Department of Commerce, Springfield, Virginia. 22151

BIOLOGICAL EFFECTS OF IONIZING RADIATION

An Annotated Bibliography

Covering the Years 1898 - 1957

Abstracts

Compiled by:

MARYLOU INGRAM, M.D.

Atomic Energy Project

University of Rochester

Rochester, New York

DTI Extension Issuance Date

December 1966

FOREWORD

These volumes represent the fruition of more than a dozen years of personal devotion to an objective that arose from the recognition of a gap and a need. It is only necessary to read the compiler's introduction to sense the trials and frustrations that attended the preparation of this compendium, the problems of locating the literature, of abstracting it, and of devising a system of arrangement which would enable an interrogator to find his way profitably through the accumulated information. These volumes are a tribute to the perseverance with which Dr. Marylou Ingram followed through with her chosen task.

It is perhaps unique that a branch of science should have the essential literature of its first half dozen decades of life so well represented in annotated form, as the Division of Technical Information has done with Dr. Ingram's work through the year 1957, and with Mr. Charles M. Pierce's work for the years 1958-60 (TID-3098). The rapidly expanding number of research reports in radiation biology since 1960 adds no small degree of urgency to the continuation of this program. The efforts of the Division of Technical Information to find compilers to further the program are to be commended.

Charles L. Dunham, M.D., Director
Division of Biology and Medicine
U.S. Atomic Energy Commission

INTRODUCTION AND DESCRIPTION OF CONTENTS

Originally, a review of the literature on both biological and chemical effects of ionizing radiation was begun by the compiler and Dr. W. B. Mason in preparation for a general review article which they wrote in collaboration with Dr. G. Hoyt Whipple, Jr., and Dr. J. W. Howland. This review was distributed as a UR report (UR-196, 1952) and used as a general reference for students in the Department of Radiation Biology at Rochester for several years. Apparently the need for a literature review had been common to many investigators in Radiation Biology, for a surprising number of inquiries were received about the status of the literature review and its availability. As a result of such inquiries and requests for bibliographic material, the compiler (continuing to add references to the collection) agreed to make the review reasonably comprehensive (but limited to biological effects) and to publish and distribute it through the AEC's Division of Technical Information Extension (DTIE), Oak Ridge, Tennessee (formerly the Technical Information Service).

The association with the group at Oak Ridge has been a felicitous one although, in many respects, the staff of the Division of Technical Information Extension at Oak Ridge and the compiler seemed related to each other in the manner of the bread and gravy that never came out even. During long periods when the bibliography was largely an extracurricular activity of the compiler, or when the work on it was suspended entirely, the staff at Oak Ridge would often have time and facilities to handle much more than the trickle of material received from Rochester. On other occasions, chiefly during summers when academic duties were lighter and additional help could be hired on a temporary basis in Rochester, the compiler proposed a serious effort to complete the bibliography for references published up to the period ending about one year previously, only to learn that the Oak Ridge staff had just been made responsible for completing some other project quickly; hence forced to curtail work on the bibliography. By the end of each cycle, more references would have been added to the bibliography, and a new proposed cutoff date for references selected. The final decision was to include references published through 1957.

This bibliography has never had a formal budget nor a permanent "home" in the Atomic Energy Project at Rochester. It has the distinction of having been nearly always the first project to be uprooted from its temporary position and shunted to another in the unflagging efforts of the AEP staff to assuage the thirst for space. In this respect, the bibliography has come to share certain characteristics usually associated with such disparate sets as orphans and bootleg activities.

In deciding about pertinence of references included in the bibliography it was sometimes necessary to be fairly arbitrary. The decisions were made on the basis of the following major criteria

1. The subject matter was restricted to the biological effects of *ionizing radiation*. Literature about the effects of non-ionizing radiation was included only if it referred to ionizing radiation, as, for example, when effects of the two types of energy were compared.
2. The subject was restricted to *biological effects*. This automatically eliminated many studies in which

radioactive isotopes were used as tracers and were assumed to have no effect in themselves. Not all tracer studies could be eliminated, however, for often they contained discussions of possible effects of the tracer, or reported studies on metabolic systems that would greatly influence the absorption, distribution or excretion of the radioisotope and therefore have important implications with respect to biological effects of doses larger than tracer doses. Many of these references are included in the section of the subject index on "Quantitative Aspects of Changes Induced by Ionizing Radiation in Living Systems."

Chemical studies carried out *in vitro* and not oriented toward biological effects have been excluded.

3. Many references in the field of Health Physics were excluded because they were concerned solely with problems of physical measurement rather than biological effects. These references, however, like the tracer study references, could not be excluded automatically. Those discussing biological effects likely to occur following exposures under conditions where radiometry was carried out were usually included.

4. Decisions about pertinence of references concerned with radiation therapy were among the most difficult. For example, reports of five year survival studies representing a group of patients receiving radiation therapy for a given kind of tumor in contrast to survival among a similar group treated by some other method, e.g., surgery, were usually excluded. Radiation therapy reports that included discussions of the mechanism of effect of radiation have been considered pertinent.

In general, the search for references was less exhaustive in the area of tracer studies and clinical radiation therapy than in other areas. Bibliographies covering these subjects are included in the section, Reviews and Bibliographies, in the present compilation.

An extensive bibliography, *The Effects of Radiation and Radioisotopes on the Life Processes* covering literature published during 1958-1959 and 1960 has been compiled by Charlie M. Pierce and indexed by William E. Bost, Helen L. Ward and Hugh E. Voreess. It is available as TID-3098 from the USAEC, Division of Technical Information, to official Government requesters. Public Availability is from the Clearinghouse for Federal Scientific and Technical Information, U. S. Department of Commerce, Springfield, Virginia, 22151, for \$15.00 per copy.

It has not been possible to read all references in the original, although most references in English, French or German have been read or consulted in the original. References in these and other languages may be misclassified, or inappropriately included or excluded on the basis of information contained in an abstract when that was the only information available to the compiler.

The notations at the end of many of the abstracts refer to the source in which the reference was originally found when that source was *Biological Abstracts*, *Chemical Abstracts* or *Nuclear Science Abstracts*. The abstracts themselves, of course, are not the same as those in the abstract journals, except for many abstracts from *Nuclear Science Abstracts* which have been used with the permission of the Division of Technical Information Extension, Oak Ridge,

Tennessee.* The notations indicating the abstract journals have proved helpful and time saving to the compiler on countless occasions when some question about the accuracy of the reference notations arose, as, for example, when an article was not found in the volume indicated by our reference card when the article was sought in the library. In such cases a preliminary check with the abstract journal frequently showed that a simple typographical or copying error had been made in working up the reference, in which case the correction could be made and the article found promptly. The abstract journal notations are included for the convenience of users of the bibliography who may encounter similar errors when attempting to find the original articles. The letters refer to the abstract journal, CA for *Chemical Abstracts* BA for *Biological Abstracts* and NSA for *Nuclear Science Abstracts*. The first numbers indicate the abstract volume number and the last set of numbers the abstract number in the volume. For example, BA 1-1000 would be abstracted in *Biological Abstracts*, Volume 1, abstract number 1000.

The subject index for the most part represents the literature as it exists, not necessarily as one might wish it to be. An early attempt to make an outline first and fit the references to it was totally unsuccessful. For this reason, development of the subject outline was deferred until several thousand references had been collected. These were then sorted and re-sorted until a workable outline, the subject index, emerged, based on the material *per se*. Outlines of areas with which the compiler is less familiar have been outlined to the best of her ability. All sections reflect the material available.

Some decisions about the pertinence of references may appear strange, even ludicrous, to experts in the fields represented. Blame this on the limitations of the compiler's scholarship. In other instances, entirely pertinent references may have been omitted simply because they escaped the dragnet of the literature search. In no instance

was a reference excluded because of personal opinion about its scientific merit, for—as any investigator learns sooner or later—the main value of a reference to one scientist may lie in some part of the work that the author (or reviewer) considered incidental. In any event, the bibliography is not intended to be editorial in any sense.

In many instances, reasons for the subject classifications of references are not obvious from the abstract or title, and it will be necessary to consult the original article before the pertinence of the material to a particular subject heading is apparent.

Serious effort has been made to cross reference all items as completely as possible using all available information about the total contents of each publication. Indeed, this is a major reason for compiling the bibliography in its present form, *viz.*, to permit one to find a large proportion of available pertinent references by searching under a few main headings without having to flip back and forth interminably between a simple alphabetical subject index and a set of abstracts. Nevertheless, it has been necessary to restrict, to some extent, the degree of subdivision of the subject index in order to keep the publication manageable in size. The outline form should be reasonably adaptable to change or addition, however. Those wishing to subdivide further certain subjects of special interest should find it relatively easy to do so by listing additional subheadings and the appropriate reference accession numbers which would all be found under the present main headings.

An obvious alternative to this type of classification of bibliographic material is a computer-contrived index. Such an index (KWIC) has been prepared for this bibliography by the Division of Technical Information Extension at Oak Ridge using titles (rewritten as necessary) as guides to the contents of the articles. Also included in this index are key words from titles appearing in the previously mentioned bibliography, *The Effects of Radiation and Radioisotopes on the Life Processes* (TID-3098). This combined index is published as TID-3099 and is also available from the Clearinghouse for Federal Scientific and Technical Information, U. S. Department of Commerce, Springfield Virginia, 22151. This will permit comparison of the two methods of classifying bibliographic material. Perhaps, in the interest of rigorous comparison, the computer-contrived index should be based on the original title or title rewritten with the benefit only of the abstract supplied by the various abstract journals. In any event, the experiment should be something of a pioneering effort in the comparison of two systems of information storage and retrieval.

*Note by AEC DTIE Staff

Although it is not the intent to use the original abstract from other announcement journals except NSA (and it is our belief this practice has been stringently adhered to), the AEC Division of Technical Information Extension has received from the editors of *Biological Abstracts* an indication of their willingness to permit the use of BA abstracts in the original. For their generosity and cooperative spirit, the Division of Technical Information Extension is very grateful.

HOW TO USE THE BIBLIOGRAPHY

The bibliography is comprised of subject indices, in the index volume, and references in the abstract volume. References and their accompanying abstracts are arranged from references 1 through 12,726 in numerical order of accession numbers. The accession numbers were assigned according to the order in which the references were added to the bibliography. This number is the identification number used whenever an abstract is referred to in the subject outline volume.

The subject index is of a hierarchical type consisting of general categories, each followed by one or more subdivisions. Papers of comprehensive or general nature are listed under Reviews and Bibliographies. This category is further subdivided into Reviews of General Biological Effects, Reviews of the Effects on Microorganisms, Reviews on the Effects on Multicellular Plants, etc. Familiarity with this general classification scheme is essential to optimum utilization of the bibliography. The detailed subject index as well as author indices comprise the remainder of the index volume.

Under each subheading of the subject outline, references containing pertinent information are listed in order of accession number. Most references contain information pertinent to more than one classification, hence are listed under various classifications to which the compiler considered them pertinent.

To find references on a given subject, first consult the condensed subject index and then the appropriate sections of the detailed subject index. Look up the references in the reference volume(s) according to accession numbers shown under the appropriate headings and subheadings in the subject index.

For example, suppose one wished to find references pertinent to effects of acute and chronic x-irradiation of the skin. This is a broad classification and references would be found in the sections on (1) Reviews (skin), (2) Bibliography (skin), Morphological Effects (skin), Physiological Effects (skin), Biochemical Effects (skin), and Late Effects (skin). If one is also interested in other aspects of effects on skin, for example, studies comparing radiation effects on skin of various species, he should find all these references under the same subheadings since they would be listed according to the topic considered, regardless of what other classes they belonged to. If one is interested *only* in the comparative study, he could avoid reviewing the references on other aspects of radiation effects on skin by consulting instead the section on "differences inherent in species" under "Quantitative Aspects of Factors Influencing the Response to Irradiation," selecting only those references that pertain to skin.

If one wished to include studies on *in vitro* effects of ionizing radiation on skin, he would consult references listed under the subheading, *skin*, in sections on "Morphological Effects After *In Vitro* Irradiation" and "Physiological Effects After *In Vitro* Irradiation." On the other hand, if one wished to find *only* those references to studies in which the effects of *in vitro* irradiation of skin were compared with *in vivo* irradiation, he would consult first the subsection on *In Vitro* vs. *In Vivo* Effects, under the main heading, "Quantitative Aspects of Factors Influencing the Response to Irradiation."

Some section headings in the subject outline are followed by a notation referring to other sections that are particularly likely to contain additional pertinent references.

These reminders are not substitutes for cross referencing, they are simply for the convenience of users who are not thoroughly familiar with the general outline.

In many instances the pertinence of the reference to the subject classification may not be apparent from the title or abstract presented and it will be necessary to consult the original article to find the information on which the classification was based.

CONDENSED SUBJECT INDEX

REVIEWS AND BIBLIOGRAPHIES

Reviews

- biological effects of ionizing radiation, not subclassified
- effects on microorganisms including viruses
- effects on multicellular plants
- cellular effects
- effects on embryos
- effects of atomic bombs
- acute radiation injury, acute radiation syndrome
- effects on immune mechanisms
- effects on the blood, blood forming tissues and circulation
- effects on the gastrointestinal system
- effects on the nervous system
- effects on skin
- effects on endocrine glands
- effects on eyes ears
- effects on the respiratory system
- effects on neoplastic tissue
- histological changes induced by radiation
- effects of radiation protective agents and other agents or procedures modifying the response to radiation
- therapeutic uses of radiation

THEORETICAL CONSIDERATIONS OF EFFECTS OF IONIZING RADIATIONS ON BIOLOGICAL SYSTEMS

target theory and related concepts
release of substances that cause or alter observed
changes
alteration of metabolites growth factors or other sub-
stances required by the biological system under study
identification of the critically important part of cell,
tissue or organ
deleterious effects on cell division
effects on H₂O
molecular events including ionization, free radical
formation, etc
change in molecular size or configuration, including
polymerization, depolymerization
point-heat theory
physiological function of radioactive materials normally
present
comparison of mode of action of ionizing radiation and
other physical or chemical agents
indirect effects—molecular level
indirect effects—within cell or organism
theoretical mathematical interpretation of radiation
lethality and morbidity data
mechanism of action of radiation protective agents or
other agents modifying response to irradiation
permeability

MORPHOLOGICAL CHANGES AFTER TOTAL OR PARTIAL BODY IRRADIATION, MULTICELLULAR ANIMALS

Comparison of effects of ionizing radiation with effects of
other agents
Morphological effects listed by type of effect
Morphological effects listed according to tissue
immature invertebrates
mature invertebrates
zygotes and embryos of vertebrates
post-embryonic vertebrates (listed according to tissue)
Morphological effects in tissues *other than those irradiated*

PHYSIOLOGICAL CHANGES AFTER TOTAL OR PARTIAL BODY IRRADIATION, MULTICELLULAR ANIMALS

Comparison of effects of ionizing radiation with effects of
other agents
Physiological changes listed according to type of effect
Physiological changes listed according to organ or tissue
immature invertebrates
mature invertebrates
zygotes and embryos of vertebrates
mature vertebrates (listed according to tissue)

Physiological changes in tissues *other than those
irradiated*—listed according to tissue

PHYSIOLOGICAL CHANGES AFTER *IN VITRO* IRRADIATION

Comparison of effects of ionizing radiation with effects of
other agents
Physiological changes *in vitro* (according to type of effect)
Physiological changes *in vitro* (listed according to tissue)

BIOCHEMICAL CHANGES AFTER TOTAL OR PARTIAL BODY IRRADIATION, MULTICELLULAR ANIMALS

Comparison of effects of ionizing radiation with effects of
other agents
Biochemical changes listed according to type of effect
Biochemical changes listed according to tissue or organ

BIOCHEMICAL CHANGES FOLLOWING *IN VITRO* IRRADIATION

Tissues from multicellular animals listed according to
tissue

QUANTITATIVE ASPECTS OF FACTORS INFLUENCING RESPONSE TO IRRADIATION

Biological and physiological factors
Effects of chemical composition of cells or tissues
Physical factors
Chemical and pharmaceutical agents

ACKNOWLEDGMENTS

Many persons have assisted in the compilation of this bibliography at one time or another. Some were students working during the summer or on a part-time basis during the academic year, others were full-time employees who assisted during the course of their regular duties. The invaluable assistance of the following persons is acknowledged gratefully and with sincere pleasure: Philip Cooper, Elizabeth Crahan, Arpad Galocy, Rita Gertzog, Jacqueline Griggs, Lynn Katz, Barbara Martin, Bernice Morehouse, Kathleen Parkin, William Quinlan, Mary Schneider, Mary Schroeder, Betty Smith and Alice Struthers.

Mr. Norman Zaichick, Argonne National Laboratory, very kindly permitted me to check this bibliography against an extensive bibliography he was compiling on radioactive isotopes.

Without the encouragement, assistance and support of Mr. Hugh Voress, Dr. Helen Ward, William E. Bost, and M. Madge Spencer and their colleagues at the Division of Technical Information Extension, Oak Ridge, this bibliography would never have been distributed beyond my own card file.

This work was supported by the Atomic Energy Commission through the Atomic Energy Project at the University of Rochester, Rochester, New York.

1

THE EFFECT OF X-RAY ON THE DIVISION RATE OF PARAMECIUM. R. T. Hance and R. Clark. *J. Exp. Med.* 43, 61 (1926).

Division rate of *P. caudatum* and *P. multimicro-nucleatum* was depressed for a period of 2-5 days after exposure then returned to normal. Short exposures were most effective, continued exposures producing little additional effect until they were prolonged to 3-4 hours when results were acceleration of division. Repeated doses at intervals were only slightly more effective than single exposure, but caused cells to swell without loss of viability. BA 1-80.

INDUCING ENDOSPERM CHANGES IN MAIZE WITH NEUTRON IRRADIATION OF POLLEN E. F. Frolik and R. Morris. *Genetics*, 33, 105 (1948). BA 1-243.

3

X-RAYS AND LIVING MATTER. J. A. Crowther. *Nature* (London) 118, 86-88 (1926).

Two lectures giving resume of work on biological action of x-rays, especially in the realm of physics BA 1-376.

4

THE DANGER OF MALFORMATION OF THE FETUS IN ROENTGEN-RAY TREATMENT DURING PREGNANCY. E. Ries. *Am. Jour. Obstet. and Gyn.* 11, 361 (1926).

Results of irradiation of the uterus in 21 women in various stages of pregnancy are reported 11 fetuses showed some damage, 10 were normal, 1 born dead (autopsy findings are reported). The stillborn fetus was first exposed at about 109 days of age. Author states that some defects found at post mortem examination, viz absent right adrenal, kidney and ureter and absent uterus and vagina, must have antedated radiation. Bony malformations observed may or may not have been radiation-induced. BA 1-638.

5

EFFECT OF X-RAYS ON CYTOPLASM AND NUCLEUS OF THE CELL BASED ON STUDIES OF LIVING CELLS. G. Nadson and E. Rochlin-Gleich-Gewicht. *Compt. Rend. Soc. Biol.* 94, 249 (1926).

Organism *Allium cepa*. BA 1-2051.

6

THE EFFECT OF BETA-RAYS ON BACTERIAL GROWTH C. H. Boussevain. *Amer. Rev. Tuberc.* 14, (2) 172-176 (1926).

Tubercle bacilli grow on synthetic culture medium when K is replaced by radioactively-equivalent amount of Rb, but not if Cs, Na or Li is substituted for K. Suggests beta rays necessary for bacterial growth. BA 1-2316.

7

ACTION OF TEMPERATURE ON THE RADIOSENSITIVITY OF THE EGG OF ASCARIS. A. Dognon. *Compt. Rend. Soc. Biol.* 94, 466-468 (1926).

Sensitivity increases with temp. above optimum temp. for activity. Below 20° C temp. has almost no influence on sensitivity. Above 30° C there is rapid increase in sensitivity. BA 1-2371.

8

THE EFFECTS OF X-RAY ON THE PANCREAS. N. F. Fisher, J. T. Groot and A. Bachem. *Amer. J. Physiol.* 76, 299-305 (1926).

Three erythema doses to pancreas produced fibrosis and diabetes. Can recover by proliferating new tissue from periphery of gland. Four-5 erythema doses caused disappearance of gland. Species dog. BA 1-2372.

9

THE PREVENTION OF PIGMENT FORMATION IN THE HAIR FOLLICLES OF COLORED MICE WITH HIGH-VOLTAGE X-RAY. R. I. Hance and J. B. Murphy. *Jour. Exp. Med.* 44, 339 (1926). BA 1-2374.

10

GERMINAL EPITHELIUM IN X-RAYED TESTES OF RATS. R. Oslund and A. Bachem. *Proc. Soc. Exp. Biol. and Med.* 23, 761 (1926).

Graded doses of x-rays were delivered to the testes of rats and histological studies were carried out on testes at various times between 1 day to 6 months after exposure. Injury and recovery pictures are described. BA 1-2378.

11

EXPERIMENTAL STUDIES ON COMBINED EFFECTS OF ROENTGEN RAYS AND ULTRAVIOLET RAYS. G. E. Pfahler, J. V. Klauder, and J. L. Martin. *Amer Jour. Roentgenol.* 16, 150 (1926).

Combined rays produce more severe reaction of ears of rabbits. BA 1-2381.

12

THE SUSPENSION STABILITY OF THE HUMAN BLOOD IN ROENTGEN THERAPY. E. A. Pohle. *Ann. Clin. Med.* 4, 987 (1926).

Compared blood of patients being treated with blood of normal individuals. Radiation appears to retard erythrocyte sedimentation rate. BA 1-2382.

13

RADIUM EMANATION AND ITS BIOLOGICAL ACTION. REVIEW AND CRITICISM (Italian). Giuseppe Sangiorgi. *Ann. d. Igine* 36, 386 (1926). BA 1-2387.

14

THE EFFECTS OF X-RAYS UPON MITOTIC CELL DIVISION IN TISSUE CULTURES IN VITRO T.S.P. Strangeways and F. L. Hopwood. *Proc. Roy. Soc. (London)*. B100, 283(1926).

Tissues choroid and sclerotic of 7-9 day-old chick embryo. BA 1-2388.

15

EXPERIMENTAL STUDIES ON THE BIOLOGICAL ACTION OF HARD ROENTGEN RAYS. Masao Tsuzuki. *Amer. Jour. Roentgenol.* 16, 134-150 (1926).

Studied relative radiosensitivity of various organs of rabbits after whole-body exposure. BA 1-2389.

16

CHRONIC ULCER OF THE STOMACH EXPERIMENTAL PRODUCTION AND EFFECT ON GASTRIC SECRETION AND MOTILITY. John A. Wolfer. *Ann. Surg.* 84, 89-94 (1926).

Produced gastric ulcer by direct irradiation of exposed stomach mucosa (dogs). Adjoining areas shielded with

lead plates. Ulcers lasted 400-500 days. Some perforated, others healed. No effect on secretion. BA 1-2949.

17

THE EFFECT OF X-RAYS ON LIVING TISSUE. S. W. Allen. J. Med. Research 9, 462-74 (1903).

Conclusions: x-ray exposure of vinegar worms and protozoa is fatal; x-rays act as inhibitors of the heart in cold blooded animals and are over stimulating to growing plants. Exposures produce a local increase in leukocytes; no microscopic change in deep malignant growths; exposure of healthy skin produces a low grade ulceration. (Based on authors' conclusions).

18

ACTION OF X-RAYS UPON THE DEVELOPING CHICK EMBRYO. Hector Colwell, J. Reginald Gladstone, and C. P. G. Wakely. Jour. Anat. 60, 207 (1926).

Series I: Effect of x-rays of different degrees of hardness on embryos which have been allowed to develop normally for 4 days before start of irradiation are described.

Series II: daily doses of x-rays for 3 days; embryos removed after 7 days; total period of incubation 168 hours.

Series III: incubation continued for 210 hours; eggs irradiated on each of last 5 days of incubation. BA 1-3704.

19

THE PRESENT STATUS OF OUR KNOWLEDGE OF THE EFFECT OF IRRADIATION UPON THE GENERATIVE ORGANS AND THE OFFSPRING. H. J. Bagg. Amer. Jour. Roentgenol. 16, 529 (1926).

Lecture on research in this field. Reference is made to reports of observations on: man, rat, frog, rabbit, mouse. BA 1-4582.

20

THE EFFECT OF RADIUM ON MITOSIS IN VITRO. R. Canti and M. Donaldson. Proc. Roy. Soc. (London) B100, 413 (1926).

(Chick choroid) Mitosis stops if enough radiation is administered. Mitosis may reappear after cessation of radiation. BA 1-4583.

21

RADIOACTIVE MATERIAL AN INDUSTRIAL HAZARD? F. Flinn. J. Am. Med. Assoc. 87, 2078 (1926).

Five deaths from jaw necrosis among employees of plant using luminous paint are reported. BA 1-4585.

22

EXPERIMENTS ON THE SELECTIVITY OF THE SECONDARY RADIATIONS. Maro Ponzio. Brit. J. Radiol. 31, 502-05 (1926).

Bacteria treated with secondary radiation from Cu, Mo, Ag, Sn, Sb, Bi, Ba, and Pb. Secondary radiations from elements of greater atomic weights are more destructive. BA 1-4589.

23

SURVIVAL OF TISSUES CULTIVATED IN PLASMA OF IRRADIATED ANIMALS (French). J. Rouffart and M. Rouffart. Compt. Rend. Soc. Biol. 95, 865 (1926).

More vigorous growth and division resulted when fibroblasts cultivated in serum from animals which had been exposed to 90 microcurie-hours of Ra irradiation. BA 1-4591.

24

EXOPHTHALMIC GOITRE: A FOLLOW-UP STUDY OF CASES TREATED WITH ROENTGEN RAY. B. J. Sanger. Arch. Internal Med. 37, 627-640 (1926).

Of 50 patients treated and studied (some observed for 5 years) 82% became entirely well and remained so. BA 1-4592.

25

PERPETUATION OF THE INJURY PRODUCED BY

X-RAYS ON DRY SEED. (French). S. Ancel. Bull. Soc. Bot. France 72, 991-995 (1926). BA 1-6534.

26

INFLUENCE OF WAVE LENGTH OF RADIATION AS REGARDS CHANGES IN ALKALINE RESERVE IN BLOOD OF RABBIT. (French). CH. de Gheldere. Compt. Rend. Soc. Biol. 94, 1263 (1926).

The effect on alkaline reserve varies with the wave length of radiation delivered to the abdomen of rabbits. BA 1-6572.

27

EFFECT OF RADON IRRADIATION ON ANTIBODIES (French). R. Bruynoghe. Compt. Rend. Soc. Biol. 95, 736-737 (1926).

Diphtheria toxin lost part of its toxicity; antidiphtheria serum lost part of its anti-toxic potency. Microbial agglutinins not destroyed. BA 1-6886.

28

41
ACTION OF X-RAYS ON ADRENALIN IN BLOOD (French). E. Zunz and J. LaBarre. Compt. Rend. Soc. Biol. 96, 126 (1927).

Increased adrenalin in blood of dogs following "hyper-coagulating dose" of hard x-rays. Also calcaemia and glycaemia. BA 1-8954.

42
ON THE OCCURRENCE OF THE OESTROUS CYCLE AFTER X-RAY STERILIZATION IN MICE THREE WEEKS OLD. A. S. Parkes. Proc. Roy. Soc. (London) 172, 199 (1926). BA 1-9320.

43
ROENTGEN RAY STIMULATING DOSES OF THE OVARIES, PERMANENT AND TEMPORARY STERILIZATION. E. Pohle. Amer. Jour. Med. Sci. 173, 91 (1927).

Man, rabbit, mouse, lepidoptera. BA 1-9321.

44
A NOTE ON THE DIFFERENT KINDS OF MALIGNANT TUMORS EXPERIMENTALLY OBTAINED BY MEANS OF RADIUM. F. Daels and G. Bacten. Lancet 211, 666 (1926).

Rat, mouse. BA 1-9595.

45
EXPERIMENTS ON THE RADIATION OF TUMORS WITH SPECIAL REFERENCE TO THE BLOOD SUPPLY. J. C. Mottram. Brit. Med. Jour. 1, 275 (1927).

Mouse. BA 2-9696.

46
EXPERIMENTAL INVESTIGATION OF X-RAY INJURY IN DESCENDANTS. R. Dyroff. Strahlentherapie 24, (2) 288 (1926).

When one parent guinea pig is irradiated, effects do not show up until the third generation. BA 1-11161.

47
VARIATIONS IN THE VEGETATIVE AND CONIDIAL STRUCTURES IN CULTURES OF *A. FUMIGATUS* SUBJECTED TO RADIATION WITH RADIUM (French). A. Sartory, R. Sartory, and J. Meyer. Bull. Sci. Pharmacol. 34, 193-202 (1927).

Effects much more marked when cultures grown in sugar solution + NaCl than when grown in non-dissociated medium. BA 1-11464.

48
A LAW OF THE RELATION BETWEEN EXPOSURE AND BIOLOGICAL EFFECT OF RADIATION. W. Bovie. Jour. Cancer Res. 10, 161-174 (1926).

Mathematical expression for susceptibility of tissue. (Human blood). BA 1-11578.

49
CHANGE IN SERUM PROTEIN INDUCED BY IRRADIATION WITH X-RAY. K. Breitlauder and C. Lasch. Klin. Wochenschr. 6, 743 (1927).

No change in total or residual N, refractive index, viscosity or surface tension. BA 1-11579.

50
THE ACTION OF X-RAYS ON THE ORGANISM (PRELIMINARY PAPER). M. Burrows, L. H. Jorstad, and E. Ernst. Proc. Soc. Exp. Biol. and Med. 24, 311-12 (1927).

Graded small doses of x-rays were delivered twice weekly to rats on carefully controlled diets. Doses of 25 and 50 ma minutes increased both growth and length of life of rats fed on vitamin A and B deficient diet. Doses of 75 and 100 ma minutes caused deterioration and death. Moderate x-ray doses simulate U-V in liberating vitamin A from tissue stores. BA 1-11580.

51
THE PROPERTIES OF SPLEEN ADENOSINETRIPHOSPHATASES AND THE EFFECT OF X-IRRADIATION. G. Ashwell and J. Hickman. J. Biol. Chem. 201, 651-659 (1953).

Homogenates were prepared from spleens of mice after total body exposure to 640 r of x-rays, and from spleens of unirradiated control mice. Spleens of irradiated mice broke down ATP much faster than did spleens of controls. Both connective tissue and parenchymal fractions contributed to the increased activity of several enzymes considered. Only myokinase, 5 nucleotidase and inorganic phosphatase were found in homogenates; a true ATP-ase was not found. Effect of Ca and Mg on *in vitro* reactions described.

52
BIOLOGICAL EFFECTS OF RADIATIONS (French). Foveau de Courmelles. Compt. Rend. Assoc. Franc. Avanc. Sci. 49, 592-594 (1925-1926).

Infra red radiation can influence response to x-rays and various other types of radiation may also have antagonistic effects. Considers briefly the effects of infra red, ultra violet and x-rays; compares x-rays to drugs which in low doses excite; in large doses depress. Describes radiation sickness following abdominal exposure; also stresses individual sensitivity, variability and, finally, raises question of indirect effects. BA 1-11582.

53
CLINICAL LABORATORY EXAMINATION OF PLUTONIUM PROJECT PERSONNEL p. 113-139. L. O. Jacobson and Edna K. Marks. INDUSTRIAL MEDICINE ON THE PLUTONIUM PROJECT. (NNES IV-20). Robert S. Stone, ed. New York, McGraw-Hill Book Co., Inc. 1951.

Hematological and urine studies were conducted to provide a check for chance radiation exposure; to find damage to these systems; to provide legal protection for the contractor. Only in a few instances was exposure to radiation excessive. Interpretation of minor variations in hematological constituents was difficult and often impossible. (From authors' summary.)

54
ELEMENTARY IDEAS REGARDING THE ACTION OF X-RAYS ON TISSUES. L. Hoche. Bull. Med. 41, 202 (1927). BA 1-11584.

55

RADIUM IN OPHTHALMOLOGY. A FURTHER STUDY, EXPERIMENTAL AND CLINICAL. Laura A. Lane. Jour. Amer. Med. Assoc. 88, 232-240 (1927).

Evidence of delayed reaction and remote effects of radium. Heavily screened gamma radiation produced little injury. (Rabbit). BA 1-11586.

56

INFLUENCE OF X-RAYS ON BIOELECTRICAL DIFFERENCES OF POTENTIALS. A. Liechti. Biochem. Zeitschr. 171, 240-255 (1926).

57

THE MEASUREMENT OF QUANTITATIVE BIOLOGICAL EFFECTS OF X-RAYS. Charles Packard. Jour. Cancer Res. 10, 319-339 (1926).

Percent of *Drosophila* eggs which hatch after exposure was criterion of effect. BA 1-11589.

58

THE EFFECTS OF X-RAY STERILIZATION ON THE DEVELOPMENT OF THE ACCESSORY ORGANS OF REPRODUCTION IN THE MOUSE. (Parts I and II). A. S. Parks and F. W. R. Brambell. Jour. Roy. Micros. Soc. 47, 97-106 (1927).

Irradiation of female mouse produces destruction of follicles. No interference with development of accessory organs, uterus, vagina, or clitoris. BA 1-11590.

59

EFFECT OF RADIOTHERAPY ON POLYPEPTIDEMIA. A. Puech. Bull. Soc. Sci. Med. et Biol. Montpellier 7, 136 (1926).

Polypeptidemia "of cytolytic origin" following exposure. BA 1-11591.

60

CHANGES IN THE OVARY OF THE MOUSE FOLLOWING EXPOSURE TO X-RAYS. F. Brambell, W. Rogers and A. S. Parks. Proc. Roy. Soc. (London) B101, (707) 95 (1927).

Part II: Irradiation at or before birth. BA 1-11840.

61

CHANGES IN THE OVARY OF THE MOUSE FOLLOWING EXPOSURE TO X-RAYS. F. Brambell, W. Rogers and A. S. Parks. Proc. Roy. Soc. (London) B101, (706) 29-56 (1927).

Part I: Forty-seven female mice 3 wks old exposed to full sterility dose of x-rays. BA 1-11840.

62

ON THE OCCURRENCE OF THE ESTROUS CYCLE AFTER X-RAY STERILIZATION. A. Parkes. Proc. Roy. Soc. (London) B101, 71 (1927).

Part II: Irradiation at or before birth. BA 1-11873.

63

AN EARLY CHANGE IN THE NUCLEUS OF THE CELLS OF TUMORS FOLLOWING EXPOSURE TO RADIATION. J. C. Mottram. British J. Radiol. 32, 61-63 (1927).

Increase in size of nuclei in both normal and tumor cells. (Mouse sarcoma). BA 1-12186.

64

THE X-RAY ACTIVITY OF SECONDARY ELECTRONS UPON MICROORGANISMS. S. S. Trillat. Compt. Rend. Acad. Sci. (Paris) 184, 170-172 (1927). BA 1-12583.

65

EFFECT OF "OVER-SOFT" X-RAYS ON BACTERIA. W. Schepman and H. Flecke. Klin. Wochenschr. 5, 1608 (1926).

X-rays of long wave length; various species of organisms. Equal doses of hard rays produce only 1/2 effect which results from irradiation with soft rays. BA 1-12745.

66

EFFECT OF X-RAYS OF LONG WAVE LENGTH ON

MICROORGANISMS. (French). J. J. Trillat. Compt. Rend. Acad. Sci. (Paris) 183, 614-616 (1926).

Bactericidal effect noted in case of *B. prodigiosus*. BA 1-12756.

67

EFFECT OF RADIATION ON GUINEA PIGS. (French). P. Mendeleeff. Compt. Rend. Soc. Biol. 94, 1274-1277 (1926).

Measured electrical resistance of liver tissue before and after exposure to x-rays. Also studied tissue culture of various tissues on media using plasma from normal and irradiated animals. BA 1-13672.

68

A HISTOLOGICAL STUDY OF THE RESPONSE OF THE INTESTINAL MUCOSA OF THE DOG TO IRRADIATION, WITH SPECIAL REFERENCE TO GIANT CELL FORMATION. A. B. Dawson. Jour. Exp. Zool. 46, 467-491 (1927). BA 1-13488.

69

PRODUCTION OF AN EXPERIMENTAL EPITHELIOMA BY MEANS OF RADIUM. (French). F. Daels and G. Bacten. Bull. Assoc. Franc. Etude Cancer 15, 162-173 (1926). BA 2-17520.

70

THE EFFECT OF LEAD AND RADIUM ON MATURE AND IMMATURE RED BLOOD CORPUSCLES. Herman E. Pearce. Arch. Internal Med. 37, 715 (1926). BA 2-5978.

71

EFFECT OF X-RAYS ON BLOOD ADRENALIN LEVEL. (French). E. Zunz and J. LaBarre. Bull. Acad. Roy. Med. Belgique 6, 649 (1926).

Irradiation of spleen produces increased carotid pressure. When cross circulated (carotid-jugular) B. P. in recipient increases. Direct irradiation of adrenal produces hypertension. (Rabbit, dog). BA 2-9711.

72

A STUDY OF THE DIRECT AND INDIRECT ACTION OF X-RAYS ON THE TISSUES OF THE EMBRYONIC FOWL. T. S. P. Strangeways and H. B. Fell. Proc. Roy. Soc. (London) B102, 9-29 (1927).

Cessation of mitosis. Tissue cultures from irradiated 6 day chick grow if removed soon after exposure; do not grow if removed 24 hrs. after. BA 2-16356.

73

ON THE EFFECTS OF BETA RAYS FROM RADIUM UPON DIVISION AND GROWTH OF CANCER CELLS. J. C. Mottram, G. M. Scott, and S. Russ. Proc. Roy. Soc. (London) B100, 326-335 (1926).

Effect: Inhibits cell division. BA 2-9697.

74

PHYSIO-PATHOLOGY OF THE THYMUS. PRELIMINARY EXPERIMENTS. (Italian). A. Amato. Sperimentale Arch. Biol. 81, 6-15 (1927).

X-ray produces precocious involution of thymus (dogs). BA 2-11117.

75

REGENERATION OF PANCREAS AFTER X-RAYS. M. Rosenbaum. Wien. Klin. Wochenschr. 40, 1315-1319 (1927).

Describes histological changes including marked hypertrophy of islands of Langerhans and abnormal mitoses. (Chick). BA 2-19140.

76

EPILATION IN MICE AS A BIOLOGIC STANDARD FOR DETERMINING ROENTGEN RAY DOSAGE. H. H. Hazen and L. C. Milstead. Arch. Dermat. and Syphilol. 13, 230 (1926).

Preliminary paper. BA 2-9690.

77

EFFECTS OF X-RAY AND RA ON TEETH AND JAWS (German). M. Leist. *Strahlentherapie* 24, 268-281 (1926).

Injures odontoblasts; affects dentine formation; injures alveolar bone and marrow. (Rat, dog). BA 2-16351.

78

COMPARATIVE STUDIES OF HISTOLOGICAL SKIN CHANGES PRODUCED BY X-RAYS AND LIPOID SOLVENTS. L. H. Jorstad and C. W. Lane. *Proc. Soc. Exp. Biol. and Med.* 24, 886 (1927).

Preliminary paper. BA 2-5213.

79

TISSUE REACTIONS TO RADIATION. J. Ewing. *Amer. J. Roentgenol.* 15, 93 (1926). BA 2-9682.

80

RELATION OF POLYNUCLEAR NEUTROPHILES AND THEIR REACTION TO X-RAY, TO CERTAIN LYMPHODENOPATHIES. H. Fox. *Amer. Jour. Path.* 3, 545 (1927).

Polynucleosis of Hodgkin's disease is "indifferent to radiation" except in malignant and febrile cases when this is variable. Species monkeys and other zoo animals. BA 2-11082.

81

CULTIVATION IN VITRO OF SPLEEN EXPOSED TO ROENTGEN RAYS. (Spanish). A. Roffo. *Rev. Soc. Argentina Biol.* 3, 379 (1927).

No effect on growth. BA 2-9704.

82

BIOLOGICAL EFFECTS OF EXTERNAL RADIATION. (NNES VI-2). Henry A. Blair, ed. New York, McGraw-Hill Book Co., Inc. 503 p. 1954.

A review of studies of acute and chronic irradiation of various species of experimental animals at the University of Rochester Atomic Energy Project during the period of 1943 to 1948. Chapters abstracted individually.

83

EFFECTS OF X-RAYS UPON GROWTH, DEVELOPMENT, AND OXIDIZING ENZYMES OF *HELIANTHUS ANNUUS*. Edna Louise Johnson. *Bot. Gaz.* 82, 373-402 (1926).

BA 2-9576.

84

ACTION OF MESOTHORIUM AND X-RAYS ON THE UNICELLULAR *G. PECTORALE*. (German). Ryotaro Tsukamoto. *Gann* 20, 61 (1926).

(Unicellular plant which contains chlorophyll.)

BA 2-654.

85

TRANSFORMATIONS INDUCED BY X-RAYS IN TUMOR TISSUES. (Italian). V. Rivera. *Riv. Biol.* 8, 1-15 (1926). BA 2-9296.

86

HYPOPLASIA OF BONE MARROW ASSOCIATED WITH RADIOACTIVE COLLOIDAL GOLD THERAPY. T. W. Botsford, H. B. Wheeler, R. A. Newton and W. E. Jaques. *J. Am. Med. Assoc.* 151, 788-791 (1953).

Bone marrow biopsy specimens were taken from six patients at autopsy after intratumor or intraperitoneal injection of more than 50 mc. of Au¹⁹⁸. Hypoplasia of the marrow was found. It is suggested that the marrow destruction was due to radiation from gold particles carried from the site of injection to the bone marrow.

87

THE ACTION OF X-RAYS ON SUBSTANCES AS SEEN IN THEIR EFFECT ON YEAST. H. Zeller. *Biochem. Zeitschrift.* 172, 105 (1926).

Difference between irradiated and non-irradiated substances on CO₂ production by yeast. (German) (cholesterin, salts of nucleic acid, thyroid, hemoglobin, others). BA 2-9580.

88

RADIOTHERAPY TESTS ON PLANTS. (Italian) V. Rivera. *Boll. R. Staz. Pat. Veg.* 6, 337-345 (1926).

Studies were carried out in which each of 2 crown galls on one plant received a different dose of x-rays. A third gall on the same plant served as unirradiated control. Growth of irradiated galls increased initially but the growths were dead at end of summer. Control grew uniformly; remained green at end of summer. BA 2-9295.

89

BIOLOGICAL DETERMINATION OF THE SCATTERING OF HARD X-RAYS TO AVOID ERRORS OF MEASUREMENT IN PHYSICAL DOSIMETRY. (German).

H. T. Schreus. *Klin. Wochenschr.* 5, 1762 (1926).

Amount of scattering depends on size of field; hardness of rays. Studied amount of radiation producing equal damage to pea or bean seedlings. Biologically effective intensity increases with size of field. BA 2-5134.

90

DEPRESSION AND STIMULATION OF GROWTH IN EXPERIMENTALLY IRRADIATED PLANT NEOPLASIA. (Italian). V. Rivera. *Riv. Biol.* 9, 3-10 (1927).

Regression of growth 22 hours post-exposure, then increased growth to 14-15 days. Finally tumor mass size diminished. Cells of tumor vary in radiosensitivity.

BA 2-9292.

91

THE EFFECT OF HIGH VOLTAGE CATHODE RAYS ON LIVING TISSUE, AN EXPERIMENTAL STUDY. V. C. Jacobson and K. C. Waddell. *Amer. Jour. Path.* 3, 560 (1927).

Forty white rats had unshaved abdominal skin exposed to x-rays (1 ma and voltages of 100,000, 200,000 and 350,000, TSD 1"). Rats were killed 1 min. and 14 days post exposure. Changes in hair and skin are described. BA 2-5212.

92

THE PART OF THE CELL ATTACKED BY IRRADIATIONS. (German). J. Seide. *Naturwiss.* 16, 128 (1928).

Review of work up to 1926. BA 2-9705.

93

EXPERIMENTAL PARTHENOGENESIS AND EPHEBOGENESIS IN VERTEBRATES. (German). Wilhelm Bosaeus. *Upsala Lakareforen Forhandl.* 31, 415-462 (1926).

Review of literature. X-ray is one method used to induce parthenogenesis. BA 2-3479.

94

EXPERIMENTAL NEPHRITIS PRODUCED BY IRRADIATION. (dogs). F. W. Hartman, A. Bolliger, and H. P. Doub. *Amer. Jour. Med. Sci.* 172, 487 (1926).

Renal epithelium is readily damaged by high voltage x-rays. Blood vessel walls become thickened; some endarteritis noted. Renal function decreased. BA 2-9686.

95

INFLUENCE OF X-RAYS ON PRODUCTION OF CEREBROSPINAL FLUID. (German). C. Inaba, M. Sgalitzer, and E. Spiegel. *Klin. Wochenschr.* 6, 1655 (1927).

X-ray injures plexus epithelium and thereby reduces production of C.S.F. BA 2-9690.

96

VARIATIONS OF THE PIRQUET REACTION UNDER THE INFLUENCE OF DIFFERENT DOSES OF X-RAYS. (German). J. Liebersohn and I. Shimanko. *Strahlentherapie* 24, 343 (1926).

Skin test for tuberculosis. BA 2-1685.

97

RADIUM NECROSIS OF BONE. D. Phemister. *Amer. Jour. Roentgenol.* 16, 340 (1926). (dog). BA 2-9701.

INDIRECT EFFECTS OF IRRADIATION WITH X-RAYS STUDIED BY METHOD OF VASCULAR ANASTOMOSIS. (French). R. Ferroux, R. Gayet, and J. Jolly. *Compt. Rend. Soc. Biol.* 97, 665 (1927).

Carotid-jugular anastomosis. Completely reject idea of indirect action (studied nuclear changes in lymph nodes). BA 2-9684.

THE ACTION OF X-RAYS ON COLPIDIUM COLPODA. J. A. Crowther. *Proc. Roy. Soc. (London)* B100, 390-404 (1926).

Deduced size of structure affected by radiation responsible for death of organism. BA 2-16344.

THE SENSITIVITY OF *V. FABA* TO RADIATIONS. (Italian). Vincenzo Rivera. *Riv. Bio.* 8, 505 (1926).

Plants not killed even by strong dosage of x-rays. Extensive bibliography. BA 1-8846.

VARIATIONS OF COAGULABILITY, GLYCAEMIA AND CALCAEMIA FOLLOWING X-IRRADIATION. (French). E. Zunz and J. LaBarre. *Compt. Rend. Soc. Biol.* 96, (1927).

(Dog) 2-6 hours after exposure blood from spleen shows hypercoagulability due to acceleration of transformation of pro-serozyme to serozyme. Variable effect on coagulability of recalcified plasma. Plasma Ca and glucose increased. BA 1-8955.

RADIOACTIVITY OF SOIL AND AIR AND ITS INFLUENCE ON BIOCHEMICAL SOIL PROCESSES. (German). J. Pěkava. *Actes 4 ème Conf. Int. Pédologie* 3, 252-253 (1924-1926). BA 2-12372.

PHOTOPHARMACOLOGY IV: EFFECT OF RADIATION ON DIGITALIS. D. I. Macht and J. C. Krantz, Jr. *Proc. Soc. Exp. Biol. and Med.* 23, 340 (1926).

X-rays, radium, U-V and high temperatures all caused destructive changes. BA 2-12771.

IS THE RETARDATION OF DEVELOPMENT PRODUCED WITH X-RAYS DUE TO ACTION ON THE RESERVE? (French). S. Ancel. *Bull. Soc. Bot. France* 74, 12-17 (1927).

Cotyledon, root and stem of seedling lentils were irradiated separately. Retardation of growth after x-irradiation was due to lesions in cells of plantlet, not to injury of reserve in cotyledon. BA 2-16120.

ACTION OF X-RAYS ON NORMAL MERISTEM OF R. COMMUNIS. (Italian). V. Rivera. *Boll. R. Staz. Pat. Veg.* 6, 144-152 (1926).

Young plants were exposed to 180 KV x-rays. Normal meristematic tissue is sensitive to radiation. (Temporary cessation of growth of terminal shoots with subsequent formation of abnormal leaves.) BA 2-16126.

BIOLOGICAL EFFECT OF SHORT WAVE RADIATION ON *H. SENTA*. (German). J. Seide. *Zool. Anzeiger* 69, 81-96 (1926).

Germ cells of the rotifer *H. senta* were more sensitive than somatic cells to Ra and x-rays; somatic cells more sensitive to ultra-violet. BA 2-16333.

AN INTRODUCTION TO THE STUDY OF X-RAYS AND RADIUM. H. Colwell and C. P. G. Wakeley. Oxford Med. Press: London, (1926).

Introductory text for students of physics and medicine. BA 2-16342.

QUANTUM PHENOMENA IN THE BIOLOGICAL ACTION OF X-RAYS. E. U. Condon and H. M. Terrill. *Jour. Cancer Res.* 11, 324-333 (1927).

"Because x-rays are absorbed in discrete quanta of energy instead of continuously, a statistical theory of the number of organisms surviving after a given period of exposure can be developed." BA 2-16343.

COMPARISON OF THE EFFECT OF UNFILTERED AND FILTERED RADON TUBES BURIED IN RABBIT MUSCLE. Max Cutler. *Amer. Jour. Roentgenol.* 16, 535-543 (1926). BA 2-16345.

EFFECT OF X-IRRADIATION ON THE CHOLINESTERASE IN RAT INTESTINE. J. H. Burn, P. Kordik and R. H. Mole. *J. Physiol.* 116, 5-6 (1952).

Strips of intestine were examined by suspending them in a bath and determining their reaction to acetylcholine. The colon of irradiated rats was more sensitive than that of control rats. There was a fall of cholinesterase in the jejunum and ileum 48 hours after irradiation.

RADIATION PNEUMONITIS. S. Warren and O. Gates. *Arch. Pathol.* 30, 440-60 (1940).

Experimental and pathologic observations on lungs. The lung reacts to radiation as do superficial tissues, with congestion, edema and degenerative changes of cells and intercellular substance. Certain phases of the reaction in the lung are distinct from other forms of pulmonary inflammation. Observations made in animals as well as in man.

SENSITIVITY TO SECONDARY RAYS PRODUCED BY METALS. (German). A. Liechti. *Klin. Wochenschr.* 5, 545-548 (1926).

Strips of various metals laid on dog's ear, irradiated from opposite side. Effect of secondary rays more marked for metals of high atomic number. Subcutaneous applications have no effect nor do colloidal preparations. BA 2-16352.

A HISTOCHEMICAL STUDY OF IRRADIATED BONE. M. S. Burnstone. *Am. J. Pathol.* 28, 1133-48 (1952).

Ten mice were injected subcutaneously with a carrier free solution containing radioactive phosphorus, P^{32} , as sodium phosphate. Seven days later marrow cells of the large marrow cavity were replaced by atypical reticular cells, that contained greater than normal amounts of glycoprotein, glycogen, and alkaline phosphatases, and were associated with a glycoprotein-containing matrix which calcified.

THE ROLE OF AUTOMATINE AS A RADIOACTIVATED SUBSTANCE IN THE HEART. (German). H. Zwaardemaker. *Zeit. Kreislaufforsch.* 20, 121-131 (1928).

Postulates "automatine" is excitant of all automatic organs, produced experimentally by corpuscular radiation of precursor "automatinogen" in blood and skeletal muscle. Radiation required to activate it is supplied by K. BA 2-17221.

MICROSCOPIC CHANGES OF CERTAIN ANEMIAS DUE TO RADIOACTIVITY. H. S. Martland. *Arch. Path. and Lab. Med.* 2, 465-472 (1926).

Autopsy findings on former radium dial painter. Profound anemia and leukopenia. Fatty marrow replaced with red regenerating marrow showing regeneration of megakaryoblastic type. BA 2-17433.

116

BASAL METABOLISM IN CHRONIC MYELOGENOUS LEUKEMIA. M. Riddle and C. Sturgis. *Arch. Internal Med.* 39, 255-274 (1927).

Transient increase in BMR was observed for not more than 3 days after x-ray treatment. Suggest increased rate of destruction of WBC may be an important cause of the increase. BA 2-17578.

117

PHYSIOLOGICAL ORIGIN OF CANCER. GEOPHYSICS OF A PATHOLOGICAL ENVIRONMENT. (French). M. Stelys. *Compt. Rend. Acad. Sci. (Paris)* 184, 1281-1283 (1927).

On basis of local distribution of cancer in certain French regions, author concludes that cancer is due to excess CO₂ and radioactive substances in the air. BA 2-17588.

118

FUNCTIONAL STUDIES THROUGHOUT THE COURSE OF ROENTGEN RAY NEPHRITIS IN DOGS. F. Hartman, A. Bolliger, and H. Doub. *Jour. Amer. Med. Assoc.* 88, 139-145 (1927).

Numerous kidney function studies done. Except for acute stage, x-ray nephritis is comparable with chronic interstitial nephritis in man. BA 2-11170.

119

CHANGES IN THE SALIVARY GLANDS OF GUINEA PIGS DUE TO X-RAYS. (French) J. Watrin and P. Florentin. *Compt. Rend. Soc. Biol.* 97, 1297-1298 (1927).

No change in secretory cells; increase in excretory channels. BA 2-10153.

120

THE PERIOD OF INDUCTION IN BLOOD CLOTTING, OR THE SEQUENCE OF EVENTS PRECEDING FIBRIN FORMATION. C. A. Mills. *Chinese Jour. Physiol.* 1, 123-142 (1927).

X-ray was one agent used to hasten liberation of prothrombin in the plasma. BA 2-9833.

121

CHOLESTEROL CONTENT OF BLOOD SERUM AFTER X-RAY IRRADIATION. (German). R. Hubert. *Klin. Wochenschr.* 7, 208-211 (1928).

In non-carcinomatous patients, x-ray produces an increase in serum cholesterol; in carcinomatous patients, a decrease. BA 2-9809.

122

VARIATIONS IN IONIC ALKALINITY OF THE BLOOD THROUGH THE ACTION OF X-RAYS. (French). J. Cluzet and T. Kofman. *Compt. Rend. Assoc. Franc. Avanc. Sci.* 49, 589-592 (1925-1926).

After usual therapeutic irradiation there is slight alkalosis. With larger doses: acidosis and change in acid-base balance. (Rabbits irradiated over splenic area; patients receiving x ray therapy for tumor.) BA 2-9775.

123

EFFECT OF X-RAYS ON ENDOCRINE GLANDS.

(German). H. Wintz. *Strahlentherapie* 24, 412-438 (1927).

Histological and physiological changes described. Different portions of gland (especially ovary) show differences in sensitivity. Sensitivity also varies with physiological activity. BA 2-9710.

124

THE EFFECT OF URANIUM RADIATION ON THE SILK WORM, BOMBYX MORI. L. Arata Terao and N. Wakamori. *Proc. Imp. Acad. (Japan)* 2, 188-191 (1926).

Eggs, larvae, pupae exposed. In general, cocoons from irradiated series were heavier. With very long exposures (e.g. entire larval period) cocoons were lighter. BA 2-9709.

125

EFFECT OF RADIUM EMANATIONS ON EXPERIMENTAL TAR CANCER AND ON ITS PRELIMINARY CHANGES. (German). G. Stoel. *Zeitschrift Krebsforsch.* 26, 386-403 (1928).

Three stages of response: 1. temporary cessation of mitoses; 2. renewal of division with abnormal mitoses; 3. permanent suppression of division. Tar cancer reacted same as normal tissue. (mouse). BA 2-9706.

126

DISCORDANCE OF EFFECTS OF X-RAYS IN FRACTIONATED DOSES ON THE SKIN AND ON THE TESTIS. (French). C. Regaud and R. Ferroux. *Compt. Rend. Soc. Biol.* 97, 431-434 (1927).

Effect of repeated doses additive for testis, not for skin. BA 2-9703.

127

THE QUANTITATIVE BIOLOGICAL EFFECTS OF X-RAYS OF DIFFERENT WAVE LENGTHS. Charles Packard. *Jour. Cancer Res.* 11, 1-15 (1927).

Used death rate of *Drosophila* eggs as indicator. Homogeneous beams (0.20, 0.54, 0.70 AU) of 2 intensities (0.22 and 0.154 e/sec) and heterogeneous beams (0.154 e/sec) produce similar effects when total dose is the same. Biological effect parallels ionization. BA 2-9700.

128

NATURE OF BIOLOGICAL EFFECTS OF X-RAYS. (German). Yoshisada Nakashima. *Strahlentherapie* 24, 1-36 (1926).

Denaturing of protein molecules is a fundamental process in biological effect of x-rays. BA 2-9698.

129

X-RAY STANDARDIZATION PROBLEMS. F. Hunt. *Physical Therap.* 45, 422-431 (1927).

Review of units in use and outline of National Bureau of Standards plans for establishing international x-ray unit. BA 2-9689.

130

THE EFFECT OF RADIATION ON VAGINAL CELLS IN CERVICAL CARCINOMA. II. PROGNOSTIC SIGNIFICANCE. R. M. Graham. *Surg. Gynecol. Obstet.* 84, 166 (1947).

131

ACTION OF RADIUM ON *A. FUMIGATUS*. (French). A. Sartory, R. Sartory, and J. Meyer. *Compt. Rend. Acad. Sci. (Paris)*, 183, 77-79 (1926).

Cultures on 41 different media given continuous and discontinuous irradiation. Morphological changes: echinulate spores with double membranes and enlarged cells. Biochemical changes: reduction of saccharose and lowered pH in solutions containing NaCl; reducing power of organism and pH of media increased in non-dissociated media. BA 2-5133.

132

EFFECT OF X-RAYS ON BLOOD SUGAR. (Italian). A. C. Ferrari. *Arch. Farmacol. Sperim. e Sci. Affini* 42, 174-179 (1926).

Rabbits: blood sugar increases 50-100% after 30 min. exposure. (1 ma, 30 cm distant, filters: 2 mm Al and 1/4 mm of Zn.) Various parts of body exposed with same result. BA 2-5286.

133

AN ANALYSIS OF CHROMOSOME STRUCTURE AND BEHAVIOR WITH THE AID OF X-RAY INDUCED REARRANGEMENTS. L. Husted. *Genetics* 21, 537-553 (1936).

134

CAN RADIOACTIVE SUBSTANCES REPLACE K IN SUSTAINING THE HEART BEAT OF THE FROG? (German).

P. Niederhoff. Pfluger's Arch. Ges. Physiol. 213, 823-825 (1926).

Zwaardemaker's statements that radioactive substances can replace K not confirmed. BA 2-5217.

135
INFLUENCE OF ALPHA RADIATION ON BLOOD SUGAR. (French). Fr. Vanysek. Acad. Tcheque Sci. Bull. Internat. Res. Trav. Présentés Cl. Sci. Mat. et Med. 26, 157-162 (1925).

Few mgm. ionium injected into rabbits cause marked hyperglycemia. Animals given adrenalin prior to ionium have greater hyperglycemia. BA 2-5346.

136
EFFECT OF KIDNEY DECAPSULATION. W. Hülse and S. Litzner. Zeitschr. Ges. Exp. Med. 52, 84-102 (1926).

X-radiation increases kidney circulation and exerts protective action against sublimate. BA 2-5695.

137
FORMATION OF PERITHECIA IN FUMIGATUS UNDER INFLUENCE OF RADIUM. A. Sartory, R. Sartory, and J. Meyer. Compt. Rend. Acad. Sci. (Paris) 183, 1360-1362 (1927).

Treatment with 10.2 mc Ra under conditions of experiment suppressed conidial and stimulated perfect fruiting. Single spore cultures of ascospores developed conidial state of *A. fumigatus*. BA 2-6903.

138
ON AUTOLYSIS OF FISH MUSCLE (JAPANESE WITH ENGLISH SUMMARY). T. Oya and E. Sumi. Jour. Imp. Fish. Inst. (Tokyo) 22, 336-343 (1927).

Hard x-ray 1:5 min. exposure: no effect; 30 min. accelerates; 180 min. retards autolysis. Hard x-ray III-IV: 10 min. accelerates; 180 min. retards autolysis. Hard x-ray VI: 10 sec. no effect, 1 min. accelerates, 180 min. retards autolysis. BA 2-1214.

139
HISTOLOGICAL CHANGES IN RADIATED CARCINOMAS. (German). Hojo Yamakawa. Gann 20 68-69 (1926).

Radiation causes degeneration of tumor cells. BA 2-655.

140
THE EFFECT OF RADIATION OF TESTES AND OVARY ON THE DESCENDENTS. (Italian). Antonio Pais. Atti. R. Acad. Naz. Lincei. Rend. Cl. Sci. Fis. Mat. e Nat. 4, 227-233 (1926).

1. Remarks re "stimulating effect" of small doses. (humans).

2. Large doses: descendents show the characters of non-irradiated parent; weak doses: of the irradiated parent. (rabbits and mice). BA 2-653.

141
STUDIES OF THE EFFECTS OF ROENTGEN RAYS ON GLANDULAR ACTIVITY: V. EXTERNAL PANCREATIC SECRETION. A. C. Ivy, J. I. Farrell, and B. H. Orndoff. Skand. Arch. Physiol. 49, 156 (1926).

Dose	Result
1/10 HED	no effect on quantity of secretion; decreased concentration of lipase and trypsin
50% HED	increased total secretion and lipase
1 HED	total output about normal. BA 2-651.

142
THE PHYSIOLOGICAL ACTION OF X-RAYS OF DIFFERENT WAVE LENGTHS. (French). A. Dognon. Compt. Rend. Acad. Sci. (Paris) 182, 655-657 (1926). BA 2-649.

143
PRODUCTION OF MALIGNANT TUMORS BY MEANS OF RADIUM (French). Frans Daels. Bull. Assoc. Franc. Etude Cancer 15, 102-109 (1926).

Salts diluted 1:10,000 with Talc. or 1:20,000 in aq. solution in glass tubes. Subcutaneous application produced sarcomas in rats and mice; only mild foreign body reaction. BA 2-1471.

144
AWAKENING OF THE HEART, BROUGHT TO REST THROUGH DEPRIVAL OF K, BY RADIUM BETA RAYS. (German). H. Zwaardemaker, Pfluger's Arch. Ges. Physiol. 215, 460-467 (1927).

Heart of eel, frog, toad stops when perfused with K-free Ringers solution; starts again if exposed to β rays (Ra) while perfusion continues. Eventually stops again, may start when Ra removed. BA 2-1295.

145
STUDIES ON LEUKEMIA. II. CONCERNING THE ACTION OF ROENTGEN RAYS. P. Szilard. Amer. Jour. Med. Sci. 173, 348-353 (1927).

Rate of leukocyte destruction increased over a period of 1 mo. after in vitro irradiation of (1) leukemic leukocytes in leukemic serum and (2) in normal serum. Rate of destruction same for (1) and (2). BA 2-1533.

146
SECONDARY ACTION OF X-RAYS ON MICRO-ORGANISMS (French). J. Trillat. Compt. Rend. Acad. Sci. (Paris) 183, 1304-1307 (1926).

B. prodigiosus was irradiated with hard x-rays delivered through sheets of various metals over the cultures. Increase in sterilizing effect increased with increasing atomic no. of metals. BA 2-2279.

147
DEVELOPMENT OF RICINUS IN A THORIUM MEDIUM RADIOACTIVATED BY THE ADDITION OF THORIUM X. Q. Averseng, M. Jaloustre, and M. Maurin. Presented by M. L. Mangin. Compt. Rend. Acad. Sci. (Paris) 182, 804-805 (1926).

Irradiated castor oil plants developed more branches, leaves, inflorescences and fruits, greater weight of seed; more oil. BA 2-5128.

148
EFFECT OF DRUGS AND IRRADIATION UPON YEAST. THE BASIS OF THE ARNDT-SCHULZ LAW. (German). H. Zeller. Biochem. Zeitschr. 171, 45-75 (1926).

X-ray was one agent used to inhibit fermentation of yeast. BA 2-5082.

149
EFFECT OF X-RAY ON SALT AND WATER BALANCE IN THE RAT. W. O. Caster. Federation Proc. 11, 195 (1952).

Following total body irradiation with an LD₅₀ dose of 160 kv. x-ray, rats lose 10-20% of their body weight. Twenty rats were maintained under conditions suitable for metabolic studies for a 3-week control period, irradiated with 700 r of x-ray, and studied for 2 more weeks. The potassium and sodium balances became negative, the chloride balance was at first positive and became negative after 4-6 days. (from authors' summary).

150
CHANGES IN THE WEIGHT AND ELECTROLYTIC CONTENT OF RAT TISSUES FOLLOWING TOTAL BODY X-IRRADIATION. W. O. Caster. Radiation Research 1, 128 (1954).

Changes in weight of rat organs were recorded at 3 and 12 hrs. and 1, 2, 3, 4, 6, 8, and 10 days after total-body irradiation with 700 r of x-rays. Spleen and thymus showed the greatest percentage weight loss. Greatest absolute weight loss was in muscle. Little change in skin and liver. Increases in weight observed in lungs, testes, and parts of gastrointestinal tract.

151
BIOLOGICAL INDIFFERENCES OF TISSUES TO X-RAYS.

(German). L. Karczag, G. Farkas, and G. Gyorgyi. Arch. Exp. Zellforsch. 4, 206-211 (1927).

Frog skin, spleen and fibroblasts stained with indicators then x-rayed show no change in pH. Egg white and other colloids do. Believe living cells can compensate for changes produced. BA 2-5214.

152
ANAPHYLAXIS AND EXPOSURE TO X-RAYS. (German). F. Klewitz and R. Wigand, Zeitschr. Ges. Exp. Med. 50, 427-431 (1926).

X-ray treatment had no effect in preventing anaphylactic shock in guinea pigs. BA 2-5215.

153
INHIBITING ACTION OF X-RAYS ON EXPERIMENTAL VACCINATION OF THE RABBIT. (French). A. de LeFevre, Compt. Rend. Soc. Biol. 96, 208-209 (1927).

Rabbits were irradiated 14 days before vaccination with 1-100 dilution of smallpox vaccine. Control rabbits had more and larger pustules; generalized response same. BA 2-5216.

154
CONCENTRATION OF RADIOACTIVE ATOMS IN THE HEART OF COLD BLOODED ANIMALS. (German). H. Zechuisen and G. M. Streef, Pflüger's Arch. Ges. Physiol. 215, 170-186 (1926). BA 2-5220.

155
THE NEW ULTRAPENETRATING RADIATIONS AND THE LIVING CELL. (French). Albert Nodon, Rev. Sci. Franc. and Etrang. 65, 609-617 (1927).

X-rays and radium cause germinal changes. Milikan's discovery of cosmic rays of great penetrating power leads to speculation regarding biological effects of these rays. BA 2-5218.

156
ACTION OF X-RAY ON ADRENALINEMIA. E. Zunz and J. LaBarre, Arch. Internat. Physiol. 27, 371-396 (1926).

Irradiation of splenic area (rabbit; 100-175 r) raises carotid pressure but not in adrenalectomized animal. Arterial blood removed during irradiation of donor causes hypertension in recipient rabbit. Irradiation of adrenals (dogs; 100-300 r) also causes hypertension. BA 2-5221.

157
SIGNIFICANCE OF RADIOACTIVITY FOR ANIMAL LIFE. H. Zwaardemaker, Ergeb. Physiol. 25, 535-573 (1926).

Analysis of ash of perfused hearts reveals regulatory mechanism for K; no such mechanism for heavy radioactive elements. Cold blooded hearts may be kept beating if radioactive component is K or Rb. Heavy elements accumulate in toxic amounts. BA 2-5222.

158
WATER AND ELECTROLYTE METABOLISM IN THE RAT FOLLOWING TOTAL BODY X-IRRADIATION. W. O. Caster and W. D. Armstrong. Intern. Physiol. Congress XIX 263 (1953).

159
CHRONIC NEPHRITIS PRODUCED BY X-RAY. J. O'Hare, H. Altnow, T. Christian, A. Calhoun, and M. Sosman. Boston Med. and Surg. Jour. 194, 43-45 (1926).

(Rabbits) Animals lived 1 day-5 mos. after treatment. Progressive sclerosis of kidney produced in 28 rabbits. (Exposed one kidney directly and compared with untreated contralateral kidney; both acute and chronic exposures.) BA 2-6091.

160
CAUSE OF DEVELOPMENT OF PERITHECIA IN FUMIGATUS. A. Sartory, R. Sartory, and J. Meyer. Compt. Rend. Acad. Sci. (Paris) 184, 1020-1021 (1927).

Observations on *A. fumigatus* in media containing electrolytes: Ra radiation causes increased concentration of H ions, decreased exodiastase activity, increased endodiastase activity. Enzymatic activity and sexual reproduction are closely related. BA 2-6904.

161
GRANULAR DEGENERATION OF IRRADIATED PLANT TUMORS. (Italian). V. Rivera. Boll. Accad. Pugliese Sci. 1, 3-7 (1926).

X-irradiation of crown gall on *Pelargonium* caused secondary tumors surrounded by rapidly dividing pseudocambium cells; formation of fibrovascular elements; degeneration of cytoplasm and nucleus. Secondary tumor dies because of obliterated conducting system. BA 2-9291.

162
EFFECTS OF X-RAYS ON NORMAL AND PATHOLOGICAL PLANT TISSUES. (French). V. Rivera. Ann. Inst. Pasteur 40, 614-658 (1926).

Radiosensitivity varies with type of cell and stage of development. (plants). BA 2-9293.

163
EFFECTS OF X-RAYS IN THE MOUSE TESTICLE. (French). N. Dobrovolskaia-Zavadskaia. Arch. Anat. Microsc. 23, 396-438 (1927). BA 2-9679.

164
INFLUENCE OF TEMPORARY ISCHEMIA ON THE RADIO-SENSITIVITY OF THE SKIN AND THE SEMINAL EPITHELIUM. (French). R. Ferroux and C. Regaud. Compt. Rend. Soc. Biol. 97, 663-665 (1927).

One testis was irradiated intact in scrotum, one with circulation temporarily occluded by clamps. No aggravation of lesion with ischemia, rather some protection from injurious effects. BA 2-9683.

165
CHANGES IN BLOOD COMPOSITION FOLLOWING TOTAL BODY X-IRRADIATION IN THE RAT. W. O. Caster and W. D. Armstrong. Federation Proc. 13, 190 (1954).

Following total body irradiation with an LD₅₀ dose of x ray there is an increase in weight and HCl concentration in the gastric contents; this is associated with a decrease in plasma chloride and an elevated plasma CO₂. By the third day the plasma electrolytes are in a normal range. On the fourth day the chloride level is normal. After this the chloride balance is negative. (From authors' summary).

166
THE EFFECT OF ROENTGEN RAYS ON THE HEART. 1. THE MICROSCOPIC CHANGES IN THE HEART MUSCLE OF RATS AND RABBITS FOLLOWING A SINGLE EXPOSURE. A. S. Warthin and E. A. Pohle. Jour. Amer. Med. Assoc. 89, 1825-1829 (1927).

Surface dose to precordium = 1 human erythema dose, 1100 x-ray units. No clinical, no gross pathological changes at autopsy. Only 1 rabbit and 2 rats (out of 24 and 30 respectively) showed microscopic degenerative changes. BA 3-5598.

167
EFFECT OF X-RAYS ON ACID-BASE EQUILIBRIUM. (German). G. Von. Pannewitz. Strahlentherapie 24, 327-330 (1926-1927).

Acidosis develops immediately after exposure, followed in few hours by alkalosis which may last several days. Effects on acid-base balance are most marked after radiation of thorax and abdomen. BA 3-5595.

168
THE EFFECT OF RADIATION ON ROUX CHICKEN TUMOR. J. C. Mottram. Brit. Jour. Exp. Path. 9, 147-154 (1928).

Tumor is more resistant to β rays in vitro than in vivo. Tumor radiated in vivo may disappear while cell-free filtrate from tumor area remains infective. Serum of birds resistant to inoculation can destroy the infective property of such filtrates in vitro. BA 3-5594.

169
OBSERVATIONS ON THE BIOCHEMICAL CHANGES IN THE BLOOD FOLLOWING RADIUM THERAPY. H. Matthews and V. Mazzola. Amer. Jour. Obstet. and Gynecol. 16, 97-102 (1928).

No evidence of renal impairment was observed following therapeutic radiation. Blood urea was elevated slightly in both benign and malignant conditions after exposure.

170
THE STANDARDIZATION OF THE ROENTGEN RAY DOSE. O. Glasser and U. V. Portmann. Jour. Roentgenol. and Radium Therapy 19, 47-61 (1928). BA 3-5590.

171
THE CHEMICAL AND BIOLOGICAL CHANGES INDUCED BY X-RAYS IN BODY TISSUES. M. T. Burrows, L. Jorstad, and E. Ernst. Radiology 11, 370-378 (1928).

X-ray liberates vitamin A from tissues. Foods rich in vitamin A protect rats against weight loss following large doses of x-ray. BA 3-5589.

172
THE QUESTION OF LOCAL OR GENERAL RADIATION. (German). A. Beck and D. Engel. Strahlentherapie 26, 729-734 (1927).

Mice given heavy dose, localized, of x-rays had tumors implanted under radiated and non-radiated sites several days post-exposure. Tumors grew faster on non-radiated sites. Concludes radiation produced tissue changes which inhibited tumor growth. BA 3-5588.

173
ACTION OF ULTRAVIOLET AND X-RAYS ON REACTION OF THE SKIN. (German). S. Kaplansky and S. Soloweitschik. Zeit. Ges. Exp. Med. 55, 111-114 (1927).

Effects: Erythema and increased pH of skin following exposure to either ultraviolet or x-ray. (rabbit). BA 2-5551.

174
THE INFLUENCE OF X-RAYS ON PLANT GERMINATION AND GROWTH. (French). K. Wernhart. Compt. Rend. Soc. Biol. 96, 1090-1091 (1927). BA 3-5304.

175
ON WHAT DOES THE SLIGHT BIOLOGICAL ACTION OF X-RAYS ON UNICELLULAR ORGANISMS DEPEND? (German). E. Schneider. Klin. Wochenschr. 5, 97-99 (1926).

Unicellular organism is more independent of its surroundings. BA 3-5302.

176
REPRODUCTION IN ASPERGILLIS SUBJECTED TO RADIUM. (French). A. Sartory, R. Sartory, and J. Meyer. Bull. Sci. Pharm. 34, 12-15 (1927).

Increased sexual reproduction is considered to be a deleterious effect of radium. BA 3-5301.

177
EFFECT OF THORIUM X ON THE NUTRITION AND GROWTH OF A. NIGER. (French). H. Lassalle and R. Delas. Compt. Rend. Soc. Biol. 94, 971-972 (1926).

Five-eight micrograms in media accelerated growth and hastened sporulation; 18 mcg: no effect on sporulation but increased dry weight, % lipoids and phytosterin, and decreased lecithin; 50 mcg: good growth; 120 mcg: poor growth, retarded sporulation. BA 3-5300.

178
THE EFFECT OF X-RAY STIMULUS ON SEEDLINGS.

(German). E. Bersa. Akad. Wiss. Wien Math. Nat. Kl. Sitzungsber. Abt. 1 135, 425-451 (1926).

Finds no stimulating effect on *Vicia faba* and *Sinapis alba*. BA 3-5298.

179
THE EFFECTS OF RADIUM IN PRODUCING LETHAL MUTATIONS IN D. MELANOGASTER. F. B. Hanson and F. M. Heys. Science 68, 115-116 (1928).

423 control pairs of flies: no lethals. 426 pairs exposed to 150 gm Ra: 8.2% lethals. 426 pairs exposed to γ rays only: 2.8% lethals. BA 3-4655.

180
HEREDITARY CONSTITUTION AND X-RAYS. R. T. Hance. Sci. Monthly 27, 264-266 (1928).

Tested physiological strength of adult characters determined by 1-2 genes (homozygous and heterozygous agouti mice). Gave smallest x-ray dose likely to inhibit pigment production. Hair of heterozygote was replaced by white; of homozygote by darker than normal hair. Concluded weaker determinant was destroyed. BA 3-4652.

181
INFLUENCE OF THORIUM AND URANIUM SALTS ON NITROGEN FIXATION BY AZOTOBACTER. K. Hiral. Proc. 1st International Cong. Soil Sci. 3, 154-159 (1928).

U salts increased N-fixation and reproduction in Azotobacter sp. BA 3-2301.

182
EXPERIMENTAL NEPHRITIS. F. W. Hartman. Ann. Clinical Med. 5, 599-615 (1927).

Renal insufficiency is produced by x-irradiation of kidneys (dogs). Histological changes are tubular destruction, fibrosis, round cell infiltration, glomerular and capsular fibrosis and hyalinization, and vascular changes. (endarteritis). BA 3-1938.

183
CERTAIN PROPERTIES OF CANCER TISSUE TREATED WITH X-RAYS AS DEMONSTRATED BY SWELLING EXPERIMENTS IN VITRO. (German). M. Magath. Zeitschr. Krebsforsch. 25, 122-135 (1927). BA 3-1848.

184
THE IRRADIATION THRESHOLD OR THRESHOLD OF THE STIMULUS WITHIN THE HEART. (German). H. Zwaardemaker. Pfluger's Arch. Ges. Physiol. 217, 1-10 (1927).

Frog hearts perfused with K-free solutions become quiescent when K is reduced by 1/3. Th, U, Ra, and external radiation can restore activity. Amount of radiation required to restore activity is proportional to length of quiescent period. BA 3-1694.

185
CONCERNING A HORMONE OF HEART ACTIVITY. (German). I. Haberlandt. Pfluger's Arch. Physiol. 218, 129-136 (1927).

Hormone from sinoauricular junction and base of ventricle of frog heart showed diminished activity when tested on the isolated ventricle although the isolated heart exposed to the same dose was not affected. Frog heart in situ responds to x irradiation by increasing its rate of contraction. BA 3-1660.

186
WILL X-RAY IRRADIATION STIMULATE THE IMMATURE OVARY TO PRODUCE HORMONES? (German). C. Schatz. Klin. Wochenschr. 6, 2435-2436 (1927).

Mice, 3-4 weeks old, irradiated with 10-100% sterility dose, did not develop premature oestral crisis. (45 animals). BA 3-1512.

187
LEUKEMIA IN GUINEA-PIGS. C. C. Congdon and E. Lorenz. Am. J. Pathol. 30, 337-59 (1954).

Leukemia appeared at an earlier age in the irradiated animals than in the controls. Data on the leucocyte count indicated a sudden appearance of the disease without preleukemic alteration in the peripheral blood. Lymphatic leukemia occurred in 3.6 per cent of 112 strain 2 guinea pigs, in 6.7 per cent of 30 strain 13 guinea pigs, and in 2.5 per cent of 161 heterogeneous hybrid guinea-pigs. X-irradiation and gamma irradiation were not established as leukemogenic agents for the guinea-pig. (from authors' conclusions).

188

BIOLOGICAL EFFECTS OF X-RAYS AND THEIR INVESTIGATION BY MEANS OF TISSUE CULTURE. M. Schubert. *Strahlentherapie* 24, 551-554 (1927).

Embryonic chick heart: grows normally if planted immediately after irradiation; no growth if remains in egg 3 hrs or more after exposure. Extract of irradiated embryo prevents growth of normal tissue. BA 3-1008.

189

CULTURES IN VITRO OF SPLEENS PREVIOUSLY SUBJECTED TO X-RAYS. (French). A. H. Roffo. *Compt. Rend. Soc. Biol.* 97, 1034-1036 (1927).

Irradiation had no effect on growth of cultures of embryo chicken spleen. BA 3-1005.

190

A COMPARISON OF THE SUSCEPTIBILITY TO X-RAYS OF *DROSOPHILA MELANOGASTER* AT VARIOUS STAGES OF ITS LIFE CYCLE. J. W. Mavor. *Jour. Exp. Zool.* 47, 63-83 (1927). BA 3-1003.

191

X-RAY CARCINOMA IN MICE. (German). A. R. Jonkhoff. *Zeitschr. Krebsforsch.* 26, 32-41 (1927).

Irradiated 20 mice; eight mice died. Six mice received repeated exposures, and of these 4 developed malignant sarcomas. BA 3-1002.

192

BLEEDING TIME AND CLOT RESISTANCE STUDIES IN MICE, RATS AND RABBITS FOLLOWING WHOLE BODY X-IRRADIATION. A. L. Copley. *Federation Proc.* 11, 27 (1952).

Bleeding time tests were developed using the rat's tail and the rabbit's paw immersed in physiological saline at 37.5 C. In 66 normal rats 154 bleeding times were within 3 minutes. In 37 normal rabbits 75 bleeding times ranged from 20 to 270 seconds. Bleeding times of 9 minutes or more were found 6 days after radiation. (from authors' abstract).

193

EFFECT OF X-RAYS ON PRODUCTIVITY AND THE SEX RATIO IN *DROSOPHILA MELANOGASTER*. F. B. Hanson. *Amer. Nat.* 62, 352-362 (1928).

Observations on daily egg production, mortality rate of eggs, larvae and pupae; differences in sex ratio, visible mutations. BA 3-1000.

194

CROSS CIRCULATION EXPERIMENTS. PART B. IS THERE AN "INDIRECT" EFFECT OF RADIATION? p. 115-139. BIOLOGICAL EFFECTS OF EXTERNAL RADIATION (NNES VI-2). Henry A. Blair, ed. New York. McGraw-Hill Book Co., Inc. 1954.

Purpose: to gather evidence on indirect radiation effects. Cross-circulation experiments were performed on cats. In 7 experiments, cross-circulation was established and then one animal was radiated while the other was shielded. Report includes data on leucocyte and lymphocyte count. Leukopenia did not develop in the unirradiated animal. (from authors' summary).

195

EFFECT OF X-RAYS ON DEVELOPMENT OF INFECTIONS. (French). L. Bazy. *Bull. Acad. Med. (Paris)*. 99, 123-125 (1928).

Guinea pigs were given s.c. injection of streptococci in talc a 1 vaseline and some of the animals were treated with 500 r weekly. Ordinarily abscesses were non-fatal in untreated animals; treated animals had high mortality; developed diffuse cellulitis of abdominal wall. Concludes x-ray sensitizes tissue to pyogenic infection. BA 3-996.

196

INFLUENCE OF TEMPERATURE ON SENSITIVITY TO X-RAYS OF EGGS OF BIRDS AND BATRACHIANS.

(French). P. Ancel and P. Vintemberger. *Compt. Rend. Soc. Biol.* 97, 796-799 (1927).

Concluded radiosensitivity of eggs not appreciably modified by temperature at moment of radiation. Dosage 1.250 r - 1.705 r, Temp. 8° and 25°. BA 3-973.

197

THE INFLUENCE OF RADIOACTIVE WATERS ON THE GERMINATION AND DEVELOPMENT OF PLANTS.

(French). D. Vidal. *Ann. École Nat. Agric. Montpellier* 18, 215-276 (? year).

Seedlings watered with H₂O which had high natural radioactivity. This resulted in stimulation of germination. BA 3-852.

198

GROWTH AND GERMINATION OF SUNFLOWERS AS INFLUENCED BY X-RAYS. E. L. Johnson. *Amer. Jour. Bot.* 15, 65-76 (1928).

Low doses do not have stimulating effect. "Medium" doses have inhibitory effect proportional to dose. Plants compensate for this after about 3 weeks and differ very little from controls at maturity. BA 3-849.

199

INFLUENCE OF TEMPERATURE ON THE RADIO-SENSITIVITY OF GERMINATING LENTIL SEEDS. (French). S. Ancel. *Compt. Rend. Soc. Biol.* 97, 800-802 (1927).

Root growth was retarded by x-irradiation. Temperatures of 4°, 5°, 18°, 24°, 25° did not influence sensitivity. BA 3-847.

200

ON THE CUMULATION OF INJURIOUS EFFECTS DETERMINED BY THE SUCCESSIVE ACTION OF 2 FACTORS ON LEGUMINOUS SEEDS. (French). S. Ancel. *Bull. Soc. Bot. France* 74, 346-349 (1927).

Mutilated and normal germinated seeds were treated with x-ray. Mutilated seeds were affected more than normals. Effect of mutilation plus x-ray on growth reduction was greater than sum of two effects when tested separately. BA 3-846.

201

THE ACCELERATING INFLUENCE OF X-RAYS ON THE DEVELOPMENT OF PLANTS. (French). S. Ancel. *Arch. Phys. Biol.* 5, 106-118 (1926).

Historical summary and experiments to check reports of stimulating effect of weak doses on plant development. Concludes stimulating effect does not exist. (Beans, lentils, wheat). BA 3-845.

202

NATURAL RADIOACTIVITY AND THE ORIGIN OF SPECIES. A. R. Olson and G. N. Lewis. *Nature (London)* 121, 673-674 (1928).

Calculated predicted number of variants in field grown tobacco based on intensity of gamma rays in atmosphere. Predicted figure agreed closely with natural variance actually observed. Conclude that naturally occurring variants are largely due to radioactivity of environment. BA 3-355.

203

CHEMISTRY OF SUGAR DECOMPOSITION IN PLANT CELL AND INFLUENCE OF RADIOACTIVITY ON ANAEROBIC RESPIRATION IN PLANTS. (German).

J. Stoklasa and J. Pěnkava. Zeitschr. Probleme Garung, Atmung und Vitaminforsch. 12, 362-433 (1926).

Ra emanation causes increased CO₂ production, increased O₂ demand; if O₂ is sufficient, Ra stimulates enzymatic processes. β and γ rays act on glycolytic enzymes. BA 3-851.

204
SOMATIC GENOVARIATIONS OF THE GENES W, w^e AND w IN D. MELANOGASTER UNDER THE INFLUENCE OF ROENTGEN RAYS. (German). N. W. Timofeef-Ressovsky. Z. wiss. Biol. Abt. D. Wilhelm Roux' Arch. Entwicklungsmech. Organ 115, 620-635 (1929).

More visible mutations found among descendants of rayed flies, including a reverse mutation of scute gene. BA 4-26607.

205
ACTION OF RADIATION ON THE BLOOD SUPPLY OF TUMOURS. J. C. Mottram. Lancet. 2, 966-968 (1928).

Radiation decreases the blood supply in the several rats and mouse tumors studied. BA 4-28155.

206
MEASUREMENTS OF THE POLARIZATION OF THE SKIN AFTER RADIATION WITH ROENTGEN AND ULTRAVIOLET RAYS. (German). Keller, Philipp, and H. Rein. Arch. Dermatol. and Syphilis 155, 67-70 (1928).

Polarization of skin (considered measure of cell membrane permeability) was lowered by x ray erythema and other inflammatory responses of skin. Polarization increases just prior to erythema and during pigmentation following it. BA 4-28119.

207
HEART LESIONS PRODUCED BY THE DEEP X-RAY. AN EXPERIMENTAL AND CLINICAL STUDY. F. W. Hartman. Adolph Bolliger, H. P. Doub, and F. Janney Smith. Bull. Johns Hopkins Hosp. 41, 36-61 (1927).

Twenty-one dogs and 5 sheep irradiated over anterior chest wall, 3 dogs irradiated through right chest wall, chronic exposures for 30 d. to 5 mo. Histological and EKG changes described. BA 4-27976.

208
HISTOLOGY OF CARCINOMA HEALING AFTER X-RAY. (German). R. Dyroff. Monatsschr. Geburtshilfe u. Gynäk. 80, 153-157 (1928). BA 4-27956.

209
X RAYS AND HEART AUTOMATICITY. (German) H. Zwaardemaker and T. P. Feenstra. Strahlentherapie 29, 527-533 (1928).

Isolated frog heart perfused with K-free Ringers solution stopped pulsating when it lost 1/3 of its K. Very soft x rays caused revival in 80 per cent of experiments. BA 4-27181.

210
PHYSIOLOGICAL ACTION OF X-RAYS. Samson Wright and H. A. Bulman. Jour. Physiol. (London) 68, append. p. IV (1929).

Lethality and clinical picture in cats and rabbits receiving whole body exposure to x-rays for various periods of time (single exposure) are described. Results are compared with those observed after chest or abdomen irradiation only and with clinical picture of chronic histamine poisoning. BA 4-27178.

211
RADIUM HEMOLYSIS (German). Iwao Yamasaki. Strahlentherapie 29, 363-366 (1928).

Ra causes hemolysis both in air and in N₂, more rapidly in N₂. Both β and γ rays can produce hemolysis. BA 4-27180.

212
INFLUENCE OF X RAYS ON BLOOD PROTEIN. (German). Paul Wichels and Alfred Behrens. Z. ges. exp. Med. 56, 387-397 (1927).

After irradiation serum albumin increases in normal persons, decreases in allergic persons. Extent of reaction determined in part by magnitude of dose and susceptibility of individual. BA 4-27176.

213
OBSERVATIONS ON THE PHYSIOLOGICAL INFLUENCE OF UNIPOLAR HIGH FREQUENCY ELECTRIC DISCHARGES IN CONNECTION WITH RADIUM IRRADIATION. Georg von Wendt. Am. J. Physiol. 90, 552-553 (1929).

The report is concerned mainly with effects of electric discharges but notes: "An immediate reaction of certain leukocytes to the radiation can be observed, with a tendency to motion towards the radiation direction. A weak Ra effect, not seen microscopically under normal circumstances, can be made very effective by high frequency discharges." BA 4-27175.

214
THE EFFECT OF RADIUM ON CANCER. (German). J. Wätjen. Virchow's Arch. Pathol. Ant. u. Physiol. 275, 156-180 (1930).

Mitosis stopped 24 hr. after irradiation of human cancer, and in 5-6 days there was marked regression of cancer tissue. BA 4-27174.

215
A STUDY OF RESISTANCE TO TUMOR RE-IMPLANTATION IN RATS CURED OF CANCER BY RADON. Kanematsu Sugiura and Stanley R. Benedict. Am. J. Roentgenol. Radium Therapy 20, 142-148 (1928).

Immunization following progressive absorption of tumors (Jobling rat carcinoma) after small doses of β radiation is more marked than that following larger doses. Absorption of cancer cells after γ ray treatment does not produce immunity. BA 4-27172.

216
INFLUENCE OF CATHODE RAYS ON LEUCOCYTES OF RABBITS. Wilhelm Stenstrom, Charles H. Watkins, Carl E. Nurnberger, and Madeleine Fallon. Proc. Soc. Exp. Biol. Med. 26, 380-383 (1929). BA 4-27170.

217
THE DELAYED LETHAL EFFECT OF RADIUM ON TISSUE CULTURES IN VITRO. F. G. Spear. Proc. Roy. Soc. (London) B 106, 44-49 (1930).

Delayed lethal effect on cultures of choroid and sclerotic of chick embryos is constant with constant product of intensity x time (mgms Ra x hrs.). BA 4-27169

218
EFFECT OF RADIUM, ULTRA-SOFT X RAYS AND ULTRAVIOLET RAYS ON INFUSORIA. (Italian). G. C. Segale and A. Vallebona. Radiol. med. (Genova) 14, 3-5 (1927).

V. microstoma, C. steini, G. scintillans all highly radioresistant. BA 4-27168.

219
EFFECT OF GRADED TREATMENTS OF X RAYS OF VARIED WAVE LENGTHS ON THE STRUCTURE AND FUNCTION OF THE OVARIES. (German). P. Schugt. Strahlentherapie 27, 603-662 (1927). BA 4-27167.

220
ON THE POINT OF ATTACK OF ROENTGEN RAYS UPON THE BIOLOGICAL OBJECT. (German). Julius Rother. Strahlentherapie 27, 197-256 (1927). BA 4-27166.

221
THE EFFECTS OF X-RAYS ON THE ADRENAL GLAND. F. T. Rogers and C. L. Martin. Am. J. Physiol. 93, 219-226 (1930).

Irradiation of 1 dog adrenal directly (other adrenal previously excised) with 3 1/2 HED caused slight fibrosis (3-12 mo. observation in all cases); with 6-8 HED caused fibrous proliferation without dysfunction; with "heavy doses" produced degenerative changes in

medulla first, then zona reticularis and zona glomerulosa, and fibrosis throughout. BA 4-27164.

222
DEMONSTRATION OF RADIATION INJURY TO THE RETICULO-ENDOTHELIAL SYSTEM BY RADIOACTIVE COLLOIDS. J. L. Cutler and E. R. Gabrieli. *Federation Proc.* 13, 32 (1954).

$\text{CrP}^{32}\text{O}_4$ was given intravenously to rats. Distribution of radioactivity among different organs was determined. There was more radioactivity in the group receiving the most P^{32} , especially in the liver. (from authors' summary).

223
THE SKIN ERYTHEMA FOR COMBINATIONS OF GAMMA AND ROENTGEN RAYS. Edith H. Quimby and George T. Pack. *Radiology* 13, 306-312 (1929).

Found it necessary to use 35% more of combined radiation than of either radiation alone to produce same effect. BA 4-27161.

224
BIOLOGICAL EFFECTS OF CATHODE RAYS. (German). G. Politzer and W. E. Pauli. *Fortschr. Gebiete Roentgenstrahlen* 40, 35-36 (1929). *Proc. 20th Congress, German Roentgen Society, Vienna, 1929.*

Changes in the epidermal cells of salamander larvae after exposure to x-rays and radium γ and β rays are described. BA 4-27160.

225
THE SPECIFIC EFFECT OF X RAYS. (German). G. Politzer. *Strahlentherapie* 27, 533-544 (1927).

Primary and secondary effects of x-rays on mitosis of epidermal cells of urodele larvae are described. BA 4-27159.

226
THE RELATION OF WAVE LENGTH TO THE DEATH RATE OF *DROSOPHILA* EGGS. Charles Packard. *J. Cancer Research* 13, 87-96 (1929). BA 4-27157.

227
THE BIOLOGICAL MEASUREMENT OF SCATTERED RADIATION. Charles Packard. *J. Cancer Research* 13, 373-382 (1929).

Used *Drosophila* egg method to determine amount of x radiation scattered backward from large area of paraffin. Scatter was 23 per cent at 60 KV, 37 per cent at 190 KV. BA 4-27156.

228
A BIOLOGICAL MEASURE OF X-RAY DOSAGE. Charles Packard. *J. Cancer Research* 11, 282-292 (1927).

Drosophila eggs killed at equal rates by x rays of equal intensity regardless of wave length. One hundred eighty r kill 50% of eggs. Suggests intensity of beam can be found by determining time required to kill 50% of eggs. BA 4-27155.

229
INFLUENCE OF TH AND U RADIATION ON THE DEVELOPMENT OF SEA URCHIN EGGS. (German). Yō. K. Okada. *Zool. Anz.* 75, 157-175 (1928).

Radiation has destructive effect, decreases viability of eggs. A variation of effects up to monstrosity of larvae observed. BA 4-27153.

230
EFFECT OF X RAYS ON PREGNANCY AND THE DEVELOPMENT OF THE FETUS. (German). J. de Nobele and H. Lams. *Strahlentherapie* 25, 702-707 (1927). BA 4-27152.

231
EFFECT OF RADIATION ON EXPERIMENTAL GUINEA PIG TUBERCULOSIS. (German). Hans Löwenstädt. *Virchow's Arch. Pathol. Anat. u. Physiol.* 266, 99-132 (1927). BA 4-27145.

232
ELECTROLYTE EXCRETION AND TISSUE CONCENTRATION AFTER ACUTE WHOLE-BODY X-IRRADIATION. V. D. Davenport, J. Z. Bowers and N. Christensen. *Am. J. Physiol.* 171, 718 (1952).

Male rats received total body exposure to 660 r. There were no differences between control and irradiated rats in electrolyte excretion. No differences attributable to irradiation were seen in water and electrolyte concentrations of plasma and muscle. At 24 hours there was a fall in potassium concentration of the small intestine and an equivalent rise in both sodium and chloride and an increase in liver potassium.

233
EFFECT OF ROENTGEN RADIATION ON THE PERMEABILITY OF THE RED BLOOD CORPUSCLES FOR ELECTROLYTES. (German). Fritz Lehmann and Paul Wels. *Pflüger's Arch. ges. Physiol.* 213, 628-641 (1926).

Cow RBC's decrease in volume when x rayed in isotonic glucose solution due to increased permeability to salts. BA 4-27141.

234
CHANGES IN THE FUNCTIONAL CONDITION OF BLOOD VESSELS AFTER ROENTGEN RADIATION. (German). N. W. Lazarew and Anna Lazarewa. *Strahlentherapie* 26, 347-362 (1927).

Irradiated forearms of healthy persons: capillaries parallel to course of erythema, and vessels in deep venous plexus of skin become first constricted and then, after a few hr, dilated for a few days. These changes recur at about 14th and 35th days. BA 4-27139.

235
CHANGES IN THE FUNCTIONAL CONDITION OF BLOOD VESSELS AFTER X RADIATION. II. EFFECT OF X RADIATION ON SUBSEQUENT PROGRESS OF EXPERIMENTAL IRRITATIONS. (German). N. W. Lazarew. *Strahlentherapie* 25, 255-279 (1927).

Irradiated one ear of dog, later both ears irritated with hot H_2O or Croton oil. When latter given within 2 wks, hyperemia greater in irradiated ear: later there is little difference in the ears. BA 4-27138.

236
THE EFFECT OF X RAYS ON THE N AND NaCl METABOLISM. (German). Anna Jugenburg. *Strahlentherapie* 25, 288-303 (1927).

Thirty six guinea pigs in metabolism cages; 33 of 36 which received 1/2 skin unit dose showed decreased fecal N, increased urinary Cl and diuresis. N was retained in organs, which contained more N than organs of controls; 1/10 skin unit dose increased N output. BA 4-27131.

237
THE FUNDAMENTAL PROCESSES OF THE BIOLOGICAL EFFECT OF RADIATION. (German). H. Holthusen. *Strahlentherapie* 25, 157-173 (1927).

Postulates that radiation acts by photochemical process. Sequence of processes of biological radiation effect given in tabular form. BA 4-27125.

238
BIOLOGICAL EFFECTS OF X RAYS AND CORPUSCULAR RAYS. (German). H. Holthusen. *Naunyn-Schmiedeberg's Arch. exp. Pathol. u. Pharmacol.* 147, 36-45 (1929). BA 4-27124.

239
EFFECT OF RADIANT ENERGY ON THE EYE. X RAYS AND RA RAYS. (German). W. Hoffmann. *Ergeb. Allgem. Pathol. and Anat.* 21, 479-510 (1927). Review article. BA 4-27123.

240
THE INFLUENCE OF HARDNESS OF DOSES IN R UNITS

AS COMPARED TO EQUIVALENT ERYTHEMA REACTIONS OF ALL QUALITIES OF RADIATION COMMONLY USED. (German). P. Hess. *Strahlentherapie* 27, 146-159 (1927).

Erythema dose-700r of 180 KV x-rays, 1/2 mm Zn and 1 mm Al. Number of r units required about same from 185 to 110 KV and 1 mm Cu to 1 mm Al filter. BA 4-27122.

241

THE COURSE OF POSTMORTEM AUTOLYSIS AND PROTEOLYSIS IN ORGAN MASH OF ROENTGEN RADIATED GUINEA PIGS. (German). Rudolf Herzger. *Biochem. Z.* 184, 341-358 (1927).

Irradiation of guinea pigs caused increased post-mortem autolysis of liver and lung; no increase when same tissues irradiated in vitro. Serum shows slight increase in proteolytic action, no increase in hemolytic action. BA 4-27121.

242

THE EFFECT OF X RAYS ON THE FORMATION OF SPECIFIC AGGLUTININS. (German). Curt Hempel. *Strahlentherapie* 26, 379-385 (1927).

Rabbits irradiated and infected with *B. coli*; 2 wks. later tested for agglutinins. Large or moderate doses of radiation depressed antibody production and animals died from infection. Weak doses had no effect. BA 4-27120.

243

BIOLOGICAL EFFECTS OF X-RAYS ON CHICK EMBRYOS. STUDIED IN EGGS AND ORGAN TRANSPLANTATIONS. (German). Konrad Heim. *Strahlentherapie* 27, 694-710 (1927).

Single doses of x rays given just before eggs laid, or to embryos at various stages of development, retarded growth. Greater injury resulted from irradiation of earlier embryos. Eye and brain defects, and asymmetrical growth were typical injuries. BA 4-27119.

244

INTRACORPOREAL RADIUM TREATMENT. (German). L. Halberstaedter. *Strahlentherapie* 26, 20-44 (1927).

Reviews historical aspect of intracorporeal Ra therapy; describes experimental studies using $\text{ThX}(\text{Ra}^{244})$ tubes in vitro and in vivo. BA 4-27118.

245

DEPENDENCE OF THE BIOLOGICAL EFFECT ON THE X RAY DOSAGE. (German). Heinrich Guthmann. *Strahlentherapie* 25, 280-287 (1927).

Studied number of colonies and number of surviving bacterial cells following exposure to various doses of x-ray. BA 4-27116.

246

THE FUNDAMENTAL LAW OF THE PHYSICAL ACTION OF X RAYS OF VARIOUS WAVE LENGTHS AND ITS RELATION TO THE BIOLOGICAL EFFECT. (German). R. Glocker. *Strahlentherapie* 26, 147-155 (1927).

The implications, for therapeutic use of radiation, of the theoretical concepts considered are stressed. BA 4-27114.

247

EFFECTS OF X RADIATION ON TISSUE CULTURES. (German). R. Gassul. *Strahlentherapie* 27, 545-560 (1927).

Spleen and erythrocytes of the frog were irradiated in vitro in (1) normal plasma, (2) plasma of x irradiated frog and (3) plasma with vital stain. Cells from normal frogs were compared with cells from irradiated frogs. BA 4-27110.

248

X RAY EFFECTS ON TISSUE CULTURES. (TRANS-PLANTATION STUDIES). (German). R. Gassul.

Arch. exp. Zellforsch. Gewebezücht. 6, 323 (1928). BA 4-27109.

249

ROENTGEN RADIATION AND UNICELLULAR ORGANISMS. (German). O. Gaertner and G. H. Klövekorn. *Strahlentherapie* 26, 211-213 (1927).

Lethal effects on *B. coli*, *Staph. pyogenes aureus* and *B. mesentericus* in 3 different media are compared.

BA 4-27108.

250

RADIATION AS A CARCINOGENIC AGENT. Austin M. Brues. *Radiation Research* 3, 272-80 (1955). BA 10-1180.

251

CHEMICAL, COLLOIDAL AND BIOLOGICAL EFFECTS OF X RAYS OF VARIED WAVE LENGTHS IN THEIR RELATION TO IONIZATION IN AIR. (German). Hugo Fricke and Sterne Morse. *Strahlentherapie* 26, 749-756 (1927). BA 4-27105.

252

RADIATION BIOLOGY OF CANCER. (German). Hans Dehler. *Strahlentherapie* 25, 239-254 (1927).

Author considers basic effect as observed in clinical studies of patients receiving radiation therapy. BA 4-27100.

253

X RAY EFFECTS ON BLOOD VESSELS. (German). O. David. *Arch. Dermatol u Syphilis.* 155, 99-101 (1928). BA 4-27099.

254

THE EFFECT OF X RAYS ON CULTURES OF GONOCOCCI. (German). Alfred Cohn and Max Levy-Dörn. *Strahlentherapie* 27, 746-750 (1927).

Gonococci are resistant to x rays. BA 4-27097.

255

INFLUENCE OF ROENTGEN RAYS UPON GASTRIC SECRETION. James T. Case and W. N. Boldyreff. *Am. J. Roentgenol.* 19, 61-70 (1928).

Dog stomach is highly resistant to x-ray damage. Large doses produce temporary decrease in amount of gastric juice and increase in amount of pepsin. Acidity does not change. BA 4-27095.

256

CHANGES OF THE WHITE BLOOD CELLS AFTER ROENTGEN RADIATION. (German). Alfred Behrens. *Strahlentherapie* 26, 602-606 (1927). BA 4-27087.

257

ACTION OF THORIUM X ON CHEMICAL COMPOSITION OF CERTAIN MEDICINAL PLANTS. (French). Q. Aversen, Jaloustre, and Maurin. *Compt. Rend.* 188, 345-347 (1929).

$\text{ThX}(\text{Ra}^{244})$ added to water applied to roots of Jimson weed, black mustard, rhubarb, Ricinus, and other plants produced marked increase in their active therapeutic principles. BA 4-26946.

258

EXPERIMENTAL ALTERATION OF NORMAL REACTION BY ANTIRRHINUM (RADIOMORPHOSIS). (German). Emmy Stein. *Biol. Zentr.* 47, 705-722 (1927).

Genetically pure Antirrhinum seeds exposed to Ra developed into 3 types of radiomorphs. BA 4-26952.

259

THEORETICAL CONSIDERATIONS ON CHEMICAL EFFECTS OF RADIATION. B. Gudden. *Strahlentherapie* 34, 544-557 (1929). BA 5-27057.

260

EFFECTS OF X RAYS AND RADIUM ON TISSUE METABOLISM. (German). Karl Adler. *Naunyn-Schmiedeberg's Arch. exp. Pathol. u Pharmakol.* 147, 56-57 (1929).

Aerobic and anaerobic metabolic processes in tissues from rats exposed to 600 r were studied by means of Warburg's technique. Production of chronic injury and

carcinoma with repeated small doses is described.
BA 4-27079.

261
PREVIOUS IRRADIATION AS PROPHYLAXIS AGAINST X RAYS. (French). P. Ancel and Suzanne Lallemand. *Compt. Rend. Soc. Biol.* 99, 1588-1590 (1928).

Fractional dosage applied in 48 experiments. Results not uniform but believed to indicate existence of "radio-phylaxis." BA 4-27082.

262
THE DETECTION AND ESTIMATION OF RADIUM AND MESOTHORIUM IN LIVING PERSONS. I. Howard H. Barker and Frederick B. Flinn. *Am. J. Roentgenol.* 21, 345-354 (1929). BA 4-27085.

263
STUDIES OF DEVELOPMENTAL ANOMALIES IN THE DESCENDANTS OF X-RAYED MICE. I. GENETIC BEHAVIOR. William S. Murray. *Papers Mich. Acad. Sci.* 10, 509-587 (1928).

The x-ray-produced foot abnormality in mice from Little and Bragg's x-rayed stock is hypostatic to true normal; not due to single gene. Foot defect linked in some way to x-ray produced eye defect. Foot abnormality not due to x-ray injury to motor neurones. BA 4-26598.

264
THE EFFECT ON CROSSING OVER AND NON-DISJUNCTION OF X-RAYING THE ANTERIOR AND POSTERIOR HALVES OF DROSOPHILA PUPAE. James W. Mavor. *Genetics* 14, 129-159 (1929).

Irradiation of whole body or posterior half caused marked sterilizing effect and increased frequency of non-disjunction. First 4 days post-exposure: marked sterilizing effect, no effect on crossing over; 509 days post-exposure: decreased crossing over; 9-12 days: gradual recovery to normal crossing over value. BA 4-26597.

265
THE PROBLEM OF SPECIES IN VIEW OF THE ORIGIN OF SOME NEW FORMS IN MICE. N. Dobrovolskaia-Zavadakia. *Biol. Rev. and Biol. Proc. Cambridge Phil. Soc.* 4, 327-351 (1929).

Irradiation of mice testes with sterilizing dose or less of x ray did not produce hereditary effects in majority of about 3000 descendants. Two mutations observed were same as naturally occurring mutations. Conclude rays merely reveal pre-existing latent conditions. BA 4-26584.

266
CHEMISTRY OF X-RAYED TISSUE EXPLANTS IN THE LIGHT OF VITAL STAINING. (German). Farkas. *Arch. exp. Zellforsch. Gewebezücht.* 6, 322 (1928). BA 4-27104.

267
DEPENDENCE OF THE X-RAY DOSAGE UPON A PRECEDING INJECTION OF IODOFORM GLYCERIN. (German). Walter Wynen. *Strahlentherapie* 25, 346-350 (1927).

V. faba equina irradiated with 100 to 200 r Idoform solution in front of test object decreases dose because of absorption; iodoform behind test object increases dose because of secondary radiation. Irradiation after injection is more effective in region between iodoform and x-ray source. BA 4-24682.

268
RADIUM SENSITIVITY OF *V. FABA*. (Italian). V. Rivera. *Riv. Biol. (Perugia)* 10, 3-33 (1928). BA 4-23915.

269
CHANGES IN THE OVARY OF THE MOUSE FOLLOWING EXPOSURE TO X-RAYS. III. IRRADIATION OF THE NON-PAROUS ADULT. F. Brambell, W. Rogers, and A. S. Parkes. *Proc. Roy. Soc. (London)* B 101, 316-328 (1927).

Adult females irradiated in dioestrous: sterility appears 5 weeks after radiation, but oestrus cycles continue. Follicles disappear as organized structures. Cortical elements persist, and produce oestrin. BA 4-27090.

270
THE ACTION OF X-RAYS ON THE ENDOCRINE GLANDS. Herman L. Wintz. *Radiology*, 9, 285-303 (1927). BA 4-27177.

271
THE INFLUENCE OF RADIOACTIVITY ON THE CHEMISTRY OF SUGAR DECOMPOSITION IN THE LIVING CELL. (German). Julius Stoklasa. *Strahlentherapie* 25, 304-310 (1927).

Postulates that α rays from earth and air increase respiration rate by increasing enzyme action and destroying protein molecules: β and γ rays stimulate glycolytic enzymes, break down easily oxidized intermediates. BA 4-27171.

272
INFLUENCE OF THORIUM X ON ERYTHROCYTE SEDIMENTATION RATE. (German). Ibrahim Valeeff. *Strahlentherapie* 26, 363-378 (1927).

Injected ThX (0.01 to 1 mgm) intramuscularly into rabbits. Larger doses caused increased erythrocyte sedimentation rate after 2 days. Leucopenia was observed at same time. BA 4-27173.

273
THE DIFFERENTIAL ACTION OF X-RAYS ON TISSUE GROWTH AND VITALITY. PART I. IRRADIATED CHORIO-ALLANTOIC MEMBRANE OF EMBRYO CHICK WITH HOMOGENEOUS X RAYS OF WAVE LENGTHS 0.3 TO 2A. Warnford Moppett. *Proc. Roy. Soc. (London)* B 105, 402-420 (1929). BA 4-27151.

274
EFFECT OF RADIATION OF THE OVARY ON THE PROGENY. (German). Heinrich Martius. *Strahlentherapie* 24, 101-124 (1926-1927).

Five mice irradiated, 4 subsequently conceived. Sex ratio was altered, (increased number of female offspring). All F_1 offspring were sterile. BA 4-27147.

275
EFFECT OF RADIATION ON CELL DIVISION. (German). J. Markovits. *Arch. exp. Zellforsch. Gewebezücht.* 6, 315-321 (1928).

Paramecia are most susceptible to Ra radiation during reorganization period when division rate is low, most resistant when it is high. BA 4-27146.

276
STUDIES ON THE DIRECT OR INDIRECT EFFECT OF X RAYS ON SURVIVING LYMPHOID TISSUES. (French). A. Lacassagne and G. Gricouloff. *Compt. rend. soc. biol.* 96, 862-864 (1927).

Compared effects when radiation applied to tissues in vitro, with effects following irradiation of whole animal (rabbit). Found effects the same in both instances. BA 4-27137.

277
BIOCHEMISTRY OF RADIATION. PART VII. EFFECT OF X RAYS ON THE COMPOSITION OF ARTIFICIAL PERITONEAL FLUID. (German). C. Kroetz. *Biochem. Z.* 191, 263-270 (1927).

Reports results of determination of Na, K, Cl, Ca, HCO_3 , H_2PO_4 and HPO_4 levels in normal and irradiated rabbits. BA 4-27135.

278
BIOCHEMISTRY OF RADIATION. PART VI. EFFECT OF X RAYS ON THE PERMEABILITY OF THE SURVIVING FROG SKIN. (German). Christian Kroetz. *Biochem. Z.* 191, 250-262 (1927). BA 4-27134.

279

THE EFFECT OF RADIOTHORIUM ON THE URINARY C:N RATIO. (German). A. Allen Goldbloom. *Biochem. Z.* 192, 272-297 (1928).

Daily oral administration of 22 to 240 Mache units/kilo of radiothorium caused rise in urinary C:N ratio, varying with dose. Single intravenous injections also increased ratio. Changes due to altered excretion of both C and N. BA 4-27115.

280

THE BIOCHEMICAL EFFECT OF X RAYS ON PROTEOLYTIC AND OTHER REACTIONS IN VIVO AND IN VITRO. (German). R. Gassul and A. Polakov. *Strahlentherapie* 30, 519-526 (1928).

Irradiated freshly extirpated cat livers showed first a decrease, then an increase in proteolysis. Control studies on irradiated pepsin confirmed observations for large doses. Role of enzymes in x irradiation discussed. In a series of irradiated rabbits, no change in cholesterol observed. BA 4-27111.

281

THE METHOD OF EVOLUTION. H. J. Muller. *Sci. Monthly* 29, 481-505 (1929).

Treating germ plasm of *Drosophila* with x rays increased frequency of mutation about 15000%. Many mutations were the same as those occurring naturally: most were recessive and detrimental. Postulates that effect of x rays on the genes is a chemical change. BA 4-26495.

282

X-RAY TREATMENT OF TUMORS PRODUCED BY B. TUMEFACIENS ON RICINUS. Vincenzo Rivera. *Boll. regia. staz. patol. vegetale (Rome)* 7, 3-19 (1928).

Doses of 3 to 4 mc for 6 days checked tumor growth and resulted in healing. Six mc for 48 hr resulted in immediate inhibition of growth of diseased and normal tissues. BA 4-17508.

283

GENETIC AND OTHER EFFECTS OF X-RAY AND RADIUM TREATMENT OF SEEDS, GROWING POINTS, AND SEX CELLS OF NICOTIANA SPECIES. T. H. Goodspeed and A. R. Olson. *Am. J. Botany* 15, 622 (1928).

BA 4-17591.

284

BLEEDING TIME AND CLOT RETRACTION UNDER NORMAL, PATHOLOGICAL AND EXPERIMENTAL CONDITIONS. (SPLENECTOMY, X RAY, CA ADMINISTRATION) (Italian). Giuseppe Salvatore Donati. *Boll. soc. med.-chir. Pavia* 42, 1131-1145 (1928).

Studied normal humans, patients receiving radiation therapy, and experimental animals. BA 4-17778.

285

CHANGES IN NORMAL EYE TISSUES AFTER X RADIATION. 1.) OBJECT OF EXPERIMENTS AND DEFINITIONS. (German). Wilhelm Rohrschneider. *Graefe's Arch. Ophthalmol.* 121, 526-536 (1929).

Rabbit eye: 188 KV x rays. 4 ma. Filtration: either 0.5 mm Cu and 3 mm Al: or 3 mm Al only. BA 4-17994.

286

OCCUPATIONAL POISONING IN MANUFACTURE OF LUMINOUS WATCH DIALS. GENERAL REVIEW OF HAZARD CAUSED BY INGESTION OF LUMINOUS PAINT, WITH SPECIAL REFERENCE TO THE NEW JERSEY CASES. Harrison S. Martland. *J. Am. Med. Assoc.* 92, 466-473 (1929). BA 4-18300.

287

RADIOSENSIBILITY OF NORMAL AND MALIGNANT TISSUES IN VITRO. (German). H. Laser and L. Halberstaedter. *Z. Krebsforsch.* 29, 411-433 (1929).

Tissues irradiated in vitro show inhibition of growth. Growth inhibition is preceded by latent period. Inhibitory effect increases with increasing dosage, and is greater in tissues with high rate of proliferation. No absolute difference between irradiated and normal tissues. (chick fibroblasts, osteoblasts, embryo iris; embryonal rat fibroblasts, mouse carcinoma, rat sarcoma.)

BA 4-1855.

288

RADIOSENSITIVENESS OF MALIGNANT TISSUE AND ITS BIOLOGICAL SIGNIFICANCE. M. J. Sittenfield. *Am. J. Roentgenol.* 19, 150-156 (1928).

Presents experimental evidence to show that mitotic activity and local metabolic rate do not completely explain radiosensitivity. Notes effect of colloidal Pb in tumor (increases) radiosensitivity. BA 4-18650.

289

EXPERIMENTAL PRODUCTION OF X-RAY CATARACT. (German). Wilhelm Rohrschneider. *Strahlentherapie* 31, 596-600 (1929).

Cataract produced in rabbits by 54 to 360% human erythemia doses or 30 to 200% human epilation dose. Time required roughly inversely proportional to dose. Lens most sensitive, then cornea, then conjunctiva.

BA 4-18643.

290

ANAPHYLAXIS IN GUINEA PIGS AFTER X-RAY IRRADIATION. (German). Ernst Herzfeld and Menna Tenn Doornkaat Koolman. *Deut. Med. Wochchr.* 54, 429 (1928).

BA 4-18782.

291

EXPERIMENTS ON THE INFLUENCE OF X RAYS ON PHAGOCYTOSIS OF COCCI IN THE R-E SYSTEM. (German). Maria Schwienhorst. *Beitr. pathol. Anat. u. allgem. Pathol.* 81, 375-390 (1928).

Liver, spleen and lung (in Rat) lose ability to phagocytize cocci after irradiation. No stimulating effect of x rays on R-E system observed. BA 4-18889.

292

THE EFFECT OF X-RADIATION ON THE SPERMATOGENESIS OF THE GUINEA PIG. J. Bronté Gatenby and Sylvia Wigoder. *Proc. Roy. Soc. (London)*, B 104, 351-370 (1929).

Giant spermatids were formed. Inability of cell to divide post-exposure attributed to break down of Golgi apparatus. Golgi bodies fail to reassemble at formation of spermatid nucleus. BA 4-20788.

293

TUMORS FROM ROENTGEN RAYS IN ROOT TIP TISSUES OF V. FABA. (Japanese with German summary). Muro-Hide Ko. *Gann* 22, 4-14 (1928).

Tumors arise 1.06 to 1.28 mm from root tip, contain abnormal cells. BA 4-21078.

294

IRRADIATION OF SPLEEN AND RETICULO-ENDOTHELIAL APPARATUS. (German). F. Schürer. *Wien. klin. Wochschr.* 41, 1581-1586 (1928).

(Rabbits) Irradiation of spleen with 2H caused complete blockade of R-E system for about 4 hr. Six hr post exposure phagocytosis of dyes is increased: R-E function normal in 48 hrs. BA 4-21255.

295

EXPERIMENTAL INVESTIGATIONS ON THE EFFECT OF X RAYS ON THE BLOOD AND THE BLOOD FORMING ORGANS IN WHITE LABORATORY RATS. (German). E. Woenckhaus. *Arch. Exp. Pathol. Pharmacol.* 131, 335-356 (1928).

Small doses of x-rays to young growing rats result in severe anemia. Protection of liver and spleen with Pb foil prevents production of anemia. BA 4-21275.

296

EXPERIMENTAL PRODUCTION OF TUMORS BY MEANS OF RADIUM. (German). Franz Daels. *Strahlentherapie* 25, 675-678 (1927).

Subcutaneously placed radium in paraffin was studied as a tumor-inducing agent in mice and rats. BA 4-21711.

297

THE GARDEN TULIP. Daniel Hall. *Proc. Roy. Inst. G. Brit.* 26, 102-105 (1929).

Various growing bulbs were subjected to x rays of 90,000 v for 1/2 hr. When these bulbs flowered all had narrow pointed petals; ovaries destroyed, anthers and pollen apparently unchanged. BA 4-17352.

298

CHROMOSOME NUMBER AND THE MUTATION RATE IN AVENA AND TRITICUM. L. J. Stadler. *Proc. Nat. Acad. Sci. U. S.* 15, 876-881 (1929).

Frequency of mutation induced by x rays was much lower in common oats and common wheat than in common barley. Differences ascribed to gene reduplication in the polyploid series. BA 4-17360.

299

HISTOLOGY OF THE EYES OF X-RAYED DROSOPHILA. Dana B. Casteel. *J. Exp. Zool.* 53, 373-386 (1929). BA 4-17368.

300

PRESENT STATUS OF PRODUCTION OF GENE VARIATIONS BY MEANS OF X RAY IRRADIATION. (German). N. W. Timofeef-Ressovsky. *J. Psychol. u. Neurol.* 39, 432-437 (1929). BA 4-17390.

301

LATER STAGES IN SPERMATOGENESIS OF LEPISMA DOMESTICA, WITH A NOTE ON ITS VACUOLAR SYSTEM. R. N. Mukerji. *Roy. Microscop. Soc.* 49, 1-8 (1929).

X-radiation effects all cytoplasmic structures except vacuoles. This is considered to be evidence that vacuoles are probably of the nature of metaplastic products. BA 5-122.

302

INHERITANCE IN NICOTIANA TABACUM. IX. MUTATIONS FOLLOWING TREATMENT WITH X RAYS AND RADIUM. T. H. Goodspeed. *Univ. Calif. (Berkeley) Publs. Botany* 11, 285-298 (1930). BA 5-144.

303

THE EFFECT OF X RAYS IN PRODUCING SOMATIC GENOVARIATIONS OF A DEFINITE LOCUS IN DIFFERENT DIRECTIONS IN D. MELANOGASTER. N. W. Timofeef-Ressovsky. *Am. Naturalist* 63, 118-124 (1929). BA 5-195.

304

STUDY OF THE FUNCTION OF THE SPLEEN IN GYN-ECOLOGY AND OBSTETRICS. 1. COMPARATIVE STUDY OF EFFECT OF SPLEEN EXTIRPATION OR EXPOSURE TO ROENTGEN RAYS UPON THE CLOTTING TIME OF BLOOD. Sh. Yunoki. *Jap. J. Obstet. Gynec.* 10, 39-41 (1927).

In rabbits coagulation time was delayed during period of several weeks after splenectomy: 2/3 E.D. x-ray exposure caused decreased clotting for several days; 1/2 E. D. sometimes prolonged sometimes shortened clotting time, 1/3 E.D. shortened clotting time. BA 3-12627.

305

CHROMOSOME STRUCTURE X, AN X-RAY EXPERIMENT. B. R. Nebel. *Genetics* 21, 605-14 (1936).

306

LEUKOPENIA FROM BENZOL AND FROM X-RAYS IN ANIMALS WITHOUT SPLEEN. (Spanish). José di Leo Lira. *Rev. soc. Argentina Biol.* 3, 737-741 (1927). BA 3-13213.

307

BETTER TOLERANCE TO POLONIUM INJECTED LOCALLY IN AN "INSOLUBLE" STATE. (French). A. Lacassagne and J. Lattès. *Compt. rend. soc. biol.* 97, 697-698 (1927).

Po fixed on certain metals was better tolerated locally, but eliminated more slowly. BA 3-13197.

308

BIOLOGICAL ACTION OF THORIUM. (Italian). Oscar M. Bernardi. *Boll. soc. biol. sper.* 1, 246-247 (1926). BA 3-13048.

309

MAINTENANCE OF LEUKOCYTE LEVEL AND CHANGES DURING IRRADIATION. Raphael Isaacs and Arthur C. Danielian. *Am. J. Med. Sci.* 174, 70-87 (1927).

Studied diapedesis of WBC through mucous membranes of mouth. After x-ray, elimination of WBC in this way is increased. BA 3-12477.

310

THE PHYSIOLOGICAL EFFECTS OF ROENTGEN RADIATION UPON NORMAL BODY TISSUES. Stafford L. Warren. *Physiol. Rev.* 8, 92-129 (1928).

Review article. BA 3-11912.

311

THE ACTION OF RA ON TRANSPLANTABLE TUMORS. (Italian). Guido Tizzoni and Giovauni de Angelis. *Ann. d'igiene* 37, 274-282 (1927).

Spindle cell sarcoma, endothelioma, and adenocarcinoma resist Ra effects in ratio of 1:3:5 in vitro. Relative resistance to low temperatures is in approximately the same ratio. Tumors from more differentiated cells are more resistant in vitro. BA 3-1191.

312

THE USE OF LIPIODOL TO PRODUCE SECONDARY RADIATION IN THE X RAY TREATMENT OF MALIGNANT TUMORS. (German). Fujiwo Shionoya and Hojo Yamakawa. *Proc. Imp. Acad. (Tokyo)* 3, 622-623 (1927). BA 3-11910.

313

THE EFFECT OF RADIUM EMANATION ON THE BLOOD-VESSELS. (German). E. Polak. *Acta Radiol.* 9, 169-205 (1928).

Discusses effects of ionizing radiation on the autonomic nervous system. The second part presents experiments on frogs, demonstrating vasoconstrictor action of Ra emanation, compares it with ergotamine and adrenaline. BA 3-11908.

314

A COMPARISON OF THE QUANTITATIVE BIOLOGICAL EFFECTS OF GAMMA AND X RAYS. Charles Packard. *J. Cancer Research* 12, 60-72 (1928).

LD₅₀ of Drosophila eggs is the same following exposure to 180 r units of x rays or 5300 mc min. of Ra gamma rays. BA 3-11905.

315

ACTION OF RA EMANATION ON GLYCEMIA IN WHITE MICE. (French). H. Labbe and A. Kortzareff. *Compt. rend. (Paris)* 184, 474-476 (1927).

Subcutaneous injection of solutions containing 1.05 to 1.59 mc of Ra into mice produced sharp hypoglycemia, with lowest blood sugar levels at 3 to 5 hr post-injection. Similar reactions produced in rabbits. BA 3-11903.

316

STUDIES ON THE BIOLOGICAL EFFECTS OF ROENTGEN RAYS ON MICE. I. PRIMARY GENERAL EFFECTS. Joseph M. Murray. *Mich. Acad. Sci.* 8, 401-9 (1927).

Five ma x rays at 135 KVP, 30 cm distance, for 1 to 120 sec., 5 exposures, alternate days, one day old brown mice; 45 to 120 sec. exposures result in stunted growth,

white hair, sterility (females less than 45 sec., males 45 sec.). Longer exposures result in disturbance of nervous system and death. BA 3-11904.

317
EFFECTS OF HIGH-VOLTAGE CATHODE RAYS ON THE SKIN OF THE RAT. Victor C. Jacobson and Kenneth C. Waddell. Arch. Pathol. and Lab. Med. 5, 195-222 (1928).

Intensity of reaction varied with voltage and duration of exposure; epithelial repair was slow. Believes observations support assumption that x ray effects are due to cathode rays which they produce in tissues. BA 3-11901.

318
THE EFFECT OF PENETRATING RADIUM RAYS ON PSEUDOGLOBULIN. (German). A. Fernau. Biochem. Z. 189, 172-174 (1927).

Electrodialyzed, salt free pseudoglobulin was exposed to Ra β rays. Increased turbidity followed irradiation, and turbidity increased with addition of salt. BA 3-11900.

319
STUDIES ON THE ARNETH COUNT. VIII. THE DEFLECTION OF THE COUNT BY X RAYS. Walter P. Kennedy and Cecil A. Grover. Quart. J. Exp. Physiol. 18, 79-87 (1927). BA 3-12492.

320
THE ROLE OF TIME AND INTENSITY IN THE EFFECT OF X RAY TREATMENTS ON THE GROWTH OF SEEDLINGS. (French). Suzanne Ancel. Compt. rend. (Paris) 185, 791-792 (1927).

Lentil seedlings were exposed to radiation from Coolidge tube. Intensity varied, but product of time x intensity was kept constant. Protraction of dose decreased deleterious effect on growth. BA 3-11651.

321
WHEAT SMUT AND X RAYS. (Italian). V. Rivera. Boll. regia staz. patol. vegetable 6, 237-241 (1926). BA 3-11363.

322
LOCALIZATION OF THE ROENTGEN TUMOR DEVELOPED IN THE ROOT TIP TISSUE OF V. FABIA. (German). Hideo Komuro. Gann 22, 41-62, 1-14 (1928). BA 3-9610.

323
THE EFFECT OF β RADIATION ON ROUS CHICKEN TUMOR. J. C. Mottram. Lancet 2, 1266 (1926).

Rous chicken tumors can be destroyed by β radiation in doses comparable to x ray doses destroying mouse and rat tumors. Tumor destroying dose smaller in vivo than in vitro. Successfully treated chickens show resistance to subsequent infection. BA 3-8302.

324
THE GROWTH OF TUMOR IN TISSUES EXPOSED TO X RAYS AND RADIUM. S. Russ and G. M. Scott. Brit. J. Radiol. 32, 289-296 (1927).

Tumor grew less readily in irradiated tissues whether they were irradiated before or after tumor transplantation. (Rats). BA 3-7971.

325
EXPERIMENTAL PRODUCTION OF ACUTE AND CHRONIC ARTHRITIS AND ARTICULAR NEOPLASM BY RADIUM. A. Fisher and G. Timbrell. Brit. Med. J. 1, 319-321 (1927).

0.15 to 0.04 mgm Ra in glass tubes introduced into knee joint of rabbits produced hypertrophy of synovial membrane, articular cartilage; 2 to 0.2 mgm in Pt tubes produced suppurative arthritis, subacute arthritis, localized abscess, osteosarcoma. BA 3-7864.

326
RADIOBIOLOGICAL STUDY OF EPITHELIOMATAS OF THE UTERINE CERVIX WITH TELECURIETHERAPIE. CURVES OF PYKNOSIS OF NORMAL MITOSES AND

ATYPICAL MITOSES. A. P. Dustin. Arch. Intern. med. exp. 3, 383-449 (1927).

Description of cytological changes in irradiated tumors: after 3 days 3 phenomena occur; rapid decline in mitosis, increase in pyknotic nuclei, increase of atypical mitoses. Recovery from the latter may occur. BA 3-7559.

327
ON THE OCCURRENCE OF THE OESTRUS CYCLE AFTER X RAY STERILIZATION. III. THE PERIODICITY OF OESTRUS AFTER STERILIZATION OF THE ADULT. A. S. Parkes. Proc. Roy. Soc. (London) B. 101, 421-449 (1927).

Author sterilized adult mice with an x ray dose sufficient to destroy follicles. This did not significantly affect periodicity of oestrus. BA 3-6670.

328
INTERRELATION OF PITUITARY AND GENITAL ORGANS. (German). L. D. Podljaschuk. Strahlentherapie 24, 439-458 (1927).

Author irradiated heads of young dogs and rabbits and studied changes in hypophysis and genital organs. BA 3-6467.

329
TRANSFORMATION OF VITAMIN B INTO AUTOMATINE BY ACTIVATION UNDER INFLUENCE OF RADIUM. (French). H. Zwaardemaker. Compt. rend. soc. biol. 98, 183-184 (1928).

Irradiation confers automatine characteristics to vitamin B. Author feels that administration of irradiated vitamin B is responsible for automaticity of certain organs. BA 3-6175.

330
RAPID PROOF OF HISTOLOGICAL CHANGES AFTER X-RAYING THE SKIN. (German). Oskar Hilsnitz. Strahlentherapie 22, 525-537 (1926). BA 3-13508.

331
RADIOACTIVITY AND MUSCULAR CONTRACTION. (Italian). Oscar M. Bernardi. Boll. soc. biol. spec. 1, 335-336 (1926). BA 3-6880.

332
EXPERIMENTAL STUDIES ON THE EFFECT OF X RAY IRRADIATION UPON ANIMALS. I. ON THE DEATH OF RABBITS DUE TO THE APPLICATION OF X RAYS. (Japanese English summary). Tetsuji Kimura, Retsu Nichii, and Kiyohiko Fukahori. Sei-i-kwai Med. J. 47, 1-13 (1928). BA 3-13532.

333
CHANGES IN CHOLESTEROL METABOLISM IN CARCINOMA PATIENTS AFTER ROENTGEN TREATMENT. (German). E. Jacobs and Ryunosuke Motojima. Z. Krebsforsch. 26, 57-71 (1927).

Blood cholesterol after x-ray increases in 63% of patients with no carcinoma or sarcoma; no increase in patients representing surgical cures, but a decrease in 95% of these. BA 3-13785.

334
CLINICAL INVESTIGATIONS INTO THE BASAL METABOLISM IN DISEASES OF THE THYROID GLAND. Eggert Moller. Acta Med. Scand. Suppl. 21 (1927).

B.M.R. decreased during x ray treatment of hyperthyroidism. BA 3-13812.

335
EFFECT OF ROENTGEN RAY UPON ISOHEMOAGGLUTINATION. Tokuji Muramatsu. Japan Med. World 7, 287-292 (1927).

No change due to irradiation was observed in blood groups of 30 patients studied before and after therapy. BA 3-14164.

336

INFLUENCE OF RADIUM ON THE METABOLISM OF BACTERIA WHICH PLAY A PART IN THE NITROGEN CYCLE OF NATURE. (German). J. Stoklasa and J. Kricka. *Centr. Bakteriolog. Parasiten K. II Abt.* 74, 161-183 (1928).

In general, influence of rays considered to be favorable to processes studied. BA 3-14698.

337

SOME BIOLOGICAL MODIFICATIONS PRODUCED BY THE ACTION OF RADIUM ON *A. FUMIGATUS*. (French). A. Sartory, R. Sartory, and J. Meyer. *Bull. sci. pharmacol.* 34, 273-277 (1927).

Pathogenicity of the organism for pigeons decreased after irradiation. BA 3-14511.

338

VARIATIONS IN ALKALOID CONTENT OF POMEGRANATE UNDER INFLUENCE OF CERTAIN CHEMICALS. (French). E. Maurin. *Bull. soc. botan. France* 75, 280-282 (1928).

Thorium X (Ra^{224}) added to soil low in Ca, high in silica at base of trees gave large increase of alkaloid in the root but only slight increase in stem. BA 3-15257.

339

THE ROLE OF THE SPLEEN IN BLOOD FORMATION. (German). St. Weiss and E. Kolta. *Z. ges. exp. Med.* 57, 157-163 (1927).

Dogs' spleens were x-rayed until peripheral blood WBC decreased and RBC increased. Spleens were then removed, spleen extract prepared and injected into rabbits. Extracts did not change rabbit WBC counts, but increased RBC counts. BA 3-15750.

340

X-RAYS AND P/W CONSTANT. (French). N. Waterman. *Arch. neerl. Sci.* III, C 13, 587-588 (1928).

P/W constant $\frac{P \text{ (polarization of cell surface)}}{W \text{ (resistance in Ohms)}}$.

is a measure of cell permeability. It varies with exposure of cell to x rays, is low in carcinoma cells, but brought to normal after irradiation. BA 3-11711.

341

EFFECT OF RADIUM EMANATION ON MICRO-ORGANISMS. (French). Herman von Schroetter. *Compt. rend. soc. biol.* 97, 462 (1927).

Describes species differences in sensitivity to Ra emanations. BA 3-20733.

342

EXCITATION OF BACTERICIDAL FLUORESCENCE BY MEANS OF X-RAYS. P. R. Peacock and L. E. H. Whitby. *Brit. J. Exp. Pathol.* 8, 43-49 (1927).

Observations on guinea pigs and rabbits indicating that calcium phospho-tungstate emits bactericidal wave lengths when excited by x-rays and can be used subcutaneously for bactericidal purposes. BA 3-20705.

343

CULTIVATION OF *TRICHOMONAS BUCCALIS*, A PROTOZOAN OF THE HUMAN MOUTH. H. Corwin Hinshaw. *Univ. Calif. (Berkeley) Publs. Zool.* 31, 31-49 (1927).

T. buccalis may multiply for 72 hr in contact with a capsule containing 50 mg. of Ra. BA 3-20250.

344

HYPERPLASIA OF LYMPHOID TISSUE AND LYMPHOCTOSIS. Caroline Whitney. *Medicine* 7, 1-29 (1928).

Author mentions lymphocytosis secondary to x-irradiation when properly applied. BA 3-19577.

345

CHANGES IN THE FUNCTIONAL CONDITION OF BLOOD VESSELS AFTER X RADIATION. (German). N. W. Lazarew and Amo Lazarewa. *Strahlentherapie* 25, 458-469 (1927).

Observations on isolated, perfused dog ear, and on tongue and web of frog reveal no change in tonus of capillaries during radiation. BA 3-19083.

346

IRON STORAGE AND METABOLISM. (German). L. Schwarz. *Verhandl. deut. pathol. Ges.* 23, 118-122 (1928).

Following x ray exposure, oat-fed mice develop spleen siderosis. Following x-ray exposure, bread and milk fed mice do not develop spleen siderosis. (Food Fe stored only in liver cells, Fe of blood destruction stored in spleen and Kupffer cells). BA 3-18394.

347

THE ENZYMES OF THE SKIN. VIII. LACTIC ACID FORMATION IN THE SKIN AND THE EFFECT THEREON OF DIFFERENT SORTS OF RADIATIONS. (German). J. Wohlgemuth and Toshisuke Ikebata. *Biochem. Z.* 186, 43-53 (1927).

Studied lactic acid production when various sugars were added to skin specimens: compared human cadaver skin and fresh skin from humans and animals. Activity of skin enzymes was decreased by sunlight, artificial light and particularly by x rays. BA 3-18333.

348

A PERMEABILITY TEST WITH RADIOACTIVE INDICATORS. Karl Lark-Horovitz. *Nature* 123, 277 (1929).

Used radioactive indicators to test permeability of single cells of *Valonia macrophysa*: found Pb ions do not enter sap of living cell, but enter sap of dead cells readily. Ra emanation distributed evenly between sap of living cell and surrounding sea water in 1 hr. BA 3-17875.

349

BIOLOGY OF URANIUM. (German). Julius Stoklasa and Jos. Penkava et al. *Biochem. Z.* 194, 15-77 (1928).

Describes action of U on metabolism of bacteria, seed germination, transpiration, and development of plants in culture media and vegetation vessels: also physiological effects of various types of radiation from U on germination and development of plants. BA 3-17859.

350

EXPERIMENTAL OBSERVATIONS OF THE BIOLOGICAL EFFECTS OF DEEPLY PENETRATING ROENTGEN RAYS UPON PLANTS. Subodh Mitra. *Calcutta Med. J.* 23, 73-77 (1928).

Sprouting cosmos and pansies exposed to x rays showed marked retardation of growth including diminution in size of flowers. BA 3-17847.

351

THE EFFECT OF FRACTIONAL DOSES OF X RAYS ON GERMINATING SEEDS. (French). Suzanne Ancel. *Compt. rend. soc. biol.* 98, 223-224 (1928).

Divided dosage caused less injury to lentil seedlings. BA 3-17829.

352

QUARTERLY REPORT OF BIOLOGICAL AND MEDICAL RESEARCH DIVISION. (1956). 102 p. Argonne National Lab., Lemont, Ill. Contract W-31-109-eng-38. ANL-5576.

Includes reports on: effects of irradiation on immunity to parasitic infections (mice) and hemolysin production; effect of age, parity and litter size on lethal effectiveness of whole body x irradiation in 4 inbred mouse strains; survival of mice given large doses, single and repeated of γ rays; dose-exposure time influence on radiation response (chick); other studies in dogs and amoebae. NSA 10-6460.

353

THE PRODUCTION OF PERITHECIA IN *A. FUMIGATUS*. (French). A. Sartory, R. Sartory, and J. Meyer. *Bull. sci. pharmacol.* 34, 427-429 (1927).

Sexually induced by Ra exposure results in limited acid zone of growth due to liberation of an electrolyte

into medium. It is related to production of enzymes and reflects change (decrease) in cell permeability. BA 3-17911.

354
ELECTROMAGNETIC HYBRIDS OF ZEA MAYS. (Italian). A. Pirovano. Ann. botan. (Rome). 17, 347-356 (1928). BA 3-17379.

355
THE REGIONALLY DIFFERENTIAL EFFECT OF X RAYS ON CROSSING OVER IN AUTOSOMES OF DROSOPHILA. H. J. Muller. Genetics 10, 470-507 (1925). BA 3-17327.

356
EFFECT OF X-RAYS ON THE RESPIRATION OF ROOT-TIPS OF V. FABA. (German). Egon Bersa. Akad. Wiss. Wien Math-naturw. Kl. Sitzber. Abt. I. 136, 403-418 (1927).

Respiration is depressed by irradiation. Influence of rays is independent of normal intensity of respiration. RQ is unaltered by irradiation. (Studies utilized Haldane gas analysis method). BA 4-590.

357
EFFECT OF X-RAYS ON SEEDS. Ruth E. P. Patten and Sylvia B. Wigoder. Nature 123, 606 (1929).

Broad bean, barley, and mustard seeds were irradiated with 3 HED (120 KV). All seedlings had growth stunted. Roots of broad bean became bulbous at tip and failed to develop laterals. BA 4-624.

358
EXPERIMENTS ON THE EFFECT OF X-RADIATION ON GROWING SEEDLINGS. M. C. Reinhard, and K. L. Tucker. J. Cancer Research 12, 26-29 (1928).

Radiosensitivity depends upon species, age of plant, time of day when irradiated, and part radiated. Four periods of max. sensitivity in 24 hr described for V. faba. BA 4-628.

359
ACTION OF X-RAYS AND DRUGS ON YEAST. III. ACTION OF X-RAYS ON YEAST. (German). Heinrich Zeller. Strahlentherapie 23, 336-353 (1926). BA 4-632.

360
OBSERVATIONS ON THE COMBINED ACTION OF COLLOIDAL LEAD AND RADIATION ON TUMORS. J. C. Mottram. Brit. Med. J. 1, 132-133 (1928).

Studied mice inoculated with T/63 tumor. Best results were obtained when Pb injected first, followed in 3-4 days by radiation (RaBr₂ applicator, filtered through 0.15 mm. Ag for 15 min. applied for 5 consecutive days). This treatment caused tumor to disappear. BA 4-1220.

361
COMPARATIVE STUDIES OF ACCELERATED AMPHIBIAN METAMORPHOSIS. E. A. Spaul. Brit. J. Exp. Biol. 5, 212-231 (1928).

Exposure of tadpoles to x rays increased the susceptibility to factors accelerating metamorphosis. X-ray effect increased with age. BA 4-2429.

362
A MORPHOLOGICAL ANALYSIS OF THE FOOT ABNORMALITIES OCCURRING IN DESCENDANTS OF X-RAYED MICE. Achsa M. Bean. Am. J. Anat. 43, 221-246 (1929).

A series of at least 17 types of foot abnormalities observed, varying in severity. Reduction of tarsal or carpal bones by fusion found in practically all abnormal feet. BA 4-2437.

363
THE EFFECT OF X-RAYS ON NUCLEAR DIVISION IN THE ROOT TIPS OF ZEA MAYS. (German). Egon Bersa. Akad. Wiss. Wien. Math-naturw. Kl., Sitzber. Abt. I. 136, 383-402 (1927).

Root tips exposed to 4.8 or 16 H units showed depression of nuclear divisions with return to normal rate

after varying periods depending upon dose (greater dose, longer effect.) Abnormal mitoses (observed after 36 hr) considered a secondary effect. BA 4-3806.

364
TUBERIZATION OF POTATOES INCREASED BY X-RAYS. Edna Louise Johnson. Science 68, 231 (1928). BA 4-3816.

365
COMPARATIVE STUDIES OF CYTOLOGICAL CHANGES IN THE ROOT TIPS OF PLANTS TREATED WITH COAL TAR OR X RAYS. (German). Hideo Komuro. Proc. Imp. Acad. (Tokyo) 3, 445-448 (1927).

Roots of V. faba were exposed to coal tar 30 min. to 5 days; roots of Pisum sativum exposed to coal tar 15 min. Results: marked changes (degenerative) in nucleus; often disintegration. X rays had similar but less harmful effect. In both cases: some type of dissolution. BA 4-3817.

366
HOURLY VARIATIONS IN EFFECT OF EQUAL ROENTGEN RAY DOSES ON GROWTH OF V. FABA SEEDLINGS. M. C. Reinhard and K. L. Tucker. Am. J. Roentgenol. 19, 71-73 (1928).

Greatest radiosensitivity at 10:00 AM, 11:00 AM, 1:00 PM and 5:00 PM. Seedlings most sensitive after appearance of root tip, and prior to appearance of side rootlets. BA 4-3826.

367
EFFECT OF RA ON MORPHOLOGY AND BIOLOGY OF ADULT VEGETABLE CELLS. (French). A. Sartory, R. Sartory, and J. Meyer. Bull. Sci. Pharmacol. 34, 553-564 (1927). BA 4-3827.

368
EFFECT OF X RAYS ON TERMITES. D. L. Crawford. Proc. Hawaiian Ent. Soc. 7, 36 (1927).

Kaloterms immigrants exposed to various strength x rays (max. 30 kv) for 5 to 30 min were apparently unaffected. BA 4-3927.

369
RADIUM AND ITS ACTION. W. E. Dixon. Brit. Med. J. 1, 238-240 (1929).

Describes lethal effects of radium radiation in guinea pig, rabbit and mouse, and symptoms and histological changes in animals subjected to lethal doses. Also includes descriptions of: effects on embryos, bacteria, variable tissue radiosensitivity; effects of ingested radium. BA 4-3929.

370
EXPERIMENTS ON THE ROLE OF LYMPHOID TISSUE IN THE RESISTANCE TO EXPERIMENTAL TUBERCULOSIS IN MICE. J. B. Murphy and A. W. M. Ellis. J. Exp. Med. 20, 397 (1914).

Repeated small doses of x ray destroy most of the mouse's lymphoid tissues without causing apparent injury to other tissues or harming general health. Destruction of lymphoid tissue increases the mouse's susceptibility to tuberculosis.

371
EFFECT OF EMANATION ON STRIATED MUSCLE. (French). Isidore Gunzburg. Arch. intern. physiol. 26, 21-32 (1926).

Removal of K causes altered contractility. K may be replaced by other radioactive substances and by emanation. BA 4-3932.

372
THE EFFECT OF ROENTGEN-RAYS ON THE FUNCTION OF THE STOMACH. K. Ihima. Jap. J. Obstet. Gynec. 11, 53-58 (1928).

Feels effect of radiation on stomach function is related to effect of radiation on the individual's blood

pressure. Secretion decreased or unchanged when B. P. rises: secretion accelerated in persons whose B. P. decreases. BA 4-3933.

373
EFFECTS OF ROENTGEN RAYS UPON THE FETUS. I. INVESTIGATIONS OF THE INFLUENCE AND EFFECT OF ROENTGEN-RAYS UPON THE MOUSE FETUS. SH. Kosaka. Jap. J. Obstet. Gynec. 10, 34-39 (1927). BA 4-3934.

374
RADIUM EMANATION AND GOITRE. R. R. D. Milligan and N. M. Rogers. Trans. Proc. New Zealand Inst. 59, 389-394 (1928).

Continuous addition of Rn to water in which trout were reared did not produce goitre in 6 months. Rn given intravenously in mammals is excreted rapidly by lungs, only minute quantity can traverse arterial (including thyroid) system. BA 4-3936.

375
TOLERANCE TO X-RAYS OF ANIMALS FED A LIPOGENIC DIET. (French). A. Sartory, R. Sartory, and J. Meyer. Bull. Acad. med. (Paris) 100, 856-858 (1928). BA 4-3937.

376
INFLUENCE OF X-RAYING ON THE FUNCTION OF THE RETICULO-ENDOTHELIAL SYSTEM. (German). H. Zacherl. Wien. klin. Wochschr. 41, 1613 (1928). Preliminary report. BA 4-3939.

377
BEHAVIOR OF BLOOD CHOLESTEROL AFTER IRRADIATION OF THE LIVER. (Italian). G. Margreth. Boll. soc. it. biol. sper. 2, 507-508 (1927).

X irradiation of liver did not change blood cholesterol level. BA 4-4031.

378
THE EFFECT OF X-RAYS ON THE ADRENAL GLANDS. N. F. Fisher, E. Larson, and A. Bachem. Endocrinology 12, 335-341 (1928).

Four human erythema dose (H.E.D.) of x ray to left adrenal (dogs); no adrenal deficiency when sacrificed 3, 6, and 9 weeks later. Five H.E.D. 5 weeks after rt. adrenalectomy caused death 6-1/2 months later with signs of adrenal insufficiency. All x-rayed adrenals showed some cortical destruction. No change in blood cholesterol. BA 4-4246.

379
CHANGES IN NORMAL EYE TISSUES AFTER RADIATION. II. GENERAL EFFECT OF X-RAYS AND CHANGES IN CORNEA, CONJUNCTIVE AND UVEA AFTER RADIATION. (German). Wilhelm Rohrschneider. Graefe's Arch. Ophthalmol. 212, 537-559 (1929).

Smallest dose producing changes in corneal epithelium (rabbit): 1340 r (0.5 mm Cu. 3 mm Al): 980 r (3 mm Al). No uveal injury. BA 4-4409.

380
SENSITIVITY TO X-RAYS OF GERMINATED SEEDS AT DIFFERENT STAGES OF DEVELOPMENT. (French). Suzanne Ancel. Compt. rend. soc. biol. 96, 986-989 (1927).

Lentil seedlings were irradiated with 200-1000 r at different stages of development. Sensitivity to x rays increases progressively from appearance of germ until root length is 10 mm. thereafter decreases. Used growth as criterion of effect. BA 4-11046.

381
ON THE BEHAVIOR OF CHLORINE IN ERYTHROCYTES AFTER ROENTGEN RADIATION. (German). Ludwig Koch. Strahlentherapie 25, 470-475 (1927).

Determined Cl in blood and plasma (method of Austin and van Slyke), and blood cell volume after

exposure to 600 r. RBC volume increased in all cases; Cl entered RBC except in patients with vagotonia. BA 4-11170.

382
REACTIONS OF HUMAN SKIN TO SINGLE DOSES OF BETA RAYS. IN: BIOLOGICAL EFFECTS OF EXTERNAL BETA RADIATION. Ed. by Raymond E. Zirkle, New York, McGraw-Hill Book Co., Inc. 1951. J. E. Wirth and J. R. Raper. National Nuclear Energy Series IV. 22E, Chapter 12, p. 193-99.

Threshold reaction (mild tanning) can be produced in 80 per cent of those exposed to the beta radiation from a 1 inch P³² contact disk by a dose of 200 rep and in only 60 per cent of those exposed to 170 rep. Threshold erythema may be produced under similar circumstances in 80 per cent of those exposed to 813 rep and in 60 per cent of those exposed to 635 rep.

383
HISTOLOGICAL CHANGES IN RADIUM IRRADIATED CARCINOMA. (German). August Matras. Wien. klin. Wochschr. 42, 293 (1929). BA 4-11932.

384
GENETICAL AND CYTOLOGICAL PROOF OF TRANSLOCATION INVOLVING THE THIRD AND FOURTH CHROMOSOMES OF *D. MELANOGASTER*. Theodore Dobzhansky. Biol. Zentr. 49, 408-419 (1929).

Five cases of translocation between the 3rd and 4th chromosomes were observed in progeny of flies treated by x rays. BA 4-14036.

385
DURATION OF THE EFFECTS OF X-RAYS ON MALE GERM CELLS IN *D. MELANOGASTER*. Frank Blair Hanson and Florence Heys. Am. Naturalist 63, 511-516 (1929).

When irradiated (x ray or Ra) males are continuously mated, sperm which are mature at time of treatment function for approximately 2 weeks, after which mutation rate drops sharply due to fertilization by sperm maturing after treatment. (Muller's CLB method for detecting lethals used). BA 4-14040.

386
THE DIFFERENCE BETWEEN ROENTGEN TUMORS AND THE LATERAL ROOTS INDUCED IN ROOTS DEVELOPED FROM IRRADIATED *V. FABA* SEEDS. (German). Hideo Komuro. Proc. Imp. Acad. (Tokyo) 4, 404-406 (1928). BA 4-14238.

387
ATTEMPT AT ENERGY INTERPRETATION OF THE ACTION OF K RAYS OF AL ON MICROBES. (French). F. Holweck. Compt. rend. (Paris) 186, 1318-1319 (1928).

300 pairs of ions required per 1 *B. pyocyaneus* in order to modify development: 6,000 ions lethal for most of the organisms but 45,000 ions necessary for complete sterilization (figures are means). BA 4-14332.

388
ACTION OF K RAYS OF AL ON VARIOUS MICROBES. (French). A. Lacassagne. Compt. rend. Acad. Sci. (Paris) 186, 1316-1317 (1928).

Determined relative sensitivity of *B. pyocyaneus*, *B. prodigiosus*, *Staphylococcus*, and *Enterococcus*. Relative sensitivity to β rays of Rn similar to that to K rays of Al. BA 4-14333.

389
INFLUENCE OF ROENTGEN RADIATION ON THE CHOLESTERIN CONTENT OF THE BLOOD IN HEALTHY AND DISEASED HUMAN BODIES. (German). M. Levy-Dorn and F. Burgheim. Strahlentherapie 22, 538-549 (1926). BA 4-14540.

390
HEREDITARY ABNORMALITIES OF LIMBS. THEIR

ORIGIN AND TRANSMISSION. H. J. Bagg. *Am. J. Anat.* **43**, 167-219 (1929).

Studies on descendents of x irradiated mice.

391

INTERRELATIONSHIPS BETWEEN EFFECTS OF HEPARIN, PROTAMINE, CITRATE AND TOTAL BODY X-IRRADIATION ON PLASMA AND SERUM BACTERICIDAL ACTION. D. M. Donaldson and S. Marcus. *Federation Proc.* **14**, 461 (1955).

A decrease in bactericidal action followed the intravenous injection of 500 units of heparin into normal rabbits. Attempts to reverse or halt the development of the post-irradiation suppression of serum bactericidal function by single or multiple injections of protamine sulfate were unsuccessful. Heparin added to normal blood *in vitro* before coagulation decreased the bactericidal action. (from authors' summary).

392

LOCAL IMMUNIZATION AGAINST CANCER BY IRRADIATION. (German). Boris Sokoloff. *Z. Krebsforsch.* **28**, 256-265 (1929). BA 4-15158.

393

EFFECT OF RA ON JENSEN RAT SARCOMA. (Italian). Guido Tizzoni and Giovanni de Angelis. *Mem. reale accad. naz. Lincei, Classe sci. fix. mat. e nat.* **2**, 249-263 (1927). BA 4-15483.

394

SIGNIFICANCE OF THE SOFT ROENTGEN RAYS FOR IRRADIATION TESTS WITH BACTERIA. (German). Otto Gaertner. *Strahlentherapie* **22**, 327-332 (1926). BA 4-15628.

395

A PHENOMENON OF PSEUDO-EXCITATION PRODUCED BY X-RAYS ON DORMANT COTYLEDONARY BUDS OF THE LENTIL. (French). Suzanne Ancel. *Bull. soc. bot. France* **72**, 1084-1088 (1926).

Exposed 16 seedlings in H₂O culture to x rays, the roots shielded. The 10th day after exposure, stem length was 46 mm; axillary buds had produced branches 16 mm long. Latter effect not stimulation, but result of damage to main stem terminal bud. BA 4-7374.

396

ENZYME INCREASE IN SERUM AFTER LIGHT AND ROENTGEN RADIATION, AN INDEX FOR CELL DECOMPOSITION PROCESSES. (German). Albrecht Mertz. *Strahlentherapie* **22**, 301-318 (1926).

Observations on patients receiving radiation therapy.

BA 4-7447.

397

EFFECT OF ROENTGEN RADIATION OF SYMPATHETIC NERVES ON SWEAT SECRETIONS. (Bohemian with French resumé). Olga Valentová. *Česka Dermátol.* **10**, 43-49 (1929).

Following radiation, sweat may be increased in amounts, unchanged or diminished. Secretory response corresponds to distribution of specific nerves irradiated (i.e. radiation of neck causes changes in axillae and palms; of lumbar regions, changes in soles of feet.) BA 4-7847.

398

PROTECTIVE INOCULATION AGAINST TUBERCULOSIS WITH LIVING BACILLI WEAKENED BY RADIATION. (German). Vincenzo Bisceglie. *Z. Immunitätsforsch.* **49**, 272-283 (1926).

X-ray depressed virulence of tubercle bacilli as shown by both inoculation and dye tests, x-ray effect being proportional to intensity. Guinea pigs vaccinated with irradiated bacilli and subsequently with virulent organisms did not develop TB. Controls died in 2-1/2 month. BA 4-8461.

399

EFFECT OF X-RAYS ON SPECIFIC IMMUNE BODIES.

(German). Alexander Luszitig. *Centralbl. Bakt. I. Abt. Orig.* **105**, 142-151 (1927). BA 4-8596.

400

EFFECT OF ROENTGEN RAYS ON IN VITRO CULTURES OF CHICKEN FIBROBLASTS AND PEYTON-ROUS CHICKEN SARCOMA. (German). L. Santesson. *Uppsala Läkarefören. Förh.* **34**, 591-602 (1928).

There was always a latent period between exposure and appearance of growth retardation. With exposure of 4-5 HED all cultures degenerated 7 days post exposure. Sarcoma more radio-resistant than fibroblasts. BA 4-8766.

401

SENSITIZATION BY SECONDARY RAYS FROM METALLIC SURFACES. RESEARCHES ON PHOTOGRAPHIC EMULSIONS AND SURFACE BACTERIAL CULTURES. (German). H. Holthusen, A. Schuback, and H. Sielmann. *Strahlentherapie* **24**, 577-606 (1926-1927). BA 4-8972.

402

THE ROENTGEN RAYS IN EMBRYOLOGY AND OBSTETRICS. (German). W. Dorland, A. Newman, and Maximilian John Hubeny. 3 Vols. Translated by W. Lahm, Otto Nemnich, Kempten. i. A., Germany (1928). BA 4-9852.

403

DOES NATURAL IONIZING RADIATION CONTROL RATE OF MUTATION? E. B. Babcock and J. L. Collins. *Proc. Nat. Acad. Sci. U. S.* **15**, 623-628 (1929).

Authors conclude (on basis of *Drosophila* studies at 2 sites differing in amounts of ionizing radiation by ratio of at least 2:1) that natural ionizing radiation of the earth is an important factor in evolution. BA 4-10830.

404

THE PRODUCTION OF MUTATIONS IN SOMATIC CELLS OF *D. MELANOGASTER* BY MEANS OF X-RAYS. John T. Patterson. *J. Exp. Zool.* **53**, 327-372 (1929).

Author irradiated eggs and larvae; studied sex linked gene for eye color. Size of variant area was greater when treatment was given during early developmental stages. Variant areas were due in part to gene mutations, in part to breaks in x-chromosome followed by loss of x-chromosome fragment. BA 4-10844.

405

STUDIES ON THE CELL GROWTHS OF PLANTS INDUCED BY ROENTGEN RADIATION. I. ON THREADLIKE BODIES OF THE ROENTGEN TUMORS OF THE ROOT TIP OF *PISUM SATIVUM*. (German). Hideo Komuro. *Z. Krebsforsch.* **28**, 371-373 (1929). BA 4-7193.

406

FUNDAMENTALS OF THE BIOLOGICAL ACTION OF RADIATION. (German). Hans Meyer. *Arch. Dermatol. u. Syphilis* **155**, 22-43 (1928). BA 5-602.

407

THE EFFECT OF X RAYS ON THE SPERMATOZOA OF *DROSOPHILA*. L. G. Barth. *Physiol. Zool.* **2**, 172-180 (1929).

Experiments described demonstrate a differential susceptibility of the X and Y sperm to x rays, resulting in a deficit of functional X sperm and an altered sex ratio of the progeny of x-rayed flies. BA 5-613.

408

THE INFLUENCE OF X RAYS ON THE DEVELOPMENT OF *DROSOPHILA* LARVAE. R. G. Hussey, W. R. Thompson, and E. T. Calhoun. *Science* **66**, 65-66 (1927).

Irradiation prolonged the larval stage, prolongation being approximately proportional to dose. BA 5-617.

409

SOME EFFECTS OF DEEP X RAYS ON THE CELLS OF THE BLOOD. F. A. Knott and W. L. Watt. *Brit. Med. J.* **1**, 542-543 (1929).

Leukocytes of patients receiving radiation therapy take up fewer staphylococci after therapy is started. The number of staphylococci/leukocyte decreases by 30-50% depending upon the dose and the site irradiated. BA 5-619.

410
PHYSICO-CHEMICAL ACTION OF X RAYS IN ORGANISMS. (German). G. D. Lieber. *Strahlentherapie* 29, 139-151 (1928).

K is limited to the region of hair follicles and under the epidermis; Ca is present in the form of a regular network in the skin of non-irradiated rat. After depilatory radiation, K falls to 0 and Ca is densely packed around hair follicles and in a dense layer under the epidermis. Distribution of Ca and K returns to normal prior to the regrowth of hair and epidermis. BA 5-622.

411
ACTION OF X RAYS ON HEALTHY AND DISEASED SKIN. (German). Karl Linser. *Fortschr. Therap.* 5, 117-122 (1929).

X rays have a destructive effect upon cells of the skin: especially on nuclei. Desensitization of the skin to x rays by exposure to successive small doses does not occur. BA 5-623.

412
INVESTIGATIONS ON RAYING OF INFLAMMATIONS. (German). Richard Mittermaier. *Deut. Z. Chir.* 203-204, 557-574 (1927).

X-radiation at the beginning of inflammation causes an increase of inflammatory edema which acts as a check on abscess formation. Radiation after inflammation has started increases the intensity of the response. Wounds heal more readily in irradiated animals. BA 5-625.

413
THE EFFECTS OF RADIUM AND RADIUM IN COMBINATION WITH METALLIC SENSITIZERS ON ENDAMOEBIA DYSENTERIAE IN VITRO. Elizabeth Custer Nasset and Charles A. Kofold. *Univ. Calif. (Berkeley) Publs. Zool.* 31, 387-416 (1928).

β and γ rays of Ra first stimulate then depress division of *E. dysenteriae* in vitro. Both produce morphological changes in cultures. Large dose given over short time is more effective than smaller doses acting over a long period. Sublethal doses of Hg or Pb given prior to radiation caused radiation to kill the cultures. BA 5-626.

414
THE SIGNIFICANCE OF WEAK X RADIATIONS ON THE BACTERICIDAL IMMUNITY POWER OF THE BLOOD. (German). G. J. Pfalz. *Arch. Gynäkol.* 138, 93-110 (1929).

Small x-ray doses (10% E.D.) increased the bactericidal action of the blood, the effect being the same as that following autovaccines or injections of proteins. BA 5-628.

415
RADIOACTIVE SUBSTANCES IN A BODY FIVE YEARS AFTER DEATH. A. V. St. George, Alexander O. Gettler, and Ralph H. Muller. *Arch. Pathol.* 7, 397-405 (1929).

Ra content of the entire skeleton was found to be 48,282 μ g. Bombardment of bones by Ra rays caused increased brittleness and necrosis. BA 5-630.

416
PIGMENT ATROPHY IN THE HORSE FOLLOWING X-RAY TREATMENT. (German). Karl Schoupe. *Münch. tierärztl. Wochschr.* 81, 77-78 (1930). BA 5-631.

417
INVESTIGATION OF THE BIOLOGICAL EFFECTS OF X RAYS BY THE TISSUE EXPLANTATION METHOD. (German). Martin Schubert. *Deut. Med. Wochschr.* 54, 429-430 (1928).

Author studied effect of x-irradiation on chick tissue cultures; concluded that radiation effect is not specific, and is due largely to protein degeneration products induced by radiation. BA 5-632.

418
MODIFICATION OF TISSUE PERMEABILITY BY X RAYS. (French). Tsebrikow. *Arch. intern. méd. exp.* 3, 185-199 (1927).

Measured electrical impedance of excised mouse tissues; found that cancer and x rays both decreased specific resistance, x rays causing the greater decrease. Large doses caused greater decrease than small doses; influenced cancerous tissue more than normal tissue. BA 5-633.

419
RADIOSENSITIVITY IN THE PERIOD OF REACTION. (Italian). Alessandro Vallebona. *Atti Raduno Radiologi dell' Alta Italia, Brescia-Gardone* 6, 1928 (1929).

Believes there is a period following the first appearance of erythema and preceding extreme reaction when administration of a 2nd dose gives a greater effect than the total dosage administered at one time. BA 5-635.

420
HISTOLOGY OF SKIN SENSITIZED TO X RAYS. (German). H. G. Bode and E. Riecke. *Strahlentherapie* 35, 265-289 (1930).

X radiation of skin previously treated with chemical irritants increased the inflammation and produced degenerative changes. BA 5-1324.

421
MODIFIED LYMPH NODES FROM DOGS WITH A KNOWN HISTORY OF IRRADIATION, INCLUDING A NOTE ON GLOBULE LEUCOCYTE FORMATION. Alden Benjamin Dawson. *Anat. Record* 36, 1-29 (1927). BA 5-2719.

422
EXPERIMENTAL STUDIES ON THE HISTOLOGY OF THE MAMMALIAN THYMUS. Ruth Deanesly. *Quart. J. Microscop. Sci.* 72, 247-275 (1928).

Involution of mouse thymus was induced by irradiation, and histological changes during involution and subsequent regeneration are described. BA 5-2720.

423
PHOSPHORESCENCE OF BACTERIA AND FUNGI. PARALLELISM. (French). René Guyot. *Rev. gén. sci.* 39, 113-116 (1928).

The action of radium on light production by bacteria and fungi is included in the paper. BA 5-3970.

424
INFLUENCE OF WHOLE BODY IRRADIATION ON INTRACELLULAR DIGESTION BY MOUSE PHAGOCYTES. D. M. Donaldson, S. Marcus, and K. K. Gyi. *Federation Proc.* 13, 490 (1954).

Peritoneal exudation was induced in mice by injecting a saline solution of glycogen: then chicken erythrocytes were injected intraperitoneally. Following ingestion of erythrocytes by the exudate phagocytes the most marked change is disintegration of the erythrocyte nuclear chromatin. Disintegration of nuclear material was inhibited with doses of 350 r whole body x irradiation.

425
USE OF RADIOACTIVITY IN HORTICULTURE. (German). J. Stoklasa. *Gartenbauwiss.* 1, 141-153 (1928).

Radioactive water and moderate irradiation of seed increased growth and yields. BA 5-3973.

426
THE EFFECT OF RADIOACTIVITY ON THE ENZYMATIC ACTIVITY OF BLOOD CATALASE. (Italian). Renzo Agnoli. *Atti. Soc. ligust. Sci. lett.* 7, 134-142 (1928).

In general radiation had a deleterious effect. BA 5-4002.

427

BIOLOGICAL ACTION OF IRRADIATION. (German). Friedrich Dessauer. *Strahlentherapie* 30, 506-518 (1928).

Biological effects of x rays are considered to be due to action on large molecules, particularly albumin. Studied x-ray and ultra violet effects on albumin solution and attributed observed effects to a point of intense heat resulting from emission of photoelectrons by absorbed quanta. (Point heat theory). BA 5-4034.

428

THE BIOLOGIC ACTION OF SHORT WAVE RAYS ON CELL METABOLISM. (German). Karl Adler. *Strahlentherapie* 30, 1-31 (1930).

Rat testes exposed to 600 r or 2500 r of x rays or to 2400 mgm hr of Ra demonstrated decreased tissue respiration and increased aerobic and anerobic glycolysis, the metabolic changes being parallel to histological changes. Radiation induced metabolic changes were similar to metabolism of malignant tumor tissue. BA 5-4059.

429

INFLUENCE OF X RAYS ON THE DEVELOPMENT OF "FISCHER'S PHENOMENON". (Italian). L. Avellone. *Ann. Clin. Med.* 18, 99-108 (1928).

Antecedent x irradiation intensifies the aseptic inflammatory response in the connective tissue of the rabbit's ear following injection of a foreign substance. Nature of the response (Fischer's Phenomenon) not changed. BA 5-4060.

430

INJURY TO GROWTH AFTER THERAPEUTIC X-RAYING. (German). A. Beck. *Strahlentherapie* 32, 517-533 (1929).

Seven cases (young adults or children) are described in which localized inhibition of skeletal growth followed localized radiation therapy. Effect was most prominent in long bones and feet. BA 5-4061.

431

THE BIOLOGICAL APPLICATIONS OF INTRA-ATOMIC ENERGY. (Italian). Eugenio Centanni. *Atti. soc. ital. progr. sci.* (Rome) 1926, 377-387 (1927).

Radiations due to or associated with atomic breakdown are briefly discussed. Biological effects of radiation are reviewed. BA 5-4062.

432

A THEORETICAL CONSIDERATION OF THE ACTION OF X-RAYS ON THE PROTOZOAN CALPIDIUM COLPODA. Harry Clark. *J. Gen. Physiol.* 10, 623-636 (1927).

A hypothesis (an alternative to Crowther's "small body theory") is proposed to account for variation in lethal x ray doses among individual *Colpidium colpoda*. BA 5-4063.

433

PROPHYLACTIC IRRADIATION AGAINST INFLAMMATION. (German). Shuichi Fukase. *Strahlentherapie* 36, 95-101 (1930).

X irradiation of wounded abdominal skin of rabbits with 350 r caused acceleration of healing. Hard x rays were more effective than soft x rays. BA 5-4065.

434

THE EFFECT OF ROENTGEN IRRADIATION ON WOUND HEALING. (German). Shuichi Fukase. *Strahlentherapie* 36, 102-104 (1930).

X-irradiated half of cutaneous wounds of abdominal skin of rabbits healed by first intention; non-irradiated half granulated first. BA 5-4066.

435

THE EFFECT OF X-RAYS ON CHOLESTEROL AND ITS FATTY ACID ESTER IN VITRO AND IN VIVO. (German). Rudolf Hummel. *Strahlentherapie* 36, 533-538 (1930).

Free cholesterol and its fatty acid ester dissolved in chloroform are destroyed by x rays; not destroyed when dissolved in fat or when in the blood serum *in vitro*. Cholesterol *in vivo* (mouse liver stores) also not destroyed. BA 5-4070.

436

THE EFFECT OF X-RAYS ON THE PERMEABILITY OF THE CELL MEMBRANE. (German). K. Kovács. *Strahlentherapie* 30, 77-85 (1928).

X radiation causes increased permeability of frog skin (to salt, sugar; not to hemolysin, albumin or dye) and of frog heart (to methyl violet). Postulates effect on permeability is related to change of charge at cell membrane. BA 5-4071.

437

EFFECT OF THORIUM ON LACCASE. (French). Alfred Maubert. *Compt. rend.* 184, 781-783 (1927).

Laccase (diastase) is activated by 1 to 5 μ g of Th; inactivated by 10 μ g or more. BA 5-4074.

438

INFLUENCE OF X-RAYS ON THE FUNCTIONS OF THE RETICULO-ENDOTHELIAL SYSTEM. (German). J. P. Mischtschenko. *Strahlentherapie* 32, 154-162 (1929).

Intravenously administered trypan blue disappeared less rapidly from blood of x-rayed than of non-irradiated rabbits. Author postulates that x radiation inhibits activity of reticulo-endothelial system. BA 5-4075.

439

ACTION OF X-RAYS ON TUMORS. E. H. Molesworth, B. J. Harrison, J. G. Stephens, and L. Keating. *J. Cancer Research Comm. Univ. Sydney* 1, 179-183 (1929).

Authors oppose theory that size is a determining factor in response of tumor to radiation therapy. BA 5-4076.

440

X-RAY SENSITIZATION. III. THE SENSITIZING ACTION OF THORIUM NITRATE. (German). S. A. Nikitin. *Strahlentherapie* 36, 745-750 (1930).

No difference was observed in results of subcutaneous or intracutaneous injection of $\text{Th}(\text{NO}_3)_4$ in mice, rats or guinea pigs before and after exposure to x radiation. Author concludes that effect of combined action of x rays and $\text{Th}(\text{NO}_3)_4$ does not depend on secondary emission of electrons by the latter. BA 5-4077.

441

ARE THE BACTERICIDAL POWER OF THE BLOOD AND THE THERAPEUTIC EFFECT OF PROTEIN EQUALLY INCREASED BY X-RAY EXPOSURES WHICH CAUSE INFLAMMATION. (German). G. J. Pfalz. *Med. Klin. (Munich)* 1929, 1-7 (1929). BA 5-4078.

442

COURSE OF X-RAY ERYTHEMA AND ITS RELATIONS TO SIZE OF FIELD IRRADIATED. (Italian). Alessandro Vallebona. *Diario Radiol.* 5, 3-14 (1926). BA 5-4079.

443

GENERAL EFFECT OF X-RAYS. (German). E. Woenckhaus. *Arch. Exp. Pathol. Pharmacol.* 150, 182-197 (1930).

Single doses of x radiation produced prompt leukopenia and lymphopenia in rats. Injection of heart's blood from irradiated rat into control rat caused leukopenia in recipient. Injection of heart's blood from control rat into irradiated rat caused leukocytosis in recipient. Exposure of one of each of 3 parabiotic pairs caused leukocytosis in non-exposed partner. Parabionts survived following exposure of one of the pair to a dose which would be lethal to a normal rat. BA 5-4080.

444

A THEORY OF CANCER BASED ON THE GEOLOGICAL

NATURE OF THE SOIL. (French). Georges Lakhovsky. *Rev. gén. sci.* 39, 533-544 (1928).

Geographical nature of soil effects radiations there- from which are the primordial factor in the etiology of cancer. Incidence of cancer is closely related to mineral content of soil. BA 5-4505.

445

STUDIES ON THE CONCENTRATION OF ANTIBODY- CONTAINING SERA BY THE USE OF PHYSICO-CHEMICAL METHODS. (German). M. Eisler and M. Spiegel-Adolf. *Biochem. Z.* 204, 28-45 (1929).

Unless refrigerated, freshly electrodialyzed, toluized serum albumin fails to coagulate when exposed to Ra rays. Dialysis removes NH_3 in amounts which, if added to freshly dialyzed albumin, are sufficient to prevent coagulation due to Ra rays. Ra coagulation time is independent of albumin concentrations except at very high concentration. Coagulates produced by Ra are not made water soluble by treatment with alkali. H_2O_2 produces changes similar to Ra induced changes in serum albumin. BA 5-4722.

446

CHANGES IN THE STRIATED MUSCLES IN ANIMALS AFTER ROENTGEN RADIATION. (German). Ludwig Fedder and Hans Hellner. *Strahlentherapie* 30, 682-706 (1928). BA 5-5836.

447

X-RAYS AS LOCALIZED DESTRUCTIVE AGENTS IN EMBRYOLOGY. A NEW TECHNIQUE FOR STUDYING THE POTENTIALITY OF THE FIRST TWO BLASTOMERES OF THE FROG EGG. (French). P. Vintemberger. *Compt. rend. soc. biol.* 99, 1590-1592 (1928).

Exposure of 1 of the 2 first blastomeres of the frog egg permits irradiated blastomere to develop to gastrula stage only. Remainder of embryo develops to advanced neurula stage. BA 5-6092.

448

THE EFFECTS OF LOCALIZED IRRADIATIONS ON ONE OF THE TWO FIRST BLASTOMERES IN THE EGG OF THE EUROPEAN FROG. (French). P. Vintemberger. *Compt. rend. soc. biol.* 99, 1592-1594 (1928). BA 5-6093.

449

INFLUENCE OF RADIOACTIVITY OF WATER ON BIOLOGICAL AND BIOCHEMICAL PROCESSES IN THE CELL OF LOWER AND HIGHER ORGANISMS (German). Julius Stoklasa. *Strahlentherapie* 29, 324-332 (1928).

Life, metabolic rate and vitality of organisms in radioactive waters (bacteria; algae) depend upon radio-activity and O_2 in the water. BA 5-7157.

450

HEMATOLOGICAL FINDINGS IN DOGS INJECTED WITH GRADED DOSES OF PLUTONIUM AND RADIUM. J. H. Dougherty, P. Keyanonda and J. Horner. *Federation Proc.* 13, 427 (1954).

Hematological effects of graded amounts of plutonium and radium in adult beagles were studied for 1 year. No significant alterations were found in animals receiving the 2 lowest doses. Animals given 0.81 $\mu\text{g/kg}$ of plutonium showed a moderate leukopenia within 1-2 weeks. The highest dose produced a depression in all formed elements. (from authors' summary).

451

ANEMIA, AGE OF CELLS AND SENSITIVENESS TO IRRADIATION. (German). Otto Dyes. *Strahlentherapie* 36, 552-561 (1930).

Findings relative to localized epilation in a patient treated with x ray therapy for hypophyseal tumor are presented. BA 5-7316.

452

CANCER IRRADIATION WITH CATHODE RAYS. M. F.

Guyer and Farrington Daniels. *J. Cancer Research* 12 166-187 (1928).

Cathode rays had detrimental effect on Flexner-Jobling carcinoma in rats if tumor growth was not too far advanced. Single large doses had best effect. No effect noted on tumors remote from site of irradiated tumor. BA 5-7317.

453

IRIS DISCOLORATION AFTER RADIUM TREATMENT. (German). L. Kumer and L. Sallmann. *Albrecht von Graefe's Arch. Ophthalmol.* 121, 238-240 (1928).

Increased pigmentation was noted in the iris of many children treated with Ra for angioma of eyelid. Change was more common in children with brown eyes, and was due to heavier pigmentation of surface layer or stroma of iris. BA 5-7319.

454

ALTERATIONS IN CELL PERMEABILITY BY X-RAYS MEASURED BY PHOSPHATE ELIMINATION OF SLICES OF SURVIVING TUMOR AND LIVER TISSUE M. A. Magath. *Z. Krebsforsch.* 31, 95-104 (1930).

X-radiation of normal liver causes increased elimination of phosphoric acid. In cancer no change or a diminished output of phosphoric acid follows irradiation. KCN increases phosphoric acid elimination by tumor tissue, and this effect is not altered by irradiation. BA 5-7320.

455

X RAY BIOLOGY OF THE HEALTHY AND DISEASED SKIN. (German). O. Miescher. *Arch. Dermatol. u. Syphilis* 155, 43-64 (1928).

Disturbance of mitosis is most prominent histologic feature of x-ray effect, and is maximal when x-ray effect generally is maximal. Regeneration originates from resistant resting cells. Meanwhile mitosis is inhibited in the cutis, and proliferative power of connective tissue is not equal to increased demands, with the result that ulcers may develop. BA 5-7321.

456

THE BIOLOGICAL EFFECT OF DEEPLY PENETRATING ROENTGEN RAYS UPON INDIAN SKIN AND ITS PRACTICAL APPLICATION IN DEEP ROENTGEN THERAPY. Subodh Mitra. *Calcutta Med. J.* 23, 481-517 (1929). BA 5-7322.

457

POSTCONCEPTION PELVIC IRRADIATION OF THE ALBINO RAT (*MUS NORVEGICUS*) ITS EFFECT UPON THE OFFSPRING. Douglas P. Murphy and Marguerite de Reny. *Surg. Gynecol. Obstet.* 50, 861-863 (1930).

Thirty-four albino rats irradiated when pregnant. In 5 of the litters 1 or more of the young exhibited clubbing of feet or absence of toes. The proportion of defective young varied directly with degree of exposure BA 5-7323.

458

ROENTGEN SENSITIZATION. II. CHEMICAL SENSITIZATION OF PROTOZOA. (German). S. A. Nikitin. *Strahlentherapie* 36, 539-545 (1930).

Author asserts that x-rays produce no perceptible effect on the rhythm of division of *P. caudatum*. BA 5-7324.

459

THE EFFECT OF RADIUM EMANATION ON INFUSORIA. (German). G. Roskin. *Arch. Protistenk.* 66, 340-345 (1929).

Lethal dose of β and γ rays (Ra) was lowered when paramecia were fed with ferric saccharate. *Spirostomum ambiguum* more radiosensitive than other infusoria studied. BA 5-7327.

460

PHYSICAL AND BIOLOGICAL STUDIES OF CATHODE

RADIATION. (German). Walter Schaefer and Ernst Witte. *Strahlentherapie* 31, 415-466 (1929).

Cathode ray tube with Ni window also produces x rays. Cathode rays penetrate tissue to depth of 0.1 mm and produce weak x-radiation on rebound from tissue. Therapeutic effect of cathode rays similar to that of x rays. BA 5-7328.

461
FURTHER STUDIES ON THE EFFECT OF DEEP X-RAY ON THE HEART. F. Janney Smith, F. W. Hartman, Adolph Bolliger, and H. P. Doub. *Trans. Amer. Climatol. and Clin. Assoc.* 44, 116-131 (1928).

After destruction of right auricle (dog) by x-ray, there is preponderance of ectopic auricular rhythms. Some evidence that even after complete destruction of S-A node, a pacemaker may exist in myocardium of left auricle. Heart seems more resistant when x ray directed solely through left side of dog's chest. BA 5-7330.

462
EXPERIMENTAL RESEARCHES OF GENERAL ACTION OF ROENTGEN RAYS ON MYXOSARCOMA OF FOWLS. Y. Yamamoto. *Japan. Med. World* 9, 1-3 (1929).

Tumors were transplanted subcutaneously into lateral aspects of femora of 20 fowl. One side was shielded, other side exposed to 150 KV x rays for 30-45 min. Eleven showed improvement in tumors on both sides, improvement being less on protected side. In general, fowl were weakened by irradiation. BA 5-7333.

463
EXPERIMENTAL RESEARCHES ON EFFECTS OF GERM IRRADIATION ON OFFSPRING. T. Yamamoto. *Japan. Med. World* 9, 290-295 (1929).

Female mice mated with non-irradiated males 8 days after x ray exposure. Number of young decreased but offspring showed no abnormalities and grew better than young from larger litters. Subsequent litters were of normal size. BA 5-7438.

464
EXPERIMENTAL PRODUCTION OF GASTRIC ULCERS BY RADIUM EMANATION. (German). H. Aue and A. Cečulin. *Arch. klin. Chir.* 158, 148-157 (1930).

Gastric Ra ulcer resembles human gastric ulcer, runs chronic course, has complications similar to those of human ulcer. High acidity develops as result of gastric ulcer. BA 5-7670.

465
EXPERIMENTAL CANCER AFTER COMBINED CHEMICAL AND PHYSICAL STIMULI. (Italian). Giovanni Castiglioni. *Boll. soc. ital. biol. sper.* 2, 636-642 (1927).

Tar painting alone produced tumors in 6-8 months in 80% of mice. Tar painting of 1 skin area, radiation of another produced cancer in 6-8 months at site of painted skin only. Combination of tar painting and x rays to same region produced tumors in 3-4 months in 100% of animals. BA 5-7699.

466
POLYPEPTIDEMIA IN CANCEROUS PATIENTS AND ITS MODIFICATIONS IN THE COURSE OF CURIE AND RADIOTHERAPY. (French). P. Cristol and A. Puech. *Bull. et mem. soc. radiol. méd. France* 17, 207-212 (1929).

X-ray and Ra produce polypeptidemia in tumor patients. Intensity of polypeptidemia depends upon nature of tumor. BA 5-7708.

467
ERYTHROPOIESIS IN BASEDOW'S DISEASE BEFORE AND AFTER RADIUM TREATMENT AND IN ARTIFICIAL

HYPERTHYROIDISM. (German). F. Höglér and Herz Blanka. *Wiener klin. Wochchr.* 43, 553-555 (1930).

Reticulocytes increased in Basedow's disease cases, decreased in Ra irradiated Basedow's disease cases in parallel with clinical improvement. Hypothyroidism was accompanied by decreased or low normal reticulocyte level. BA 5-7764.

468
RESISTANCE OF CARCINOMA. (Italian with French, English and German summaries). Endre Kubányi. *Rinascenza med.* 6, 132-133 (1929).

Carcinoma from mouse tumors kept at -20° C and exposed to 25 E.D. of x ray grew in mice into which it was transplanted. Small islands of intact cells were apparent in the irradiated tissue. BA 5-7790.

469
CANCER IN THE LIGHT OF GEOPHYSICAL RADIATION. H. Th. Winzer and W. Melzer. *Cancer* 5, 8-25 (1927).

Cites cases of tumor susceptibility in regions or houses over radioactive subsoils. Spontaneous healing of cancer in domestic animals and salmon observed when changed from one location to another. Proposes that allergic-like condition may result from continuous exposure and that exposure to repeated small doses may immunize organisms to radiation damage. BA 5-7920.

470
THE SIGNIFICANCE OF THE RETICULO-ENDOTHELIAL SYSTEM DURING IRRADIATION OF CARCINOMA OF THE CERVIX. (German). H. Zacherl. *Strahlentherapie* 33, 515-536 (1929).

Strong x-radiation of body lowers storing capacity, small doses increase capacity of reticulo-endothelial system. Carcinolytic power of serum of women with cancer of cervix is decreased after radiation therapy, and function of the already impaired R-E system is further depressed. BA 5-7929.

471
THE EFFECT OF THE X-RAY ON THE NODULES OF VERRUGA PERUANA. Henry R. Muller and Joseph R. Tyler. *J. Exp. Med.* 51, 23-26 (1930).

Development of early nodules produced experimentally in monkeys may be inhibited by single erythema dose of x-rays. BA 5-8320.

472
A STUDY OF THE EFFECTS OF LONG WAVE X-RAYS ON THE STAPHYLOCOCCUS AUREUS AND ON THE MICROSPORUM AUDOUINI. Albert Bertrand and Albéric Marin. *Can. Med. Assoc. J.* 20, 496 (1929).

X-rays in doses used had no effect on cultures of the organisms. BA 5-8372.

473
X-RAY AND MUTATIONS. (Russian). N. M. Voskresenskiĭ. *Priroda* 1930, 494-507 (1930). BA 5-10341.

474
RADIATION AND GENETICS. T. D. A. Cockerell. *Am. Naturalist* 64, 474-476 (1930).

Consideration of possibility that naturally occurring radioactive substances may determine mutation and species formation. BA 5-10370.

475
IRRADIATION OF THE TESTES AND HEREDITY IN THE MOUSE. (French). N. Dobrovolskaia-Zavaskiaia. *Arch. Biol.* 38, 457-501 (1928). BA 5-10376.

476
THE PROBLEM OF GENIC MODIFICATION. H. J. Muller. *Z. indukt. Abstamm.-u. Vererblehre. Suppl.* 1, 234-260 (1928). BA 5-10396.

477
THE EFFECT OF RADIOACTIVE SUBSTANCES ON THE

RAPID DEVELOPMENT OF BACTERIA IN THE SOIL; OPTIMUM OF RADIOACTIVITY. (French). D. Chouchak. Bull. soc. hist. nat. Afrique du Nord 20, 10-11 (1929). BA 5-10761.

478

BIOLOGICAL PROPERTIES OF RAYS OF 4-8 ÅNGSTRÖM UNITS. (French). L. J. Colanéri. Bull. et mém. soc. radiol. méd. France 17, 100-102 (1929).

Rays absorbed by skin; produce erythema of 2-4 weeks duration. BA 5-10762.

479

THE QUESTION OF THE FUNDAMENTAL BIOLOGICAL REACTION OF RADIATION. Friedrich Dessauer. Radiology 14, 1-16 (1930).

The general destructive effects of x and ultraviolet rays are based on a non-specific reaction which is considered to be further proof of the point-heat theory. BA 5-10763.

480

EXPERIMENTAL INVESTIGATIONS OF THE X-RAY SENSITIVITY OF THE ADRENALS. (German). Hans Frey. Acta Radiol. 9, 23-53 (1928).

Changes observed in irradiated adrenal glands are due to secondary influence on the adrenals of radiation induced changes in sensitive organs (e.g. ovaries). Believes that while adrenals are not radiosensitive, indirect effects on them as a result of radiating other organs cannot be avoided. BA 5-10764.

481

THE SIGNIFICANCE OF THE r-UNIT FOR THE DETERMINATION OF THE DOSE OF γ RAYS OF RADIUM. (German). Otto Glasser and F. R. Mautz. Strahlentherapie 34, 845-854 (1929). BA 5-10765.

482

THE EFFECT OF X-RAYS ON THE CELL AS A PHYSICAL PROBLEM. (German). R. Glocker. Strahlentherapie 33, 199-205 (1929).

Biological action of x-rays considered to be due to mechanical action of electrons, the impact probability and the number of impacts necessary to cause cell death being statistically predictable. Studies on *V. faba* used to illustrate hypothesis. BA 5-10766.

483

H.E.D. AS A BIOLOGICAL MEASURE OF RADIATION EFFECT. (German). Karl Wilhelm Hausser and Emil Schlechter. Wiss. Veröffentlich. Siemens-Konzern 6, 121-124 (1927). BA 5-10767.

484

EXPERIMENTAL AND HISTOLOGICAL OBSERVATIONS ON THE EFFECTS OF A SINGLE IRRADIATION WITH BUCKY'S RAYS ON THE HEALTHY RABBIT EYE. (German). Ilona Krasso. Z. Augenheilk. 70, 237-256 (1930).

Rabbits were exposed to doses ranging from 96 to 4500 international units: 980 units caused reversible changes in cornea. Administration of 3360 units in 3 doses caused marked injury of substantia propria of cornea; 3360 to 3400 units caused epilation of eyelids and temples. BA 5-10770.

485

INFLUENCE OF RADIOACTIVITY ON THE ELIMINATION OF CERTAIN METALS FROM, AND THEIR DISTRIBUTION IN THE ORGANISM. (Italian). P. Mascherpa. Atti soc. ligust. sci. lett. 8, 114-128 (1929).

Radioactive Co-protein combination in lungs breaks up sooner than normal Co-protein and is eliminated more rapidly (4 days vs. 7 days). Radioactive Co is more toxic to kidneys and lungs than normal Co. BA 5-10772.

486

EFFECT OF X-RAYS ON THE ADRENALIN CONTENT OF THE SUPRARENAL OF RABBITS. (Japanese). Tomozo Matsuda. Iji Shimibun 1211, (1927). BA 5-10773.

487

THE EFFECT OF X-RAYS ON NERVE TISSUES. (Russian). B. N. Mogil'Nitskii. Compt. rend. acad. sci. U.R.S.S. Ser. A 1929(6), 149-150 (1929). BA 5-10774.

488

THE EFFECT OF X RAYS ON ANIMALS. (Russian). N. N. Nechaeva. Compt. rend. acad. sci. U.R.S.S. 1929, 147-148 (1929). BA 5-10775.

489

STUDIES OF THE SYSTEMIC EFFECT OF ROENTGEN RAYS. I. BLOOD CHEMICAL CHANGES IN DOGS FOLLOWING EXPOSURE TO FILTERED ROENTGEN RAYS OF SHORT WAVE LENGTH. Ernst A. Pohle and Elmer L. Sevringhaus. Am. J. Roentgenol. 23, 291-298 (1930).

Dogs were given 500 r of x-rays to one or more regions of the body. No change was noted in hemoglobin, total non-protein N, uric acid, NaCl or cholesterol in the blood. BA 5-10776.

490

STUDIES OF THE ROENTGEN ERYTHEMA OF THE HUMAN SKIN. III. MACROSCOPIC AND SKIN CAPILLARY CHANGES AFTER COMBINED EXPOSURE TO ROENTGEN RAYS AND ULTRAVIOLET RAYS. Ernst A. Pohle and Cecil S. Wright. Radiology 14, 351-363 (1930).

Skin changes occur more rapidly following x-radiation alone, but end results are approximately the same following x-radiation alone and combined with ultraviolet radiation. BA 5-10777.

491

THE "OVARIAN DOSIS". SEVERAL INSTANCES OF PREGNANCY AFTER IRRADIATION WITH X-RAYS. K. Ihdimä. Japan. J. Obstet. and Gynec. 12, 323-327 (1929).

Reports 6 cases of pregnancy following x-irradiation. Permanent amenorrhea was caused in older women by a dose of x rays that caused only temporary amenorrhea in younger women. BA 5-10986.

492

X RAY CASTRATION AND PREGNANCY. (Spanish). Jesús García Orcóyen. Arch. med. cirug. 28, 113-117 (1928).

"Castration dose" of x-rays was followed by pregnancy in 2 women. BA 5-11006.

493

INFLUENCE OF X RAY IRRADIATION ON BLOOD LACTIC ACID. (German). G. Joos and J. Heeren. Frankfurter Z. Pathol. 39, 466-472 (1930).

In patients with malignant tumors blood lactic acid increased 10 to 40% immediately after irradiation (as a result of lowering of alveolar CO₂ tension): 4 to 6 hr after exposure blood lactic acid level fell 20 to 35% due to increased utilization of lactic acid in body. BA 6-11169.

494

CYTOLOGICAL AND OTHER FEATURES OF VARIANT PLANTS PRODUCED FROM X-RAYED SEX CELLS OF *NICOTIANA TABACUM*. T. H. Goodspeed. Botan. Gaz. 87, 563-582 (1929).

X-ray induced variants include modification of all vegetative and floral organs and reduced fertility. Cytologically, variants demonstrate normal chromosome number and behavior; non-disjunction of 1 or more chromosome pairs; fragmented chromosomes. Only visible somatic effect on x-rayed parent plant is abscission of all smaller flower buds. BA 5-13444.

495

THE CONCENTRATION OF RADIUM BY LIVING ORGANISMS. (Russian). V. I. Vernadskii. *Compt. rend. acad. sci. U.R. S.S.A.* 1929, 33-34 (1929). BA 5-13648.

496

EXPERIMENTAL INVESTIGATION OF THE EFFECTS OF X RAYS ON BONE MARROW. (German). Anfibale Casati. *Strahlentherapie* 32, 721-738 (1929).

Hind legs of rabbits were exposed to 800 r, 140 KV, 300 MA; filtration 0.5 mm Zn and 2 mm Al. This exposure was followed by 400 r exposure on each of the 2 subsequent days. Major effect on marrow was not cell destruction but interference with cell differentiation. BA 5-13743.

497

X RAYS AND GERMINAL INJURY: PRINCIPLES IN ANIMAL EXPERIMENTATION. (German). Hans Duncker. *Strahlentherapie* 37, 142-163 (1930). BA 5-13744.

498

EXPERIMENTAL INVESTIGATIONS OF THE EFFECT OF X RAYS ON GASEOUS METABOLISM. (German). Sigurd Frey and Hans George Zwerg. *Bruns' Beitr. klin. Chir.* 149, 310-321 (1930).

X-irradiation caused increased oxygen consumption in dogs. Irradiation of spleen caused 100% increase, heavy dose to whole body caused 50-60% increase, light doses to whole body or to liver and testes about 30% increase; thyroid, 14% increase followed by 10% decrease; irradiation of hypophysis caused 8% fall by 3rd day. Believes effects are due to cell destruction and that they are similar to effects following injection of foreign protein. BA 5-13745.

499

THE EFFECT OF X RAYS ON THE VEGETATIVE NERVOUS SYSTEM. (German). Gerhard Gabriel. *Strahlentherapie* 34, 813-822 (1929). BA 5-13746.

500

THE SKIN ERYTHEMA DOSE AS A BIOLOGICAL MEASURE OF THE RADIATION EFFECT. (German). Karl Wilhelm Hausser and Emil Schlechter. *Strahlentherapie* 27, 348-352 (1927).

Skin erythema may be used as measure of biological dose of x rays, not of Bucky's grenz. rays. BA 5-13747.

501

EFFECTS OF X RAYS ON BASAL METABOLISM. (German). Anna Jugenburg. *Strahlentherapie* 24, 288-300 (1929).

Effects of x rays on metabolism found to be available. Respiratory quotient approached 1 after x-raying animals, and in general there tended to be some decrease in O₂ consumption. BA 5-13748.

502

GRAYED HAIR AS AN INDEX OF RELATIVE EFFECTIVE X-RAY DOSAGE IN THE HOUSE MOUSE. Clyde E. Keeler. *Am. Naturalist* 64, 188-190 (1930).

In tests with 3 male black mice it was found that the appearance of gray hair is an index of sterilization following x-radiation, and also an indication of the extent of scattering of the cone of rays. BA 5-13749.

503

ROENTGEN RAYS AND HEMOLYSIN. (Italian). Antonio Merlini. *Arch. atti soc. ital. chir. (Rome)* 34, 749 (1928).

In rabbits exposed to x-rays the hemolytic titer was raised. BA 5-13753.

504

THE DEVELOPMENT OF CHILDREN BORN AFTER

TEMPORARY IRRADIATION STERILITY OF THE MOTHER. (German). H. Naujoks. *Strahlentherapie* 37, 572-583 (1930).

Of 6 children born of previously irradiated mothers, 1 child was "nervous", 1 backward in speech, 1 adipose. No other abnormalities noted. BA 5-13754.

505

BACTERICIDAL ACTION OF X RAYS. (German). W. E. Pauli and E. Sulger. *Strahlentherapie* 32, 761-768 (1929).

Growth of *B. pyocyaneus* on agar was checked by 2.3 H.E.D. of x-rays; 5.6 H.E.D. checked growth of *Staphylococcus* on agar. Lowering the temperature from 41° C to 37° C increased the killing power of the rays. Irradiation of local inflammation at site of injection of a mixture of *B. pyocyaneus* and *Staphylococci* in rabbits hastened healing but did not prevent the production of secondary infections. BA 5-13755.

506

NITROGEN EXCRETION IN THE URINE AFTER ROENTGEN AND RADIUM IRRADIATION. (German). K. F. Schultze. *Strahlentherapie* 47, 642-658 (1930).

N determined in 24 hr urine specimens in 12 normal persons, 22 patients with carcinoma of cervix treated with x rays, and 8 similar cases treated with Ra; 12 of 22 x-ray treated cases showed an increase in urinary N after exposure; all Ra treated cases showed an increase. BA 5-13757.

507

THE INFLUENCE OF X RAYS ON THE MULTIPLICATION OF HYDRAS. (Russian with German summary). G. S. Strelin. *Ann. roentgenol. et radiol. (U.S.S.R.)* 7, 199-203 (1929).

Multiplication in the hydra *Pelmatohydra oligactis* is stimulated by 475 r of x ray, but only in those hydras ready to germinate at the time of irradiation. BA 5-13758.

508

EXPERIMENTAL RESEARCHES OF GENERAL ACTION OF ROENTGEN RAYS ON MYXOSARCOMA OF FOWLS. T. Yamamoto. *Japan. J. Obst. Gynec.* 11, 271-275 (1928).

Both irradiated and non-irradiated femoral tumor implants underwent regression in chickens bearing one implant on each femur (one irradiated, one control). Irradiated tumors gave positive transplants in 5 of 9 cases. Irradiation of site before tumor was transplanted to it decreased the susceptibility of the tissue to the transplant. (4 of 8 transplanted this way were positive). Irradiation shortened life of chicken and increased immunity of chicken to tumors. BA 5-13760.

509

EFFECT OF X-RAYS ON HEART FUNCTION OF THE FROG. T. Yamamoto. *Japan. J. Obst. Gynec.* 11, 290-292 (1928).

X-irradiation of excised, beating frog hearts for 30 to 80 min. had no effect unless adrenalin chloride had been added to culture solution prior to irradiation, in which case pulsation became irregular. Irregularity would be terminated by addition of atropine to solution, but not merely by replacing solution with fresh Ringer's. BA 5-13761.

510

THE CHANGES OF CATALASE AND LIPASE IN THE BLOOD OF PATIENTS TREATED WITH X RAYS. (German). M. J. Goldstein and J. P. Neworoshkin. *Strahlentherapie* 36, 736-744 (1930).

After local irradiation, catalase was increased in the blood of 18 patients; lipase was increased in some, decreased in others. Greatest increase in catalase

occurred after irradiation of the lymphatic gland region. Changes in blood catalase appeared not to be related to changes in disease process. BA 5-13842.

511

INFLUENCE OF ORAL AND INTRAVENOUS ADMINISTRATION OR RADIUM BROMIDE ON THE URINARY C N QUOTIENT. (German). A Allen Goldbloom. Biochem. Z. 197, 14-19 (1928).

Daily oral administration or a single intravenous injection of RaBr_2 to rabbits raises the C N quotient due to decreased N elimination. BA 5-14222.

512

FURTHER EXPERIMENTS ON THE RELATIONS BETWEEN X-RAYS AND CALCIUM EFFECTS ON TUMOR TISSUE (German). M. A. Magath and M. J. Kolomijetz. Z. Krebsforsch. 30, 457-472 (1930).

Tumor tissue treated with Ca shows decreased imbibition. This behavior of cancer tissue reversed after x-irradiation, although x-irradiation alone reduces imbibition of cancer cells. Embryonal tissue behaves similarly to cancer tissue. Effect is not related to pH change nor to Ca retention (which does not occur in irradiated tissue). Author feels x-ray effect is on organism as a whole. BA 5-14416.

513

EFFECT OF THE INCUBATION PERIOD OF A BACTERIAL CULTURE ON ITS SENSITIVENESS TO X RAYS (German). E. Sulger. Strahlentherapie 36, 546-551 (1930).

X-irradiation for 90 min. was fatal to unincubated cultures of *B. pyocyaneus* (av. of 6 experiments). After 1, 2, and 3 hr of incubation, no change in radiosensitivity was observed. After 4 hr, however, L.D. was 120 min. 9 hr cultures required 210 min of exposure. 10 hr cultures, 150 min. Longer incubation gave variable results. BA 5-14921.

514

THE EFFECT OF X RAYS ON THE REGENERATION OF THE LENS. (German). G. Politzer. Z. wiss. Biol. Abt. D. Wilhelm Roux Arch. Entwicklungsmech Organ. 121, 39-71 (1930).

Salamandra maculosa from which the lens of one eye had been removed were exposed to x rays filtered through 1 mm Al. 6 Holzknicht units had no effect on lens regeneration. One dose of 20 units, 9 doses of 4 units, or 14 doses of 4 units produced delay in onset of regeneration, and abnormal lenses when regeneration did occur. BA 5-15434.

515

OCCURRENCE OF TRIPLOID AND TETRAPLOID INDIVIDUALS IN X-RAY PROGENIES OF NICOTIANA TABACUM. T. H. Goodspeed. Univ. Calif. (Berkeley) Publ. Botany 11, 299-308 (1930). BA 5-16355.

516

THE EFFECT OF CARBON DIOXIDE ON THE OCCURRENCE OF NON-DISJUNCTION IN DROSOPHILA. J. C. Mottram. J. Exp. Biol. 7, 370-372 (1930).

Exposure of female flies to CO_2 or to β rays from Ra before fertilization increases the occurrence of non-disjunction. BA 5-16463.

517

PROOF THAT THE ENTIRE CHROMOSOME IS NOT ELIMINATED IN THE PRODUCTION OF SOMATIC VARIATIONS BY X-RAYS IN DROSOPHILA. J. T. Patterson. Genetics 15, 141-149 (1930). BA 5-16468.

518

STUDIES ON STEP-ALLELOMORPHISM. IV. THE MUTATION SCUTE-6 AND A CASE OF 'NON-ALLELOMORPHISM' OF MEMBERS OF AN ALLELOMORPHIC SERIES IN *D. MELANOGASTER*. (German).

A. S. Serebrovsky. Z. Wiss. Biol. Abt. D. Roux Arch. Entwicklungsmech. Organ. 122, 88-104 (1930).

A new scute allelomorph produced by x rays. BA 5-16474.

519

HISTOGENESIS OF SO-CALLED X-RAY CANCER OF PLANTS. II. TISSUE ABNORMALITIES AS THE RESULT OF MULTINUCLEATION OF CERTAIN PORTIONS OF THE ROOT TIPS OF *V. FABA*. (German). Hideo Komuro. Z. Krebsforsch. 31, 490-494 (1930). BA 5-16607.

520

THE EFFECT OF X-RAY ON POTATO TUBERS FOR SEED. Howard B. Sprague and Maurice Lenz. Science 69, 606 (1929).

Strong doses causing definite lesions in leaves may also reduce number of tubers formed. In this case however, tubers may attain larger size. BA 5-16719.

521

THE EFFECTS OF THE DECAY OF INCORPORATED RADIOACTIVE PHOSPHORUS ON THE GENOME OF BACTERIOPHAGE T_4 . F. W. Stahl. Virology 2, 206-234 (1956).

Using five genetic characters of the coliphage T_4 as criteria of effect, the author shows that P^{32} decay in DNA portion of phage inactivated the genetic characteristics.

522

RELATIONS OF ACTINOTHERAPY TO BLOOD COAGULATION AND ARREST OF HEMORRHAGE (English, French and German Summaries). Karel Prerovsky. Bratislav Lekárske Listy 10, 49-56 (1930).

Hard x rays can increase blood coagulability in vitro and in vivo. X rays act directly on blood by releasing cytozyme from destroyed cellular elements. Ra salts act in an analogous manner. BA 5-16787.

523

BIOLOGICAL EFFECTS OF RADIUM IRRADIATION. R. G. Cant. Acta Radiol. 10, 320-331 (1929).

Evidence is presented to support the author's thesis that the effect of x rays on mitosis is not one of stimulation. The transient increase of cells in mitosis observed after irradiation is at most a compensatory phenomenon and may represent prolongation of some mitotic stages. The major aim is interpretation of histological observations in serially biopsied tumors from patients receiving radiation therapy. Supporting data include studies on chick choroid and fibroblasts in vitro, irradiated mustard and cress seeds and in vitro studies on tumor cells. BA 5-16804.

524

THE RELATION OF DIETARY TO THE EFFECTS OF LARGE AMOUNTS OF X-RAYS ON THE ORGANISM. Louis H. Jorstad and Edwin C. Ernst. Radiology 15, 13-29 (1930).

White rats, 88 in number, on various diets, were exposed to 124 to 155 r of 200 KVP x rays every 2 weeks for 6 months or until death. Rabbits on well-balanced diet plus cod liver oil tolerated exposures relatively well but did not gain weight as rapidly during the period of x-ray exposures as they did before and after the exposure period. BA 5-16805.

525

THE CAUSE OF DEATH FROM RADIUM. A. James Larkin. Radiology 15, 296-302 (1930).

A description of clinical and histological changes in rabbits following whole body exposure to lethal doses of Ra (lethal dose delivered in 1 week). BA 5-16806.

526

EFFECT OF IRRADIATION ON THE HEARING APPARATUS. (Japanese, English Abstract by author).

in B A) Tetsusaburo Muta Dai Nihon Jibi Inkoka Kaiho 32, (1927)

Application of 100 9 mg of RaBr to guinea pig ear causes degenerative atrophy of nervus cochlearis Effect of radiation is greatest on nerve fibres, less on nerve ends, weakest on ganglion cells BA 5-16807.

527
FURTHER STUDIES ON THE SKIN ERYTHEMA WITH COMBINATIONS OF TWO TYPES OF RADIATION Edith H Quimby and George T Pack Radiology 15, 30-41 (1930)

When γ -rays and hard β -rays, γ rays and soft x rays, or γ -rays and hard x rays, are combined in equal parts, it requires 1/3 more radiation to produce a threshold erythema on human skin than for any of these types of radiation used alone BA 5-16808.

528
VARIOUS REACTIONS OF TISSUES TREATED WITH X-RAYS AS GOVERNED BY THE TIME FACTOR, AND THE RELATIONS OF BIOMETRIC DOSAGE TO THE X-RAY THERAPY OF MALIGNANT TUMORS (French) C Regaud and R Ferroux Z Krebsforsch 32, 10-26 (1930)

Testicular sterilization cannot be effected by a single dose of x rays sufficient to cause fatal skin necrosis Since skin effect is not cumulative while testicular effect is cumulative, complete destruction of seminal epithelium can be effected by repeated doses Authors endorse fractionation of dose in treatment of human cancers BA 5-16809.

529
X-RAY IRRADIATION AND THE PRODUCTION OF ANTIBODIES (Italian) Alessandro Vallabona Cong Ital Radiol Med, 8th Congr Florence May 14-16, 1928 Giuseppe Sambolino e Figli Genova, 1928, 16 p

Lethal doses of x ray caused slight increase in rate of agglutinin production in rabbits sub-lethal doses diminished production for 10 days after which the production remained constant until the 22nd day and then diminished again until it reached zero on the 60th day BA 5-16811.

530
INVESTIGATION OF A BIOLOGICAL PROTECTIVE SCREEN PART XI PROTECTIVE EFFECTS OF VARIOUS AMINES H Langendorff and R Koch Strahlentherapie 98, 245-54 (1955)

The authors report their experiments regarding the protective action of different amines against the damaging influence of radiations With the exclusion of tryptamine, all of the tested substances proved to be ineffective The authors further discuss certain methodical questions in connection with the performance of such experiments NSA 10-1995.

531
EFFECT OF X-RAYS ON MICROBIAL ANTIGENS (German) R Torikata and S H Uno Z Immunitatsforsch 65, 152-160 (1930)

Studies on impenin, a heat labile substance present in watery solutions of bacterial proteins As determined by phagocytosis experiments, impenin is destroyed by x rays BA 5-17559.

532
RADIATION AND GENETICS H J Muller Am Naturalist 64, 220-251 (1930)

A discussion of the effect of radiation in inducing changes in gross morphology of chromosomes and of the nature of point mutations Not more than 1/1000th of natural mutation rate accounted for by naturally occurring radiation BA 5-19312

533
THE EFFECTS OF X-RADIATION ON COTTON J W McKay and T H Goodspeed Science 71, 644 (1930)
Qualitative and quantitative changes in hereditary material of cotton produced by x-irradiation BA 5-19318.

534
AN ANALYSIS OF THE EFFECTS OF THE DIFFERENT RAYS OF RADIUM IN PRODUCING LETHAL MUTATIONS IN DROSOPHILA Frank Blair Hanson and Florence Heys Am Naturalist 63, 201-213 (1929) BA 5-19340.

535
THE TEMPERATURE COEFFICIENT OF THE ACTION OF ULTRA-VIOLET RAYS ON THE ASCARIS EGG (French) A Dognon and J C Tsang Compt rend soc biol 98, 22-24 (1928)

The temperature coefficient is considerably less for ultra-violet than for x rays BA 5-19595.

536
THE EFFECTS OF X-RAYS ON THE GALL BLADDERS EXPERIMENTAL PRODUCTION OF AN X-RAY CHOLECYSTITIS Julius Brams and Leo Darnbacher Radiology 13, 103-108 (1929)

Acute cholecystitis was produced in dogs by administration of x rays within dosage range used in therapeutic work Authors conclude that gall bladder epithelium is more radiosensitive than is neighboring gastro-intestinal epithelium BA 5-19619.

537
THE EFFECT OF X-RAYS ON THE VEGETATIVE NERVOUS SYSTEM (German) P Del Buono Strahlentherapie 34, 201-312 (1929)

Irradiation of hypophysis-thalamencephalon region caused leukocytosis, hypertension and hyperglycemia BA 5-19620.

538
ROENTGEN RAYS AND THE GRANULE STORING ACTIVITY OF THE RETICULO-ENDOTHELIAL SYSTEM (Italian) G Dellepiane Boll soc ital biol sper 5, 458-462 (1930).

Following x-ray irradiation of the hepatic region of rabbits the liver fixed less Pb than normally, the diminution being related to the dose of x rays used. BA 5-19622.

539
THE EFFECT OF RADIUM EMANATION I RADIUM EMANATION IN CEREBROSPINAL FLUID (German). Ernst Freund and Robert Loebel. Z. ges. phys. Therap. 39, 109-112 (1930).

The hematoencephalic barrier offers no hindrance to radon. (dogs, patients). BA 5-19623.

540
EFFECT OF ROENTGEN RAYS AND RADIUM ON THE LIFE DURATION OF SPERMATOOZOA. T Fuke. Jap. J. Obst. and Gyn. 13, 467-469 (1930).

Hanging drop preparations of epididymal fluid of rabbits was exposed to x rays for 1 to 30 min. (120 KV, 4 ma, focus distance 30 cm filtration 1 mm Al); other preparations exposed to RaBr. Younger cells showed greater effect; longer irradiation with smaller dose more effective than short exposure to high dose. BA 5-19624.

541
THE EFFECT OF X-RADIATION ON FRACTURE HEALING (German). Shuichi Fukase. Fortschr. Gebiete Röntgenstrahlen 41, 581-588 (1930).

Quality of callus improves with increasing x-ray doses up to 400 r beyond which it declines below normal. Quantity of callus is decreased in all dosage groups. BA 5-19625.

542
THE EFFECT OF GRENZ RAYS ON THE SKIN. HISTO-

LOGICAL STUDIES. (German). Karl Herxheimer and Erich Uhlmann. Arch. Dermatol. u. Syphilis 157, 467-482 (1929). BA 5-19627.

543

EXPERIMENTAL INVESTIGATIONS OF THE EFFECT OF FRACTIONATED X-RAY DOSES ON ASCARIS EGGS. (German). A. Kahistorf. Strahlentherapie 31, 199-206 (1929).

A higher % of anaerobic unhatched Ascaris eggs was damaged by repeated fractional radiation than by a single exposure to intense radiation. Impossible to injure all eggs even with doses of 20,000 r, some being highly resistant to radiation. BA 5-19630.

544

THE EFFECT OF GAMMA IRRADIATION ON CELL DIVISION IN TISSUE CULTURE IN VITRO. PART II. R. G. Cantl and F. G. Spear. Proc. Roy. Soc. (London) B105, 93-98 (1929).

Hanging drop preparations from choroid and sclerotic of chick embryo were exposed to γ rays of Ra. Exposures longer than 1-1/2 min. caused a decrease in number of mitotic cells, with a return to normal after a period of apparently increased mitotic activity, (increased number of cells in mitosis). After 30 min. exposure, normal mitotic rate was not regained. Apparent increase in mitotic activity following smaller doses may represent delay in completing mitosis. BA 5-19621.

545

THE MUTAGENIC EFFECT OF RADIUM AND ROENTGEN RADIATION. (German). H. Stubbe. Strahlentherapie 37, 124-136 (1930).

Survival of 20 to 50% of irradiated Antirrhinum seeds is reported in contrast to 80% of non-irradiated seeds. Vitality of 2-3 wk. old seedlings similarly reduced. Surviving plants showed decreased fertility, and increased number of detrimental mutations in F_1 generation. All wave lengths and all quantities of radiation produced like results. BA 5-19323.

546

INVESTIGATIONS OF SKIN TOLERANCE TO PROTRACTED FRACTIONAL ROENTGEN IRRADIATION. (German) A. Kahlstorf. Strahlentherapie 38, 499-520 (1930).

Tolerance of skin of back of rabbits to x radiation was greatly increased by fractionation of dose, 4 epilation doses being tolerated without epilation if doses were administered fractionally over a protracted period. Similar effects noted in human skin. BA 5-19631.

547

FURTHER STUDIES OF THE EFFECT OF RADIATION ON BLOOD CHOLESTEROL IN MALIGNANT DISEASE Walter L. Mattick and Melvin C. Reinhard. J. Cancer Research 14, 426-433 (1930).

Cholesterol content of blood was determined before and every half hr for 3 hr after therapeutic irradiation of 25 cancer patients. Authors conclude that high voltage x or γ radiation causes a decrease in blood cholesterol concentration. BA 6-19636.

548

PHYSICAL BASIS OF RADIUM EMANATION THERAPY. (German). Stefan Meyer. Sitzber. Akad. Wiss. Wien. Math.-naturw. Kl. Abt. 2a 138, 557-580 (1929).

Experiments gave no ground for assumption that radon is absorbed through the skin (in baths) in amounts comparable to that inhaled. BA 5-19637.

549

THE RELATION BETWEEN DIVISION RATE AND THE RADIOSENSITIVITY OF CELLS. Charles Packard. J. Cancer Research 14, 359-369 (1930).

Susceptibility of Drosophila eggs to x rays rose as the rate of division at the time of exposure increased, but

did not parallel the rate of increase. Injury was proportional, secondarily, to cell activity after exposure. BA 5-19638.

550

THE SENSITIZING EFFECT OF HEMATOPORPHYRINS FOR X RAYS. (German). N. A. Podkaminsky. Strahlentherapie 38, 98-102 (1930).

Injection of hematoporphyrin followed by exposure to x rays leads to subacute and chronic forms of "Roentgen disease" analogous to those seen in some forms of "light disease." BA 5-19639.

551

THE ENERGY ABSORBED IN TISSUES IN RADIUM AND ROENTGEN RAY THERAPY. (German). E. Stahel. Strahlentherapie 33, 296-321 (1929).

Measured energy absorption by calorimetry and found amount of energy (in ergs) required to produce a certain biological effect is considerably smaller in the case of x rays than in the case of γ -rays. Also, local treatments found to deliver more energy than distant treatments. BA 5-19640

552

RADIOBIOLOGICAL STUDIES OF ASCARIS EGGS. (German). Adolf Zuppinger. Strahlentherapie 28, 639-758 (1929).

Biological effect varies with intensity of radiation, a greater effect being produced by rays of shorter wave length. Fractional doses distributed over 10 days have twice the biological effect of the total dose in one application. BA 5-19642.

553

THE EFFECT OF ROENTGEN IRRADIATION ON THE HEMATOLOGICAL PICTURE OF SPLENECTOMIZED ANIMALS. (Italian). Goffredo Froia. Pathologica 21, 313-318 (1929).

The effect of x rays plus splenectomy on the blood picture is additive. Arneth count shifts to right after splenectomy, shifts further right after irradiation. Young erythrocytes appear in peripheral blood. BA 5-19701.

554

STUDY OF THE MICROBIAL FLORA OF EPI-THELIOMAS OF THE UTERINE NECK: ITS IMPORTANCE IN RADIATION THERAPY. (French). René Vincent and Octavé Monod. Gynéc. et obstet. 20, 709-719 (1929).

In general, infection increased during treatment. 28 of a total of 116 cases treated presenting infectious complications during treatment, the complications not being attributable to any one organism. The hemolytic streptococcus was the most frequently encountered pathogenic agent. BA 5-20769.

555

EFFECTS OF TUBES OF RADIUM EMANATION ON THE DEVELOPMENT OF SOME PLANT MICROORGANISMS. (Italian). Vincenzo Rivera. Boll. regia staz. patol. vegetale (Roma) 9, 241-247 (1929).

Describes zones of growth inhibition around tubes of nitron (radium emanation) on agar cultures of *B. tumefaciens*, *B. fluorescens* and *P. crustaceum*. BA 5-22812.

556

THE BIOLOGICAL EFFECT OF X RAYS OF DIFFERENT WAVE LENGTHS ON VICIA FAVA EQUINA. (Spanish). S. A. Saralegui. Prensa med argentina 16, 821-837 (1929). BA 5-22943.

557

ENZYMATIC HYDROLYSIS OF ACETYLCHOLINE AND OTHER ESTERS BY TISSUES FROM X-IRRADIATED ANIMALS. J. Doull and O. K. Cummings. Federation Proc. 13, 349 (1954).

Measurements of pseudocholinesterase and true cholinesterase activity of tissues from x-irradiated animals indicated that although lethal doses of x-ray had no effect on the true cholinesterase of any of the tissues studied, lethal and sublethal doses produced marked changes in the pseudocholinesterase activity of liver, ileum, spleen, and thymus glands of rats. (from authors' summary).

558
PIGMENT (MELANIN) STUDIES OF THE HUMAN SKIN AFTER APPLICATION OF THORIUM X, WITH SPECIAL REFERENCE TO THE ORIGIN AND FUNCTION OF DENDRITIC CELLS. Samuel M. Peck. Arch. Dermatol. and Syphilol. 21, 916-956 (1930).

Histologic changes resemble those following X radiation. BA 5-23609.

559
THE EFFECTS OF ROENTGEN RAYS ON THE TRANS-PLANTABILITY OF MOUSE CARCINOMA. (German). W. Caspari. Deut. Z. Chir. 227, 85-97 (1930). BA 5-23668.

560
RADIATION SENSITIZATION, WITH CASE REPORT. Vernor M. Moore. Radiology 15, 262-267 (1930).

Postoperative Ra therapy for carcinoma of left breast was followed in 1 month by collapse, pain about heart, cyanosis, edema of arms, erythema, fever. Recovery was complete, but symptoms recurred after subsequent smaller dose of Ra. BA 5-23897.

561
HEMATOLOGICAL CHANGES DUE TO IRRADIATION WITH BUCKY RAYS. (German). Alexander Böhm. Strahlentherapie 35, 592-596 (1930).

Leukopenia and left shift in differential WBC count followed irradiation. Author attributes these effects to stimulation of the parasympathetic nervous system. BA 5-25461.

562
GLUTATHIONE IN PLANT TISSUES. Virginia B. White. Science 71, 74-76 (1930).

Glutathione occurs throughout plant kingdom (except in algae) in meristematic regions of stems and roots, in reproductive organs and in phloem of angiosperms. Grains treated with x rays for short time show increased glutathione (increased color in sodium nitroprusside test) after longer exposure, color changes in quality; after still longer exposure color reaction is very faint. BA 5-27046.

563
SOME EFFECTS OF CATHODE RAYS ON SEEDS. Warren F. Busse and Farrington Daniels. Am. Jour. Bot. 16, 139-153 (1929).

Treatment of seed with cathode rays injures the embryos, causing dwarfing and one or more local injuries in the seedlings. Nearly all plants show injury to main root, and injury to one side of the hypocotyl. BA 5-27183.

564
THE RADIOSENSITIVITY OF ACTINOMYCES. (German) Edmondo Ingber. Strahlentherapie 28, 581-588 (1929).

Pure cultures of *A. bovis* showed retardation of growth rate after dose of 10,575 mgm/hr of MsTh. When source of radiation was removed, growth rate returned to normal BA 5-27213.

565
THE EFFECT OF IRRADIATION ON TUMORS IN RELATION TO INTENSITY AND AMITOGENETIC DOSE. (Italian). Luigi Cappelli. Policlinico. II (Rome). Sez. prat. 37, 1053-1057 (1930).

Proposes amitogenetic action of radiation on tumor cells be used as criterion of dosage. BA 5-27351.

566
EXPERIMENTAL INVESTIGATION OF THE EFFECT OF ROENTGEN RAYS ON THE BONE MARROW. II. (German). Annibale Casati. Strahlentherapie 38, 315-321 (1930).

Normal bone marrow of young rabbits 50 days after first irradiation with 1600 r for 32 hr shows complete development of regeneration process. BA 5-27352.

567
THE PHENOMENON OF LOCAL HAIR HYPERTROPHY FOLLOWING ROENTGEN EPILATION. (German). Marie Dostrowsky. Arch. Dermatol. u. Syphilis. 162, 739-761 (1931).

In 50 of 1970 school children given x-ray treatment for Trichophyton of scalp, areas of atypical new growth appeared in which hair was thicker, coarser, more strongly pigmented. BA 5-27355.

568
EXPERIMENTAL INVESTIGATION OF HEMATOLOGIC DAMAGE DUE TO ROENTGEN RAYS ADMINISTERED BY OLD TECHNIC AND DUE TO RAYS FROM METALIX TUBES. (German). Walter Fürst. Strahlentherapie 37, 659-692 (1930).

Absence of avoidable and undesirable rays in metalix tubes verified in observations on patients. Blood injury and general injury are greatly decreased when undesirable rays are eliminated. BA 5-27356.

569
RADIOGENIC MICROCEPHALY A SURVEY OF 19 RECORDED CASES WITH SPECIAL REFERENCE TO OPHTHALMIC DEFECTS. Leopold Goldstein. Arch. Neurol. u. Psychiat. 24, 102-115 (1930).

Records of 19 microcephalic feebleminded children, irradiated in utero were studied with special reference to ophthalmic defects. BA 5-27357.

570
LUNG CHANGES IN EXPERIMENTAL ROENTGEN IRRADIATION. (German). M. Lüdin and A. Werthmann. Strahlentherapie 38, 684-710 (1930).

Rabbits received local x irradiation of chest (160 KV, 2.3 ma., 8 mm Al filter) to a field 5 x 5 cm or 12 x 12 cm. Changes included destruction of alveolar epithelium, edema of lung, overgrowth of bronchial mucous membrane, autonomous growth of bronchial epithelium with cell picture similar to carcinoma. BA 5-27361.

571
THE EFFECT OF RADIOACTIVE RADIATIONS UPON EUGLENA. W. F. G. Swann and C. del Rosario. J. Franklin Inst. 211, 303-317 (1931).

When exposed to α radiation from Ra emanation dissolved in the media, the death rate of Euglena cells was proportional to the strength of the dissolved emanation and to the number of live Euglena cells present. BA 5-27363.

572
MODIFICATIONS OF THE CAPILLARIES UNDER X-RAY IRRADIATION. (Italian). Luigi Turano. Arch. Radiol. Nap. 6, 349-363 (1930).

Observations by Müller's capillaroscopy showed "aneurysmal" capillaries in radiodermatitis. Author believes response to radiation is determined by vegetative nervous system. BA 5-27364.

573
A BIOLOGICAL CALIBRATION OF AN X-RAY DOSIMETER. Charles Packard. J. Cancer Research 14, 134-143 (1930).

A commercial dosimeter was compared with biological method (*Drosophila* eggs) of measuring intensity of x-ray beams. Dosimeter found to be accurate for x rays of 200 to 100 KV. BA 5-27447.

574

EXPERIMENTAL INVESTIGATION OF BLOOD PLATELETS. (German). Shinzo Otsuka. Okayama Igakkai Zasshi 39, No. 7. (1927).

Platelets are present in increased numbers in peripheral blood of rabbits after splenectomy and after 1/2 H.E.D. of x rays. BA 5-27523.

575

HISTOLOGIC STUDIES OF HUMAN SKIN IRRADIATED WITH SUB-ERYTHEMA DOSES OF X-RAY. (Italian). Giuseppe Bertaccini. Giorn. ital. dermatol. e sifilol. 71, 593-613 (1930).

A description of histological changes following x irradiation of 8 apparently healthy areas in 5 dermatologic patients is presented. Changes were perivascular and perifollicular infiltrates, and dilatation and congestion of small vessels. BA 5-28049.

576

EXPERIMENTAL RENAL DISEASE PRODUCED BY X-RAYS. PRODUCTION AND FUNCTIONAL STUDY OF A STANDARDIZED LESION. Adolph Bolliger and M. S. S. Earlam. Med. J. Australia 1, 340-355(1930).

A renal lesion (a lipid nephrosis preceded by nephritis) of fairly constant intensity causing death in 40 days was produced consistently in dogs from which the opposite kidney had been removed. BA 5-28154.

577

THE BACTERICIDAL ACTION OF ROENTGEN RAYS. Hirsh W. Sulkowitch. Bull. Johns Hopkins Hosp. 44, 439-442 (1929). BA 5-28636.

578

EXPERIMENTAL CANCER IN PLANTS AND THE THEORY OF LAKHOVSKY. (French). I. Gheorghiu. Compt. rend. soc. biol. 106, 754-756 (1931).

Over 50 plants were inoculated with *B. tumefaciens*; part of these then exposed to rays from radio-cellulo-oscillator of Lakhovsky. Only 3 permanent recoveries resulted and these were thought to be due to effect of x rays. BA 6-81.

579

INFLUENCE OF RADIUM ON THE DEVELOPMENT OF CRESS SEEDLINGS (*LEPIDIUM SATIVUM*). (In French). Mina Engus. Compt. rend. soc. biol. III. 1094 (1932).

Ra rays caused development of root malformations in *Lepidium sativum* seedlings. CA 27-1379.

580

EXPERIMENTAL STUDIES ON TISSUE REACTION TO RADIATION USING A SEGMENT OF A GROWING MOUSE TAIL AS A BIOLOGICAL INDICATOR. Halsey J. Bagg and C. Robert Halter. Am. J. Roentgenol. 24, 640-647 (1930).

A segment of 9 to 12 mm² of tissue of tail of growing mouse may be used as an indicator of radiation effects, the magnitude of effect being measured in terms of epilation, retardation of tail growth, or spontaneous amputation. BA 6-296.

581

PRODUCTION OF ION CLUSTERS BY X-RAYS. U. Fano. Nature 151, 698 (1943).

X-ray-induced chromatid breaks in Tradescantia microspores are due to simultaneous occurrence of about seventeen ionizations concentrated in a chromatid. Study was made to determine how many clusters consisting of a given number of ionizations are produced per unit volume and per roentgen. Conclusion chromatid breakage requires a substantial number of ionizations occurring at a single time and place.

582

THE BIOLOGICAL EFFECT OF RADIATION. IV. REINFORCEMENT OF ROENTGEN RAY EFFECT DUE TO

SECONDARY RAYS. (German). Ph. Ellinger and E. Gruhn. Strahlentherapie 38, 58-97 (1930).

B. prodigiosus cultures begin to be injured by dose of over 500 r, are killed faster as dose is increased between 1000 r and 3000 r. Some survive 15,000 r. By using secondary rays cultures may be killed rapidly, complete sterilization being possible with a dose of 300 r. Killing effect of secondary rays increases with increasing wave length of primary rays. Bactericidal action of secondary rays increases with atomic number of secondary rays. Bactericidally active rays are almost entirely absorbed by 4 to 5 mm of air. BA 6-299.

583

EXPERIMENTAL INVESTIGATION OF THE EFFECT OF X-RAYS ON CALLUS FORMATION. (German). Shunichi Fukase. Virchow's Arch. path. Anat. u Physiol. 277, 69-92 (1930).

Both fibulae broken (subcutaneously) in 84 young rabbits and the fracture on one side was subsequently x-irradiated on 4 successive days. Following heavy doses (1600 r) bone formation was completely suspended for several weeks and healing delayed. After moderate doses (400 r) amount of callus was decreased, but healing occurred faster on radiated side. Microscopic and roentgenologic changes are described. BA 6-300.

584

THE EFFECT OF ROENTGEN RAYS ON THE ENERGY RELEASING REACTIONS OF GROWING TISSUES. (German). R. Hubert. Pflüger's Arch. ges. Physiol. 223, 335-350 (1929).

Glycolysis of growing and not growing tissue of chick embryos were determined by Warburg manometric method. Glycolysis was found to be far more sensitive than other energy-providing reactions examined. Ability to grow was damaged earlier than glycolysis. BA 6-302.

585

RADIOBIOLOGICAL INVESTIGATION OF THE GERM CELLS OF THE SEA URCHIN. (German). H. Langendorf and M. Langendorf. Strahlentherapie 40, 97-110 (1931).

The action was tested of 50, 100, 200, 300, or 400 r units administered to egg or sperm of *Psammechinus miliaris* either before or after fertilization. Number of injured larvae increased with increase in dose, the curve being exponential in type. Sperm were more radio-sensitive than egg. Sensitivity of fertilized egg was greatest shortly after fertilization, decreasing to minimum during metaphase, beginning to increase again with anaphase. BA 6-303.

586

STUDY OF RADIOSENSIBILISATION OF NORMAL AND TUMOR TISSUE. (French). J. Maisin and E. Picard. Rev. belge. sci. med. 2, 328-335 (1930).

One group of 5 tumor-bearing mice was injected twice a week for 6 weeks with colloidal U-Th²³⁰ mixture. This group as well as a second non-injected group of 5 mice received 3 exposures to 1500 r during the 2nd week of the experiment. Tumors generally resorbed within 3 weeks in injected mice. Uninjected mice showed temporary check then resumption of tumor development BA 6-304.

587

ULTRA SOFT X-RAYS. (French). J. Meyer and J. Saidman. Bull. soc. française dermatol. et syphilis. 1929, 1251-54(1929).

Rays of 4-8 Å units are almost entirely absorbed by the epidermis. A layer of 34 μ absorbs half the energy. Cutaneous vessels are not affected when these rays are used in therapy. Paper includes a summary of biologic properties and therapeutic uses of ultra soft rays, Grenz rays, ordinary rays, and ultraviolet. BA 6-307.

588

THE EFFECT OF CATHODE RAYS ON RESTING CELLS AND ON KARYOKINESIS IN SALAMANDRA MACULOSA. (German). W. E. Pauli and G. Politzer. *Z. wiss. Biol. Abt. B. Zr. Zellforsch. u. mikroskop. Anat.* 8, 404-424 (1929).

After radiation of cornea of larvae of *S. maculosa* with cathode rays 3 groups of changes appeared: necrotic changes of resting cells, and karyokinetic changes of 2 types, one characteristic of cathode rays. BA 6-309.

589

THE EFFECT OF X RAYS ON THE THYROID AND PARATHYROID GLANDS. O. M. Walters, B. J. Anson and A. C. Ivy. *Radiology* 16, 52-58 (1931).

Repeated exposure of thyroid to 385 r units at intervals varying from 7 to 14 days caused thyroid hyperplasia (4 of 8 dogs) and hyperplasia of parathyroids. In spite of parathyroid hyperplasia, a gradual slight decrease in blood Ca occurred. BA 6-321.

590

THE BONE MARROW UNDER THE ACTION OF X RAYS. (Italian). L. Siciliano and C. Banci-Buonamici. *Arch. Radiol. Nap.* 6, 1108-1136 (1930).

Authors describe histological changes in shielded marrow and consider these to be indirect effects of radiation. Also noted that when circulation of a limb was interrupted during irradiation, both local and indirect effects were decreased, presumably due to depression of release of toxic products from the irradiated limb. BA 6-317.

591

X-RAY INJURY OF TESTES, OVARY AND EMBRYO. (German). Hermann Wintz. *Monatsschr. Geburtsh. u. Gyn.* 78, 428-449 (1928).

Effects of radiation on testes, ovaries and embryos are reviewed. Degeneration of spermatogonia and depopulation of seminal canal are reparable but destruction of interstitial cells is not. Effect of small doses on interstitial cells is cumulative. Dose of 34% E.D. destroys ovulation and ovarian endocrine function. BA 6-322.

592

CHEMICAL STUDIES ON AUTOMATIN. I. (French). H. G. K. Westenbrink and Ph. Aarons. *Arch. néerl. physiol.* 14, 394-406 (1929).

A heart in which contraction has been stopped by perfusion with K free Ringer solution can contract again under influence of Ra emanations. Authors conclude that mechanism involved is the liberation of automatin, a substance which is soluble in H₂O and alcohol, dialyzable through collodion membrane, not destroyed by HCl, HNO₃, or boiling NaOH: not precipitated by AgNO₃, not absorbed by kaolin. BA 6-1140.

593

AN EXPERIMENTAL STUDY OF THE OPSONINS OF THE BLOOD. II. EFFECT OF IRRADIATION WITH ULTRAVIOLET AND WITH X RAYS. E. W. Blanchard. *Physiol. Zool.* 4, 316-323 (1931).

Opsonin of normal cat serum was almost completely inactivated by 30 min exposure to ultraviolet or by a 45 min exposure to x rays. Shorter exposure decreased the opsonic activity of the serum. BA 6-1403.

594

THE DELAYED LETHAL EFFECT OF RADIUM ON TISSUE CULTURES IN VITRO. COMPARISON OF CONTINUOUS AND SPACED RADIATION. F. G. Spear. *Proc. Roy. Soc. (London)* B 108, 190-195 (1931).

Cultures of a 8 to 9 day choroid or sclerotic of fowl embryos was exposed to continuous (6 hr) or discontinuous (1 hr per day for 6 days) irradiation with γ rays from 300

mgm Ra, 0.5 cm distance. Subcultures were made every 48 hr after exposure. Lethal effect was delayed to about same extent in both groups. BA 6-318.

595

STUDIES OF VERY SOFT ROENTGEN RAYS (SO-CALLED GRENZ RAYS). (German). Boris Rajewsky and Gerhard Gabriel. *Strahlentherapie* 30, 308-333 (1928).

Author's thesis is that Bucky's soft x-rays have no special properties not explainable by absorption coefficients. Very soft rays absorbed in surface layers affect the capillaries. BA 6-313.

596

INTRAVENOUS ADMINISTRATION OF CARBON DUST AND TRYPAN BLUE LOADED WITH RADON TO RATS WITH TUMORS. (Italian). Giuseppe Vecchi. *Arch. sci. med.* 54, 844-850 (1930). BA 6-319.

597

STUDIES OF THE EFFECT OF ROENTGEN RAYS ON THE HEALING OF WOUNDS. I. THE BEHAVIOR OF SKIN WOUNDS IN RATS UNDER PRE- OR POST-OPERATIVE IRRADIATION. Ernst A. Pohle, Gorton Ritchie, and Cecil S. Wright. *Radiology* 16, 445-460 (1931).

Eighty white rats were exposed to x rays (100 kv, 2.0 mm Al, or 140 kv, 0.25 mm Cu + 1 mm Al) preceding or following incisions in the skin. Half of each incision served as control. Single dose of 1000 r given 1 to 30 days pre-exposure did not influence healing. Single doses of 1000 r immediately, 24 hr, and 48 hr after incisions were made, retarded healing but did not alter final result. BA 6-311.

598

MORPHOLOGICAL ALTERATIONS OF BLOOD IN RATS TREATED WITH INTRAVENOUSLY ADMINISTERED RADON. (Italian). Giuseppe Vecchi and Sergio Tenef. *Arch. Sci. med.* 54, 851-860 (1930).

Diminution of erythrocytes and leukocytes. BA 6-320.

599

THE EFFECT OF ROENTGEN RADIATION ON BLOOD PRESSURE FLUCTUATION, AND ITS CLINICAL SIGNIFICANCE. (German). Hans Pausdorf and W. Nell. *Strahlentherapie* 38, 40-53 (1930).

Delayed blood pressure fall after x-ray exposure is an expression of general reaction caused by cell decay and increased irritability of vasomotor apparatus. It is important in prognosis and in determining time for re-irradiation. BA 6-310.

600

ON THE INFLUENCE OF RADIUM UPON THE BLOOD. (Japanese with English summary). K. Saito. *J. Orient. Med. Dairen* 14, (1931).

Rabbits were irradiated for 1 hr with 100, 50, 20, or 10 mgm Ra and examined 24, 48, 72, and 120 hr after exposure. RBC and Hgb were markedly depressed at 24 and 48 hr, began to increase at 72 hr, were normal in 120 hr. WBC increased at 24 to 48 hr, then dropped to subnormal levels, generally returned to normal in 120 hr. BA 6-314.

601

STUDIES ON THE BIOLOGICAL EFFECT OF ROENTGEN RAYS. EFFECT OF ROENTGEN RAYS ON THE ELECTROLYTES POTASSIUM AND CALCIUM IN HUMAN BLOOD SERUM. (German). G. Schaal, M. A. Gruschetskaja, and E. J. Zwillichowskaja. *Strahlentherapie* 40, 111-124 (1931).

Twenty patients were studied before and after irradiation with varying doses of x rays. In some, a shift in K/Ca quotient occurred after irradiation. During first few post-exposure days, shift favored K, later favored Ca. BA 6-315.

602

THE EFFECT OF X-RAY UPON BACTERIOPHAGE AND UPON THE BACTERIAL ORGANISM. T. D. Beckwith, A. R. Olson, and E. J. Rose. *Proc. Soc. Exp. Biol. and Med.* 27, 285-286 (1930).

In 3 of 7 strains of *B. coli* bacteriophage in phase of logarithmic growth, 30 min. exposure to x rays (14 inch target distance, 75 kv) resulted in reduced effectiveness towards the respective strains of bacteria. BA 6-4409.

603

ROENTGEN RAY STUDIES WITH *DROSOPHILA FUNEBRIS*. (German). H. A. Timofeev-Ressovskii. *Naturwissenschaften* 18, 431-434 (1930).

F₁ of 7083 flies from 380 matings of normal females with x-rayed males (dosage 3600 to 4800 r), F₂ of 58,375 flies and F₃ of about the same number were examined. 1137 cultures gave 84 sex-linked lethals and no visible mutations from 1988 control cultures. BA 6-3272.

604

THE BIOLOGICAL EFFECTIVENESS OF ROENTGEN RAYS OF DIFFERENT QUALITIES, DOSES MEASURED IN R UNITS. R. Glocker, E. Hayer, and O. Jüngling. *Strahlentherapie* 32, 1-38 (1929).

X rays of 80 kv (fibre filter) differed slightly from 180 kv x rays (0.7 mm Cu filter). Softer rays were about 15% more effective in producing erythema and retarding growth of bean seedlings when dose was small. No detectable difference when larger doses of the 2 were compared. BA 6-3609.

605

EXPERIMENTAL INVESTIGATION OF THE QUESTION OF THE ORIGIN OF CONGENITAL ANOMALIES OF THE EYE. (German). Hugo Gasteiger and Ko Hidano. *Graefe's Arch. Ophthalmol.* 119, 733-754 (1928).

Adrenalectomy or irradiation of parents in rats and mice resulted in some offspring with eye anomalies although the stock from which the parents came had no history of such defects. BA 6-5419.

606

THE EFFECT OF X-RADIATION ON THE SPERMATOGENESIS OF *ABRASAS GROSSULARIATA*. J. Brontë Gatenby, R. N. Mukerji, and Sylvia B. Wigoder. *Proc. Roy. Soc. (London)* B 105, 446-469 (1929).

Larvae of *Callimorpha jacobae* were killed 4 days post-exposure by dose corresponding to 12x human erythema dose (85 kv, 4 ma, no filter, 23 cm focal skin distance.) Four and one half erythema doses hastened pupation in both *C. jacobae* and *A. grossulariata*. Pupation and emergence were normal after 2-1/2 erythema doses. In parasitized *Pieris brassicae* caterpillars, x radiation caused larvae of *Apanteles glomeratus* to come out of the caterpillars. Irradiation killed most spermatocytes in growth stage in testes of *A. grossulariata* within 5 hr. Spermatogonia and spermatids were less sensitive. BA 6-3608.

607

PARTIAL INJURY TO THE GERM PLASM DUE TO RADIUM AND ROENTGEN RAYS. (German). P. Hertwig. *Handbuch der Vererbungswissenschaft* Vol. 3, No. 1, of Gebrüder Borntraeger: Berlin (1927). BA 5-16447.

608

EFFECTS OF ROENTGEN RAYS ON THE DEVELOPMENT OF THE EMBRYO OF THE HEN. T. Yamamoto. *Japan Med. World* 9, 45-52 (1929).

Roentgen irradiation prior to or in early stages of incubation had no effect on development of embryo. Resistance to irradiation was lowest in 32nd hr of incubation, gradually increased to 241st hr. No abnormal post-embryonic effects observed in birds hatched, reared and allowed to reproduce. BA 6-2340.

609

THE BIOLOGICAL EFFECT OF HIGH VOLTAGE X-RAYS. Charles Packard and C. C. Lauritsen. *Science* 73, 321-322 (1931).

Quality of beam had no effect, intensity was deciding factor when beams of hard (0.20 Å) medium (0.50 Å), and soft (0.70 Å) x rays were delivered at constant potential (50-180 kv) to *Drosophila* eggs. Identity of effect per r unit was further demonstrated on mouse tumor. BA 6-3613.

610

THE INCREASED BACTERICIDAL EFFECT OF INORGANIC COMPOUNDS IN THE PRESENCE OF X-RAYS. Robert J. Norris. *Bull. Basic Sci. Research (Univ. Cincinnati)* 3, 21-36 (1931). BA 6-3612.

611

THE HISTOLOGY OF MYELOID LEUKEMIA TREATED WITH ROENTGEN RAYS. (German). Franz Freund. *Virchow's Arch. pathol. Anat. u. Physiol.* 269, 501-519 (1928).

Section of leukemoid nodule after irradiation shows transformation of leukocytes into connective tissue cells. BA 6-4103.

612

THE EFFECT OF X-RAYS ON HAIR. Sidney Russ. *Nature (London)* 127, 894 (1931).

Hair fell out of black rat at points exposed to x-rays (approximately 150 kv), and was replaced by thinner, slightly curly white hair. BA 6-3614.

613

BLOOD CLOTTING STUDIES FOLLOWING INTERNAL RADIATION. J. H. Ferguson, G. A. Andrews and M. Brucer. *Federation Proc.* 11, 46 (1952).

'Prothrombin consumption tests' by both the 2 stage and 1 stage methods, whole blood clotting times, tests for circulatory anti-coagulant were performed on dogs receiving intravenous radio gold (Au¹⁹⁸). The prothrombin consumption tests gave evidence of radiation injury to this system. (from authors' summary).

614

ROENTGEN RAY SENSITIVITY OF THE SEVERAL PARTS OF THE RABBIT EYE. (German). Wilhelm Rohrschneider. *Graefe's Arch. Ophthalmol.* 122, 383-390 (1929).

Effects on conjunctiva, cornea and lens vary with size of dose. BA 6-3942.

615

QUANTITATIVE STUDIES ON THE LETHAL ACTION OF X-RAYS UPON CERTAIN INSECTS. Kiyooki Koidsumi. *J. Soc. Trop. Agr.* 2, 243-263 (1930).

Dacus cucurbitae Coq. and *D. dorsalis* Hendel can be killed by certain doses of x rays in any stage of life cycle. Resistance to x rays increases as development proceeds from egg to full grown larva, falls after beginning of pupation, then increases until emergence of adult. Author believes radiobiological phenomena to be subject to general photochemical reaction. BA 6-3610.

616

THE INDUCTION OF CHROMOSOMAL ABERRATIONS BY OXYGEN (Abstract). Alan D. Conger and L. M. Fairchild. (Oak Ridge National Lab.) (nd). 1p. (AECU-1697). *Genetics* 36, 347-8 (1951).

Treatment of dry pollen grains of *Tradescantia* with oxygen produces chromosomal aberrations which are identical with those found after irradiation with x or γ rays. Oxygen-treated pollen had aberration frequencies equivalent to that produced by about 600 r of x rays in air. Exposure of oxygen treated pollen to only 2 r of γ rays caused fragment frequency about equal to that expected from 1000 r of γ rays in air. NSA 6-4.

617

THE THEORY OF RATE PROCESSES AND GENE MUTA-

TION. W. D. McElroy and C. P. Swanson. (Johns Hopkins Univ.) (nd). 42p. (AECU-1713). Quart. Rev. Biol. 26, 348-63 (1951). NSA 6-6.

618

PRE-PROTECTION OF MICE AGAINST X-IRRADIATION MORTALITY BY SODIUM NITRITE (TECHNICAL). V. P. Bond, L. J. Cole, and M. C. Fishler. (Naval Radiological Defense Lab.) Sept. 21, 1951. 14p. (AD-331(B)).

Pre-irradiation intraperitoneal injection of 100-125 mgm/kg doses of NaNO_2 reduced the mortality in a group of mice receiving 600 or 750 r single dose whole body exposure to x ray. Less marked protection was observed with doses of 62 mgm/kg. It is suggested that nitrite protection may be mediated via its effect on catalase activity. NSA 6-23.

619

THE OXYGEN EFFECT OF X-RAY-INDUCED CHROMATID ABERRATIONS IN TRADESCANTIA MICROSPORES.

Herbert Parkes Rile, Norman H. Giles, Jr., and Alvin V. Beatty. (Oak Ridge National Lab.) (nd). 1p. (AECU-1685). Genetics 86, 572-3 (1951).

There is a linear relationship between aberration frequency and dose obtained with or without O_2 . Aberration frequencies are higher in O_2 . Magnitude of oxygen effect is greater for isochromatid types than for chromatid types (2.6 vs. 1.4). For equivalent dosages, chromatid interchanges are almost 4X as frequent in O_2 as in He. NSA 6-24.

620

ALBUMIN EXCHANGE BETWEEN BLOOD AND LYMPH COMPARTMENTS AND ESTIMATION OF LYMPH VOLUME (abstract). R. H. Storey, M. C. Woods, and J. Furth. (Oak Ridge National Lab.) (nd). 1p. (AECU-1691).

In normal dogs, lymph volume is calculated to be about 80% of plasma volume. In massively x rayed dogs the lymph volume is highly variable. Metabolism rate of ^{131}I labeled albumin is approximately 42% in 24 hours in normal dogs, is much reduced in dogs 4-14 days post irradiation. Authors suggest findings indicate increased capillary permeability in x rayed dogs. NSA 6-25.

621

THE RELATION BETWEEN THE EFFECTS OF TEMPERATURE AND OF OXYGEN ON THE FREQUENCY OF X-RAY-INDUCED CHROMOSOME ABERRATIONS IN TRADESCANTIA MICROSPORES (abstract). Norman H. Giles, Alvin V. Beatty, and Herbert Parks Rile. (Oak Ridge National Lab.) (nd). 1p. (AECU-1695). Genetics 36, 552-3 (1951).

Increased yield of aberrations at low temperatures cannot be attributed entirely to increased O_2 solubility. In absence of O_2 , yield of aberrations is higher at high than at low temperatures. In presence of O_2 , yield is higher at low temperatures. NSA 6-26.

622

EFFECTS OF INFRARED IRRADIATION ON THE FREQUENCY OF X- AND GAMMA-RAY-INDUCED CHROMOSOMAL ABERRATIONS IN TRADESCANTIA POLLEN TUBES (abstract). J. S. Kirby-Smith. (Oak Ridge National Lab.) (nd). 1p. (AECU-1696). Genetics 36, 558-9 (1951).

No significant difference in the aberration frequency, including interchanges, observed between material treated with x or γ rays alone and material treated with near infra-red immediately pre- or post-exposure to x rays or γ rays. NSA 6-27.

623

EFFECTS OF INJECTED RADIUM ON ALKALINE PHOSPHATASE ACTIVITY OF BONE AND TISSUES.

William P. Norris and Stanton H. Cohn. (Argonne Nation-

al Lab.) Oct. 1951. 22p. (AECU-1703; UAC-451). J. Biol. Chem. 196, 255-64 (1952).

Bone deposited radium causes significant reduction of alkaline phosphatase of bone; not of soft tissues. 1 to 10 rep/hr produces reduction in alkaline phosphatase (bone) within 24 hrs in vivo. In vitro, 10,000 r dose (x rays or radium) to serum and bone homogenates produced no change in phosphatase activity. NSA 6-28.

624

THE EFFECT OF X RADIATION ON THE ADAPTIVE FORMATION OF FORMIC HYDROGENLYASE IN *ESCHERICHIA COLI* (abstract). Daniel Billen and Herman C. Lichstein. (Oak Ridge National Lab.) (nd). 1p. (AECU-1705). J. Bacteriol. 63, 533-5 (1952).

X-irradiation of resting cell suspensions of *E. coli* with doses of 60,000 r or greater, prevents completely the ability to synthesize formic hydrogenlyase, while having no effect on preformed hydrogenlyase activity. NSA 6-29.

625

CHANGES IN THE CARDIOVASCULAR SYSTEM FOLLOWING TOTAL BODY X-IRRADIATION. W. B. Armstrong and W. O. Carter. Federation Proc. 15, 5 (1956).

A lethal dose (700 r) of irradiation to rats was followed by increased venous pressures two hours to four days following exposure. There was also evidence of a decrease in potassium and DNA concentrations.

626

THYROID RESPONSE TO TOTAL-BODY X-IRRADIATION. A. L. Botkin, E. H. Praytor, Mary E. Austing, and J. Hensen. (Army Medical Research Lab., Fort Knox) Sept. 28, 1951. 9p. (AMRL-66). Endocrinology 50, 550-4 (1952).

Changes in thyroid and serum ^{131}I content of rats indicate a stimulation of thyroid activity within 2 hrs after total body exposure to 1000 r of x rays, persisting until 1 day post-exposure. After first day and until 6th day there is progressive decrease in activity. Changes considered to be due to systemic radiation damage mediated through hypophysis. NSA 6-31.

627

A COMPARISON OF THE EFFECTS OF TEST ABLE ATOMIC BOMB IONIZING RADIATION AND X-RAYS ON SEEDS OF BARLEY, WHEAT, AND OATS; APPENDIX NO. 25 TO THE FINAL REPORT. Luther Smith. (Naval Medical Research Section, Joint Task Force One) (nd). 17p. (NP-1900).

No clear cut differences in types of seedling mutants obtained from exposure to atomic bomb or to equivalent dose of x rays (16,000 r). Also no difference in relative proportion of mutant types obtained. NSA 6-32.

628

THE SYNERGISTIC LETHAL ACTION OF CERTAIN RADIOISOTOPES IN RATS. Paul R. Salerno, H. L. Friedell, James H. Christie, and Marvin Berg. (Western Reserve Univ. School of Medicine) Oct. 22, 1951. 15p. (NYO-1624). Radiology 59, 564-9 (1952).

Studies utilizing more than one internally distributed radioactive isotope indicate that their lethal effects are synergistic if they are deposited in different organs. R-E system and hematopoietic system appear closely related; effects much more profound when both are injured than when injury is confined to either one. NSA 6-33.

629

ON THE ENERGY DISSIPATION OF MOVING IONS IN TISSUE. W. S. Snyder and J. Neufeld. (Oak Ridge National Lab.) Nov. 29, 1951. 14p. (ORNL-1083). NSA 6-34.

630

SYSTEMIC EFFECTS OF IRRADIATION OF THE EXTERIORIZED SMALL INTESTINE IN RABBITS. Marta S Billings, A. H. Dowdy, Louise Burlingame, and Juanita Lamport. (Atomic Energy Project, Univ. of Calif., Los Angeles). Oct. 26, 1951. 30p. (UCLA-152).

Doses up to 1800 r caused no significant morbidity. Doses from 1800 to 6000 r caused illness after 5 days terminating in 100% lethality in 4th week. There was no specific effect on circulating blood cells. Leukopenia and anemia following total body irradiation were not modified by lead shielding of exteriorized small bowel. Shielding of exteriorized small bowel did prevent initial shock and early death after total body irradiation. NSA 6-35

631

CYTOLOGICAL EFFECTS OF X-IRRADIATION AND COLCHICINE APPLIED SEPARATELY AND IN COMBINATION. Ole Arne Schjeide, Bennet M. Allen, and Ronald T. Piccirillo. (Atomic Energy Project, Univ. of Calif., Los Angeles). Nov. 16, 1951. 16p. (UCLA-165). J. Cellular Comp. Physiol. 40, 115-25 (1952).

A dose of 500 r of x rays plus 10 γ colchicine produced acceleration in breakdown of hematopoietic cells (compared to changes produced by either agent alone) in tadpoles between 4 and 8 hrs post exposure. Doubling the dosage did not produce such acceleration, and in fact had no effect in increasing cellular alterations. NSA 6-36.

632

THE EFFECTS OF X-IRRADIATION ON GASTRO-INTESTINAL TRANSIT AND ABSORPTION AVAILABILITY. R. D. Goodman, A. E. Lewis, and E. A. Schuck. (Atomic Energy Project, Univ. of Calif., Los Angeles). Nov. 15, 1951. 14p. (UCLA-168). Am. J. Physiol. 169, 242-7 (1952).

After total body exposure to 450 r of 250 KV x rays, male rats (white, Wistar) developed moderate decrease in gastric emptying rate as determined by Evans blue dye method. Transit time from pylorus to ileocecal junction was not affected. Maximum limit of absorption availability from small intestine was markedly diminished after irradiation; maximal change occurred between 4th and 7th post-exposure day. NSA 6-37.

633

EFFECTS OF TOTAL BODY IRRADIATION UPON LIPO-PROTEIN METABOLISM. John E. Hewitt, Thomas L. Hayes, John W. Gofman, Hardin B. Jones, and Frank T. Pierce. (Radiation Lab., Univ. of Calif.). (nd). 27p. (UCRL-1549). Am. J. Physiol. 172, 579-87 (1953).

Changes observed in lipoprotein levels in rabbits after irradiation were found to be consistent with theory of conversion of low-density lipoprotein to higher density components. Injection of heparin after irradiation hastened return of lipoprotein levels to normal. NSA 6-38.

634

THE EFFECT OF IONIZING RADIATIONS ON THE BROAD BEAN ROOT. PART IX CONCLUDED. J. M. Thoday. Brit. J. Radiol. 24, 622-8 (1951).

Technique presented for predicting percentage deficient daughter cells of a certain number of cells in mitosis. Estimated number of singly and doubly deficient cells in *V. faba* root meristems/100 cells after various dosages of x irradiation and of α particles, and percentages of fragmented nuclei are tabulated. X rays and α particles are approximately equal in their inhibition of growth of root tips. NSA 6-39.

635

THE EFFECT OF WHOLE BODY X-IRRADIATION ON THE RETICULO-ENDOTHELIAL SYSTEM AS DEMONSTRATED BY THE USE OF RADIOACTIVE CHROMIUM PHOSPHATE. E. R. Gabrieli and A. A. Auskaps. Yale J. Biol. and Med. 26, 159-69 (1953).

Rats were exposed to 25, 50, and 100 r whole body X-irradiation and reticulo-endothelial functions were tested by means of the radioactive chromium technique. Rate of removal of chromium phosphate was not altered but organ distribution of chromium phosphate was altered by doses as small as 25 r.

636

NEUTRON AND X-RAY EXPERIMENTS IN BARLEY. James MacKey. Hereditas 37, 421-64 (1951).

Dry and pre-soaked seed of barley were treated with x rays and fast neutrons and biological effect followed through first and second generation. NSA 6-41.

637

JACKSONIAN EPILEPSY FOLLOWING HIGH ENERGY SHORT DISTANCE IRRADIATION OF A TEMPLE MELANOMA. Wilhelm Hornberger. Strahlentherapie 85, 459-76 (1951). (German)

A case of Jacksonian epilepsy following 18,000 r short distance Chaoul tube irradiation of a temple melanoma is described. NSA 6-42.

638

EFFECT OF TEMPERATURE ON THE SENSITIVITY OF WHEAT GERMINATION TO X RADIATION. R. G. Trudova. Doklady Akad. Nauk S.S.S.R. 79, No. 2, 353-6 (1951). (Russian).

Effects on the mitotic activity of the root-tip meristem of wheat of 500 r of x radiation prior to exposure at 0°, 20°, and 36° C and of 250, 500, 1000 and 2000 r following exposure to these temperatures are presented graphically. NSA 6-44.

639

FAILURE OF HYPOXIA TO PROTECT AGAINST THE RADIATION INDUCTION OF DOMINANT LETHALS IN MICE (abstract). W. L. Russell, J. C. Kile, Jr., and Liane B. Russell. (Oak Ridge National Lab.). (nd). 1p. (AECU-1686). Genetics 36, 574 (1951).

Male mice were exposed to (a) 800 r in air, (b) non-irradiated in air, (c) 800 r in 5% O₂-95% He mixture, or (d) non-irradiated in same mixture. Females were fertilized by males shortly after treatment; opened surgically before term and embryos classified as alive or dead.

Results	Alive	(a) 3.9	(b) 8.2	(c) 3.6	(d) 8.3
Dead	(a) 3.6	(b) 0.98	(c) 3.5	(d) 0.96	

NSA 6-45.

640

MODIFICATION OF THE EFFECTS OF X-RAYS ON STOCK 90 OF VARIETY 1 OF PARAMECIUM AURELIA (abstract). R. F. Kimball. (Oak Ridge National Lab.). (nd). 1p. (AECU-1689).

Low oxygen tension protects against post-autogamous effects, not against immediate effects of radiation. Both division delay and death are greater when paramecia are irradiated in dilute culture fluid than when they are irradiated in undiluted culture fluid. Alcohol and sodium hydrosulfite decrease division delay but cause higher mortality. NSA 6-46.

641

PROBABLE MECHANISMS OF PROTECTIVE ACTION OF SOME CHEMICALS AGAINST RADIATION DAMAGE (abstract). George E. Stapleton, Daniel Billen, and Alexander Hollaender. (Oak Ridge National Lab.). (nd). 1p. (AECU-1690).

Studied protective effect of various chemicals against x ray damage in *E. coli* B/r. Results suggest that pre-irradiation incubation of bacterial cells with protective compounds may remove oxygen at critical locations within the cell, thereby inhibiting formation of oxidizing radiodecomposition products of H₂O. NSA 6-47

642

MODIFICATION OF THE ACTION OF X-RAYS UPON

PARAMECIUM AURELIA (abstract). R. F. Kimball and Nenita Gaither. (Oak Ridge National Lab.). (nd). 1p. (AECU-1694). *Genetics* 36, 558 (1951).

Mutagenic action of 1 to 6 r of x rays was reduced when irradiation performed in N_2 or in presence of 0.7 M C_2H_5OH . Sodium hydrosulfite (0.001 M), metabolic state (fasting or fed) and division rate had no effect on the mutagenic action, but sodium hydrosulfite did protect against lethal action of x radiation. Presence of 0.7 M C_2H_5OH during irradiation decreased both the death rate and the retardation of division. NSA 6-48.

643

CHEMICAL ASPECTS OF RADIATION SENSITIVITY ON LIVING CELLS (abstract). Alexander Hollaender, George E. Stapleton, and W. T. Burnett, Jr. (Oak Ridge National Lab.). (nd). 2p. (AECU-1699).

Sulfhydryl compounds, reducing compounds, respiratory inhibitors, alcohols and glycols, carboxylic acids and sugars yield similar curves relating concentration to protective effect against radiation damage. Curves indicate a saturation phenomenon. Two compounds used simultaneously at plateau level give added protection. NSA 6-49.

644

THE EFFECT OF ORAL TERRAMYCIN ON WHOLE BODY X-RADIATION. Gordon E. Gustafson and Simon Koletsky. (Western Reserve Univ., School of Medicine). Oct. 26, 1951. 10p. (NYO-1635). *Proc. Soc. Exptl. Biol. Med.* 78, 489-90 (1951).

Terramycin has been shown to be effective in reducing the mortality in rats when administered for a period only 48 hours prior to 660 r of whole body x-radiation. NSA 6-50.

645

PROTECTION OF MICE AGAINST A LETHAL DOSE OF X-RAYS BY CYANIDE, AZIDE, AND MALONONITRILE. Z. M. Bacq and A. Herve. *Brit. J. Radiol.* 24, 617-21 (1951).

Pre-exposure administration of cyanides, azide and malononitrile protect a significant percentage of mice against a single lethal whole-body dose of x rays. Not protective when administered post-exposure. Action of cyanide is increased by simultaneous administration of glutathione. NSA 6-51.

646

INJURIES TO HEALTH FOLLOWING UNCONTROLLED NUCLEAR FISSION CHAIN REACTIONS. George L. Wied and Gerhard Schmidt. *Arztl. Forsch.* 5, No. 12, 1/455-65 (1951). (German).

Literature review of injuries caused by atomic bombs and of indicated treatment. 40 references. NSA 6-52.

647

CHEMICAL PROPHYLAXIS OF RADIATION INJURIES. H. Langendorff. *Strahlentherapie* 85, 391-400 (1951). (German).

Cysteine, glutathione, p-chloromercuribenzoate, BAL, KCN, and HgCl affect cell reactions locally. Doca, rutin, pyridoxin, nicotinamide, d-catechol and antibiotics protect by general stress-damping effect. Importance of compound protecting free SH-groups is stressed. NSA 6-53.

648

EXPERIMENTAL INVESTIGATIONS ON EFFECTS OF VITAMINS ON LIVER METABOLISM IN ANIMALS SUFFERING FROM RADIATION INJURIES. R. Koch and A. Bohlander. *Strahlentherapie* 85, 331-41 (1951). (German).

Total body X radiation in white mice resulted in reduction of liver glycogen to 27% of original value. In

homogeneous and heterogeneous animal material the distribution of liver glycogen corresponds to normal Gaussian distribution. No change in liver total N. NSA 6-56.

649

MODIFICATION OF IRRADIATION INJURY IN MICE AND GUINEA PIGS BY BONE MARROW INJECTIONS. Egon Lorenz, Delta Uphoff, T. R. Reid, and Emma Shelton. *J. Natl. Cancer Inst.* 12, 197-201 (1951).

Intravenously or intraperitoneally injected bone marrow (post-irradiation) gives excellent protection to mice and guinea pigs. NSA 6-57.

650

TREATMENT OF RADIATION SICKNESS WITH ACTH. Kenneth W. Taber. *Radiology* 57, 702-9 (1951).

Patients were relieved of symptoms of radiation sickness after a few 10 mgm intramuscular doses of ACTH. Dose of 300 r of x ray was non-lethal to mice treated with comparable doses of ACTH, and survival of mice after 600 r dose of x rays was prolonged by this treatment. NSA 6-58.

651

FURTHER INVESTIGATIONS OF THE INHERITANCE OF REDUCED VIGOR (abstract). R. D. Kimball and R. P. Geckler. (Oak Ridge National Lab.). (nd). 2p. (AECU-1682). NSA 6-140.

652

BIOLOGICAL STUDIES OF RADIATION EFFECTS. SECT. II OF MEDICAL AND HEALTH PHYSICS QUARTERLY REPORT, APRIL, MAY, AND JUNE, 1951. J. H. Lawrence. (Radiation Lab., Univ. of Calif.). Aug. 14, 1951. Decl. Dec. 5, 1951. (AECU-3282 (Sect II); UCRL-1437 (Section II)).

An assay of daily dose of cosmic radiation near top of the atmosphere was made for study of radiation hazards in high-altitude aviation. Data presented in tabular form. NSA 6-497.

653

EXPERIMENTAL RADIATION CATARACTS. II. CATARACTS IN THE RABBIT FOLLOWING SINGLE EXPOSURE TO FAST NEUTRONS. David G. Cogan, John L. Goff, and Elizabeth Graves. (Los Alamos Scientific Lab.). (nd). 23p. (AECU-1743). *Arch. Ophthalmol.* (Chicago) 47, 584-92 (1952).

Course of events in cataract production after single exposures to 14 Mev neutrons was similar to course following x ray exposures. Effects following 5×10^{10} neutrons/cm² (14 Mev) were comparable to effects following 500 r (1.2 Mev). Threshold dose for cataract production by neutrons is less than 2×10^9 neutrons/cm² incident on lens. NSA 6-505.

654

RADIATIONS EFFECTS. p.21-40, 56, 58-9, 64-5, 91-8, 164-70, 177-86, 192 OF QUARTERLY REPORT, FEBRUARY, MARCH, APRIL, 1951: DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH. Austin M. Brues, ed. (Argonne National Lab.). (ANL-4625).

Survival data for acute or chronically radiated new born mice; survival data and cataract formation data for mice which had only heads exposed to large doses of x radiation 6-12 hrs. after birth; plasma electrolyte balance in x-radiated dogs; binding of organic ions by x-radiated bovine serum albumin, and other topics. NSA 6-506.

655

PAPER CHROMATOGRAPHIC STUDY OF FREE AMINO ACIDS OF YOLK OF DEVELOPING NORMAL AND X-IRRADIATED CHICK EMBRYOS. Richard F. Riley and Esther Richter. (Atomic Energy Project, Univ. of Calif., Los Angeles). Nov. 26, 1951. 8p. (UCLA-171).

500 r of x radiation administered on 10th day did not alter free amino acid content of yolk of fertile chick embryos between 5th and 20th day post-exposure. NSA 6-508.

656
RADIUM TOXICITY AND EXTERNAL RADIATION-BIOLOGICAL EFFECTS, p.6-45 OF QUARTERLY TECHNICAL REPORT JULY 1, 1951, THRU SEPTEMBER 30, 1951. Henry A. Blair, Director. (Atomic Energy Project, Univ. of Rochester). Oct. 25, 1951. (UR-180 (p.6-45)).

Sodium, potassium and chloride balance studies in irradiated dogs; preliminary observations of effects of radiation on metabolic process in baker's yeast; urinary and serum fibrinolytic activity in dogs after 450-700 r of whole body x radiation. NSA 6-510.

657
EFFECT OF IONIZING RADIATIONS ON VITAMIN B₁₂. P. C. Markakis, S. A. Goldblith, and B. E. Proctor. Nucleonics 9, No. 6, 71-82 (1951).

B₁₂ in pure solution and in raw whole milk found to be relatively radiosensitive. Effect of radiation considered to be indirect. NSA 6-511.

658
EXTERNAL RADIATION-TOLERANCE AND THERAPY. M. P. Coulter and F. W. Furth. p.46-55 OF QUARTERLY TECHNICAL REPORT JULY 1, 1951 THRU SEPTEMBER 30, 1951. Henry A. Blair, Director. (Atomic Energy Project, Univ. of Rochester). Oct. 25, 1951. (UR-189 (p.46-55)).

Beneficial effects of (1) spleen shielding and (2) aureomycin and whole blood therapy in irradiated dogs NSA 6-516.

659
RADIATION SICKNESS, p.14-20, 41-54, 57, 60-3, 125-41, 152-4 OF QUARTERLY REPORT, FEBRUARY, MARCH, APRIL, 1951 DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH. Austin M. Brues, ed. (Argonne National Lab.). (ANL-4625).

Survival was enhanced in groups of irradiated LAF₁ mice by (1) intravenous or intraperitoneal injection of bone marrow suspensions, (2) peritoneal implantation of 4 spleens from baby mice (3) leaving patent blood vessel at distal tip of exteriorized, shielded spleen during irradiation. NSA 6-520.

660
DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, MAY, JUNE, JULY, 1951. Austin M. Brues, ed. (Argonne National Lab.). 112p (ANL-4676).

Reports of studies on prophylactic effect of bone marrow injections; 30-day LD-50 comparisons of radon and x radiation effects in mice; histological changes in eyes of mice subjected to 1000 r x radiation during newborn period; protective effect of 1 ml doses of plasma from blood-perfused dog spleens injected into irradiated mice; effect of large doses of cortisone on mortality in irradiated chicks. NSA 6-763.

661
A SUGGESTED CHAIN PROCESS FOR RADIATION DAMAGE. A. T. Reid and H. G. Landau. Bull. Math. Biophys. 13, 153-61 (1951). NSA 6-768.

662
THE GENETIC BASIS OF X-RAY INDUCED RECESSIVE LETHAL MUTATIONS. Irwin H. Herskowitz. Genetics 36, 357-63 (1951).

An hypothesis is suggested which recognizes lethals arising from 3 origins point mutation, independent of breakage; breakage alone; and position effect following rearrangement of breaks. NSA 6-769.

663
X-RAY INDUCED LETHAL MUTATIONS IN SEVERAL STRAINS OF DROSOPHILA MELANOGASTER. Ørstein Strømnaes. Hereditas 37, 532-59 (1951).

Males from 31 strains of *D. melanogaster* were tested for sensitivity to induction of dominant lethal mutations by 2300 r x rays. Genetic differences in sensitivity to induction of dominant lethal mutations by x rays found to exist between unrelated strains. NSA 6-770.

664
THE LETHAL EFFECTS OF RADIATION. Edward Spoerl. Sci. American 185, 22-5 (1951).

Review of physical and chemical events produced in living cells by ionizing radiations. NSA 6-771.

665
SPONTANEOUS AND X-RAY INDUCED GYNANDRO-MORPHS IN DROSOPHILA MELANOGASTER. G. Bonnier and K. G. Luning. Hereditas 37, 470-87 (1951). NSA 6-773.

666
CHANGES IN THE WHITE BLOOD COUNT AND THE URINARY EXCRETION OF LIPID-SOLUBLE REDUCING SUBSTANCES FOLLOWING RADIUM APPLICATION IN CASES OF CANCER OF THE UTERUS. S. Parviainen and P. O. Pärnänen. Ann. Med. Exptl. et Biol. Fenniae 28, 135-42 (1950).

Decreased excretion of reducing substances was observed during radium application, temporary increase on day following treatment. Radium application reduces excretion of urine and increases concentration of reducing substances in urine. NSA 6-775.

667
HORMONE-SECRETING TRANSPLANTABLE NEOPLASM OF THE PITUITARY INDUCED BY I¹³¹. J. Furth and W. T. Burnett, Jr. Proc. Soc. Exptl. Biol. Med. 78, 222-4 (1951).

Pituitary growths induced by thyroid destructive doses of I¹³¹ are readily transplantable in mice whose thyroid glands are similarly destroyed, but not in normal mice. Growths discharge gonadotropic hormones. Discharge of thyrotropic hormones by the tumors is assumed but remains to be demonstrated. NSA 6-776.

668
ON THE INTERPRETATION OF THE DOSE-FREQUENCY CURVE IN RADIOGENETICS R. A. Wijsman. Genetics 36, 478-87 (1951).

Comparison of curves of multiple-event models with the curve for a single-event model supports the theory that a linear relationship between mutation frequency and radiation dose is caused by a single event. NSA 6-777.

669
RADIATION HEMOLYSIS, A CONTRIBUTION TO OUR KNOWLEDGE OF BIOLOGICAL EFFECTS OF IONIZING RADIATION. Bruno Lindemann. Fortschr. Gebiete Röntgenstrahlen 75, 523-59 (1951). (German).

Electron-optical analyses were made of structure of x-irradiated erythrocytes. It is concluded that (1) x rays caused osmotic hemolysis of erythrocytes by altering the permeability of cell membrane due to primary denaturation; (2) degree of hemolysis depends on amount of plasma in suspension of RBC, therefore denaturation of RBC membrane is an indirect effect of x rays. NSA 6-778.

670
A SURVEY OF ROENTGEN RAY EXPOSURES RECEIVED BY PERSONNEL IN SEVERAL CLINICS AND GENERAL HOSPITALS. Eglida De Amicis, Charles K. Spalding, and Russell F. Cowing. (Cancer Research Inst., New England Deaconess Hospital, Boston). (nd). 8p. (AECU-1749). J. Am. Med. Assoc. 149, 924-5 (1952).

Reviewed 1100 film badges worn by roentgenologists over a period of 1 year, and 2740 badges worn by technicians over same period. 0.63% of radiologists badges and 0.11% of technicians badges revealed exposures greater than 300 mr in one week. NSA 6-779.

671

STRAY X-RAYS FROM ELECTRON BEAM INSTRUMENTS AND SOME BIOLOGICAL IMPLICATIONS. S. D. Larks. Am. Ind. Hyg. Assoc. Quart. 12, 175-9 (1951).

Oscillographs and electron microscopes are discussed in detail as possible sources of radiation above tolerance level. NSA 6-783.

672

THE TREATMENT OF POST-IRRADIATION INFECTION WITH ANTIBIOTICS; AN EXPERIMENTAL STUDY ON MICE; PARTS I AND II. C. Phillip Miller, Carolyn W. Hammond, Marianne Tompkins, Gertrude Shorter, George Sacher, Sylvanus A. Tyler, and Joan Gurian. (Institute of Radiobiology and Biophysics, Univ. of Chicago). (nd) 65p. (AECU-1711).

Young adult mice were treated with antibiotics after single total body exposure to x radiation in doses of 450 to 600 r. Various antibiotics given singly or in combination were studied, protective effects analyzed statistically. NSA 6-784.

673

UTILIZATION OF THE GROSS FISSION PRODUCTS; PROGRESS REPORT. L. E. Brownell, L. C. Anderson, H. J. Gomberg, J. J. Martin, W. W. Meinke, L. Thomasen, E. T. Vincent, and R. A. Wolfe (Engineering Research Inst., Univ. of Michigan). Aug. 31, 1951. 94p. (COO-86; Progress Report No. 1).

Preliminary experimental results reported for studies of effect of radiation on foods. Milk and meat were preserved for more than 3 weeks at 77°F after γ irradiation of 2.4×10^6 r. Molds found to be most resistant microorganism. Enzymes have greater radiation resistance than microorganisms. NSA 6-916.

674

ABNORMAL SPORE GERMINATION AND MICROTHALLUS DEVELOPMENT OF FUNGI INDUCED BY DILUTE COLLOIDAL POLONIUM (abstract). Edward E. Butler and John B. Rowell. (Minnesota University). (nd). 2p. (AECU-1813). NSA 6-1073.

675

ELECTROLYTES IN MUSCLE OF RAT FORELIMB AFTER INTENSE LOCAL X IRRADIATION (abstract). W. S. Wilde and C. W. Sheppard. (Oak Ridge National Lab. and Tulane Univ.). (nd). 1p. (AECU-1796). Proc. Soc. Exptl. Biol. Med. 88, 249(1955).

Single doses of 10 to 73 kr (250 kvp x rays, 720 r/min) were administered to muscles of one forelimb of anesthetized rat. Total water of exposed muscle increased with dosage to exceed controls by 25%. No change in potassium content. Studies of inulin and Na^{24} space indicated water gain was interstitial. NSA 6-1077.

676

THE EFFECT OF HYPOXIA ON THE RADIATION INDUCTION OF DEVELOPMENTAL ABNORMALITIES IN THE MOUSE (abstract). Liane Brauch Russell, W. L. Russell, and Mary H. Major. (Oak Ridge National Lab.). (nd). 1p. (AECU-1799). Anat. Record 111, 455 (1951).

Hypoxia exerts marked protective effect against x ray damage in all characters known to be radiosensitive on 11-1/2 day of gestation in fetal mice. Magnitude of protection similar for all characters studied. NSA 6-1078.

677

THE EFFECT OF X RADIATION ON THE RESPIRATION OF BACTERIAL CELLS (abstract). Daniel Billen, G. E.

Stapleton, and Alexander Hollaender. (Oak Ridge National Lab.). (nd). 1p. (AECU-1801).

60,000 r inhibited respiration in *E. coli*. Magnitude of effect varied with substrate, temperature and strain of organism. There was characteristically a latent period after exposure before respiratory rate declined. Length of latent period varied with substrate and post-exposure incubation temperature. NSA 6-1079.

678

CONDITIONS OF TRANSPLANTATION AND HORMONAL SECRETIONS OF PITUITARY TUMORS INDUCED BY P^{31} (abstract). J. Furth, W. T. Burnett, Jr., E. Gadsden, and J. N. Dent. (Oak Ridge National Lab.). (nd). 1p. (AECU-1803). NSA 6-1080

679

THE PROTECTIVE ROLE OF PYRIDOXIN AGAINST THE TOXIC EFFECTS OF P^{32} (abstract). Camillo Artom, W. E. Cornatzer, and George T. Harrell, Jr. (Bowman Gray School of Medicine, Wake Forest College). (nd). 1p. (AECU-1811).

Mice on various experimental diets received a mixture of B vitamins without pyridoxin, and were injected with single dose of P^{32} (5-6 $\mu\text{C/g}$). Pyridoxin had marked protective effect in animals in which vitamin deficiency was made more severe by adding a pyridoxin analog or by increasing metabolic demand for pyridoxin. No effect in animals with only mild deficiency. NSA 6-1081.

680

FACTORS MODIFYING THE EFFECT OF X IRRADIATION ON REGRESSION OF A TRANSPLANTED LYMPHOSARCOMA. Joanne Weikel Hollcroft, Egon Lorenz, and Marion Matthews. (National Cancer Inst. and Argonne National Lab.). Oct. 25, 1951. 27p. (AECU-1819; UAC-458). J. Natl. Cancer Inst. 12, 751-63(1952).

Simultaneous systemic and local tumor irradiation; intravenous administration of H_2O_2 immediately before tumor irradiation; and maintaining mice in high-oxygen atmosphere all increased regression of transplanted mouse lymphosarcoma after irradiation of the tumor. NSA 6-1082.

681

THE EFFECT OF SELECTIVE SHIELDING OF RABBIT INTESTINE DURING TOTAL BODY IRRADIATION. Richard S. Farr and Peter P. H. DeBruyn. (Argonne National Lab.). Oct. 1951. 11p. (AECU-1820; UAC-459). Am. J. Roentgenol. Radium Therapy 69, 1001-4 (1953).

Selective shielding of the exteriorized colon or small intestine does not decrease the lethal effect of x rays in rabbits. NSA 6-1083.

682

CELLULAR RESPIRATION, CELL DIVISION, AND IONIZING RADIATIONS. E. S. Guzman Barron and S. Louise Seki. (Argonne National Lab.). Oct. 1951. 13p. (AECU-1821; UAC-462).

Respiration of eggs and sperm of *Arbacia punctulata* decreased following large doses, increased following small doses of x rays. Inhibition of cell division was observed even following x ray doses which produced increased respiration. NSA 6-1084.

683

THE MUTAGENIC ACTION OF DILUTE COLLOIDAL POLONIUM ON FUNGI. J. B. Rowell, E. C. Stakman, and E. E. Butler. (Minnesota Univ.). (nd). 6p. (AECU-1823).

Polonium concentrations of 0.5 to 1.0 $\mu\text{C/ml}$ readily induced mutation in vegetative cells or spores of various fungi in aqueous suspension at 8° C. Spores germinated directly in water containing 1 μC of Po/ml grow and pro-

duce normal colonies. Lethal and mutagenic effects appear when cells are kept in this mixture at low temperature for long periods. NSA 6-1085.

684

SOME EFFECTS OF X-IRRADIATION ON TURTLES. Paul D. Atland, Benjamin Highman, and Betty Wood. *J. Exptl. Zool.* **118**, 4-14 (1951).

Box turtles were exposed to 500-10,000 r x rays (whole body). Effects were similar to those in other mammals but occurred at slower rate. Turtles survived at least 270 days after 500 r, 4 of 6 survived longer than 4 months after 1000 r, 2 of 6 survived 4 months after 1500 r. Higher doses caused death in 18 to 48 days. NSA 6-1090.

685

THE EFFECT OF ACETYL- β -METHYLCHOLINE, CARBAMYLCHOLINE, AND ATROPINE ON THE SURVIVAL OF X-IRRADIATED MICE (abstract). W. T. Burnett, Jr., A. W. Burke, Jr., and A. C. Upton. (Oak Ridge National Lab.). (nd). 1p. (AECU-1793). *Am. J. Physiol.* **174**, 254-8 (1953).

Parasympathomimetic drugs given by intraperitoneal injection 3 to 5 min. before total body x irradiation increased the LD-50/28 days of 8 to 10 week old C₅₇ black strain mice from 600 r to 900 r. Some late effects of radiation were noted in surviving mice. NSA 6-1093.

686

DOSAGES RECEIVED BY PATIENTS DURING X-RAY DIAGNOSTIC EXAMINATIONS. F. Wachsmann. *Fortschr. Gebiete Rontgenstrahlen* **75**, 728-33 (1951). (German).

A nomograph is given to facilitate dosage determinations. NSA 6-1100.

687

LOCALIZATION OF X-RAY INJURY TO THE INITIAL PHASES OF ANTIBODY RESPONSE. W. H. Taliaferro, L. G. Taliaferro and E. F. Janssen. (Chicago Univ.). (nd). 1p. (AECU-1846).

X ray damage to antibody formation is limited to early phases of immunizing process. (Studied hemolysin titres in rabbits following a single injection of standardized suspension of sheep cells.) NSA 6-1375.

688

PERMISSIBLE DOSAGE AND CONSIDERATIONS OF CALCULATED RISK. C. F. Behrens. (Naval Research Inst., Bethesda). July 2, 1951. 21p. (NP-3546).

A table of permissible dosage determinations for both external and internal radiation exposures is included. NSA 6-1376.

689

A BIBLIOGRAPHY ON "THE EFFECTS OF X-RAY ON BACTERIA." Radcliffe F. Robinson, Michael D. Phillips, and Margaret G. Nagelsen. (Battelle Memorial Inst.). Aug. 20, 1951. 18p. (NP-3610).

178 titles of articles published during the period 1896 through August 1951. NSA 6-1377

690

IN VIVO DIALYSIS OF BLOOD AS A MEANS OF INFLUENCING THE SURVIVAL OF X-IRRADIATED DOGS Paul S. Lavik, Jack R. Leonards, G. Warren Buckaloo, Charles Heisler, and Hymer L. Friedell. (Western Reserve Univ., School of Medicine). Dec. 15, 1951. 21p. (NYO-1637). *Fed. Proc.* **10** (1), 213 (1951).

Dogs were subjected to in vivo dialysis of their blood by means of "artificial kidney" during or following exposure to a lethal dose of x rays. No beneficial effects observed. NSA 6-1378.

691

MONTHLY PROGRESS REPORT NOV. 1951. Hymer L. Friedell. (Atomic Energy Project, Western Reserve Univ.). (nd). 6p. (NYO-1639).

Deposition of intravenously injected colloidal Au¹⁹⁸ and hematological response were markedly altered in partially hepatectomized rats. Rats receiving colloidal Au¹⁹⁸ before x-irradiation showed approximately one third of x ray effect after receiving pretreatment with cysteine. NSA 6-1379.

692

ATTEMPTS TO ALTER THE RESPONSE TO IONIZING RADIATIONS. W. A. Selle. (Atomic Energy Project, Univ. of Calif., Los Angeles). Jan. 15, 1952. 53p. (UCLA-176).

Summary in tabular form of 100 papers published since 1949 relative to attempts to alter response of animals to ionizing radiation. NSA 6-1380.

693

BIOLOGICAL EFFECT OF SHORT WAVE RADIATIONS. INVESTIGATIONS ON INVERTEBRATES. Manfred Gersch and Winfried Möbius. *Strahlentherapie* **85**, 565-80 (1951). (German).

Oligochaete worms (Enchytraeae) showed no radiation injuries after 3 exposures to 90,000 r, Gnat Larva (Corethra) showed injury to intestinal cells after moderate doses; delayed degeneration of pericardial cells and some thoracic cell complexes after higher doses, 25,000 r caused widespread cellular injury and high mortality. NSA 6-1381.

694

FURTHER OBSERVATIONS ON INHIBITION OF LYMPHOID TUMOR DEVELOPMENT BY SHIELDING AND PARTIAL-BODY IRRADIATION OF MICE. Henry S. Kaplan and Mary B. Brown. *J. Natl. Cancer Inst.* **12**, 427-35 (1951).

Shielding of indifferent areas of the body, e.g., thigh, significantly inhibits the genesis of lymphoid tumor. Mediastinal shielding had no effect. NSA 6-1382.

695

EXPERIMENTAL INVESTIGATIONS ON VITAMIN EFFECTS ON LIVER METABOLISM AFTER RADIATION INJURY. II. EFFECT OF LACTOFLAVIN AND PYRIDOXIN ON GLYCOGEN AND TOTAL NITROGEN OF THE LIVER IN TOTAL BODY IRRADIATED ANIMALS Ruprecht Koch and Adam Bohlander. *Strahlentherapie* **85**, 599-605 (1951) (German).

Irradiation of mice with total body doses of 350-400 r of x rays on each of 5 consecutive days did not change N content of liver. Liver glycogen dropped to 27% of normal after exposure. Both lactoflavin and pyridoxin treatment decreased the glycogen loss. NSA 6-1383.

696

INTRATHORACIC CHANGES FOLLOWING ROENTGEN TREATMENT OF BREAST CARCINOMA. T. A. Groover, A. C. Christi and E. A. Merritt. *Am. J. Roentgenol.* **10**, 471-76 (1953).

The authors are convinced that not all the changes observed in the chest after massive dose treatment of carcinoma of the breast are due to malignant disease: that at least some of them are attributable directly to the effect of treatment. The fact that symptoms of intrathoracic irritation follow the course of skin reaction is considered significant.

697

PROTECTIVE ACTION OF METHYLAMINE AGAINST X-IRRADIATION. Z. M. Bacq and A. Herve. *Nature* **168**, 1126 (1951).

C₅₇ black mice were injected intraperitoneally with 2 mg of methylamine immediately prior to irradiation. All non-injected mice exposed to 700 r died 5-10 days post exposure; 73% of injected mice survived. Injected mice exposed to 850 r died somewhat later than controls. Injection had no protective effect against larger doses.

Post-exposure injection shifted mortality curve to the right after 700 r. NSA 6-1375.

698
PROTECTIVE ACTION OF ETHYL ALCOHOL ON IRRADIATED MICE. Edith Paterson and Joyce J. Matthews. *Nature* 168, 1126-7 (1951).

Two 1-ml orally administered doses of ethyl alcohol (10% in saline) 80 and 20 minutes before 700 r x-irradiation decreased mortality from 100% (controls) to 63%; raised LD-50 dose from 554 r to 625 r; extended life of non-survivors. Post-exposure administration of alcohol did not have protective effect. Intravenous cysteine (20 mgm/mouse) gave greater protection than did the alcohol. NSA 6-1386.

699
EFFECT OF X-RADIATION, RADIOMIMETIC SUBSTANCES AND SURGICAL TRAUMA ON THE SULFHYDRYL CONTENT OF PLASMA. FINAL REPORT. Bernard Shacter, Helen Supplee, and Cecil Entenman. (Naval Radiological Defense Lab.). Nov. 27, 1951. 22p. (AD-333(B); Technical Objective AW-6; U20409). *Am. J. Physiol.* 169, 499-507 (1952).

Plasma sulfhydryl concentration decreased 2 days after exposure to 700 r (250 kvp x rays), and was minimal (60% of control level) 6-8 days after exposure in 3-6 month old rats of both sexes. Sulfhydryl concentration approached normal by 12th post-exposure day. Nitrogen mustard and trisethylene also decreased sulfhydryl concentration of plasma. NSA 6-1593.

700
EFFECT OF X-RADIATION AND LAPAROTOMY ON THE POLYSACCHARIDE CONTENT OF PLASMA; RELATIONSHIP TO PLASMA SULFHYDRYL CHANGES. Bernard Shacter, Helen Supplee, and Cecil Entenman. (Naval Radiological Defense Lab.). Nov. 27, 1951. 11p. (AD-334(B); Technical Objective AW-6; U20432). *Am. J. Physiol.* 169, 508-10 (1952).

Plasma polysaccharide content increased 6 days after exposure to 700 r (but not 300 r), remained elevated for a few days, returned to normal by 12th day in rats. NSA 6-1594.

701
BIOLOGY AND MEDICINE, p. 131-62 OF QUARTERLY PROGRESS REPORT, JULY 1-SEPTEMBER 30, 1951. (Unclassified Section). (Brookhaven National Lab.). 32p. (BNL-132, p. 131-2).

Report includes data on weight changes, water consumption, metabolism, histological changes in pituitary, and kinetics of phosphate interchange in tissues of x irradiated rats; cytological and morphological changes induced in plants grown in 200-curie γ field; radiation effect on nucleic acids in plants and animals; effects of radiation on anti-body production. NSA 6-1595.

702
FURTHER EVALUATION OF PRESENT DAY KNOWLEDGE OF COSMIC RADIATION IN TERMS OF THE HAZARD TO HEALTH. Hermann J. Schaefer. (Naval School of Aviation Medicine, Pensacola). Aug. 15, 1951. 23p. (NP-3564).

Data published during 1950 pertaining to heavy-nuclei component of primary cosmic radiation are summarized. Values of specific ionization for different components of heavy spectrum cover range from about 1000 ion pairs per 10 μ of living tissue to more than 1,000,000. A 15 hour daily exposure continued over weeks and months is expected to produce marked symptoms of radiation injury. Daily exposure of 1.3 hours estimated to be about equal to tolerance limit of 0.1 r in system. NSA 6-1596.

703
THE PATHOGENESIS OF POSTIRRADIATION ANEMIA.

J. B. Kahn, Jr., and I. Furth. (Oak Ridge National Lab.). Feb. 6, 1952. 34p. (ORNL-1186). *Blood* 7, 404-16 (1952).

Irradiation at or below MLD does not hemolyse erythrocytes directly, but causes increased destruction of erythrocytes. It is postulated that the change is a capillary endothelial damage causing diversion of erythrocytes into tissue spaces and lymphatics, resulting in injury to some RBC. NSA 6-1598.

704
ROENTGEN EXPERIMENTS ON FROG HEARTS. L. Haberlandt and R. Sanders. *Strahlentherapie* 26, 607-9 (1927).

In case of some heart diseases roentgen irradiation of the heart muscle has favorable influence. Frog hearts were irradiated using certain controlled doses of roentgen rays.

705
IDENTIFICATION OF FERRITIN IN BLOOD OF DOGS SUBJECTED TO RADIATION FROM AN ATOMIC DETONATION. Thomas J. Haley, M. R. Andem, Richard F. Riley, and I. Williams. (Atomic Energy Project, Univ. of Calif., Los Angeles). Feb. 12, 1952. 10p. (UCLA-180). *Proc. Soc. Exptl. Biol. Med.* 79, 547-50 (1952).

Post-exposure plasma from eight dogs exposed to lethal dose of radiation from an atomic detonation contained a material which when injected intravenously, decreased both the rate of vasomotion and the epinephrine sensitivity of the mesoappendix capillary bed of normal rat. Material fits criteria established for ferritin. NSA 6-1600.

706
BIOLOGICAL EFFECTS OF THE β RADIATION OF P^{32} ON *B. COLI*. A. Deysine and B. Bonet-Maury. *Compt. rend. soc. biol.* 145, 1091-3 (1951). (French).

B. coli in media containing 0.1 mc of P^{32} /ml were carried through seven generations. The decrease in number of living cells was noted in each generation for 150 days. Later generations developed radioresistance. Increasing P^{32} to 1 mc/ml caused much more rapid decrease in viability. NSA 6-1603.

707
HISTOLOGICAL EFFECTS OF LONG-CONTINUED WHOLE-BODY GAMMA-IRRADIATION OF MICE. B. Spargo, J. R. Bloomfield, D. J. Glotzer, E. Leiter Gordon, and O. Nichols. *J. Natl. Cancer Inst.* 12, 615-56 (1951). NSA 6-1606.

708
THE 30-DAY LD-50 OF TWO RADIATIONS OF DIFFERENT ION DENSITY. Joanne Weikel Hollcroft and Egon Lorenz. *J. Natl. Cancer, Inst.* 12, 533-44 (1951).

The 30-day LD₅₀ x radiation was compared with that of α particles emanating from short-lived decay products of radon injected intravenously in strain A male mice. Integral dose of x radiation necessary to produce 50% mortality was found to be 1.42 times that of γ particles.

NSA 6-1607.

709
GROWTH OF TUMOR FRAGMENTS X-IRRADIATED IN VITRO FOLLOWING PRETREATMENT WITH CYSTEINE. B. Vincent Hall. (University of Illinois and Argonne National Lab.). Aug. 1951. 24p. (AECU-1866; UAC-500). *Cancer Research* 12, 787-92(1952).

Mouse tumor fragments treated with 0.008 M cysteine before being exposed to x rays in vitro were more resistant to radiation injury than untreated fragments. Dose of x rays necessary to prevent growth of 50% of the fragments after transplantation into host mice was 20% greater for cysteine treated fragments than for untreated fragments. NSA 6-1608.

710

PROTECTION EXPERIMENTS AGAINST RADIATION INJURY WITH LYMPHOCYTES. Ira L. Campbell and Mary H. Ross. (Oak Ridge National Lab.). Feb. 14, 1952. 7p. (ORNL-1193).

No protection against effects of radiation following injection of living lymphocytes into genetically compatible irradiated hosts. NSA 6-1612.

711

THE NUTRITIONAL VALUE OF INTRAVENOUS TAPIOCA DEXTRIN IN NORMAL AND IRRADIATED RABBITS.

Lawrence E. Detrick, Alvin E. Lewis, Thomas J. Haley, and Bonnie Rhodes. (California Univ., Los Angeles School of Medicine). Jan. 23, 1952. 16p. (UCLA-181). J. Am. Pharm. Assoc., Sci. Ed. 41, 614-17 (1952).

Acute whole body irradiation increased the sensitivity and mortality rate of rabbits fed intravenous tapioca dextrin. Orally fed irradiated rabbits survived longer than those receiving intravenous alimentation (tapioca dextrin amino acid hydrolysate and vitamins). NSA 6-1617.

712

1. GAMETE FACTOR ON CHROMOSOME 9. 2. THE EFFECT OF OXYGEN TENSION ON THE RADIOSENSITIVITY OF CHROMOSOMES (abstract). Drew Schwartz. (Oak Ridge National Lab.). (nd). 1p. (AECU-1876).

There is a 3.2-fold decrease in radiation induced chromosome aberrations in pollen when exposures are made on 100% N as compared with exposures in air. Results are interpreted as suggesting that the effect of oxygen tension during irradiation is on the recovery process of broken ends rather than on initial breakage. NSA 6-1946.

713

RECOVERY OF X-IRRADIATED BACTERIA AT SUB-OPTIMAL INCUBATION TEMPERATURES (abstract).

G. E. Stapleton, Daniel Billen, and Alexander Hollaender. (Oak Ridge National Lab.). (nd). 1p. (AECU-1873). J. Cell. Comp. Physiol. 41, 345 (1953).

At incubation temperatures of 12°-30° C, survival of cultures plated after irradiation is significantly increased over survival of cultures grown at 37° C. Incubation at 6° C does not increase survival. Ratio of survivors at 18° C over that at 37° C is an exponential function of x ray dose. Strain differences in optimal temperature for recovery and in extent of recovery have been observed. NSA 6-1947.

714

MECHANISM OF LETHAL AND MUTAGENIC ACTION OF IONIZING RADIATIONS ON *ASPERGILLUS TERREUS*. II. USE OF MODIFYING AGENTS AND CONDITIONS.

G. E. Stapleton and Alexander Hollaender. (Oak Ridge National Laboratory). (nd). 20p. (AECU-1892). J. Cellular Comp. Physiology 39, Suppl. 1, 101-13 (1952).

Authors found direct relationship between x ray sensitivity of spores and their relative water content. Lowering oxygen tension during irradiation inhibited both inactivation and production of mutations. NSA 6-1948.

715

RELATIONSHIPS BETWEEN IONIZING RADIATION, CHROMOSOME BREAKAGE AND CERTAIN OTHER NUCLEAR DISTURBANCES. A. H. Sparrow, M. J. Moses and Rosalind DuBow. (Brookhaven National Lab.). (nd). 39p. (BNL-1066). Exptl. Cell Research. Suppl. 2, 245-67 (1952).

Authors discuss relationship between relative radio-sensitivity of different stages of meiosis of *Trillium erectum* and the desoxypentose and pentose nucleic acid content of the cells at the various stages. Cytological effects of chronic irradiation of *Tradescantia paludosa* are described. NSA 6-1949.

716

THE SEQUENCE OF PATHOLOGIC CHANGES IN SWINE EXPOSED TO THE LD_{100/30} OF TOTAL BODY SUPER-VOLTAGE X-RADIATION. John L. Tullis. (Naval Medical Research Inst., Bethesda). Aug. 24, 1951. 17p. (NP-3600). NSA 6-1950.

717

IRRADIATION EFFECTS ON VIABILITY OF *DROSOPHILA MELANOGASTER* (abstract). John W. Gowen and Janice Stadler. Anat. Record 111, 497 (1951).

Physiological effects of various doses of x irradiation on day-old male and female imagoes were studied after repeated pair matings. Doses ranged from 0 to 10,000 r. Twenty-six different criteria for physiological effects are presented. NSA 6-1951.

718

CATARACT FORMATION AND RETINAL DAMAGE FOLLOWING X IRRADIATION OF THE HEADS OF NEW-BORN MICE (abstract). Howard H. Vogel, Jr. Anat. Record 111, 497 (1951).

Heads of newborn mice received a single exposure to x rays in doses varying from 50 r to 3000 r. No newborn mouse receiving 2000 r or more survived for more than 10 days. Forty-five percent of the 31 mice which died did so on 10th or 11th post-exposure day. Marked pathological changes in retina noted within 3 to 4 hours after 1000 r. NSA 6-1952.

719

SINGLE WHOLE-BODY X IRRADIATIONS OF GUINEA PIGS; PRINCIPAL BIOLOGICAL EFFECTS. Lucien Piguory and Pierre Nizza. Compt. rend. 234, 370-2 (1952).

Authors studied effects of single whole-body x-irradiation exposures to 100, 200, 400, 500, 800 and 1000 r on male guinea pigs. LD₅₀ was 200 r. Average survival was 21.5 days at 200 r, 13.1 days at 400 r, and 12.7 days at 500 r. Blood changes during the post-irradiation period are described. NSA 6-1953.

720

GENETIC DAMAGE BY ROENTGEN RADIATION? H. Chantraine. Röntgen Blätter 5, 1-10 (1952). (German).

Relative numbers of x ray-induced and spontaneous mutations in humans are discussed. Direct application of radiation-induced mutation rates in *Drosophila* to man is considered invalid. Genetic changes resulting from medical applications of x rays are considered to be no more numerous than those caused by many other circumstances of modern life. NSA 6-1954.

721

THE EFFECT OF IONIZING RADIATIONS ON THE BROAD BEAN ROOT. PART X. THE DEPENDENCE OF THE X-RAY SENSITIVITY ON DISSOLVED OXYGEN. John Read. Brit. J. Radiol. 25, 89-99 (1952).

Growth curves of groups of bean roots irradiated (1) in water containing 18 cc O per liter, (2) in water containing 6 cc O per liter, and (3) anerobically are presented in tabular form. NSA 6-1955.

722

ADRENAL ASCORBIC ACID IN MALE AND FEMALE RATS AFTER TOTAL BODY X-RAY IRRADIATION. B. C. Wexler, R. Pencharz, and S. F. Thomas. Proc. Soc. Exptl. Biol. Med. 79, 183-4 (1952).

Total body x-irradiation is associated with a marked depletion in adrenal ascorbic acid. Decrease is more marked in male rat than in female. NSA 6-1956.

723

EFFECT OF WHOLE-BODY X-RADIATION ON RAT INTESTINAL NUCLEOPROTEIN. Robert N. Feinstein and Carrie L. Butler. Proc. Soc. Exptl. Biol. Med. 79, 181-2 (1952).

After 800 r whole-body irradiation, a nucleoprotein-rich fraction of intestine is diminished in amount, total phosphorus, total nitrogen, dry weight and ash. Greatest loss of phosphorus is from nucleic acid fraction. Data are interpreted as indicating that one effect of whole-body irradiation is the degradation of nucleic acid. NSA 6-1957.

724
EXPOSURE TO X-RADIATION OF LOCALIZED AREAS OF MAMMALIAN SKIN CONDITIONED TO DIFFERENT LEVELS OF METABOLIC ACTIVITY (abstract). J. P. O'Brien, J. A. Belli, and J. W. Saunders, Jr. *Anat. Record* **111**, 496 (1951).

Preliminary experiments indicate that mammalian skin is less susceptible to the effects of x rays when the overall metabolic level is reduced. With a given dose of x radiation, lesions in chilled skin appeared earlier but were less extensive and healed more quickly. NSA 6-1958.

725
SODIUM PENTOBARBITAL ANESTHESIA AND MORTALITY FROM TOTAL BODY X-RADIATION IN C₅₇ (BLACK) MICE. H. Patterson Mack and Frank H. J. Figge. *Anat. Record*, **111**, 524 (1951).

Animals which were anesthetized during irradiation appeared to have lower mortality than unanesthetized animals. Other studies suggest that nembutal may reduce radiosensitivity by lowering metabolic rate and/or producing hypoxemia during anesthesia. NSA 6-1959.

726
A LIPO-PROTEIN-NUCLEIC ACID COMPLEX IN THE TREATMENT OF RADIATION INJURY (A PRELIMINARY REPORT). Ralph M. Thompson. *Military Surgeon* **110**, 51-9 (1952).

Results of preliminary experiments lead author to believe that the lipo-protein-nucleic acid complex, Reticulose, is of value in the treatment of radiation injury. NSA 6-1962.

727
MODIFICATION OF SENSITIVITY TO X RADIATION BY MORPHINE SULFATE. J. B. Kahn, Jr. *Proc. Soc. Exptl. Biol. Med.* **78**, 486-9 (1951).

Morphine sulfate injected intramuscularly into ZBC male mice 30 min. before exposure to total body x radiation raises the LD-50 of the radiation from 609 to 830 r. NSA 6-1963.

728
PROTHROMBIN UTILIZATION IN FATAL RADIATION INJURY. D. P. Jackson, E. P. Cronkite, G. J. Jacobs, and C. F. Behrens. (Naval Research Inst., Bethesda). June 26, 1951. 17p. (NP-3623; R5997). *Am. J. Physiol.* **169**, 208-17 (1952).

Eight dogs died between 9th and 15th post-exposure day after receiving 600 r whole body radiation. All dogs showed extensive hemorrhage prior to death, and the hematological changes characteristic of radiation injury. A slight terminal decrease in prothrombin concentration in 4 dogs indicated that prothrombin utilization approaches zero from 9th post-exposure day to death. NSA 6-1964.

729
EFFECT OF ACTH ON THE MORTALITY OF IRRADIATED MICE. H. Betz. *Compt. rend. soc. biol.* **145**, 1240-2 (1951). (French).

Daily injection of 0.5 mg of ACTH for 7 days before exposure to 700 r of 250 kvp x rays decreased the mortality rate of C₅₇ mice. Administration of ACTH after irradiation caused earlier mortality. Intraperitoneal injection of 0.05 mg of KCN immediately before exposure markedly decreased mortality, resulting in 75% survival. Pre-exposure KCN followed by post-exposure ACTH gave only 30% survival. NSA 6-1965.

730
RADIATION SICKNESS A CLINICAL INVESTIGATION. Frank Ellis and Basil A. Stoll. *J. Fac. Radiologists* **3**, 207-22 (1952).

Authors report of results of treating 225 patients complaining of radiation sickness. Various drugs were tried in a total of 296 drug trials. Results of study are presented graphically. NSA 6-1966.

731
RELATIONSHIP BETWEEN THE ADRENAL CORTEX AND RADIATION SICKNESS A REVIEW OF THE LITERATURE AND A PRESENTATION OF NEW DATA. Edward C. Porter. *Radiology* **58**, 246-58 (1952).

Thirty-six patients undergoing radiation therapy were studied by means of eosinophil counts. With few exceptions, an adrenal cortical response was noted in patients in whom radiation sickness developed. No such response was observed in patients without radiation sickness. NSA 6-1968.

732
THE RESPONSE OF HUMAN TISSUES TO RADIATION WITH SPECIAL REFERENCE TO DIFFERENTIATION. A. Glucksmann. *Brit. J. Radiology* **25**, 38-43 (1952).

Correlation of local histological prognosis with local clinical results of radiotherapy of tumors in approximately 200 patients for periods of 1-12 years following initial treatment are tabulated. NSA 6-1973.

733
EFFECTS OF BETA RAYS AND X-RAYS ON MITOTIC RATE OF LIVING GRASSHOPPER NEUROBLASTS (abstract). Mary Esther Gaulden, Marjorie Nix, and Edgar B. Darden, Jr. (Oak Ridge National Lab.). (nd). 1p. (AECU-1896).

Fourteen day old embryos were exposed to 8 r or 64 r of x rays or 8.8 rep or 70.4 rep of beta rays from P³². Hanging drop preparations of the embryos were maintained at 38° C and the number of cells in mid-mitosis recorded every 22 min. for 6 hours. X- and β -rays had similar effect on mitotic activity, but a greater number of cells recovered after exposure to beta rays. NSA 6-2249.

734
FRAGMENTATION OF CHROMOSOMES IN GRASSHOPPER NEUROBLASTS BY BETA RAYS AND X-RAYS (abstract). Mary Esther Gaulden, Katherine Loemker, and Edgar B. Darden, Jr. (Oak Ridge National Lab.). (nd). 1p. (AECU-1898).

Fourteen day old embryos were exposed to 64 r of 125 kvp x rays or to an equivalent dose of 1.7 Mev beta rays from P³², then incubated at 38° C for 44, 220, 264, or 352 minutes after which they were fixed and stained and cells examined for chromosome fragments. Total number of cells with fragments, and number of single-fragments were the same in both groups. There were more double fragments in β ray group at 352 minutes. NSA 6-2250.

735
RADIOSENSITIVE AND RADIORESISTANT PHASES IN THE ANTIBODY RESPONSE. Frank J. Dixon, David W. Talmage, and Paul H. Maurer. (Pittsburgh Univ.). (nd). 15p. (AECU-1919). *J. Immunol.* **68**, 693-7 (1952).

Whole body radiation given simultaneously with, or 6 hours after injection of I¹³¹ labeled bovine gamma globulin had little effect on antibody response in rabbits. Response decreased until none was detectable when radiation was given 48 hours before the antigen. NSA 6-2251.

736
SOME CYTOLOGIC AND HISTOCHEMICAL STUDIES OF RADIATION REACTION. Shields Warren, Margaret W. Holt and Sheldon C. Sommers. (Cancer Research Inst., New England Deaconess Hospital, Boston). (nd). 10p. (AECU-1902). *Am. J. Clin. Pathol.* **22**, 411-17 (1952).

A report of cytologic and histochemical investigations of frozen-dried dry-mounted animal tissues exposed to ionizing radiations. Radiosensitive cells developed intranuclear vacuoles, rupture of nuclear membranes after exposure. Desoxyribose nucleic acids showed post-irradiation decrease proportional to radiosensitivity of the cell. Colchicine, but not 4 other radiomimetic drugs, produced similar effects. NSA 6-2252.

737

A CRITICAL EVALUATION OF THE LITERATURE PERTAINING TO THE APPLICATION OF IONIZING RADIATIONS TO THE FOOD AND PHARMACEUTICAL FIELDS. Bernard E. Proctor and Samuel A. Goldblith. (Massachusetts Inst. of Tech.). Jan. 1, 1952. 242p. (NYO-3337; Technical Report No. 1). NSA 6-2253.

738

ORAL MANIFESTATIONS OF IONIZING RADIATION: 1. ORAL LESIONS AND EFFECT ON DEVELOPING TEETH OF SWINE EXPOSED TO 2000 K.V. TOTAL BODY X-RADIATION. James A. English and John L. Tullis. (Naval Medical Research Inst., Bethesda). Dec. 29, 1950. 38p. (NP-3162; U17518) Jour. Dental Res. 30(1), 33-52 (1951).

Total body exposure of 41 young swine to 250 to 800 r of x rays resulted in the following changes in oral mucosa: hemorrhage in 49%; marked ulceration in 9.8%; irregular erosions in about 30%; hemorrhage around developing teeth in 70%. Doses greater than 400 r caused hypoplasia of enamel of developing molars. NSA 6-2254.

739

THE PROTECTIVE EFFECT OF GLUTATHIONE AGAINST RADIATION INDUCED CHROMOSOME ABERRATIONS. Knut Mikaelson. (Brookhaven National Lab.). (nd). 8p. (BNL-1111). Science 116, 172-4 (1952).

1×10^{-8} to 3×10^{-4} M concentrations of reduced glutathione decreased the number of chromosome fragments in cuttings of *Tradescantia paludosa* grown in the glutathione-containing media during 48 hour exposure to continuous gamma radiation from 3-curie Co^{60} source at a dose of 25 r/day. NSA 6-2255.

740

THE PROGRESSION OF MORPHOLOGIC LESIONS IN SWISS MICE EXPOSED TO 625 r, 2000 KVP, TOTAL BODY X-RADIATION. Baldwin G. Lamson and John L. Tullis. (Naval Medical Research Inst., Bethesda). July 31, 1951. 27p. (NP-3667; R6089).

Microscopic studies of progressive changes in spleen, lymphoid tissue, bone marrow, intestines, liver and testes are reported. NSA 6-2256.

741

MYXEDEMA IN THE RADIOTHYROIDECTOMIZED DOG. R. C. Goldberg and I. L. Chaikoff. Endocrinology 50, 115-23 (1952).

In addition to typical myxedema, the following changes were noted: increase in acid polysaccharide content of skin; hyperkeratosis and epidermal atrophy of skin; anemia; increased liver fat; muscle degeneration; lymph node involution; atrophy of G-I tract. NSA 6-2257.

742

EFFECT OF ROENTGEN RADIATION ON THYROID FUNCTION IN RATS. John B. Hursh, Priscilla A. Van Valkenburg, and John B. Moheny. Radiology 56, 411-18 (1951).

Rats received x ray doses of 3000 r, 4500 r and 6000 r administered to thyroid area. Thyroid function was tested by injecting I^{131} after irradiation and analyzing gland for I^{131} uptake and % I^{131} bound in undialyzable complex. After 3000 r or 6000 r, I^{131} uptake was greater than in controls but no morphological changes were found. I^{131} uptake increased with increasing doses in this series. NSA 6-2258.

743

PHYSICAL ASPECTS OF THE BIOLOGICAL ACTION OF IONIZING RADIATIONS. John Read. Brit. J. Applied Phys. 2, 337-45 (1951). NSA 6-2259.

744

DETERMINATION OF THE SENSITIVE VOLUME BY IRRADIATION AND THE IONIZATION DENSITY 1. Opatowski. Bull. Math. Biophys. 13, 263-71 (1951).

Lea's formula for the determination of size of the sensitive volume is corrected and applied to experiments on inactivation of tobacco mosaic virus using three different wave lengths of x rays. Concept of transfer of energy around ionizing particles is discussed. NSA 6-2261.

745

AN ANALYSIS OF SEEDLING MUTANTS (SPONTANEOUS, ATOMIC BOMB RADIATION-, AND X-RAY INDUCED) IN BARLEY AND DURUM WHEAT. C. C. Moh and Luther Smith. Genetics 36, 629-40 (1951).

Progeny tests were made on 650 X_2 plants representing 397 independent mutants; and of 5,653 X_3 plants representing 581 mutants. Over 20% of mutants tested segregated in ratios that deviated significantly from the theoretical 3:1. Results could be accounted for if it were assumed that many of the mutations were in fact deficiencies rather than gene or "point" mutations. NSA 6-2262.

746

EFFECTS ON THE WHITE MOUSE OF A SINGLE WHOLE-BODY EXPOSURE TO 190 MEV DEUTERONS. Paul D. Rosahn, Cornelius A. Tobias, and John H. Lawrence. Am. J. Pathol. 28, 37-49 (1952).

White mice were exposed to single whole-body irradiation by deuteron beam of 184-inch cyclotron in doses of 3.8×10^6 , 7.5×10^6 , and 14.9×10^6 ergs/g. Blood and tissue changes after exposure were proportional to the roentgen equivalent doses, and similar to changes known to occur following exposure to other types of ionizing radiation. NSA 6-2263.

747

QUANTITATIVE AND QUALITATIVE ANALYSIS OF ROENTGEN RAY INJURY IN DROSOPHILA EXPERIMENTS. Hedi Fritz-Niggli. Fortschr. Gebiete Röntgenstrahlen 76, 218-54 (1952). (German).

Radiosensitivity of chrysalis diminishes with advancing age. Detailed studies on changes in body wall, bristle design, hypodermis, muscles, fat cells, gonads, cell differentiation etc., are reported. NSA 6-2265.

748

EFFECT OF ULTRAHARD RADIATION (31-MEV-BETATRON) ON THE EGGS OF DROSOPHILA MELANOGASTER. H. R. Schinz, Hedi Fritz-Niggli, and E. Frey. Experientia 8, 16-18 (1952). (German).

LD_{50} for *Drosophila melanogaster* eggs of various ages 3 hr. eggs, 200 r; 4 hr. eggs, 460 r; 7.5 hr. eggs, 825 r, for 180 kev radiation. For 3 Mev electrons, respective doses were 200 r, 1225 r and 1060 r. For 31-Mev x radiation, doses were 237 r, 117 r and 1167 r. Reasons for lower biological effectiveness of 31 Mev radiation are discussed. NSA 6-2266.

749

THE TOLERANCE OF EPIDERMAL CELLS OF MICE TO HEAVY DOSES OF EXTERNAL ALPHA-IRRADIATION. Finn Devik. Acta Path. Microbiol. Scand. Suppl. 91, 45-7 (1951).

Histological and cytological effects of known quantities of external α irradiation on skin of mice are compared with effects of local x irradiation. Concluded that epidermis contains a number of cells which can survive doses of the order of 100,000 r of α rays. Histological studies showed that x rays produced more pronounced changes than

those produced by α ray doses 1 to 2 orders of magnitude above x ray dose. NSA 6-2267.

750

THE VALUE OF GAMMA RADIATION DOSIMETRY IN ATOMIC WARFARE INCLUDING A DISCUSSION OF PRACTICAL DOSAGE RANGES. George V. Taplin. (Atomic Energy Project, Univ. of Calif., Los Angeles). Mar. 6, 1952. 20p. (UCLA-187).

Author presents data suggesting that few persons receiving external radiation exposures exceeding 400 r would warrant extensive medical treatment. Proposes that critical values used in personnel dosimeters be revised downward from 200-400-600 r to 100-250-400 r. A 50 r range would be helpful for monitors and rescue groups. NSA 6-2269.

751

FURTHER EFFORTS TO INFLUENCE X-RAY CATARACT BY CHEMICAL AGENTS. Ludwig Von Sallmann. Arch. Ophthalmol. (Chicago) 47, 21-2 (1952).

Review of studies of the effects of cysteine treatment for x ray cataract. NSA 6-2270.

752

CLINICAL AND PATHOLOGICAL CHARACTERISTICS OF RADIATION CATARACT. David G. Cogan, David D. Donaldson, and Algernon B. Reese. Arch. Ophthalmol. (Chicago) 47, 55-70 (1952). NSA 6-2271.

753

THE HAZARD INVOLVED IN THE USE OF CARBON-14. Howard E. Skipper. Nucleonics 10, No. 2, 40-4 (1952).

It is concluded that C^{14} is nonhazardous when used with caution at experimental levels. NSA 6-2272.

754

THE ACUTE RADIATION SYNDROME: A STUDY OF NINE CASES AND A REVIEW OF THE PROBLEM. Louis H. Hempelmann, Hermann Lisco, and Joseph G. Hoffman. Ann. Internal Med. 36, 279-510 (1952).

Case histories of 9 of 10 persons injured in two accidental nuclear reactions at Los Alamos several years previous are presented. Emphasis is on clinical, hematological and pathological aspects of the illnesses, and comparison is made with Japanese victims of A bomb in 1945. NSA 6-2273.

755

EFFECT OF COLLOIDAL Au^{198} ON THE GROWTH CYCLE OF LEUKEMIC CELLS AND ON THE SURVIVAL OF THEIR HOST. Horace Goldie, F. B. Watkins, Carl Powell, and Paul F. Hahn. Cancer Research 12, 92-9 (1952).

Intravenous colloidal gold prolonged the survival of leukemic mice and reduced the number of leukemic cells in the blood and organs. Therapeutic effect is attributed to direct cytotoxic action on leukemic cell, improvement of host's regulatory mechanism and stimulation of reticulo-endothelial elements. NSA 6-2277.

756

QUARTERLY TECHNICAL REPORT: OCTOBER 1, 1951 THRU DECEMBER 31, 1951. (Atomic Energy Project, Univ. of Rochester). February 11, 1952. 59p. (UR-200).

Includes data on bone marrow studies on spleen-shielded and non-shielded dogs exposed to LD_{50-400} dose of x radiation. NSA 6-2279.

757

ON THE EFFECT OF RADIOACTIVITY ON THE AUTOMATICITY OF FROG HEARTS WITH SPECIAL CONSIDERATION OF THE EFFECT OF LARGE RADIATION DOSES AND THE ANTAGONISTIC EFFECTS OF α and β RAYS. (German). E. Polak. Pflüger's Arch. ges. Physiol. 226, 659-75 (1931).

Confirms Zwaardemaker's observations on role of K in heart function (due to radioactivity of K). Equimolar

substitution of Rb for K or smaller concentrations of more radioactive elements permits normal activity and restores a heart which has stopped in absence of K. NSA 6-1134.

758

DISTRIBUTION AND EXCRETION OF ELECTROLYTES AFTER ACUTE WHOLE-BODY IRRADIATION INJURY. 1. STUDIES WITH RADIOPOTASSIUM. John Z. Bowers and Kenneth G. Scott. Proc. Soc. Exptl. Biol. Med. 78, 645-52 (1951).

Radiosensitive tissues show a variety of alterations in radiosodium concentration after total body irradiation above LD_{50} . Percent loss of dry weight per day is generally most pronounced in radiosensitive tissues. Urinary excretion of radiosodium shows complementary decrease in response to increased loss through G-I tract post-exposure. NSA 6-2292.

759

THE VIABILITY OF HETEROZYGOTES FOR LETHALS. C. Stern, G. Carson, M. Kinst, E. Novitski, and D. Uphoff. (Radiation Lab., Univ. of Calif.). Dec. 1951. 68p. (UCRL-1614). Genetics 37, 413-49 (1952).

Data on a total of 77 different x chromosome lethals indicate that the majority, if not all, so called recessive lethals in the x chromosome of *D. melanogaster* have a dominant effect on viability. NSA 6-2556.

760

(RESEARCH ON THE BIOLOGICAL AND MEDICAL ASPECTS OF ATOMIC ENERGY). QUARTERLY PROGRESS REPORT NO. 2. (Air Force Radiation Lab., Univ. of Chicago). Jan. 15, 1952. 81p. (COO-87; U21326).

Includes data relative to effect of partial shielding on mortality in x irradiated rats, cell division in x irradiated giant amoeba, failure of p-aminopropiophenone to reduce toxicity of nitrogen mustard in mice, preliminary tests of protective effects of various chemicals against x ray death in mice, effects of x rays on isolated mammalian heart and destruction of epinephrine solutions by x rays. NSA 6-2557.

761

EFFECT OF WHOLE BODY X-RADIATION AND OF INTRAPERITONEAL HYDROGEN PEROXIDE ON A NUCLEOPROTEIN-CONTAINING FRACTION OF RAT INTESTINE AND ON WHOLE RAT INTESTINE. Robert N. Feinstein and Carrie L. Butler. (Air Univ. School of Aviation Medicine). Nov. 1951. 7p. (NP-3642; U21021). Proc. Soc. Exptl. Biol. Med. 79, 179-81 (1952). NSA 6-2558.

762

MONTHLY PROGRESS REPORT JANUARY 1952. Hymer L. Friedell. (Atomic Energy Project, Western Reserve Univ.). 11p. (NYO-1643).

Includes data on effects of administration of antibiotics to rats irradiated with Au^{198} , effect of splenectomy on total body x irradiation of rats, tests of protective effects of various compounds in whole body x irradiated mice; effect of radiation on yeast growth, studies relative to the protection afforded the irradiated dog by perfusion of its blood through a donor spleen. NSA 6-2559.

763

EFFECT OF TOTAL BODY X-IRRADIATION ON THE PLASMIN INHIBITOR TITER IN THE BLOOD OF RATS. Walter Kocholaty, William W. Ellis and Hans F. Jensen. (Army Medical Research Lab.). Dec. 16, 1951. 6p. (AMRL-71).

Exposure of rats to 1000 r total body x irradiation produced a fall in plasmin inhibitor titer of plasma beginning on 2nd post-exposure day and gradually increasing there-

after. Starvation exerted similar effect. Total body irradiation with 1000 r caused weight loss nearly identical with that due to starvation. NSA 6-2561.

764

CHRONIC EXTERNAL IRRADIATION; NEUTRON TOXICITY, AND HEMATOLOGY. p.9-47 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH; QUARTERLY REPORT. (Argonne National Lab.). August, September, October, 1951. 39p. (ANL-4713 (p.9-47)).

Data on the effects of homologous and heterologous bone marrow injections on survival in mice following x irradiation are presented in tabular form. The addition of 0.025M K citrate to distilled water suspensions of Rous sarcoma virus gave a high degree of protection against an x-ray dose of 75,000 r. Studies on the mechanism of citrate protection are in progress. Data on the pattern of loss and recovery of weight of the testes of mice exposed to a single dose of x radiation and a single intravenous injection of Rn in equilibrium with its short-lived decay products are presented in tabular form. Results indicate that the α particle does not manifest as high a factor of biological effectiveness relative to x radiation as has been assumed. A summary is included of visible lens opacities 6 to 7 months after various doses of x radiation to the head of newborn mice. Histologic examination showed progressive destruction of the cells of the retina following 1000 r x irradiation, with obvious signs within 3 hr after irradiation. The effects of shielding of liver, intestine, or spleen, and of spleen shielding followed by splenectomy at 5 min and at 24 hr upon the hematocrit values, reticulocyte and leukocyte counts of mice exposed to 1025 r x irradiation are presented graphically. Data indicate that cysteine injected up to 4 days before sacrifice does not significantly alter the 24-hr uptake of P^{32} by rat and mouse tissues. Studies of the effects of spleen shielding and subsequent splenectomy upon antibody formation in rats receiving total-body x irradiation confirm previous observations concerning the protective effects of spleen shielding on antibody formation. NSA 6-2562.

765

PHYSIOLOGY, RADIUM TOXICITY, HISTOPATHOLOGY, AND RADIOCHEMISTRY. p.48-73 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH; QUARTERLY REPORT. (Argonne National Lab.). August, September, October, 1951. 26p. (ANL-4713 (p.48-73)).

Data from a study of the effects of cysteine and hypoxia on the survival of rabbit thymocytes irradiated in vitro with 200-r x rays, and data on the effects of chilling on the protection afforded x-irradiated thymic cells by cysteine are presented in tabular form. From results of the study it is concluded that the effect of cysteine on irradiated thymic-cell-serum suspensions can not be ascribed to a direct competition for the short-lived free radicals presumably formed in the aqueous phase, and also that the protection is not due simply to the removal of O and consequent decrease in the toxic breakdown products of water. Preliminary results suggest that cysteine binds O rapidly in the presence of thymic cells suspended in serum, and the effect of chilling suggests that other events, presumably related to the binding of O, must take place. Further work on this problem is in progress. Changes in body weight, food intake, and water intake were found to be related to x-ray dosage in rats, and cysteine pretreatment and a force-fed, semiliquid diet greatly decreased the characteristic postirradiation drop in body weight. A method of measurement of the γ activity in humans due to the nonemanating fraction of Ra present in the body is re-

ported and comparison is made of counting results in patients whose Ra burden was established by the absolute method of measurement, and with Rn exhaled in the breath by these patients. In the clinical study of persons exposed to radium, one 68-year-old male given radium chloride intramuscularly 25 years ago was found to have an estimated total-body radium of 13.9 ug, however, complete radiography indicates only minimal skeletal changes. A dosage of 800-r x radiation delivered to the tenotomized legs of rats did not appear to greatly disturb tendon regeneration although the regenerative process took a longer time in irradiated than in control rats. NSA 6-2563.

766

SPECIAL PROBLEMS, p.74-86 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH; QUARTERLY REPORT. August, September, October, 1951. Austin M. Brues, Ed. (Argonne National Lab.). 13p. (ANL-4713 (p.74-86)).

A method is described whereby data on tumor incidences may be put into such a form that comparison can be made according to standard statistical procedures for handling rare discrete events. In a study of the effects of pile-irradiated cholesterol on mice it was concluded that ionizing radiation does not produce appreciable carcinogenic activity in cholesterol and that direct action of ionizing radiation on cholesterol is not responsible for radiation carcinogenesis. Data on the mortality of cysteine-treated chicks following x irradiation are presented in tabular form. Preliminary data indicate that larger cysteine doses are required to protect against radiation toxicity in newly-hatched than in older chicks. Dog plasma was found to afford protection against radiation injuries to mice when administered intravenously just prior to exposure to 800-r x radiation. The toxicity of normal dog plasma to mice was found to be lost after 5 hr incubation or perfusion through the dog spleen. White's medium, a synthetic nutrient containing salts, amino acids, and vitamins, did not afford protection to mice after perfusion through dog spleen, but did give active protection if given intravenously after perfusion through the spleen that had been lead-protected during irradiation of the dog. Neither agent was protective when administered before x irradiation. NSA 6-2564.

767

INVERTEBRATE ZOOLOGY, PHYTORADIOBIOLOGY, AND MICROBIOLOGY, p.87-100 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH; QUARTERLY REPORT. August, September, October, 1951. Austin M. Brues, ed. (Argonne National Lab.). 14p. (ANL-4713 (p.87-100)). NSA 6-2565.

768

PHARMACOLOGY; THEORETICAL BIOLOGY, EXPERIMENTAL PATHOLOGY, AND TREATMENT OF POST-IRRADIATION INFECTION WITH ANTIBIOTICS, p.109-24 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH; QUARTERLY REPORT. August, September, October, 1951. Austin M. Brues, ed. (Argonne National Lab.). 16p. (ANL-4713 (p.109-24)).

Preliminary data from a study of the pharmacodynamics of compounds derived from ribonucleic acid and the effects of these compounds upon physiological changes following total-body irradiation showed that the blood pressure of rats is appreciably decreased by small amounts of adenosine and 3-adenylic acid, while other nucleic acid derivatives have much smaller effects. An approximate formula for the standard error of an absolute white cell count is used to show the dependence of the standard error on the blood count

parameters and sample sizes and to develop formulas for minimum error at fixed cost as well as for minimum cost at fixed relative error. Data on the survival and incidence of malignant bone tumors in mice that had received less than 22 uc per kg of U from 210 to 415 days previously, and experimental design and survival figures at 221 days of mice which had received injections of Ra²²⁶ and Pu²³⁹ are presented in tabular form. Biometric analysis of data on the effects of various patterns of antibiotic therapy on the survival of mice following a fixed dose of x rays showed streptomycin dosages ranging from about 3000 to 6000 units per day were protective to the same degree. Penicillin plus streptomycin appeared to be less protective than streptomycin alone. Aureomycin, chloramphenicol, and terramycin, all supplemented with streptomycin, conferred about equal degrees of protection. NSA 6-2567.

769
EFFECT OF IRRADIATION ON P³² UPTAKE BY BONE MARROW AND SPLEEN. I. NORMAL VALUES AND THE EFFECT OF SODIUM PENTOBARBITAL. W. A. Rambach, D. A. Moomaw, H. L. Alt, and J. A. D. Cooper. (Air Univ. School of Aviation Medicine). Apr. 1952. 6p. (NP-3690).

Normal values are given for DNA and RNA phosphorus as well as uptake of P³² and DNA in bone marrow and spleen of adult rats. Anesthetic doses of sodium pentobarbital were found to produce a decrease in relative rate of formation of DNA in bone marrow and spleen during period of 5 1/2 hours. NSA 6-2568.

770
THE LOCAL GREYING OF HAIR IN MICE TREATED WITH X-RAYS AND RADIOMIMETIC DRUGS. E. Boyland and S. Sargent. Brit. J. Cancer 5, 433-40 (1951).

Intradermal injection of nitrogen or sulfur mustard into colored mice exerts a radiomimetic effect as regards greying of hair. Numerous other carcinogenic and non-carcinogenic substances were tested by same criteria, and several were found to produce greying. Greying, a preferential lethal action on pigment-producing dendritic cells, is similar to vesication and induction of mutations and cancer. NSA 6-2570.

771
RADIATION HAZARDS TO THE EMBRYO AND FETUS. Liane Brauch Russell and W. L. Russell. Radiology 58, 369-77 (1952).

Susceptibility of developing embryo to induction of malformations by radiation, critical periods in development, dosages which may produce anomalies, direct radiation effects on the embryo, and indirect effects via maternal injury are discussed. Discussion based on review of literature. NSA 6-2572.

772
THE INFLUENCE OF VISIBLE LIGHT ON THE SULFHYDRYL CONTENT OF YEAST CELLS AFTER IONIZING AND ULTRAVIOLET IRRADIATION. Walter Kocholaty and Jack Denson. (Army Medical Research Lab.). Dec. 15, 1951. 11p. (AMRL-72).

Yeast cultures irradiated with ultraviolet light or soft x rays showed a decrease in sulfhydryl content and number of visible cells. Subsequent irradiation with strong visible light led to partial reversal of effect. Subsequent irradiation of soft x-ray treated cells with visible light had no effect on sulfhydryl content of cells, but did lead to slight increase in viable cell count. NSA 6-2605.

773
THE INFLUENCE OF ROENTGEN RAYS UPON THE INDOPHENOL OXIDASES WITHIN THE TISSUE AND IN THE LEUKOCYTES. (In German). S. Hallheimer and H. R. Schinz. Strahlentherapie 20, 331-341 (1925).

No changes occur because of roentgen irradiation in

the stable or labile oxydases of the leukocytes, skin, or of skeletal diaphragm or heart muscle.

774
BIOLOGICAL STUDIES OF RADIATION EFFECTS, AND HEALTH CHEMISTRY AND PHYSICS, p.39-113 OF MEDICAL AND HEALTH PHYSICS QUARTERLY REPORT OCTOBER, NOVEMBER AND DECEMBER 1951. (Radiation Lab., Univ. of Calif.). Feb. 28, 1952. 75p. (UCRL-1694 (p.39-113)).

From a study of the role of the nucleus in x-ray-induced deferred death in yeast it was concluded that radiation-induced deferred death in both haploid and diploid yeast cells is the result of the inhibition of the nuclear division of the irradiated cell without inhibition of cell growth. Ferrokinetic abnormalities in diseases with anemia were studied by the Fe turnover method using Fe⁵⁹ globulin. Serial in vivo radioactivity measurements at marrow, liver, and spleen sites as well as sampling of plasma and cells were made subsequent to instantaneous labeling of the plasma globulin Fe. All measurements were made using high-efficiency fluorescence counters. Representative tissue volumes of liver, spleen, and marrow were serially followed using external directional detectors. Data from 22 cases are compared with normal controls. Techniques for the survey of slow neutrons, methods of measurement of fast neutrons, and methods for estimation of high-energy neutron flux densities are discussed. NSA 6-2810.

775
THE EFFECT OF TOTAL BODY X IRRADIATION ON THE SUSCEPTIBILITY OF MICE TO INFLUENZA A VIRUS INFECTION. Ernest Beutler and Horace M. Gezon. J. Immunol. 68, 227-42 (1952). NSA 6-2811.

776
EFFECT OF IRRADIATION ON THE UNIVERSAL REACTION IN CANCER. Reuben L. Kahn, Fred J. Hodges, Isadore Lampe, and Owen W. Doyle. Cancer Research 12, 170-5 (1952).

Patients whose universal reactions exhibited a rise in titer following irradiation were found to manifest clinically a normal post irradiation course; patients who developed no rise or a decrease in titer were found to be in a poor state clinically and did not manifest a normal post-irradiation course. NSA 6-2812.

777
EFFECT OF IRRADIATION ON THE UNIVERSAL REACTION IN POLYCYTHEMIA VERA. Reuben L. Kahn, William H. Bullock, and Frank H. Bethell. Cancer Research 12, 176-9 (1952).

In patients who developed a rise in precipitation (universal reactions) following irradiation, polycythemia was found to be under control. In patients in whom the universal reaction showed no rise in precipitation following irradiation, polycythemia was found to be in an active state, not under control. NSA 6-2813.

778
EFFECT OF BAL ON SURVIVAL OF RATS AFTER LETHAL DOSES OF POLONIUM. John B. Hursh. Proc. Soc. Exptl. Biol. Med. 79, 210-2 (1952).

Control rats injected with lethal dose of polonium (36 µg/kg) had median survival time of 22 days in contrast to BAL-treated group which had median survival time of 89 days. BAL-treated group also maintained good cell and platelet counts in peripheral blood; control rats showed typical picture of hemopoietic depression. NSA 6-2814.

779
EFFECTS OF HIGH-VOLTAGE CATHODE-RAY IRRADIATION ON COTTONSEED. M. G. Lambou, R. Y. Mayne, B. E. Proctor, and S. A. Goldblith. Science 115, 269-71 (1952).

Cotton seeds infected with molds and bacteria and exposed to 3 Mev cathode rays in doses up to 3,000,000 rep showed significant reduction of number of micro-organisms, no change in moisture or free fatty acid content, but increasing inhibition of germination and seedling growth with increasing cathode ray dose. Inactivation of one or more enzymes is suggested. NSA 6-2815.

780

EXPERIMENTAL STUDIES ON EARLY LENS CHANGES AFTER ROENTGEN IRRADIATION. III. EFFECT OF X-RADIATION ON MITOTIC ACTIVITY AND NUCLEAR FRAGMENTATION OF LENS EPITHELIUM IN NORMAL AND CYSTEINE-TREATED RABBITS. Ludwig Von Sallmann. Arch. Ophthalmol. (Chicago) 47, 305-20 (1952).

Pretreatment with cysteine afforded some protection evidenced by lower incidence of nuclear fragmentation in all zones of treated eyes, as compared with eyes of untreated or post-irradiation treated rabbits. NSA 6-2816.

781

PROTECTIVE EFFECT OF SMALL LEAD SHIELDS DURING REPEATED WHOLE-BODY X-RAY IRRADIATION OF RATS. J. Gershon-Cohen, M. B. Hermel, and I. O. Griffith, Jr. Radiology 58, 383-9 (1952).

Small lead shields over various surfaces of body during irradiation caused enhanced survival of rats exposed to whole body x irradiation. Protection resulted when as little as 15% of body surface was shielded. Second dose of 600 r (LD_{50}) given 34 days after first dose resulted in no decrease in survival although lower body weights were noted after the second exposure. NSA 6-2817.

782

FURTHER STUDIES ON THE NATURE OF THE HEMORRHAGIC STATE IN RADIATION INJURY. D. P. Jackson, E. P. Cronkite, G. V. Leroy and Bernard Halpern. J. Lab. Clin. Med. 39, 449-61 (1952).

Authors studied hemorrhagic state in ten dogs exposed to 600 r of whole body x radiation. No conclusive evidence found for presence of circulating anticoagulant detectable by Conley's test or heparin-protamine titration. Specific tests for antithromboplastins and antithrombins were not made. Clotting defect is attributed to decreased platelet count. NSA 6-2818.

783

LATE RADIATION NECROSIS OF THE JAW BONES. Thomas J. Cook. J. Oral Surg. 10, 118-37 (1952).

Late effects on normal mouth tissues of high voltage x rays used in treatment of cancer of oral cavity are discussed. Causative factors of irradiation osteonecrosis, as well as prophylaxis, treatment and case histories are reviewed. NSA 6-2819.

784

STUDIES ON X-RAY INDUCED RECIPROCAL TRANSLOCATIONS IN EINKORN WHEATS. IV. AUTOTRIPLOIDS. Kosuke Yamashita. Japan. J. Genetics 26, 69-72 (1951).

Cytogenetic behavior of x-ray induced reciprocal translocations in 3 cases of triploids from crosses in Einkorn wheat is described. NSA 6-2820.

785

BLOOD COAGULATION AND HEMOSTASIS BY SPLEEN IRRADIATION IN GYNECOLOGY. Helmut Wagner. Arch. Gynäkol. 181, 246-76 (1952). (German).

A detailed scheme of blood coagulation based on observations of 30 women treated for juvenile, pre-climacteric or cancerous chronic bleeding by x-irradiation of the spleen is presented. NSA 6-2821.

786

EFFECTS OF FAST NEUTRONS AND Co^{60} γ -IRRADIATION ON MOUSE SPLEEN. D. L. Jordan and W. Clark. Radiation Research 1, 501 (1954).

Splenic atrophy 5 days after single acute exposure of CF-1 female mice to fast neutrons and Co^{60} γ rays, and to mixtures of these two radiations, is found to vary as the log of the dose. An RBE of 4.4 (n/r) for splenic weight loss is indicated. Additivity of these two ionizing radiations in producing splenic atrophy is discussed.

787

SOME POTENTIAL HAZARDS OF THE WIDESPREAD USE OF ROENTGEN RAYS IN PEDIATRICS. Robert W. Miller. (Atomic Energy Project, Univ. of Rochester.) Mar. 13, 1952. 24p. (UR-191). Pediatrics 11, 294-303 (1953). NSA 6-2823.

788

PROTECTION OF MICE AGAINST X-IRRADIATION BY SPLEEN HOMOGENATES ADMINISTERED AFTER EXPOSURE. L. J. Cole, M. C. Fishler, M. E. Ellis, and V. P. Bond. (Naval Radiological Defense Lab.). Jan. 15, 1952. 18p. (USNRDL-339; U21254).

Administration of the equivalent of 1.3 spleens (from 1 to 3 week old mice) in the form of phosphate buffered homogenates, from 1 to 45 hrs. after total body exposure to 700 r or 800 r of x rays afforded protection of recipient mice against the lethal effects of irradiation. There may be a quantitative relationship between degree of protection and amount of spleen injected. NSA 6-2824.

789

FIXATION OF I^{131} IN THE HUMAN FETAL THYROID. CASE HISTORY. U. Marinoni. Folia Endocrinol. (Pisa) 4, 637-40 (1951). (Italian).

A living fetus born at 4th or 5th month of pregnancy was injected with 30 μ c of I^{131} . Significant uptake by thyroid was found. NSA 6-2830.

790

NECROSIS OF THE BRAIN FOLLOWING ROENTGEN IRRADIATION. G. S. Dugger, J. G. Stratford and J. Bouchard. Am. J. Roentgenol. 72, 953-60 (1954).

Authors describe brain necrosis following therapeutic irradiation of tumors of skin of the head. Brain damage is secondary to vascular damage.

791

AN INVESTIGATION INTO THE MECHANISM WHEREBY EXTREME HYPOTHERMIA INCREASES THE SURVIVAL OF INFANT MICE GIVEN A LETHAL DOSE OF X-RAYS. John B. Storer and Louis H. Hempelmann. (Los Alamos Scientific Lab.). (nd). 18p. (AECU-1961).

Survival of infant mice while in a state of extreme hypothermia is almost twice that of litter mates exposed to same doses of total body x rays at room temperature. Experimental results indicate that lowered tissue oxygen tension in chilled mice is an important factor in increasing the survival rate. NSA 6-3153.

792

MECHANISMS IN ACQUIRED RADIORESISTANCE OF CANCER. P. O'B. Montgomery and Shields Warren. (Cancer Research Inst., New England Deaconess Hospital, Boston). (nd). 10p. (AECU-1991). Radiology 60, 421-4 (1953).

Authors present transplant survival data obtained when Gardner lymphosarcoma is given increasing *in vitro* doses of x radiation. It is concluded that the mechanism of acquired radioresistance in the tumor is probably an alternation of the host-tumor relationship as a consequence of host's response to x radiation. NSA 6-3154.

793

CLEARANCE OF PRODIGIOSIN DUST FROM THE RESPIRATORY TRACT OF NORMAL AND X-IRRADIATED RABBITS. George V. Taplin, James S. Grevior, Camille Finnegan, and Arthur Dunn. (Atomic Energy Project, Univ. of Calif., Los Angeles). Apr. 10, 1952. 15p. (UCLA-191). Ann. Allergy 10, 397-403 (1952).

When rabbits are given whole body x ray dose of 800 r followed by single inhalation exposure to prodigiosin dust, removal of dye particles from nasal mucosa and lung is greatly accelerated and efficiency of its clearance definitely increased over that of controls, especially on 14th and 28th post-exposure days. NSA 6-3158.

794

THE DIMINUTION AND INCREASE OF RADIOSENSIBILITY OF ANIMAL TISSUE AND THEIR IMPORTANCE FOR RADIOTHERAPY. G. Schwarz. Munch. Med. Wochschr. 766-7(1921). (In German)

Roentgen irradiation therapy should be applied by a step-by-step system after the early reaction, at least 24-48 hour intervals.

795

MORTALITY OF MICE AFTER TOTAL BODY IRRADIATION AS INFLUENCED BY ALTERATIONS IN TOTAL DOSE, FRACTIONATION, AND PERIODICITY OF TREATMENT. Henry S. Kaplan and Mary B. Brown. J. Natl. Cancer Inst. 12, 765-75 (1952).

A mathematical model is presented which fits the experimental data for daily fractionation and provides a tentative framework for additional dose-response experiments. NSA 6-3162.

796

HISTOLOGICAL CHANGES INDUCED IN BARLEY PLANTS BY RADIATION FROM P^{32} . Ruth W. Mackie, James M. Blume, and C. E. Hagen. Am. J. Botany 39, 229-37 (1952). NSA 6-3164.

797

BIOLOGICAL ACTION OF RADIUM BETA RADIATION (THE CURTIS F. BURNAM TUBE). Jean Moulinard. J. radiol. électrol. 33, 156-61 (1952). (French).

Burnam tube contains 50 mg of Ra filtered by 0.3 mm of monel metal. Physical and biological evaluation of its feebly penetrating β rays is presented. Skin application of 5 min (1800 rep) causes an erythematous reaction of the second degree. A 50 min. exposure (18,000 rep) results in radioepithelitis with good cicatrization. NSA 6-3165.

798

ACTION OF X-RAYS ON THE CARDIAC FUNCTION OF BUFO VULGARIS. II. ELECTROCARDIOGRAPHIC OBSERVATIONS. Giancarlo Lischi and Alberto Pacciardi. Radioterapia radiobiol. e fis. med. 4, 308-14 (1952). (Italian).

Electrocardiographs of Bufo vulgaris following 200-300 or 1000 r x-ray irradiation are illustrated and discussed. NSA 6-3166.

799

SERIOUS ALTERATION OF SKELETAL GROWTH FOLLOWING THERAPEUTIC ROENTGEN IRRADIATION IN EARLY LIFE. Ruggero Camera. Radioterapia radiobiol. e fis. med. 4, 257-68 (1951). (Italian).

Author presents detailed observations on a 13 year old boy with extreme hypoplasia of right arm resulting from roentgen irradiation of an angioma in infancy. Review of literature on effects of radiation on bone development is included. NSA 6-3167.

800

EFFECT OF X-RAYS ON THE METABOLISM OF THE NUCLEIC ACIDS. Mario Paoletti. Radioterapia radiobiol. e fis. med. 4, 225-36 (1951). (Italian).

Effect of 100 to 200 r of x radiation on nuclear staining of epidermal cells of guinea pig investigated. A decrease in nucleic acids, particularly thymonucleic and ribonucleic acids, is suggested. NSA 6-3168.

801

NEW EXPERIMENTS ON THE EFFECTS OF ROENTGEN RADIATION AND FLUORESCENCE RADIATION OF

CALCIUM TUNGSTATE ON THE FORMATION AND EVOLUTION OF CALLUSES IN EXPERIMENTAL FRACTURES. Braggion Paolo and Ravazzolo Sinclair. Radioterapia radiobiol. e fis. med. 4, 300-7 (1951). (Italian).

Inserting $CaWO_4$ near fracture prior to x irradiation as well as x irradiation alone were studied relative to their effects on healing of fractures in rabbits. Neither x rays nor x rays plus fluorescence had any definite effect on healing. NSA 6-3169.

802

ON THE EFFECT OF LARGE DOSES OF X-RAYS ON TISSUE CULTURES. M. N. Meisel, T. M. Kondrat'eva, and K. H. Emel'yanov. Doklady Akad. Nauk, S.S.S.R. 81, 1047-50 (1951). (Russian).

Cultures of tumorous tissue from a mouse milk gland were exposed to 5000 to 500,000 r of 90 kv x rays at the rate of 8300 r/min. Effects on cells and nuclei are described briefly. NSA 6-3170.

803

CILIARY MOVEMENT AND ACETYLCHOLINE. Pamela Kordik, E. Bulbring, and J. H. Burn. Brit. J. Pharmacol. 7, 58-66 (1952).

Authors report studies of responses of isolated loops of intestine from irradiated rats to acetylcholine and histamine. Response of colon was increased 24 hrs post-exposure; response of duodenum jejunum and ileum after 48 hrs. No changes in response to histamine. Cholinesterase content of intestines of irradiated rats was also determined. No fall in "true" or "specific" cholinesterase was observed 48 hrs post-exposure. NSA 6-3171.

804

THE LIMIT OF RENAL TOLERANCE TO X-RAYS: AN INVESTIGATION INTO RENAL DAMAGE OCCURRING FOLLOWING THE TREATMENT OF TUMOURS OF THE TESTIS BY ABDOMINAL BATHS. P. B. Kunkler, R. F. Farr, and R. W. Luxton. Brit. J. Radiology 25, 190-201 (1952).

Clinical picture of renal failure associated with hypertension following x ray abdominal baths for seminoma testis is described. In cases developing renal failure, the whole of both kidneys received dose of 2300 r or more in 5 weeks. NSA 6-3172.

805

BODY WEIGHT, FASTING AND FORCED FEEDING AFTER WHOLE BODY X-IRRADIATION. Willie W. Smith, Isabelle B. Ackermann, and Flaconer Smith. Am. J. Physiol. 168, 382-90 (1952).

Weight pattern in rats, mice and guinea pigs following irradiation was characteristic of species rather than of dose or lethality. Fasting did not alter mortality. Forced feeding (rats) a partially digested diet by stomach tube was detrimental to rats when feedings were given first 3 post exposure days; not thereafter. NSA 6-3173.

806

RESULTS AND INTERPRETATIONS OF X IRRADIATION STUDIES WITH ESCHERICHIA COLI. C. R. Goucher, Ichiro Kamei and W. Kocholaty. (Army Medical Research Lab., Fort Knox, Ky.). Aug. 18, 1955. 17p. (AMRL-206).

Protection of *Escherichia coli* B/r from x irradiation by pre-incubation with metabolizable substrates, such as succinic acid and ethanol may occur only with dense bacterial suspensions, limiting equilibration with the surrounding oxygen, and may be abolished altogether by shaking the suspension a few seconds before irradiation. Irradiated suspensions of *E. coli* B/r showed no dilution effect; a given irradiation dose resulted in essentially the same percentage inactivation for suspensions ranging from 10^4 to 10^8 cells per ml. NSA 10-41.

807

EFFECTS OF X-RAYS AND RADIUM ON THE NUCLEI OF CANCEROUS CELLS. L. Cusmano. *Acta Unio Intern. contra Cancrum* 7, 822-23(1952). (French)

Radiation caused disappearance of proliferating cells and increase in number of resting cells. Hyperploid cells seemed to be more resistant and their number may explain radioresistance or recurrence of certain types of tumors. (Tumors studied: rat sarcoma exposed to 200 r x rays, and epithelial cancer of cervix treated with 20 mg Ra.). NSA 6-3175.

808

ANALYSIS OF DIFFERENT FACTORS RESPONSIBLE FOR THE DEATH OF MICE IRRADIATED IN TOTO. H. Betz. *Acta Unio Intern. contra Cancrum* 7, 814-17 (1952). (French).

The protective action of KCN against x irradiation is exerted only on those tissue lesions resulting from general metabolic disturbances, such as changes in lipid production of the adrenal cortex and the liver, and not on radiolesions. It is concluded that general alarm syndrome is cause of radiation death in the mouse. NSA 6-3176.

809

EXPERIMENTAL RADIATION INDUCED OVARIAN TUMORS: ADENOCARCINOMA WITH HYPERVOLEMIA. Jacob Furth and J. B. Kahn. *Acta Unio Intern. contra Cancrum* 7, 827-30 (1952).

Histological and physiological classification of ovarian tumors caused by irradiation. NSA 6-3177.

810

SYMPOSIUM ON CEREBRAL PALSY. PART II. SOME EFFECTS OF IONIZING RADIATION AND METABOLIC INHIBITION ON THE DEVELOPING MAMMALIAN NERVOUS SYSTEM. Samuel P. Hicks. *J. Pediat.* 40, 489-513 (1952). NSA 6-3178.

811

RADIATION-INDUCED LYMPHOID TUMORS OF MICE. Henry S. Kaplan. *Acta Unio Intern. contra Cancrum* 7, 849-59 (1952).

Paper presents results of current large scale experiments on effect of varying such factors as total x ray dosage, number of treatments and interval between treatments upon radiation mortality and the incidence of lymphoid tumors. NSA 6-3179.

812

NUCLEIC ACIDS IN THE CANCEROUS CELL AND RADIO-SENSITIVITY. L. Cornil and A. Stahl. *Acta Unio Intern. contra Cancrum* 7, 818-21 (1952). (French).

Observations on lymphosarcoma cells and orthoplastic epitheliomas during Ra therapy show that radiosensitivity of a cell is proportional to its nucleoprotein content and directly proportional to the thymonucleic acid/ribonucleic acid ratio. NSA 6-3180.

813

A STUDY OF THE X-IRRADIATION PROTECTION AFFORDED BY COBALT. W. H. Parr, T. O'Neill, and A. T. Krebs. (Army Medical Research Lab., Fort Knox). Feb. 4, 1952. 8p. (AMRL-74; U21459).

White mice maintained on a diet containing 3 to 4 mg Co/day for 5 to 8 days before and 15 days after 720 r whole body irradiation showed an increased resistance to radiation as compared to group fed only Purina chow. General appearance of the two groups was similar. NSA 6-3181.

814

THE EVALUATION OF WHITE-CELL COUNTING IN RADIATION PROTECTION. A. C. Chamberlain, F. M. Turner, and E. K. Williams. *Brit. J. Radiol.* 25, 169-76 (1952).

Reviews normal variations in leukocyte counts and reliability of leukocyte counts in detecting occupational radiation injury. Concludes that WBC counting does not give full measure of protection implied in Recommendations of British X-ray and Radium Protection Committee, but that there are detectable changes in large groups of workers even when levels are maintained as low as those which prevail at the British Atomic Energy Research Establishment. NSA 6-3184.

815

THERAPY OF THE X-IRRADIATION SYNDROME WITH TERRAMYCIN. Molly P. Coulter, Frank W. Furth and Joe W. Howland. (Atomic Energy Project, Univ. of Rochester). Apr. 2, 1952. 13p. (UR-195). *Am. J. Pathol.* 28, 875-81(1952). NSA 6-3187.

816

DISAPPEARANCE RATE OF TAGGED SUBSTANCES FROM THE CIRCULATION OF ROENTGEN IRRADIATED ANIMALS. Leon Wish, Jacob Furth, Charles W. Sheppard, and Robert H. Storey. *Am. J. Roentgenol.* 67, 628-40 (1952).

Disappearance rate of several labelled substances studied in mice and rabbits. All substances disappeared faster from blood stream of irradiated than of normal animals one day after exposure, presumably due to increased capillary permeability. NSA 6-3210.

817

THERAPY OF ACUTE RADIATION HYPOTENSION IN THE RAT. P. O'B. Montgomery and Shields Warren. (Cancer Research Inst., New England Deaconess Hospital, Boston). (nd). 7p. (AECU-1992).

Blood pressure of rats made hypotensive by 1500 r total body radiation is raised to normal by L-norepinephrine bitartrate and monohydrate. Transfusion has little or no effect on the blood pressure. NSA 6-3484.

818

EFFECTS OF ACUTE RADIATION ON THE ADULT MAMMALIAN CENTRAL NERVOUS SYSTEM. Samuel P. Hicks and Philip O'B. Montgomery. (Cancer Research Inst., New England Deaconess Hospital, Boston and Laboratory of Pathology, Harvard Cancer Commission). (nd). 15p. (AECU-1994). *Proc. Soc. Exptl. Biol. Med.* 80, 15-18 (1952).

Irradiation of rats and mice resulted in acute necrosis of scattered oligodendroglia cells, subependymal cells of young adult animals, retinal rod cells and neurons of pyramidal lobe and olfactory brain. Subependymal cells were radiosensitive (200 r) but the others were not destroyed below 1200 r. Findings are related to other data on concomitant changes in cell metabolism and radiosensitivity in the developing nervous system. NSA 6-3485.

819

STUDIES ON THE MECHANISM OF ACTION OF IONIZING RADIATIONS; VII. CELLULAR RESPIRATION, CELL DIVISION AND IONIZING RADIATIONS. E. S. Guzman Barron and S. Louise Seki. (Argonne National Lab.). Mar. 1952. 11p. (AECU-2000; UAC-547). *J. Gen. Physiol.* 35, 865-71 (1952).

X-irradiation of the eggs and sperm of *Arbacia punctulata* in relatively large doses inhibited respiration, while small doses increased it; dose required to increase it depending on the cell's sensitivity to radiation. Most sensitive were sperm, then fertilized eggs. Unfertilized eggs were least sensitive. NSA 6-3486.

820

THE EFFECT OF X RAYS ON THYMOCYTES AND ITS MODIFICATION BY CYSTEINE. H. M. Patt, M. E. Blackford and R. L. Straube. (Argonne National Lab.).

Mar. 1952. 17p. (AECU-2001; UAC-541). Proc. Soc. Exptl. Biol. Med. 80, 92-7 (1952).

Sensitivity of rabbit thymocytes to x irradiation in vitro is decreased by a constant factor over a wide dosage range when cysteine is added to the suspension. This effect on thymic cell suspensions may result from competition with cell substrates for O₂. NSA 6-3487.

821
BIOLOGICAL EFFECTS OF IONIZING RADIATION. M. Ingram, W. B. Mason, G. Hoyt Whipple, and Joe W. Howland. (Atomic Energy Project, Univ. of Rochester). Mar. 7, 1952. 76p. (UR-196).

A review of present knowledge and concepts of the biological effects of ionizing radiation. Among topics are: physical and chemical effects on biological systems, physiological changes in the intact animal, latent changes following exposure of biological systems, factors influencing the biological response to ionizing radiation, relative effects of various ionizing radiations, and biological dosimetry. NSA 6-3489.

822
PRESENT TENDENCIES IN INTERPRETATION OF CELLULAR RADIATION INJURIES. P. De Plaen. J. belge radiol. 35, 113-29 (1952). (French).

The nuclear-chemical, histological, and genetic changes produced in cells by ionizing radiation are discussed in terms of current explanations of radiation effects. NSA 6-3491.

823
SOME SUBSTANCES WITH REDUCING ACTION (CYSTEINE, THIOGLYCOLIC ACID, ASCORBIC ACID, COMBINED CYSTEINE AND ASCORBIC ACID) AS PROTECTIVE AGENTS IN BIOCHEMICAL X-RAY INJURIES. Enrico Caffaratti. Radioterapia radiobiol. e fis. med. 4, 378-84 (1951). (Italian).

Protective action of combined cysteine and ascorbic acid was marked, 94% of mice so treated being alive 3 weeks after irradiation, (800 r, 5 week LD₅₀ of 180-kv x-rays), in contrast to 48, 80, and 50% respectively, of control and cysteine-, thioglycolic acid-, and ascorbic-acid-treated mice. NSA 6-3495.

824
RECOVERY OF THE FUNCTION OF DENERVATED LIMBS OF AXOLOTL FOLLOWING X IRRADIATION. K. F. Galkovskaya. Doklady Akad. Nauk S.S.S.R. 81, 945-8 (1951). (Russian).

Limbs of live axolotls were denervated and exposed to 15,000 or 20,000 r of 160-kv x rays. Graphs of recovery in terms of reaction to acid, raising of limbs, and mobility are presented. Irradiation retarded recovery and did not stimulate nerve regeneration. NSA 6-3496.

825
CHANGES IN CELLULAR COMPOSITION OF THE LYMPH CAUSED BY IONIZING RADIATIONS. M. H. Ross, J. Furth and R. R. Bigelow. Blood 7, 417-28 (1952).

Large numbers of erythrocytes appear in lymph of rats and dogs after massive exposure to x rays, causing a relative anemia. Lymph and blood lymphocyte counts drop precipitously in 5 to 10 hours. During recovery, large lymphocytes in lymph increase greatly; blood smears show large abnormal lymphocytes, mitotic figures and tissue mast cells. Diversion of erythrocytes into lymph, if severe, is self-aggravating process leading to death. NSA 6-3497.

826
PRODUCTION AND CHARACTERISTICS OF HYPOPHYSEAL TUMORS FOLLOWING HIGH DOSAGES OF ¹³¹I IN MICE. Aubrey Gorbman. Acta Unio Intern. contra Cancrum 7, 831-3 (1952).

Mice of 3 inbred strains were given thyroid-lethal doses of radioiodine, or doses allowing survival of fragments of thyroid tissue. Of those surviving 8 months after 1 subcutaneous injection, 90% had pituitaries at least 5 times normal size. NSA 6-3498.

827
DECREASED X-RAY SENSITIVITY OF MICE FOLLOWING ADMINISTRATION OF ETHANOL. L. J. Cole and M. E. Ellis. (Naval Radiological Defense Lab.). (nd). 19p. (USNRDL-341). Am. J. Physiol. 170, 724-30 (1952).

Within the limits of ethanol dosage studies (1.25, 2.5 or 3.75 ml of 25% ethanol/100 g body weight of mice) degree of radiation protection at 750 r is a linear function of the amount of ethanol administered. Pretreatment of x-irradiated rats with ethanol did not elicit similar protection. NSA 6-3500.

828
THE PROTECTIVE ACTION OF FLAVONOIDS AGAINST RADIATION. I. Arons, B. Sokoloff, and R. Dutcher. Acta Unio Intern. contra Cancrum 7, 803-9 (1952).

A flavonoid compound identical to the original vitamin P of Szent-Gyorgyi gave considerable protection against injury to capillary system of rats subjected to a total-body near-lethal dose of x rays; and decreased reaction of skin to radiation in the case of 13 patients subjected to deep x ray therapy. NSA 6-3502.

829
CURRENT CONCEPTS OF THERAPY OF THE RADIATION SYNDROME. Joe W. Howland. J. Missouri State Med. Assoc. 49, 425-9 (1952).

Nature of the radiation syndrome discussed; signs and symptoms of definite importance in correct therapy noted. Procedures and agents effective in modifying the syndrome analyzed as to probable physiological effects. NSA 6-3503.

830
THYMIC AND SPLENIC WEIGHT CHANGES PRODUCED BY X-RAYS. R. F. Kallman and H. I. Kohn. Federation Proc. 13, 76-77 (1954).

Changes in weight of spleen and thymus following total and partial-body irradiation were studied in female mice. The direct effect of radiation upon the spleen and thymus is the major cause of weight loss in these organs. The spleen was less sensitive than the thymus. (from authors' summary).

831
THE COAGULOGRAM AFTER SPLEEN IRRADIATION. Helmut Wagner. Gynaecologia 133, 194-204 (1952). (German).

In 76.7% of cases, comparative studies of blood coagulation in x irradiation of the spleen (indication: gynecological hemorrhages) and of mastitis showed acceleration of coagulation after irradiation of the spleen. NSA 6-3906.

832
THOROTRAST DAMAGE IN BRONCHOGRAPHY, RETROGRADE PYELOGRAPHY, SALPINGOGRAPHY, AND ARTERIOGRAPHY. J. Vogtlin and W. Minder. Radiologia Clin. 21, 96-115 (1952). (German).

Clinical changes caused by thorotrast (colloidal ThO₂) in 4 patients are presented. Changes in lungs, kidneys, serosa, liver, spleen and mediastinal lymph glands are described. A squamous epithelioma was present in the lungs in one case in addition to typical thorotrast granulomas. NSA 6-3907.

833
NIL NOCERE! THE QUESTION OF PETEOSTHOR DAMAGE. Ernst L. Schäfer and Hans Greuel. Münch med. Wochschr. 94, 158-62 (1952). (German).

Patient with tuberculosis of knee joint was treated with intravenous injections of Peteosthor (eosin-stabilized, ThX(Ra²²⁴)-containing platinsol). Myeloid leukemia developed, and death occurred 1 year following conclusion of treatments. Possibility of radiation damage in therapeutic use of Peteosthor is discussed. NSA 6-3908.

834
BEHAVIOR OF OXYGEN CONSUMPTION BY THE HUMAN GASTRIC MUCOSA IRRADIATED IN VITRO WITH SMALL DOSES OF X RAYS. Marsili and Paoletti. *Radiologia Med.* 37, 948-9 (1951). (Italian).

Human gastric mucosa was irradiated with 1, 2, 5, or 10 r in vitro and O₂ consumption measured with Warburg manometer. The inhibiting, enhancing, variable, and time effects noted are outlined. NSA 6-3909.

835
EFFECT OF WHOLE-BODY X-IRRADIATION OF THE GUINEA PIG ON UTILIZATION OF GLUCOSE BY THE LIVER. M. Lourau and O. Lartigue. *J. physiol. et path. gen.* 43, 593-603 (1951). (French).

Male guinea pigs irradiated sublethally with 500 r of 180-kv x rays exhibited deficient hepatic glycogenesis. Authors hypothesize that irradiation does not affect direct synthesis of glycogen from alimentary glucides, but impedes synthesis from small molecules. NSA 6-3910.

836
THE CONCEPT OF A MAXIMUM PERMISSIBLE EXPOSURE. Robert S. Stone. *Radiology* 58, 539-61 (1952).

Biological effects of radiation are reviewed and a concept presented for establishing maximum permissible exposure limits. NSA 6-3914.

837
EFFECT OF SODIUM SALICYLATE ON RESISTANCE OF MICE IRRADIATED WITH X RAYS. H. Betz and H. van Cauwenberge. *Compt. rend. soc. biol.* 145, 1910-13 (1951). (French).

Mice injected with 12 daily doses of 400, 500, or 600 mg Na salicylate/kg prior to irradiation (700 r of 250 kv x rays) had survival rates of 25, 55, and 50%, respectively, (control-0%). Others injected with 500 mg/kg daily following 700 r died in 6 days, (controls lived 12 days.) Stimulation of adrenal cortex suggested as mechanism of salicylate effect. NSA 6-3915.

838
AMINOACIDURIA FOLLOWING TOTAL BODY IRRADIATION IN THE HUMAN BEING. E. J. Katz and R. J. Hasterlik. *J. Lab. Clin. Med.* 44, 816-17 (1954).

Total daily urinary amino acid excretion increased to ten times normal after exposure of four laboratory workers to total body gamma radiation. Increased above normal were excretion of glycine, taurine, cystine, glutamic acid, aspartic acid, and hydroxyproline. Increased protein breakdown is not the major factor in producing aminoaciduria.

839
THE HEMORRHAGIC PHASE OF THE ACUTE RADIATION SYNDROME DUE TO EXPOSURE OF THE WHOLE BODY TO PENETRATING IONIZING RADIATION. E. P. Cronkite, G. J. Jacobs, George Brecher, and George Dillard. *Am. J. Roentgenol. Radium Therapy* 67, 796-804 (1952). NSA 6-3918.

840
TREATMENT OF ROENTGEN SICKNESS WITH AVIL AND VITAMINS. C. Montag. *Therap. Gegenwart*, No. 4, 148-9 (1952). (German).

Clinical use in 250 patients of Avil, proprietary antihistamine (25 mg tablets 3 or 4 times daily), and large injections of vitamins C, B₁, B₆, B₁₂, and nicotinic acid

mixtures in treating radiation sickness are reported to have given good results, but no data are given. NSA 6-3919.

841
EXAMPLE OF THE ACUTE RADIATION SYNDROME IN MAN. L. H. Hempelmann. *New Engl. J. Med.* 206, 776-82 (1952).

Case histories of three persons receiving single total body exposures to radiation doses of varying magnitude (primarily neutrons and gamma rays) illustrate the lethal, sublethal, and asymptomatic forms of the acute radiation syndrome. NSA 6-3920.

842
FIRST CLINICAL TESTS OF A CHEMICAL PROTECTOR AGAINST X RADIATION. A. Herve. *Rev. Med. Liege* 7, 276-9 (1952). (French).

β -Mercaptoethylamine, HSCH₂CH₂NH₂, has low toxicity and high protective action against radiation. Twelve patients with typical radiation sickness symptoms from massive doses of radiation showed symptomatic improvement following treatment with a series of 200 mg intravenous doses of the drug. NSA 6-3921.

843
ROENTGEN IRRADIATION OF COBALT POLYCYTHEMIA AS A MODEL EXPERIMENT. R. Seyss. *Wien. Z. inn. Med.* 33, 107-11 (1952). (German).

Increased erythrocyte counts were induced in rats by subcutaneous injections of CoCl₂ prior to irradiation. Whole body exposures to doses of 5 r or 20 r depressed erythrocyte counts to a greater extent in these rats than did exposure of the head alone to the same doses. Two phases of reaction followed midbrain irradiations, viz (1) hormonal excitation and (2) depression. Treatment of polycythemia in man is discussed. NSA 6-3984.

844
COMPARATIVE CHRONIC TOXICITIES OF RADIUM AND PLUTONIUM. A. M. Brues. (Argonne National Lab.). *Apr.* 1951. 20p. (ANL-4799).

Results of preliminary quantitative survey of survival and gross pathologic changes in animals given Ra and Pu are reported. Significance of findings and their relation to human toxicity problem are discussed. NSA 6-3936.

845
THE EFFECT OF α AND β RAYS ON PROTOPLASM. Nora Feichtinger. *Naturwissenschaften* 8, 252-257 (1930). (German).

"Germ" roots (1-2 mm long) of *Crepis virens* were irradiated with equal doses of α and β rays from polonium and radium E, respectively. Alpha rays produced injury to a depth of 30 μ only. Beta rays damaged entire root. BA 6-6638.

846
MICROCHEMICAL AND CYTOLOGIC FINDINGS IN X-RAY IRRADIATED PLANT TISSUES. I. DEEPLY STAINED CYTOPLASMIC CELL-GROUPS IN THE APICAL ROOT TISSUE OF V. FABA. Ko Muro-Hideo. *Fortschr. Gebiete Rontgenstrahlen* 41, 948-9 (1930). (German). BA 6-6645.

847
SOME EFFECTS OF ROENTGEN RAYS ON SEEDLINGS. Sylvia B. Wigoder and Ruth Patten. *Proc. Roy. Irish Acad.* 39B, 146-55 (1929).

Dried seeds and soaked seeds of *V. faba*, barley, white mustard, timothy grass, and peas were not injured by x-irradiation. Seeds maintained in germinating condition for 5-7 days failed to develop root or shoot. Effect was greatest on actively dividing cells in last 4 mm of root tip. Mitosis decreased 3 hrs. after exposure, stopped after 3 days, often resumed after 5-8 days. Multinucleate cells noted at that time. BA 6-6647.

848

THE EFFECT OF X-RAYS ON BLOOD SUGAR REGULATION. A. Held. *Strahlentherapie* 38, 27-39 (1930). (German).

Distinction is drawn between general action of x-rays on blood sugar regulation and their direct action in the sphere of irradiation. Blood irradiated in vitro and injected into host from which it came causes hyperglycemia. In the absorption territory of the rays, hypoglycemia occurs. This is regarded as a direct reaction to the rays. BA 6-6674.

849

THE EFFECT OF ROENTGEN RAYS ON VARYING WAVE LENGTHS ON SERUM CHOLESTEROL. Hermann Hoehne. *Arch. Gynäkol.* 146, 41-61 (1931). (German).

Serum cholesterol usually increased in carcinoma-free patients after irradiation; decreased in carcinomatous patients. Composition of the diet appeared to be a contributing factor. BA 6-6676.

850

THE EFFECT OF RADIATION ON LEUKOCYTES, STUDIED BY MEANS OF TISSUE CULTURE. A. M. B. Lacassagne and G. Gricouff. *Arch. exp. Zellforsch. Gewebezucht* 6, 303-15(1928). (French).

Authors studied survival of irradiated (x-rays or radon) rabbit leukocytes in tissue culture. X-rays and γ rays did not affect motility, β rays killed cells promptly. Lymphocytes were most sensitive cells; monocytes became macrophages. Conclusion: leukopenia after irradiation represents damage to hematopoietic centers, not destruction of mature circulating leukocytes. BA 6-6680.

851

BIOLOGICAL EFFECTS OF RADIATION AS STUDIED IN TISSUE CULTURES. Hans Laser. *Strahlentherapie* 38, 391-437 (1930). (German).

Cultures of various tissues from various species were exposed to x-ray or radium, half of each culture being shielded to serve as control. Sensitivity and latency bore a definite relationship to rate of proliferation. Recovery eventually followed changes due to non-lethal doses. Cultures became refractory to repeated irradiation. Biological sensitivity corresponds to product of time and intensity of irradiation. BA 6-6681.

852

OBSERVATIONS ON THE ACTION OF COLLOIDAL LEAD ON AN IN VITRO CULTURE WITH REFERENCE TO SUPPLEMENTARY IRRADIATION. Warnford Moppett. *Med. J. Australia* 2, 690-92(1930).

Gamma rays from radium D reinforce the destructive action of colloidal lead on cultures of heart muscle from an 8-day chick embryo. Mixed x-rays have no effect. BA 6-6682.

853

SKIN REACTIONS FOLLOWING EXPOSURE TO ROENTGEN RAYS. I. A COMPARISON OF THE EFFECT OF TWO DIFFERENT WAVE LENGTHS ON THE SKIN OF RATS. Ernest A. Pohle and C. H. Bunting. *Radiology* 13, 496-503 (1929).

60 KV x-rays of an effective wave length of 60 Å produced slight ulceration between 10-14 days after exposure. Healing occurs, leaving smooth scar after 2 months. Seven KV x-rays with an effective wave length of 2.0 Å also produce a macroscopic reaction, but skin is in atrophic condition 2 months following exposure. (Doses = 4 times the human erythema dose in each instance). BA 6-6683.

854

THE BIOLOGICAL EFFECT OF ROENTGEN RAYS STUDIED BY TISSUE EXPLANT METHOD. Martin Schubert. *Strahlentherapie* 26, 425-71(1927). (German).

Heart of 9 day chick embryo grew for 3-4 days if explanted immediately after irradiation of embryo or if washed carefully in Ringers solution before explanting 2 hrs. after exposure; did not grow when explanted 4 hrs. after exposure. In vitro irradiation of explant did not inhibit growth. Dose delivered to eggs: 10 HED, no filter. NSA 6-6685.

855

THE EFFECT OF ROENTGEN RAYS ON THE DEVELOPING EMBRYO. N. M. Woskressensky. *Z. Wissenschaft. Biol. Abt. D. Wilhelm Roux' Arch. Entwicklungsmech. Organ.* 113, 447-61(1928). (German).

Author reports studies on the biological effect of various doses of x-rays on axolotl embryos and larvae of *D. melanogaster*. Conclusions: the radiosensitivity of the growing organism decreases with age according to a hyperbolic function. Decrease in sensitivity parallels decrease in rate of growth. BA 6-6688.

856

HEMATOLOGICAL EFFECTS OF IONIZING RADIATIONS. p.140-196 OF INDUSTRIAL MEDICINE ON THE PLUTONIUM PROJECT. L. O. Jacobson, Edna K. Marks, and Egon Lorenz. (NNS IV-20). Robert S. Stone, ed. New York. McGraw Hill Book Co., Inc. 1951.

Study of: effects of acute whole-body exposure to x rays and fast neutrons; rise in leucocyte and reticulocytes after exposure; effect of radiations on coagulation of blood; effect of irradiation on induced anemia; hematological effects in mammals after exposure to externally originating radiations; effects of radioactive elements. Studies on experimental animals and man.

857

HOMOTRANSPLANTS AND RETICULOENDOTHELIAL SYSTEM. B. E. Bruda and W. Kreiner. *Deutsch Z. Chir.* 222, 285-301 (1929). (German).

In 30% of x-rayed rats and rabbits, transplanted glands of internal secretion survived for longer period than in normal controls. This is attributed to decreased function of R-E system in irradiated animals. In contrast, x-radiation, injection of colloids and splenectomy had no effect on healing of homologous skin grafts. BA 6-8245.

858

CLINICAL AND HISTOLOGICAL CHANGES PRODUCED IN CARCINOMA OF THE CERVIX BY DIFFERENT AMOUNTS OF ROENTGEN RADIATION. A. N. Arneson and F. W. Stewart. *Arch. Surg.* 31, 542(1935).

859

CHRONIC EXTERNAL IRRADIATION AND NEUTRON RADIOBIOLOGY. p.13-32 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, FEBRUARY, MARCH, APRIL, 1952. Austin M. Brues, ed. (Argonne National Lab.). (ANL-4794(p.13-32)).

Guinea pigs given injections of bone marrow following 750 r total body x radiation survived and had normal blood pictures after 40 days. Controls died. Menkin's leukocytosis-promoting factor did not modify radiation injury in mice or guinea pigs. NSA 7-7.

860

HEMATOLOGY, p.33-51 OF DIVISION OF BIOLOGY AND MEDICAL RESEARCH QUARTERLY REPORT, FEBRUARY, MARCH, APRIL, 1952. Austin M. Brues, ed. (Argonne National Lab.). (ANL-4793(p.33-51)).

Studies on: lead shielded exteriorized Peyer's patches of rabbits exposed to 800 r total body radiation; spleen shielded irradiated mice; depression of Hgb formation, antibody formation in spleen shielded and non-shielded irradiated mice, effect (on survival) of post-irradiation surgery (mice). NSA 7-8.

861

PHYSIOLOGY AND RADIUM TOXICITY, p. 52-65 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, FEBRUARY, MARCH, APRIL, 1952. Austin M. Brues, ed. (Argonne National Lab.). (ANL-4794(p. 52-65)).

Protective effect of cysteine is enhanced in mice breathing 10% oxygen for several minutes prior to and during irradiation; also when animals are injected (pre-exposure) with 2, 4-dinitrophenol followed by cysteine. Data relative to hematological changes in irradiated bats are also presented. NSA 7-9.

862

EXPERIMENTAL CYTOLOGY AND EXPERIMENTAL PATHOLOGY AND EXPERIMENTAL SURGERY AND HISTOPATHOLOGY AND RADIOCHEMISTRY AND SPECIAL PROBLEMS. p. 66-100 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, FEBRUARY, MARCH, APRIL, 1952. Austin M. Brues. (Argonne National Lab.). (ANL-4794 (p. 66-100)).

Includes reports on: protective effects of dog plasma and dog spleen perfusates prior to exposure of mice to x rays; malignant bone changes in mice after injections of U^{233} , Ra^{226} , or Pu^{239} ; protective effect of pre-exposure epinephrine in irradiated chicks. NSA 7-10.

863

INVERTEBRATE ZOOLOGY AND PHYTORADIOBIOLOGY AND PLANT PHYSIOLOGY AND MICROBIOLOGY AND BIOCHEMISTRY. p. 101-37 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, FEBRUARY, MARCH, APRIL, 1952. (Argonne National Laboratory). (ANL-4794 (p. 101-37)).

Includes reports on: study of living grasshopper ovariole; radiosensitivity of auxin biosynthesis; effect of treatment with auxin on growth and development of the kidney bean; two types of x ray effects on reproduction in paramecia. NSA 7-11.

864

THE BIOLOGICAL EFFECTIVENESS OF THERMAL NEUTRONS ON MICE. James T. Brennan, Payne S. Harris, Robert Emerson Carter, and Wright H. Langham. (Los Alamos Scientific Lab.). Feb. 15, 1952. 101p. (LA-1408). Nucleonics 12, No. 2, 48-56; No. 4, 31-5 (1954).

Authors report experimental animal exposures to thermal neutron flux (nuclear reactor) accompanied by γ flux; mouse in slow neutron flux becomes a γ ray source; to some extent mice exposed together shield each other from neutron flux. Taking those factors into account, RBE of gamma contaminant in thermal column found to be low (0.53). NSA 7-13.

865

THE BIOCHEMICAL EFFECTIVENESS OF THERMAL NEUTRONS DETERMINED BY THE DECREASE IN WEIGHT OF THE SPLEEN AND THYMUS OF THE MOUSE. Payne S. Harris and James T. Brennan. (Los Alamos Scientific Lab.). May 6, 1952. 33p. (LA-1410). NSA 7-14.

866

INCIDENCE OF LENS OPACITIES IN MICE EXPOSED TO X-RAYS AND THERMAL NEUTRONS. John Storer and Payne Harris. (Los Alamos Scientific Lab.). July 1952. 27p. (LA-1455).

RBE of thermal neutrons calculated on basis of production of lens opacities was approximately 9 x RBE calculated on basis of production of lethality at 30 days. NSA 7-15.

867

EFFECT OF X RAYS ON LIVING TISSUES IN VITRO. R. I. Gassoul. Ann. Roentgenol. et Radiol. 2, 211-25 (1927). (In French).

Vibrations of ciliated epithelium first become stronger, then are weakened and finally cease with increasing x ray exposure. Results are in agreement with theory of Nadson and Nemenow who propose that x irradiated cells exhaust their vital energy more rapidly and grow old quicker than unirradiated cells. NSA 6-3734.

868

STUDIES ON THE MECHANISM OF ACTION OF IONIZING RADIATIONS; X. EFFECT OF HYDROGEN PEROXIDE ON CELL METABOLISM, ENZYMES, AND PROTEINS. E. S. Guzman Barron, Louise Seki, and Phyllis Johnson. (Argonne National Lab.). Mar. 1952. 25p. (AECU-2018; UAC-561). Arch. Biochem. and Biophys. 41, 212-32 (1952).

In acid solutions and presence of titanium sulfate, amount of H_2O_2 formed on x-irradiation of H_2O was proportional to dose and was depressed by adding electrolytes. Irradiation of Ringer bicarbonate solution gave half of amount formed on irradiation of distilled H_2O ; protein diminished it further. Role of H_2O_2 is considered small in action of ionizing radiation on biological systems. NSA 6-3738.

869

BIOLOGICAL EFFECTS OF IONIZING RADIATIONS FROM RADIUM AND POLONIUM ON FUNGI. PART III. THE PREVENTION OF MOLD GROWTH IN OPTICAL INSTRUMENTS SERIES. Sigmund Berk. (Pitman-Dunn Labs., Frankford Arsenal). July 1951. 89p. (NP-3798; FA Report R-1016).

Constant irradiation with 7.5 μ g sources of Ra inhibited sporulation of *Chaetomium globosum*. *Lenzites trabea*, *Aspergillus niger*, *A. flavus* and *Penicillium* and showed appreciable differences in radiosensitivity of species. Particulate radiation appears to be primarily responsible for effect. NSA 6-3739.

870

HYPOTHESIS OF THE BIOLOGICAL ACTION OF RADIATION. Kiga Masami. Science 115, 549-50 (1952).

A simple expression for survival curve of irradiated cells is derived for general case of n essential molecules in a cell able to survive if no more than r of the n are damaged; each molecule assumed damaged by one ionization. If $n = 1$ and $r = 0$, or if $n > 1$ and $r = 0$, survival curve is exponential. The case $n \geq 2$ and $r = n - 1$ corresponds to clumping and a sigmoid curve results. NSA 6-3740.

871

MONTHLY PROGRESS REPORT FEBRUARY, 1952. Hymer L. Fridell. (Atomic Energy Project, Western Reserve Univ.). 9p. (NYO-1644).

Study of 60 rats splenectomized 5 days before exposure to 458-655 r showed that radiation sensitivity of spleen is not markedly different from that of other hematopoietic tissues. Deposition of Au^{198} following subtotal hepatectomy and antibiotic therapy of these rats is described. Protective effects of propylene glycol against radiation injury in rats was not significant, but yeast afforded some protection. Survival of dogs given 700 r total body x radiation was not significantly increased by cross-circulation with donor dogs. NSA 6-3888.

872

QUARTERLY PROGRESS REPORT FOR PERIOD JANUARY 1, 1952 TO MARCH 31, 1952. Bernard E. Proctor and Samuel A. Goldblith. (Massachusetts Inst. of Tech.). Apr. 1, 1952. 29p. (NYO-3338).

Standard operating procedures for food sterilization experiments using Co^{60} source are reviewed. Calibration of the Co^{60} source and preliminary studies of Co^{60} radiation effect on *E. coli* are discussed, and comparative effects of Co^{60} and 3 Mev cathode rays on ascorbic acid solutions noted. NSA 6-3889.

873

EVIDENCE FOR SISTER-STRAND CROSSING OVER IN MAIZE (abstract). Drew Schwartz. (Oak Ridge National Lab.). (nd). 1p. (AECU-2031). *Genetics* 38, 351-60 (1953). NSA 6-3891.

874

THE ROLE OF EXTERNALLY PRODUCED HYDROGEN PEROXIDE IN THE ACTION OF X RAYS UPON PARAMECIUM AURELIA (abstract). R. F. Kimball and Nenita Garthen. (Oak Ridge National Lab.). (nd). 1p. (AECU-2032). *Proc. Soc. Exptl. Biol. Med.* 80, 525-9 (1952).

Nongenetic death and division delay were produced in Paramecium by 50-400 kr of x rays depending on medium and other conditions. Irradiation in medium where living bacteria and catalase prevented accumulation of H_2O_2 was less effective than in medium containing organic matter but no live bacteria or catalase. Large part of irradiated medium's action is attributed to H_2O_2 . Medium had no influence on mutagenic effect. NSA 6-3892

875

RADIATION REACTIONS IN PARABIOTIC RATS. Joshua L. Edwards and Sheldon C. Sommers. (Cancer Research Inst., New England Deaconess Hospital, Boston). (nd). 23p. (AECU-2056). *J. Lab. Clin. Med.* 40, 342-54 (1952).

Morphologic tissue changes and leukocyte counts of parabiotic rats were studied after x irradiation. One rat was lead-shielded, other given single dose of 400, 800, 1200, or 1600 r total body x radiation. Protected rats showed no radiation damage by circulating substances and appeared to bolster leucocytes of irradiated partner. NSA 6-3893.

876

THE PROTECTIVE EFFECT OF SHIELDED ECTOPIC BONE MARROW AGAINST TOTAL-BODY X-RADIATION. J. B. Storer, C. C. Lushbaugh, and J. E. Furchner. (Los Alamos Scientific Lab.). (nd). 28p. (AECU-2039). *J. Lab. Clin. Med.* 40, 355-66 (1952).

Lead shielding of small amounts of ectopic marrow induced in the tails of rats by abdominal implantation increased survival of rats exposed to 650 r total-body x radiation. Shielding of normal tails containing fatty marrow didn't increase survival indicating that marrow cells per se rather than other tissues unavoidably shielded are responsible for increased survival in bone shielding experiments. NSA 6-3894

877

PROGRESS REPORT FOR MARCH 1, 1951 - MARCH 1, 1952. Ernest C. Pollard. (Yale Univ.). March 28, 1952 120 p. (NYO-4004).

Research reports on biological action of ionizing radiation; ionizing particle evidence for molecular wt. of pneumococcus transforming principle; radiation sensitivity of catalase as function of temperature; determination of molecular wt. of insulin and alpha amylase; soft x-ray inactivation of bacteriophage and catalase; enzymes and enzyme inhibitors; x-ray effect on germinating spores of B. subtilis; low voltage electron bombardment of bacterial spores; inactivation of bovine albumin (bulk and monomolecular layers). NSA 6-3895

878

QUARTERLY PROGRESS AND WORK ACCOMPLISHMENT REPORT FOR QUARTER ENDING MARCH 31, 1952. (Tennessee Univ.). 30p. (ORO-68).

Research reports on fission product and Ca metabolism in animals, radiation effect on reproductive function in farm animals; behavior and fate of radioactive Ca after incorporation in soil; external radiation studies with large animals including burro (its lethal dose of whole-body Ta^{187} γ irradiation and its response to large external doses of whole-body gamma irradiation). NSA 6-3896.

879

THE HUMAN LEUKOCYTE COUNT FOLLOWING LOCALIZED X-RAY EXPOSURE. H. I. Kohn. *Intern. Physiol. Congress XIX*, 523 (1953).

880

GENES FROM RADIUM TREATMENT AFFECTING POLLEN-TUBE GROWTH IN DATURA. J. T. Buchholz and A. F. Blakeslee. *Genetics* 21, 731-51 (1936).

881

CHROMOSOME BEHAVIOR AND NUCLEAR DEVELOPMENT IN TRADESCANTIA. K. Sax. *Genetics* 22, 523-33 (1937).

882

MONOCYTIC LEUKOSIS FOLLOWING CHRONIC ROENTGEN-RADIUM INJURY. F. Leibetseder. *Med. Klin. (Munich)* 47, 46-8 (1952). (German).

A radiologist exposed for 20 yr to x rays and Ra developed acute leukoblastosis (monocytic leukemia of the Hittmair type), the illness beginning as panmyelopathy with megaloblastic anemia. Continual enlargement of monocytes was observed. Blood and bone-marrow picture is described. NSA 6-3901.

883

POT EXPERIMENTS WITH RADIOACTIVE FERTILIZER. H. Linser and W. Pelikan. *Bodenkultur* 5, 417-24 (1951). (German).

A possible beneficial effect of radiation on plant growth was sought by using fertilizer containing various amounts of Ra. No positive results were observed. NSA 6-3902.

884

KINETICS OF APPEARANCE OF NEUTROCYTES WITH KARYOSCHISIS AFTER WHOLE-BODY IRRADIATION WITH A SINGLE DOSE OF X RAYS. Jean-Francois Duplan. *Compt. rend.* 234, 2020-2 (1952). (French).

In adult male guinea pigs x irradiated with 10-1100 r, relative and absolute increases of polynuclear neutrophils exhibiting karyorrhexis of the nuclei were studied. Rate of increase was greater and maximum was obtained earlier the greater the x-ray dose. Minimum dose causing an increase was between 10 and 25 r for guinea pigs. NSA 6-3903.

885

EFFECTS OF X-RAY RADIATION ON PANCREATIC FUNCTION IN DOGS. Robert F. Rauch and K. Wilhelm Stenstrom. *Gastroenterology* 20, 595-603 (1952).

Volume of pancreatic secretion decreased temporarily in 5 dogs with pancreatic fistulas following irradiation, with subsequent secondary increase above normal in a few cases. In all cases 400 or 600 r had definite depressive effect on amylase, lipase and trypsin output, generally after 12-36 hr delay. Depression was limited to a few days. Second exposure gave similar findings, except for more persistent depression of trypsin. No histological changes were found in abdominal organs. NSA 6-3904.

886

ACTION OF WHOLE-BODY X IRRADIATION ON THE SYNTHESIS OF MUSCULAR GLYCOGEN IN THE GUINEA PIG. Lourau Marguerite and Odette Lartigue. *Compt. rend.* 234, 2022-4 (1952). (French).

Sublethal x irradiation did not modify glycogenesis in guinea pig muscles, provided the diet was normal. In fasted animals irradiation lowered muscle glycogen, but diminution was not so general nor so important as that observed under same conditions in liver. NSA 6-3905.

887

INFLUENCE OF X-RAYS ON ERYTHROCYTES. F. Krömele. *Strahlentherapie* 22, 608-652 (1926). (In German).

All powerful roentgen irradiations eventually have an injurious effect on the erythrocyte apparatus. The small and moderate doses increased regeneration. Effects of large doses are no longer reversible.

888
QUARTERLY PROGRESS REPORT NO. 3, APR. 15, 1952. (Air Force Radiation Lab., Univ. of Chicago). 99p. (NP-3881; Quarterly Progress Report No. 3).

Includes reports on phosphatase activity of irradiated ground squirrel tissues; blood cell carboxypeptidase inhibitors; concentration of mucoprotein from alkaline solutions of intestine; F_1 generation of hybrid mice from irradiated parents; x-ray destruction of epinephrine; quantitative K studies on x-irradiated isolated mammalian heart; and effect of incomplete abdominal shielding on mortality of x-irradiated rats. NSA 6-4352.

889
QUARTERLY PROGRESS REPORT FOOD IRRADIATION AND ASSOCIATED STUDIES. MAR. 1, 1952. (Columbia Univ.). 36p. (NYO-3318).

Progress report on modification of Co^{60} radiation source and its use; survival curve and sterilization dose for mixed microbiological population of raw whole milk; destruction of vitamins and phosphatase activity in whole and evaporated milk, and Vitamin A in butter; radiation effects on enzyme systems and fatty acids; catalase inactivation; degradation of riboflavin in defined systems. NSA 6-4353.

890
A FORMULATION OF THE INJURY, LIFE SPAN, DOSE RELATIONS FOR IONIZING RADIATIONS 1. APPLICATION TO THE MOUSE. H. A. Blair. (Atomic Energy Project, Univ. of Rochester). May 13, 1952. 37p. (UR-206).

Hypothesis that injury from penetrating radiation develops in proportion to dose rate and is repaired spontaneously at a rate proportional to its magnitude except for an irreparable portion proportional to total accumulated dose is tested by applying solutions of the equation $D\dot{I}/dt = A\gamma - \beta I - \alpha\gamma t$ in which I = injury γ dose rate, and A , β , and α are constants. NSA 6-4355.

891
MONTHLY PROGRESS REPORT. Hymer L. Friedell. (Atomic Energy Project, Western Reserve Univ.). Mar. 1952. 8p. (NYO-1645).

Red cells, tagged by incubation with Cr^{51} and injected into rats treated with 36 $\mu\text{C/g}$ of Au^{198} 7 weeks before, showed no hemolytic effect. Thiosorbitol, monothio-glycerol and glycerol give significant protection to mice against 600 r whole body radiation. Effect of pH on yeast survival after irradiation is reported. While 1000 r = LD_{100} for chick embryos, 500 r had no apparent effect. NSA 6-4357.

892
FURTHER EFFORTS TO INFLUENCE X-RAY CATARACT BY CHEMICAL AGENTS Ludwig von Sallmann. Trans. Am. Ophthalmol. Soc. 69, 391-418 (1951).

Intravenously administered cysteine gave marked protection against radiation damage to lens of rabbits when treatment preceded the exposure of the eye to 1500 r. Protective influence persisted for at least a year. Pre-treatment with glutathione and thiourea was less effective. Sodium thioglycollate, BAL, and other reducing agents had no protective effect. NSA 6-4358.

893
THE EFFECT OF IONIZING RADIATIONS ON SOME SYSTEMS OF BIOLOGICAL IMPORTANCE E. S. Guzman Barron. Chap. 12 in Symposium on Radiobiology. James J. Nickson, ed. New York, John Wiley and Sons, 1952. 25p. NSA 6-4359.

894

THE EFFECT OF RADIATION FROM RADIOACTIVE IODINE ON GASTRIC SECRETION. R. Armour Forse, J. B. R. McKendry, and D. R. Webster. Surgical Forum American College of Surgeons, 54-8 (1951). Nov. NSA 6-4360.

895

ANALYSIS OF MAMMALIAN RADIATION INJURY AND LETHALITY. Austin M. Brues and George A. Sacher. Chap. 23 in Symposium on Radiobiology. James J. Nickson, ed. New York, John Wiley and Sons, 1952 25p.

Radiation cumulant and impulse lethality functions for various mammals are presented. Linearity of response of physiological systems to radiation, aging problems, relation of chronic lethal pattern to life span, relation of dosage rate to effect, carcinogenic pattern and radiation-injury of mammals are discussed. NSA 6-4361.

896

THE SAFETY FACTOR IN ULTRASOFT ROENTGEN IRRADIATION Erik Ebbehøj. Acta Radiol. 37, 241-5 (1952).

Risk of radionecrosis is almost the same whether radiation produced at 130 kv, 60 kv or from contact x-ray tubes is used. Risk is reduced by using ultrasoft x rays. The softer the quality of the ultrasoft rays the smaller the risk of radionecrosis, the wider the range of therapeutic effect and the greater the safety factor. NSA 6-4362.

897

EFFECT OF THERMAL INJURY AND X-IRRADIATION ON SERUM IRON CONCENTRATION AND ON IRON CONTENTS OF LIVER, SPLEEN, AND KIDNEY OF RATS. Alfred Chanutin, Stephen Ludewig, and Elizabeth A. Lentz. Am. J. Physiol. 169, 203-7 (1952).

Mild thermal injury causes hypoferrremia and transient increases in iron contents of liver and spleen; additional injury by x rays causes transient hyperferrremia and prevents hypoferrremia. A marked, persistent increase in deposition of iron in spleen and liver is observed. NSA 6-4363.

898

RADIATION EFFECTS ON PLANTS GROWN IN SOIL TREATED WITH FERTILIZER CONTAINING P^{32} . James M. Blume. Soil Sci. 73, 299-303 (1952).

Barley and oats were grown in greenhouse soils that had received surface application of KH_2PO_4 solutions containing 0 to 12,500 $\mu\text{C/g}$ P^{32} . Differences in dry weight of tops, phosphorus content of tops, and percentage of phosphorus in tops derived from the fertilizer are analyzed statistically. NSA 6-4364.

899

MECHANISM OF LETHAL AND MUTAGENIC ACTION OF IONIZING RADIATION ON ASPERGILLUS TERREUS. 1. RELATIONSHIP OF RELATIVE BIOLOGICAL EFFICIENCY TO ION DENSITY. George E. Stapleton, Alexander Hollaender, and Frances L. Martin. J. Cellular Comp. Physiol. 39, Sup. 1, 87-100 (1952).

Densely ionizing α particles and protons were more efficient than x rays in inactivating spores of *A. terreus*. NSA 6-4365.

900

A COMPARISON OF SPONTANEOUS AND INDUCED MUTATIONS OF ESCHERICHIA COLI TO STREPTOMYCIN RESISTANCE AND DEPENDENCE. Howard B. Newcombe. J. Cellular Comp. Physiol. 39, 13-25 (1952). NSA 6-4366.

901

THE EFFECTS OF X-RAYS ON THE LIFE CYCLE AND MORPHOLOGY OF ASCARIDIA GALLI (Schrank, 1788). Bert B. Babero. Trans. Am. Microscop. Soc. 71, 114-19 (1952).

Development of *Ascaridia galli* eggs was retarded by 20,000 to 40,000 r, the dose preventing development lying somewhere in this range. Morphological abnormalities were observed in larvae from x-irradiated eggs. Abnormalities resulting from exposure to above dose were more varied and pronounced than those resulting from exposure to 5,000-10,000 r. NSA 6-4367.

902

THE EFFECT OF SUPPLEMENTARY FACTORS ON THE RADIATION-INDUCED FREQUENCY OF MUTATIONS IN *ASPERGILLUS TERREUS*. C. P. Swanson. J. Cellular Comp. Physiol. 39, 27-37 (1952).

Mutation frequencies induced by x rays and ultraviolet can be significantly modified by supplementary treatments. Since ultraviolet-induced mutation rate is altered by nitrogen mustard pretreatment, increased frequency of mutations is attributed to increased frequency of intra-rather than extra-genic (chromosomal) changes. This is less certain in case of modifications of x-ray-induced mutation rate. NSA 6-4368.

903

THE ANALYSIS OF THE EFFECT OF ROENTGEN RAYS ON THE EMBRYO AND FETAL TISSUE. A. A. Kronowski. Strahlentherapie 21, 12-30(1926). (In German).

Findings on the chicken embryo are discussed.

904

SOME ASPECTS OF THE BIOLOGICAL ACTION OF HIGH ENERGY RADIATIONS. Harvey M. Patt. Ann. Rev. Nuclear Sci. 1, 495, 524 (1952).

Mode of radiation's action, biological effectiveness of ionizing radiations, and effects on growth, enzymes, metabolism, blood, blood-forming tissues, immunity, infection, and general physiology are presented. NSA 6-4370.

905

GENETIC EFFECTS OF RADIATION. R. F. Kimball. Ann. Rev. Nuclear Sci. 1, 479-94 (1952).

Review presented of radiation genetics literature; essentially a survey of papers published in 1950. NSA 6-4371.

906

THE SURVIVAL OF IRRADIATED RATS DURING PROLONGED EXPOSURE TO ENVIRONMENTAL COLD. D. J. Kimeldorf and B. J. Newsom. (Naval Radiological Defense Lab.). May 22, 1952. 16p. (USNRDL-350). Am. J. Physiol. 171, 349-53 (1952).

Two groups of rats were irradiated simultaneously with 400-900 r of 250 kvp x rays. A portion of each group was maintained at 23° C (RH 65%) and the rest at 6° C (RH 65%) for 30 days post irradiation. This prolonged exposure to cold after lethal doses increased mortality. NSA 6-4372.

907

HEALTH PHYSICS DIVISION QUARTERLY PROGRESS REPORT FOR PERIOD ENDING JANUARY 20, 1952. (Oak Ridge National Lab.). June 12, 1952. 21p. (ORNL-1277).

Includes progress reports on seasonal differences in tissue radioactivity of certain aquatic animals. NSA 6-4373.

908

EVIDENCE FOR A HUMORAL FACTOR (OR FACTORS) CONCERNED IN RECOVERY FROM RADIATION INJURY: A REVIEW. Leon O. Jacobson. Cancer Research 12, 315-25 (1952).

Survival of animals exposed to single lethal dose of total-body x radiation can be increased by spleen-shielding, intraperitoneal implantation of splenic tissue or embryo suspension, injection of homologous bone marrow suspensions. Recovery may be due to humoral substance produced by living cells of the shielded, implanted or injected tissue. NSA 6-4375.

909

LEUKEMIA IN ATOM BOMB SURVIVORS. R. D. Lange, W. C. Moloney and T. Yamawaki. Blood 9, 574-85(1954).

A review of 75 established cases of leukemia in atomic bomb survivors in Hiroshima and Nagasaki reveals that the rate of occurrence of leukemia is greatly increased among survivors of a single massive dose of ionizing radiation among all age levels studied and in both sexes. The leukemias were predominantly myelogenous.

910

TEMPERATURE EFFECT ON IRRADIATION DAMAGE IN BACTERIOPHAGE. C. S. Bachofer. (Notre Dame Univ.). (nd). 2p. (AECU-2100). Proc. Indiana Acad. Sci. 61, 62 (1951).

Bacteriophage T1, specific for *E. coli*, strain B, was x-irradiated at temperatures from 77° to 310° K, in vacuo in chamber to prevent freezing, liquefaction of air, and interference of oxygen. Three series of experiments used: (1) phage in broth, lyophilized; (2) phage in broth, vacuum-dried; (3) phage in chemically defined medium, vacuum-dried. No inactivation due to temperature alone was observed. Inverse correlation was observed between radiation damage and temperature. NSA 6-4684.

911

DIRECT EFFECT OF X-RAYS ON BACTERIAL VIRUSES MODIFIED BY PHYSICAL STATE AND RELATED TO THE TARGET THEORY. C. S. Bachofer. (Notre Dame Univ.). (nd). 11p. (AECU-2101). Science 117, 280-2 (1953).

Author reports studies on effect of physical condition of dry bacteriophage particles on their resistance to x irradiation. Great differences were found in effectiveness of x rays on viruses dried by different methods but handled the same in other respects. Hypothesis is presented to explain difference of effectiveness of x rays on dried and lyophilized phage. Target theory of inactivation is discussed. NSA 6-4685.

912

PROTECTION OF BACTERIOPHAGE AGAINST X-RAYS BY HIGH CONCENTRATIONS OF A NEUTRAL SALT. C. S. Bachofer and M. Aelred Pottinger. (Notre Dame Univ.). (nd). 25p. (AECU-2101).

Protection of bacteriophage T1 against x rays was tested in presence of $(\text{NH}_4)_2\text{SO}_4$ concentrations ranging from 10^{-6} M to saturation (4.26 M). Survival in concentrations of 10^{-6} to 10^{-3} M did not differ significantly from that in distilled H_2O after irradiation; steep rise in survival was observed from 10^{-3} M to 10^{-1} M, with a leveling off as concentration approached saturation, giving over-all a two thousandfold increase. NSA 6-4686.

913

BIOLOGIC AND PHYSICAL ASPECT OF THE ACTION OF TWO RADIATIONS OF DIFFERENT SPECIFIC IONIZATION. Joanne W. Hollcroft and Egon Lorenz. (Argonne National Lab.). May 1952. 26p. (AECU-2109; UAC-580).

Authors compare the biological effects of x and α radiation on mice. No significant differences were seen in leukocyte count response, nor were effects of whole-body irradiation different (regression rate of a transplantable mouse lymphosarcoma was the same for the two). For corresponding energy dose, total-body response (measured by weight loss and recovery of testes) was also the same. NSA 6-4687.

914

CHRONIC EXTERNAL IRRADIATION AND NEUTRON RADIOBIOLOGY, p.14-42 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, NOVEMBER, DECEMBER, 1951, JANUARY, 1952. Austin M. Brues, ed. (Argonne National Lab.). (ANL-4745(p.14-42)).

Reports on: survival of irradiated mice given bone-marrow injections; survival patterns in tissue culture after 250-2000 r; effect of spleen protection on x-ray induced lymphoid tumors in mice; survival of mice with circulation to shielded spleen clamped off during ex-

posure; pre-treatment of mice with cysteine and post-irradiation spleen implantation (survival increased). NSA 6-4689.

915
PHYSIOLOGY, RADIUM TOXICOLOGY, AND EXPERIMENTAL PATHOLOGY. p.43-52 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, NOVEMBER, DECEMBER, 1951, JANUARY, 1952. Austin M. Brues, ed. (Argonne National Lab.). (ANL-4745(p.43-52)).

Report on radiation protection in mammals by cysteine; disappearance rate of RaSO_4 dust from human lung; study of C^{14} toxicity (2.5 $\mu\text{c/g}$ for rats and 20 $\mu\text{c/g}$ for mice had little effect on longevity and moribundity). NSA 6-4690.

916
EXPERIMENTAL SURGERY, CLINICAL INVESTIGATION, AND RADIOCHEMISTRY p.53-70 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, NOVEMBER, DECEMBER, 1951, JANUARY, 1952. Austin M. Brues, ed. (Argonne National Lab.). (ANL-4745(p.53-70)).

Includes reports on average ratios of pre- and post-irradiation amino acid N values in dogs; dextran metabolism; effective use of sodium salicylate for Be poisoning in mice. NSA 6-4691.

917
SPECIAL PROBLEMS, PLANT PHYSIOLOGY, MICROBIOLOGY, AND BIOCHEMISTRY. p.73-93 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, NOVEMBER, DECEMBER, 1951, JANUARY, 1952. Austin M. Brues, ed. (Argonne National Lab.). (ANL-4745(p.73-93)).

Progress is reported in studies of the effects of x rays and nitrogen mustard on growth of the ciliate, *Tetrahymena geleii*, changes in blood plasma of the chick following x irradiation, the effects of x irradiation on enzymogenesis in postdiapause grasshopper embryos, the purification of labeled indoleacetic acid, and the radiosensitivity of auxin biosynthesis in bean plants. In a study of x radiation toxicity in the chicken, the mature chicken showed no response to variation of x-radiation dose rate similar to that reported in newly-hatched birds. Survival data for chickens of different ages given 1000 r of x irradiation are presented in tabular form. Effects of photoperiod and temperature on the movement of the flowering stimulus, and light-dark relationships of *Xanthium* are summarized and the effect of photoperiod on floral and fruit development in the red kidney bean are discussed. Data on biological effects of exposure of *Paramecium aurelia* to a nitrogen mustard compound revealed that, over the period of a year during which the experiments were performed, at equivalent doses death after autogamy increased and suppression of division decreased, while the death rate before cell division remained about the same. An investigation of the mechanism of inactivation of yeast alcohol dehydrogenase by x irradiation indicates the -SH groups are oxidized by the OH and O_2H radicals produced after irradiation of H_2O . NSA 6-4692.

918
MONTHLY PROGRESS REPORT APRIL, 1952. Hymer L. Friedell. (Atomic Energy Project, Western Reserve Univ.). 6p. (NYO-1646).

Includes reports on thirty-day mortality of splenectomized rats exposed to 655 r of x rays = 45% (controls = 35%) indicating (1) widely different sensitivity of rats toward bartonellosis, and (2) radiation can reduce immunity of splenectomized rat to *Bartonella muris*; effect of sub-total hepatectomy on sensitivity of rat to colloidal Au^{198} ; study of N metabolism in rats given lethal dose of whole-body x rays; levels of irradiation best for study of inhibition of nucleic acid synthesis in chick embryos are 700-800 r and LD_{50} dose. NSA 6-4694.

919
PROTECTION OF THE X-IRRADIATED DOG WITH EXTERNAL ABDOMINAL SHIELDING, AND PRELIMINARY REPORT ON SOME CLINICAL FEATURES OF THE RADIATION SYNDROME COMPLICATED BY INDUCED INFECTION. R. W. Miller and M. P. Coulter p.31-47 OF QUARTERLY TECHNICAL REPORT, JANUARY 1, 1952 THRU MARCH 31, 1952. Henry A. Blair, ed. (Atomic Energy Project, Univ. of Rochester). May 14, 1952 17p. (UR-205(p.31-47)). NSA 6-4698.

920
STUDIES RELATIVE TO THE PHAGOCYTIC ACTIVITY OF LEUKOCYTES IN IRRADIATED DOGS, AND THE EFFECT OF RUTIN ON THE X-IRRADIATED DOG. M. Ingram and M. Adams. p 48-59 OF QUARTERLY TECHNICAL REPORT, JANUARY 1, 1952 THRU MARCH 31, 1952. Henry A. Blair, ed. (Atomic Energy Project, Univ. of Rochester). May 14, 1952. (UR-205(p.48-59)).

Decrease in phagocytic activity of controls (irradiated) not seen in Pyromen-treated dogs Activity returns to normal prior to start of hematopoietic recovery Rutin therapy gave no beneficial effect against x ray mortality in dogs. NSA 6-4699.

921
SERUM AND URINARY FIBRINOLYTIC ACTIVITY RELATED TO THE HEMORRHAGIC DIATHESIS IN IRRADIATED DOGS. J. Colgan, E. Gates, and L. L. Miller. (Atomic Energy Project, Univ. of Rochester). June 2, 1952. 26p. (UR-210). J. Exptl. Med. 95, 531-42 (1952).

Dogs dying of pulmonary hemorrhage showed precipitate rise in fibrinolytic activity in urine and serum 4-5 days before death. Fibrinolytic activity in surviving dogs approached control levels on the 24th day post irradiation. NSA 6-4701.

922
EFFECT OF BETA RAYS ON THE SKIN AS A FUNCTION OF THE ENERGY, INTENSITY AND DURATION OF RADIATION. I. PHYSICAL CONSIDERATIONS. PREPARATION AND CALIBRATION OF BETA-EMITTING PLAQUES. F. W. Henriques, Jr. Lab. Invest. 1, 153-66 (1952).

Isotopes used for investigation S^{35} (0.17 Mev), Co^{60} (0.31 Mev), Cs^{137} (0.55 Mev), Y^{91} (1.53 Mev) and Sr-Y^{90} (0.61 and 2.2 Mev). Radiation dosage of surface of skin and percentile reduction in dosage as β particles penetrated underlying tissue are computed for each isotope. NSA 6-4702.

923
EFFECT OF BETA RAYS ON THE SKIN AS A FUNCTION OF THE ENERGY, INTENSITY AND DURATION OF RADIATION. II. ANIMAL EXPERIMENTS A E. Moritz and F. W. Henriques, Jr. Lab. Invest. 1, 167-85 (1952)

Study of effects of β emitting plaques on porcine skin. NSA 6-4703.

924
THE INCORPORATION OF METHIONINE S^{35} INTO THE PROTEINS OF JENSEN RAT SARCOMA CELLS AFTER IRRADIATION OF THE TUMOUR Barbara E. Holmes and Lorna K. Mee. Brit. J. Radiology 25, 273-8 (1952)

Uptake of methionine S^{35} proteins is not affected in any regular manner by 2000 r x-ray dose. Effect of irradiation on protein formation does not correspond to its action on nucleic acid synthesis, as this dose causes 50% inhibition of the latter. NSA 6-4704.

925
REDUCTION OF THE X-RAY SENSITIVITY OF *ESCHERICHIA COLI* BY SODIUM HYDROSULFITE AND CERTAIN OTHER INORGANIC COMPOUNDS. William T. Burnett, Jr., M. Laurance Morse, Arthur W. Burke, Jr., and Alexander Hollaender. J. Bact. 63, 591-5 (1952).

Protection of *E. coli*, strain B/r, against radiation by $\text{Na}_2\text{S}_2\text{O}_4$ is due to removal of dissolved oxygen. Other in-

organic sulfur compounds with ability to remove oxygen from buffer solutions also increase survival of x-irradiated bacterial cells in suspensions. NSA 6-4705

926

EFFECTS OF WHOLE BODY EXPOSURE TO IRRADIATION UPON SUBSEQUENT FERTILITY OF MALE RABBITS. R. L. Murphree, W. M. Whitaker, J. L. Wilding, and J. H. Rust. *Science* 115, 709-11 (1952).

Deleterious effects on prenatal viability of off-spring occur when male parent received relatively low levels of exposure (100, 200, or 300 r). Extreme caution is suggested in voluntary exposure of humans to radiation of this order of magnitude until further experimental evidence is available. NSA 6-4706.

927

STRAIN SPECIFICITY OF THE THERAPEUTIC EFFECT OF SPLENIC TRANSPLANTS IN IRRADIATED MICE.

John B. Storer. (Los Alamos Scientific Lab.). (nd). 15p. (AECU-2095).

Donor tissues taken from (1) same strain, (2) unrelated strains, (3) rats and guinea pigs and transplanted into irradiated mice of 2 inbred and non-inbred strain. Implantation of adult spleens was effective only when donor belonged to same inbred strain as recipient. Adult spleens from (1) non-inbred, (2), or (3) were ineffective in reducing mortality. Marrow transplants were ineffective in reducing mortality in all animals tested. NSA 6-4709.

928

LACK OF EFFECT OF URINARY EXTRACTS FROM IRRADIATED SPLEEN-SHIELDED RATS ON SURVIVAL OF IRRADIATED MICE. J. B. Storer and J. E. Furchner. (Los Alamos Scientific Lab.). (nd). 8p. (AECU-2098).

Extracts prepared from urine of totally-irradiated and irradiated spleen-shielded rats, and injected into irradiated mice, did not increase survival. If a hormone is elaborated by the shielded spleen of irradiated rats it is either not excreted in urine or not extractable by this method. NSA 6-4710.

929

RELATIVE EFFECTS OF ALPHA, BETA, GAMMA, AND NEUTRON RADIATION. THE SIGNIFICANCE OF THESE DIFFERENCES IN RADIATION THERAPY. William F. Bale. (Atomic Energy Project, Univ. of Rochester). May 28, 1952. 21p. (UR-209).

Special attention paid to techniques based on localization of boron in tumor tissue and use of slow neutron beam to radiate selectively such tissue by means of protons produced by neutron-boron interaction. Use of tissue specific antibodies is suggested for concentrating boron in neoplastic tissues. NSA 6-4713.

930

WEIGHT CHANGES AND WATER CONSUMPTION OF RATS EXPOSED TO WHOLE BODY X-IRRADIATION. L. F. Nims and E. Sutton. (Brookhaven National Lab.). (nd). 14p. (BNL-1190). *Am. J. Physiol.* 171, 17-21 (1952).

Weight changes and H₂O consumption of rats after whole-body x irradiation were reexamined to see if they could serve as indices for biological dosimetry. Study concluded that x rays do not greatly alter over-all metabolism of animal or degree of tissue hydration. Weight loss of irradiated rats is proportional to dose received. Time required to regain pre-irradiation weight in 200 g rats is linear function of dose up to 600 r. NSA 6-5010.

931

THE USE OF RADIOCOBALT AS A SOURCE OF GAMMA RAYS AND SOME EFFECTS OF CHRONIC IRRADIATION ON GROWING PLANTS. Arnold H. Sparrow and W. Ralph Singleton. (Brookhaven National Lab.). (nd). 44p. (BNL-1188). *Am. Naturalist* 87, 29-48 (1953).

By placing plants in concentric circles around sources of 16-200 c at various distances, effects of a wide range of radiation intensities could be studied. Dose varied

from less than 0.1 r/day to 2000 r/day. Tolerance of different species found to vary widely. Preliminary tolerances given for 19 species. NSA 6-5009.

932

THE OCCURRENCE OF LYMPHOCYTES WITH BILOBED NUCLEI IN CYCLOTRON PERSONNEL. M. Ingram, M. Adams, L. Coonan, J. Jespersen, G. Nielson, D. Platt, and G. Yettewich. (Atomic Energy Project, Univ. of Rochester). June 16, 1952. 11p. (UR-211). *Science* 116, 706-8 (1952).

Increased incidence of lymphocytes with bilobed nuclei in peripheral blood of cyclotron workers occurred in group as a whole during first few months of cyclotron operation. After completion of an earth and concrete dike between cyclotron and cyclotron laboratory building, incidence of abnormal cells returned to approximately level of control group. NSA 6-5011.

933

EFFECT OF CASTRATION ON THYROID REACTIONS FOLLOWING WHOLE-BODY IRRADIATION OF THE ORGANISM. H. Betz. *Compt. rend. soc. biol.* 146, 325-7 (1952). (French).

Male and female rats were castrated and 5 or 15 days later were exposed to whole-body irradiation with 500 r of 250 kv x rays. Five or 15 days post irradiation, the thyroids were removed and examined. Without regard to sex or to time separating castration and irradiation, thyroids were found to be inactive. Hypothyroid state of rats receiving 800 r whole-body exposure appears not to be due solely to castration effect of irradiation. NSA 6-5012.

934

EFFECT OF SURGICAL AND CHEMICAL THYROIDECTOMY ON HEMATOPOIETIC REGENERATION IN THE IRRADIATED RAT. H. Betz. *Compt. rend. soc. biol.* 146, 318-20 (1952). (French).

Surgical thyroidectomy on rats 6 days prior to 500 r whole-body x irradiation did not change regeneration picture in soft bone and spleen. Extreme inhibition was noted in rats receiving thiourea (1% in feed) for 15 days prior to irradiation and during 6 or 16 days before histological examination. Direct effect on hematopoietic organs or perturbation of endocrine glands other than thyroid hypothesized to explain thiourea's action. NSA 6-5013.

935

STUDY OF THYROID MODIFICATION AFTER WHOLE-BODY IRRADIATION OF THE ORGANISM. H. Betz. *Compt. rend. soc. biol.* 146, 315-18 (1952). (French).

Thyroids of rats given sublethal dose (500 r, 250 kv x rays) and others given a lethal dose (800 r) are described. Hyperactivity in first case contrasted with hypoactivity in the second. Of rats irradiated with 6-11 LD₅₀ dose (650 r) those dying exhibited thyroid hypoactivity, those surviving, hyperactivity. Hypothesis under lethal irradiation, all secretory potential of pituitary is used up in liberating corticotrophic principle (ACTH) to detriment of thyrotrophic hormone. NSA 6-5014.

936

EFFECTS OF X RADIATION ON THE ORIGIN OF MALFORMATIONS IN HUMAN FETUSES. J. Pitter and J. Svejda. *Ophthalmologica* 123, 386-93 (1952). (German).

Case described of 2-year-old girl whose mother was examined with x rays in 4th, 5th, and 6th months of pregnancy for diagnostic purposes. Formation of various teratogenic peculiarities, microphthalmus, microcornea, syndactyly, brachydactyly, strabismus, hypermetropia and amelogenesis and odontogenesis imperfecta, occurred. General account of malformation development and similar cases quoted. NSA 6-5015.

937

ROLE OF THYMONUCLEIC ACID IN THERAPY OF RADIATION LEUKOPENIAS. René Saracino. *Semaine med.* (Paris) 28, 411-15 (1952). (French).

Injection of a sodium salt of thymonucleic acid during x-ray therapy of malign tumors avoids or considerably reduces leukopenia, and as a consequence permits uninterrupted local or general irradiation. Same considerations hold for teletherapy and radioisotope application. It appears possible to unite in a single syndrome appearance of leukopenia and radioresistance. NSA 6-5016.

938

X-RAY-INDUCED MUTATIONS IN MICE. W. L. Russell. Cold Spring Harbor Symposia Quant. Biol. 16, 327-36 (1951).

To obtain information useful in estimating genetic hazards of ionizing radiation in man, wild-type mice exposed to single x-ray dose were mated to stock homozygous for 7 autosomal recessive visible genes. Comparison with similar data from *Drosophila* shows a higher induced mutation rate in the mouse, indicating that estimates of human hazards based on *Drosophila* mutation rates may be too low. NSA 6-5017.

939

STUDIES ON THE MECHANISM OF REVERSION IN BIOCHEMICAL MUTANTS OF *NEUROSPORA CRASSA*. Norman H. Giles, Jr. Cold Spring Harbor Symposia Quant. Biol. 16, 283-313 (1951). (cf. NSA 1-229).

Initial comparative biochemical and genetic tests, experiments on x-ray-induced reverse-mutations, results of studies on spontaneous and induced reverse-mutability and studies of crossing-over between certain alleles of mutants carrying genetic markers on opposite sides of an inositolless locus reported for various nutritional mutants of *Neurospora crassa*. NSA 6-5018.

940

EFFECT OF DIETARY PROTEIN AND METHIONINE ON THE X-IRRADIATED RAT. Willie W. Smith, Isabelle B. Ackermann, and I. M. Alderman. Am. J. Physiol. 169, 491-98 (1952).

Rats kept on pre- and post-irradiation diets with 6% casein had slightly higher mortality after a 550 r dose than rats on diets with 18 and 35%. Reducing casein after exposure did not significantly alter 40-day mortality. Increasing casein to 60% gave somewhat reduced mortality but the difference was not statistically significant. Addition of methionine and cysteine to low casein diets did not affect mortality. Slight hematopoietic effect and moderate respiratory effect described. NSA 6-5019.

941

EFFECT OF EARLY CASTRATION AND OF X IRRADIATION ON THE DIFFERENTIATION OF SECONDARY SEXUAL CHARACTERISTICS IN XIPHOPORES. Jean Vivien. Compt. rend. 234, 2394-5 (1952). (cf. NSA 5-2339). (French).

Permanent sterilization of prepuberal xiphophores (king crab) was accomplished with 6000-8000 r of x rays. Ensuing sexual differentiation was slightly retarded but normal in both sexes. Comparison with effect of surgical castration and treatment with crude extracts of normal or sterile gonads proves that development of secondary sexual characteristics is controlled by interstitial gonad tissues. NSA 6-5020.

942

REFRACTORY ANEMIA OCCURRING IN SURVIVORS OF THE ATOMIC BOMBING IN NAGASAKI, JAPAN. R. D. Lange, S. W. Wright, M. Tomonaga, H. Kurasaki, S. Matsuo, and H. Matsunaga. Blood 10, 312-24 (1955).

Histories including autopsy findings are presented for six Nagasaki atomic bomb survivors who developed refractory anemia four to seven years after the bombing. Four of the six were exposed within a radius of 1500 meters from the hypocenter; two within 3800 meters.

943

EFFECT OF OXYGEN TENSION AND CERTAIN CHEM-

ICALS ON THE X-RAY SENSITIVITY OF MUTATION PRODUCTION AND SURVIVAL. Alexander Hollaender, W. K. Baker, and E. H. Anderson. Cold Spring Harbor Symposia Quant. Biol. 16, 315-26 (1951).

Effect of O₂ tension on x ray sensitivity is reviewed, as measured by lethal effects, chromosome changes and mutations produced in *E. coli*, *Drosophila* and *Tradescantia*. Compounds having protective effect against radiation damage strong reducing compounds, especially Na₂S₂O₄, glycerin, propylene glycol, triethylene glycol and alcohols (methanol, ethanol and propanol); carboxylic acids and sulfhydryl-containing compounds. NSA 6-5025.

944

EXPERIMENTAL STUDY OF ACUTE RADIATION SICKNESS IN THE DOG. Marqués, Puget, Bru, and Carriere. Rev. méd. vét. (new series) 15, 1-16 (1952). (French).

Symptomatology, blood picture, hemorrhagic syndrome and digestive disturbances of radiation sickness were induced in dogs of 6-15 kg weight and 1-10 year age by whole-body exposure to 450-500 r of x radiation NSA 6-5028.

945

THE USE OF SMALL LABORATORY ANIMALS IN MEDICAL RADIATION BIOLOGY. PART 1. APPLICATION OF A 200 K.V.P. X-RAY THERAPY UNIT TO LETHAL DOSE STUDIES. Friedrich Ellinger, Jasper E. Morgan, and Francis W. Chambers, Jr. (Naval Medical Research Inst., Bethesda). Apr. 30, 1952. 35p. (NP-4120; U23980). NSA 7-16.

946

QUARTERLY PROGRESS REPORT, APRIL, MAY, JUNE 1952. (Atomic Energy Project, Western Reserve Univ.). (nd). 5p. (NYO-1647).

Includes reports on effectiveness of LD₅₀ dose (rats) administered on 11th or 18th day following treatment with 0.2 mgm/kg of nitrogen mustard; a review of certain data indicating that spleen plays much more prominent role in survival of irradiated mice than of irradiated rats. NSA 7-17.

947

BIOLOGICAL STUDIES OF RADIATION EFFECTS, p.40-80 OF MEDICAL AND HEALTH PHYSICS QUARTERLY REPORT, APRIL, MAY, AND JUNE, 1952. (Radiation Lab., Univ. of Calif.). Aug. 21, 1952. 41p. (UCRL-1922(p.40-80)).

Progress reports on studies relative to radiosensitivity of diploid and haploid *S. cerevisiae* under various experimental conditions. NSA 7-20.

948

HISTOPATHOLOGY OF ALPHA RADIATION FROM INTERNALLY ADMINISTERED POLONIUM. PART I. George W. Casarett. (Atomic Energy Project, Univ. of Rochester). Aug. 25, 1952. 267p. (UR-201(pt.I)). NSA 7-21.

949

HISTOPATHOLOGY OF ALPHA RADIATION FROM INTERNALLY ADMINISTERED POLONIUM. (PART III). George W. Casarett. (Atomic Energy Project, Univ. of Rochester). Aug. 25, 1952. 563p. (UR-201(pt.II)). NSA 7-22.

950

X-IRRADIATION INJURY AND REPAIR IN THE GERMINAL EPITHELIUM OF MALE RATS. I. INJURY AND REPAIR IN ADULT RATS. Samuel Lelus Shaver. (Rochester Univ. N. Y. Atomic Energy Project). Sept. 23, 1952. 47p. (UR-218).

Histological studies on various phases of injury and repair following total body exposure to 500 r x-ray radiation are reported. (adult rats). NSA 7-23.

951

X-IRRADIATION INJURY AND REPAIR IN THE GERMIN-

AL EPITHELIUM OF MALE RATS. II. INJURY AND REPAIR IN IMMATURE RATS. Samuel Lelus Shaver. (Atomic Energy Project, Univ. of Rochester). Sept. 23, 1952. 20p. (UR-219). *Am. J. Anat.* **92**, 433-49 (1953).

Histological studies of injury and repair following total body exposure to 500 r x-ray radiation (immature rats), are reported. Author emphasizes differences between changes in testes of mature and immature rats. NSA 7-24.

952
THE DIRECT EFFECTS OF RADIATION ON ERYTHROCYTES. C. W. Sheppard and Marian Stewart. *J. Cellular Comp. Physiol.* **39**, 189-215 (1952).

Preliminary studies on ability of irradiated erythrocytes to maintain concentration gradients of cations between the cell contents and surrounding medium are described. *In vitro* studies of K leakage (using K^{42} tracer technique in nonirradiated systems and in irradiated human RBC) are described. Loss of K selectivity indicative of erythrocyte radiation damage. NSA 7-25.

953
LOW-VOLTAGE ELECTRON BOMBARDMENT OF BACTERIAL SPORES. Marguerite Davis and Franklin Hutchinson. *Arch. Biochem. and Biophys.* **39**, 459-61 (1952).

Preliminary data from a study of survival of *B. subtilis* spores as a function of electron dose at various voltages are reported. NSA 7-26.

954
A STUDY OF THE SHORT-TIME EFFECTS ON THE MOUSE OVARY OF INTERNAL IRRADIATION WITH P^{32} . Erik Odeblad. *Acta Radiol.* **38**, 33-40 (1952).

Adult mice were given 0.1, 0.3, 1.0, 3, 10 and 30 μC^{32} /gm and killed after 48 or 96 hours. In ovary, granulosa tissue was most radiosensitive with changes appearing at 3 μC /gm. Interstitial tissue was least radiosensitive. NSA 7-27.

955
THE BIOLOGICAL ACTION OF X-RAYS AND FAST NEUTRONS ON BARLEY AND WHEAT. James MacKey. *Arkiv Botanik* **1**, 545-56 (1952).

Dry dormant seeds of barley and wheat and pre-soaked seed of high metabolic activity were irradiated with x rays and fast neutrons and followed through two generations. From genetic standpoint, neutrons were more effective than x rays. Author discusses interpretation of curves relating retardation of sprouting, survival, plant fertility and certain earlier observations. NSA 7-28.

956
MITOTIC RHYTHM IN CARCINOMAS OF HUMAN SKIN UNDER THE INFLUENCE OF CHAOL RADIATION. II. Roderich Helmke. *Strahlentherapie* **88**, 123-8 (1952). (German).

Author studied effect of daily doses of 300 or 500 r of Chaol radiation on mitotic rhythms of 10 prickle-cell and eight basal-cell carcinomas of human skin; noted gradual drop in number of mitotic figures in nearly all carcinomas. In some cases, one or two delayed waves appeared on graphs of mitosis numbers. NSA 7-32.

957
EFFECT OF ROENTGEN RAYS DURING VARIOUS PHASES OF THE HAIR CYCLES OF THE ALBINO RAT. John R. Geary, Jr. *Am. J. Anat.* **91**, 51-106 (1952).

Effects of low-voltage x rays on hair follicle of Sherman strain albino rat during various phases of hair cycle are discussed. 72 references. NSA 7-33.

958
THE LIMITS OF THE TARGET THEORY OF THE BIOLOGICAL ACTION OF RADIATION. B. Rajewsky. *Brit. J. Radiology* **25**, 550-52 (1952). NSA 7-34.

959
X-RAY ULCERS OF THE UPPER INTESTINAL SEGMENTS FOLLOWING IRRADIATION OF CERVICAL CARCINOMAS. W. Hinz and W. Mohnke. *Zentr. Gynäkol.* **74**, 734-48 (1952). (German).

Describes x-ray ulcers of upper intestine observed at autopsy of patient who had undergone extensive x-ray and Ra therapy for cancer of the cervix. NSA 7-35.

960
MAXILLARY SINUS CARCINOMA CAUSED BY RADIUM-CONTAINING CONTRAST AGENTS. O. Hofer. *Deut. Zahnärztl. Z.* **7**, 736-41 (1952). (German).

Complete retention of thorotrast and development of slightly cornified epithelioma were found in right maxillary sinus of 64 year old patient who had had the thorotrast injected 10 years previously for radiographic contrast studies. NSA 7-36.

961
THE EFFECTS OF BETA RAYS ON THE CONDUCTED ACTION POTENTIALS OF NERVES. Edgar Lionel Gasteiger, Jr. PhD. Thesis, Univ. of Minnesota (1952). NSA 7-38.

962
TETRAZOLIUM SALTS AS PROTECTORS AGAINST LETHAL EFFECTS OF X-RAYS. N. Puckett, S. Bellack, and A. T. Krebs. (Army Medical Research Lab., Fort Knox). Mar. 5, 1952. 9p. (AMRL-77). *Science* **117**, 155-6 (1953).

Administration of a tetrazolium compound before irradiation produced a definite protection against lethal effects of x rays in mice. NSA 7-39.

963
INABILITY OF FLAVONOIDS TO MODIFY ROENTGEN RAY IRRADIATION MORTALITY IN GUINEA PIGS. Thomas J. Haley and Samuel Mann. (Atomic Energy Project, Univ. of Calif., Los Angeles). Sept. 22, 1952. 9p. (UCLA-224). *Proc. Soc. Exptl. Biol. Med.* **81**, 665-7 (1952).

Female guinea pigs given pre- or post-irradiation injections of rutin (250 mg/kg), hesperidin (25 mg/kg), hesperidin methyl chalcone (100 mg/kg) or naringin (75 mg/kg) were not protected against effects of 200 r acute whole body x irradiation. Post-exposure administration of the flavonoids increased mortality rate, as did pre-exposure administration of hesperidin and naringin. NSA 7-40.

964
BONE MARROW CONDITIONS IN RHEUMATIC PATIENTS AND THEIR INFLUENCING BY THERMAL CAVITY TREATMENT IN THE BÖCKSTEIN AT BADGASTEIN. K. Inama. *Wien. Z. inn. Med.* **33**, 241-5 (1952). (German).

Treatment of rheumatic patients in the Bockstein caverns consists in resting for 1 hour at 40.8 to 41.6° C (95-98% RH) and 4×10^{-3} c/1 Rn concentration. Sternal marrow studies on 8 patients before and after 10 or more treatments indicated stimulation of marrow, especially erythroid hyperplasia and moderate lymphocyte increase at expense of granulocytes. Also noted regular appearance of basophil cells. NSA 7-49.

965
ATTEMPTS AT TREATMENT OF ACUTE LEUKOSIS BY REINJECTION OF THE PATIENT'S OWN BLOOD IRRADIATED WITH X RAYS. P. Croizat, L. Revol, J. Papillon, Pinet, and Bussy. *Sang. Le* **23**, 537-39 (1952). (French).

Attempts to treat acute leukemia by collection of 100-150 cc of blood in 10-15% Na citrate, x irradiation with 100-200 r, then reinjection revealed: 1) too large blood sample or too intense radiation may aggravate the disease, 2) correct dose may result in some amelioration, usually

limited to certain symptoms such as bone pain, chloromatous tumors and leukosis. NSA 7-50.

966

THE LATE EFFECTS OF INTERNALLY-DEPOSITED RADIOACTIVE MATERIALS IN MAN. Joseph C. Aub, Robley D. Evans, Louis H. Hempelmann, and Harrison S. Martland. *Medicine* 21, 221-329 (1952).

Case histories are given for 30 persons containing internally deposited Ra alone or with mesothorium; most exposures at least 25 years duration. Biological and physical properties of Ra and mesothorium are reviewed. NSA 7-52.

967

INVESTIGATIONS INTO THE PROBLEM OF RADIUM POISONING. VI. RESULTS ON ELIMINATION OF RADIOACTIVE SUBSTANCES FROM THE HUMAN BODY FOUND IN TWO RADIUM POISONING CASES. B. Rajewsky and H. Muth. *Strahlentherapie* 88, 261-75 (1952). (German).

Ra excretion in stool and urine were followed during first week after exposure in two cases of Ra poisoning, one due to inhalation of products of Ra-Be neutron source explosion, the other to intravenous injection of Ra solution in suicide attempt. NSA 7-53.

968

LETHAL EFFECTS ON MICE OF IRRADIATION IN THE ZOE PILE. Paul Bonet-Maury and André Ertaud. *Compt. rend.* 235, 828-30 (1952). (French).

Mean survival curve of mice exposed in Al cages in the interior of the Chatillon pile was determined, using 400 18-20 gm animals in lots of 10. Curve is contrasted with that for x and γ rays. Marked decrease in survival time was noted when animals were irradiated in Cd cages. NSA 7-383.

969

BRAIN METABOLISM IN THE EMBRYO, NEWBORN AND ADULT. THE EFFECTS OF CORTISONE, ASPHYXIA, RADIATION AND OTHER INHIBITORS. Samuel P. Hicks. (New England Deaconess Hospital, Boston and Harvard Cancer Commission and Harvard Medical School). (nd). 40p. (AECU-2292). *Arch. Pathol.* 55, 302-27 (1953). NSA 7-469

970

THE EFFECT OF X IRRADIATION ON THE METABOLISM OF PHOSPHORUS-CONTAINING COMPOUNDS IN MELANO-PLUS DIFFERENTIALIS EGGS. J. V. Passonneau. (Argonne National Lab.). Oct. 1952. 24p. (AECU-2304; UAC-663).

X-irradiation produces degradation and inhibits synthesis of nucleic acids in grasshopper eggs. Irradiated cell was unable to replace nucleic acids as they broke down, the inhibition of NA synthesis being most marked in postdiapause eggs. NSA 7-470.

971

CROSS-CIRCULATION EXPERIMENTS. PART A. RATE OF UTILIZATION OF CROSS CIRCULATED PLATELETS IN THE THROMBOPENIC CAT. p.104-15 OF BIOLOGICAL EFFECTS OF EXTERNAL RADIATION. (NNS VI-2). Henry A. Blair, ed. New York, McGraw-Hill Book Co., Inc. 1954. John S. Lawrence, and William N. Valentine.

Thrombopenic animals were cross-circulated by means of carotid-to-carotid anastomoses with normal animals. The highest platelet count was from a splenectomized animal. The platelet level was generally the same among normal cats. The average rate of platelet utilization was about 2500/cu/mm/hr. (from authors' summary).

972

RADIATION STERILIZATION: II. THE EFFECT OF HIGH ENERGY GAMMA RADIATION FROM KILOCURIE RADIO-ACTIVE SOURCES ON STEROID HORMONES. William Tarpley, Milton Yudie, Bernard Manowitz, Robert V.

Horrigan, and Jerome Weiss. (Brookhaven National Lab. and Schering Corp.). Aug. 1952. 32p. (BNL-1258).

Irradiation of cortisone acetate and pregnenolone acetate with 2-4 times the sterilization dose of γ radiation produced no detectable changes in the molecules. NSA 7-472.

973

SUPPRESSION OF GASTRIC ACIDITY BY RADIO KRYPTON. Winton Stienfield. (Brookhaven National Lab.). (nd). 4p. (BNL-1272). *Proc. Soc. Exptl. Biol. Med.* 81, 836-8 (1952).

Survey experiments on dogs utilizing A^{41} (used to inflate a balloon within the stomach) were followed by tests with Kr^{86} , preferred because it emits only β radiations. Changes in gastric pH and histological changes in stomach wall described. NSA 7-473.

974

RELATION OF X-IRRADIATION DOSAGE AND ELAPSED TIME TO THE DESTRUCTION OF HEMATOPOIETIC CELLS OF TADPOLES. Bennet M. Allen, Ole A. Schjeide, Mary J. Millard, and Ronald Piccirillo. (Atomic Energy Project, Univ. of Calif., Los Angeles). Oct. 27, 1952. 21p. (UCLA-232).

X rays in doses from 25 to 10,000 r produced destruction of hematopoietic cells of *Rana catesbiana*; degree of destruction varied with dose. Mitotic figures were seldom seen before 5th post-irradiation day following 250 to 750 r doses. Inhibition of mitosis was complete by 30th post-exposure day after 1000 r. NSA 7-475.

975

INDIRECT EFFECTS OF LOCALIZED DEUTERON IRRADIATION OF THE RAT. V. P. Bond, M. N. Swift, S. T. Taketa, G. P. Welch, and C. A. Tobias. (Naval Radiological Defense Lab.). Aug. 26, 1952. 22p. (USNRDL-366). *Am. J. Physiol.* 174, 259-63 (1953).

Doses of 3564 rep of 190 Mev deuterons applied selectively to head, liver, adrenals, intestine and hindquarters of intact, unanesthetized rats caused changes in weight of thymus, spleen and adrenals characteristic of pituitary--adrenal stimulation, the weight changes occurring only when the irradiation caused generalized stress. NSA 7-476.

976

SYNERGISTIC ACTION OF CORTISONE AND TOTAL-BODY IRRADIATION IN MICE. John H. Wentworth and John A. Billows. *Radiology* 59, 559-63 (1952). NSA 7-477.

977

APPLICATION OF SINGLE EXPOSURES OF SHORT DURATION AND GREAT INTENSITY FOR DYNAMIC INVESTIGATION OF RADIOBIOLOGICAL EFFECTS. G. A. Medvedeva, M. N. Meisell, and Ya. L. Shekhtman. *Zhur. Obshchei Biol.* 13, 243-5 (1952). (Russian).

Endomyces magnusii--(yeast) was x irradiated with 500,000 r or more at rate of 21,000 or 1400 r/min. Structural changes in nuclei, protoplasm and chondrosomes are described and their relation to target theory of radiation damage is discussed. NSA 7-478.

978

HISTOPATHOLOGICAL EFFECTS OF IMMEDIATE AND DELAYED RADIATION DEATH IN HAMSTERS PRODUCED BY TWO MILLION VOLT X-RAYS. I. THE LYMPHOCYTIC ORGANS: SPLEEN, LYMPH NODES, THYMUS AND BONE MARROW. Roberts Rugh, Barnet Levy, and Lottie Sapadin. *J. Morphol.* 91, 237-68 (1952).

Immediate histopathological effects observed in spleen, lymph nodes, thymus and bone marrow of hamsters following exposure to 1500 r of x radiation

are compared with effects observed in same tissues after continuous exposure to lethal dose of approximately 110,000 r. NSA 7-479.

979

PROTECTION OF THE SPLEEN IN RATS SUBMITTED TO A LETHAL DOSE OF X RAYS. M. Mandart and G. Lambert. *J. belge radiol.* 35, 337-48 (1952). (French). NSA 7-481.

980

OBSERVATIONS ON SERUM PROTHROMBIN CONVERSION ACCELERATOR IN RADIATION-INDUCED PANCYTOPENIA. George J. Jacobs, Eugene P. Cronkite and Sidney G. White. *Am. J. Physiol.* 170, 390-5 (1952).

Evolution of SPCA is impaired in irradiated dog but impairment is not due to deficiency of precursor. Prolonged clotting time during thrombocytopenia results in high residual prothrombin when blood is permitted to clot spontaneously and results in slow evolution of SPCA. Increased amounts of SPCA are evolved when prothrombin conversion is accelerated mechanically or chemically. NSA 7-483.

981

RESPONSE OF X-IRRADIATED MICE TO INTRAVENOUS INOCULATION OF INTESTINAL BACTERIA. M. H. Hatch, H. B. Chase, P. F. Fenton, W. Montagna, and J. W. Wilson. *Proc. Soc. Exptl. Biol. Med.* 80, 632-5 (1952).

Intravenous inoculation of mice with *Proteus* following moderate total body x irradiation caused increased mortality and shorter median death time compared with saline injected controls. Non-irradiated, *Proteus*-inoculated mice all survived. NSA 7-484.

982

EFFECT OF ALTITUDE-INDUCED POLYCYTHEMIA AND RETICULOCYTOSIS ON TOLERANCE OF RATS TO RADIATION. Willie W. Smith, Walter S. Cool, Falconer Smith, and Paul D. Altland. *Am. J. Physiol.* 170, 396-400 (1952).

Rats with altitude-induced polycythemia showed only relative anemia following irradiation but had lower tolerance than did ground-level controls. Rats with slight polycythemia and reticulocytosis also had lowered radiation tolerance. Authors conclude that decreased tolerance to radiation is associated with marrow hyperplasia at time of exposure. NSA 7-485.

983

THE EFFECT OF THYROIDECTOMY ON THE MORTALITY AND PERIPHERAL BLOOD CHANGES OF THE RAT SUBJECTED TO WHOLE BODY X-IRRADIATION. A. L. Kretchmar, H. J. Gombert, D. E. Weyant, and F. H. Bethell. *Endocrinology* 51, 59-65 (1952).

Irradiation leukopenia and anemia were found to be more severe and prolonged in thyroparvitic than in euthyroid animals, and probability of surviving total body irradiation was decreased by hypothyroidism. NSA 7-486.

984

THE MEDICAL EXAMINATION OF HIROSHIMA PATIENTS WITH RADIATION CATARACTS. Paul G. Fillmore. *Science* 116, 322-3 (1952).

This report is a summary of physical findings in a group of patients with radiation cataracts examined approximately 5 years after exposure within 1094 yards to radiation from A-bomb at Hiroshima. NSA 7-487.

985

THERAPEUTIC EFFECTS IN HYPERTHYROIDISM FROM REPEATED DIAGNOSTIC DOSES OF I^{131} . Sidney C. Werner, Howard B. Hamilton, and Martha R. Nemeth. *Radiology* 59, 720-28 (1952).

Remission of hyperthyroidism resulted in 6 of 24 patients given several tracer doses of I^{131} at weekly intervals, with total doses as low as 240 μ c. In 5 of 6 cases the remissions were not sustained beyond two or three months. Changes in laboratory studies were noted in 15 patients failing to develop remissions. NSA 7-488.

986

BIOLOGICAL ANALYSIS OF THE RADIATION DAMAGE TO DROSOPHILA EGGS DURING 180-KV X RADIATION AND ULTRAHARD 31-MEV RADIATION. Hedi Fritz-Neggli. *Naturwissenschaften* 39, 485-6 (1952). (German). NSA 7-489.

987

COURSE OF TESTICULAR INJURY FOLLOWING ACCIDENTAL EXPOSURE TO NUCLEAR RADIATIONS REPORT OF A CASE. William R. Oakes and Clarence C. Lushbaugh. *Radiology* 59, 737-43 (1952).

A case of testicular atrophy in man following accidental exposure to nuclear radiations is presented along with studies of regeneration based on sperm counts and testicular biopsies done over a 5 year period. Regeneration was found to be slow but similar to that studied in irradiated experimental animals. NSA 7-490.

988

X-IRRADIATION AND BACTEREMIA STUDIES ON ROENTGEN DEATH IN MICE. IV. J. W. Osborne, H. S. Bryan, H. Quastler, and H. E. Rhoades. *Am. J. Physiol.* 170, 414-17 (1952).

Authors report a study of bacteremia in partial-body irradiated mice in which no intestinal damage found. Authors conclude that irradiation of head and thorax is sufficient to elicit death due to bacteremia, the bacteria entering the blood stream via the oropharynx. NSA 7-491.

989

CHOLINESTERASE ACTIVITY, WEIGHT, WATER CONTENT AND PATHOLOGY OF SMALL INTESTINE OF RATS SUBJECTED TO X-RADIATION. Robert A. Conrad. *Am. J. Physiol.* 170, 418-25 (1952).

Cholinesterase activity of small intestine showed significant depression 15-20 hours after 500 r x irradiation, with maximum (60%) depression by 4th day. Recovery was slow, with near-normal values by 20-24 days. Gross appearance of small intestine paralleled cholinesterase activity more closely than did histological appearance. NSA 7-493.

990

FURTHER STUDIES ON POST-IRRADIATION PROTECTION BY SPLEEN HOMOGENATES AGE, STRAIN, AND SPECIES FACTORS. Leonard J. Cole and Marie E. Ellis. (Naval Radiological Defense Lab.). Sept. 15, 1952. 21p. (USNRDL-370).

Age, Strain and species modify protective effect of spleen homogenates against radiation damage. Spleen homogenates from 1 week old mice have greater protective activity than do homogenates from adult mice. Homogenate preventing death in 80% of adult mice exposed to 750 r does not protect 5 week old mice after similar exposure. NSA 7-494.

991

SKIN DECONTAMINATION A LITERATURE SEARCH. Frances Sachs. (Carbon and Carbide Chemicals Co. (Y-12)). Oct. 22, 1952. 26p. (Y-914). NSA 7-495.

992

RADIATION HAZARDS IN HIGH ALTITUDE AVIATION. Cornelius A. Tobias. *J. Aviation Med.* 23, 345-72 (1952).

Distribution of types of radiations in the cosmic radiation; dosimetry, and expected biological effects are reviewed. 70 references. NSA 7-496.

993

HEMATOLOGICAL INVESTIGATIONS ON THE ACTION OF CYSTEINE. W. Lorenz. *Strahlentherapie* 88, 190-7 (1952). (German).

Intracardial injection of cysteine prior to an 800 r total body exposure (x ray) increased survival rate of rats from 10 to 75%. Cysteine-treated survivors showed the same degree of hematological damage as untreated irradiated controls. After adrenalectomy, radiosensitivity increased and protective effect of cysteine decreased. NSA 7-497.

994

A RADIOCHEMICAL AND AUTOGRAPHIC STUDY OF THE DISTRIBUTION OF POLONIUM IN RATS AFTER INTRA-VEINOUS ADMINISTRATION. John C. Gallimore, Jr. (Atomic Energy Project, Univ. of Rochester and Oak Ridge Inst. of Nuclear Studies). Oct. 6, 1952. (UR-220).

Immediately after injection, Po in blood exists as (1) a system of Po aggregates, and (2) singly dispersed atoms or molecules. Aggregates (1) are removed from blood stream over an approximately 2 hour period, deposited in liver and spleen. Proximal convoluted tubules of kidney concentrated most of (2). NSA 7-511.

995

THE INACTIVATION OF BACTERIOPHAGE AND CATALASE BY SOFT X-RAYS. W. R. Guild. *Arch. Biochem. Biophys.* 40, 402-15 (1952).

An x ray tube was constructed so that bacteriophage and catalase samples could be irradiated inside the vacuum system. Voltage dependence of T-1 phage and catalase was studied in region of 1500 to 4100 V to find effect as K absorption edge of P was passed. Found that to within factor of 4, absorption of photon by P atom in nucleic acid is no more effective for T-1 inactivation than absorption in any other atom. NSA 7-546.

996

THE ULTRAVIOLET MICROSCOPY OF THE LIVING CELL'S RESPONSE TO LETHAL X-RADIATION. P. O'B. Montgomery and Shields Warren. (Cancer Research Inst., New England Deaconess Hospital, Boston). (nd). 9p. (AECU-2294). *Science* 117, 589-91 (1953).

Authors report of effects of 47,000 to 60,000 r of x radiation on Walker rat carcinoma 256 cells in tissue culture as recorded by Polaroid color-translating ultraviolet microscope. Marked and constant change was produced in irradiated cultures from 48 through 120 hours. NSA 7-715.

997

MODIFICATION, THROUGH THE USE OF SUPPLEMENTARY ENVIRONMENTAL FACTORS, OF THE FREQUENCY AND TYPES OF GENE AND CHROMOSOME CHANGES INDUCED BY X-RAYS, ULTRAVIOLET LIGHT, AND NITROGEN MUSTARD. W. D. McElroy and C. P. Swanson. (Johns Hopkins Univ.). Nov. 15, 1951. 9p. (AECU-2295).

Evidence is presented indicating that delayed effects of mutagenic agents on frequency and types of gene and chromosome changes are due to presence of metastable states formed in various parts of chromosome. NSA 7-716.

998

VARIATIONS IN THE FLORAL MORPHOLOGY OF NORMAL AND IRRADIATED PLANTS OF *TRADESCANTIA PALUDOSA*. James E. Gunkel, Ielene B. Morrow, Arnold H. Sparrow, and Eric Christensen. (Brookhaven National Lab.). (nd). 21p. (BNL-1285). *Bull. Torrey Botan. Club* 80, 445-8 (1953).

Cross aspects of flower development in both γ irradiated and non-irradiated plants of *Tradescantia paludosa* are described. NSA 7-717.

999

THE EFFECT OF IONIZING RADIATIONS UPON THE RESPIRATION AND OXIDASES OF THE POTATO TUBER. Alfred S. Sussman. (Michigan Univ. and Brookhaven National Lab.). (nd). 25p. (BNL-1299). *J. Cellular Comp. Physiol.* 42, 273-83 (1953).

CO₂ of potato tubers was increased up to 60% by γ irradiation over wide range of doses. CO₂ evolution also increased, reaching peak about 24 hours after peak of O₂ uptake. Cytochrome oxidase and tyrosinase activities were not affected by dosages used except that tyrosinase lost half its activity at 3,200,000 r.

1000

EFFECT OF DIET EXPOSED TO CAPACITRON IRRADIATION ON THE GROWTH AND FERTILITY OF THE ALBINO RAT. Esther DaCosta and Stanley Levenson. (Medical Nutrition Lab., Chicago). Dec. 14, 1951. 10p. (NP-4122; Report No. 89).

Growth was maintained in four generations of rats fed diet normally adequate but irradiated by high intensity β rays for 1×10^6 seconds. Fertility was somewhat impaired, especially in male. Mortality per litter markedly increased. NSA 7-719.

1001

PARTIAL-BODY IRRADIATION OF THE RAT WITH 190-MEV DEUTERONS. (Naval Radiological Defense Lab.). Aug. 26, 1952. 20p. (USNRDL-365).

Various anatomical regions (not more than 5% of total body) of intact, unanesthetized rat were exposed to 190 Mev deuteron beam. Etiology of the syndrome resulting from exposure of relatively small portions of abdomen are contrasted with that following irradiation of large portions or all of abdomen. NSA 7-720.

1002

EFFECTS OF TOTAL BODY X-RADIATION ON SALIVARY COMPONENTS OF DOGS. R. S. Leopold, J. L. Nemes, and M. G. Wheatcroft. *J. Dental Research* 31, 603-8 (1952). NSA 7-721.

1003

EFFECT OF RADIATION ON THE BLOOD. Margaret D. Stelling. *Radiography* 18, 221-31 (1952).

A review of changes in blood and blood forming tissues in patients undergoing radiation therapy. NSA 7-722.

1004

EFFECTS OF X IRRADIATION ON CONNECTIVE TISSUE BASOPHIL GRANULAR CELLS (MAST CELLS) OF HUMAN SKIN. Alessandro Novaro. *Radioterapie radiobiol. e fis. med.* 8, 69-72 (1952). (Italian).

Normal human skin exposed to 1500-3000 r of x rays, then fixed in alcohol and basic Pb acetate. Changes in mast cells described and illustrated. NSA 7-723.

1005

ON DISTANCE EFFECTS IN THE ANIMAL ORGANISM FOLLOWING LOCAL X IRRADIATION. H. Langendorff and W. Lorenz. *Strahlentherapie* 88, 177-89 (1952). (German).

Local x irradiation (3000 r over 1-3 cm) of pituitary, testicles or thigh produces changes in lipids and plasmas of suprarenal cortex, as well as variations of nuclear volumes and concomitant decrease of lymphocytes. NSA 7-724.

1006

THE COMPONENTS WITH LETHAL EFFECT ON MICE OF THE TOTAL RADIATION OF A URANIUM PILE. André Ertaud and Paul Bonét-Maury. *Compt. rend.* 235, 909-11 (1952). (French).

Calculations of various components of pile radiation leads to a value of lethal dose in good agreement with that evaluated biologically from mean survival of mice irradiated in Al or Cd cages. NSA 7-725.

1007

ULTRAFRACTIONATION. II. ADDITIONAL EXPERIMENTAL STUDIES OF THE BIOLOGICAL EFFECT OF AN INTERMITTENT X IRRADIATION. E. Witte and R. Sigmund. *Strahlentherapie* 88, 384-94 (1952). (German).

Authors report additional investigations on intermittent x irradiation of *Drosophila* eggs and pupae. If ultrafractionation effect exists for eggs it must appear at irradiation times shorter than 4×10^{-5} sec. Significance of results discussed. NSA 7-726.

1008

RADIOACTIVITY INDUCED IN TISSUES BY BETATRON RADIATION. G. Joyet. *Oncologia* 5, 1-12 (1952). (German).

Bremsstrahlung of 31 Mev betatron induces radioisotopes in tissues, most important being O^{15} , C^{11} , N^{13} , P^{30} , I^{128} , I^{126} , and those from irradiation of Ca. Specific induced activity at 100 cm from target with 20 min exposure (730 r) is about 0.1 mg/gram-element for C^{11} and N^{13} , 0.26 mc for O^{15} , 0.2 for P^{30} , and 0.006 mc for I^{128} . Dose due to artificial radioactivity is of order of 0.0005 of dose of direct radiation measured at maximum of transition curve. NSA 7-727.

1009

PROBLEM OF THE PHYSICAL EXPLANATION OF DIFFERENT TIME-FACTOR EFFECTS IN BIOLOGICAL OBJECTS. Richard Kurt Kepp and Kurt Müller. *Strahlentherapie* 88, 139-49 (1952). (German).

Time factor in radiation biology is shown to depend on mean ionization density of the radiation. The time necessary for a certain degree of resitutation after a number of hits is dependent upon the number of ionizations of which each hit consists. NSA 7-728.

1010

A QUANTITATIVE STUDY OF THE EFFECTS OF X RADIATION ON CELLS IN VITRO. Thomas R. Reid and Margaret P. Gifford. *J. Natl. Cancer Inst.* 12, 431-39 (1952).

Quantitative method for determining cell population in tissue cultures was applied to studies of dose-response patterns following x irradiation. Response to 250, 500, 750, 1000 and 2000 r is described. Recovery occurs following 250 and 500 r; 1000 and 2000 r being lethal. The 750 r dose was found to be partially lethal. NSA 7-731.

1011

RADIATION-INDUCED MUTATIONS IN WHEAT AND BARLEY. T. J. Arnason, C. O. Person, and J. M. Naylor. *Can. J. Botany* 30, 743-54 (1952).

A study of mutagenic effect of absorbed radiophosphorus in wheat and barley. NSA 7-732.

1012

MAXIMUM PERMISSIBLE NEUTRON FLUX FOR FAST AND THERMAL NEUTRONS. W. S. Snyder and J. Neufeld. (Oak Ridge National Lab.). (nd). 1p. (AECU-2328).

Collision density resulting from irradiation of a 30 cm tissue slab by normally directed beam ($1 \text{ n/cm}^2/\text{sec}$) of thermal neutrons and fast neutrons (10, 5, 2.5, 0.005 Mev) is calculated. Maximum permissible flux (mpf) for 40 hr week is found to be about $1800 \text{ n/cm}^2/\text{sec}$ for thermal neutrons: about 25, 24, 38, 82 and $1640 \text{ n/cm}^2/\text{sec}$ for 10, 5, 2.5, 0.5 and 0.005 Mev neutrons, respectively. Report includes assumptions made to calculate mpf. NSA 7-734.

1013

THE BIOLOGICAL AND MEDICAL ASPECTS OF IONIZING RADIATION: IV. THE EFFECT OF FOLINIC ACID, S. F., ON HEMATOPOIESIS FOLLOWING X-RADIATION. K. H. Burdick and G. O. Ballengee. (School of Aviation Medicine). Oct. 1952. 7p. (NP-4271; Report No. 4).

Folinic acid is found to be ineffective as hematopoietic stimulus in rats following irradiation with 570 r of x rays. NSA 7-736.

1014

EFFECT OF POTENTIATION OF INHIBITION OF ACETYLCHOLINE ON INTESTINAL DAMAGE, MORTALITY AND RECOVERY AFTER ACUTE ABDOMINAL X-RADIATION IN THE RAT. Lawrence E. Detrick, Bonnie Rhodes, Virginia Debley, and Thomas J. Haley. (Atomic Energy Project, Univ. of Calif., Los Angeles). Nov. 20, 1952. 14p. (UCLA-236). *J. Am. Pharm. Assoc., Sci. Ed.* 42, 296-300 (1953).

Autonomic drug medication of various kinds failed to prolong survival or decrease mortality of rats following x irradiation of abdomen. Atropine increased rate of and total mortality. NSA 7-737.

1015

A NEW PROTECTIVE AGENT AGAINST X RADIATION. Z. M. Bacq and A. Herve. *Schweiz. med. Wochschr.* 82, 1018-20 (1952). (French).

Mice were injected intraperitoneally with various amines or amino acids or various salts of histamine before 700 r x irradiation. Frequent superior protective effect of an amine over the corresponding amino acid was noted, suggesting that cysteinamine may have important value in therapy of human radiation sickness. NSA 7-739.

1016

COMPARATIVE ACTION OF CORTISONE, DESOXY-CORTICOSTERONE, AND PROMETHAZINE ON THE RESISTANCE OF ADRENALECTOMIZED ANIMALS TO X RAYS. B. N. Halpern, A. Cuendet, and J. P. May. *Schweiz. med. Wochschr.* 82, 1020-3 (1952). (French).

Adrenalectomy triples sensitivity of rats to x rays. Cortisone exerts protective effect during cytotoxic phase (1st 8 days post exposure) but increases mortality from infections after first week. Desoxy-corticosterone has similar but weaker effect; anti-histamines aggravate radiation injuries in adrenalectomized animals. NSA 7-740.

1017

THE ROLE OF THE ADRENAL IN THE GENERAL RESISTANCE OF THE ORGANISM TO RADIATION. H. Betz. *J. belge radiol.* 35, 380-92 (1952). (French). NSA 7-742.

1018

SURVIVAL AFTER RADIATION EXPOSURE-INFLUENCE OF A DISTURBED ENVIRONMENT. Willie W. Smith. *Nucleonics* 10, No. 11, 80-3 (1952).

Moderate exercise, moderate degrees of stress and no food or poor diet for a short time can be tolerated under laboratory conditions by irradiated mice and rats. Extremes of exercise or cold are tolerated less well. High degree of susceptibility to infection appears within few days and may last several weeks. NSA 7-744.

1019

DOSIMETRIC CONSIDERATIONS IN DETERMINING HEMATOPOIETIC DAMAGE FROM RADIOACTIVE IODINE. J. E. Rall, Charles G. Foster, Jacob Robbins, R. Lázerson, Lee E. Farr, and Rulon W. Rawson. (Brookhaven National Lab. and Sloan Kettering Inst. for Cancer Research and Memorial Center, New York). (nd). 21p. (BNL-1278). *Am. J. Roentgenol.* 70, 274-82 (1953).

Lymphocyte count was found to be most sensitive and reliable index of degree of radiation damage in 33 patients receiving tracer and large therapeutic doses of I^{131} . NSA 7-747.

1020

EXPERIMENTAL RADIOTHERAPY OF ABDOMINAL

CANCER. II. EFFECT OF A FLAVONONE (RUTIN) ON RADIATION REACTIONS. Annabelle Cohen and Lionel Cohen. *Brit. J. Radiology* 25, 601-5 (1952). NSA 7-748.

1021
FUNDAMENTALS OF INTRAUTERINE BETA RADIATION THERAPY WITH ARTIFICIAL RADIOACTIVE ISOTOPES. H. A. Kunkel, H. J. Schmermund, and G. Schubert. *Geburtshilfe u. Frauenheilk.* 12, 695-708 (1952). (German).

Includes description of histological effects of P^{32} on the endometrium as observed in 3 patients. NSA 7-749.

1022
EXPERIMENTAL STUDIES IN METAL CANCERIGENESIS. II. EXPERIMENTAL URANIUM CANCERS IN RATS. W. C. Hueper, J. H. Zuefle, A. M. Link and M. G. Johnson. *J. Nat. Cancer Inst.* 13, 291-305 (1952).

Localized U deposits in tissues of rats, creating high concentration of U in circumscribed areas, and prolonged action of U in "non-toxic" or low-toxic quantities on cells in immediated vicinity of such foci, exert a definite carcinogenic effect (production of sarcomas.) NSA 7-760.

1023
THE BIOLOGICAL AND MEDICAL ASPECTS OF IONIZING RADIATION: THE INFLUENCE OF NITROGEN MUSTARDS ON CITRIC ACID SYNTHESIS IN VIVO. Kenneth P. Dubois, Jere Deroin, and Kenneth W. Cochran. (Air Force Radiation Lab., Univ. of Chicago). Nov. 1952. 5p. (NP-4270; Report No. 1).

In certain tissues nitrogen mustards produce alterations in citrate synthesis which are qualitatively similar to those produced by x ray. Decreased citrate synthesis was observed in spleen and thymus of N-mustard treated rats; increased citrate content of liver of male rats. NSA 7-795.

1024
THE BIOLOGICAL AND MEDICAL ASPECTS OF IONIZING RADIATIONS: III. THE IMMEDIATE EFFECTS OF X-RADIATION ON ISOLATED STRIATED FROG MUSCLE. Herbert B. Gerstner, Charles P. Powell, and Everett O. Richey. (School of Aviation Medicine). Oct. 1952. 8p. (NP-4278; Report No. 3). *Am. J. Physiol.* 176, 9-14 (1954).

No effect was detectable following 0-30 kr. After 30-150 kr: muscle function was depressed and color and length of isolated muscle were changed. Doses greater than 150 kr caused immediate total loss of function and pronounced morphological change. NSA 7-1037.

1025
THE ANTIBODY RESPONSE OF ANIMALS EXPOSED TO X-RADIATION. IV. THE LEVELS OF X-RADIATION EXPOSURE REQUIRED TO DESTROY AN IMMUNITY TO *SALMONELLA TYPHIMURIUM*. John D. Fulton and Roland B. Mitchell. (School of Aviation Medicine). Dec. 1952. 10p. (NP-4279; Report No. 4).

200 r or more of 260 kvp 18 ma x radiation (whole body exposure) administered 6 days after immunization with heat killed *S. typhimurium* antigen, was sufficient to destroy the resistance to *S. typhimurium*. (mice). NSA 7-1038.

1026
QUARTERLY PROGRESS AND WORK ACCOMPLISHMENT REPORT FOR QUARTER ENDING SEPTEMBER 30, 1952. (Tennessee Univ.). 91p. (ORO-84).

Blood chemistry values for normal burros and burros after exposure to 400 r of γ radiation/day (Co^{60} source) are given. Observations on abnormal blood clotting in whole-body irradiated dogs, observations on sexual cycle of female burrows one year after irradiation, and observations on eyes of burros and swine after irradiation are included. NSA 7-1039.

1027
VARIATION OF X-RADIATION-INDUCED LIPEMIA IN RABBITS WITH DOSAGE ADMINISTRATION OF INSULIN OR AMMONIUM CHLORIDE, AND THE INCIDENCE OF TETANY. L. T. Steadman and A. J. Grimaldi. (Atomic Energy Project, Univ. of Rochester). Nov. 7, 1952. 20p. (UR-227).

Post-exposure increase in plasma total lipids is maximal following doses of 1000-1500 r. Insulin or NH_4Cl reduce lipemia following 1000 r but not following 2000 r. NH_4Cl increases mortality, insulin has no effect on it. Incidence of deaths due to hypocalcemic tetany is about 19% at 1000 r, 50% at 2000 r. NSA 7-1040.

1028
FREQUENCY OF DICENTRIC BRIDGES IN MEIOSIS IN THE GRASSHOPPER *GESONIA PUNCTIFRONS*, PRODUCED BY DIFFERENT DOSAGES OF X-RAYS. S. P. Ray-Chaudhuri and Ira Sarkar. *Science* 116, 479-82 (1952).

Quantitative data were obtained by direct cytological examination. Dicentric bridges detected at first anaphase of meiosis after irradiating testes of *Gesonia punctifrons*. NSA 7-1041.

1029
IMPAIRMENT OF ANTIMICROBIAL DEFENSES FOLLOWING TOTAL BODY IRRADIATION OF MICE. H. S. Kaplan, R. S. Speck, and E. Jawetz. *J. Lab. Clin. Med.* 40, 682-91 (1952).

A standard subacute streptococcal infection spread more rapidly in C_{57} black mice subjected to single total body x ray exposures in LD_{50} range than in nonirradiated controls. Cumulative mortality curves in the two groups were parallel but average survival time was significantly reduced by irradiation. Impaired resistance was apparent within 24 hours after irradiation. NSA 7-1042.

1030
ATOMIC ENERGY AND THE PLANT SCIENCES. Edward N. Tolbert and Paul B. Pearson. *Advances in Agron.* 4, 279-303 (1952).

A review of Atomic Energy Commission research program in plant sciences. NSA 7-1043.

1031
THE EFFECT OF LOCAL X-RAY IRRADIATION UPON THE TEETH AND SURROUNDING TISSUES IN YOUNG AXOLOTLIS. V. V. Brunst, E. A. Sheremetieva-Brunst, and Frank H. J. Figge. *J. Dental Research* 31, 609-19 (1952).

The mechanisms of tooth formation and tooth maintenance are permanently destroyed by 2000 to 4000 r doses of x irradiation. NSA 7-1044.

1032
THE EFFECT OF FAT LEVEL OF THE DIET ON GENERAL NUTRITION. IX. THE RELATIONSHIP OF RADIATION INJURY IN THE RAT TO FAT CONTENT OF THE DIET. Amber L. S. Cheng, George K. Kryder, Lois Bergquist, and Harry J. Deuel, Jr. *J. Nutrition* 48, 161-82 (1952).

Fat content of diet did not alter susceptibility of rats to large (650-850 r) single doses of x rays, but rats receiving fat in diet showed increased resistance to x radiation administered in sub-lethal doses at weekly intervals. NSA 7-1046.

1033
THE TREATMENT OF THE ACUTE RADIATION SYNDROME WITH AUREOMYCIN AND WHOLE BLOOD. F. W. Furth, Molly P. Coulter, R. W. Miller, J. W. Howland, and S. Swisher. (Atomic Energy Project, Univ. of Rochester). Nov. 8, 1952. 48p. (UR-221). *J. Lab. Clin. Med.* 41, 918-28 (1953). NSA 7-1047.

1034

THE PATHOLOGIC EFFECTS OF I^{131} ON THE NORMAL THYROID GLAND OF MAN. A. Stone Freeberg, George S. Kurland, and Herrman L. Blumgart. *J. Clin. Endocrinol. and Metab.* 12, 1315-48 (1952).

Post mortem pathological findings in 16 euthyroid patients who received therapeutic doses of I^{131} because of intractable angina pectoris or congestive failure are described. NSA 7-1049.

1035

ACTIVATION OF PSEUDOTUBERCULOSIS IN MICE EXPOSED TO SUBLETHAL TOTAL BODY RADIATION. I. L. Shechmeister and F. L. Adler. (Washington Univ., St. Louis, School of Medicine). (nd). 26p. (AECU-2350). *J. Infectious Diseases* 92, 228-39 (1953).

After sublethal doses of radiation mice developed generalized pseudotuberculous lesions with high mortality rate; non-irradiated controls developed no infection or subclinical pseudotuberculosis. Sublethal x irradiation of subclinically infected animals caused an epidemic of the infection. Role of radiation in the activation of latent infections is discussed. NSA 7-1326.

1036

COLD STERILIZATION OF FOOD BY GAMMA RAYS. L. E. Brownell, C. A. Lawrence and J. T. Graikoski. (Michigan Univ.). (nd). 13p. (AECU-2355). *Refriger. Eng.* 61, 55-7, 104 (1953).

Includes data on effect of dosage of γ radiation on bacterial count, effect of γ radiation on various molds and viruses and effect of γ sterilization on the flavor of various foods. NSA 7-1327.

1037

CHRONIC EXTERNAL IRRADIATION, NEUTRON RADIOBIOLOGY, HEMATOLOGY, PHYSIOLOGY, HISTOPATHOLOGY, AND RADIUM TOXICITY, p.10-56 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT FOR MAY, JUNE, JULY, 1952. Austin M. Brues, ed. (Argonne National Lab.). (ANL-4840(p.10-56)).

Includes progress reports on: factors influencing radiation therapy of experimental lymphoid tumors; effect of bone marrow or other tissue originating from hemopoietic organs on various types of radiation injury in several species; effect of fast neutron and γ irradiation of mice; effects of irradiation of mast cells. NSA 7-1329.

1038

EXPERIMENTAL PATHOLOGY, SPECIAL PROBLEMS, INVERTEBRATE ZOOLOGY, MICROBIOLOGY, PHYCOTRADIOBIOLOGY, PHYSIOLOGICAL CHEMISTRY, ORGANIC CHEMISTRY, PHARMACOLOGY, THEORETICAL BIOLOGY, AND BIOPHYSICS. p.57-108 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT FOR MAY, JUNE, JULY, 1952. Austin M. Brues, ed. (Argonne National Lab.). (ANL-4840(p.57-108)).

Includes reports on: Sr^{89} toxicity (mice); effects of implanted Pu metal (rabbits, rats); blood pressure changes in x-irradiated chicks; effect of high energy neutron irradiation on metabolism in egg nuclei of grasshopper nymphs; antibiotic and radiation sensitivity of auxin biosynthesis; hormonal influences on response of rat liver tryptophane peroxidase-oxidase to total-body x radiation. NSA 7-1330.

1039

(Pages 1-17 of) QUARTERLY PROGRESS REPORT NO. 5. (Air Force Radiation Lab., Univ. of Chicago). Oct. 15, 1952. (NP-4247(p.1-17)).

Blood cell carboxypeptidase inhibitor is reduced after about LD_{50} (man); also reduced in certain other pathological conditions. Assays on blood of 328 patients are reported. Related findings on reduced carboxypeptidase activity in rats and guinea pigs are reviewed. NSA 7-1332.

1040

(Pages 18-82 of) QUARTERLY PROGRESS REPORT NO. 5. (Air Force Radiation Lab., Univ. of Chicago). Oct. 15, 1952. (NP-4247(p.18-82)).

Following topics included: thymus and bone marrow homogenates stimulate O_2 consumption of liver homogenates; spleen homogenates inhibit liver tissue oxidative phosphorylation (pyruvate plus fumarate); human central nervous system stimulants have no effect on radiosensitivity of rats; x ray effects on 5-nucleotidase and ATP from rat and ground squirrel tissue; increased reproductive recovery of x rayed amoeba after fusion with 1/3 of normal amoeba; serum Na and K changes (irradiated dogs); correlation of x ray and histamine sensitivities (mice). NSA 7-1333.

1041

QUARTERLY TECHNICAL REPORT, JULY 1, 1952 THROUGH SEPTEMBER 30, 1952. (Atomic Energy Project, Univ. of Rochester). Nov. 3, 1952. 57p. (UR-222).

Includes progress reports on: effects of radiation on reticuloendothelial system; therapeutic trials of blood transfusion in irradiated dogs; stimulation of leukocyte phagocytic activity by Piromen. NSA 7-1334.

1042

BIOLOGICAL INTERFERENCES BETWEEN X RAYS AND CERTAIN RADIOISOTOPES. J. Maisin and G. Lambert. *J. belge radiol.* 35, 329-36 (1952). (French).

Neither whole-body nor spleen irradiations protected rats against a lethal dose of x rays. Small doses of radioisotopes, but not large doses, injected prior to lethal irradiation resulted in increased survival as compared to non-injected controls. NSA 7-1335.

1043

CYTOLOGICAL VARIATIONS OF NORMAL VAGINAL EPITHELIUM AND NEOPLASTIC TISSUES OF THE CERVIX UNDER THE INFLUENCE OF RADIUM THERAPY. Andre Ghilain and W. F. Bouwer. *Gynecol. et obstet.* 51, 309-23 (1952). (French).

Descriptions and microphotographs of changes in various vaginal and neoplasm cells during the course of Ra therapy of epitheliomas and adenocarcinomas in 19 patients. NSA 7-1336.

1044

MECHANISM OF X-RAY EFFECTS ON REFLEX EXCITABILITY. Ya. L. Geinisman and E. A. Zhirmunskaya. *Fiziol. Zhur. S.S.S.R.* 38, 312-18 (1952). (Russian).

The authors observed immediate depression of the acid reflex of frogs after 7000 r whole-body x irradiation, and immediate diminution (smaller number of pulses) of electrical activity of skin receptors. Partial x irradiation of region of sympathetic nervous system (5400 r) altered electrical activity of skin receptors, changes depending upon state of excitation of receptors before exposure. NSA 7-1337.

1045

EFFECTS OF BETA-RADIATING ISOTOPES IN FRUIT TREES. Lars Ehrenberg and Ingvar Granhall. *Hereditas* 38, 385-419 (1952). NSA 7-1338.

1046

CHEMICAL AND BIOLOGICAL EFFECTS OF NEUTRONS AND X-RAYS. Lars Ehrenberg and Nils Nybom. *Hereditas* 38, 481-501 (1952).

Fast neutrons were at least 20 times more effective than x rays as regards production of lethality, growth, retardation, chromosome rearrangements, sterility, and gene mutations whether radiation was applied to dormant or germinating barley seeds. Doses were measured chemically by means of an indicator reaction occurring in a solution of the same atomic composition as the tissue. NSA 7-1339.

1047

THE EFFECTS OF RADIATION ON THE CHICK

EMBRYO. Frank J. Dixon. *Ann. N. Y. Acad. Sci.* 55, 216-20 (1952).

Includes data on lethal x ray doses for 2-18 day chick embryos and on effects of intrayolk injections of P^{32} at different days of incubation. Also describes morphological changes due to P^{32} injection as well as over-all effects of radiation on growth rate, gonads, bone marrow, peripheral blood and lymphoid tissue. NSA 7-1340.

1048

EFFECT OF IRRADIATION ON LYMPHOID TISSUE

NUCLEIC ACIDS IN C57BL MICE. Patricia P. Weymouth and Henry S. Kaplan. *Cancer Research* 12, 680-3 (1952)

Desoxyribonucleic acid P (DNAP) increased with age in thymus and lymph nodes of normal C57BL mice to maximum level at 90 days, with subsequent decrease. Concentration of P in ribonucleic acid fraction did not change with age, and was the same in thymus as in lymph nodes. Thymic DNAP decreased 40% 4 days after exposure; remained low 142 days after 4 doses of 168 r of x rays at 8 day intervals. Most thymuses contained lymphomas 142 days post exposure. NSA 7-1341.

1049

FINGER RIDGE CHANGES IN MONKEYS FOLLOWING X-RADIATION.

p.140-152 IN BIOLOGICAL EFFECTS OF EXTERNAL RADIATION (NNS VI-2). Henry A. Blair, ed. New York. McGraw-Hill Book Co., Inc. 1954. Roger A. Harvey.

Acute x-ray exposures up to 800 r cause no changes in finger ridges of monkeys; 800 to 1100 r result in temporary atrophy of ridges. Chronic x-ray exposures of 10/r day cause no change. Exposure of 20 r or more cause weakening. There is less complete regeneration with chronic than with acute exposure, and slightly more secondary weakening with chronic exposure. (from authors' conclusions).

1050

INFLUENCE OF CYSTEINE ASSOCIATED WITH ASCORBIC ACID ON RADIATION-INDUCED VARIATIONS IN THE PLASMA PROTEIN FRACTIONS. Enrico Caffaratti. *Radioterapie radiobiol. e fis. med.* 8, 144-52 (1952). (Italian).

Male guinea pigs (450 g) were injected intramuscularly with 750 mg of cysteine and 150 mg of ascorbic acid, then whole-body irradiated with 800 r of 180 kv x rays. Variations in albumin and globulin fractions and total protein were determined and compared with changes in injected or irradiated controls. Treatment reduced the post-exposure elevation of γ globulin. NSA 7-1344.

1051

STUDIES ON THE SECOND LINKAGE GROUP IN THE SILKWORM, *BOMBYX MORI* L. II. PALE STRIPED (p^{st}) AND SECOND STRIPED (S^2) INDUCED BY X-RAYS. Tsuneo Takasaki. *Bull. Sericult. Expt. Sta. (Tokyo)* 14, 10-21 (1952). (Japanese with English Summary).

Two F_1 mutants and their genetic origin are described in detail. NSA 7-1345.

1052

COMPARATIVE INVESTIGATIONS ON THE PRIMARY EFFECT FOLLOWING ACTION OF FAST ELECTRONS AND X RAYS ON TISSUE CULTURES. Henni Gärtner. *Strahlentherapie* 89, 26-51 (1952). (German).

Author compares quantitative and qualitative differences in effects of 500 and 4000 r doses of (1) fast electrons (6 Mev betatron) and (2) 90 kv x rays on cultures of chicken heart fibroblasts. Suggests differences may be due to different ionization density of the two radiations. NSA 7-1346.

1053

THE NON-RECUPERABLE FRACTION OF X-RAY IRRADIATION INJURY AS THE BASIS FOR EXPERIMENTAL APPROACH TO THE PROBLEM OF DELAYED EFFECTS OF IONIZING RADIATION. p. 396-402 OF PROGRESS IN RADIOBIOLOGY. F. S. Mitchell, B. E. Holmes, and C. L. Smith, eds. Springfield, Ill., Charles C. Thomas, Publisher. 1955. R. W. Brauer, F. S. Krebs, and R. Pressotti.

1054

MODE OF ACTION OF AGENTS GIVING PROTECTION FROM RADIATION. P. Alexander and M. Fox. *Nature* 170, 1022-3 (1952).

Authors suggest that compounds which give protection against radiation do so *in vivo* by competitively removing perhydroxyl radicals formed in the presence of oxygen. NSA 7-1352.

1055

SENSITIZATION OF MALIGNANT TUMORS BY SHORT WAVES Georg Fuchs. *Strahlentherapie* 88, 647-53 (1952). (German).

Author describes sensitization of malignant tumors (particularly intrathoracic tumors) to x rays by means of short wave (6 m) treatment for 10-15 minutes immediately before x irradiation. NSA 7-1356.

1056

THE DISTRIBUTION OF EXCRETION OF THORIUM SULFATE. J. K. Scott, W. F. Neuman, and J. F. Bonner. *J. Pharmacol. Exptl. Therap.* 106, 286-90 (1952).

Intravenously administered soluble thorium compound was removed slowly from blood of experimental animals; most thorium found in liver, spleen, bone marrow. Intramuscularly administered thorium remained in the injected muscle; intratracheally injected thorium in lung. No absorption demonstrated when compound given by gavage. NSA 7-1363

1057

RADIATION SHIELDS AND SHIELDING A BIBLIOGRAPHY OF UNCLASSIFIED AEC REPORT LITERATURE. Charles J. Engberg, comp. (Technical Information Service, AEC). Sept. 1952. 26p. (TID-3032). NSA 7-1539.

1058

THE OCCURRENCE OF GENERALIZED INFECTION OF ENTERIC ORIGIN IN MICE POISONED WITH NITROGEN MUSTARD. Carolyn W. Hammond, Marianne Tompkins, and C. Phillip Miller. (Institute of Radiobiology and Biophysics, Univ. of Chicago). (nd). 12p. (AECU-2363). *Proc. Soc. Exptl. Biol. Med.* 82, 137-40 (1953).

Generalized infection of enteric origin seems to play a less important role as cause of death in mice poisoned with nitrogen mustard than in mice subjected to moderate doses of total body x radiation. NSA 7-1574.

1059

THE EFFECT OF X-RAYS ON THE UPTAKE AND LOSS OF IONS BY POTATO TUBER TISSUE. Robert E. Winthrow, Edward S. Mika and Noe Higinbotham. (Argonne National Lab.). Dec. 1952. 14p. (AECU-2368; UAC-683).

X irradiation was found to depress the rate of accumulation of Rb^{86} by excised discs of potato tuber tissue, to increase rate of loss of ions from excised discs in distilled H_2O and to decrease conductivity in intact tubers. Theory of a transfer mechanism which would probably be damaged by x radiation is discussed. NSA 7-1579.

1060

GAMMA-NEUTRON RADIATION CHAMBER OF RADIO-BIOLOGICAL STUDIES. Howard H. Vogel, Jr., Roland A. Blomgren, and Wils J. G. Bohlin. (Argonne National

Lab.). Nov. 1952. 33p. (AECU-2369; UAC-668).
Nucleonics 11, No. 3, 29-31 (1953). NSA 7-1580.

1061
THE EFFECTS OF TOTAL-BODY X IRRADIATION ON THE TISSUE MAST CELL. Douglas E. Smith and Yvette S. Lewis. (Argonne National Lab.). Dec. 1952. 10p. (AECU-2377; UAC-674). *Proc. Soc. Exptl. Biol. Med.* 82, 208-12 (1953).

Total body x irradiation (mouse, hamster) caused series of striking changes in tissue mast cells in the cheek pouch and/or mesentery resulting in disruption of cell and dispersion of its contents into surrounding tissues. Possible relationship of the observed phenomena to hemorrhage and clotting defect of radiation syndrome discussed. NSA 7-1581.

1062
THE INFLUENCE OF TEMPERATURE UPON THE ACTIVATION OF A BACTERIAL VIRUS BY X-RAYS. C. S. Bachofer, C. F. Ehrer, S. D. Mayer, and E. L. Powers. (Argonne National Lab. and Notre Dame Univ.) Nov. 1952. 15p. (AECU-2381; UAC-669). *Proc. Natl. Acad. Sci. U. S.* 39, 744-50 (1953).

Data are presented for relation (1) between survival of dried T-1 bacteriophage of *E. coli* and relative dosage of x rays at temperatures ranging from 77-310 °K, (2) between dose-inactivation constant and temperature and (3) between estimated temperature-dependent component of the dose-inactivation constant and the reciprocal of the temperature. NSA 7-1582.

1063
THE BIOLOGICAL EFFECTIVENESS OF THERMAL NEUTRONS IN INHIBITING MITOSIS OF MICE. John Storer. (Los Alamos Scientific Lab.). Nov. 1952. 25p. (LA-1400).

Author determined mitotic index of ear epithelium of mice at intervals after exposure to (1) x rays and (2) thermal column radiation (thermal neutrons plus γ contaminant). With dose of exposure to (2) expressed in rem, dose-response regression line did not differ significantly from line for x-irradiated animals. Assuming γ contaminant was also equally effective, relative effectiveness of thermal neutrons is estimated at about 1.7. NSA 7-1583.

1064
EFFECTS OF TOTAL BODY X-RADIATION ON SALIVARY COMPONENTS OF DOGS. J. L. Nemes, M. G. Wheatcroft and R. S. Leopold. (Naval Medical Research Inst., Bethesda and Maryland Univ.). July 29, 1952. 9p. (NM-008-012.04.02).

Study of salivary components of 14 dogs exposed to total body x ray doses of 200, 400 and 600 r revealed: decreased (average) P and N content post exposure; increased lysozyme activity and increased acidity. NSA 7-1584.

1065
THE METABOLIC PROPERTIES OF VARIOUS MATERIALS AND THE PATHOLOGICAL EFFECTS OF ASTATINE. p. 84-104 OF MEDICAL AND HEALTH PHYSICS QUARTERLY REPORT FOR JULY, AUGUST, AND SEPTEMBER, 1952. (Radiation Lab., Univ. of Calif.). Nov. 10, 1952. 21p. (UCRL-2001(p.84-104)).

Includes progress reports on experimental attempts to remove Pu from rats by use of Ca salt of Versene. Data are included on effects of Versene on tissue distribution and excretion of Pu²³⁸ following intravenous injection. NSA 7-1585.

1066
THE EFFECT OF A LARGE SINGLE DOSE OF PHOSPHORUS³² ON THE BONE MARROW OF THE COTTON RAT, *SIGMODON HISPIDUS TEXIANUS*. Georgine

Phillips, A. Bryon Leonard, and Charles A. Leone. (Kansas Univ.). (nd). 29p. (AECU-2157).

Single 4.3 μ g/g-intraperitoneal P³² injection lowered WBC counts in sternal marrow of the rat. Distinct aplasia was noted in WBC foci at 7 days; in 7-9 days recovery began; after 57 days normal cell count found. RBC foci were relatively unaffected. Initial destruction of hematopoietic tissue was seen 1-12 hr after P³² dose. Start of bone marrow regeneration was seen 7-9 days with significant amount seen at 57 days. NSA 6-5260.

1067
A SEMI-QUANTITATIVE STUDY OF THE EFFECTS OF RADIOPHOSPHORUS ON THE SPLEEN OF THE COTTON RAT, *SIGMODON HISPIDUS TEXIANUS*. Donald S. Overend, A. Bryon Leonard and Charles A. Leone. (Kansas Univ.). (nd). 44p. (AECU-2156).

Rats were injected with 50 μ g of P³²; spleens examined microscopically at intervals of 1-63 days, and quantitative counts of cellular constituents made. Changes observed: thinning of stroma, occasional nuclear disorganization, and shifts in relative quantities of various cells. Changes in cellular balance are transient, with normal values restored in 63 days or less. NSA 6-5259.

1068
THE EFFECT OF COBALT⁶⁰ GAMMA RADIATION ON SUSCEPTIBILITY AND IMMUNITY TO TRICHINOSIS. Richard D. Stoner and William M. Hale. (Brookhaven National Lab.). (nd). 11p. (BNL-1193). *Proc. Soc. Exptl. Biol. Med.* 80, 510-12 (1952).

Whole-body Co⁶⁰ γ irradiation (55-650 rep) increased susceptibility of mice to *Trichinella spiralis* infection. Exposure of *Trichinella*-immune mice to 600 rep before administering challenge (infection), destroyed immunity to reinfection. A 680-rep irradiation sharply reduced the number of circulating leukocytes in peripheral blood, perhaps indicating that the role of cellular immunity should be emphasized more in acquired immunity to such infection. NSA 6-5261.

1069
A COMPARISON OF THE EFFECTS OF X-RAYS AND THERMAL NEUTRONS ON DORMANT SEEDS OF BARLEY. Richard S. Caldecott, E. F. Frolik, and Rosalind Morris. (Brookhaven National Lab. and Univ. of Nebraska). (nd). 13p. (BNL-1195). *Proc. Natl. Acad. Sci. U.S.* 38, 804-9 (1952).

Dormant seeds of Himalaya barley were given various doses of (1) x rays or (2) thermal neutrons. Seeds treated with (1) gave seedlings with wide range in height distributions at 14 days; those from (2) had narrow range. Differential killing was characteristic of seeds given 3 highest doses of (1): if any survived (2), essentially all did. For similar chromosomal aberration frequencies, less injury resulted from (2) than (1). Apparently (1) has proportionately more effect on extra-chromosomal elements of cell. NSA 6-5262.

1070
STERILITY AND RECESSIVE LETHAL MUTATION FOLLOWING X-IRRADIATION OF FEMALE *DROSOPHILA MELANOGASTER*. R. C. King. (Brookhaven National Lab.). (nd). 14p. (BNL-1198). *Am. Naturalist* 86, 391-8 (1952). NSA 6-5263.

1071
NITROGEN BALANCE IN WHOLE BODY X-RADIATION. Gordon E. Gustafson and Simon Koletsky. (Western Reserve Univ. School of Medicine). June 15, 1952. 13p. (NYO-1649).

To learn whether post-irradiation weight loss is due to starvation or altered metabolism. N balance of rats given 660 r whole-body x-ray dose was compared with that of controls given same amount of food. For 6 days after

dose, rats were in negative N balance, a 2nd such period occurring in irradiated rats during 2nd or 3rd week. H_2O intake and urinary output of those irradiated fell on 2nd or 3rd day after dose; same functions in controls increased. For 3 days after 660 r, greater N excretion and more negative N balance seen than after 1000 r. NSA 6-5265.

1072

LIVER DAMAGE IN RATS FROM RADIOACTIVE COLLOID-AL GOLD. Simon Koletsky, Gordon Gustafson, Phyllis Goldston, Eileen Goodman, and Vera Milanich. (Western Reserve Univ. School of Medicine). June 15, 1952. 17p. (NYO-1650). Lab. Invest. 1, 312-23 (1952).

Internal radiation of rat liver with single dose of colloidal Au^{198} gave profound hepatic cell necrosis, distorted architecture and conversion of much parenchyma to atypical giant cells. Lesion was not accompanied by substantial fibrosis. Kupffer cells, biliary epithelium and blood vessels were not significantly injured; jaundice and ascites occurred frequently. NSA 6-5266.

1073

A FORMULATION OF THE INJURY, LIFE SPAN, DOSE RELATIONS FOR IONIZING RADIATIONS: II, APPLICATION TO THE GUINEA PIG, RAT AND DOG. H. A. Blair. (Atomic Energy Project, Univ. of Rochester). July 3, 1952. 37p. (UR-207).

An hypothesis of radiation injury and recovery is tested by applying $dI/dt = A\gamma - \beta(I - \alpha\gamma t)$, in which I is injury, γ the dose rate and A , β , and α are constants. Data are given on chronic irradiation of rats with x rays, guinea pigs with γ rays, dogs with x rays and rats with fast neutrons. NSA 6-5267.

1074

CLINICAL OBSERVATIONS UPON THE RESPONSE OF THE BURRO TO LARGE DOSES OF EXTERNAL WHOLE BODY GAMMA IRRADIATION. Bernard F. Trum, John H. Rust, and James L. Wilding. Auburn Vet., 131-6 (Spring, 1952).

When 123 burros were given LD_0 to LD_{100} doses of whole-body γ radiation, symptoms included apathy, malaise, dullness, restlessness and anorexia. Locomotion, pulse, respiration, temperature, eyes, gastro-intestinal tract, genito-urinary system, blood and neuro-motor symptoms were observed. After 14th day, heavily irradiated animals died with increasingly severe symptoms. NSA 6-5268.

1075

EFFECT OF ROENTGEN IRRADIATION UPON GROWTH AND PERIPHERAL BLOOD CELL LEVELS OF THE ALBINO RAT. Thomas R. Noonan and Ann M. Noonan. Federation Proc. 11, (1952) Mar.

100 r/week, (1 dose or 5 equal doses), for 4 weeks produced significant decrease in growth and absolute lymphocytes in both sexes of rats. No significant change seen in hemoglobin level or absolute neutrophils in 10 weeks of exposure. 10 r/day 5 times a week caused significant weight decrease in males but not females. Normal rats between 3rd and 13th week of life show an increase in hemoglobin concentration and absolute lymphocytes, and little change in absolute neutrophils. NSA 6-5272.

1076

EFFECT OF AUREOMYCIN AND WHOLE BLOOD SEPARATELY AND IN COMBINATION ON X-IRRADIATED DOG. F. W. Furth, M. P. Coulter, R. W. Miller, J. W. Howland, and S. N. Swisher. Federation Proc. 11, (1952) Mar.

No significant difference seen in mortality rate or 28-day mortality between controls or irradiated dogs (575 r) given either aureomycin (50 mg/kg/24 hr), whole-blood transfusions (125 cc when hematocrit fell to 80% normal), or both. NSA 6-5273.

1077

INDIRECT EFFECTS OF X-RADIATION ON THE WALL

OF THE DEVELOPING MESENCEPHALON OF THE CHICK EMBRYO. M. J. Tobin and J. P. O'Brien. Wasmann J. Biol. 10, 1-6 (1952).

Indirect effects of x rays on the wall of developing chick mesencephalon were more delayed and less severe than direct effects. Importance of indirect effects in studies involving interaction of ionizing radiations and protoplasmic systems is discussed. NSA 6-5274.

1078

A COMPARISON OF THE EFFECT OF LOW (124 KV) AND OF HIGH (50 MEV) X IRRADIATION ON THE INCIDENCE OF LENS OPACITIES IN MICE. Leonard B. Clark and Peter Sykowski. Am. J. Ophthalmol. 35, 848-50 (1952).

Low- and high-voltage x irradiation increases incidence of lens opacities. Difference in incidence with different voltages is not significant. Neutron damage in 50-Mev betatron radiation appears negligible compared with that attributable to x-ray dosage. NSA 6-5275.

1079

INFLUENCE OF PERIPHERAL CHOLINERGIC BLOCKING DRUGS ON SURVIVAL TIME IN ROENTGEN RAY IRRADIATED MICE. Thomas J. Haley and Bonnie M. Rhodes. (Atomic Energy Project, Univ. of Calif., Los Angeles). July 13, 1952. 8p. (UCLA-207). Science 117, 139-40 (1953).

Mice subjected to 550 r acute whole body x ray dose were treated with 4 cholinergic blocking drugs. None of the antispasmodics tested significantly decreased total mortality. NSA 6-5277.

1080

STUDIES ON THE TREATMENT OF INTERNAL RADIOACTIVE CONTAMINATION. I. REMOVAL OF A BONE-DEPOSITED FISSION PRODUCT BY THE SALTS OF ETHYLENE DIAMINE TETRA-ACETIC ACID. S. H. Cohn, J. K. Gong, and M. C. Fishler. (Naval Radiological Defense Lab.). June 4, 1952. 16p. (USNRDL-352). Nucleonics 11, No. 1, 56-61 (1953).

Administration of Na EDTA followed by Ca EDTA showed it possible to remove substantial amounts of fission product Y^{91} fixed by rat skeleton. Doubling the daily frequency of this administration gave no significant increase in removal of isotope from bone. NSA 6-5278.

1081

THE ROLE OF ENZYMATIC OXYGEN REMOVAL IN CHEMICAL PROTECTION AGAINST X-RAY INACTIVATION OF BACTERIA. G. E. Stapleton, Daniel Billen, and Alexander Hollaender. J. Bact. 63, 805-11 (1952).

Compounds protecting against lethal action of x rays on bacterial cells are divided into 2 classes on basis of whether or not preincubation with cells is required for protection. Data are presented consistent with hypothesis that O_2 removal rather than H_2 donation is major mode of protection afforded by chemical protective agents. NSA 6-5280.

1082

CROWN GALL SUPPRESSION BY IONIZING RADIATION. Paul E. Waggoner and A. E. Dimond. (Connecticut Agricultural Experiment Station). (nd). 18p. (AECU-2145). Am. J. Botany 39, 679-84 (1952).

Suppression of crown galls caused by *Agrobacterium tumefaciens* in tomato and kalanchoe occurred whether plants were inoculated with bacteria before or after irradiation. Since pathogens *in vitro* and *in vivo* survived doses causing gall suppression, it is concluded that radiation gives suppression by affecting host, not the pathogen directly, and mechanism of suppression affects growth of host in general. Possible role of suppression of auxin production by radiation in gall formation is discussed. NSA 6-5284.

1083

THE POSSIBLE USE OF NEUTRON-CAPTURING ISOTOPES SUCH AS BORON¹⁰ IN THE TREATMENT OF NEOPLASMS. II. COMPUTATION OF THE RADIATION ENERGIES AND ESTIMATES OF EFFECTS OF NORMAL AND NEOPLASTIC BRAIN. Manucher Javid, Gordon L. Brownell, and William H. Sweet. *J. Clin. Invest.* 31, 604-10 (1952). NSA 6-5287.

1084

THE ENERGY DEPOSITION BY FAST NEUTRONS IN BONE MARROW. J. H. Tait. (Atomic Energy Research Establishment, Harwell, Berks (England). Feb. 1952. 10p. (AERE-T/R-871).

Calculations are made to determine whether bone increases energy flux of fast neutrons at points adjacent to bone marrow by scattering neutrons without degrading their energy. Effect is found to be small and for purposes of dosimetry calculations, bone may be replaced by equal volume of soft tissue. NSA 6-5426.

1085

QUARTERLY TECHNICAL REPORT, APRIL 1, 1952 THRU JUNE 30, 1952. Henry A. Blair, ed. (Atomic Energy Project, Univ. of Rochester). July 31, 1952. 71p. (UR-213).

After 750 r of total-body x irradiation, Aldinamide, Rimifon and Marsilid gave no changes in mortality rate, food consumption, weight gain, red or white blood cell count compared with radiated untreated controls. Dogs (groups of 4) given 700 r x ray dose with abdomens shielded and then injected with *Staphylococcus aureus* on 2, 6, and 9 days post irradiation all died, while only 2 controls died. NSA 6-5541.

1086

THE ROLE OF THE INTESTINAL FLORA IN RADIATION INJURY: PROGRESS REPORT FOR MAY 1, 1951 TO DECEMBER 31, 1951. H. B. Chase, P. F. Fenton, M. H. Hatch, W. Montagna and J. W. Wilson. (Brown Univ.). 6p. (AECU-2165).

Lesions of intestinal mucosa in mice after 1000-550 r x ray dose are described. Data indicate gastric emptying rate of solutions is inhibited, but intestinal absorption unaffected by 500 r. Bacteriological studies of intestinal flora of mice and of tissues they invade after irradiation are reported. NSA 6-5545.

1087

THE GRAM-NEGATIVE FLORA OF THE UPPER INTESTINAL TRACT AND ITS INFLUENCE ON POST-RADIATION BACTEREMIA IN MICE. Phillip C. Miller, Marianne Tompkins, Margaret Colling, Marjorie Bohnhoff and Carolyn W. Hammond. (Chicago Univ.). (nd). 7p. (AECU-2187).

Intestinal flora of mice given 550 r total body x-ray dose shows an increase in all Gram-negative bacilli in upper half of small bowel after 1 week. Administration of *10⁷ Pseudomonas aeruginosa* gives effect which increases with time after exposure. Highest mortality from *Pseudomonas* bacteremia occurred on 11th post-irradiation day. NSA 6-5547.

1088

DURATION OF POST-IRRADIATION BACTEREMIA IN MICE. Carolyn W. Hammond, C. Phillip Miller, Marianne Tompkins, Margaret Colling, and Marjorie Bohnhoff. (Chicago Univ.). (nd). 8p. (AECU-2195).

Data show that bacterial invasion of the blood stream of irradiated mice causes septicemia (2nd week after moderate x-ray dose) which invariably proves fatal. Length of time bacteremia can be tolerated varies from less than 18 hours with *Pseudomonas* to 5 days with *Paracolobactrum*. NSA 6-5548.

1089

QUARTERLY PROGRESS REPORT NO. 4. (Air Force

Radiation Lab., Univ. of Chicago). July 15, 1952. 99p. (NP-4011; Quarterly Progress Report No. 4).

Data presented on: recovery in cell division rates of irradiated amoeba treated with fractions of non-irradiated centrifuged amoebae; effect of spleen homogenates on intermediary carbohydrate metabolism; effect of radiation on tissue enzymes, respiration, glycolysis and oxidative enzymes in normal and hibernating ground squirrels; effect of some chemical agents on mortality of mice poisoned with nitrogen mustard; effect of x rays, applied to dog heart in situ, on K concentration in coronary venous blood. NSA 6-5550.

1090

BEHAVIORAL CHANGES FOLLOWING RADIATION. II. MATERNAL BEHAVIOR AND MAZE PERFORMANCE. C. Downing Tait, Jr., Patrick D. Wall, Muriel Balmuth, and Sylvan J. Kaplan. (Air Univ. School of Aviation Medicine). July 1952. 14p. (NP-4026).

White rats in final week of pregnancy were exposed to single doses of 30, 90, 180 or 360 r (in air). Only the last caused apparent deterioration in maternal behavior. Growth disturbances in offspring correlated positively with size of dose. Both 90 r and 180 r offspring made significantly more errors than controls. NSA 6-5551.

1091

FURTHER STUDIES ON THE MECHANISM OF PULMONARY CLEARANCE OF PRODIGIOSIN IN NORMAL AND X-IRRADIATED RABBITS. George V. Taplin, James S. Grevior, Camille Finnegan, Arthur Dunn, and Philip Noyes. (Atomic Energy Project, Univ. of Calif., Los Angeles). Aug. 12, 1952. 17p. (UCLA-216). *Ann. Allergy* 11, 1-11 (1953).

In rabbits 800 r whole-body x irradiation increases rate of efficiency of major mechanisms by which lungs clear themselves of insoluble foreign particles after acute inhalation exposures. Ciliary action and/or increased mucous secretion play greater role than phagocytosis. Both mechanisms are more effective in γ -irradiated than in non-irradiated animals. NSA 6-5552.

1092

RADIATION DOSE REDUCTION BY CYSTEINE. H. M. Patt, S. H. Mayer, R. L. Straube, and E. M. Jackson. (Argonne National Lab.). July 1952. 24p. (AECU-2177; UAC-610). *J. Cellular Comp. Physiol.* 42, 326-39 (1953).

Cysteine is shown to afford relatively uniform protection against a number of x-radiation sequelae in mice (lethality, splenic atrophy, leucopenia, lymphopenia and granulocytopenia) implying that protective action occurs at an early stage in chain of events induced by irradiation. NSA 6-5553.

1093

OBSERVATIONS ON THE PATHOGENESIS OF POST-IRRADIATION BACTEREMIA. Lee E. Gordon and C. Phillip Miller. (Chicago Univ.). (nd). 6p. (AECU-2194).

Observations are presented on mechanism by which intestinal bacteria enter blood stream and long interval between dose and onset of bacteremia. Mice were fed *Serratia marcescens* in drinking water for 2 days before irradiation and until sacrificed. Authors concluded that bacteria leave intestine and are localized normally in mesenteric lymph nodes. Those escaping are removed by normal defense mechanisms which are adequate until they become ineffective during post exposure period. NSA 6-5715.

1094

ANNUAL REPORT ON RESEARCH PROJECT. G. Failla and H. H. Rossi. (Radiological Research Lab., Columbia Univ.). June 1, 1952. 128p. (NYO-4008).

Research report on: exposure of hamsters to 2-Mv x rays under conditions of "death under beam" and "delayed

death"; H_2O content of adrenals and intestine of mice given lethal x-ray dose; in vitro respiration studies on kidneys of x-rayed mice; increase due to x rays in absorption rate of subcutaneously injected solutions; pretreatment with cysteine confirmed as protective to lens of eye. Data show such treatment prolongs inhibitory effect of x rays on mitosis in eye. NSA 6-5716.

1095

MAMMALIAN RADIATION GENETICS. W. L. Russell. (Oak Ridge National Lab.). Aug. 11, 1952. 16p. (ORNL-1337).

General features of genetic hazards of radiation are reviewed and studies on gene mutations and chromosome aberrations compared with data obtained on Drosophila and mice. Published calculations of genetic hazards of radiation in man are evaluated. NSA 6-5717.

1096

RELEASE OF HEPARIN IN ANAPHYLACTIC SHOCK IN IRRADIATED AND NON-IRRADIATED ANIMALS.

Frank C. Monkhouse, Edward Fidler, and John C. D. Barlow. Am. J. Physiol. **169**, 712-20(1952).

Irradiated rats, guinea pigs, rabbits and dogs were tested for presence of heparin in blood before and after shock, and, when present, for its effect on clotting time. NSA 6-5718.

1097

DELAYED RADIATION EFFECTS AT HIROSHIMA AND NAGASAKI. John C. Bugher. Nucleonics **10**, No. 9, 18-21 (1952).

Present facilities available to Atomic Bomb Casualty Commission are described, and work in progress on frequency of leukemia, cataracts and genetic changes summarized. Sociological and psychological changes in inhabitants of Hiroshima and Nagasaki are noted, and post-treaty relations of the commission with the Japanese government and Atomic Energy Commission are discussed. NSA 6-5719.

1098

THE RELATIVE BIOLOGIC EFFECTIVENESS OF 200 KV AND 23.5 MEV (BETATRON) X-RADIATION. I. PRODUCTION OF LEUKOPENIA IN MICE. T. P. Tung, H. E. Johns, and L. B. Jaques. Blood **7**, 826-35 (1952).

Maximum leukocyte depression is used as basis for comparing biologic effectiveness of (1) betatron radiation and (2) 200-kv x radiation. (1) (2) ratio of effectiveness in producing 70% leukocyte reduction was 0.65 for 3 strains of mice. Recovery from leukopenia began earlier in animals given (1) than those given similar dose of (2). Data on other aspects of comparison are included. NSA 6-5722.

1099

RADIOBIOLOGICAL SURVEY OF BIKINI, ENIWETOK AND LIKIEP ATOLLS. JULY-AUGUST 1949. (Applied Fisheries Laboratory, Univ. of Washington). July 12, 1950. Decl. Sept. 15, 1952. 146p. (AECD-3446; UWFL-23).

Specimens of fish, marine invertebrates, algae, plankton, land plants, land vertebrates and water samples were collected for radioassay and identification from 3 atolls. NSA 6-5934.

1100

RADIATION STERILIZATION. I. THE EFFECT OF HIGH ENERGY GAMMA RADIATION FROM KILOCURIE RADIOACTIVE SOURCES ON BACTERIA. William Tarpley, Jan Ilavsky, Bernard Manowitz and Robert V. Horrigan. (Brookhaven National Lab. and Schering Corp.). (nd). 14p. (BNL-1227). J. Bacteriol. **65**, 505-9(1953).

Successful sterilization of steroid suspensions, heavily contaminated with bacteria, by γ -rays (from kc sources of Co^{60} and Ta^{182}) was accomplished with doses of $2.7-3.2 \times 10^6$ rep. NSA 6-5935.

1101

VEGETATIVE AND FLORAL DEVELOPMENT OF IRRADIATED PLANTS OF TRADESCANTIA PALUDOSA. James E. Gunckel, Arnold H. Sparrow, Ielene B. Morrow, and Eric Christensen. (Brookhaven National Lab.). (nd). 45p. (BNL-1228). Am. J. Botany **40**, 317-32 (1953).

Plants of Tradescantia paludosa were exposed to chronic γ irradiation from Co^{60} source for periods up to 4 months. Gross aspects of vegetative and floral growth and development described. Evidence suggests auxin or mechanism of auxin synthesis is prime site of radiation effect. NSA 6-5936.

1102

THE ROLE OF IONIZING RADIATION IN ELICITING TUMORS OF THE PITUITARY GLAND IN MICE. Aubrey Gorbman and Abraham Edelmann. (Brookhaven National Lab. and Columbia Univ.). (nd). 5p. (BNL-1232). Proc. Soc. Exptl. Biol. Med. **81**, 348-50(1952).

Pituitary tumors do not form after radiothyroidectomy of C_{57} mice by small amounts of I^{131} but result when such treatment is followed by whole-body x irradiation, or by larger amounts of I^{131} . Similar doses of x rays do not lead to growth of tumors. Ionizing radiation appears to induce atypical growths in pituitaries physiologically altered by radiothyroidectomy. NSA 6-5938.

1103

STUDIES WITH RADIOPHOSPHORUS IN DROSOPHILA. I. THE MUTAGENIC EFFECTIVENESS OF RADIOACTIVE PHOSPHORUS IN ADULT MALE DROSOPHILA MELANOGASTER. Robert C. King. (nd). 36p. (BNL-1237). J. Exptl. Zool. **122**, 541-75 (1953). NSA 6-5939.

1104

AGRICULTURAL RESEARCH PROGRAM QUARTERLY PROGRESS AND WORK ACCOMPLISHMENT REPORT FOR QUARTER ENDING JUNE 30, 1952. (Tennessee Univ.). 156p. (ORO-77).

Includes data on lowest dose of whole body radiation which, delivered to male rabbit, produces demonstrable increase in fetal mortality among his offspring. Also includes data on survival and blood chemistry in burros after whole body exposure to large doses of γ radiation. NSA 6-5940.

1105

EFFECT OF PERIPHERAL SHIELDING ON LYMPHOID TISSUE RESPONSE TO IRRADIATION IN C_{57} BLACK MICE. Henry S. Kaplan and Mary B. Brown. Science **116**, 195-6 (1952).

C_{57} mice with Pb shields over the right thigh were given 4 exposures to 168 r of x rays at 8-day intervals. Injury to thymus was unaffected by shielding, but thymic recovery was accelerated. Lymph node recovery was also accelerated, but to lesser degree. Relation between effects of thigh shielding on thymic recovery and on inhibition of thymic lymphomas suggested. NSA 6-5941.

1106

THE EFFECT OF OXYGEN CONCENTRATION ON X-RAY INDUCED CHROMOSOME BREAKAGE IN MAIZE. Drew Schwartz. Proc. Natl. Acad. Sci. U.S.A. **28**, 490-4 (1952).

Observations on pollen irradiated in air and 100% nitrogen atmospheres demonstrate effect of low oxygen concentration on radiosensitivity of maize chromosomes. Low O_2 tension protects differentially against interstitial and terminal deletions, suggesting O_2 effect is exerted on recovery process rather than on initial breakage mechanism. NSA 6-5942.

1107

REGENERATION OF X-RAY-IRRADIATED EXTREMITY OF AXOLOTL ON TRANSPLANTATION OF UNSPECIFIC

TISSUES. V. F. Sidorova. Doklady Akad. Nauk S.S.S.R. 81, 297-9 (1951). (Russian).

Right hind leg of axolotl was amputated after both hind legs received x-ray dose. Regenerative capacity, normally inhibited entirely by prior x irradiation, was restored by implanting near the wound pieces of internal organs of the axolotl or muscle tissue of frogs. NSA 6-5943.

1108
FETAL X-IRRADIATION AND FERTILITY. Roberts Rugh. Proc. Soc. Exptl. Biol. Med. 80, 388-95 (1952).

Author describes effect of sub-lethal x ray exposures on subsequent fertility of mice exposed in utero. Animals showed various degrees of sterility at 6 months of age. Data indicate that precursors of Sertoli cells, interstitial tissue and ovarian stroma are radioresistant, while primordialia of maturation stages and ovarian germinal nests are definitely radioresistant. NSA 6-5947.

1109
PROTECTIVE EFFECT OF SEROTONIN AND OF PARAAMINOPROPIOPHENONE AGAINST LETHAL DOSES OF X-RADIATION. John L. Gray, John T. Tew and H. Jensen. (Army Medical Research Lab., Fort Knox.). May 12, 1952. 10p. (AMRL-82; U-22905). Proc. Soc. Exptl. Biol. Med. 80, 604-7 (1952).

Survival rate of rats exposed to lethal x-ray dose is significantly increased after pretreatment with serotonin creatinine sulfate (20 mg/kg) or p-aminopropiophenone (32 or 16 mg/kg). Protective effect of those agents is assumed to be due to their property of producing temporary tissue anoxia. NSA 6-5948.

1110
RADIOLOGICAL HEALTH HANDBOOK. Simon Kinsman, Donald J. Nelson, Jr., Robert P. Christman, Morton I. Goldman, Henry J. L. Rechev, Richard F. Valentine, Arthur H. Wolff and Mitchell R. Zavon, comps. and eds. (Environmental Health Center, Cincinnati). Sept. 1952. 261p. (NP-4071). NSA 6-5949.

1111
X-RAY DOSAGE TO PATIENTS UNDERGOING ORAL ROENTGENOGRAPHY. W. E. Nolan. (Radiation Lab., Univ. of Calif.). July 16, 1952. 10p. (UCRL-1882). NSA 6-5950.

1112
QUANTITY OF ENERGY ABSORBED BY THE ORGANISM IN X-RAY DIAGNOSTIC STUDIES. Carlo Picchio and Carlo Martinenghi. Radiologia Med. 38, 665-669 (1952). (Italian).

Total energy received during x-ray diagnosis is compared with that administered during x-ray therapy. Most advantageous conditions for reducing radiation damage to humans is discussed. NSA 6-5952.

1113
RADIATION GENETICS. I. GENETIC ASPECTS OF RADIATION RISKS. Alma Howard. Brit. J. Radiol. 25, 177-19 (1952).

Need for policy with regard to radiation dose permissible to man based on genetic grounds is stressed. Effects of mutant genes are summarized. Studies made of radiation-induced mutations in animals are reviewed. NSA 6-5955.

1114
CHROMOSOME REJOINING CAPACITY WITH RESPECT TO BREAKAGE SENSITIVITY TO X-RAYS AND THERMAL NEUTRONS. Eleanor Deschner and A. H. Sparrow. Genetics 40, 460-75 (1955).

Various stages of microsporogenesis in *Trillium erectum* L. were irradiated with 50 r of x rays and ten minutes of thermal neutrons at $4-7 \times 10^5$ thermal neutrons per cm^2 per sec. First meiotic metaphase was highly sensitive to x rays and to thermal neutrons. Microspore interphase had low sensitivity to x rays and thermal

neutrons. With both neutron and x irradiation the amount of rejoining in cells exposed at diplotene state depended on number of fragments induced. Neutron and x ray irradiation differed with respect to production of chromosome fragmentation, regardless of stage irradiated. (From author's summary).

1115
WHITE NONSPORING MUTANTS OF *PENICILLIUM NOTATUM* CHRYSOGENUM INDUCED BY RADIOACTIVITY. M. L. Gattani. Current Sci. (India) 21, 167-8 (1952).

Monosporous cultures of *P. notatum* chrysogenum were grown on potato dextrose agar containing 0.5 and 1.0 g U nitrate/l, then transferred to media with higher U nitrate content. This promotes production of white mycelial non-sporing mutants which produce less penicillin than their parents. NSA 7-1586.

1116
THE SENSITIVITY OF LYMPHOCYTES TO IONIZING RADIATION. O. A. Trowell. J. Path. Bact. 64, 687-704 (1952).

In vitro radiosensitivity of lymphocytes of lymphoid tissue is compared with in vivo sensitivity. Dose producing 50% pyknosis in 5 hours (ED_{50}) was 275 r in vitro; 150 r in vivo. High sensitivity of lymph node lymphocytes considered to be property of cells per se. Reticular cells, monocytes and plasma cells were unaffected by doses up to 800 r. ED_{50} for lymphocytes of whole blood in vitro was 1600 r. After 400 r, whole body doses, considerable numbers of pyknotic lymphocytes are present in peripheral blood. NSA 7-1587.

1117
THERMAL-NEUTRON INDUCED EFFECTS IN *F1* MAIZE PLANTS. John Wesley Schmidt. Ph. D. Thesis, Univ. of Nebraska 1952.

An investigation of the comparative effects of exposing maize seed and maize pollen in Argonne heavy-water reactor in order to determine the effective radiations obtained from the reactor. NSA 7-1588.

1118
HYPOTHERMIA AND INCREASED SURVIVAL RATE OF INFANT MICE IRRADIATED WITH X-RAYS. John B. Storer and Louis H. Hempelmann. Am. J. Physiol. 171, 341-8 (1952).

Survival of infant mice irradiated while in state of extreme hypothermia (about 5° C) is almost twice that of litter mates exposed to same doses of total body x rays at room temperature. On basis of several series of studies designed to elucidate protective effect of hypothermia, authors conclude that lowered tissue O_2 level played important, perhaps crucial role. NSA 7-1589.

1119
NATURE OF MOUSE HOST DEFENSES IN DISEASE FOLLOWING WHOLE-BODY IRRADIATION. S. Marcus and D. M. Donaldson. Federation Proc. 13, 504 (1954).

It has been found that loss of bactericidal power after whole body radiation is not positively correlated with bacteremia. Mice are unique among mammals with regard to serum bactericidal action since their serum is devoid of such activity against a variety of saprophytic and pathogenic bacteria. (from authors' summary).

1120
NITROGEN METABOLISM FOLLOWING WHOLE BODY X-RADIATION. Gordon E. Gustafson and Simon Koletsky. Am. J. Physiol. 171, 319-24 (1952).

Authors observed marked negative N balance in rats for the first 6 days after whole-body exposure to 660 r x rays. Could not account for negative balance on basis of decreased food intake alone. Second period of negative N balance occurred during 2nd or 3rd post-exposure week, perhaps related in part to blood loss and infection. For

1st 3 days post-exposure, there was greater N excretion and more negative N balance in rats receiving 660 r than in animals receiving 1000 r. NSA 7-1591.

1121
ANOMALIES OCCURRING IN CHILDREN EXPOSED IN UTERO TO THE ATOMIC BOMB IN HIROSHIMA. George Plummer. *Pediatrics* 10, 687-93 (1952).

Observations are presented on 205 4-1/2 year old children exposed to A-bomb blast during first half of uterine life. Data indicate that central nervous system defects can be produced in the fetus by atomic bomb radiation if exposure occurs within approximately 1200 m of hypocenter, with no effective shielding. NSA 7-1592.

1122
INDIRECT INACTIVATION OF BACTERIOPHAGE DURING AND AFTER EXPOSURE TO IONIZING RADIATION. Tikvah Alper. *Discussions Faraday Soc.*, No. 12, 234-43 (1952).

Studies of variation of inactivation dose with concentration, shape of survival curves, inactivating effect of H_2O_2 and after-effect of radiation in systems composed of bacteriophages S_{13} and T_6 in varying concentrations in buffer solution after exposure to x rays, γ rays and ultraviolet light. NSA 7-1593.

1123
DIVISION DELAY BY RADIATION AND NITROGEN MUSTARD IN PARAMECIUM. R. F. Kimball, R. P. Geckler, and Nenita Gaither. *J. Cellular Comp. Physiol.* 40, 427-59 (1953).

Division delay by ultraviolet, x rays or nitrogen mustard in Paramecium involves retardation not only in first post-exposure interval but also in later intervals. Division delay varies with treatment and individual organism or individual lines of descent from same treated organism. Recovery of normal rate is usually almost complete by 6th division. NSA 7-1594.

1124
CYTOLOGICAL CHANGES FOLLOWING ROENTGEN IRRADIATION OF MOUSE LIVER. Margaret E. Wilson and Robert E. Stowell. (Kansas Univ. School of Medicine). (nd). 21p. (AECU-2390). *J. Natl. Cancer Inst.* 13, 1123-38 (1953).

Cytological changes of variable degree are observed in mouse liver 1-3 days after selective exposure of liver to x-rays in amounts to 12,000 r. Also studied effect of fasting on changes. NSA 7-1867.

1125
RADIATION EFFECTS ON CERTAIN CONSTITUENTS OF THE LIVER AND KIDNEY IN THE RAT. Jack R. Densin, Elizabeth J. Gray, John L. Gray, Frank J. Herbert, John T. Tew, and H. Jensen. (Army Medical Research Lab., Fort Knox). Nov. 20, 1952. 14p. (AMRL-104).

Liver inorganic phosphate and ATP were depressed on the 1st post-exposure day: both increased on 4th day: only ATP exceeded control level before death. Increased liver glycogen in irradiated fasting animals was not affected by adrenalectomy. Irradiation augments decrease in liver sulfhydryl content of fasting, adrenalectomized animals. NSA 7-1868.

1126
THE INCIDENCE OF ABNORMAL LYMPHOCYTES IN THE PERIPHERAL BLOOD OF RABBITS DURING AND AFTER CHRONIC X-RADIATION. F. C. V. Worman and R. E. Carter. (Los Alamos Scientific Lab.). Nov. 1952. 16p. (LA-1494).

Total exposure of 12-15 r was required to inaugurate production of abnormal lymphocytes in New Zealand white female rabbits receiving 3 r/week of 250 KVP x-rays. NSA 7-1869.

1127
ADDITIVITY OF THERMAL NEUTRONS AND X-RAYS IN

THEIR ACUTE LETHAL ACTION ON MICE. John B. Storer and Payne S. Harris. (Los Alamos Scientific Lab.). Nov. 1952. 13p. (LA-1502).

Using 30-day lethality in CF_1 mice as end effect, the radiations from the thermal column of the Los Alamos Homogeneous Reactor and a 250 KVP x-ray machine were found to be completely additive over ranges of total dose and dose ratios used. NSA 7-1870.

1128
PHARMACOLOGICAL STUDIES ON IRRADIATED ANIMALS. III. EFFECT OF SALINE ON RADIATION-INDUCED MORTALITY AND WEIGHT CHANGES. Friedrich Ellinger. (Naval Medical Research Inst., Bethesda). Nov. 17, 1952. 8p. (NM-006-012.05.09).

Daily injections of 0.3 ml. 0.9% NaCl into mice (22 g) for 6 days after $LD_{50}/14$ days exposure resulted in a statistically significant decrease in mortality rate; no effect with $LD_{50}/14$ days exposure or with saline administration for 14 days. Saline administration also influences weight curves. NSA 7-1871.

1129
THE EFFECT OF X-IRRADIATION ON THE CIRCULATING BLOOD CELLS OF THE TADPOLE OF *RANA CATESBIANA*. Ole Arne Schjeide, Mary Jane Millard and Bennet M. Allen. (Atomic Energy Project, Univ. of Calif., Los Angeles). Jan. 30, 1953. 19p. (UCLA-241).

100, 250, 500 and 1000 r of x rays markedly decreased the number of circulating blood cells. Decrease was fastest for lymphocytes and slowest for thrombocytes. No restoration noted during 25 day post irradiation period. NSA 7-1872.

1130
POST-IRRADIATION PROTECTION ACTIVITY ASSOCIATED WITH SPLEEN SUBCELLULAR COMPOUNDS. L. J. Cole, M. C. Fishler and V. P. Bond. (Naval Radiological Defense Lab.). Dec. 15, 1952. 28p. (USNRDL-378).

LAF_1 mice receiving 750 r x ray exposure are all living after 30 days if each is injected after exposure with nuclei fraction from 280 mg of mouse spleen tissue. No protection associated with mitochondria, microsome or soluble supernatant fraction. Crude nucleic acid extracts from nuclei are also inactive. Protective factor is suggested to be a nucleo-protein. NSA 7-1873.

1131
STUDIES ON THE MECHANISM OF ACTION OF IONIZING RADIATIONS: VIII. EFFECT OF HYDROGEN PEROXIDE ON CELL METABOLISM, ENZYMES AND PROTEINS. E. S. Guzman Barron, Louise Seki and Phyllis Johnson. *Arch. Biochem. and Biophys.* 41, 188-202 (1952).

Although H_2O_2 is formed in water subjected to x-irradiation, the concentration is insufficient to produce metabolic or biochemical changes of consequence. Electrolytes and protein in irradiated solutions diminished H_2O_2 formation. H_2O_2 production is proportional to x-ray exposure. NSA 7-1874.

1132
TEMPERATURE, X-RAY AND NEUTRON STUDIES ON NEUROSPORA. T. H. Goodspeed and W. S. Malloch. *Genetics* 23, 148 (1938).

1133
EFFECT OF SUB-LETHAL TOTAL BODY X-RADIATION ON SUSCEPTIBILITY OF MICE TO *CLOSTRIDIUM SEPTICUM* TOXIN. F. L. Adler and I. L. Schechmeister. (Washington Univ., St. Louis, School of Medicine). (nd). 12p. (AECU-2221). *Proc. Soc. Exptl. Biol. Med.* 80, 660-4 (1952).

Mice injected 7 days post irradiation (250 and 350 r) succumbed to about half the amount of *C. septicum* toxin required to kill non-irradiated controls. Anti-toxin given 6 days post irradiation, and 1 day before challenge with

toxin, protected both irradiated and control mice, the former requiring 1.1-2.2 times more. Severe x-ray exposure does not significantly raise amount of anti-body required for antitoxic prophylaxis. NSA 6-6240.

1134

AN ANALYSIS OF THE ROLE OF ELECTROMAGNETIC RADIATIONS IN THE MATING REACTION OF PARAMECIUM BURSARIA. Charles F Ehret. (Argonne National Lab. and Notre Dame Univ.). Aug. 1952 60p. (AECU-2232; UAC-631). *Physiol. Zool.* 26, 274-300(1953).

Increase in reactivity follows ultraviolet and x radiation. Differences in exposure time required as well as in reaction magnitude suggest that change is mediated through an indirect mechanism. Higher doses of both types (also intense flashes of visible light) induce autoagglutination. NSA 6-6241.

1135

NUCLEOPROTEIN CHANGES IN THE GASTROINTESTINAL TRACT FOLLOWING TOTAL BODY X-RADIATION. Frederick W. Tillotson and Shields Warren. (Cancer Research Inst., New England Deaconess Hospital, Boston). (nd). 24p. (AECU-2247). *Radiology* 61, 249-60 (1953).

Cytochemical alterations of DNA, RNA and alkaline phosphatase occur in epithelium of gastrointestinal tract of rat after total-body x radiation. Cells of crypts of small intestine are most sensitive and show distinctive cytochemical modifications during destructive and reparative phases. NSA 6-6242.

1136

EFFECT OF TOTAL BODY X IRRADIATION ON RATS. II. EFFECT OF SINGLE AND PERIODIC DOSES ON WEIGHT. A. THE GROWTH OF RATS EXPOSED TO SMALL DAILY DOSES OF X RAYS. George A. Sacher. (Metallurgical Lab., Univ. of Chicago). July 1952. 20p. (CH-3902).

Rats were exposed daily to 4, 8, or 16 r (x ray) for 146 days and weighed daily. Effect on growth was studied by comparing growth curves. Effect of treatment on weight of selected organs also reported. NSA 6-6243.

1137

CELL DIVISION IN THE GIANT AMOEBA PELOMYXA CAROLINENSIS, FOLLOWING X-IRRADIATION. A. THERAPEUTIC EFFECTS AFTER FUSION WITH EITHER NON-IRRADIATED LIGHT OR HEAVY HALVES OF CENTRIFUGED AMOEBAE IMMEDIATELY FOLLOWING EXPOSURE. Edward W. Daniels. Sept. 1952. 11p. (NP-4124; Report No. 5). NSA 6-6244.

1138

PLASMA ANTIHEMOPHILIC ACTIVITY FOLLOWING TOTAL BODY IRRADIATION. G. D. Penick, E. P. Cronkite, L. D. Godwin, and K. M. Brinkhous. *Proc. Soc. Exptl. Biol. Med.* 78, 732-4 (1951).

Plasma antihemophilic activity of dogs subjected to total-body irradiation remained at normal levels. Whole hemophilic blood with full complement of platelets accelerated clotting of irradiated dog's blood, while platelet-poor hemophilic plasma did not. NSA 6-6245.

1139

THE EFFECT OF COBALT⁶⁰ GAMMA RADIATION ON ANTIBODY FORMATION AND IMMUNITY. William M. Hale and Richard D. Stoner. *Record Med. Gen. Practice Clinics* 165, No. 6, 358-60 (1952).

Studies of doses of about 600 rep/hr γ radiation (Co⁶⁰ source) on antibody production and on immunity in mice exposed to influenza virus, tetanus toxin, pneumococcus and *Trichinella* show significant effect on immune mechanisms. NSA 6-6246.

1140

EFFECT OF X-IRRADIATION UPON THE ENZYME SYSTEMS OF THE MOUSE SPLEEN. Gilbert Ashwell and

Jean Hickman. *Proc. Soc. Exptl. Biol. Med.* 80, 407-10 (1952).

Total-body irradiation of mice with 640 r (LD₅₀ dose) reveals the following changes in metabolism of spleen homogenates (1) no effect on activity of succinoxidase system (2) marked increase in activity of alkaline phosphatase (especially marked with ATP as substrate) (3) decreased ability to synthesize or maintain high energy phosphorus compounds coupled with oxidation of succinate. NSA 6-6247.

1141

FACTORS INFLUENCING DEVELOPMENT OF HYPOPHYSEAL TUMORS IN MICE AFTER TREATMENT WITH RADIOACTIVE IODINE. Aubrey Gorbman. *Proc. Soc. Exptl. Biol. Med.* 80, 538-40 (1952).

Radiation thyroidectomy with I¹³¹ is followed by pituitary tumors in C₅₇ mice only after treatment with larger doses of I¹³¹. Thyroid implants or adequate thyroxine dosages prevent pituitary tumors after suitable I¹³¹ treatment, but implantation of pituitary, ovarian or adrenal tissue does not. Radiation thyroidectomy is a necessary but not the sole factor in growth of these tumors. NSA 6-6249.

1142

BLOOD-CLOTTING STUDIES ON DOGS INTERNALLY IRRADIATED WITH RADIO-GOLD. John H. Ferguson, G. A. Andrews, and Marshall Brucer. *Proc. Soc. Exptl. Biol. Med.* 80, 541-5 (1952).

Internal irradiation with Au¹⁹⁸ induces a blood coagulation defect of which prothrombin consumption test is a sensitive index. By using the test during course of irradiation, 2-stage values seem to reflect severity and probable outcome of radiation injury. NSA 6-6250.

1143

EXPERIMENTAL INVESTIGATION OF X-RAY INDUCED CHANGES IN NORMAL TISSUES. III. CHANGES IN THE LENS, RETINA AND OPTIC NERVE. (German). Wilhelm Rohrschneider. *Graefe's Arch. Ophthalmol.* 122, 282-298 (1929).

X irradiation of the rabbit eye has no effect on uvea, retina or optic nerve but does affect conjunctiva, cornea, and lens, the effects depending upon dose. BA 6-3942.

1144

A CLINICAL TRIAL OF CYSTEINAMINE (BETA-MERCAPTOETHYLAMINE) IN RADIATION SICKNESS. W. M. Court Brown. *Brit. J. Radiol.* 28, 325-6 (1955).

Cysteamine was administered i.v. to 12 patients within 3 min of commencement or 1 hr of termination of radiation (therapeutic for post-operative carcinoma). The cysteamine had no significant effect on time at which symptoms of radiation sickness developed. NSA 9-5234.

1145

BIOLOGICAL STUDIES ON THE EFFECT OF HARD X-RAYS AND RADIUM PREPARATIONS ON THE SKIN. (German). A. Reisner. *Strahlentherapie* 38, 19-26 (1930).

Concept of skin-bearable dose (HED) involves comparison of effects of hard x rays and radium rays on skin. BA 6-6684.

1146

EXPERIMENTS ON THE VALIDITY OF THE LINEAR RELATION OF MUTATION FREQUENCY TO X-RAY DOSE IN DROSOPHILA MELANOGASTER. p.153-193 OF BIOLOGICAL EFFECTS OF EXTERNAL RADIATION. (NNES VI-2). Henry A. Blair, ed. New York, McGraw-Hill Book Co., Inc. Warren P. Spencer and Curt Stern.

A stock of 200,801 X chromosomes of mature sperm were tested for the origin of new lethal mutations. For X-ray dosages as low as 50 and 25 r, the linear relation of dose to mutation frequency holds. Control mutation rate was doubled at 50 r. The relation to exposure of human

beings to low dosages of x-rays is discussed. (from authors' summary).

1147

RADIOACTIVE DUST FROM NUCLEAR DETONATIONS. Merrill Eisenbud and John H. Harley. *Science* 117, 141-7 (1953). Feb. 13.

The Atomic Energy Commission monitoring program to measure changes in radioactivity levels throughout the United States caused by nuclear detonations is described. NSA 7-2453

1148

A DESCRIPTION OF TUMORS ON IPOMOEA TUBA FROM THE A-BOMB TEST SITES ON ENIWETOK ATOLL APPENDIX TO RADIOBIOLOGICAL SURVEY OF BIKINI ENIWETOK, AND LIKIEP ATOLLS, JULY-AUGUST, 1949. Susann F. Biddulph and Orlin Biddulph. (1952). 24p. (AECD-3446(app): UWFL-23(app.).

Plant tumors are described, and it is concluded that they were radioinduced. NSA 7-2461.

1149

EFFECT OF PROLONGED ADMINISTRATION OF RADIOACTIVE ZINC⁶⁵ ON THE PANCREAS James W. Sherrill and Arne N. Wick. *J. Lab. Clin. Med.* 41, 40-2 (1953). Jan.

Radioactive Zn⁶⁵ acetate administered weekly to rats for 6-month period caused no diabetic symptoms (weight loss, glycosuria, high blood sugar). NSA 7-2462.

1150

EFFECTS OF IRRADIATION ON EMBRYONIC DEVELOPMENT. II. X-RAYS ON THE NINTH DAY GESTATION IN THE RAT. James G. Wilson, H. Charles Jordan, and Robert L. Brent. *Am. J. Anat.* 92, 153-87 (1953). Jan.

Rat embryos on the 9th day of gestation were exposed to doses of 25-400 r of x rays directly through an abdominal incision in the mother. Over-all effects of irradiation on this day were more severe than those after treatment on 10th day, owing presumably to greater susceptibility of less-differentiated 9th day embryo to mitotic delay and genic alterations. NSA 7-2463.

1151

THE RELATIVE BIOLOGICAL EFFECTIVENESS OF 200 KV AND 23.5 MEV X-RADIATION. II. COMPARISON OF THE LETHAL EFFECT FOR YEAST. T. P. Ting, H. F. Chinn, and H. E. Johns. *Rev. can. biol.* 11, 389-400 (1952). Dec.

Results indicate biological effectiveness is dependent upon formation of intermediate products in the neighborhood of the genes. NSA 7-2465.

1152

HISTOCHEMICAL CHANGES IN IRRADIATED OVARIES. I. SUCCINIC DEHYDROGENASE ACTIVITY. Alvan G. Foraker, Sam W. Denham, and M. Harlan Johnston. *Arch. Path.* 55, 147-53 (1953). Feb.

Left ovaries of 12 rabbits were exposed to external 200-kvp irradiation for a single dose of 400 r. Four weeks later 6 were used in negative and 6 in positive Friedman tests. Little damage to stromal cells was seen either in general pattern or in succinic dehydrogenase activity, as manifested by formazan deposition in irradiated and non-irradiated ovaries. NSA 7-2466.

1153

THE RADIATION TOLERANCE OF AN ADULT WASP. Robert L. Sullivan and Daniel S. Grosch. *Nucleonics* 11, No. 3, 21-3 (1953). Mar.

Effects of various x-ray dosages and ingested P³² on the parasitic wasp *Habrobracon* were studied. Less than 108,150 r produced no visible effects and 144,200 to 180,250 r caused sluggishness from which recovery was noted in about 30 min. Life span of males and females increased after irradiation, but were not demonstrably affected by P³² ingestions of 100 and 250 µc/cc. NSA 7-2467.

1154

RADIATION INJURY OF THE KIDNEY. P. W. Davey, J. D. Hamilton, and H. D. Steele. *Can. Med. Assoc. J.* 67, 648-50 (1952). Dec.

A renal lesion consisting of marked tubular degeneration, vascular injury and interstitial scarring with slight glomerular hyalinization is presented as an example of chronic radiation injury in one of the deeply seated so-called radio-resistant organs. It is stressed that heavy exposure of abdomen or spine in kidney region may damage renal structure and function. NSA 7-2468.

1155

COMPARISON OF LOCAL AND SYSTEMIC EXPOSURES IN PRODUCTION OF RADIATION CATARACT. A. C. Upton, K. W. Christenberry, and J. Furth. *Arch. Ophthalmol.* (Chicago) 49, 164-7 (1953). Feb.

Lens opacities can be induced in mice by x rays, threshold dose being less than 15 r. Cataract did not occur if head was shielded, although body received up to 405 r. Induction time, progression, configuration and severity of opacities are about the same after exposure of head alone as after total-body irradiation, indicating protection of eyes against cataract is not afforded by shielding body. NSA 7-2470.

1156

HISTOLOGICAL CHANGES IN THE TISSUES OF THE HIBERNATING MARMOT FOLLOWING WHOLE BODY IRRADIATION. Kirkland C. Brace. *Science* 116, 570-1 (1952). Nov. 21.

Studies of the thymus, testes, spleen, and bone marrow after whole-body irradiation are summarized. Comparison with data from histological studies of non-irradiated hibernating and irradiated non-hibernating controls indicates a retardation in development of radiation damage in the hibernating animal. Relationship of rate of cell division to appearance of radiation injuries is discussed. NSA 7-2471.

1157

EFFECT OF X-RAYS ON MICRONUCLEAR NUMBER IN PARAMECIUM AURELIA. R. P. Geckler and R. F. Kimball. *Science* 117, 80-1 (1953). Jan. 23.

After x irradiation of *P. aurelia*, the fraction with less than 2 micronuclei was found to increase with increasing dose, fraction with 2 micronuclei decreased and no unequivocal change was observed in group with more than 2 micronuclei. Effect of such variation of results in genetic studies with *P. aurelia* is discussed. NSA 7-2472.

1158

PRELIMINARY REPORT ON ANEMIA IN MICE RESULTING FROM IRRADIATION OF THE EXTERIORIZED SPLEEN. Bruce Allen. *Nucleonics* 11, No. 3, 44-5 (1953). Mar. NSA 7-2473.

1159

RESEARCH ON THE VARIATIONS OF RADIOSENSITIVITY INDUCED BY CHEMICAL SUBSTANCES. QUANTITATIVE ASPECTS OF THE PROTECTIVE ACTION OF CYSTEINE ON THE LETHAL EFFECTS OF X RAYS IN *E. COLI*. Carissimo Biagini and Vinci Grossi. *Rev. Biol.* (Perugia) 44, 493-510 (1952). Oct.-Dec. (In Italian).

In all cases a very significant inverse correlation was found between log surviving fraction and x-ray dose. About 87% of lethal effect is attributed to indirect action and about 13% to direct action of x rays. NSA 7-2475.

1160

EXTENSION TO MAN OF EXPERIMENTAL WHOLE-BODY IRRADIATION STUDIES. SOME MILITARY AND CIVIL DEFENSE CONSIDERATIONS. Franklin C. McLean, John H. Rust, and Ann M. Budy. *Military Surgeon* 112, 174-82 (1953). NSA 7-2476.

1161

RADIATION EXPOSURE IN THE UNITED STATES. Dade W. Moeller, James G. Terrill, Jr., and Samuel C. Ingraham. Public Health Repts. 69, 57-65 (1953). Jan.

Sources of radiation to which the average person living in United States may be exposed during an average lifetime are reviewed, and hazards of exposure to radioactive materials and radiation-generating units in commerce, industry and research are discussed. NSA 7-2477.

1162

THE PRODUCTION OF HOMOZYGONS DEFICIENT TISSUES WITH MUTANT CHARACTERISTICS BY MEANS OF THE ABERRANT MITOTIC BEHAVIOR OF RING-SHAPED CHROMOSOMES. B. McClintock. Genetics 23, 315-76 (1938).

1163

PHARMACOLOGICAL STUDIES ON IRRADIATED ANIMALS. IV. WATER INTAKE OF GUINEA PIGS AS A PARAMETER OF ORAL DRUG ADMINISTRATION IN EXPERIMENTAL RADIATION THERAPY. Friedrich Ellinger. (Naval Medical Research Inst., Bethesda, Md.). Nov. 8, 1955. 8p. (NM-006-012.05.15).

Although irradiated animals which succumb reduce their H₂O intake prior to death, intake during the critical period for drug administration prior to death is not significantly different from controls. Oral administration of H₂O-soluble drugs is considered feasible. NSA 10-5484.

1164

USE OF CALCIUM ETHYLENEDIAMINETETRAACETATE IN TREATING HEAVY-METAL POISONING. Arch. Ind. Hyg. Occupational Med. 7, 137-47 (1953). Feb.

Conference report on research and clinical problems associated with use of this substance in accelerating excretion of lead and other heavy metals in treating metal poisoning. NSA 7-2485.

1165

PROTECTIVE MECHANISMS IN IONIZING RADIATION INJURY. Harvey M. Patt. Physiol. Revs. 33, 35-76 (1953). Jan.

Comprehensive review of present concepts. NSA 7-2478.

1166

POTENTIALITIES OF UTILIZING RADIATION FROM FISSION MATERIALS FOR THE PRODUCTION OF CANNED MEAT PRODUCTS. L. E. Brownell, L. L. Kemps, and J. T. Graikoski. (Michigan Univ.). (1952). 12p. (AECU-2450).

Problems associated with sterilizing canned meats and other foods by ionizing radiation are reviewed. Also discussed: radiation dosage required to destroy various microorganisms; animal-feeding experiments with food exposed to γ radiation: flavor and texture changes in irradiated foods. Steps necessary before food can be preserved by γ radiation on commercial basis are summarized. NSA 7-2721.

1167

CALCULATIONS OF TOLERANCE FLUX OF FAST NEUTRONS TAKING INTO ACCOUNT THE EFFECT OF ENERGY LOSS DUE TO NON-HYDROGENOUS NUCLEI IN THE TISSUE. M. B. Biram. (Atomic Energy Research Establishment, Harwell, Berks (England). 1952. 7p. (AERE-T/R-1062). NSA 7-2723.

1168

A STUDY OF COMBINED THERMAL RADIATION BURN AND X-IRRADIATION EFFECTS ON MICE. W. H. Parr, V. M. Daggs, T. A. O'Neill, and S. G. Bush. (Army Medical Research Lab., Fort Knox). Sept. 4, 1952. 11p. (AMRL-94).

Mice exposed to both total-body x rays (720 r) and thermal radiation burns (non-lethal) succumb more rapidly

than those receiving x irradiation only. Mice were burned either immediately before or after irradiation with overall result being about the same. Possible reasons for earlier and higher mortality of mice receiving both treatments is discussed. NSA 7-2724.

1169

NEUTRON RADIOBIOLOGY, RADIUM TOXICITY, EXPERIMENTAL PATHOLOGY, AND CLINICAL INVESTIGATION. Howard H. Vogel, Jr., John W. Clark, Donn L. Jordan, Robert J. Hasterlik, Mariam P. Finkel, Hermann Lisco, Austin B. Brues, Asher J. Finkel, Earl A. Hathaway, and Elaine J. Katz. (Argonne National Lab.). p.8-25 of Quarterly Report for August, September, and October, 1952; Division of Biological and Medical Research. Austin M. Brues, ed. 18p. (ANL-4932(p.8-25)).

Studied: production of cataracts in mice with fast neutrons, γ rays from Co⁶⁰ source and a mixture of both; response of mouse spleen and thymus to 90-min exposure to fast neutrons; survival and gross pathological changes in rats after dose of Pu²³⁹; protection against and treatment of NaK burns; aminoaciduria as indicator of radiation exposure. NSA 7-2726.

1170

DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT. Austin M. Brues, Ed. (1952). (ANL-4932).

Includes reports on: effect of partial-body shielding on radiation induced hypotension in chicks; growth delay in Paramecium due to irradiated media; effect of β rays of Sr⁹⁰ and Y⁹⁰ on rats; administration of human plasma fractions to mice 6 min. before exposure to 800 r of x rays; effect of weekly x radiation on organ weights of growing mice. NSA 7-2727.

1171

RADIOBIOLOGY EXPERIMENT STATION, RADIO-CHEMISTRY, PHYSICAL CHEMISTRY, PHARMACOLOGY, THEORETICAL BIOLOGY, AND BIO-PHYSICS. John F. Thomson, E. T. Mikuta, George A. Sacher, Robert E. Rowland, and Herbert E. Kubitschek. (Argonne National Lab.). p.41-71 of Quarterly Report for August, September, and October, 1952; Division of Biological and Medical Research. Austin M. Brues, ed. 31p. (ANL-4932(p.41-71)).

Studied: biosynthesis of C¹⁴-labeled sucrose and rutin; plant growth response to enriched levels of N¹⁵; excretion and tissue distribution of radioberyllium after injection of salicylic or sulfosalicylic acid; x ray effect on capacity of rats to acetylate p-amino-benzoic acid; response of rat liver tryptophane peroxidase-oxidase to total-body irradiation; x-ray effect on respiration of *E. coli*. NSA 7-2728.

1172

QUARTERLY PROGRESS REPORT NO. 6. (Air Force Radiation Lab., Univ. of Chicago). Jan. 15, 1953. 70p. (NP-4447).

Studied: ATP activity of mouse spleen and thymus after 25 r; intestinal cholinesterase in rats, mice and ground squirrels after x irradiation; effect of central nervous stimulants on response of rats to x rays; 5-nucleotidase activity of rat spleen and thymus after 100-400 r total body dose; protective effect of swine liver catalase; abdominal shielding in rats; blood catalase activity as index of susceptibility of mice to x rays at 800 r, 250 kv. NSA 7-2729.

1173

QUARTERLY PROGRESS REPORT (FOR) JULY, AUGUST, (AND) SEPTEMBER, 1952. (Atomic Energy Project, Western Reserve Univ.). 9p. (NYO-4027).

Studied: effect of nembatal on cysteine's protection against radiation damage in rats and mice; toxicity of

intravenously and intraperitoneally administered Au¹⁹⁸; effect of CaCl₂, MgCl₂, formate, tetraethyl ammonium, thiosorbitol and sorbitol on post-exposure mortality in mice; spleen-shielding in mice; effect of cysteine on Murphy sarcoma-bearing rats; thyroid uptake of radio-iodine in rats given food and water after dose; x ray effect on nucleic acid synthesis in chick embryos; cross-transfusion of irradiated and control dogs. NSA 7-2730.

1174

QUARTERLY PROGRESS AND WORK ACCOMPLISHMENT REPORT FOR QUARTER ENDING DECEMBER 31, 1952; AGRICULTURAL RESEARCH PROGRAM. (Tennessee Univ.). 152p. (ORO-90).

Studied: properties and action of Po²³³; effects of estrogen on Ca behavior in blood and bone; Ca and P blood levels and bone histology in cattle; LD_{50/30} dose for burros, swine and rabbits. NSA 7-2731.

1175

THE EFFECT OF X-IRRADIATION ON SERUM POTASSIUM AND SODIUM LEVELS IN RABBITS.

Raymond D. Goodman and Marcus Vogel. Mar. 10, 1953. 14p. (UCLA-248). Am. J. Physiol. 175, 29-32 (1953).

Rabbits were exposed to 600 to 850 r whole-body x rays; serial determinations of serum K and Na concentrations were made. No deaths from radiation shock or sickness could be attributed to significant change in these serum electrolytes. In several instances high serum K was noted at death in rabbits dying from radiation shock. This appeared to be a terminal event rather than etiologically related phenomenon. NSA 7-2733.

1176

SYMPTOMATIC DISTURBANCE AFTER SINGLE THERAPEUTIC DOSE OF X RAYS; ITS RELATIONSHIP TO THE GENERAL RADIATION SYNDROME. W. M. Court Brown. Brit. Med. J. 1, 802-5 (1953). Apr. 11.

Pattern of symptoms in a group of 50 patients consisted of latent period, acute disturbance period, and recovery period. Possibility suggested of using such clinical studies to interpret what may occur when much higher doses are received. NSA 7-2734.

1177

BIOCHEMICAL ASPECTS OF THE PLANT INJURY CAUSED BY IONIZING RADIATIONS. L. Ehrenberg, A. Gustafsson, and N. Nybom. Acta Chem. Scand. 6, 1554-5 (1952).

Seeds are 20 to 30 times more sensitive to fast neutrons than to x rays when equal doses are given. Difference between radiation sensitivities to neutrons of dormant and germinating seed is a half to a third of corresponding difference in case of x rays. Differences in behavior are probably related to difference in ionizing densities produced in tissue by neutrons and x rays. NSA 7-2735.

1178

TRANSBRONCHIAL INSTILLATION OF RADIOACTIVE GOLD COLLOID IN THE LUNG OF THE DOG; DISTRIBUTION STUDIES, SURVIVAL AND PATHOLOGY. George R. Meneely, Stewart H. Auerbach, Clarence C. Woodcock, Ross C. Kory, and Paul F. Hahn. Am. J. Med. Sci. 225, 172-7 (1953). Feb. NSA 7-2736.

1179

STUDIES ON THE PROTECTIVE ACTION OF SULFHYDRYL COMPOUNDS AGAINST X-IRRADIATION. W. H. Parr, N. Puckett, R. Ransom, S. Spradling, and A. Krebs. (Army Medical Research Lab., Fort Knox). Nov. 12, 1952. 19p. (AMRL-102).

Inhibiting effect of x rays on nucleic acid synthesis in intestinal mucosa of the rat is influenced by pretreatment of rat with cysteine indicating that the protective action of the compound involves the nucleic acid cycle. If cysteine

affords protection by other means than a shielding effect, mechanism of the effect must be an indirect one.

NSA 7-2737.

1180

MECHANISMS OF PROTECTION AGAINST MAMMALIAN RADIATION INJURY. Austin M. Brues and Harvey M. Patt. Physiol. Revs. 33, 85-9 (1953). Jan. NSA 7-2739.

1181

NATURALLY OCCURRING INFECTIONS IN UNTREATED AND STREPTOMYCIN-TREATED X-IRRADIATED MICE. Leon Gonshery, Robert Q. Marston, and Willie W. Smith. Am. J. Physiol. 172, 359-64 (1953). Feb.

With streptomycin treatment, although there was not always a significant reduction in mortality, there was always a reduction in number showing positive blood cultures and an increase in those showing negative cultures at death. This treatment also resulted in prolonged survival time independent of presence of organisms in blood at death. NSA 7-2740.

1182

PROPHYLACTIC ANTIBIOTIC THERAPY IN X-IRRADIATED ANIMALS. Wille W. Smith, Falconer Smith, H. Jeanette Ruth, Harry Y. Canter, and Marie M. Grenan. Am. J. Physiol. 172, 351-8 (1953).

Streptomycin treatment after irradiation in mice gave favorable survival results in about half the weaning batches studied over a period of 16 months, while treatments with other antibiotics and results with rats and guinea pigs were less favorable. Streptomycin blood levels and LD₅₀ were about the same in irradiated and control mice. NSA 7-2741.

1183

EXPERIMENTAL INFECTION AND STREPTOMYCIN TREATMENT IN IRRADIATED MICE. Robert Q. Marston, Leon Gonshery, Ilo M. Alderman, and Willie W. Smith. Am. J. Physiol. 172, 365-71 (1953).

Of 8 organisms tested, all but 2 strains of α -streptococcus increased mortality in mice x-irradiated with 475 r. Streptomycin was effective against *Staph. Aureus*, *Paracolon*, *E. coli* and *Proteus*; ineffective against *Pseudomonas* infections. NSA 7-2742.

1184

RADIUM AS A FOREIGN BODY. (In German). R. Mende. Ztschr. Laryng. 29(4), 170-1 (1950).

1185

METABOLISM OF CESIUM 137 IN LABORATORY AND DOMESTIC ANIMALS. S. L. Hood and C. L. Comar. (1953). 31p. (ORO-91).

Uptake, distribution, excretion, and placental transfer of tracer amounts of Cs¹³⁷ in rats, cattle, sheep, swine, and chickens were studied. High absorption of ingested Cs¹³⁷, long-term retention, non-logarithmic excretion, and species difference in excretory route and quantity observed. Tissue concentration patterns constant for species and tissues. Muscles had highest concentration; plasma lowest. Lower tissue-concentrating ability in young animals; fetuses. NSA 7-2943.

1186

LATENT CARCINOGENIC ACTION OF BETA IRRADIATION ON MOUSE EPIDERMIS. Philippe Shubik, A. Robert Goldfarb, A. C. Ritchie, and Hermann Lisco. (Chicago Medical School). (1952). 3p. (AECU-2471; Nature 171, 934-5 (1953)).

Mice irradiated on small skin area with 800 rep β radiation from a Ti²⁰⁴ source showed no tumors after 8 months, while mice similarly exposed and subsequently treated on exposed skin area with bi-weekly applications of 5% croton oil solution showed 6 animals bearing 13 tumors out of 17 survivors. NSA 7-2950.

1187

EFFECTS OF IONIZING RADIATION ON THE ADULT AND EMBRYONIC NERVOUS SYSTEM. Samuel P. Hicks. (New England Deaconess Hospital and Harvard Medical School, Boston, and Pondville State Hospital, Walpole, Mass.). (1953). 37p. (AECU-2480), Research Pubs. Assoc. Research Nervous Mental Disease 32, 439-62 (1953).

Damage to adult system is a secondary late effect resulting from slowly developing vascular damage; developing system is radiosensitive and serious malformations may follow irradiation of fetus in utero. Neuroblast is one of cells most easily destroyed by x rays. Production of ions and ionizing substances that alter enzyme function are considered as fundamental causes of radiation damage to cells. NSA 7-2951.

1188

THE RELATION BETWEEN MORPHOLOGIC AND IMMUNOLOGIC CHANGES CAUSED BY RADIATION. Frank J. Dixon and David W. Talmage. (Pittsburgh Univ., School of Medicine). (nd). 2p. (AECU-2489).

Initial phase of antibody response appears dependent on some extremely radiosensitive process, the site of which cannot be determined histologically as it is destroyed by amounts of radiation too small to produce persistent, significant morphologic change. Second phase involving actual synthesis of antibody protein is not dependent on any radio-sensitive cells or tissues. NSA 7-2952.

1189

STUDIES ON THE MECHANISM OF ACTION OF IONIZING RADIATIONS. X. EFFECT OF X-RAYS ON SOME PHYSICO-CHEMICAL PROPERTIES OF PROTEINS. E. S. Guzman Barron and P. Finkelstein. Arch. Biochem. and Biophys. 41, 212-32 (1952). Nov.

Results of x irradiation of aqueous solutions of serum albumin, serum globulin and egg albumin are described. NSA 7-1876.

1190

EFFECTS OF RADIOPHOSPHORUS P^{32} ON THE GONADS OF VIVIPAROUS CYPRINODONTES. Jean Vivien. Compt. rend. 236, 535-8 (1953). Feb. 2. (French).

Male and female *Xiphophorus helleri* H. and *Lebistes reticulatus* H. were kept for 40 days in aquarium to which had been added initially 200 μ c of P^{32} /liter. Autopsy showed gonads of all had undergone profound structural modifications. NSA 7-1877.

1191

THE EFFECT OF OXYGEN ON THE PRODUCTION BY FAST NEUTRONS OF CHROMOSOMAL ABERRATIONS IN *TRADESCANTIA MICROSPORES*. Norman H. Giles, Jr., Alvin V. Beatty, and Herbert Parkes Riley. Genetics 37, 641-9 (1952). Nov.

Results indicate that in absence of O_2 , frequencies of all types of aberrations are reduced when equal dosages of fast neutrons are compared. NSA 7-1878.

1192

EFFECTS OF DAILY IRRADIATION BY FAST NEUTRONS ON MALE FERTILITY. G. J. Neary, R. J. Munson, and R. H. Mole. Nature 171, 256 (1953). Feb. 7.

A dose of 70 rep at weekly dose rate of 8.3 rep reduced fertility of male mice to half that of controls. An accumulated dose of 100 rep halved the average weight of testis, with no recovery of fertility. With females, an accumulated dose of 140 rep in 17 weeks did not seem to affect ability to conceive or produce young. NSA 7-1880.

1193

SOME OBSERVATIONS ON THE EFFECT OF GAMMA IRRADIATION ON THE BIOCHEMISTRY OF RABBIT BONE MARROW. John F. Thompson, Wallace W. Tourtellotte, Magdalene S. Carttar, and John B. Storer. Arch. Biochem. and Biophys. 42, 185-96 (1953). Jan.

Exposure of one leg of rabbits to 310 or 620 r from a γ -ray source produced marked decrease in concentration of RNA and DNA in exposed marrow in comparison with control leg. NSA 7-1881.

1194

ENERGY ABSORPTION IN HUMAN TISSUE BY NUCLEAR PROCESSES WITH HIGH-ENERGY X-RAYS. R. J. Horsley, H. E. Johns, and R. N. H. Haslam. Nucleonics 11, No. 2, 28-31 (1953).

Energy absorption in tissue due to nuclear reactions amounts to at most 0.6% of energy absorbed in conventional manner, and probably, therefore, is of no appreciable biological significance. NSA 7-1882.

1195

THE INDUCTION OF TRANSLOCATIONS AND RECESSIVE LETHALS IN *DROSOPHILA* UNDER VARIOUS OXYGEN CONCENTRATIONS. William K. Baker and Charles W. Edington. Genetics 37, 665-77 (1952). Nov.

Translocations were induced in *Drosophila virilis* sperm by irradiating (200 r x rays) males maintained in various O_2 concentrations during treatment. Less than one-fourth as many translocations were induced in absence of O_2 as in presence of 100% O_2 . NSA 7-1883.

1196

RECOVERY IN BIOLOGY. Paul Lamarque. Presse med. 60, 1039-41 (1952). July 12. (French).

Bombyx mori silkworm eggs were exposed to single and fractionated instantaneous doses of x rays to 2000 r. Effects on recovery (measured by % of hatching), of placing eggs in incubator or refrigerator during interval between irradiations, of varying length of the interval, and of varying initial dose, were studied. Existence of a critical radiation dose for optimum recovery is discussed. NSA 7-1884.

1197

PULMONARY RADIOLESIONS SUBSEQUENT TO TREATMENT OF THORACIC LOCALIZATIONS IN HODGKIN'S DISEASE. M. Pierre-Lehman. Sang. Le. 23, 700-8 (1952). (In French).

To sterilize completely a thoracic center of Hodgkin's disease, a total x ray dose of 6500 to 7000 r must be applied to mediastinum through two fields over 15 to 25 days. Radiograms demonstrate extensive radiolesions of lungs sometimes resulting from treatment. NSA 7-1885.

1198

INFLUENCE OF THE ALIMENTARY REGIMEN ON THE RADIOSENSITIVITY OF THE GUINEA PIG. Jean Francois Duplan. Compt. rend. 236, 424-6 (1953). Jan. 26. (In French).

Guinea pigs receiving a supplement of cabbage in addition to necessary proteins were less sensitive to effects of whole-body x irradiation than those whose diet was completed with carrots. NSA 7-1888.

1199

IMMEDIATE EFFECT OF AN IRRADIATION WITH X RAYS ON THE THYROID FUNCTION IN THE RAT. Pierre Landau, Jeanne Leschi, and Maurice Tubiana. Compt. rend. 236, 240-2 (1953). Jan. 12. (In French). NSA 7-1889.

1200

THE EFFECT OF OXYGEN ON THE INDUCTION OF CHROMATID ABERRATIONS IN *TRADESCANTIA MICROSPORES* BY X-IRRADIATION. Herbert Parkes Riley, Norman H. Giles, Jr., and Alvin V. Beatty. Am. J. Botany 39, 592-7 (1952). Oct. NSA 7-1890.

1201

EFFECT OF SOFT ROENTGEN RAYS ON THE RABBIT SKIN. William R. Christensen, Sheldon C. Sommers, and Charles K. Spalding. Am. J. Roentgenol. Radium Therapy Nuclear Med. 68, 801-8 (1952). Nov.

Unfiltered 100-kv x rays produced superficial cytological effects in the skin of rabbits. At moderate dosage, effects were limited to epidermis. Single doses of 7000 to 15,000 r produced permanent pathological effects at levels extending as far as muscular layer of cutis. NSA 7-1891.

1202
SECONDARY GLAUCOMA, CATARACT AND RETINAL DEGENERATION FOLLOWING RADIATION. W. E. Fry. Trans. Am. Acad. Ophthalmol. Otol. 56, 888-9 (1952). Nov.-Dec. NSA 7-1892.

1203
MODIFICATION BY WHOLE-BODY X IRRADIATION OF GLYCOGEN UTILIZATION BY THE LIVER DURING FASTING. Marguerite Lourau. Compt. rend. 236, 422-4 (1953). Jan. 26. (In French).

Strong (2000 r) and average (1000 r) x ray doses, all lethal, had immediate effects on mice and guinea pigs, resulting in increased liver glycogen. Strong doses acted by preserving existing reserves and favoring gluconeogenesis. Average doses maintained second mechanism only. Sublethal doses (500 r) had no immediate effect. NSA 7-1893.

1204
AN INVESTIGATION INTO THE REMOVAL OF RADIOACTIVE CONTAMINATION FROM THE HANDS. James Gregory. Brit. J. Ind. Med. 10, 32-40 (1953). Jan.

Ten cleansing agents compared of these white Windsor soap and a mixture of equal parts of soap-powder and wood-flour were found most effective for cleansing hands of contamination with substances containing U and Ra. NSA 7-1894.

1205
RESULTS OF EXAMINATIONS OF IMPAIRED HEALTH OF RADIUM AND X-RAY WORKERS. Marie Rejsková. Pracovní Lékařství 4, 200-7 (1952). June 15. (In Czech).

Analysis made of 1685 examinations of 442 persons working with Ra and x rays followed over a number of years, including medical personnel and industrial x ray workers. Since absolute exposures were not known, relative exposure (length of time individuals worked with one or the other) is used. Changes in skin and blood counts are described. NSA 7-1896.

1206
PROTECTIVE EFFECT OF SUCCINONITRILE AGAINST A LETHAL WHOLE-BODY IRRADIATION IN THE RAT. L. Mazzanri and M. Franchi. Arch. ital. sci. farmacol., 261-2 (1952). July. (In Italian).

Three groups of rats were given 500 r whole-body x irradiation. Control group, given no medication, all died in 10 days. Second lot, given 8 mg/g intraperitoneal injection of succinonitrile before exposure, all died in 7 days. Of third group, given equal injection subcutaneously for 3 days before exposure, 33% died in 15 days, while 67% survived indefinitely in good health. Mean survival times, respectively 148 hr, 104 hr, and 289 hr. NSA 7-1897.

1207
DECREASE IN RADIOSENSITIVITY OF THE RAT AND GUINEA PIG BY THE ANTERIOR PITUITARY GROWTH HORMONE. Antoine Lacassagne and Herbert Tuchmann-Duplessis. Compt. rend. 236, 440-3 (1953). Feb. 2. (In French).

Somatotropic hormone, injected daily in almost lethal 1 mg doses for 6 days before or after whole-body x irradiation (guinea pigs-150 r, rats-250, 300, 500 or 900 r), decreased radiosensitivity of animals. In guinea pig, only protective effect exerted; in rat, both protective and curative action noted. Increased radioresistance therefore not due to hyperglycemia. NSA 7-1898.

1208
MODIFICATION OF ACUTE IRRADIATION INJURY IN MICE AND GUINEA PIGS BY BONE MARROW INJECTIONS. Egon Lorenz, Charles Congdon, and Delta Uphoff. Radiology 58, 863-77 (1952). June.

Action of heterologous bone marrow injections in reducing irradiation induced mortality of mice and guinea pigs suggests a humoral (non-cellular) factor. Superior protective action of homologous bone marrow, however, may indicate a cellular factor in addition. NSA 7-1899.

1209
EFFECT OF LEUKOCYTE-PROMOTING FACTOR (LPF) ON SURVIVAL OF X-IRRADIATED MICE. J. B. Storer, P. Sanders, and C. C. Lushbaugh. Proc. Soc. Exptl. Biol. Med. 81, 541-2 (1952). Nov.

Treatment of irradiated mice with leukocytosis-promoting factor did not significantly increase their 30-day survival, suggesting that if survival of irradiated mice with normal-spleen implants is due to humoral factor released by spleen, such factor is unrelated to specific leukocyte-promoting factor obtained from sterile exudates. NSA 7-1900.

1210
ATOM BOMB RADIATION SICKNESS REPORT FROM HIROSHIMA. Koichi Ishibachi. Merck Rept. 62, 18-20 (1953). Jan.

Summary of clinical observations made on 108 patients with clear case record of radiation sickness, from time of atom bombing (August 6, 1945) until January, 1946, and an additional 62 patients admitted to Kusatsu Hospital in 1946. Study deals only with those who suffered directly or indirectly from radiation at time of atom bomb explosion. NSA 7-1901.

1211
AN EXPERIMENTAL STUDY OF THE DIRECT AND INDIRECT EFFECTS PRODUCED BY X-RAY IRRADIATION AND BY RADIOACTIVE ISOTOPES, WITH SPECIAL REFERENCE TO THE PROTECTIVE ROLE OF THE SPLEEN: FINAL REPORT. (Stanford Research Inst.). Nov. 1, 1952. 23p. (AECU-2491).

Spleen's protective role in mouse not confirmed in rat. NSA 7-2953.

1212
ENDOCRINE CHANGES AFTER TOTAL BODY IRRADIATION IN PARABIOTIC RATS. Sheldon C. Sommers. (1952). 18p. (AECU-2493); J. Lab. Clin. Med. 42, 396-407 (1953).

Morphologic study of endocrine alterations in parabiotic rats during short intervals post-irradiation is reported. Aside from radiosensitive gonadal tissue, few endocrine gland changes were observed, except after prior hemi-adrenalectomy. NSA 7-2954.

1213
A QUANTITATIVE COMPARISON OF THE ANTIBODY PRODUCED BY X-RADIATED AND NORMAL RABBITS. Paul H. Maurer, Frank J. Dixon, and David W. Talmadge. (Pittsburgh Univ., School of Medicine). (1953). 10p. (AECU-2498); Proc. Soc. Exptl. Biol. Med. 83, 163-6 (1953).

Antibody formed by rabbits irradiated with 400 r of whole body x radiation prior to, simultaneously with, or after immunization, and by rabbits radiated with 800 r after immunization, although often reduced in amount was indistinguishable from that formed by nonradiated rabbits. NSA 7-2955.

1214
COMPARISON OF PATHOLOGIC EFFECTS OF RADIATION IN WEANLING AND ADULT RATS. George W. Casarett.

(Atomic Energy Project, Univ. of Rochester). Feb. 17, 1953. 25p. (UR-239); Arch. Pathol. 55, 393-402 (1953).

Presented are histopathologic, hematologic and clinical data on adult and 4-week-old rats given single total-body dose of 800 r of x rays (250 kv, unfiltered; HVL equivalent to 0.34 mm Cu). Weanling rats exhibited greater degree of acute illness than did adults, presented shock-like picture, and suffered high mortality between 3rd and 4th post-radiation day. NSA 7-2959.

1215
QUARTERLY TECHNICAL REPORT (FOR) OCTOBER 1, 1952 THROUGH DECEMBER 31, 1952. (Atomic Energy Project, Univ. of Rochester). Feb. 26, 1953. 41p. (UR-242).

Reports on: ultrafiltration apparatus for clearing various ions in biological work; Rn damage to lungs; preparation of iodine free Cr(VI) for use with H₂SO₄ in protein-bound I determination; variable factors affecting degree of I¹³¹ binding in in vitro iodination of rabbit serum proteins. NSA 7-2960.

1216
RADON INHALATION STUDIES IN RATS. S. H. Cohn, R. K. Skow, and J. K. Gong. (Naval Radiological Defense Lab.). Nov. 17, 1952. 17p. (USNRDL-380); Arch. Ind. Hyg. and Occupational Med. 71, 508-15 (1953).

In calculating the relative amount of radiation received by lungs of animals exposed to a radon atmosphere, decay products of Rn also present in this atmosphere are of primary importance. NSA 7-2961.

1217
THE EFFECT ON THE THYROID GLAND AND THE GONADS FOLLOWING CHRONIC TREATMENT OF MICE WITH LOW DOSES OF RADIOIODINE (I¹³¹). Roberts Rugh. J. Exptl. Zool. 122, 151-68 (1953). Feb.

Pathological effects of weekly injections of graded doses of I¹³¹ for 6 months on thyroids and gonads of mice are described in detail. NSA 7-2963.

1218
EFFECT OF ROENTGEN RAYS ON MICROSPORUM AUDOUINI. AN IN VITRO STUDY. Kurt Loewenthal. Arch. Dermatol. and Syphilol. 67, 191-3 (1953). Feb.

Two strains of Microsporum audouini received 1 exposure each of 340 r (unfiltered) x rays. Neither irradiated colonies nor descendants showed gross or microscopic changes attributable to exposure. Microsporum canis under same conditions showed acceleration and intensification of pleomorphism and degradation of fuseaux formation. NSA 7-2964.

1219
THE EFFECT OF X RADIATION ON THE RESPIRATION OF ESCHERICHIA COLI. Daniel Billen, G. E. Stapleton, and Alexander Hollaender. J. Bacteriol. 65, 131-5 (1953). Feb. NSA 7-2965.

1220
URINARY EXCRETION OF DESOXYRIBONUCLEASE IN X-RADIATED RATS. O. D. Kowlessar, K. I. Altman, and L. H. Hempelmann. Arch. Biochem. and Biophys. 43, 240-1 (1953). Mar.

Progressive increase in urinary DNA-ase activity up to 5th day was observed in x-irradiated rats. NSA 7-2966.

1221
POSTIRRADIATION RELEASE OF ADENOSINE TRIPHOSPHATE FROM ESCHERICHIA COLI B/r. D. Billen, B. L. Strehler, G. E. Stapleton, and E. Brigham. Arch. Biochem. and Biophys. 43, 1-10 (1953). Jan. NSA 7-2967.

1222
EFFECT OF X RAYS, CYANIDE, AND VARIOUS RADIATION-PROTECTIVE AGENTS ON THE INFUSORIA. Z. M. Bacq, H. Mugard, and A. Herve. Acta. Radiol. 38, 489-505 (1952). Dec. (In French).

Close parallelism exists between resistance to x rays and to cyanide of 4 species of histophagous infusoria (Ophrioglenidae). Histochemical studies on irradiated infusoria show carbohydrate changes only. Cysteine mixed with NaCN protects Ophrioglenidae against lethal threshold dose of x rays. Cysteine or cyanide alone, Na pyruvate and β , β -aminoethyl disulfide have weaker action and on certain species only. NSA 7-2968.

1223
SMALL-SCALE ANATOMICAL PECULIARITIES OF THE BACK OF THE HAND AND THEIR SIGNIFICANCE FOR X IRRADIATION OF MALIGN NEOPLASMS IN THIS REGION. Franz Aichinger. Strahlentherapie 89, 257-64 (1952). (In German). NSA 7-2969.

1224
HAZARD DUE TO BETA RADIATION FROM FISSION PRODUCTS DEPOSITED ON THE GROUND AFTER AN ATOMIC EXPLOSION. F. S. Goulding and G. Cowper. (Chalk River Project (Canada). Jan. 1953. 14p. (CREL-529). NSA 7-2970.

1225
THE ORIGIN OF PERICHONDritis IN IRRADIATION OF TUMORS OF THE LARYNX. Z. Hlasivec. Casopis Lekaru Ceskych 87, 680-82(1948). NSA 4-1847.

1226
POLONIUM INDUCED ANEMIA IN RATS AS STUDIED WITH ALPHA-C¹⁴-GLYCINE. R. G. Thomas, K. I. Altman, J. N. Stannard, and K. Salomon. (Atomic Energy Project, Univ. of Rochester). Dec. 9, 1952. 13p. (UR-224); Radiation Research 1, 180-8 (1954). NSA 7-2982.

1227
X-RAY AND ULTRAVIOLET INDUCED MUTATIONS IN NEUROSPORA. C. C. Lindergen, and G. Lindergen. Genetics 27, 154 (1942).

1228
THE EFFECTS OF RADIATION IN VITRO ON OXIDATIVE PHOSPHORYLATION AND ADENOSINE TRIPHOSPHATASE. Margery G. Ord and L. A. Stocken. Brit. J. Radiol. 28, 279-82 (1955).

Neither oxidative phosphorylation nor ATPase was affected by in vitro γ radiation (300-700 r from radium and iridium sources) of rat spleen mitochondria or spleen homogenates although doses administered have been found effective in uncoupling oxidative phosphorylation when applied to spleen in vivo. Possible explanation for negative results considered. NSA 9-4674.

1229
FATE OF ASCORBIC ACID IN EARLY RADIATION DAMAGE. Peter D. Klein, Dorothy T. Handa and Robert W. Swick. Proc. Soc. Exptl. Biol. Med. 90, 204-8 (1955). NSA 10-523.

1230
PROTEIN CHEMISTRY, IMMUNOCHEMISTRY, AND CLINICAL INVESTIGATION. p. 52-95 OF SEMI-ANNUAL REPORT. (Sloan-Kettering Inst. for Cancer Research). Feb. 1, 1952. 44p. (AECU-2463(p.52-95)).

Studied: organic and physicochemical aspects of nucleic acids and related compounds; capacity of thyroid cancers to collect I¹³¹; optimal dose of I¹³¹ for hyperthyroidism; post-irradiation changes in physiology of man; quantitative comparison of effects of equal doses of various ionizing radiations on alkaline phosphatase activity of mouse bone. NSA 7-3297.

1231
EFFECT OF SUBLETHAL TOTAL BODY X-RADIATION ON SUSCEPTIBILITY OF MICE TO SALMONELLA ENTERITIDIS AND ESCHERICHIA COLI. I. L. Shechmeister, L. J. Paulissen, and M. Fishman. (Washington Univ., School of Medicine, St. Louis). (1953).

14p. (AECU-2520); Proc. Soc. Exptl. Biol. Med. 83, 205-9 (1953).

Mice were challenged intraperitoneally with *S. enteritidis* over 30-day period after whole-body dose of 50-350 r. Susceptibility to infection was higher 8 hr after 250-350 r, but not after 50 r. Susceptibility to *E. coli* increased 1 day after 200-450 r; declined but was not absent 60 days after 450 r and 11 days after 200-350 r. Susceptibility to *E. coli* was maximal 11 days after 50 r. NSA 7-3301.

1232

THE EFFECTS OF IONIZING RADIATION, CERTAIN HORMONES, AND RADIOMIMETIC DRUGS ON THE DEVELOPING NERVOUS SYSTEM. Samuel P. Hicks. (New England Deaconess Hospital, Boston and Harvard Medical School, Boston). (1953). 31p. (AECU-2521); J. Cellular Comp. Physiol. 43, Suppl. 1, 151-78(1954).

Metabolic machinery for differential growth is seen as intimately related to certain sulphydryl enzymes, and these may be the common meeting ground for effects produced by such diverse agents as radiation, triethylene melamine and certain steroids. NSA 7-3302.

1233

EFFECT OF BETA RADIATION UPON BIOCHEMICAL OXIDATION IN POLLUTED WATER. Rolf T. Skrinde and Clair N. Sawyer. (Sedgewick Labs. of Sanitary Science, Mass. Inst. of Tech.). Sept. 30, 1952. 55p. (NYO-4438).

Inhibitory effects of P^{32} on waste purification by biochemical oxidation in natural and synthetic sewage are reported. In full strength substrates, P^{32} effect on oxidation appears rather erratic, being distinctly inhibitory to oxidation in synthetic sewage at concentrations of 60 and 80 mc/l while failing to show effect in undiluted domestic sewage. NSA 7-3303.

1234

AN ELECTROPHYSIOLOGICAL STUDY OF SOME PROPERTIES OF THE VERTEBRATE RETINA (thesis). Leo E. Lipetz. (Radiation Lab., Univ. of Calif., Berkeley). Jan. 1953. 147p. (UCRL-2056).

Comparison of responses to light and to x radiation indicate that they both excite the same retinal processes; x rays exert desensitizing action on some retinal photochemical processes. Radiation may be useful for study of vision as it affects processes essential to vision but unaffected by light. NSA 7-3304.

1235

THE CAUSE OF INCREASED SUSCEPTIBILITY TO AVIRULENT PASTEURELLA PESTIS AFTER EXPOSURE TO A SUBLETHAL DOSE OF X IRRADIATION. M. S. Silverman, P. H. Chin, V. Greenman, and J. C. Young. (Naval Radiological Defense Lab.). Jan. 4, 1953. 17p. (USNRDL-389).

Increased mortality in mice due to increased susceptibility to plague endotoxin rather than to lowered resistance permitted avirulent organisms to multiply and invade host. NSA 7-3305.

1236

EFFECT OF X-IRRADIATION ON FAT BALANCE AND ON LIPID AND VITAMIN A CONTENT OF THE LIVER. John G. Coniglio, William J. Darby, Mary Catlet Wilkerson, Richard Stewart, Ann Stockell, and Granville W. Hudson. Am. J. Physiol. 172, 86-92 (1953).

Fat absorption in rats given single dose of 500 or 650 r was studied over a 28-day period. There was no significant difference in amount of fat excreted in post-irradiation period in irradiated and pair fed controls nor was there significant post-irradiation change in total lipids, phospholipid, total cholesterol, or in liver vitamin-A concentrations due to irradiation. NSA 7-3307.

1237

ROENTGEN-RAY CATARACT. EFFECTS OF SHIELDING OF THE LENS AND CILIARY BODY. A. J. Alter and P. J. Leinfelder. Arch. Ophthalmol. (Chicago) 49, 257-60 (1953). Mar.

Cataract is not caused by x ray exposure when lens is protected by 2 mm lead shield. Equatorial portion of lens is most sensitive to x ray injury; pupillary zone least sensitive. Exposure of one quadrant of lens results in opacities limited to that quadrant. NSA 7-3308.

1238

A HISTOCHEMICAL STUDY OF NORMAL AND IRRADIATED SALIVARY GLAND TISSUE IN THE MOUSE. M. S. Burstone. Anat. Record 115, 543-57 (1953). Mar.

Irradiation from P^{32} decreases stainability of submaxillary gland alveoli as compared with sublingual gland, and increases water solubility of periodic acid-Schiff positive components of both glands. On basis of this study submaxillary exhibits greater radiosensitivity than sublingual gland. NSA 7-3309.

1239

ABERRANT GROWTH IN PLANTS INDUCED BY IONIZING RADIATION. J. E. Gunckel and A. H. Sparrow. Brookhaven Symposia in Biol. 6, 252-79 (1954).

1240

THE BEHAVIOR OF AN X-RAY-INDUCED CHROMOSOME IN MAIZE. Drew Schwartz. Am. Naturalist 87, 19-25 (1953). Jan.-Feb.

By crossing over in ring-rod heterozygotes and breakage of resultant anaphase bridges, ring is frequently converted into rod chromosome. Some rods carry duplication and are transformed back to rings in subsequent meiosis. Inclusion of nucleolar organizer in anaphase bridge results in high frequency of aberrant spore quartet types. NSA 7-3311.

1241

HISTOCHEMICAL INVESTIGATION OF ALKALINE PHOSPHATASE BEHAVIOR IN KIDNEY AND DUODENUM IN ADRENALECTOMIZED AND IRRADIATED RATS. Duccio Palazzi. Arch. "E. Maragliano" patol. e clin. 7, 821-36 (1952). Sept.-Oct. (In Italian).

Renal and duodenal alkaline phosphatase diminished slightly in adrenalectomized female rats; increased in proportion to dose in rats whole-body irradiated with 750, 1500, or 3000 r of 170-kv x rays; and decreased sharply in rats both adrenalectomized and 750 r whole-body irradiated. NSA 7-3313.

1242

CONTRIBUTION TO THE PROBLEM OF PROTECTIVE AGENTS AGAINST RADIATION EFFECTS. Kurt Erdmann. Naturwissenschaften 40, 147 (1953). Feb. (In German).

Euglobulin solutions, with and without cysteine, ascorbic acid, NaN_3 , glutathione, or Na thioglycolate were irradiated with ultraviolet or x rays. Protective agents prevented turbidity even at 56° C. Application of effect tested on Unio mussel eggs. Na thioglycolate prevented coagulation, while cysteine, thioglycolic and ascorbic acids had no effect, perhaps due to non-penetration of nuclear membrane. NSA 7-3314.

1243

DEVELOPMENT OF BACTERIOPHAGE IN X-RAY INACTIVATED BACTERIA. Louis W. Labaw, Vernon M. Mosley, and Ralph W. G. Wyckoff. J. Bacteriol. 65, 330-36 (1953). Mar.

Better growth of bacteriophage on x irradiated bacteria (*E. coli*) than on ultraviolet irradiated bacteria was observed. Effect of two irradiations on metabolism is discussed. NSA 7-3315.

1244

HEMATOLOGICAL DISTURBANCES IN GUINEA PIGS

BEARING A MALIGNANT TUMOR. P. Mendeleeff. *Compt. rend. soc. biol.* 146, 1432-4 (1952). Sept. (In French).

400 r Ra irradiation applied to right flank of guinea pigs, and 2 cg methylcholanthrene injected. Resultant reticulum sarcoma at point of injection causes changes in cellular composition of blood, general anemia with intraperitoneal hemorrhages and stimulation of hemopoiesis of spleen. Successive grafts of tumor to healthy guinea pigs have same effects. NSA 7-3316.

1245

INFLUENCE OF THE SUPRARENAL HORMONES UPON THE HEMATOPOIETIC REGENERATION OF THE IRRADIATED RAT. H. Betz. *Compt. rend. soc. biol.* 146, 1423-6 (1952). Sept. (In French).

Daily injections of desoxycorticosterone acetate did not modify lymphoid regeneration in irradiated rats, but stimulated myeloid regeneration on 6th and 7th day post irradiation. Centers of erythropoiesis appeared in the liver. Cortisone (5 mg daily) did not affect lymphoid and myeloid regeneration, but 10 mg daily blocked both almost entirely. Thymus regeneration was stopped by the 5 mg cortisone dose. NSA 7-3317.

1246

NATURE OF THORIUM-X ACTION ON HUMAN SKIN. Victor H. Witten and Marion B. Sulzberger. *Hautarzt*, Der 3, 521-7 (1952). Nov. (In German).

Besides direct effect of ThX (Ra²²⁴) and its decay products on skin, internal effects result from penetration of radioactive atoms in 4 ways: diffusion of thoron, penetration of vehicle in which it is incorporated, penetration of ThX-bearing H₂O separated from vehicle, and penetration by means of sweat and sebaceous matter. NSA 7-3318.

1247

THE EFFECT OF HIGH INTENSITY ELECTRON BURSTS ON ANTIBODIES. Frederick Bl Traub, Arno Brasch, and Wolfgang Huber. *J. Immunol.* 70, 366-71 (1953). Apr.

Observed changes in antibodies could not be correlated with molecular weight, state of purification and concentration of antibody in serum. Dose-temperature dependence was demonstrated, and explanation discussed. Effect of dilution on radiation-inactivation of antibodies was studied and significance evaluated. Results discussed in relation to target theory. NSA 7-3319.

1248

THE EFFECTS OF SPLEEN SHIELDING AND SUBSEQUENT SPLENECTOMY UPON ANTIBODY FORMATION IN RATS RECEIVING TOTAL-BODY X-IRRADIATION. R. W. Wissler, M. J. Robson, F. Fitch, W. Nelson, and L. O. Jacobson. *J. Immunol.* 70, 379-85 (1953).

Spleen-shielding abolished depressant effect of x rays on circulating antibody formation in rat whether antigen was given intravenously or peritoneally. Splenectomy alone suppressed antibody regardless of time antigen was given with respect to removal. No effect when antigen was given intraperitoneally. NSA 7-3320.

1249

EFFECTS OF X-RAYS ON THE FORMATION OF LACTASE IN A LYSOGENIC STRAIN AND SENSITIVE STRAIN OF *ESCHERICHIA COLI*. Charles Yanofsky. *J. Bacteriol.* 65, 383-7 (1953). Apr.

X ray doses affecting viability of the 2 strains have only slight effect on ability to form lactase adaptively. K-12 releases lactase when incubated with lactose, post-irradiation due to lysis of cells in which phage production was induced by irradiation. Release of lactase and phage from cells upholds view that formation of the two can occur simultaneously. NSA 7-3321.

1250

DIFFERENTIATION AS A DETERMINANT OF THE

REACTION OF RAT EMBRYOS TO X-IRRADIATION.

James G. Wilson, Robert L. Brent, and H. Charles Jordon. *Proc. Soc. Exptl. Biol. Med.* 82, 67-70 (1953). Jan.

X irradiation of rat embryos on 8th day of gestation has more limited effect on subsequent development than does similar treatment on 9th or 10th days. Difference in reactivity appears dependent on whether cellular differentiation within embryos has begun at time of irradiation. NSA 7-3322.

1251

THE RADIOACTIVITY OF THE NORMAL HUMAN BODY. A CONTRIBUTION TO THE PRESENT SITUATION. A. T. Krebs. (Army Medical Lab., Fort Knox). Jan. 12, 1953. 14p. (AMRL-109).

Latest value for basal radioactivity of human body according to Sievert is 1.03×10^{-8} g of γ radiation Ra equivalent. Problem of basal radioactivity is more complicated than anticipated. Intensity x time law used to estimate permissible total-body exposure. NSA 7-3323.

1252

STUDIES ON THE MECHANISM OF ACTION OF THERMAL NEUTRONS IN PRODUCING BIOLOGICAL EFFECTS. I. LACK OF EFFECT OF HYPOXIA AND GLUTATHIONE IN ALTERING MORTALITY IN MICE. John B. Storer, L. Edward Ellinwood, Wright H. Langham, and Phyllis Sanders. (Los Alamos Scientific Lab.). Mar. 1953. 24p. (LA-1527).

Pretreatment with p-aminopropiophenone or glutathione protected mice against total-body x radiation but not against thermal column radiation. Data suggest that tissue O₂ tension may be a factor in difference in effectiveness of neutrons and x rays in various tissues. NSA 7-3324.

1253

PROTECTIVE ACTION OF β -MERCAPTOETHYLAMINE IN THE CASE OF RATS IRRADIATED IN TOTO. G. Lambert, J. Maisin, and M. Mandart. *Compt. rend. soc. biol.* 146, 1434-5 (1952). Sept. (In French).

Rats were given 15 mg intraperitoneal dose of 2-mercaptoethylamine immediately prior to 700 r of x rays. This dose lowered mortality rate, delayed death and raised lethal dose. NSA 7-3328.

1254

BONE MARROW IMPLANTS IN THE TREATMENT OF RADIATION SICKNESS. John M. Talbot, and Herbert B. Gerstner. (School of Aviation Medicine, Randolph Air Force Base, Texas). Sept. 1951. 16p. (ATI-116834). NSA 7-3329.

1255

RADIATION SICKNESS; A MEDICAL SURVEY OF THE IMMEDIATE EFFECTS ON THE VICTIMS OF THE NAGASAKI A-BOMBING. Masao Shiotsuki. *Oriental Economist* 21, 30-4 (1953). Jan.

Account of the atomic bombing of Nagasaki; immediate clinical symptoms and anatomical observations on survivors. Pathological observations on 2000 patients treated during 1st month after explosion are summarized. NSA 7-3330.

1256

PATHOLOGICAL CHANGES FOLLOWING INTRACAVITARY THERAPY WITH COLLOIDAL Au¹⁹⁸. Ralph M. Kniseley and Gould A. Andrews. *Cancer* 6, 303-12 (1953). Mar.

Twelve patients with advanced cancer treated with Au¹⁹⁸ were studied at autopsy. Au¹⁹⁸ absorbed on cavity surface, precipitates in relatively large aggregates and is phagocytosed. Frequent fibrous thickening of pleura or peritoneum found, usually without extensive adhesions. Radiation damage to tumor was not prominent; limited to

very superficial zones. Morphologic evidence of whole-body radiation was minimal. NSA 7-3334.

1257

EXPERIENCES IN THE CLINICAL APPLICATION OF RADIOACTIVE PHOSPHORUS. F. Odenthal and K. Philipp. *Munch. med. Wochschr.* **47**, 2363-70 (1952). Nov. 21. (In German).

Therapy of several cases of polycythemia vera and chronic myeloid leukemia with P^{32} are reviewed. Changes in blood picture are presented graphically. NSA 7-3335.

1258

A GENE FOR LONG CHROMOSOMES IN BARLEY. G. R. Burnham. *Genetics* **31**, 121-3 (1946).

1259

DESTRUCTION OF THE BRAIN OF MOUSE EMBRYOS ON THE 13TH DAY OF GESTATION BY X-RAY IRRADIATION. A. Raynaud and M. Frilley. *C. R. Soc. Biol.* **141**, 658 (1947). (In French).

1260

PATHOLOGICAL CHANGES EXHIBITED BY ANIMALS EXPOSED TO SINGLE DOSES OF X-RADIATION. Roger G. Metcalf, Richard J. Blandau, and Thomas B. Barnett. p.11-57. BIOLOGICAL EFFECTS OF EXTERNAL RADIATION. (National Nuclear Energy Series VI-2). Henry A. Blair, ed. New York, McGraw Hill Book Co., Inc., 1954.

Albino rats were exposed to a single dose of 550 r of whole-body radiation. Degeneration was observed in lymph nodes, spleen, bone marrow, spermatogonia, ovarian follicles, and the gastrointestinal tract. Lymphocytes were affected and anemia occurred. Megakaryocytes were reduced. Deaths were attributed to septicemia. (from authors' abstract).

1261

THE EXPERIMENTAL PRODUCTION OF RADIATION CATARACTS BY FAST NEUTRONS. Campbell Moses, Jay G. Linn, Jr., and Alexander J. Allen. (Addison H. Gibson Lab., Univ. of Pittsburgh School of Medicine and Sarah Mellon Scaife Radiation Lab., Univ. of Pittsburgh School of Medicine). (Mar. 10, 1953). 9p. (AECU-2527). *Arch. Ophthalmology* **50**, 609-12 (1953). NSA 7-3682.

1262

REPORT OF THE MEDICAL EXAMINATION ON THE 78 HIROSHIMA PATIENTS WITH RADIATION CATARACTS. Paul G. Filmore. (Atomic Bomb Casualty Commission). July 20, 1951. 13p. (NP-4451; NP-4560).

Cataracts are the only late effects observed that are attributable to radiation exposure 5 yrs after bombing. Fifty percent or more of patients received near-lethal whole-body radiation exposure. NSA 7-3683.

1263

MEDICAL SURVEY OF ATOMIC BOMB CASUALTIES. Rausuke Shirabe. (Nagasaki Medical School, Nagasaki (Japan)). (nd). 32p. (NP-4556; NP-4561). NSA 7-3684.

1264

SYMPOSIUM OF EXPOSED SURVIVORS HELD (in) HIROSHIMA (on) MARCH 28, 1952. (Hiroshima Communications Hospital (Japan)). 25p. (NP-4557; NP-4562).

Summary of experiences of 19 staff members of Hiroshima Communications Hospital at time of atomic explosion and during period following. NSA 7-3685.

1265

BIBLIOGRAPHY OF A-BOMB MATERIAL COLLECTED THROUGH APRIL 17, 1952. (Atomic Bomb Casualty Commission). 27p. (NP-4552; NP-4563).

Published and unpublished material on effects of atomic bombing at Hiroshima and Nagasaki are listed. Field observations on radioactivity and clinical data on survivors are included. NSA 7-3686.

1266

FOOD IRRADIATION AND ASSOCIATED STUDIES; PROGRESS REPORT DEC. 1, 1952. (Columbia Univ.). 69p. (NYO-3319; Progress Report 3).

Studied mechanism of γ -induced oxidation of ferrous sulfate; effect of γ radiation on vitamin A in butter, cheese, cream and margarine; on tocopherols and peroxides in wheat germ oil; on *A. javanicus* and oleic acid; animal feeding tests with foods exposed to high-energy radiations; mechanism of riboflavin destruction; induced resistance to γ radiation in *E. coli*. NSA 7-3687.

1267

THE CAPACITY OF THE ANTERIOR PITUITARY GLAND TO FUNCTION AFTER HEAVY IRRADIATION. Bennet M. Allen, Ole A. Schjeide, Ronald T. Piccirillo, and Gerald Kowitz. (Atomic Energy Project, Univ. of Calif., Los Angeles). Apr. 28, 1953. 25p. (UCLA-254) *J. Exptl. Zool.* **124**, 131-45 (1953).

Pituitary glands of heavily irradiated recently metamorphosed donor toads were transplanted into immature tadpoles. Stimulation was measured by growth of hind limbs and shedding of larval teeth. X rays to 20,000 r reduced activity of transplants, while 50,000 to 200,000 r γ radiation permitted slight but significant growth; caused gross injury to transplants. NSA 7-3688.

1268

BLOOD RETENTION OF INTRAVENOUSLY INJECTED COLLOIDAL PRODIGIOSIN IN NORMAL AND X-IRRADIATED RABBITS. AN INDEX OF PHAGOCYTIC FUNCTION IN THE RE SYSTEM. George V. Taplin, Camille Finnegan, Philip Noyes, and Gerald Sprague. (Atomic Energy Project, Univ. of Calif., Los Angeles). May 1, 1953. 24p. (UCLA-255); *Am. J. Roentgenol Radium Therapy Nuclear Med.* **71**, 294-305 (1954). NSA 7-3689.

1269

PERFORMANCE STUDIES ON ANIMALS EXPOSED TO EXTERNAL RADIATION. PART 3. FURTHER STUDIES OF THE EFFECTS OF X IRRADIATION UPON THE PERFORMANCE OF RATS IN A DAILY EXHAUSTIVE EXERCISE TEST. PART 4. THE RELATIONSHIP BETWEEN THE NUMBER OF POST-IRRADIATION EXERCISE TRIALS AND LETHALITY IN ANIMALS EXPOSED TO ROENTGEN RAYS. D. J. Kimeldorf, D. C. Jones, and T. J. Castanera. (Naval Radiological Defense Lab.). Feb. 6, 1953. 25p. (USNRDL-390). NSA 7-3690.

1270

ACTION OF RADIATION OF RADIOACTIVE PHOSPHORUS (P^{32}) ON RABBIT SKIN. V. S. Menasov. *Vestnic Venerol. i Dermatol.*, 16-20 (1953). Jan. - Feb. (In Russian).

Skin of rabbits was exposed to varying doses of β radiation from P^{32} . Dermal layer swelled rapidly; showed much infiltration by histocytes and polynuclears. With 800 r epidermis had slight protuberance, and monotropic changes occurred in coarse nerve trunks and in capillary nerve fibrils. Hair falls out and there is atrophy of capillary follicles after 600 r. Deep ulcers and extensive scarring are produced by 3000 r. NSA 7-3691.

1271

THE LETHAL DOSE OF WHOLE-BODY TANTALUM¹⁸² GAMMA IRRADIATION FOR THE BURRO (*EQUUS ASINUS ASINUS*). John H. Rust, James L. Wilding, Bernard F. Trum, C. S. Simons, A. W. Kimball, Jr., and Cyril L. Comar. *Radiology* **60**, 579-82 (1953). Apr.

$LD_{50/30}$ value estimated to be 651 r, with a 95% confidence interval of 621 to 683 r. Mean survival time of all animals dying of acute whole-body irradiation was 26.5 days. Range of survival time was 20-41 days. NSA 7-3692.

1272

WHOLE BODY IRRADIATION OF LARGE ANIMALS.

Bernard F. Trum. *Military Surgeon* 112, 333-41 (1953). May.

Observations reported on 150 burros irradiated on exposure field activated by Ta^{182} and Co^{60} and designed to produce a near-constant flux of γ radiation on any part of field. Comparison made with findings in radiation studies on other animals. NSA 7-3693.

1273

THE BASIS OF THE OXYGEN EFFECT ON X-IRRADIATED DROSOPHILA SPERM. William K. Baker and Elizabeth S. Von Halle. *Proc. Natl. Acad. Sci. U.S.* 39, 152-61 (1953). Mar.

Data interpreted on basis that O_2 concentration affects amount of restitution of chromosome breaks taking place in sperm. Low concentration during irradiation makes restitution more likely, and broken ends apparently rejoin more quickly. Results lend support to differential reunion hypothesis of O_2 action rather than to differential breakage hypothesis. NSA 7-3694.

1274

THE EFFECT OF BORON ENRICHMENT OF SLOW NEUTRON-IRRADIATED TISSUES. Alan D. Conger. *Genetics* 38, 128-33 (1953). Mar.

An increase in chromatid aberrations in *Tradescantia* produced by a unit dose of thermal neutrons has been caused by enrichment of the tissue's B content. Increase in effect due to α rays from $B^{10}(n,\alpha)Li^7$ reaction. For same neutron dose, enriched plants showed 4-5 times as many aberrations as nonenriched normal plants. NSA 7-3695.

1275

FURTHER INVESTIGATIONS INTO THE PROBLEM OF THE WHOLE-BODY IRRADIATION OF THE WHITE MOUSE. INSTANTANEOUS DEATH BY RADIATION. B. Rajewsky, O. Heuse, and K. Aurrand. *Z. Naturforsch.* 8b, 157-9 (1953). Mar. (In German).

Subjection of white mice to radiation from Ra and x rays of 250 r to 190,000 r resulted in shortening of life span, and proved dependent upon amount and rate of dose. NSA 7-3696.

1276

SENSITIZATION AND REACTIVATION OF X-IRRADIATED COLON-BACTERIA THROUGH HEAT. H. Langendorff, M. Langendorff, and K. Sommermeyer. *Z. Naturforsch.* 8b, 117-22 (1953). Mar. (In German). NSA 7-3697.

1277

INFLUENCE OF BETAMERCAPTOETHYLAMINE AND THYMUS EXTRACT ON THE NUMBER OF GUINEA PIGS SURVIVING IRRADIATION WITH X RAYS. Charles M. Gros and Jean Comsa. *Compt. rend.* 236, 1611-13 (1953). Apr. 20. (In French).

Four groups of 15 guinea pigs each treated thus: (1) was injected intraperitoneally with 20 mg of β -mercaptoethylamine immediately post irradiation; (2) received subcutaneous injections of thymus extract 1 day post irradiation; (3) received both treatment; (4) had no treatment. After 5 months 7 of (1) survived, 6 of (2), 12 of (3), and 3 of (4). NSA 7-3698.

1278

THE INABILITY OF CROSS TRANSFUSION OR SPLEEN PERFUSION TO AFFECT THE SURVIVAL OF X-IRRADIATED DOGS. Jack R. Leonards, Charles R. Heisler, G. Warren Buckaloo, Paul S. Lavik, and Hymer L. Friedell. (Atomic Energy Project, Western Reserve Univ.). Apr. 10, 1953. 16p. (NYO-4012). NSA 7-3699.

1279

CONTRIBUTION OF RADIOCHEMISTRY TO RADIO-BIOLOGY. C. Piffault, J. Duhamel, and D. Longuet. *Acta Radiol.* 39, 64-72 (1953). Jan. (In French).

Certain lipids protect unicellular organisms against irradiation; modification of suprarenal emission of lipids protects against radiation in higher organisms. Spectrophotometric study was made of protective effect of glycerol upon several colored oxidation-reduction tests. Mechanism of effect is associated with presence of O_2 in environment, confirming recent results. NSA 7-3700.

1280

EFFECT OF ANTIHISTAMINE SALVE ON X-IRRADIATED SKIN. A. Stolz. *Deut. med. J.* 3, 582-4 (1952). Dec. 15. (In German).

Skin phenomena directly produced by x rays are related to liberation of histaminic substances. Skin reactions show good response to antihistamine salve, skin tolerance being raised at same time. Author reports objective and subjective results of self-experimentation by means of 200 to 1400 r irradiations on thigh. NSA 7-3702.

1281

INFLUENCE OF HOMOLOGOUS TISSUE FACTORS ON DNA TURNOVER AND RADIATION PROTECTION. Lola S. Kelly, and Hardin B. Jones. *Am. J. Physiol.* 172, 575-8 (1953). Mar.

Substances which stimulate DNA formation derived from rapidly growing tissues, may offer some protection against radiation effects. NSA 7-3703.

1282

EFFECT OF ACTH, CORTISONE, AND DCA ON THE RADIATION SYNDROME. Erik Odeblad. *Svenska Lakartidn.* 49, 2835-9 (1952). Nov. 14. (In Swedish).

Mice were injected with ACTH, cortisone or DCA either 1 hr before or 1 hr after 650 r whole-body x irradiation. Weight changes and mortality date are tabulated. NSA 7-3704.

1283

SYMPOSIUM ON BURNS. J. W. Brooks. National Academy of Sciences (U.S.) National Research Council Nov. 2-4, 1950. Washington, D. C. (1951).

If dogs with standardized 20% second degree thermal burn also received 100 r x ray exposure, the death rate increased from 12% to 75%. Even 25 r raised death rate (to 20%). Increased mortality is attributed to β hemolytic streptococcal infections; could be prevented by administration of penicillin.

1284

SOME EFFECTS OF X-IRRADIATION ON BLOOD. II. HEMATOLOGICAL OBSERVATIONS. A. Piney and W. V. Mayneord. *Brit. J. Radiol.* 1, 263-272 (1928).

Experiments on the results of irradiation of blood from rabbits' ears are described. Large doses of x rays cause irreparable injury to lymph adenoid tissue, but have less effect on myeloid leucocytes, while red corpuscles are little affected. Monocytosis following irradiation is characteristic of intense injury, and when persistent, is indicative of approaching death. Bone marrow is almost uninjured.

1285

EFFECT OF ROENTGEN RAYS ON THE HEART. A. S. Warthinin, and E. A. Pohle. *Arch. intern. med. exptl.* 43, 15-34 (1929).

Microscopic changes in heart muscle of rats, and of rabbits following a series of exposures were studied.

1286

THE ACTION OF RADIUM EMANATION ON DIURESIS. R. Agnoli. *J. physiol. et pathol. gen.* 26, 28-33 (1928). (French). BA 5-19618.

1287

A FACTOR OF IMPORTANCE IN THE RADIO SENSITIVITY OF TUMOURS. J. C. Mottram. *Brit. J. Radiol.* 9, 606 (1936).

Author studied changes in tar warts in mice after γ irradiation (radium); found cells at margin of carcinomas more sensitive than central cells; suggests difference may be due to difference in oxygen supply. Problem of tumor radiosensitivity in general is considered. It is suggested that therapeutic radiation should be spaced to catch tumor in radiosensitive (i.e. growing) state.

1288

THE EFFECTS OF EXTERNAL IRRADIATION WITH BETA RAYS ON THE PERIPHERAL BLOOD OF RABBITS. J. R. Raper and K. K. Barnes. National Nuclear Energy Series IV. Vol. 22E, Paper No. 10. p.179-84 (1951).

Contents: Results of experiments in which rabbits received total surface irradiation with beta rays, in doses ranging from 1500 rep to 59,000 rep; no direct effect on the cellular constituents of peripheral blood was observed.

1289

THE EFFECT OF RADIATION FROM INTRAPERITONEALLY INJECTED RADIUM CHLORIDE UPON THE HEMOPOIETIC ACTIVITY OF THE BONE MARROW IN ALBINO RATS. P. G. Rooft, and H. G. Bingham. Univ. Kansas Sci. Bull. 35, 945-60(1953).

1290

ON RADIATION INDUCED CARCINOMA, HEREDITARY TISSUE DEGENERATION, IN ANTIRRHINUM (LÖWENMAUL). (German). Emmy Stein. Strahlentherapie 37, 137-141 (1930).

The mutations produced are extremely variable and always harmful. Phytocarcinoma induced by radiation represent alterations in the hereditary substances in the chromosomes. BA 5-22832.

1291

CYTOGENETIC EFFECTS OF RADIATIONS ON BACTERIA; FINAL PROGRESS REPORT (FOR) MARCH 1, 1952-FEBRUARY 28, 1953. Joshua Lederberg. (Wisconsin Univ.). Mar. 1, 1953. 6p. (AECU-2544).

Transducing elements in lysates from bacteriophages of *E. coli* and *S. typhimurium* were studied. NSA 7-3994.

1292

THE EFFECT OF SOMATOTROPIC HORMONE AND STREPTOMYCIN ON MICE EXPOSED TO TOTAL BODY X-IRRADIATION. Lee E. Gordon, C. Philip Miller, and Helen Jo Hahne. (Institute of Radiobiology and Biophysics, Univ. of Chicago). (1952). 11p. (AECU-2553). Proc. Soc. Exptl. Biol. Med. 83, 85-8 (1953).

Treatment with somatotrophic hormone and/or streptomycin failed to reduce mortality of mice exposed to 550 r total-body x rays. Mice receiving both drugs maintained body weight, while those receiving either drug alone lost weight. NSA 7-4003.

1293

INTRANUCLEAR CHANGES RESULTING FROM EXPOSURE TO IONIZING RADIATION AS DETECTED IN FROZEN-DRIED PREPARATIONS. Margaret W. Holt, Sheldon C. Sommers, and Shields Warren. (Cancer Research Inst., New England Deaconess Hospital, Boston). (1952). 9p. (AECU-2569).

Authors describe vacuoles observed within chromosomes of mitotically dividing cells and within nuclei in frozen-dried, Feulgen-stained preparations of liver, kidney and spleen from irradiated mice and rats, and in preparations of irradiated Ehrlich mouse ascites tumor. NSA 7-4004.

1294

THE EFFECT OF COBALT-60 GAMMA RADIATION ON PASSIVE IMMUNITY. William M. Hale and Richard D. Stoner. (Brookhaven National Lab.). (1952). 17p. (BNL-1368); Yale J. Biol. and Med. 25, 326-33 (1953).

Co⁶⁰ γ whole-body irradiation effectively destroys immunity to pneumococcus infection even when abundant

specific antibody is present. When sufficient specific antibody is present at time of exposure, immunity to tetanus toxin is not destroyed by whole-body irradiation. Active immunity to influenza Type A virus is unaltered by this irradiation. NSA 7-4005.

1295

INDUSTRIAL APPLICATION OF GROSS FISSION PRODUCTS; QUARTERLY PROGRESS REPORT (FOR) OCTOBER 1, 1952-DECEMBER 31, 1952. Job 24. (Vitro Corp. of America). Feb. 2, 1953. 44p. (KLX-1385).

Most likely applications of fission product sources to industrial sterilization of foods and drugs will be for products which have good market and profit margin and for which no satisfactory alternative method exists. NSA 7-4006.

1296

SOME EXPERIMENTAL APPROACHES TO THE THERAPY OF WHOLE BODY IRRADIATION. Henry A. Schlang, Eugene P. Cronkite, and George Brecher. (Naval Medical Research Inst., Bethesda). Feb. 20, 1953. 8p. (NP-4575; Lecture and Review Series).

Symptomatic, hematological and pathological effects of whole-body x rays on dogs are reviewed. Injections of blood platelets, intradermal bacteria filtrate, subcutaneous turpentine and pus failed to produce real therapeutic benefit in modifying radiation damage to hematopoietic system. NSA 7-4007.

1297

EFFECT OF PHENYLHYDRAZINE AND X-IRRADIATION ON THE SERUM IRON CONCENTRATION IN INTACT AND SPLENECTOMIZED RATS. Alfred Chanutin, Stephan Ludwig, Elizabeth A. Lentz, Edward R. Shissler, Paul Osborne, Arthur Gooch, and Richard Wesley. (Biochemical Lab., Univ. of Va., Medical School). (1952). 13p. (ORO-96); Am. J. Physiol. 173, 474-80 (1953). NSA 7-4008.

1298

STIMULATING EFFECT OF X RAYS ON THE PROCESS OF REGENERATION OF PERIPHERAL NERVES. K. F. Galkovskaya. Doklady Akad. Nauk S.S.S.R. 87, 677-9 (1952). Dec. 1. (In Russian).

Recovery, in terms of reaction to acid, raising of limbs and mobility of denervated limbs, of axolotls was studied after x ray doses of 1500 r at rate of 300 r/wk. Irradiated animals showed improved recovery in relation to denervated controls. NSA 7-4009.

1299

INFLUENCE OF OXYGEN UPON GENETIC AND NON-GENETIC EFFECTS OF IONIZING RADIATION ON *PARAMECIUM AURELIA*. R. G. Kimball and Nenita Gaither. Proc. Soc. Exptl. Biol. Med. 82, 471-7 (1953). Mar. NSA 7-4010.

1300

THE DETERMINATION OF THE LETHAL DOSE 50/30 OF TOTAL BODY X-RADIATION FOR DOGS. Chester A. Gleiser. Am. J. Vet. Research 14, 284-6 (1953). Apr.

Dogs of Walker Foxhound variety were exposed to doses of bilateral total-body x rays varying from 3000 to 200 r from 2000 kvp x-ray generator. $D_{50/30}$ found to be 315.6 r. Mortality data included. NSA 7-4011.

1301

THE SEQUENCE OF PATHOLOGICAL EVENTS IN DOGS EXPOSED TO A LETHAL DOSE 100/30 OF TOTAL BODY X-RADIATION. Chester A. Gleiser. Am. J. Vet. Research 14, 287-97 (1953). Apr. NSA 7-4012.

1302

RELATIVE BIOLOGICAL EFFECTIVENESS OF 17

MEV ELECTRONS. Austin M. Keller, J. S. Laughlin, and H. Quastler. *Brit. J. Radiol.* 26, 152-3 (1953). May.

Biological effectiveness of 170 Mev electrons accelerated by betatron was compared with that of graded doses of 150-kvp x rays. Test reaction used was greying of hair in mice. For particular test reaction, high-energy electrons are quantitatively equivalent to high-energy x rays. NSA 7-4013.

1303

THE COMBINED EFFECTS OF CORTISONE AND ROENT-GEN RADIATION UPON NATURAL AND INDUCED RESISTANCE TO HOMOTRANSPLANTATION OF MOUSE LEUKEMIA, LINE L₁. A. A. Werder, Jack Friedman, E. E. MacDowell, and J. T. Syverton. *Cancer Research* 13, 158-64 (1953). Feb. NSA 7-4014.

1304

EFFECT OF β -MERCAPTOETHYLAMINE ON THE SECRETION OF NUCLEIC ACIDS BY THE SPLEEN FOLLOWING WHOLE-BODY X IRRADIATION. Charles Gros, Paul Mandel, and Jean Rodesch. *Compt. rend.* 236, 2010-12 (1953). May 18. (In French).

Injection of β -mercaptoethylamine before exposure to 700 r of 180-kv x rays reduced destruction, observed between 4th and 14th day post irradiation, of pentose and desoxypentose nucleic acids in spleens of rats. Protective effect was exerted on both cytoplasm and nuclei of this radiosensitive organ. NSA 7-4015.

1305

HEMATOLOGIC STUDIES ON DOGS RECEIVING LOW DOSES OF TOTAL BODY IRRADIATION. Florian J. Ragaz and Hans J. van Baaren. *Proc. Soc. Exptl. Biol. Med.* 82, 419-24 (1953). Mar.

Qualitative differences in peripheral blood and bone marrow of dogs after single or divided doses of 100 r total body x irradiation are presented. NSA 7-4016.

1306

EFFECT OF REPEATED DOSES OF EXTERNAL AND INTERNAL IRRADIATION ON STRUCTURE OF THE SPLEEN. Horace Goldie, Gadson J. Tarleton, Jr., Barbara R. Jeffries, and Paul F. Hahn. *Proc. Soc. Exptl. Biol. Med.* 82, 395-9 (1953). Mar.

Changes in spleen structure of mice exposed to various doses of internal radiation from injected colloidal Au¹⁹⁸ and to external x radiation are summarized. NSA 7-4017.

1307

EFFECT OF X RAYS UPON THE EVOLUTION OF THE TESTICLE AND THE APPEARANCE OF SECONDARY SEXUAL CHARACTERISTICS IN *LEBISTES RETICULATUS*. E. Follenius. *Compt. rend. soc. biol.* 146, 1774-6 (1952). Nov. (In French).

Young fish were irradiated with 4 to 6000 r in 2 doses at 2- or 3-day intervals. Autopsies done 6-11 months after irradiation and after complete sexual differentiation showed sterilization of testicles, but development of secondary sexual characteristics was not prevented. NSA 7-4018.

1308

PROGRESS OF DEGENERATION OF THE GERMINAL CELLS IN THE ADULT MALE *LEBISTES RETICULATUS* AFTER X IRRADIATION. E. Follenius. *Compt. rend. soc. biol.* 146, 1776-8 (1952). Nov. (In French).

Fish were irradiated with single dose of 6000 r x rays, which produced progressive degeneration of germinal elements in the testicle. Degeneration, which continued to sterility, described in detail. NSA 7-4019.

1309

RADIATION EXPOSURE SURVEY OF X-RAY AND ISOTOPE PERSONNEL, PART 2. Charles K. Spalding, Egilda DeAmicis, and Russel F. Cowing. (Cancer Research Inst., New England Deaconess Hospital, Boston and Laboratory of Pathology, Harvard Cancer Commission).

(1952). 13p. (AECU-2570); *Nucleonics* 11, No. 9, 46-7 (1953).

Data presented for groups using radioisotopes for diagnosis and therapy show x-ray workers receive considerably more radiation exposure than isotope workers. Importance of personnel monitoring and safety education is stressed. NSA 7-4020.

1310

RADIOBIOLOGY: IRRADIATION LETHALITY AND PROTECTION. Roberts Rugh. *Military Surgeon* 112, 395-413 (1953). June.

Problems associated with radiation dosage determinations in biological systems, meaning of LD/50-30 days, factors contributing to radiation death and methods of protection against radiation injury are reviewed. NSA 7-4021.

1311

SAFE DISPOSAL OF CONTAMINATED AIR FROM RADIO-CHEMICAL LABORATORIES. J. W. J. Fay. *Chem. and Process Eng.* 34, 133-6 (1953). May. NSA 7-4022.

1312

ASSOCIATED ACTION OF STREPTOMYCIN AND HEMATOPOIETIN ON MICE SUBJECTED TO A LETHAL X IRRADIATION. Paul-Edouard Genaud and Robert Meot. *Compt. rend.* 236, 2004-6 (1953). May 18. (In French).

Hematopoietin, hematopoiesis hormone was injected in the form of serum of twice-bled horse at rate of 1 cc/day into mice after whole-body irradiation of 700 r of 190 kv x rays. Streptomycin was also injected in doses of 6 mg/day, both injections starting on 4th day post-irradiation. Survival rates at 30 days post-irradiation: control-0%, hematopoietin alone-0%, streptomycin alone-70%, and hematopoietin plus streptomycin-100%. NSA 7-4023.

1313

TREATMENT OF RADIATION INTOXICATION WITH "ROKAN." J. Lackner. *Strahlentherapie* 89, 283-7 (1952). (In German).

Administration of Rokan (combination of nux vomica and extract from oats and other grains with special vitamin-rich-ingredient) to 80 patients proved beneficial with no detrimental side effects in treating radiation intoxication. Preparation proved superior to conventional remedies for this condition. Electrophoretic spot checks revealed no evidence of changes in known alterations of protein fraction of blood during course of radiation intoxication. NSA 7-4024.

1314

OVARIAN IRRADIATION AND THE HEALTH OF THE SUBSEQUENT CHILD. V. P. Murphy. *Surg. Gynecol., Obstet.* 48, 766-779 (1929).

1315

THE STAGES IN CALCIFICATION OF THE RAT KIDNEY AFTER THE ADMINISTRATION OF URANIUM NITRATE. Lewis K. Dahl. *J. Exptl. Med.* 97, 681-93 (1953). May.

Histological effects produced by this agent over wide range of dose levels were nearly identical in character and differed principally in speed of evolution. Deposition of Ca always began at foci in cytoplasm of cells of the proximal convoluted tubules of inner cortex and remained intracellular until cell boundaries were destroyed. NSA 7-4031.

1316

THE EFFECT OF THE ROENTGEN RAYS ON HEART CULTURE IN VITRO. (In German). A. H. Roffo. *Strahlentherapie* 19, 745-58 (1952).

The artificially cultured heart cell is radioresistant. (Based on author's summary).

1317

RESEARCH ON THE BIOLOGICAL ACTIONS OF X

RAYs. (in French). J. Sabrazes and P. Riviere. *Compt. rend. acad. sci.* 124, 979 (1897).

1318

ON DELAYED REACTIONS IN ROENTGEN IRRADIATED TISSUES. M. A. Magath. *Strahlentherapie* 32, 534-49 (1929).

After x irradiation, pH of chick embryo tissues decreased. When chick embryos were exposed *in ovo*, the pH change was observed in skin mesenchyme and muscle but not in liver or brain. The effect on pH was absent in mouse liver and in cancer tissue.

1319

THE EFFECT OF X-IRRADIATION ON NUCLEASE ACTIVITY AND RESPIRATION OF *TETRAHYMENA GELEII*. Herbert J. Eichel and Jay S. Roth. *Biol. Bull.* 104, 351-8 (1953). June.

The enzymes RNase and DNase and respiration were studied in *T. geleii* exposed to 6300 r/min. Respiration decreased 30% after 300,000 r and 40% after 500,000 r. Addition of cysteine prior to irradiation gave 50% protection as measured by O₂ consumption. Homocystine and pyruvate activities were not changed in homogenates after either 300,000 or 500,000 r although activity of both enzymes was reduced 50% when homogenates *per se* irradiated with 500,000 r. NSA 7-4268.

1320

MITOTIC EFFECTS OF PROLONGED IRRADIATION WITH LOW-INTENSITY GAMMA RAYS ON THE CHOROTOPHAGA NEUROBLAST. J. Gordon Carlson, Nyra G. Harrington, and Mary Esther Gauden. *Biol. Bull.* 104, 313-22 (1953). June.

Prolonged treatment of neuroblasts with low-intensity γ radiation reduces mitotic activity much less than a comparable dose given at high intensity. NSA 7-4269.

1321

X-RAY SENSITIVITY OF HUMAN RETINA. H. Bornschein, R. Pape, and J. Zakovsky. *Naturwissenschaften* 40, 251 (1953). Apr. (In German).

Quantitative data on ability of dark-adapted human eye to see x rays were obtained from 6 experimental subjects, of which 4 were normal, 1 suffered from congenital hemeralopia and 1 had retinitis pigmentosa. NSA 7-4270.

1322

EFFECT OF LARGE DOSES OF X RAYS ON PROTHALLIUM OF FERN (*DRYOPTERIS SPINULOSUM*). L. P. Breslavets. *Doklady Akad. Nauk S.S.S.R.* 87, 143-6 (1952). Nov. 1. (In Russian).

Modifications in plastids of fern prothallium exposed to 1,000,000 r of 90 kv x rays are described. NSA 7-4271.

1323

THE FORMATION OF TETANUS ANTITOXIN BY SPLEEN AND LYMPH NODE INTRAOCULAR TRANSPLANTS. William M. Hale and Richard D. Stoner. (Brookhaven National Lab.). (1953). 23p. (BNL-1409).

Lymph node and spleen tissue from immunized donor mice produce tetanus antitoxin when transplanted to anterior chamber of eye of γ -irradiated recipients. More antitoxin is formed by transplants from immunized donors when recipients are injected intravenously with fluid tetanus toxoid. NSA 7-4304.

1324

STUDIES ON CELL DIVISION. 1. ALPHA RADIATION AS A DIVISION INHIBITING AGENT. E. S. Spoerl and R. J. Balske. April 28, 1953. Dec. June 1, 1953. 35p. (AECD-3528; MLM-820).

Yeast cell division was stopped by alpha radiation but growth in size and weight continued. *E. coli* cell division was also stopped. Cells became elongated and developed cross walls. NSA 7-4306.

1325

STUDIES WITH RADIOPHOSPHORUS IN *DROSOPHILA*. 2. THE EFFECT OF P³² TREATMENT UPON DEVELOPMENT. Robert C. King. (Brookhaven National Lab.). (1953). 13p. (BNL-1406).

Exposure of developmental stages of *D. melanogaster* to media of activities over 5 μ c/g kills embryo, larvae and pupas, retards development and produces sterile adults. Females are more resistant to P³² than are males. External radiation from medium is relatively unimportant in killing insects. NSA 7-4307.

1326

THE RELATIVE BIOLOGICAL EFFECTIVENESS OF TRITIUM IN DEPRESSING IRON UPTAKE IN RATS. John Furchner, John Storer, and Virginia Lotz. (Los Alamos Scientific Lab.). Mar. 1953. 19p. (LA-1544).

Rats were exposed to total-body β radiation by intravenous injections of tritium oxide, and injected with Fe⁵⁹Cl₃ on 2nd day post irradiation. Bone marrow damage was measured by comparing Fe⁵⁹ uptake by red blood cells in exposed and control animals. Tritium β radiation has relative biological effectiveness of 1.59 as compared with that of Co⁶⁰ γ radiation in parallel experiment. NSA 7-4308.

1327

BIOLOGICAL AND MEDICAL ASPECTS OF IONIZING RADIATION. THE EFFECT OF X-RADIATION ON THE ISOLATED FROG HEART. Eugene B. Konecni and Herbert B. Gerstner. (School of Aviation Medicine). May 1953. 10p. (NP-4594; Report 3).

Isolated frog hearts treated with 3000 r/min had no ventricular contractions during a 40 minute exposure; ventricle was in extreme dilation. Such marked disturbance of cardiac rhythm makes isolated heart suitable for screening agents protective against ionizing radiation. NSA 7-4309.

1328

THERAPEUTIC ACTION OF GLUTATHIONE AND MERCAPTOETHYLAMINE AGAINST A LETHAL DOSE OF X-RAYS. J. H. Maisin, G. Lambert, M. Mandart, and H. Maisin. *Nature* 171, 971 (1953). May 30.

Reduced glutathione and β -mercaptoethylamine have therapeutic action when injected into liver-shielded rats exposed to lethal total-body x-ray dose. NSA 7-4311.

1329

THE X-IRRADIATION OF MARINE GAMETES. A STUDY OF THE EFFECTS OF X-IRRADIATION AT DIFFERENT LEVELS ON THE GERM CELLS OF THE CLAM, *SPISULA* (FORMERLY *MACTRA*). Roberts Rugh. *Biol. Bull.* 104, 197-209 (1953). Apr.

Clam spermatozoa were found to be more radioresistant than eggs (as measured by ability to cleave and develop). No protection against radiation injury of gametes and early-developing forms was conferred by cysteine hydrochloride or by β -mercaptoethylamine. NSA 7-4312.

1330

HEPATIC GLYCOGEN IN ACUTE RADIATION DEATH. Barnett Levy and Roberts Rugh. *Proc. Soc. Exptl. Biol. Med.* 82, 223-5 (1953). Feb.

Drastic depletion in liver glycogen was demonstrated in warm-blooded animals and amphibia after exposure to lethal x ray dose. Use of liver response as a diagnostic aid in determining extent of radiation damage is discussed. NSA 7-4313.

1331

EFFECTS OF FRACTIONATED DOSES OF X-RADIATION ON NORMAL AND TUMOR TISSUE. L. C. Fogg and R. F. Cowing. *Cancer Research* 13, 321-6 (1953). Apr.-May.

Fractionated doses of 294 r produce a greater effect on spermatogonia and spermatocytes in partially shielded mice

than does an equivalent acute (single) dose. Induced resistance apparently is not achieved by repeated doses. NSA 7-4314.

1332
THE PROTECTIVE EFFECT OF INTRAOCULAR TRANSPLANTS UPON COBALT-60 GAMMA IRRADIATED MICE. Richard D. Stoner and William M. Hale. (Brookhaven National Lab.). (1952). 20p. (BNL-1401). NSA 7-4316.

1333
CHEMICAL PROTECTION AGAINST X RAYS; THERAPEUTIC TESTS. A. Hervé and Z. M. Bacq. J. radio. et électrol. 33, 651-5 (1952). (In French).

Therapeutic effects of amine derivatives and β -mercaptoethylamine are discussed. Results obtained with injections of the latter in 30 cases of radiation sickness are tabulated. NSA 7-4318.

1334
THE ACUTE INHALATION TOXICITY OF CARNOTITE ORE DUST: A THIRTY-DAY STUDY. H. B. Wilson, H. E. Stokinger, and G. E. Sylvester. (Atomic Energy Project, Univ. of Rochester). Mar. 31, 1953. 22p. (UR-229).

Rabbits, rats and a goat were exposed to inhalation of a carnotite ore dust assaying 20% U and 5% V. Toxicity evidenced in rabbits by (1) high mortality, (2) weight loss, (3) sharp increase of blood nonprotein N, (4) incidence of urinary protein, (5) histologic evidence of renal tubule damage and (6) basophilic stippling of blood cells in two animals; in rats by gross lung damage, (2) and (5); in goats by (5). NSA 7-4320.

1335
STUDIES ON THE TREATMENT OF INTERNAL RADIOACTIVE CONTAMINATION. 3. EFFECT OF CHEMICAL AGENTS ON THE SKELETAL CONTENT AND EXCRETION OF INJECTED STRONTIUM-89. S. H. Cohn and J. K. Gong. (Naval Radiological Defense Lab.). Feb. 25, 1953. 17p. (USNRDL-393).

Salts of EDTA alone or combined with Zr citrate or BAL had no effect on skeletal distribution of Sr^{89} . The observed level of Sr^{89} in skeleton 40% lower than that in controls at 5 days results from pre-injection administration of the therapeutic agents. NSA 7-4322.

1336
THE ABSORPTION AND TRANSLOCATION BY PLANTS OF RADIOACTIVE ELEMENTS FROM "JANGLE" SOIL. A. A. Selders, J. H. Rediske, and R. F. Palmer. Feb. 16, 1953. 12p. (HW-27620).

Uptake of radioactive elements from Jangle test-site soil by 4 species was increased by addition of nutrients to soil. In no case was uptake over 2.8% of the activity in soil on a concentration basis. NSA 7-4326.

1337
THE INFLUENCE OF X-IRRADIATION ON THE DISAPPEARANCE OF RADIOACTIVE TRACERS FROM CIRCULATING BLOOD. William J. MacIntyre, H. L. Friedell, and M. Berg. (Atomic Energy Project, Western Reserve Univ.). May 25, 1953. 21p. (NYO-4014).

No change in disappearance rate of ^{131}I -tagged serum albumin or ^{32}P -tagged red blood cells was detected for 6 hr. after 1000 r dose of x rays. NSA 7-4327.

1338
THE EFFECTS OF X-RAYS ON RABBITS. PART III. EFFECTS ON THE LEUCOCYTES. G. A. Sacher, and N. Perlman. National Nuclear Energy Series IV, 22B, p.290-316. Raymond E. Zirkle, ed. New York, McGraw-Hill Book Co., Inc. 1954.

Changes in the number of circulating heterophils and lymphocytes of rabbits exposed to single x-ray doses was investigated.

1339
MULTIPLICATION OF COXSACKIE VIRUS IN ADULT MICE EXPOSED TO ROENTGEN RADIATION. F. S. Cheever. (Pittsburgh Univ., Graduate School of Public Health). (1953). 21p. (AECU-2584); J. Immunol. 71, 431-5 (1953).

Mice received a whole-body x ray dose 24 to 120 hr before intraperitoneal inoculation of Powers strain of Cocksackie virus. Mice from each group were sacrificed and viral content of selected organs determined. Virus could be demonstrated longer in organs of irradiated mice as compared to non-irradiated controls. Former gave consistently higher viral titer. NSA 7-4535.

1340
INFRARED SPECTROSCOPY OF LIVER GLYCOGEN. STUDIES OF FETAL LIVER BEFORE AND AFTER X-RAY IRRADIATION. H. P. Schwarz, H. E. Riggs, C. Glick, J. McGrath, R. Childs, E. Bew, Jr., and F. Stone. (Philadelphia General Hospital). (1953). 19p. (AECU-2585).

Infrared absorption band found at 9.70 to 9.60 μ is definitely assigned to glycogen. Location and band differs in adult and fetal liver. After x irradiation there are acute and delayed effects, the former decreasing and the latter increasing liver glycogen. NSA 7-4536.

1341
SOME EFFECTS OF ACUTE IRRADIATION INJURY IN DOGS. Roy E. McDonald, Ross E. Jensen, Herbert C. Urry, Vern S. Bolin, and Philip B. Price. (1951). 16p. (AECU-2587).

More than 100 dogs were given single mid-tissue doses of x rays ranging from 450 to 550 r. Data are given on fluid and electrolyte balance, effect on circulating red cell mass, plasma volume, blood volume and capillary permeability. Aside from tissue destruction, altered hematopoiesis and fever and infection, changes differ only in degree from those in non-irradiated dogs on restricted food intake. NSA 7-4537.

1342
EFFECT OF X-IRRADIATION ON WEIGHT AND CONTENTS OF THE RAT STOMACH, SMALL INTESTINE AND CECUM-COLON. Robert A. Conrad. (Naval Medical Research Inst., Bethesda). Jan. 19, 1953. 11p. (NM-006-012.04.58). NSA 7-4538.

1343
DEFECTS IN HEMOSTASIS PRODUCED BY WHOLE BODY IRRADIATION. E. P. Cronkite. (Naval Medical Research Inst., Bethesda and George Brecher, National Inst. of Arthritis and Metabolic Diseases, National Institutes of Health). Dec. 31, 1952. 34p. (NM-006-012.05).

Factors contributing to the bleeding state in irradiated animals are summarized. Data are presented on effects of various radiation doses on per cent mortality, survival time, blood clotting time, platelet count, prothrombin level and granulocyte count and on effects of treatment with antibiotics and platelet transfusions on bleeding state. NSA 7-4539.

1344
(PHYSIOLOGICAL EFFECTS OF RADIATION.) p.1-61 OF QUARTERLY PROGRESS REPORT NO. 7. (Air Force Radiation Lab., Univ. of Chicago). Apr. 15, 1953. (NP-4602(p.1-61)).

Studied: ATP-ase and 5-nucleotidase activity of spleen and thymus glands of rats and mice after whole-body x rays; effect of central nervous system stimulants on survival and weight loss of x-rayed rats; effect of pre-radiation Na azide injections; role of catalase formation on effects produced by H_2O_2 formation in radiation injury; injected hemin and radiation injury; carboxypeptidase

inhibitor level relative to survival time in rats. NSA 7-4541.

1345

(RADIATION EFFECTS.) p.62-114 OF QUARTERLY PROGRESS REPORT NO. 7. (Air Force Radiation Lab., Univ. of Chicago). Apr. 15, 1953. (NP-4602(p.62-114)).

Studied effect of x rays on action of analgesic agents that double reaction time of rats and mice to heat stimuli; effect of fatty acid esters as solvents for para-amino-propiophenone on survival of x-rayed mice; recovery in rate of cell division in x-rayed amoebae; LD₅₀ of rats as affected by anesthetization pre- or post-irradiation; effect of 200 r on frequency of pregnancy, sterility, and litter sizes of female mice; estimation of blood catalase activity. NSA 7-4542.

1346

IRRADIATION SARCOMA. Arthur Jones. Brit. J. Radiol. 26, 273-84 (1953).

Clinical aspects of irradiation-induced sarcoma are reviewed and 2 new cases are reported. One arose in an area of chronic radiodermatitis over sacrum 7 yrs after million-volt x-ray therapy for papilloma of the bladder. The other, an osteogenic sarcoma, occurred in the mandible 7 yrs after deep x-ray therapy for facio-cervical actinomycosis. NSA 7-4543.

1347

ALPHA-RAY DOSAGE IN BONE CONTAINING RADIUM. F. W. Spiers. Brit. J. Radiol. 26, 296-301 (1953). June.

Calculations are made of dose rates to soft tissue structures within bone containing Ra and its decay products. Accepted maximum permissible Ra burden is considered in light of these dose rates and the biological efficiency of α radiation is discussed in relation to carcinogenesis. NSA 7-4544.

1348

INFLUENCE OF SEVERAL NUTRITIONAL FACTORS ON THE MORTALITY OF THE MOUSE DUE TO X-RADIATION. R. Paris and J. Vevasseur. Therapie 8, 57-61 (1953). (In French).

Fodder beets, turnips, green cabbage, spinach, and carrots increased the radiosensitivity of rabbits, whereas red beets, red cabbage and lettuce decreased it. Diets rich in glucides and several proteins increased radiosensitivity while glucose decreased this effect. NSA 7-4545.

1349

ADDITIVITY OF RADIATION PROTECTION BY CYSTEINE AND SODIUM NITRITE IN MICE. L. J. Cole and M. E. Ellis. (Naval Radiological Defense Lab.). Apr. 3, 1953. 24p. (USNRDL-395).

Combination of cysteine and Na nitrite gives more pre-protection against supralethal irradiation than does either alone. Mortality of mice is not significantly affected by pretreatment with Na nitrite and ethanol. Level of methemoglobinemia is not prime factor in radiation pre-protection by means of Na nitrite. NSA 7-4546.

1350

PROTECTION AGAINST X-RAYS AND THERAPY OF RADIATION SICKNESS WITH β -MERCAPTOETHYLAMINE. Z. M. Bacq, G. Dechamps, P. Fischer, A. Herve, H. Le Bihan, J. Lecomte, M. Pirotte, and P. Rayet. Science 127, 633-6 (1953). June 5.

Good results following β -mercaptoethylamine injections are reported in 4 of 11 cases of leukemia, and in cases of radiation sickness in cancerous patients treated with ionizing radiation. Possible mechanisms are discussed. NSA 7-4548.

1351

THE RADIUM CONTENT OF PUBLIC WATER SUPPLIES. John B. Hursh. (Atomic Energy Project, Univ. of

Rochester). May 4, 1953. 27p. (UR-257); J. Am. Water Works Assn. 46, 43-54 (1954).

Ra concentration of raw-water sources used by 41 U. S. cities found to range from 0 to 65×10^{-16} g Ra/ml water. NSA 7-4709.

1352

X-RAY INACTIVATION OF POLYPLOID SACCHAROMYCES. W. H. Lucke and A. Sarachek. Nature 171, 1014-15 (1953). June 6.

Comparison of average post-irradiation survival curves for haploid, diploid, triploid, and tetraploid yeast indicates clearly a 1 to 1 correspondence between degree of ploidy and number of targets per cell. Interpretation of survival curves on multi-target basis is discussed. NSA 7-4712.

1353

TOTAL STERILIZATION OF THE GONADS AFTER TREATMENT WITH RADIOACTIVE PHOSPHORUS IN THE CYPRINODONTS LEBISTES AND XIPHAPHORES.

Jean Vivien. Compt. rend. 236, 2172-4 (1953). June 1. (In French).

Secondary sex characteristics developed at normal age in young fish despite complete sterilization. NSA 7-4713.

1354

EFFECT OF WHOLE BODY X-IRRADIATION ON NATURAL INHIBITOR OF CARBOXYPEPTIDASE. Robert N. Feinstein and John C. Ballin. Proc. Soc. Exptl. Biol. Med. 83, 8-10 (1953). May.

Whole-body x irradiation of mice, rats and rabbits at the LD₅₀ range increases activity of certain tissue cathepsins, apparently because of destruction of an enzyme inhibitor. Possible source of the inhibitor is the leucocyte, which may serve as an indicator of radiation exposure. NSA 7-4714.

1355

SUPPRESSION OF NORMAL BACTERICIDAL ACTION OF RABBIT SERUM FOLLOWING WHOLE BODY X-IRRADIATION. Stanley Marcus and David M. Donaldson. Proc. Soc. Exptl. Biol. Med. 83, 184-7 (1953). May.

First day after 650 to 725 r the bactericidal action of rabbit serum is normal; it is depressed by the 5th day and normal again by the 20th day. A 2nd dose of 650 r causes a longer depression of activity than the 1st. NSA 7-4715.

1356

CONTRIBUTIONS TO THE ENZYMOLOGY OF THE NORMAL AND CATARACTOUS LENS. III. ON THE CATALASE OF THE CRYSTALLINE LENS. E. A. Zeller. Am. J. Ophthalmol. 36, 51-3 (1953). June.

In the lens of 3 species a definite but small amount of H₂O₂-decomposing capacity was found. Agent responsible for reaction is heatlabile, does not dialyze through membranes and is blocked by typical catalase inhibitors. Thus, if H₂O₂ is produced in lens during irradiation, little protection is afforded this organ by its catalase. NSA 7-4720.

1357

PRESENT STATUS OF POLONIUM TOLERANCE ESTIMATIONS. J. B. Hursh and J. N. Stannard. (Atomic Energy Project, Univ. of Rochester). Oct. 14, 1948. Decl. with Deletions June 1, 1953. 33p. (AECD-3539; UR-44).

Summary of available information on distribution, excretion and toxicity of Po in biological systems. NSA 7-4722.

1358

EXPERIMENTAL DEMONSTRATION OF THE BACTERICIDAL EFFECT OF THORIUM X IN SOLUTION AND IN SALVE ON BACTERIA PATHOGENIC FOR THE EYE.

(German). Charalambos Spyropoulos. Arch. Augenheilk. 100/101, 418-438 (1929).

Authors tested action of thorium x on cultures of various organisms and concluded that there is little likelihood of favorable action on eye infections since radiation effect is very superficial and in vivo the organisms are enveloped in secretions and enclosed within cells. BA 6-7156.

1359

FRACTIONAL TOTAL BODY IRRADIATION AND THYROID FUNCTION IN THE BURRO. J. C. Schoolar, J. J. Lane, R. A. Monroe, J. H. Rust, and B. F. Trum. Science 120, 1032-3 (1954).

Thyroids of burros exposed to acute or fractional total-body irradiation have shown histological evidence of extreme stimulation, viz. hyperplasia of the epithelial cells and marked colloid depletion. After 600 to 800 r some animals began to concentrate iodine-131 to a marked degree; in others this function was depressed.

1360

THE EFFECT OF CHRONIC GAMMA RADIATION ON MUTATIONS IN MAIZE. 1. ENDOSPERM MUTATIONS. 2. EFFECTS ON POLLEN. W. Ralph Singleton. (Brookhaven National Lab.). (1953). 59p. (BNL-1419). NSA 7-4989.

1361

CYTOGENETIC EFFECTS OF X-RAYS AND THERMAL NEUTRON IRRADIATION ON SEEDS OF BARLEY. Richard S. Caldecott, B. H. Beard, and C. O. Gardner. (Nebraska Univ. and Brookhaven National Lab.). (1953). 37p. (BNL-1425); Genetics 39, 240-59 (1954).

A comparison made between effects of irradiating dormant seeds of barley with x rays and thermal neutrons, as measured by survival and frequency of chromosomal aberrations and mutations, shows that about 3.0×10^8 thermal neutrons/cm² are equivalent to 1 r from x radiation. NSA 7-4990.

1362

THE EFFECT OF SURGERY ON DOGS FOLLOWING WHOLE BODY X-IRRADIATION. Gordon E. Gustafson and Frank A. Cebul. (Atomic Energy Project, Western Reserve Univ.). Jan. 25, 1953. 22p. (NYO-4017). Surg. Gynecol. obstet. 98, 49-54 (1954).

Resection of a segment of ileum was well tolerated in dogs given 200 or 300 r whole-body x irradiation 20 hours earlier. Mortality in 18 pairs of dogs was 39% for animals receiving irradiation alone and 44% for those receiving irradiation and surgery. Most common pathological finding in dogs dying after irradiation was a profound bacterial pneumonitis. NSA 7-4991

1363

QUARTERLY TECHNICAL REPORT (FOR) JAN. 1, 1953 THROUGH MARCH 31, 1953. (Atomic Energy Project, Univ. of Rochester). May 29, 1953. 68p. (UR-260).

Studied urinary excretion of adrenal cortical steroids in pigs after 1000 r; effect of abdominal shielding on mortality of dogs following total-body and subtotal x irradiation; effect of intravenous injections of Piromen on dogs given LD₅₀ x ray dose; antibiotic therapy of radiation injury (dogs); use of whole blood in treating acute radiation syndrome (dogs); metabolic turnover of stroma of circulating red cells (rabbit); renal excretion of Ca (dogs). NSA 7-4992.

1364

EXPERIMENTAL ACUTE RADIODERMATITIS FOLLOWING BETA IRRADIATION. V. HISTOPATHOLOGICAL STUDY OF THE MODE OF ACTION OF THERAPY WITH ALOE VERA. C. C. Lushbaugh and D. B. Hale. Cancer 6, 690-9 (1953). July.

Rabbits were exposed locally on back to 14,000 and 28,000 rep of β radiation from Sr⁹⁰ and treated with fresh whole leaf Aloe vera and ointment made from these leaves. Treatment hastened both degenerative and reparative phases of the lesion. Treated ulcers healed in 2 mo., untreated ones were still incompletely healed 4 mo. post-irradiation. NSA 7-4994

1365

THE OCCURRENCE OF PLASMA CELLS AFTER IONIZING IRRADIATION IN DOGS. Frederick J. Wohlwill and Walter W. Jetter. Am. J. Pathol. 29, 721-9 (1953). July-Aug.

Histopathologic examination of dogs given chronic whole-body x ray dose demonstrated replacement of lymphocytes in lymphoid tissue by cells of a type that meets some or all of morphological criteria of plasma cells. NSA 7-4995.

1366

COMPARATIVE EFFECTS OF TOTAL BODY RADIATION, NITROGEN MUSTARD, AND TRIETHYLENE MELAMINE ON THE HEMATOPOIETIC SYSTEM OF TERMINAL CANCER PATIENTS. R. Kenneth Loeffler, Vincet P. Collins, and George A. Hyman. Science 118, 161-3 (1953). Aug. 7.

Comparative effects of total-body x radiation, nitrogen mustard, and triethylene melamine on the hematopoietic system were studied in 10 terminal cancer patients. Data indicate tolerance to doses of total-body x rays of 100 to 150 r. NSA 7-4996.

1367

EXPERIMENTAL ACUTE RADIODERMATITIS FOLLOWING BETA IRRADIATION. 1. ITS PATHOGENESIS AND REPAIR. C. C. Lushbaugh, J. B. Storer, and D. B. Hale. Cancer 6, 671-7 (1953). July.

Pathogenesis and repair of ulcerative radiodermatitis after exposure of abdominal skin of rats to β particles from Sr⁹⁰ and P³² are described. NSA 7-4997.

1368

CELLULAR CHANGES ACCOMPANYING ACUTE AND SUB-ACUTE X-IRRADIATION DEATH OF THE HAMSTER. II. THE ENDOCRINES. Roberts Rugh, Barnett Levy, and Lottie Sapadin. J. Cellular Comp. Physiol. 41, 359-74 (1953). June.

Endocrine glands are relatively radioresistant, although parts of some are radiosensitive. NSA 7-4998.

1369

EXPERIMENTAL ACUTE RADIODERMATITIS FOLLOWING BETA IRRADIATION. IV. CHANGES IN RESPIRATION AND GLYCOLYSIS. C. C. Lushbaugh and D. B. Hale. Cancer 6, 686-9 (1953). July.

O₂ uptake and anaerobic glycolysis were studied using skin of rats killed after local exposure to 14,000 and 28,000 rep of radiation from Sr⁹⁰. After an immediate transitory depression there was marked stimulation of O₂ uptake and glycolysis, most rapid rates occurring on 2nd post-irradiation day. Rates fell to normal by 4th to 6th days and, as necrosis developed, fell far below normal. On 10th day healing began and glycolytic rate rose. NSA 7-4999.

1370

EXPERIMENTAL ACUTE RADIODERMATITIS FOLLOWING BETA IRRADIATION. II. THE INHIBITION OF FIBROPLASIA. C. C. Lushbaugh and J. B. Storer. Cancer 6, 678-82 (1953). July.

Failure of fibroplasia to occur throughout skin damaged by irradiation and failure of subsequent ulcer healing by usual method of granulation-tissue production were studied in rats irradiated locally with β radiation. Results show cellular exudate develops promptly but fibroblasts fail to appear and proliferate in irradiated area. NSA 7-5000.

1371

EXPERIMENTAL ACUTE RADIODERMATITIS FOLLOWING BETA IRRADIATION. III. THE CHANGES IN WATER, FAT, AND PROTEIN CONTENT. C. C. Lushbaugh and D. B. Hale. *Cancer* 6, 683-5 (1953). July. NSA 7-5001.

1372

EFFECTS OF OXYGEN CONCENTRATION ON X-RAY-INDUCED MITOTIC INHIBITION IN LIVING CHORTOPHAGE NEUROBLASTS. Mary Esther Gauden, Marjorie Nix, and Jack Moshman. *J. Cellular Comp. Physiol.* 41, 451-70 (1953). June.

Neuroblast mitosis *in vivo* was unaffected by O tension in absence of radiation under conditions used. Depth to which mitosis was depressed by x rays was affected only slightly by O present during irradiation. Influence of O tension on response of these cells to radiation involves more than merely a change in amount of injury produced by radiation. NSA 7-5002.

1373

EFFECT OF PITUITARY EXTRACTS ON RADIATION-INDUCED TESTICULAR ATROPHY IN RATS. John B. Storer and Phyllis Sanders. *Proc. Soc. Exptl. Biol. Med.* 83, 259-62 (1953). June.

Adult and immature male rats were given single exposures of 500 r total-body x radiation and 800 r of x radiation to testes only in 3 fractionated doses. Gonadophysin injected twice weekly for 1st 4-6 weeks or from 8th-16th week after irradiation increased slightly the degree of testicular atrophy and inhibited testicular regeneration. NSA 7-5004.

1374

EFFECT OF ANTIBIOTIC DOSAGE ON MORTALITY FROM WHOLE BODY X-IRRADIATION. Gordon E. Gustafson and Simon Koletsky. (Atomic Energy Project, Western Reserve Univ.). June 25, 1953. 10p. (NYO-4016). *Proc. Soc. Exptl. Biol. and Med.* 84, 266-9 (1953).

Rats were given varying doses of terramycin hydrochloride beginning 72 hr and ending 1-4 hr prior to x irradiation. Highest dosage level (200 mg/rat/day) was most effective in lowering mortality. Probably larger doses of antibiotics are required in x irradiation syndrome than for treatment of other diseases. NSA 7-5005.

1375

CONTROL OF THE POSTIRRADIATION HEMORRHAGIC STATE BY PLATELET TRANSFUSIONS. M. C. Wood, Frances N. Gamble, J. Furth, and R. R. Bigelow. *Blood* 8, 545-53 (1953). June.

Appearance of large numbers of erythrocytes in lymph of dogs and rats exposed to massive x-ray doses was partially or completely prevented by transfusion of concentrated suspensions of intact, homologous blood platelets. Passage of erythrocytes from blood to lymph was retarded almost immediately after transfusion and numbers of erythrocytes in lymph were markedly reduced. NSA 7-5006.

1376

THE ACUTE RADIATION SYNDROME. L. H. Hempelmann. *Med. Radiography Phot.* 29, No. 2 and 3, 42-6 (1953).

Author presents a case history of acute radiation syndrome developing after exposure to a large dose of mixed neutron and γ radiation from an uncontrolled nuclear reaction. (cf NSA 6-2273). NSA 7-5007.

1377

CELLULAR CHANGES IN EFFUSIONS FOLLOWING INTRACAVITARY ADMINISTRATION OF COLLOIDAL Au¹⁹⁸ IN HUMAN BEINGS. Vernie A. Stembridge, Ralph M. Kniseley, and Gould A. Andrews. *J. Lab. Clin. Med.* 41, 760-6 (1953). May. NSA 7-5008.

1378

INVESTIGATION OF THE BIOLOGICAL EFFECT OF COSMIC RADIATION. Jakob Eugster. *Naturw. Rundschau* 6, 281-3 (1953). July. (In German).

Quality and intensity of cosmic radiation and its biological effects were investigated at various altitudes. Results indicate that radiation has a predominantly stimulating rather than harmful effect on life processes. Harmful effects occur chiefly at high altitudes, caused by heavy particles of cosmic radiation. NSA 7-5096.

1379

THE EFFECT OF WHOLE BLOOD TRANSFUSION ON DOGS RECEIVING A MAXIMAL SUBLETHAL (LD₅₀) EXPOSURE TO IONIZING RADIATION. R. W. Miller, W. K. Cotton and S. N. Swisher. *Science* 118, 111-2 (1953). July 24.

None of 20 irradiated, transfused dogs used died during 28-day observation period, and it was concluded that the irradiated dog is no more susceptible than normal one to transfusion reactions when compatible blood is administered. NSA 7-5281.

1380

LOCALIZATION OF RADIOACTIVITY IN REGIONAL LYMPH NODES. Harold F. Berg, William M. Christophersen, Avrom M. Isaacs, and J. Ray Bryant. *Arch. Surg.* 67, 228-43 (1953). NSA 7-5283.

1381

THE USE OF RADIOISOTOPES IN THE STUDY OF REPRODUCTION. FINAL REPORT, PART 1. Clyde Biddulph. (Utah State Agricultural Coll.). July 1, 1953. 26p. (AECU-2611).

Experiment is described in which female rats injected with P³² were bred to normal males, and injected males were bred to normal females. NSA 7-5466.

1382

THE EFFECTS OF LARGE DOSES OF PARATHYROID EXTRACT, VITAMIN D, AND DIHYDROTACHYSTEROL ON MICE AND RATS FOLLOWING ADMINISTRATION OF RADIOACTIVE CALCIUM AND STRONTIUM. W. A. D. Anderson and Gloria E. Zander. (Marquette Univ., School of Medicine). (nd). 29p. (AECU-2623).

No pathological effect on soft tissue of mice or rats was noted when vitamin D and parathyroid extract were administered. Thickening of the end of the femur occurred in all cases in rats. Dihydrotachysterol produced calcification in both soft and bone tissue. NSA 7-5467.

1383

THE PATHOLOGIC EFFECTS OF RADIOACTIVE CALCIUM AND STRONTIUM ON THE BONES OF CF₁ MICE. W. A. D. Anderson and Gloria E. Zander. (Marquette Univ., School of Medicine). (nd). 11p. (AECU-2624).

Ca⁴⁵ injected intraperitoneally as single doses of 3.5 or 5 μ c/g, or weekly doses of 0.6 or 2.1 μ c for 1 year resulted in production of bone tumors in mice, while smaller doses did not. Tumors also found in mice receiving weekly doses of 1.5 or 2.1 μ c Sr⁸⁹ for 6 months. Autoradiographs demonstrated less radioactivity in tumor tissue than in intact bone. NSA 7-5468.

1384

CALCULATION OF I¹³¹ BETA RADIATION DOSE TO THE BONE MARROW. James S. Robertson and John T. Godwin. (Brookhaven National Lab.). (nd). 7p. (BNL-1528); *Brit. J. Radiol.* 27, 241-2 (1954). NSA 7-5470.

1385

INTRA-PROSTATIC INJECTIONS OF RADIOACTIVE COLLOIDS. 2. DISTRIBUTION WITHIN THE PROSTATE AND TISSUE CHANGES FOLLOWING INJECTION IN THE DOG. George J. Bulkley, John A. Cooper, and Vincent

J. O'Connor. (Northwestern Univ., School of Medicine). (1952). 10p. (AECU-2628).

Acute radiation reaction to P^{32} in dog's prostate differs from reaction to Au^{198} but long term result is about the same following injection of either material. NSA 7-5469.

1386

ANNUAL REPORT ON RESEARCH PROJECT. G. Failla and H. H. Rossi. (Radiological Research Lab., Columbia Univ.). June 1, 1953. 89p. (NYO-4523).

Studied result of exposing exteriorized spleens of mice and rabbits to x rays; ultraviolet sensitivity and photoreactivity of bacteriophage; effect of x rays on hamster tissues; x ray effect on hepatic glycogen of mice, hamsters, and salamanders; protective effect of thiouracil against I^{131} -produced damage; protective effect of cysteamine; effects of various radiations on rabbit lens. NSA 7-5471

1387

EFFECT OF MID-LETHAL WHOLE BODY X-RAY EXPOSURE OF MICE ON THE PRODUCTION OF ACUTE PULMONARY EDEMA BY AIR BLAST INJURY. B. Cassen and K. Kistler. (Atomic Energy Project, Univ. of Calif., Los Angeles). Aug. 19, 1953. 10p. (UCLA-266). NSA 7-5472.

1388

THE APPLICATION OF INFRARED SPECTROPHOTOMETRY TO THE DETECTION OF POSSIBLE PROTEOSES AND PEPTONES IN THE BLOOD OF IRRADIATED ANIMALS. David S. Smith. (Atomic Energy Project, Univ. of Rochester). May 18, 1953. 61p. (UR-251). NSA 7-5473.

1389

THE EFFECT OF X IRRADIATION UPON THE PERFORMANCE OF VOLITIONAL ACTIVITY BY THE ADULT MALE RAT. D. C. Jones, D. J. Kimeldorf, D. O. Rubadeau, G. K. Osborn, and T. J. Castanera. (Naval Radiological Defense Lab.). Apr. 17, 1953. 22p. (USNRDL-400).

At all doses studied there was an abrupt significant depression of activity followed by a period of recovery NSA 7-5474.

1390

FURTHER STUDIES ON THE EFFECTS OF CARBON DIOXIDE AND OXYGEN ON THE FREQUENCY OF X-RAY INDUCED CHROMOSOME ABERRATIONS IN *TRADESCANTIA*. Howard A. Schneiderman and Edward D. King. Proc. Natl. Acad. Sci. U.S. 39, 834-8 (1953). Aug.

Exposure to CO_2 during irradiation markedly increases radiosensitivity of cells. O_2 concentration profoundly affects radiosensitivity. Interaction of these 2 gases is examined, and mode of action of CO_2 in increasing radiosensitivity is defined. NSA 7-5476.

1391

EFFECT OF 400 R FRACTIONAL WHOLE BODY γ -IRRADIATION IN THE BURRO (*EQUUS ASINUS ASINUS*). Bernard F. Trum, Thomas J. Haley, Murray Bassin, John Heglin, and John H. Rust. Am. J. Physiol. 174, 57-60 (1953). July.

A pronounced hyperferremia which is observed in the burro 1 hr after 400 r exposure increases up to the 6th post-irradiation day. Plasma-Fe values were significantly elevated in most animals prior to exitus. NSA 7-5480.

1392

STUDIES ON THE DOSIMETRY AND BACTERICIDAL EFFECTS OF GAMMA RADIATIONS FROM A COBALT⁶⁰ SOURCE. Samuel A. Goldblith, Bernard E. Proctor, Sol Davidson, David A. Lang, Billy Kan, Charles J. Bates, and Marcus Karel. Radiology 60, 732-5 (1953). May. NSA 7-5481

1393

PROTECTION AGAINST RADIATION LETHALITY EFFECT OF β -MERCAPTOETHYLAMINE. R. Rugb and S. C. Wang. Proc. Soc. Exptl. Biol. Med. 83, 411-14 (1953). June.

Injection of this compound prior to irradiation definitely affords radiation protection to mice. Injection after x irradiation, whether single or multiple, adversely affects survival. NSA 7-5484.

1394

SHOCK, TOXEMIA IN RADIATION LETHALITY. Roberts Rugb, Josephine Suess, and John Scudder. Nucleonics 11, No. 8, 52-4 (1953). Aug.

Polyvinyl pyrrolidone, whether in combination with Macroose or Dextrose, does not have any protective value for mice if administered either before or after exposure to 700 r x rays. NSA 7-5486.

1395

EFFECT OF X-RAYS AND HORMONES ON RESORPTION RATE OF INJECTED $NaHC^{14}O_3$. Arne G. Forssberg and George Hevesy. Am. J. Physiol. 180, 325-30 (1955).

After intra-peritoneal, -venous or subcutaneous injection of 10-50 mg of $NaHC^{14}O_3$ (in saline) into mice, $C^{14}O_2$ exhalation was measured. X irradiation (2000 r, 155 kv, 1 mm Al, 140 r or 1350 r/min) before injection markedly decreased bicarbonate resorption rate and $C^{14}O_2$ exhalation. Radiation effect found not to be due to release of adrenalin (which also slows $C^{14}O_2$ output).

1396

THE EFFECTS OF ULTRAVIOLET AND X RADIATIONS UPON THE HETEROCHROMATIN OF *SACCHAROMYCES*. G. Fred Townsend, Alvin Sarachek, and Carl C. Lindgren. (Biological Research Lab., Southern Ill. Univ.). (1953). 7p. (AECU-2622).

Tetraploid culture of known resistance to the two radiations used. In interphase cells given lethal x-ray doses, crescent formation was normal; in cells exposed to sublethal ultraviolet irradiation, crescent formation was delayed 2-3 hr, but effect was temporary. Cells eventually formed crescents. NSA 7-5682.

1397

EFFECT OF RADIOACTIVE PHOSPHORUS (P^{32}) ON THE FORMED ELEMENTS IN THE BLOOD AND UPON OTHER TISSUES OF THE COTTON RAT *SIGMODON HISPIDUS TEXIANUS* (AUDUBON AND BACHMAN). Robert M. Hankins, A. Bryon Leonard, and Charles A. Leone. (Kansas Univ.). (1953). 49p. (AECU-2642).

Four groups of rats were injected with 1.1, 4.0, 4.3, and 5.0 μ c/g P^{32} . Hematocrit, sedimentation rate, hemoglobin, total red and white cells, and differential leukocyte count changes were studied. NSA 7-5683.

1398

THE LETHAL EFFECT OF INTRAGASTRIC IRRADIATION IN THE DOG. Armand Littman, Benum W. Fox, Harold M. Schoolman, and A. C. Ivy. (Illinois Univ. Coll. of Medicine). (nd). 15p. (AECU-2644); Am. J. Physiology 174, 347-5 (1953).

Lethal doses of intragastric radiation from Ra, Sr^{90} , or Ru^{106} -Rh¹⁰⁶ caused dehydration, weight loss, hemocentration, leukocytosis with eosinopenia and lymphopenia and death in 2 months, when administered to fistula dogs. Irradiation of isolated stomach caused death in 3 days-1 month. Gastrectomy performed after exposure appeared to prevent death, indicating damage to stomach itself is partly responsible for death. NSA 7-5684.

1399

STUDIES ON THE PATHOGENESIS OF POST-IRRADIATION INFECTION. C. Phillip Miller. (Chicago Univ.). (nd) 15p. (AECU-2646).

Data are presented on the incidence of generalized infection in mice exposed to 450 or 600 r of total-body x

radiation. Cultures of blood or spleen from mice exposed to doses of 600 r showed a high incidence of bacteremia during the second week post-irradiation, which coincided with the period of greatest mortality. Data are included on the onset and duration of bacteremia caused by various organisms and the effect of subcutaneously administered streptomycin on mortality of the mice. (C.H.) NSA 7-5685.

1400

EFFECTS OF INTRAGASTRIC IRRADIATION ON GASTRIC ACIDITY IN THE DOG. Benum W. Fox, Armand Littman, M. I. Grossman, and A. C. Ivy. Feb. 12, 1953. 19p. (AECU-2675) *Gastroenterology* 24, 517-34 (1953).

Ra needles, Ru^{106} - Rh^{106} and Sr^{90} were used as sources of radiation. Dosages ranged from ineffective to lethal. Possible therapeutic applications in gastric ulcer are discussed. NSA 7-5687.

1401

X-IRRADIATION SENSITIVITY OF ESCHERICHIA COLI B IN RELATION TO TERMINAL RESPIRATION AND OXIDATIVE ASSIMILATION. Charles R. Goucher, Eugene E. Woodside, and Walter F. Kocholaty. (Army Medical Research Lab., Fort Knox). Mar. 10, 1953. 10p. (AMRL-112) *Arch. Biochem. and Biophys.* 50, 25-33 (1954).

Regardless of vast differences in oxidative and assimilatory abilities, the sensitivity of these organisms to x irradiation was essentially unchanged. NSA 7-5688.

1402

A COMPARISON OF X-RAY INDUCED DOMINANT AND RECESSIVE LETHALS IN FIRST MEIOTIC METAPHASE EGGS AND IN SPERM OF HABROBRACON. Gertrude Heidenthal. (Brookhaven National Lab.). (nd). 1p. (BNL-1565).

Metaphase eggs were found to be more radiosensitive than sperm. Effect of dose rate on induction of dominant and recessive lethal factors is discussed. NSA 7-5689.

1403

MICROBIOLOGICAL INVESTIGATIONS OF THE LETHAL EFFECTS OF VARIOUS TYPES OF IONIZING RADIATIONS. PROGRESS REPORT FOR THE PERIOD SEPTEMBER 1, 1952 TO JUNE 30, 1953. Bernard E. Proctor and Samuel A. Goldblith. (Massachusetts Inst. of Tech.). June 30, 1953. 90p. (NYO-3340; Technical Report 4).

Effects of γ radiation from Co^{60} on various species of bacteria was determined and evaluated. Sterilization efficiency of Co^{60} γ radiation is compared with efficiency of cathode rays and x rays. NSA 7-5690.

1404

THE COMBINED EFFECTS OF THERMAL BURNS AND WHOLE-BODY X RADIATION ON SURVIVAL TIME AND MORTALITY. E. L. Alpen and G. E. Shelne. (Naval Radiological Defense Lab.). May 18, 1953. 18p. (USNRDL-402; AFSWP-470).

Animals subjected to burns only die predominantly during 1st 48-hr period following the trauma. Addition of x irradiation decreases the LA_{50} (median lethal burn area) for the initial 48-hr period. This effect is function of radiation dose; the larger the dose, the smaller the 48-hr LA_{50} . NSA 7-5691.

1405

FURTHER INVESTIGATIONS INTO THE MODIFICATION OF RADIATION SENSITIVITY AFFORDED BY COBALT. W. H. Parr, T. O'Neill, S. G. Bush, and A. T. Krebs. (Army Medical Research Lab., Fort Knox). Apr. 10, 1953. 12p. (AMRL-114; Science 119, 415-16 (1954)).

Co diet for 5 and 8 days before and for 15 days after x irradiation increased tolerance of mice to 720 r total-

body x rays. Events produced by administration of Co, rather than events at later time intervals, are decisive for the observed increase in radioresistance.

NSA 7-5692.

1406

THE INTERVENTION OF OXYGEN IN RADIOBIOLOGY. J. Loiseleur. *Ann. inst. Pasteur* 84, 1001-9 (1953). June. (In French).

For radiation to have its maximum effect, O must be present. Radio-oxidation is prevented by presence of an O acceptor such as $COCl_2$, $NaNO_2$, or $FeSO_4$. Mechanism of biological action of x rays is briefly discussed and it is concluded that organisms can be protected against external radiation by injecting them with O acceptors. NSA 7-5694.

1407

OCCURRENCE OF NONEQUILIBRIUM ATMOSPHERIC MIXTURES OF RADON AND ITS DAUGHTERS. E. C. Tsvoglou, H. E. Ayer, and D. A. Holaday. *Nucleonics* 11, No. 9, 40-5 (1953). Sept.

Analysis of Rn-daughter decay curves permits determination of atmospheric concentrations of daughters. With this data, effectiveness of ventilation in protecting U-mine workers can be more accurately evaluated. NSA 7-5695.

1408

QUARTERLY PROGRESS REPORT, APRIL 1-JUNE 30, 1953 UNCLASSIFIED SECTION. (Brookhaven National Lab.). 58p. (BNL-243).

Abstracts are given for activities concurrently published in the journals covering medicine and biology. Additional progress is reported on study of comparative sensitivity of chromosomes to thermal neutron and x radiation. NSA 7-5893.

1409

STRAY RADIATION LEVELS IN THE VICINITY OF BETA-TRONS. Stanley H. Clark. *Nucleonics* 11, No. 9, 38-9 (1953). Sept.

Betatrons of 100, 50 and 15 Mev were surveyed to determine γ -ray and neutron levels in surrounding areas. Much of the radiation hazard arises from secondary targets, such as accelerator "donut" or objects in beam path. NSA 7-5696.

1410

EFFECT OF REGIONALLY FRACTIONATED X-IRRADIATION EQUIVALENT IN DOSE TO ACUTELY LETHAL TOTAL BODY EXPOSURE. M. N. Swift, S. T. Taketa, and V. P. Bond. (Naval Radiological Defense Lab.). Mar. 27, 1953. 21p. (USNRDL-405).

Mortality after exposure of entire body to acute lethal doses of x radiation was considerably reduced in mice, and to a lesser degree in rats, by irradiating abdomen before or after the remainder of the body. Decreased mortality was also obtained in mice by shielding exteriorized spleen during exposure, even though spleen alone had received same dose previously. NSA 7-5898.

1411

EVIDENCE OF TWO DIFFERENT TYPES OF X-RAY DAMAGE REVEALED BY ANALYSIS OF RETARDATION OF BUDDING IN SACCHAROMYCES. Alvin Sarachek, Ernest Shult, and Carl C. Lindegren. (Biological Research Lab., Southern Ill. Univ.). (1953). 15p. (AECU-2647).

Two different and independent types of damage are caused by x rays. One increases exponentially throughout entire exposure period, whereas the other accumulates exponentially until dose characteristic for cell is received, after which all cells are protected from further injury of this type. NSA 7-5899.

1412

STUDIES ON LOW DOSE X-IRRADIATIONS AND ITS EFFECT UPON THE BIOCHEMISTRY AND PATHOLOGY

OF THE DOG. PROGRESS REPORT. P. H. Phillips. (Wisconsin Univ.). (1953). 8p. (AECU-2680).

Studied life expectancy of splenectomized dogs; erythrocyte fragility of splenectomized rats; effects of low-dose, intermittent x irradiation on dogs; effect of local irradiation of femur on bone marrow of rats; fatty acid metabolism by rats; use of fluid milk as medium for administering prophylactic substances to rats. NSA 7-5900.

1413

THE INFLUENCE OF IONIZING RADIATION ON MITOSIS IN THE CORNEAL EPITHELIUM OF THE RAT. 1. MORPHOLOGICAL CHANGES INDUCED BY X-IRRADIATION AND THE EFFECTIVENESS OF BAL AND CYSTEINE IN REDUCING THE FREQUENCY OF THESE CHANGES. Robert S. Ransom. (Army Medical Research Lab., Fort Knox). Jan. 12, 1953. 15p. (AMRL-110).

Cysteine installation reduced structural effects, but BAL was ineffective. NSA 7-5901.

1414

CHRONIC EXTERNAL IRRADIATION, NEUTRON RADIOBIOLOGY, PHYSIOLOGY, HISTOPATHOLOGY, AND RADIOCHEMISTRY. p.11-55 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT FOR NOVEMBER AND DECEMBER 1952, AND JANUARY 1953. Austin M. Brues, ed. (Argonne National Lab.). (ANL-4948(p.11-55)).

Studied spleen-shielding in mice; treatment of leukemic guinea pigs; treatment of x-rayed mice with organ homogenates; radiation cataracts; tumor physiology and growth. NSA 7-5903.

1415

RADIUM TOXICITY, EXPERIMENTAL PATHOLOGY, SPECIAL PROBLEMS, INVERTEBRATE ZOOLOGY, AND MICROBIOLOGY. p.56-79 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT FOR NOVEMBER AND DECEMBER 1952, AND JANUARY 1953. Austin M. Brues, ed. (Argonne National Lab.). (ANL-4948(p.56-79)).

Studied mouse survival; x-ray effect on clones of *Paramecium*; x-ray effect on blood pressure of roosters; morphology of germ cells of *Helix*; role of spleen in immunity of mice to *T. duttoni*. NSA 7-5904.

1416

MODIFICATION OF THE FRAGILITY OF ERYTHROCYTES IN THE WHOLE-BODY-IRRADIATED GUINEA PIG. Odette Lartigue and Jean-Francois Duplan. *Compt. rend.* 237, 359-60(1953). July 27. (In French)

Guinea pigs were irradiated with 500 r of x rays. Fragility of red cells heated to 54°C in hypotonic glucose medium increased progressively from 6th to 12th post-exposure day. Morphological modification of the red cells appeared concurrently. NSA 7-5906.

1417

THE SHORTENING OF LIFE SPAN BY INJECTED RADIUM, POLONIUM AND PLUTONIUM. H. A. Blair. (Atomic Energy Project, Univ. of Rochester). Sept. 8, 1953. 24p. (UR-274).

Apparent biological effectiveness of Po α radiation is about 3 compared to x rays for acute effects, about 60 for chronic effects. Injury is 80% irreversible with Po compared to 4% with x rays. Chronic toxicities of Po and Pu are each about 5 as compared to Ra. NSA 7-5910.

1418

THE EFFECTS OF IRRADIATION FROM ATOMIC BOMB FALL-OUT UPON A GROUP OF HEREFORD CATTLE. (Thesis). James Merrill Bird. (Tennessee Univ., Coll. of Agriculture). Mar. 1952. 78p. (AECU-2695).

General health, growth, breeding efficiency and relative fertility of exposed cattle were studied. No gross

differences between irradiated and control cattle were found. Effects were confined to hair and skin. NSA 7-6327.

1419

EFFECTS OF IONIZING RADIATIONS (AND OTHER AGENTS) ON THE DEVELOPING MAMMAL. Samuel P. Hicks. (New England Deaconess Hospital, Boston and Harvard Medical School and Pondville Hospital, Walpole, Mass.). 1953. 6p. (AECU-2697).

Timetable is given for malformations of fetal rats and mice exposed to 150-400 r in utero. Neuroblast is cell most easily destroyed; therefore developing brain may be damaged without harm to mother or to more mature fetal tissues. NSA 7-6328.

1420

HISTOPATHOLOGY OF THE RAT PITUITARY FOLLOWING TOTAL BODY X-IRRADIATION. Roy Korson and Albert L. Botkin. (Army Medical Research Lab., Fort Knox). July 9, 1953. 11p. (AMRL-119); *Endocrinology* 54, 225-6 (1954).

Rat pituitary showed a depletion of basophilic granules and decreased number of chromophobe cells after exposure. Marked increase in pituitary acidophiles started 24 hours post irradiation. Gradual water loss from gland and slight cell shrinkage were also noted. NSA 7-6329.

1421

(PAGES 8-97 OF) ANNUAL REPORT (ON) BIOLOGY RESEARCH (FOR) 1952. (Hanford Works). July 7, 1953. (HW-28636(p.8-97)).

Studied radioactivity of Columbia River organisms; removal of P³² by plankton and algae; effect of reactor effluent on trout; metabolism of T and D in plants and animals; absorption of Pu by rats; Zr citrate effect on removal of Pu (IV and VI) in dogs. NSA 7-6331.

1422

(PAGES 98-185 OF) ANNUAL REPORT (ON) BIOLOGY RESEARCH (FOR) 1952. (Hanford Works). July 7, 1953. (HW-28636(p.98-185)).

Studied comparison of β particles from T and from P³²; algae growth in β -emitting medium; toxicity of I¹³¹ in sheep; wild life thyroid activity; absorption of P, S, Ca, Mn, Zn, Cu and Sr by *Chlorella*. NSA 7-6332.

1423

NEW STUDIES ON THE ROLE OF THE ADRENALS IN HEMATOPOIETIC REGENERATION AFTER IRRADIATION. H. Betz. *Compt. rend. soc. biol.* 147, 168-70 (1953). Jan. (In French).

Adrenalectomized rats were given 500 r of 250-kv x rays. Study of liver and bone marrow showed that adrenalectomy stimulated hematopoietic regeneration. No regeneration occurred in rats given 800 r lethal dose, whether adrenalectomized or normal. NSA 7-6334.

1424

ACTION OF IRRADIATED CYTOPLASM ON UNTREATED CHROMOSOMES OF THE SILKWORM. Yoshio Nakao. *Nature* 172, 625-6 (1953). Oct. 3.

Genetic effects on untreated introduced chromosomes is shown by appearance of mosaic eggs in progeny of x rayed females of genotype *pe re/pe re*, mated to wild-type unirradiated males. NSA 7-6335.

1425

EFFECT OF X-RADIATION ON MIGRATION OF LEUCOCYTES IN VITRO. I. L. Shechmeister, M. Fishman and R. Yunker. *Federation Proc.* 13, 511 (1954).

Migration of leucocytes from rats exposed to 600 r total body radiation was not altered 24 hours after irradiation, but was markedly impaired after 5 days. Three groups of rabbits were exposed to 100, 500, and 800 r total body radiation respectively; the rate and extent of

migration of their leucocytes and total and differential WBC counts were determined. (from authors' summary).

1426

PRODUCTION OF HEPATIC STEATOSIS BY X RADIATION IN THE RAT. André Chevallier, C. Burg, and H. Spehler. *Compt. rend. soc. biol.* 147, 497-500 (1953). Mar. (In French).

Rats were irradiated daily until death with 50-500 r of 180-kv x rays. Aureomycin was added to food to control infection. Fatty degeneration was observed in all cases but not in controls, and most notably in animals receiving 50 r/day. NSA 7-6337.

1427

CURATIVE ACTION OF β -MERCAPTOETHYLAMINE IN THE RAT IRRADIATED WITH LIVER PROTECTED. J. Maisin, M. Mandart, G. Lambert, and H. Maisin. *Compt. rend. soc. biol.* 147, 362-4 (1953). Feb. (In French). NSA 7-6338.

1428

EFFECT OF SOMATOTROPIC HORMONE ON HEMATOPOIETIC REGENERATION IN THE IRRADIATED RAT. H. Betz. *Compt. rend. soc. biol.* 147, 171-3 (1953). Jan. (In French).

Daily injections of growth hormone prior to 800 r of 250 kv x rays failed to stimulate lymphoid or myeloid regeneration. Repetition of experiment with adrenalectomized rats injected with cortisone showed definite stimulation of hematopoietic regeneration. NSA 7-6339.

1429

PHENOMENA OBSERVED IN THE REPRODUCTION OF ASPERGILLUS FUMIGATUS FRESENIUS, UNDER THE INFLUENCE OF RADIUM. (In French). A. Sartory, R. Sartory and J. Meyer. *Compt. rend. soc. biol.* 96, 276-8 (1927).

Radium causes the conidia to remain dormant, it initiates sexual reproduction, and prevents new growth. CA 21-1290.

1430

EFFECTS OF X-IRRADIATION ON AMOUNT AND COMPOSITION OF NUCLEIC ACIDS IN LIVER. Kenneth Paigen and Berwind N. Kaufmann. *J. Cellular Comp. Physiol.* 42, 163-76 (1953).

After 600 r qualitative changes in levels of DNA and PNA in mouse liver were identical; they rose and fell together. NSA 7-6341.

1431

EFFECT OF X-IRRADIATION ON CONNECTIVE TISSUE GROUND SUBSTANCE. Robert H. Edgerley. *Am. J. Physiol.* 174, 341-6 (1953). Sept. NSA 7-6342.

1432

CHOLINE STUDIES IN RATS FOLLOWING WHOLE-BODY X-IRRADIATION. Dorothy J. Buchanan, William J. Darby, E. B. Bridgforth, Granville W. Hudson, and J. Ann Efner. *Am. J. Physiol.* 174, 336-40 (1953).

None of the irradiation effects observed were usable as indicators of early irradiation injury. NSA 7-6343.

1433

EFFECT OF X-IRRADIATION UPON THE PERFORMANCE OF DAILY EXHAUSTIVE EXERCISE BY THE RAT. D. J. Kimeldorf, D. C. Jones, and T. J. Castanera. *Am. J. Physiol.* 174, 331-5 (1953). Sept.

Exposure to x-ray doses of 300 to 1,000 r depressed ability of rats to perform a standard exhaustive exercise test. Magnitude of depression in performance was dependent upon size of x-ray dose. NSA 7-6344.

1434

A COMPARISON OF THE REACTIONS OF THE IRRADIATED PARTS OF THE BODIES OF TWO DAY OLD MICE AND URODELE AMPHIBIANS TO ROENTGEN TREATMENT.

V. V. Brunst, E. A. Sheremetieva-Brunst, and Frank H. J. Figge. *Am. J. Roentgenol. Radium Therapy Nuclear Med.* 70, 283-93 (1953). Aug.

Effects of irradiation on the 2 forms were found to be similar. NSA 7-6345.

1435

EFFECT OF X RAYS IN WHOLE-BODY IRRADIATION ON THE THYROID GLAND OF WHITE RATS. J. Tusques, M. Berger, and R. Moret. *Compt. rend. soc. biol.* 147, 337-9 (1953). Feb. (In French).

Rats were whole-body irradiated with single 600 r dose of 200 kv x rays and sacrificed 2, 4, 24 and 48 hr later. Examination of the thyroids revealed lesions attributed to direct destructive x ray action, a conclusion contrary to that of previous studies. NSA 7-6346.

1436

RESPONSE OF IRRADIATED CANCER PATIENTS TO VIBRIO METSCHNIKOVII. E. Staten Wynne, David B. Hinds, Cora L. Gott, W. O. Russell, and G. H. Fletcher. *Science* 118, 442-3 (1953). Oct. 16.

Agglutinin formation toward this fowl pathogen was unimpaired in patients subjected to irradiation. NSA 7-6347.

1437

DETERMINATION OF SYSTEMICALLY DEPOSITED PLUTONIUM IN LABORATORY PERSONNEL AND A SIMPLE QUALITATIVE TEST FOR EXPOSURE TO AIRBORNE RADIOACTIVE MATERIAL. Louis H. Hempelmann and Wright H. Langham. (Los Alamos Scientific Lab. and Rochester Univ., School of Medicine). (1953). 14p. (AECU-2633).

Alpha counts of nose swabs is proposed as a simple test to supplement urine assays and to detect potential respiratory exposure to airborne radioactive material and the practice of faulty laboratory procedure. NSA 7-6348.

1438

ROLE OF HOST DEFENSES IN STREPTOMYCIN TREATMENT OF X-IRRADIATED MICE. Robert Q. Marston, H. Jeanette Ruth, and Willie W. Smith. *Proc. Soc. Exptl. Biol. Med.* 83, 289-91 (1953). June.

Intravenous injection of a homogenate of immature spleen increased resistance of sub-lethally irradiated mice to Proteus infection and significantly complemented action of streptomycin. NSA 7-6353.

1439

EFFECT OF SOYBEAN PHOSPHATIDE ON BLOOD COAGULATION DEFECT FOLLOWING TOTAL BODY X-IRRADIATION IN THE DOG. Sidney G. White, John B. Lagen, Paul M. Aggeler, and Robert P. Geyer. *Proc. Soc. Exptl. Biol. Med.* 83, 384-7 (1953). June.

Thrombocytopenia, prolonged clotting time, impaired clot retraction and prothrombin utilization were induced in dogs by 150 r total-body x irradiation. Temporary decrease in clotting time, increase in prothrombin utilization without change in platelet count or clot retraction were induced by intravenous injection of soybean phosphatide. NSA 7-6354.

1440

TOLERANCE TO WHOLE BODY IRRADIATION OF PATIENTS WITH ADVANCED CANCER. p.485-498 OF INDUSTRIAL MEDICINE ON THE PLUTONIUM PROJECT. L. F. Craver. (NNES IV-20). Robert S. Stone, ed. New York, McGraw-Hill Book Co., Inc. 1951.

Eight patients having advanced metastatic cancer were exposed to heavily filtered 180 kv x-rays at hourly intensities of 0.85 or 1.65 r and for daily doses of 10 to 15 r up to the projected total doses of 150-300 r. No deterioration was observed in blood count or general health that could not be attributed to progress of neoplastic disease. (from authors' summary).

1441

WHOLE BODY X-IRRADIATION OF OBESE MICE. Willie W. Smith, W. H. Chapman, and F. M. Alderman. *Am. J. Physiol.* **169**, 511-14 (1952). June.

Mice made fat by gold thioglucose injection and mice with hereditary adiposity had same mortality rate after whole-body x ray dose as did normal-sized litter-mate controls. Post-irradiation survival time and weight loss was the same in fat and control mice. NSA 6-6251.

1442

EFFECTS OF RADIATIONS OF RADIOACTIVE PHOSPHORUS ON CELL DIVISION IN ROOT MERISTEM. R. G. Trudova. *Doklady Akad. Nauk. S.S.S.R.* **85**, 219-20 (1952). July 1. (In Russian).

Number of cell divisions in root meristem of 48-hr wheat seedlings after transfer to aqueous P^{32} solutions of specific activities up to 20 $\mu\text{C}/\text{ml}$ is plotted for exposures of 24, 48, and 72 hr. NSA 6-6252.

1443

EFFECTS OF FAST NEUTRONS UPON FOREST TREE SEEDS. II. RELATIONS BETWEEN THE INTENSITIES OF IRRADIATIONS AND THE GERMINATIONS OF SEEDS, THE GROWTH OF SEEDLINGS OF *PINUS DENSIFLORA*. Keiji Sato and Yoshio Nishina. *Sci. Bull. Faculty Agr. Kyushu Univ.* **13**, 238-42 (1951). Nov. (In English).

Germination, growth and survival were found to be better in classes exposed to certain doses than in controls; at higher levels, germination, growth and survival were inversely proportional to dose. NSA 6-6253.

1444

ROENTGEN RAY CANCER OF THE HANDS IN DENTISTS. Frederic E. Mohs. *J. Am. Dental Assoc.* **45**, 160-4 (1952). Aug.

Exposure of the thumb and first 2 fingers of dentists from repeated holding of dental films in patients' mouths may lead to radiation damage which may be manifested by dryness, scaliness, fissuring, ulceration, telangiectasis, atrophy, keratoses and squamous cell carcinoma. Treatment of these is described. NSA 6-6254.

1445

THE RELEASE AND IDENTIFICATION OF BLOOD BORNE VASOTROPIC SUBSTANCES AFTER WHOLE BODY IRRADIATION. Thomas K. Haley. *Trans. N.Y. Acad. Sci.* **14**, 303-5 (1952). June.

After whole-body irradiation of rats and dogs a circulating toxic substance causing profound peripheral vascular depression is released. It fits criteria set up for ferritin (involved in irreversible phase of shock) and appears during first post-irradiation week. Vasoexcitator material in blood of x-rayed rats 2 weeks post irradiation fits criteria set up for vasoexcitator material which appears in reversible phase of shock. NSA 6-6255.

1446

FURTHER STUDIES ON METASTASIS OF A TRANS-PLANTABLE MOUSE MAMMARY CARCINOMA AFTER ROENTGEN IRRADIATION. Carl F. Von Essen and Henry S. Kaplan. *J. Natl. Cancer Inst.* **12**, 883-92 (1952). Feb.

Frequency of pulmonary metastasis in strain C57 mice bearing Bagg-Jackson mouse mammary carcinoma 755 is reported. Effect of irradiation on metastasis of this tumor seems to involve a transient local disturbance of the host-tumor relationship, probably concerned with facilitating entry of tumor cells into blood vessels. NSA 6-6256.

1447

SCARS REMAINING IN ATOM BOMB SURVIVORS: A FOUR YEAR FOLLOW-UP STUDY. Warner Wells and Neal Tsukifuji. *Surg. Gynecol. Obstet.* **95**, 129-41 (1952). Aug.

From results of survey made in Hiroshima and Nagasaki, authors conclude that clinical course of burns and other injuries in 28 patients giving history of acute radiation ill-

ness after atom bomb detonations does not differ significantly from the clinical course of 35 injured at same time but without history of radiation illness. No case was discovered resembling a cutaneous radiation injury. NSA 6-6257.

1448

GENETIC IMPLICATIONS OF MUTATIONS IN *S. TYPHIMURIUM*. H. H. Plough. In *Heterosis*. John W. Gowen, ed. Ames, Iowa State College Press. 1952. (Chapter 17).

Study of effects of x rays on 2 strains of *Salmonella typhimurium*, and the isolation of strains with specific nutritive requirements shows relation between dosage and percentage of recovered auxotrophic mutants, and also between dosage and number of different mutants. Tests to determine if antigenic specificity is altered by radiation were negative. NSA 6-6258.

1449

THE EFFECT OF X-RAYS, ADRENAL CORTEX HORMONES AND OTHER REAGENTS ON NORMAL AND MALIGNANT LYMPHOCYTES IN VITRO. Robert Schrek. *Acta Unio Intern. Contra Cancrum* **7**, 868-73 (1952).

Suspensions of living cells from rat lymphosarcoma, reticulum cell sarcoma, and Walker tumor 256; from rat and rabbit thymus; from blood of normal persons and patients with lymphatic leukemia and myelogenous leukemia; and from rabbit bone marrow and rat testis were compared for their in vitro reactions to incubation, 1000 r x ray dose, 2,6-dichlorophenol iodophenol, and adrenal cortex hormones. Results are presented in tabular form. NSA 6-6259.

1450

THIRD GENERATION FOLLOW-UP IN WOMAN RECEIVING PELVIC IRRADIATION. I. C. Rubin. *J. Am. Med. Assoc.* **150**, 207-9 (1952). Sept.

Case histories reviewed of women who received low-dosage pelvic irradiation while non-pregnant and who are mothers and grandmothers of normal children. NSA 6-6260.

1451

SUPPRESSION OF THE TUBERCULIN REACTION IN RABBITS BY TOTAL BODY IRRADIATION WITH X RAYS. B. Lennox, W. J. Dempster, and J. W. Boag. *Brit. J. Exptl. Path.* **33**, 380-9 (1952). Oct.

Irradiation of rabbit near time of inoculation with tubercle bacilli delays appearance of positive intradermal reaction. Exposure of tuberculin-sensitive rabbit temporarily renders the reaction negative or much weaker. Effect is unaltered by local screening. Histology of tuberculin reaction sites and timing of the process, suggest suppression is result of overproduction of cortisone under x-ray stimulus. NSA 6-6261.

1452

CATALASE POISONS IN RELATION TO CHANGES IN RADIOSENSITIVITY. E. Boyland and E. Gallico. *Brit. J. Cancer* **6**, 160-72 (1952). June.

List of catalase poisons given, including some hitherto unknown. Concentration required for 50% inhibition of catalase is compared with lethal dose for mice. Azide and hydroxylamine are discussed. NSA 6-6262.

1453

SOME OBSERVATIONS ON EFFECT OF GAMMA RADIATION ON THE BIOCHEMISTRY OF THE RAT THYMUS. John F. Thomson, Wallace W. Tourtellotte, and Magdalene S. Carttar. *Proc. Soc. Exptl. Biol. Med.* **80**, 268-72 (1952). June.

Negligible changes were seen in activities of succinic and malic dehydrogenase, cytochrome oxidase and adenosine triphosphatase in thymus homogenate from rat exposed to 800 r γ radiation; however, diminution both in

concentration and P^{32} incorporation of thymus DNA and RNA was evident 3 hours after exposure. NSA 6-6264.

1454

A RARE DOMINANT CHLOROPHYLL MUTANT IN DURUM WHEAT. Luther Smith. *J. Heredity* 43, 125-8 (1952). May-June.

Chlorophyll chimera was found in durum wheat plant grown from seed exposed to Test Able atomic bomb. In selfed generations of heterozygous plants about 3/4 of the off-spring were self-colored yellow-green changing to a golden color. Heterozygous golden plants x normal plants gave an F_1 half golden and half normal. Homozygous golden plants x normal plants gave an F_1 all golden. It is concluded that golden character is result of induced dominant mutation. NSA 6-6265.

1455

INDIRECT EFFECTS OF X RAYS ON CHROMOSOMES. G. Bonnier. *Brit. J. Radiology* 25, 180-2 (1952). Apr.

Review of work to date on induction of mutations in *Drosophila*. NSA 6-6266.

1456

EXPERIMENTAL RADIOTHERAPY OF ABDOMINAL CANCER. I. FACTORS AFFECTING RADIATION TOLERANCE OF THE ABDOMEN IN THE RAT. Lionel Cohen and Annabelle Cohen. *Brit. J. Radiology* 25, 485-90 (1952). Sept.

Systemic effects of radiation differ with both physical integral dose and anatomical zone treated. Data indicate that the abdomen has specific sensitivity 1.47 times greater than average for body as a whole, an important factor to be taken into account in the treatment of abdominal cancer with radiotherapy. NSA 6-6267.

1457

PHARMACOLOGICAL STUDIES ON IRRADIATED ANIMALS. II. EFFECT OF CORTISONE ON X-RAY MORTALITY OF MICE. Friedrich Ellinger. *Proc. Soc. Exptl. Biol. Med.* 80, 214-17 (1952).

A daily intramuscular dose of 0.25 mg of cortisone for 14 days after exposure to LD_{50} dose of x rays gave definite increase in mortality. Ascorbic acid, administered with cortisone did not modify results. NSA 6-6274.

1458

ROENTGEN DOSES DURING DIAGNOSTIC PROCEDURES. Vern W. Ritter, S. Reid Warren, Jr., and Eugene P. Pendergass. *Radiology* 59, 238-51 (1952). Aug.

Curves and formulas are given for estimating depth and integral doses of x radiation resulting from diagnostic radiological procedures. NSA 6-6275.

1459

ALTERATION OF THE MORTALITY OF ROENTGEN IRRADIATED MICE BY CHEMICAL MEANS. G. Limperos. *Am. J. Roentgenol. Radium Therapy Nucl. Med.* 67, 810 (1952). May.

Mortality of x rayed mice is altered by chemical agents capable of influencing generation of free radicals from cellular water, sulfhydryl compounds, sulfhydryl inhibitors and oxygen. Effect of thiourea, thiouracil and sodium maleate on mortality is described. NSA 6-6276.

1460

ADMINISTRATION OF PROTECTIVE AGENTS AND SUBSEQUENT X RADIATION. Finn Devik. *Brit. J. Radiology* 25, 481-4 (1952). Sept.

Mice were given 200 r total-body x ray dose and chromosome injuries in bone marrow were determined. Preradiation administration of cysteine, glutathione, thiocholine, thiourea, ascorbic acid, methylene blue, and vitamin B_1 gave no significant reduction in chromosome injury. Such injury was reduced in mice irradiated under hypoxia. NSA 6-6277.

1461

MODIFICATION OF ACUTE IRRADIATION INJURY IN MICE AND GUINEA PIGS BY INJECTION OF BONE MARROW; A HISTOPATHOLOGIC STUDY. Charles C. Congdon, Delta Uphoff, and Egon Lorenz. *J. Natl. Cancer Inst.* 13, 73-108 (1952). Aug.

Regeneration of hematopoietic tissues following irradiation is greatly enhanced by bone-marrow injections. Damage by exposure is unaltered--but injections are responsible for recovery. NSA 6-6278.

1462

ADVERSE EFFECT OF CORTISONE ON MARROW REGENERATION FOLLOWING IRRADIATION. John B. Thiersch, Loretta Conroy, Alexander R. Stevens, Jr., and Clement A. Finch. *J. Lab. Clin. Med.* 40, 174-81 (1952). Oct.

Cortisone has a retarding effect on regeneration of blood-forming tissues of rats exposed to 200 r whole-body irradiation. NSA 6-6279.

1463

A QUANTITATIVE DOSE-RESPONSE STUDY OF LYMPHOID-TUMOR DEVELOPMENT IN IRRADIATED C57 BLACK MICE. Henry S. Kaplan and Mary B. Brown. *J. Natl. Cancer Inst.* 13, 185-208 (1952). Aug. NSA 6-6282

1464

EFFECT OF BIOFLAVONIDS ON RADIOSENSITIVITY OF TRANSPLANTED TUMORS; EFFECT ON TOLERANCE TO CONTACT RADIATION. Boris Sokoloff, Walter H. Eddy, and George Cone. *Arch. Path.* 54, 197-203 (1952). Aug.

Flavonoid compound, given in total dose of 280 mg/100 g to rat bearers of Sarcoma 39 or Crocker carcinoma, submitted to single dose of 6-, 10-, 12-, or 15,000 r contact radiation, did not decrease radiosensitivity of cancer tissue. Same dose administered before 15,000 r gave considerable protection against radiation injury; after 15,000 r, gave slight protection, if any. NSA 6-6285.

1465

TREATMENT OF PLUTONIUM POISONING BY METAL DISPLACEMENT. p.472-475. INDUSTRIAL MEDICINE ON THE PLUTONIUM PROJECT. Jack Schubert. (National Nuclear Energy Series IV-20). Robert S. Stone, ed. New York, McGraw-Hill Book Co., Inc. 1951.

The chief concern with radiation poisoning is plutonium (Pu^{239}). It is deposited mainly in the skeleton, liver, and spleen. Excretion of plutonium increases after treatment with soluble salts of certain metals; zirconium is probably best. Rats given such treatment excreted significant amounts of plutonium. Excretion in the feces was not greatly altered.

1466

DEVELOPMENTAL MALFORMATIONS PRODUCED BY RADIATION: A TIMETABLE OF THEIR DEVELOPMENT. Samuel P. Hicks. (New England Deaconess Hospital, Boston and Harvard Cancer Commission and Harvard Medical School). (nd). 40p. (AECU-2264); *Am. J. Roentgenol. Radium Therapy Nuclear Med.* 69, 272-93 (1953).

Malformations, especially those of the nervous system, were produced in developing rats by giving single doses of radiation to pregnant mothers on successive days during gestation. Embryologic mechanisms are discussed and illustrated. Timetable of radiation damage is presented. NSA 6-6494.

1467

THE EFFECT OF GAMMA RADIATION FROM COBALT-60 ON MICROORGANISMS. C. A. Lawrence, L. E. Brownell, and J. T. Graikoski. (Michigan Univ.). (nd). 13p. (AECU-2265); *Nucleonics* 11, No. 1, 9-11 (1953).

Effect of γ radiation from Co^{60} on microorganisms was measured by the number of viable organisms remaining after exposure to various doses of irradiation. Data include lethal effects on non-spore-forming bacteria, spore-forming aerobic bacteria, fungi, yeast, and protozoa NSA 6-6495.

1468
FINAL REPORT (ON) UNIVERSAL SEROLOGIC REACTION FOLLOWING IRRADIATION (FOR) PERIOD JULY 1, 1949 TO JUNE 30, 1952. Reuben L. Kahn and Fred J. Hodges. (Michigan Univ.). 66p. (AECU-2266).

Authors present discussion of: the nature of the universal reaction, differences in serologic patterns in different individuals and population groups, the constancy of serologic pattern in health, reaction following injection of horse serum, tissue lipids and other substances and reaction following irradiation in rabbits, cancer patients and polythemia patients. NSA 6-6496.

1469
THE USE OF SMALL LABORATORY ANIMALS IN MEDICAL RADIATION BIOLOGY. PART II. CORRELATION OF PHYSICAL FACTORS WITH THE BIOLOGICAL EFFECT PRODUCED IN TOTAL-BODY IRRADIATION. Friedrich Ellinger, Jasker E. Morgan, and Francis W. Chambers, Jr. (Naval Medical Research Inst., Bethesda). May 15, 1952. 26p. (NP-4076). NSA 6-6498.

1470
LETHAL MUTATIONS AND THE BACTERICIDAL ACTION OF IONIZING RADIATION. K. C. Atwood and G. E. Stapleton. *Naturwissenschaften* 39, 330-1 (1952). July. (In English).

Authors object to the hypothesis that the bactericidal action of ionizing radiation may be attributed to lethal mutation, since exponential survival curves are incompatible with lethal-mutation hypothesis in cases where bacteria are multinucleate. Induction of recessive lethal mutations in a two-nuclei cell does not require mutations in identical loci of both nuclei (cytological and genetic evidence). NSA 6-6499.

1471
THE DEPENDENCE OF SOME BIOLOGICAL EFFECTS OF RADIATION ON THE RATE OF ENERGY LOSS. Cornelius A. Tobias. IN SYMPOSIUM ON RADIOBIOLOGY. James J. Nixon, ed. N. Y., John Wiley and Sons, 1952. (Chapter 19).

Phenomenon of inhibition of cell division by irradiation is examined theoretically and experimentally in a set of varied conditions. NSA 6-6500.

1472
BEHAVIOR OF NUCLEIC ACIDS IN NERVE CELLS SUBJECTED TO ROENTGEN RADIATION. A. Della Beffa. *Arch. psicol. neurol. e psychiat.* 13, 116-27 (1952). Jan. (In Italian).

Histological and cytochemical observations on cerebral, cerebellar and spinal cord tissue of guinea pigs exposed to 900 to 3600 r of x radiation in 1 to 3 exposures are reported. NSA 6-6501.

1473
SINGLE WHOLE-BODY X IRRADIATIONS OF THE GUINEA PIG: PRINCIPAL BIOLOGICAL EFFECTS. L. Pigoury, P. Nizza, and J. Charney. *Rev. vét. militaire* 7, 1-25 (1952). (In French).

Guinea pigs were x irradiated with 100, 200, 400, 500, 800, or 1000 r. Mortality rates, mean survivals, clinical effects (symptoms, temperature changes and weight losses) blood pictures and brief description of macroscopic lesions of important organs are reported. NSA 6-6502.

1474
REACTION OF THE VAGINAL WALL TO INTRAVAGINAL IRRADIATION. Hans Tischer. *Wien med. Wochschr.* 102, 133-6 (1952). Feb. 16. (In German).

Tolerance limit of 30,000 r surface dose in 12-fold fractionated exposures was established for vaginal wall in intravaginal x irradiations. Higher doses, either single or fractionated, produce extensive, lasting radiation damage. Macroscopic and histological changes at various radiation levels are illustrated. NSA 6-6503.

1475
SENSITIZATION BY BETA RADIATION OF BACTERIA TO EFFECTS OF HIGH AND LOW TEMPERATURES AND TO EFFECTS OF REPEATED BETA RADIATION. E. Ya. Graevskii. *Doklady Akad. Nauk S.S.S.R.* 83, 565-8 (1952). Apr. 1. (In Russian).

Colonies of *Bacterium coli commune* were exposed to total doses of 0.002 to 0.85 mc/day of $\text{Ra } \beta$ radiation. Sensitized colonies were incubated at various temperatures and with additional β irradiations. Survival are curves presented. Results are interpreted as supporting target theory of action of ionizing radiation. NSA 6-6504.

1476
EFFECT OF NITROGEN MUSTARD OR X- OR RADIUM-IRRADIATION TREATMENT ON THE LEVEL OF BLOOD SERUM PROTEIN-BOUND CARBOHYDRATE (POLY-SACCHARIDE) IN PATIENTS WITH NEOPLASMS. J. W. Keyser. *Biochem. J.* 51, 46 (1952). Aug.

Treatment that results in marked clinical improvement and reduction in tumor size was associated with fall in level of serum polysaccharide (total and mucoprotein) toward normal values, with preliminary rise during treatment. With relapse, polysaccharide level rose again. NSA 6-6505.

1477
HISTOCHEMICAL AND SEROLOGICAL INVESTIGATION ON THE EFFECT OF ROENTGEN RADIATION. III. BEHAVIOR OF ACETAL PHOSPHATIDES (Aph) IN SPLEEN, THYMUS, SMALL INTESTINE, KIDNEY, AND HEART MUSCLE OF THE RAT FOLLOWING WHOLE-BODY IRRADIATION WITH 1000 R. Theophil Hornykiewytsch and Günther Seydl. *Strahlentherapie* 88, 129-39 (1952). (In German).

Tissues rich in Aph (glands of small intestine) are radioresistant, while those poor in Aph (spleen and thymus) are radiosensitive. NSA 6-6506.

1478
VARIATION OF DESOXYRIBONUCLEIC ACID IN HEPATIC CELLS FOLLOWING X IRRADIATION. A. Romanini. *Boll. soc. ital. biol. sper.* 28, 103-5 (1952). (In Italian).

Mice were given single dose of 1000 r on hepatogastric region and sacrificed at end of 1 hr, or 1, 3, or 7 days. DNA concentrations were determined in liver preparations with histophotometer. An initial indefinite increase occurs, then a rapid drop to 78% of normal at end of 24 hr, followed by another increase to 125% of normal by 7th day. NSA 6-6508.

1479
PHARMACOLOGICAL STUDIES OF IRRADIATED ANIMALS. PART I. SCOPE AND METHODOLOGY. Friedrich Ellinger. (Naval Medical Research Inst., Bethesda). May 28, 1952. 13p. (NP-4121; U-23977).

Data on effects of DNA, RNA, and spleen extract on radiation-induced mortality in mice are presented graphically. Mechanisms by which pharmacological agents modify lethal effects of ionizing radiation and the necessity of using the entire lethal-dose curve for evaluation of drug effects are discussed. NSA 6-6515.

1480
BLOOD TRANSFUSION IN IRRADIATION HEMORRHAGE. J. Garrott Allen, C. E. Basinger, Jerome J. Landy, Margaret H. Sanderson, and Daniel Enerson. *Science* 115, 523-6 (1952). May.

Frequent administration of fresh blood transfusions without antibiotics in dogs failed to improve survival rate or to ameliorate spontaneous bleeding after exposures to total-body x rays (LD_{50} - LD_{100}). More caution is indicated in use of frequent blood transfusions alone as a therapeutic measure in treating latent symptoms of irradiation injury in man. NSA 6-6516.

1481

ALLELISM OF SECOND CHROMOSOME LETHALS IN *D. MELANOGASTER*. Bruce Wallace. (Biological Lab., Cold Spring Harbor, N. Y.). (nd). 5p. (AECU-990); Proc. Natl. Acad. Sci. U. S. 36, 654-7 (1950).

Through an analysis of the frequency of allelism of 100-sec chromosome lethals induced in *D. melanogaster* by chronic γ -ray treatment, it has been estimated that the minimum number of loci capable of mutating to lethality under these conditions is 400 (234-718). NSA 5-744.

1482

BIOLOGICAL EVALUATION OF 20 MILLION VOLT ROENTGEN RAYS. V. BAR EFFECT IN *DROSOPHILA*. W. M. Luce, H. Quastler, and E. F. Lanzl. Am. J. Roentgenol. Radium Therapy 64, 963-7 (1950). Dec.

Reduction of eye facet number in *D. melanogaster* after irradiation is used to compare effects of high- and low-energy roentgen rays. Efficiency of n (20 million volt at 200 kv) $\approx$ 0.85. Result is consistent with values previously obtained with responses to single doses. NSA 5-745.

1483

CONFERENCE ON RADIATION CATARACTS AND NEUTRON EFFECTS. Phillip H. Abelson. (Division of Medical Sciences, NRC). Feb. 17, 1950. 100p. (NP-1826).

Production and detection of neutrons; experimental neutron-irradiation of animals; studies on lens of eye are discussed. NSA 5-746.

1484

THE EFFECT OF IRRADIATION ON THE DENTAL SYSTEM AS DEMONSTRATED BY THE ROENTGENOGRAM. Karl W. Bruce and Edward C. Stafne. J. Am. Dental. Assoc. 41, 684-9 (1950). Dec.

Irradiation can injure tooth germ, preventing formation of tooth; cause dwarfing of permanent teeth; effect dwarfing of roots of permanent teeth undergoing development; effect premature completion of calcification of permanent teeth; may cause early eruption of permanent teeth. NSA 5-747.

1485

EXTREME RETARDATION OF EPIPHYSEAL GROWTH FROM ROENTGEN IRRADIATION. A CASE STUDY. Charles H. Frantz. Radiology 55, 720-4 (1950). Nov.

Infant with congenital hemangio-matous hypertrophicum of right leg was treated with 400 and 200 r doses of 135-kv x rays. After 15.5 yr 29% lag developed in longitudinal growth of treated leg, although normal knee-joint motion persisted. NSA 5-748.

1486

RADIATION SENSITIVITY OF CELLS DURING MITOTIC AND MEIOTIC CYCLES WITH EMPHASIS ON POSSIBLE CYTO-CHEMICAL CHANGES. A. H. Sparrow. (Brookhaven National Lab.). (nd). 65p. (AECU-160; M-4303). Ann. N.Y. Acad. Sci. 51, 1508-40 (1951).

Original data (*Trillium erectum*) show late prophase and metaphase to be highly sensitive to x-ray breakage; early interphase of low sensitivity. Tendency of broken ends to rejoin appears to be inversely related to amount of fragmentation per dosage. Factors affecting nuclear radiosensitivity are discussed. NSA 2-1506.

1487

THE FAST NEUTRON HAZARD. Titus C. Evans. Nucleonics 4, No. 3, 2-8 (1949). Mar.

Effects of neutrons (ca. 4 Mev) and 185 kv x rays on mice were studied to determine whether distribution of exposure in time would alter relative effectiveness of the radiations. Exposures were (1) single acute, (2) multiple subacute or (3) chronic (small doses); survival data are presented graphically. Equivalence of $1n = 10$ r accepted as temporary working basis for permissible exposures. NSA 2-1507.

1488

HISTAMINE IN RAT PLASMA CORRELATION WITH BLOOD PRESSURE CHANGES FOLLOWING X-IRRADIATION. R. P. Weber and F. R. Steggerda. Proc. Soc. Exptl. Biol. and Med. 70, 261-63 (1949). Feb.

Rat blood plasma contains 1-2 γ histamine/2cc plasma at 2 hr and 5 days after exposure to LD_{50} (600 r) of x rays. Other rats similarly irradiated show fall in blood pressure at time histamine found in plasma of above mentioned rats. Relationship considered to be strong suggestion that histamine causes fall in blood pressure. NSA 2-1508.

1489

MEDICAL AND BIOLOGICAL ASPECTS OF NUCLEAR ENERGY. Andrew H. Dowdy. (Atomic Energy Project, Rochester Univ. and Douglas Aircraft Co. Project RAND). Aug. 13, 1947. 36p. (RAD-202).

A review of University of Rochester experimental studies of effects of chronic and acute x and neutron irradiation on peripheral blood picture; incidence of leukemia; mortality; weight; male sterility; genetic changes and histogenetic changes (dogs, rabbits, monkeys, rats and fruit flies). Significance of results are discussed. NSA 2-1509.

1490

PLATELET VALUES IN PERSONNEL ENGAGED IN ROENTGEN DIAGNOSTIC WORK. Harry Mossberg. Acta Radiol. 34, 186-92 (1950). Sept.

Definite decrease in platelet count found in one-third of cases. NSA 5-749.

1491

THE PROPERTIES OF X-RAY-INACTIVATED BACTERIOPHAGE. I. INACTIVATION BY DIRECT EFFECT. James Dewey Watson. J. Bacteriol. 60, 697-718 (1950). Dec.

Inactivation is a simple exponential function of dose, indicating a one-hit inactivating mechanism. Results are used to distinguish two stages in early period of phage reproduction, first being called "adsorption," the second, "invasion." NSA 5-750.

1492

RADIATION INJURY TO PLANTS GROWN IN NUTRIENT SOLUTIONS CONTAINING P^{32} . James M. Blume, C. E. Hagen, and Ruth W. Mackie. Soil Sci. 70, 415-26 (1950). Dec.

Damage to tops is more severe than damage to roots. Injury is due primarily to radiation from P^{32} accumulated within the plant, that remaining in the nutrient solution having relatively little effect. No evidence of damage to cells other than those which were in zones of active division. NSA 5-751.

1493

MANUAL ON RADIOLOGICAL PROTECTION FOR CIVILIAN DEFENSE. Elda E. Anderson. (Oak Ridge National Lab.). Apr. 1950. 173p. (M-4514). NSA 5-753.

1494

MEDICAL ASPECTS OF CIVIL DEFENSE AGAINST ATOMIC WEAPONS. William F. Bale, George H. Casarett, Donald R. Charles, Adrian Dahl, Joe W. Howland, John B. Hursh, Mary Lou Ingram, Harry J. Kingsley, Alexander Leighton, Ralph J. Low, Alec E. Martin, Herbert Mermagen, Joseph T. Payne, James Scott, J. Newell Stannard, and Luville T. Steadman. (Atomic Energy Project, Univ. of Rochester). J. Newell

Stannard and Henry A. Blair, eds. Sept. 1, 1950. 265p. (UR-112). NSA 5-756.

1495

PROBLEMS IN THE ESTABLISHMENT OF MAXIMUM PERMISSIBLE RADIATION EXPOSURE LEVELS. J. N. Stannard. (Atomic Energy Project, Univ. of Rochester). Dec. 1950. 2p. (UR-135). NSA 5-757.

1496

BIOLOGICAL ASPECTS OF ATOMIC ENERGY. Brit. Med. J., 999 (1950). Oct. 28.

Report on radiation effects, genetic hazards and their control, and responsibilities of atomic scientists. NSA 5-758.

1497

EFFECT OF ANTIBIOTICS ON MORTALITY FROM INTERNAL RADIATION. Simon Koletsky. (Atomic Energy Project, Western Reserve Univ.). Sept. 28, 1950. 14p. (NYO-1614); Proc. Soc. Exptl. Biol. Med. 75, 363-6 (1950).

Combination of streptomycin and penicillin proved effective in reducing mortality of rats given lethal doses of P^{32} . Morbidity was reduced and survival time prolonged. NSA 5-759.

1498

DOSAGE UNITS FOR HIGH-ENERGY RADIATION. U. Fano and Lauriston S. Taylor. Radiology 55, 743-7 (1950). Nov.

Authors present general discussion of changing emphasis on various aspects of radiation dosage measurement and the increasing clarification of the problem. New units formulated by workers from many countries are listed. NSA 5-763.

1499

THE PHYSICIAN IN AN ATOMIC WAR. P. Allweiss-Alvet. Mûch. med. Wochenschr. 92, 705-14 (1950). Aug. 4. (In German).

Experience gained in Hiroshima, Nagasaki, and Eniwetok Atoll is basis for this outline of pathological damages caused by bomb, and therapeutic and preventive possibilities to be considered in atomic warfare. NSA 5-3.

1500

THE EFFECT OF X-RAY UPON THE GROWTH AND INFECTIVITY OF ENDAMOEBA HISTOLYTICA. Elvio H. Sadun, Joseph N. Ane, Frances Willard Fuller, and Ruth Lewis. Am. J. Trop. Med. 30, 635-40 (1950). Sept.

Exposure of amoeba to 60,000 and 120,000 r in Balamuth culture caused some inhibition of population growth, while 30,000 r dose had no such effect. Progeny of x-rayed amoeba (120,000 r) and unexposed controls both caused severe intestinal lesions when injected into normal guinea pigs. NSA 5-12.

1501

FUNCTIONAL AND STRUCTURAL CHANGES CONSEQUENT TO HIGH DOSAGES OF RADIOACTIVE IODINE. Aubrey Gorbman. J. Clin. Endocrinol. 10, 1177-91 (1950). Oct.

Observations on sequelae in mice after administration of high, radiotoxic doses of I^{131} are summarized and related, when feasible, to man. NSA 5-13.

1502

GREYING OF HAIR. II. RESPONSE OF INDIVIDUAL HAIRS IN MICE TO VARIATIONS IN X-RADIATION. Herman B. Chase and Harold Rauch. J. Morphol. 87, 381-91 (1950). Sept.

Mice were irradiated with up to 1500 r of 100 and 200 kv x rays, 920-million-volt betatron and 50 mg Ra needle. Results suggest that radiation affects melanoblast source of pigment granules for each hair follicle. NSA 5-14.

1503

RADIOACTIVITY AND COSMIC RADIATION AS BIOLOGI-

CAL FACTORS? Josef Penkava. Sborník Českoslov. Akad. Zěmèdelské 22, 448-66 (1950). (In Czech).

Elementary outline of progress and present knowledge in this field. NSA 5-15.

1504

STUDIES ON THE EFFECTS IN VITRO OF ROENTGEN RADIATION ON THE BIOLOGICAL ACTIVITY OF THE AGENT OF CHICKEN TUMOR I (ROUS SARCOMA). W. Ray Bryan, Egon Lorenz, and John B. Moloney. J. Natl. Cancer Inst. 10, 1215-37 (1950). June.

Dose-survival curve varies with method of preparation and relative purity of tumor-agent suspension exposed. Diameter of radiosensitive structure of unit particles of tumor agent is estimated at 46-49 $m\mu$. NSA 5-16.

1505

CANCER THERAPY BY MEANS OF SLOW NEUTRONS; PRELIMINARY STUDY. José W. Otte and Eduardo Sanchez Serrano. Toko-ginecol. práct. 9, 1-15 (1950). Jan. (In Spanish).

Cancers of uterus and breast previously impregnated with B or Li (iontophoresis) were irradiated with slow neutrons (4×10^3 neutrons/cm²/sec). Observations are reported. NSA 5-23.

1506

MALIGNANT TUMORS AND THE RADIUM-ROENTGEN THERAPY. S. Scaglione. Boll. soc. ital. biol. sper. 26, 23-4 (1950). Jan. (In Italian).

Observations on 3 cases of malignant tumors of uterus and ovary apparently caused by x ray treatment for myoma of uterus given 10-15 yr previously are presented. Carcinogenic action of x rays and Ra on genital organs is discussed. NSA 5-25.

1507

A COMPARISON OF FETAL AND INFANT DEATH RATES IN THE PROGENY OF RADIOLOGISTS AND PATHOLOGISTS. James F. Crow. Am. J. Roentgenol. Radium Therapy Nuclear Med. 73, 467 (1955).

1508

THE RESPONSE OF MICE TO INOCULATION WITH CERTAIN AVIRULENT BACTERIA AFTER EXPOSURE TO SUBLETHAL TOTAL BODY X-IRRADIATION. I. L. Schechmeister and V. P. Bond. (Naval Radiological Defense Lab.). Aug. 11, 1950. 12p. (AD-233(B)). Proc. Soc. Exptl. Biol. Med. 77, 77-80 (1951).

Mice, irradiated and inoculated with avirulent organisms different from those normally present in their intestines, exhibited high incidence of bacteremia and death. NSA 5-285.

1509

THE INFLUENCE OF TEMPERATURE UPON THE DESTRUCTION OF X-RAYED HEMATOPOIETIC CELLS OF TADPOLES. Bennet M. Allen, Ole Arne Schjeide, and Lynette B. Hochwald. (Univ. of Calif., Los Angeles). Oct. 12, 1950. 17p. (UCLA-93). J. Cell. Comp. Physiol. 38, 69-82 (1951).

Visible destruction of x-rayed (500 r, hard x rays) hematopoietic cells of tadpoles (due to destructive reactions subsequent to irradiation) is conditioned by temperature at which tadpoles are reared. NSA 5-286.

1510

BY-EFFECTS OF IRRADIATION ON THE SKIN. Arthur William Stillians. J. Am. Med. Assoc. 144, 743-7 (1950). Oct. 28.

Overexposure to α rays or Ra may cause infectious eczematoid dermatitis superimposed on radiodermatitis, acne, erythema and tumors. Histological study is presented of benign tumor developing after Ra β -ray treatment of an erythematous senile keratosis. NSA 5-289.

1511

THE DISTRIBUTION OF X-RAY INDUCED CROSSOVERS

FROM CURLY INVERSION HETEROZYGOTES OF DROSOPHILA MELANOGASTER FEMALES. Claude W. Hinton and Maurice Whittinghill. *Proc. Natl. Acad. Sci. U. S. A.* 36, 552-8 (1950). Oct.

Induced crossover offspring from test crossed *Drosophila* females x-rayed with 2250 r as adults are so distributed that their meiotic origin is unlikely. Results indicate oögonial influence upon recombinants. NSA 5-290.

1512
EFFECT OF LYMPHOID NECROSIS DUE TO NITROGEN MUSTARD AND ROENTGEN IRRADIATION ON NEUROMUSCULAR FUNCTION OF HYPOPHYSECTOMIZED ANIMALS. Clara Torda and Harold G. Wolff. *Am. J. Physiol.* 163, 201-8 (1950). Oct. 1.

Hypophysectomized rats exhibit marked decrease in ability of nerve to maintain amplitude of action potential, and decrease in ability of nerve tissue to synthesize acetylcholine. Administration of ACTH restores both abilities to normal. NSA 5-291.

1513
EFFECTS OF INTERNAL IRRADIATION OF MICE WITH P^{32} , PART II. GONADS, KIDNEYS, ADRENAL GLANDS, DIGESTIVE TRACT, SPINAL CORD, LUNGS, AND LIVER. Shields Warren, Jane C. MacMillan, and Frank J. Dixon. *Radiology* 55, 557-70 (1950). Oct.

Authors describe histologic damage suffered by a series of mice injected with 25 μ c, 250 μ c, and 2 mc of P^{32} . NSA 5-292.

1514
INHIBITION OF PLANT GROWTH BY IRRADIATION. V. RADIATION EFFECTS ON INITIATION AND COMPLETION OF GROWTH. Henry Quastler and Marianne Baer. *Cancer Research* 10, 604-12 (1950). Oct.

Linear growth in Mung beans was studied after total or partial irradiation with various doses of x radiation. Results showed apparatus for growth initiation is more vulnerable than apparatus concerned with actual growth. NSA 5-293.

1515
PRELIMINARY ESTIMATE OF THE ENERGY DEPOSITION IN SOFT TISSUE DUE TO A FAST NEUTRON FLUX. B. Davison. (Atomic Energy Research Establishment, Harwell, Berks (England)). (nd). 34p. (AERE-T/M-13; H.S. 1467). NSA 5-294.

1516
PYRIDOXINE AND EXPERIMENTAL X-RADIATION INJURY IN RATS. M. L. MacFarland, M. V. Peters, R. M. Ballantyne, and E. W. McHenry. *Am. J. Physiol.* 163, 394-9 (1950). Nov. 1.

Pyridoxine deprivation did not increase x ray susceptibility of rats. Irradiation did not affect total Vitamin B_6 concentration in liver of either deficient or control animals. NSA 5-295.

1517
RADIATION-INDUCED MUTATIONS IN MAMMALS. Donald R. Charles. *Radiology* 55, 579-81 (1950). Oct.

1518
PROTECTION OF BIOLOGICAL SYSTEMS FROM THE EFFECTS OF IONIZING RADIATION. Leslie F. Nims. (Brookhaven National Lab.). (nd). 7p. (AECU-972). *J. Chim. Phys.* 48, 280-3 (1951).

Author presents a general discussion of biological aspects of radiation damage. Although it is impossible to protect biological systems from physical effects of radiation, there is protection against chemical oxidations caused by radiation. Protecting substances must be present during exposure. NSA 5-297.

1519
RATIONALE OF THERAPY OF BLOOD DISEASES.

William Appel. *J. Michigan State Med. Soc.* 49, 1188-90, 1204 (1950). Oct.

Treatment of hemorrhagic diseases, anemia and leukemia including use of x rays, P^{32} , and nitrogen mustard is discussed. NSA 5-308.

1520
SOME OBSERVATIONS WITH 1,000-KV, 400-KV, AND 200-KV X-RAY THERAPY. Walter T. Murphy and M. C. Reinhard. *Radiology* 55, 477-93 (1950). Oct.

Data collected on radiation effects and x ray and Ra therapy techniques during routine treatment of malignant neoplasms of pelvic region are presented. NSA 5-309.

1521
STUDIES OF THE METABOLISM OF CERTAIN FISSION PRODUCTS AND PLUTONIUM. Bergene Kavin, D. H. Copp, and J. G. Hamilton. (California Univ., Radiation Lab.). Aug. 7, 1950. 120p. (UCRL-812).

Distribution and excretion studies of radioisotopes of cerium, niobium, plutonium, strontium, yttrium and zirconium in rats are reported. NSA 5-318.

1522
DIFFERENTIAL REJOINING AS A FACTOR IN APPARENT SENSITIVITY OF CHROMOSOMES TO X-RAY BREAKAGE. Arnold H. Sparrow. (Brookhaven National Lab. and Marc Maldawer, Harvard Univ.). (nd). 14p. (AECU-989). *Proc. Natl. Acad. Sci. U.S.A.* 36, 636-43 (1950).

Differential rejoining was studied in microspores of *Trillium erectum* after x irradiation of (1) meiotic first metaphase and (2) early post-meiotic interphase stages. Significantly higher amount of rejoining was observed in (1). NSA 5-512.

1523
COMPARATIVE BIOLOGICAL ACTIONS OF CYCLOTRON FAST NEUTRONS AND X-RAYS I. LETHAL ACTION ON MICE AND RABBITS. Charles W. Hagen, Jr., and Raymond E. Zirkle. (Argonne National Lab.). Nov. 1950. 26p. (CH-3903).

For rabbits LD_{50-30} is 825 r of x rays, or 145 n units of neutrons, x/n ratio is 5.7. Ratio of mean survival times is 6.3 LD_{50-30} for mice is 540 r or 54 n; x/n ratio is 10. NSA 5-514.

1524
THE EFFECTS OF ACUTE EXPOSURE TO ROENTGEN RADIATION ON THE PERIPHERAL BLOOD OF EXPERIMENTAL ANIMALS. M. Ingram and W. B. Mason. (Univ. of Rochester, Atomic Energy Project). July 17, 1950. 36p. (UR-122).

Single whole-body x ray doses were given to rats (5-1500 r), monkeys (300-2000 r), and dogs (300 r) and hemograms were determined at regular intervals for 25-60 days post irradiation. NSA 5-515.

1525
EXPERIMENTAL CONFIRMATION OF A PREVIOUSLY REPORTED UNUSUAL FINDING IN THE BLOOD OF CYCLOTRON WORKERS. M. Ingram and S. W. Barnes. (Univ. of Rochester, Atomic Energy Project). Oct. 10, 1950. 8p. (UR-137). *Science* 113, 32-4 (1951).

Relationships between increased incidence of lymphocytes with bilobed nuclei and exposure to radiation from cyclotron were confirmed experimentally using 3 dogs studied throughout response and recovery stages following 3 consecutive exposures. NSA 5-516.

1526
ACTION OF X-RAYS ON THE EMBRYONIC DEVELOPMENT OF AMPHIBIA. V. A. Blinov. *Doklady Akad. Nauk S.S.S.R.* 74, 401-4 (1950). Sept. 11. (In Russian).

Radiosensitivity of the embryo was studied using axolotls and tritons (147 r/min) and frogs (1100 r/min). Final phase of blastula, late neurula, and time of gill

formation were the most radiosensitive periods of development. NSA 5-517.

1527

THE EFFECT OF X-RADIATION ON ANTIBODY FORMATION. Leon O. Jacobson, Melba J. Robson, and Edna K. Marks. *Proc. Soc. Exptl. Biol. Med.* 75, 145-52 (1950). Oct.

Antibody formation is suppressed in rabbits by 800 r total body x-ray exposure. Lead shielding of spleen or appendix protects capacity to form antibodies, even though lymphatic tissue elsewhere in body is destroyed. NSA 5-519.

1528

REPORT OF "SYMPOSIUM ON MODE OF ACTION OF IONIZING RADIATIONS." Alma Howard. *Nucleonics* 7, No. 6, 26-30 (1950). Dec.

Analysis of reaction of living cells to various radiations is presented. NSA 5-520.

1529

EMERGENCY RESPIRATORY PROTECTION IN THE ATOMIC AGE. Julius Hanoach. (Brookhaven National Lab.). July 1, 1950. 20p. (AECU-982).

This discussion is based on the 2 objectives of a radiation safety program which are (1) to assure external irradiation is limited to permissible exposure limit; (2) to prevent entrance of radiomaterials into body. NSA 5-521.

1530

A CHART FOR ESTIMATING DOSAGE TIME FACTORS FOR PERSONNEL EXPOSED TO MEASURED RADIATION FIELDS. R. E. Young and C. J. Camp. (Naval Radiological Defense Lab.). Jan. 10, 1950. 7p. (AD-189(O); NRDL-12).

A 3-scale nomograph is presented for calculating maximum permissible exposure time for personnel handling radioisotopes or who are exposed to ionizing radiation. NSA 5-522.

1531

CHROMOSOMAL INTERCHANGES IN MAIZE. E. G. Anderson. *Genetics* 20, 70-83 (1935).

Author describes 64 chromosomal interchanges in maize. Chromosomes identified by diakinesis examination of intercrossovers with known interchanges. Information supplemented by linkage studies and midprophase cytological examinations. Tabulation of interchanges for 10 chromosomes after irradiation shows frequency proportional to relative lengths of chromosomes. Selective elimination is more stringent in haploid gametophyte than in zygote. (from abstract). BA 9-17598.

1532

SULFHYDRYL-CONTAINING AGENTS AND THE EFFECTS OF IONIZING RADIATIONS II. FURTHER STUDIES OF THE BENEFICIAL EFFECT OF GLUTATHIONE ON X-IRRADIATED MICE. W. H. Chapman and E. P. Cronkite. (Naval Medical Research Inst., Bethesda). June 20, 1950. 9p. (NP-1833). *Proc. Soc. Exptl. Biol. Med.* 75, 318-22 (1950).

Results indicate a quantitative relationship between glutathione dosage and degree of x ray protection given. NSA 5-530.

1533

SINGLE CELL AUTOGRAPHS OF BONE MARROW AND BLOOD FROM RATS USING RADIOACTIVE PHOSPHORUS. William I. Morse. *Am. J. Med. Sci.* 220, 522-9 (1950). Nov.

Youngest erythropoietic and granulopoietic forms from marrow have most intense autographs indicating rapid P^{32} turnover. Autographs of megakaryocytes and lymphocytes are faint. If observations are substantiated, P^{32} may have advantages over x-ray therapy in myelogenous leukemia. NSA 5-533.

1534

THE BIOLOGIC EFFECTS OF RADIATION TRAINING PROGRAM LECTURE NOTES. S. T. Cantril. (Argonne National Lab.). May 17, 1943. Decl. May 22, 1950. 10p. (AECU-2976; CL-551).

Notes on specific ionization, effective penetrability of radiation, time factor, total dose, radiosensitivity and tolerance dose in relation to occupational hazard. Tolerance level of γ radiation for skin and total body 0.1 r/day; for neutrons, 0.01 r/day. NSA 5-908.

1535

CHANGES IN ANTIDIURETIC ACTIVITY OF RAT SERUM AFTER X-IRRADIATION. Abraham Edelmann and W. J. Eversole. (Brookhaven National Lab.). (nd). 1p. (AECU-108). *Am. J. Physiol.* 186, 709 (1950).

Irradiated rats (160 KVP, 10 ma, 0.2 mm Cu) excreted test dose of H_2O at more rapid rate than did unexposed controls, apparently due to a decrease in serum anti-diuretic activity observed at 12 and 24 hr post irradiation. NSA 5-910.

1536

COMPARATIVE LETHAL ACTION OF X RAYS AND CYCLOTRON NEUTRONS ON DROSOPHILA EGGS. Raymond E. Zirkle and Mary Ellen Parrish. (Argonne National Lab.). Dec. 1950. 6p. (CH-3904).

Various lots of eggs were given graded doses of (1) x rays, (2) fast neutrons and (3) mixed neutrons and γ rays from cyclotron. LD_{50} for (1) is 170 r, for (2) 31 n, for (3) 43 Victoreen scale units. Dosage ratio of x/n is 170/31 or 5.5; x/n with γ rays present is 170/43 or 4.0. NSA 5-911.

1537

THE EFFECTS OF CHRONIC EXPOSURE TO ROENTGEN RADIATION ON THE PERIPHERAL BLOOD OF EXPERIMENTAL ANIMALS. M. Ingram and W. B. Mason. (Univ. of Rochester, Atomic Energy Project). July 17, 1950. 23p. (UR-121).

Routine hematological examinations of dogs, rabbits, rats, and monkeys exposed to daily whole-body x-ray doses of 0.1-10.0 r/day for continuous period of not more than 2 years are reported. NSA 5-912.

1538

APPLICATION OF THE CONCEPT OF ENTROPY TO CELL REACTIONS, CONSIDERED AS A FUNDAMENTAL BIOLOGICAL LAW. Luigi Turano. *Radiologia Med.* 36, 116-29 (1950). Feb. (In Italian).

Author believes reaction of cell to ionizing radiation is to hasten death, senescence or degeneration, all of which are degrees of dissipation or degeneration of energy, of irreversible approach toward greater molecular disorder and states of higher statistical probability or entropy. NSA 5-913.

1539

THE BIOCHEMICAL, CELLULAR, AND BACTERIOLOGIC CHANGES IN THORACIC DUCT LYMPH OF DOGS EXPOSED TO TOTAL BODY IRRADIATION. Crawford S. Brown, Esther Hardenbergh, and John L. Tullis. (Naval Medical Research Inst., Bethesda). June 22, 1950. 15p. (NP-1762). *Am. J. Physiol.* 163, 668-75 (1950).

Changes in protein level, creatin, uric acid, sugar, and other components of the lymph were studied in 40 dogs after 500 r total body x ray dose. NSA 5-914.

1540

THE EFFECT OF ADRENALECTOMY ON RADIATION INDUCED MORTALITY OF THE MOUSE. E. P. Cronkite and W. H. Chapman. (Naval Medical Research Inst., Bethesda). June 17, 1950. 7p. (NP-1875). *Proc. Soc. Exptl. Med.* 74, 337-40 (1950).

Adrenalectomized, irradiated mice have shortened survival time, and death is apparently caused by mechanisms other than infection and hemorrhage. NSA 5-915.

1541

EFFECTS OF X-IRRADIATION ON PASSIVELY TRANSFERRED ANTIBODY. J. W. Hollingsworth. *Proc. Soc. Exptl. Biol. Med.* 75, 477-9 (1950). Nov.

X ray dose of 300 r had no effect on rate of destruction of passively transferred homologous or heterologous antisera given rabbits 24 hr post irradiation. Dose did decrease antibody formation to heterologous serum proteins. NSA 5-916.

1542

THE EFFECTS OF X IRRADIATION ON RANA PIPIENS (LEOPARD FROG), WITH SPECIAL REFERENCE TO SURVIVAL AND TO THE RESPONSE OF THE PERIPHERAL BLOOD. S. Phyllis Stearner. *J. Exptl. Zool.* 115, 251-62 (1950). Nov.

In a study of irradiated frogs (600-2000 r), data indicate that in this animal there is a wider range of dosages causing less than 100% mortality, and slope of survival curve is not as great as that for mammals. Hematopoietic response is similar to but slower than that of mammals. NSA 5-917.

1543

EXPERIMENTAL RADIOPHYSIOLOGY CANCERS AND HORMONES; IV. CANCERS PRODUCED BY CORPUSCULAR RADIATIONS (A PROPOSED MECHANISM OF RADIATION CARCINOGENESIS). Antoine Lacassagne, ed. Paris, Herman et Cie, 1945. 115p. (Trans. by Inez C. O'Brien). (NP-2226; Scientific and Industrial Publications 981 Translation-23 (UCRL)). NSA 5-919.

1544

MORTALITY IN SWINE AND DOSE DISTRIBUTION STUDIES IN PHANTOMS EXPOSED TO SUPER-VOLTAGE X RADIATION. John L. Tullis, F. W. Chambers, Jr., J. E. Morgan, and John H. Zeller. (Naval Medical Research Inst., Bethesda). Aug. 29, 1950. 21p. (NP-1887). *Am. J. Roentgenol and Radium Therapy* 67, 820-7 (1952).

LD_{50/30} values for 110-160 lb. swine are 350-400 r for 2000 kvp bilateral irradiation; 500 r for 2000 kvp unilateral; 510 r for 1000 kvp bilateral exposures. All exposures were total body x radiation at 2 meters. NSA 5-920.

1545

PROTECTIVE ACTION OF SODIUM NITRIDE AGAINST LETHALITY PRODUCED BY X RAYS IN MICE A. Herve and Z. M. Bacq. *Compt. rend. soc. biol.* 144, 1124-5 (1950). Aug. (In French).

Injection of 0.1 to 0.2 mg Na₃N in aqueous solution into mice prior to 700 r x ray dose reduced lethality by 60%. NSA 5-921.

1546

SULFHYDRYL-CONTAINING AGENTS AND THE EFFECTS OF IONIZING RADIATIONS III. STUDIES ON THE MECHANISM OF THE PROTECTIVE ACTION OF GLUTATHIONE. Eugene P. Cronkite, George Brecher, and W. H. Chapman. (Naval Medical Research Inst., Bethesda). June 27, 1950. 15p. (NP-1876).

Positive results of this agent were observed in mice, dogs, and rats. Clearance and tissue distribution studies are reported and marked protection of hematopoietic tissues is documented. NSA 5-922.

1547

WASTE MATERIALS IN THE UNITED STATES ATOMIC ENERGY PROGRAM. Abel Wolman and Arthur E. Gorman. (Division of Engineering, AEC). Jan. 12, 1950. 20p. (WASH-8).

Problems of radioactive waste are reviewed. Future growth of industry producing such waste may depend on

effective and economical solution to problems of disposal. NSA 5-924.

1548

THE EMERGENCY CARE OF ATOMIC BOMB CASUALTIES. PART I. THE BOMB AND ITS EFFECTS. Theodore P. Eberhard, ed. *Philadelphia Med.* 46, 533, 535, 537, 545 (1950). Dec. 2.

First of series of lectures to inform doctors of problems to be faced during 1st 48 hr after atom-bombing. NSA 5-926.

1549

THE EMERGENCY CARE OF ATOMIC BOMB CASUALTIES. PART III. THE EFFECTS OF RADIANT ENERGY ON HUMAN BEINGS. Theodore P. Eberhard, ed. *Philadelphia Med.* 46, 631, 633, 635-6 (1950). Dec. 23.

Fundamental ionizing effect of radiation is discussed. Treatment for atomic-bomb radiation victims is listed: bed; antibiotics; blood transfusions as needed; anti-hemorrhagic substance; nourishment. NSA 5-929.

1550

EMERGENCY CARE OF ATOMIC BOMB CASUALTIES. PART V. THE RECOGNITION AND TREATMENT OF SHOCK. Theodore P. Eberhard, ed. *Philadelphia Med.* 46, 697-8 (1951). Jan. 6.

Proper treatment of shock under conditions of atomic-bomb attack. NSA 5-931.

1551

GERMAN AND FOREIGN REGULATIONS FOR X-RAY PROTECTION IN MEDICAL ROENTGEN UNITS. R. Glocker. *Fortschr. Gebiete Röntgenstrahlen* 73, 13 (1950).

Regulations in medical laboratories in Germany, U.S., England, and Sweden are compared as to hourly, daily, and weekly permissible dose; maximum permeability of x-ray tube hood; minimum thickness of Pb aprons and gloves; protection against dispersion of rays in therapy units; maximum working hours; minimum vacation time. NSA 5-934.

1552

HEMATOLOGY OF ATOMIC BOMB CASUALTIES. George V. LeRoy. *Arch. Internal Med.* 86, 691-710 (1950). Nov.

Data from detailed hematological studies made on the injured at Hiroshima and Nagasaki are reported. In general, severity of symptoms paralleled severity of leukopenia. NSA 5-935.

1553

STUDIES ON THE EFFECTS OF MASSIVE DOSES OF X-RADIATION ON MORTALITY IN LABORATORY ANIMALS. p.3-10 OF BIOLOGICAL EFFECTS OF EXTERNAL RADIATION. Robert D. Boche and Francis W. Bishop. (NNES VI-2). Henry A. Blair, ed. New York, McGraw Hill Book Co., Inc. 1954.

Eighty four dogs were given 1000-kv radiation. Also, rats were given 375, 500, 625, and 750 r of 250-kv radiation. Monkeys and hamsters were also irradiated with 250-kv x-rays. It was found that the ratio of effectiveness of 250- and 100-kv radiations is approximately 650 to 800.

1554

THE RADIOACTIVE EFFECTS OF ATOMIC WEAPONS. Asher A. White. *Minnesota Med.* 33, 1085-7, 1114 (1950). Nov.

This is a general, nontechnical discussion of radiation effects of atomic explosion, relative radiosensitivity of various tissues and organs, and types, complications, sequelae and treatment of acute radiation sickness. NSA 5-937.

1555

THE GENERAL PICTURE OF IRRADIATION DAMAGE TO TISSUES PART I. SUPERFICIAL RADIATION

(BETA RAYS); PART II. PENETRATING RADIATIONS (NEUTRONS, GAMMA RAYS). P. S. Henshaw and R. S. Snider. (Oak Ridge National Lab.). July 8, 1947. Decl. July 15, 1950. 29p. (AEC-D-3009; MonH-288).

Superficial radiation damage to skin is due to damage to germinal layer. Generative type of cells is most radiosensitive type, with possible exception of lymphocytes. NSA 5-1155.

1556

THE CHANGES IN THE BLOOD OF HUMANS CHRONICALLY EXPOSED TO LOW LEVEL GAMMA RADIATION. Norman P. Knowlton, Jr. (Los Alamos Scientific Lab.). (nd). Decl. Dec. 21, 1948. 16p. (AECU-1021; LADC-587; LAMS-816(Rev) p.76-92).

Exposure of 10 persons to 0.2 r of γ radiation per week resulted in a significant fall in total WBC count and absolute neutrophil and lymphocyte counts during 77-week period. NSA 5-1156.

1557

PHYSICAL AND CHEMICAL FACTORS MODIFYING THE SENSITIVITY OF CELLS TO HIGH ENERGY AND ULTRAVIOLET RADIATION. Alexander Hollaender. (Oak Ridge National Lab.). Nov. 7, 1950. 22p. (ORNL-844). NSA 5-1157.

1558

THE INFLUENCE OF INFECTION ON THE HEMATOLOGICAL EFFECTS AND MORTALITY FOLLOWING MID-LETHAL X-RADIATION. L. R. Bennet, P. E. Rekers, and J. W. Howland. (Univ. of Rochester, Atomic Energy Project). Oct. 27, 1950. 11p. (UR-140). Radiology 57, 99-103 (1951). NSA 5-1158.

1559

ACTION OF X RAYS AND CYANIDES ON FROG STRIATED MUSCLES. J. Leconte, A. Herve, and Z. M. Bacq. Compt. rend. soc. biol. 144, 708-09 (1950). May. (In French).

Hypothesis that cyanide or cysteine might inhibit oxidizing action of x-rays on enzymes was not confirmed by experimental results reported. NSA 5-1159.

1560

IMPLANTATION OF FUNCTIONAL ERYTHROPOIETIC ELEMENTS FOLLOWING TOTAL-BODY IRRADIATION. D. L. Lindsley, T. T. Odell, Jr., and F. G. Tausche. Proc. Soc. Exptl. Biol. Med. 90, 512-15 (1955). NSA 10-1997.

1561

THE COMMON CAUSES OF LYMPHOPENIA. A. J. Shillito. J. Clin. Path. 3, 321-31 (1950). Nov.

Cases of 87 patients with lymphopenia of 1000/mm³ or less are tabulated, including an x ray worker and patient receiving x ray therapy. NSA 5-1162.

1562

DISTRIBUTION OF ENZYMES IN THE LIVERS OF CONTROL AND X-IRRADIATED RATS. Stephan Ludewig and Alfred Chanutin. Arch. Biochem. 29, 441-5 (1950). Dec.

Activities and percentage distributions of nonmercapto enzymes (catalase, esterase, arginase, rhodanase and alkaline phosphatase) in rat liver homogenate and liver connective tissue are presented. Total-body 500 r x ray exposure (rats) did not affect activity of enzymes. NSA 5-1163.

1563

EFFECT OF BAL ON RADIATION MORTALITY RATE IN MICE. Lee Works, John H. Grotts, and Gordon W. Raleigh. Quart. Bull. Northwestern Univ. Med. School 24, 295-6 (1950).

Three groups of mice were treated with (1) irradiation only (550 r, 210-kvp x rays); (2) irradiation and 2.6 mg of BAL prior to exposure; (3) BAL only. Sur-

vival rates at end of 5 weeks. (1) 5%; (2) 39%; (3) 94%. NSA 5-1164.

1564

EFFECTS OF IONIZING RADIATIONS ON A TRANSPLANTED LYMPHOSARCOMA. Joanne Hollcroft, Egon Lorenz, and Harriet Hunstiger. J. Natl. Cancer Inst. 11, 1-16 (1950). Aug.

Transplanted lymphosarcoma was treated with (1) whole body x irradiation and (2) α radiation of radon and short-lived decay products. Little difference noted grossly in regression curves. NSA 5-1165.

1565

EFFECT OF ROENTGEN RAYS ON THE TESTIS. QUANTITATIVE HISTOLOGICAL ANALYSIS FOLLOWING WHOLE-BODY EXPOSURE OF MICE. Allen B. Eschenbrenner and Eliza Miller. Arch. Path. 50, 736-49 (1950). Dec.

Mice were exposed to 50, 100, 200, 300, or 400 r of 186-kv x rays, total-body. Damage and recovery of testes were studied. Radiation affects spermatogonia selectively. NSA 5-1166.

1566

EFFECT OF X-RAY IRRADIATION ON THE ALKALINE PHOSPHATASE OF THE PLASMA AND TISSUES OF RATS. Stephan Ludewig and Alfred Chanutin. Am. J. Physiol. 163, 648-54 (1950). Dec. 1.

Decrease in phosphatase activity of plasma is relatively small after 300 r; more marked and prolonged after 500 and 600 r. Phosphatase activity of thymus is markedly increased for 2 days post exposure; small increase observed in spleen. Practically no change is seen in liver or kidneys. NSA 5-1167.

1567

FIBROSARCOMA DEVELOPING IN HEAVILY IRRADIATED SKIN. Calvin B. Stewart and William J. Pendergrast. J. Med. Assoc. Georgia 40, 24-5 (1951). Jan.

Description of a case of fibrosarcoma which developed in scar on lip 20 years after Ra therapy for squamous carcinoma. NSA 5-1168.

1568

INFLUENCE OF OVARIAN FUNCTION ON INCIDENCE OF RADIATION-INDUCED OVARIAN TUMORS IN MICE. Henry S. Kaplan. J. Natl. Cancer Inst. 11, 125-32 (1950). Aug.

From results of implanting irradiated ovaries into irradiated and nonirradiated spayed mice, and into non-irradiated, nonovariectomized mice, it is concluded that intact ovarian endocrine function inhibits tumor development in irradiated ovarian grafts. NSA 5-1169.

1569

OXIDASE INCREASE IN MELANOPLUS DIFFERENTIALIS EGGS CAUSED BY X-IRRADIATION. Theodore N. Tahmisian and Dorothy M. Adamson. J. Exptl. Zool. 115, 379-97 (1950). Nov. NSA 5-1171.

1570

PHYSICAL AND BIOLOGICAL PHENOMENA PRODUCED BY IRRADIATIONS WITH FAST ELECTRONS. W. Paul and G. Schubert. Naturwissenschaften 37, 156-63 (1950). Apr. (In German).

Comparative study of hard x rays (200 kv) and fast electrons (from 6-Mev betatron). NSA 5-1172.

1571

PROTECTIVE ACTION OF ANOXIC ANOXIA AGAINST TOTAL-BODY ROENTGEN IRRADIATION OF MAMMALS. Andrew H. Dowdy, L. R. Bennett, and Sarah M. Chastian. Radiology 55, 879-85 (1950). Dec.

LD₅₀₋₃₀ for rats irradiated in 5% O₂ is 1200-1400 r; for irradiated controls, 600 r. Anoxia produced by injection of NaCN gave no protection to rats against x ray damage. NSA 5-1173.

- 1572**
PROTECTIVE ACTION OF KCN AGAINST MORTALITY IN MICE IRRADIATED WITH VARIOUS DOSES OF X RAYS. H. Betz and A. Herve. *Compt. rend. soc. biol.* 144, 1015-17 (1950). July. (In French). NSA 5-1174.
- 1573**
LOCAL CELL RESPONSES TO INDUCED SKIN INFECTION IN TRITURUS VIRIDESCENS AFTER WHOLE-BODY IRRADIATIONS. Sophie Jakowska, R. F. Nigrelli and A. H. Sparrow. *Radiation Research* 1, 569 (1954).
Triturus is relatively resistant to infection after whole body irradiation even at dosages leading to a significant reduction in the number of phagocytic cells.
- 1574**
RADIATION-INDUCED SQUAMOUS-CELL METAPLASIA AND HYPERPLASIA OF THE NORMAL MUCOUS GLANDS OF THE ORAL CAVITY. Milton Friedman and John W. Hall. *Radiology* 55, 848-51 (1950). Dec. NSA 5-1176.
- 1575**
A STUDY OF ELASTIC ARTERIES IN IRRADIATED MICE OF DIFFERENT AGES. Christianna Smith and Lois A. Loewenthal. *Proc. Soc. Exptl. Biol. Med.* 75, 859-61 (1950). Dec.
Changes comparable to those of physiological aging were induced by x rays in tunica media of elastic arteries of mice 20-30, and 80-100 days old. NSA 5-1177.
- 1576**
SULFHYDRYL-CONTAINING AGENTS AND THE EFFECTS OF IONIZING RADIATIONS. I. BENEFICIAL EFFECT OF GLUTATHIONE INJECTION ON X-RAY-INDUCED MORTALITY RATE AND WEIGHT LOSS IN MICE. W. H. Chapman, C. R. Sipe, D. C. Eltzholtz, E. P. Cronkite, and F. W. Chambers, Jr. *Radiology* 55, 865-73 (1950). Dec. NSA 5-1178.
- 1577**
VARIATIONS OF LISTERIA MONOCYTOGENES PRODUCED BY BETA PARTICLES FROM RADIOPHOSPHORUS. Matthew C. Hunter, Grant L. Stahly, and Wm. G. Myers. *Ohio J. Sci.* 50, 253-9 (1950). Nov.
Changes in colonial characteristics, physiology, antigenicity and capacity to produce disease were caused by exposure to P^{32} . NSA 5-1179.
- 1578**
VARIATIONS IN THE MINIMUM ENDOGENEOUS NITROGEN EXCRETION AS AN EFFECT OF TOTAL-BODY X-IRRADIATION. Charles Gros and Paul Mandel. *Compt. rend.* 231, 631-3 (1950). Sept. 25. (In French). NSA 5-1180.
- 1579**
MEDICAL ASPECTS OF ATOMIC EXPLOSION. Heinz Richard Landmann. *J. Kansas Med. Soc.* 51, 557-62 (1950). Dec. NSA 5-1182.
- 1580**
THE PROTECTION OF PERSONNEL ENGAGED IN ROENTGENOLOGY AND RADIOLOGY. FINAL REPORT. F. T. Hunter and L. L. Robbins. *New Engl. J. Med.* 244, 9-13 (1951). Jan. 4.
Film-badge monitoring may be used to protect against overexposure. No correlation is apparent between variations in leukocyte count, polynuclear and eosinophil percentages, and average weekly exposure. NSA 5-1184.
- 1581**
SOME ASPECTS OF ATOMIC MEDICINE. J. M. Holford. *Proc. Roy. Soc. Med.* 43, 851-7 (1950). Nov.
Work on irradiation of aqueous solutions, morphological changes in cells, clinical picture of acute radiation illness in man, fractionation dose, genetic changes, radiation effect on mammalian testes are reviewed. NSA 5-1186.
- 1582**
THE BIOLOGICAL HALF-LIFE OF RADIOACTIVE PHOSPHORUS IN THE BLOOD OF PATIENTS WITH LEUKEMIA. I. WHOLE BLOOD WITH DEVIATIONS OF OBSERVATIONS FROM PREDICTED VALUES AND AN ESTIMATE OF TOTAL-PHOSPHORUS TURNOVER RATE. Harold Tivey and Edwin E. Osgood. *Cancer* 3, 992-1002 (1950). Nov.
Value given for half-life of P^{32} in whole blood in group of 29 patients in 8 days. NSA 5-1190.
- 1583**
THE BIOLOGICAL HALF-LIFE OF RADIOACTIVE PHOSPHORUS IN THE BLOOD OF PATIENTS WITH LEUKEMIA. II. PLASMA WITH DEVIATIONS OF OBSERVATIONS FROM PREDICTED VALUES AND AN ESTIMATE OF TOTAL-PHOSPHORUS TURNOVER RATE. Edwin E. Osgood and Harold Tivey. *Cancer* 3, 1003-09 (1950). Nov.
Logarithm of plasma radioactivity (from P^{32}) in 26 leukemia patients decreases uniformly with time after 1st 3 days, with biological half life of 8.5 days. NSA 5-1191.
- 1584**
THE BIOLOGICAL HALF-LIFE OF RADIOACTIVE PHOSPHORUS IN THE BLOOD OF PATIENTS WITH LEUKEMIA. III. ERYTHROCYTES WITH DEVIATIONS OF OBSERVATIONS FROM PREDICTED VALUES. Harold Tivey and Edwin E. Osgood. *Cancer* 3, 1010-13 (1950). Nov.
Disappearance of P^{32} from erythrocytes and from plasma in leukemia patients are not essentially different. Initial level is reduced 1/2 in 8.9 days. NSA 5-1192.
- 1585**
THE BIOLOGICAL HALF-LIFE OF RADIOACTIVE PHOSPHORUS IN THE BLOOD OF PATIENTS WITH LEUKEMIA. IV. LEUKOCYTES RADIOACTIVE PHOSPHORUS CONTENT AND THE RELATIONS TO PLASMA- P^{32} LEVELS. Edwin E. Osgood and Harold Tivey. *Cancer* 3, 1014-17 (1950). Nov. NSA 5-1193.
- 1586**
IF A BOMBS FALL. Edward J. Kehoe and Francis L. Brannigan. *Natl. Safety News*, 78-9 (1950). Oct. NSA 5-1439.
- 1587**
ATOMIC ENERGY. Alan M. Thorndike. (Brookhaven National Lab.). Sept. 8, 1950. 14p. (AECU-1077). p. 49-51 of Americana Annual, 1952. John J. Smith, ed. N. Y. Americana Corp.
Author presents a nontechnical discussion of present-day production and utilization of nuclear fuels, principals of hydrogen bomb, and international implications of atomic weapon production. NSA 5-1440.
- 1588**
BIOLOGICAL ACTION OF FAST ELECTRONS FROM A 6-MEV BETATRON. Wolfgang Paul and Gerhard Schubert. *Z. Naturforsch.* 5b, 390-4 (1950). Oct.-Nov. (In German).
Action of fast electrons (up to 6 Mev) on various biological objects is compared with that of hard x rays (200 kv). In majority of cases effect per dose unit is smaller when produced by electrons. NSA 5-1445.
- 1589**
CHANGES IN THE RELATIVE PROPORTIONS OF DIFFERENT AXIAL SKELETAL TYPES WITHIN INBRED STRAINS OF MICE BROUGHT ABOUT BY X-IRRADIATION AT CRITICAL STAGES IN EMBRYONIC DEVELOPMENT. Liane B. Russell and W. L. Russell. Paper presented at the 1950 meeting of the Genetic Society of

America, Columbus, Ohio, Sept. 11-14. Abstracted in *Genetics* 35, 689 (1950). Nov. NSA 5-1447.

1590
DEVELOPMENTAL EFFECTS OBSERVED IN HABRO-BRACON AFTER EXPOSURE TO BETA RADIATION. J. W. Dent and Robert L. Amy. *Growth* 14, 113-21 (1950). June.

Wasps, *H. juglandis*, were irradiated just before hatching or during early larval period. At highest levels of irradiation, death occurred before hatching or in larval stage; at intermediate levels, during pupation; at lowest levels most of the animals reached adult form. NSA 5-1448.

1591
THE EFFECT OF ANOXIA ON X-RAY INDUCED INJURY IN *MELANOPLUS DIFFERENTIALIS* EMBRYOS. Theodore N. Tahmisiian and Dorothy M. Adamson. Paper presented at the 47th Annual meeting of the American Society of Zoologists, Cleveland, Ohio, December 27-30, 1950. Abstracted in *Anat. Record* 108, 516 (1950). Nov.

Grasshopper embryos developed normally after being in N_2/CO_2 (95%/5%) atmosphere for 24 hr. If such anoxic embryos are irradiated, (25,000 r) and placed at 25° C in air, no negative growth occurs as in eggs exposed in air. NSA 5-1449.

1592
EFFECT OF RADIATION FROM INTRAPERITONEALLY INJECTED RADIUM CHLORIDE UPON MEGAKARYOCYTE AND BLOOD PLATELET PRODUCTION IN ALBINO RATS. Paul G. Roofe, Hal Bingham, Ralph Comer, and Martha Madison. Paper presented at the 47th Annual Meeting of the American Society of Zoologists, Cleveland, Ohio, December 27-30, 1950. Abstracted in *Anat. Record* 108, 537 (1950). Nov.

Megakaryocyte regeneration begins 9 days after $RaCl_2$ injection. Platelet production does not correspond quantitatively, presumably because young megakaryocytes do not fragment. NSA 5-1450.

1593
EFFECT OF SLOW CATHODE RAYS ON MICRO-ORGANISMS. Walter S. Moos. *Nucleonics* 8, No. 1, 50-3 (1951). Jan.

Influence of slow electrons (1 to 8 kev) on *P. aeruginosa* is maximal at a voltage giving them penetration in depth corresponding to cell diameter. NSA 5-1451.

1594
THE EFFECT OF X IRRADIATION ON FIGHTING BEHAVIOR IN MALE MICE. Howard H. Vogel, Jr. Paper presented at the 47th Annual Meeting of the American Society of Zoologists, Cleveland, Ohio, Dec. 27-30, 1950. Abstracted in *Anat. Record* 108, 547 (1950). Nov.

Effects on fighting behavior in male mice of 50 r of x rays, 5 days/week, for up to 15 weeks, were cumulative. Aggressiveness of attack decreased with increasing cumulative dose. Conditioning was strong, requiring 1200 to over 2000 r to eliminate it. NSA 5-1452.

1595
EFFECT OF X-IRRADIATION ON HEMOLYSIN DECLINE. William H. Talaferro and Lucy Graves Talaferro. *J. Infectious Diseases* 87, No. 3, 201-9 (1950).

X rays (2 doses of 400 r, whole-body) during decline of hemolysin 2-4 weeks after immunization with sheep red cells did not alter downward trend as compared with nonirradiated controls. NSA 5-1453.

1596
EFFECTS OF OXYGEN TENSION ON X-RAY INDUCED MITOTIC INHIBITION. Mary Esther Gaulden and

Marjorie Nix. Paper presented at the 1950 meeting of the Genetics Society of America, Columbus, Ohio, Sept. 11-14. Abstracted in *Genetics* 35, 665 (1950). Nov.

Large neuroblasts of grasshopper embryos (*C. Viridifasciata*) were given 64 r of x rays in oxygen tension of 100%, 21% (air), 0% (N_2 , CO_2 or vacuum). Sensitivity of mitosis to x rays was reduced when cells were exposed at lower O_2 tensions. NSA 5-1454.

1597
THE EFFECTS OF RADIATION ON THE PREIMPLANTATION STAGES OF THE MOUSE EMBRYO. Liane Brauch Russell and W. L. Russell. Paper presented at the 47th Annual Meeting of the American Society of Zoologists, Cleveland, Ohio, Dec. 27-30, 1950. Abstracted in *Anat. Record* 108, 521 (1950). Nov.

Irradiation during preimplantation (cleavage) stages causes high prenatal mortality but negligible incidence of abnormalities in those surviving to term; relative magnitudes of 2 effects are reverse of those found after postimplantation exposure. NSA 5-1455.

1598
THE EFFECTS OF RADIOACTIVE PHOSPHORUS ON *CRICETUS AURATUS*. A. Martin. Paper presented at the 1950 Meeting of the Genetics Society of America, Columbus, Ohio, Sept. 11-14. Abstracted in *Genetics* 35, 679 (1950) Nov.

Male golden hamsters were given various dosages of P^{32} by intraperitoneal injection and mated to untreated females. Histological and cytological changes in treated animals and progeny are reported. NSA 5-1456.

1599
EFFECTS OF RADIO-PHOSPHORUS (P^{32}) ON MITOSIS IN LARVAL TAIL-TIPS OF *AMBLYSTOMA PUNCTATUM*. Donald P. Costello and Catherine Henley. Paper presented at the 47th Annual Meeting of the American Society of Zoologists, Cleveland, Ohio, Dec. 27-30, 1950. Abstracted in *Anat. Record* 108, 578-9 (1950). Nov.

Wide variety of mitotic abnormalities are described. NSA 5-1457.

1600
EFFECTS OF VARYING OXYGEN TENSION ON MORTALITY OF X-RAYED MICE. George Limperos. *J. Franklin Inst.* 249, 513-14 (1950). June.

Low-oxygen atmosphere exerts protective effect, possibly because it decreases concentration of OH and HO_2 radicals and of H_2O_2 . NSA 5-1458.

1601
THE INCIDENCE OF STERILITY AND PARTIAL STERILITY IN THE DESCENDANTS OF X-IRRADIATED MICE. W. L. Russell. Paper presented at the 1950 Meeting of the Genetics Society of America, Columbus, Ohio, Sept. 11-14. Abstracted in *Genetics* 35, 689-90 (1950). Nov. NSA 5-1459.

1602
THE INDIRECT ACTION OF X AND ULTRAVIOLET RADIATION. Z. M. Bacq. *Experientia* 7, 11-19 (1951). Jan. 15. (In French).

Action of x rays on enzymes, cells and organisms are believed to be indirect. Chemical substances (peroxides and short-lived radicals) resulting from x ray action on H_2O molecules are considered to be the responsible agents. NSA 5-1460.

1603
THE INFLUENCE OF POLYPOIDY ON THE X-RAY SENSITIVITY OF CELLS. C. J. Bishop. Paper presented at the 1950 Meeting of the Genetics Society of America, Columbus, Ohio, Sept. 11-14. Abstracted in *Genetics* 35, 654 (1950). Nov.

Data indicate that diploid and tetraploid species of *Tradescantia* are equally radiosensitive if comparison is based on number of x ray induced breaks per chromosome. NSA 5-1461.

1604

INFLUENCE OF THYMECTOMY, SPLENECTOMY, AND GONADECTOMY ON INCIDENCE OF RADIATION-INDUCED LYMPHOID TUMORS IN STRAIN C57 BLACK MICE. Henry S. Kaplan. *J. Natl. Cancer Inst.* 11, 83-90 (1950). Aug.

Thymectomy effectively prevented development of radiation-induced lymphomas. Gonadectomy gave no significant results. NSA 5-1462.

1605

A PHASE CONTRAST MICROSCOPY STUDY OF X-RAY INDUCED PYCNOSIS IN THE LIVING CELL. Theodore N. Tahmisian and Dorothy M. Adamson. Paper presented at the 47th Annual Meeting of the American Society of Zoologists, Cleveland, Ohio, Dec. 27-30, 1950. Abstracted in *Anat. Record* 108, 572-3 (1950). Nov.

Authors report effect of 25,000-200,000 r of x rays on grasshopper embryos kept latent for 6 months by keeping them at submetabolic temperatures.

NSA 5-1464.

1606

RADIANT ENERGY. Abraham Edelmann. *Ann. Rev. Physiol.*, 27-46 (1950).

Author presents brief review of the literature and discussions of radiation safeguards; measurements; radiation effects on blood and other tissues.

NSA 5-1465.

1607

SOME CASES OF RADIATION INJURY IN RADIOLOGICAL WORK. S. Hultberg, L. E. Larsson, and L. Eklund. *Acta Radiol.* 33, 376 (1950). Mar.-Apr.

Case histories of 8 patients who sustained radiation injuries either in daily work or from overdose during radiography are presented. NSA 5-1467.

1608

SPONTANEOUS AND INDUCED CHROMOSOME ABERRATIONS IN THE GRASSHOPPER *CHLOEALIS CONSPERSA*. K. H. Rothfels. Paper presented at the 1950 Meeting of the Genetics Society of America, Columbus, Ohio, Sept. 11-14. Abstracted in *Genetics* 35, 687 (1950). Nov.

Grasshoppers were exposed at various distances from Co⁶⁰ source for 20 days. Dose rate of 500 X background was required to produce clearly significant increases in chromosome aberrations as compared with controls. NSA 5-1468.

1609

X-RAY INDUCED SOMATIC CROSSING OVER IN *DROSOPHILA MELANOGASTER*. George Lefevre, Jr. Paper presented at the 47th Annual Meeting of the American Society of Zoologists, Cleveland, Ohio, Dec. 27-30, 1950. Abstracted in *Anat. Record* 108, 623-4 (1950). Nov.

Data indicate that appreciable somatic crossing over occurs in heterochromatic portion of X chromosome and is greater in right than in left end. Similar distortion of normal crossing-over pattern is found when excessive germinal crossing over is induced. NSA 5-1469.

1610

ESTIMATING RADIOELEMENTS IN EXPOSED INDIVIDUALS. I. RADIOELEMENT METABOLISM. Jack Schubert. *Nucleonics* 8, No. 2, 13-28 (1951). Feb.

Metabolism of radioelements was studied, and treatment is suggested for oral ingestion of excessive amounts of such materials. NSA 5-1473.

1611

HANDBOOK FOR RADIOLOGICAL DEFENSE SUB-COURSES. (Army Chemical Center, Chemical Corps. School). Nov. 1949. 103p. (NP-1913; RDS-1B; NAV PERS 10852). NSA 5-1474.

1612

POSSIBILITY OF BIOLOGICAL EFFECTS OF COSMIC RAYS IN HIGH ALTITUDES, STRATOSPHERE, AND SPACE. A. T. Krebs. *J. Aviation Med.* 21, 481-94 (1950). Dec. NSA 5-1476.

1613

PORTABLE PILOT PLANT FOR IRRADIATING POTATOES. O. A. Kuhl, A. H. Sparrow and B. Manowitz. *Nucleonics* 13, 128-9 (1955).

1614

CARCINOGENIC ACTION OF RADIATIONS IN RATS AFTER MECHANICAL AND CHEMICAL PROTECTION. F. Maisin, P. Phaldagne, A. Duujic, and H. Maisin. p.463-7 of *Progress in Radiobiology*. F. J. Mitchell, B. E. Holmes, and C. L. Smith, eds. Springfield, Ill., Charles C. Thomas, Publisher. 1955.

1615

RADIATION HAZARDS IN THE ATOMIC ENERGY PROGRAM. Merril Eisenbud. *Ind. Med. Surg.* 20, 7-11 (1951). Jan.

Author presents review of trends in radiation-biology studies; permissible radiation levels; radiation protection; waste disposal; instrumentation; personnel monitoring; and industrial utilization of atomic energy. NSA 5-1479.

1616

RADIOLOGICAL PROTECTION-INTERNATIONAL COMMISSION RECOMMENDATIONS. *Nucleonics* 8, No. 1, 31-7 (1951). Jan.

Recommendations included on following: internal and external radiation exposure; working conditions; film storage; protection against x rays, Ra; instruments. NSA 5-1481.

1617

SUGGESTIONS FOR FIRST-AID TREATMENT OF CASUALTIES FROM ATOMIC BOMBING. Richard Warren and James H. Jackson. *New Engl. J. Med.* 243, 696-8 (1950). Nov. 2.

Principles of casualty sorting, first-aid treatment of burns, radiation injury, and radioactive contamination are discussed. NSA 5-1482.

1618

WHAT EVERY MAINE DOCTOR SHOULD KNOW ABOUT THE MEDICAL ASPECTS OF ATOMIC WEAPONS AND ATOMIC WARFARE. COMMITTEE ON EMERGENCY CIVILIAN DEFENSE OF THE MAINE MEDICAL ASSOCIATION. *J. Maine Med. Assoc.* 41, 144-59 (1950). May.

Medical problems arising from an atomic explosion are considered. Maps of Maine cities illustrate damage distribution after an explosion. NSA 5-1483.

1619

IRRADIATION SICKNESS. Wade S. Rizk. *Mississippi Valley Med. J.* 72, 184-5 (1950). Nov.

Nature of radiation sickness is discussed, and drugs for therapy are reviewed. NSA 5-1484.

1620

RETENTION OF INJECTED COLLOIDAL THORIUM DIOXIDE IN THE BODY OF THE LABORATORY MOUSE. Thomas W. Easton. Paper presented at the 47th Annual Meeting of the American Society of Zoologists, Cleveland, Ohio, Dec. 27-30, 1950. Abstracted in *Anat. Record* 108, 515 (1950). Nov.

Mice were injected intravenously with colloidal ThO₂ (Thorotrast), 0.2 cc/day on 3 alternate days.

Retention by whole body, liver and spleen, and remainder of body was determined. NSA 5-1492.

1621

QUARTERLY PROGRESS AND WORK ACCOMPLISHMENT REPORT FOR QUARTER ENDING JUNE 30, 1950; AGRICULTURAL RESEARCH PROGRAM. (Tennessee Univ.). June 30, 1950. 17p. (ORO-7).

Includes reports on bomb radiation effects on farm animals; calcium and fission product metabolism in animals. NSA 5-1495

1622

PROGRESS REPORT; RADIOBIOCHEMISTRY. J. Schubert and Marcia R. White. (Argonne National Lab.). p.102-5 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT, FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.102-5)).

Effect of copper gluconate, sodium orthovanadate, sodium fluoroacetate, malononitrile, sodium iodacetate, disodium malonate and manganous gluconate on radiation sickness were studied. Effect of Zr citrate on tissue distribution of Pu is summarized. NSA 5-1708.

1623

PROGRESS REPORT; SPLEEN-SHIELDING EXPERIMENTS. L. O. Jacobson, E. L. Simmons, Edna K. Marks, Melba J. Robson, Evelyn O. Gaston, and W. F. Bethard. (Argonne National Lab.). p.22-9 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.22-9)).

Effect of shielding exteriorized spleen of mice during 1025 r x ray exposure is reported. Shielding of spleen, liver and appendix of rats and rabbits is also described. NSA 5-1711.

1624

MODIFICATION OF LEAD SHIELDS FOR PROTECTION OF THE SPLEEN AND APPENDIX DURING TOTAL-BODY X-IRRADIATION. Edna K. Marks. (Argonne National Lab.). p.30-1 of BIOLOGICAL AND MEDICAL DIVISION QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.30-1)). NSA 5-1712.

1625

PRELIMINARY REPORT; THE EFFECT OF SPLEEN AND APPENDIX PROTECTION ON THE SHWARTZMAN REACTION. M. O. Goldman, L. O. Jacobson, and Melba J. Robson. (Argonne National Lab.). p.32-5 of BIOLOGICAL AND MEDICAL DIVISION REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.32-5)).

In rabbits an intradermal meningococcus endotoxin injection followed in 24 hours by an intravenous injection of the same, results in the Schwartzman phenomenon. Reaction is suppressed by total-body (not local) irradiation. NSA 5-1713.

1626

PROGRESS REPORT; EFFECT OF SPLEEN PROTECTION DURING X-IRRADIATION. E. Lorenz, L. O. Jacobson, Delta Uphoff, Harriet Sutton, and R. Schweisthal. (Argonne National Lab.). p.36-8 of BIOLOGICAL MEDICAL DIVISION PROGRESS REPORT, FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.36-8)).

Effect of x rays on normal spleen-protected mice, and on those bearing transplanted lymphosarcoma was studied. Effect of spleen protection on incidence of radiation-induced lymphoid tumors was tested. NSA 5-1714.

1627

PRELIMINARY REPORT; THE VALUE OF MOUSE TESTES FOR BIOLOGICAL DOSIMETRY OF IONIZING RADIATIONS. A. B. Eschenbrenner, T. Wang, and Eliza Miller. (Argonne National Lab.). p.39-41 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.39-41)).

Biological response of mouse testes to x rays and neutron exposure appears to be the same. NSA 5-1715.

1628

QUANTITATIVE HISTOLOGIC ANALYSIS OF THE TESTES OF MICE FOLLOWING A SINGLE TOTAL-BODY EXPOSURE TO X-RAYS. A. B. Eschenbrenner and Eliza Miller. (Argonne National Lab.). p.42-6 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.42-6)).

No evidence of morphologic cell death appeared even when testes weights were reduced to 40% of normal. Spermatogenic elements decreased in quantity; interstitial tissue and supporting stroma remained normal in total amounts. NSA 5-1716.

1629

PROGRESS REPORT; EFFECT OF IRRADIATION ON A TRANSPLANTABLE MOUSE LYMPHOSARCOMA. Joanne Hollcraft and E. Lorenz. (Argonne National Lab.). p.47-9 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.47-9)).

Systemic or indirect effect of x rays on lymphosarcoma lasts for short time after simultaneous exposure of body and tumor and may be due to rapidly disappearing, non-specific toxic material produced by irradiation. NSA 5-1717.

1630

PROGRESS REPORT; THE 30-DAY LD₅₀ FOR HYBRID GUINEA PIGS. E. Lorenz, Delta Uphoff, Harriet Sutton, and R. Schweisthal. (Argonne National Lab.). p.50-2 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.50-2)).

LD₅₀₋₃₀ for hybrid guinea pigs is calculated to be 409 r, with limits of 307 and 543 r. NSA 5-1718

1631

PROGRESS REPORT; THE EFFECT OF ANOXIA UPON THE SURVIVAL OF ADULT FROGS AND DAY-OLD RATS. D. E. Smith, H. M. Patt, and Ella B. Tyree. (Argonne National Lab.). p.53-6 of BIOLOGICAL AND MEDICAL DIVISION QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.53-6)).

Anoxia during x irradiation increases survival in one-day rats, but not in frogs. NSA 5-1719.

1632

PROGRESS REPORT; EFFECT OF X IRRADIATION ON BLOOD URIC ACID IN THE CHICK. S. Phyllis Stearner, Emily J. B. Christian, and A. M. Brues. (Argonne National Lab.). p.77-8 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.77-8)).

Marked increase in blood uric acid concentration in chicken occurs 3-5 hours after 1000 r at 43 r/min. NSA 5-1723.

1633

PROGRESS REPORT; NUCLEIC ACID METABOLISM IN CHILOMONAS PARAMECIUM. H. S. Ducoff. (Argonne National Lab.). p.79-81 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.79-81)). NSA 5-1724.

1634

THE ACTUARIAL CALCULUS OF CHRONIC RADIATION LETHALITY. George A. Sacher. (Argonne National Lab.). p.82-3 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.82-3)).

Logarithm of mortality rate (Gompertz function) is (except for a short period after birth) approximately a linearly increasing function of age for all species of

mammals investigated and for many other metazoan forms. NSA 5-1725.

1635

THE RESPIRATION AND ACETATE OXIDATION RATE OF X-IRRADIATED BACTERIA (MYCOBACTERIUM CREATIN OVARANS). E. S. G. Barron, Veronica Bonzell, Betty Gasvoda, and Louise Seki. (Argonne National Lab.), p.97-8 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.97-8)).

Respiration of 3-times washed bacteria is unaffected by 6000 r; inhibited 30% by exposure in presence of acetate. NSA 5-1726.

1636

PROGRESS REPORT; PHYSIOLOGICAL STUDIES ON THE MATING REACTION IN PARAMECIUM BURSARIA I. SOME INDICATIONS FOR AN ACTION SPECTRUM IN THE MATING REACTION. C. F. Ehret. (Argonne National Lab.), p.99-100 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.99-100)). NSA 5-1727.

1637

PROGRESS REPORT; PHYSIOLOGICAL STUDIES ON THE MATING REACTION IN PARAMECIUM BURSARIA II. EFFECT OF X RAYS ON THE MATING REACTION. C. F. Ehret. (Argonne National Lab.), p.101 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.101)).

During light period, x rays stimulated reaction at doses below 10,000 r. Effect was proportional to dose and was maximal at 8000 r. No such reaction was observed during dark period. NSA 5-1728.

1638

PRELIMINARY REPORT; A QUANTITATIVE TEST OF RADIOBIOLOGICAL ADDITIVITY OF FAST NEUTRONS AND GAMMA RAYS. H. H. Vogels, Jr., R. E. Zirkle, and A. M. Brues. (Argonne National Lab.), p.106-8 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.106-8)).

Authors describe experiments planned to test the biological effectiveness of fast neutrons and γ rays using dose rates which will deliver LD_{50/30} in approximately 1, 6 and 24 hours. Criterion of effect acute lethality. NSA 5-1729.

1639

FECAL AND URINARY RESPONSE TO CHOLERA VACCINE IN X-IRRADIATED GUINEA PIGS. W. Burrows, Norma G. Deupree, and Dorothy E. Moore. (Argonne National Lab.), p.109 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.109)). Jour. Infect. Dis. 87 (2), 169-83 (1950).

Effect of pre- and postimmunization x irradiation (50-200 r) on immune response and guinea pigs to cholera 0 vaccine was assayed as serum, fecal and urinary antibody (agglutinin). NSA 5-1730.

1640

EXPERIMENTAL ENTERIC CHOLERA IN THE X-IRRADIATED GUINEA PIG. W. Burrows, Norma G. Deupree and Dorothy E. Moore. (Argonne National Lab.), p.110 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.110)).

Effect of single total-body doses of 100 or 200 r was assayed by autopsy culture of guinea pigs sacrificed at various intervals and by number of vibrios and titer of antibody excreted in feces. NSA 5-1731.

1641

THE EFFECT OF TRITIUM (H^3) ON CELLS CULTIVATED IN VITRO. Agnes N. Stroud and A. M. Brues. (Argonne National Lab.), p.111-17 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FEBRUARY, MARCH, APRIL, 1950. (ANL-4451(p.111-17)).

Chick embryo muscle cultures were treated with H^3O at dosage rates of 41.5 to 3000 rep/hour to total dosages of 72,000 rep. Mitotic and cytoplasmic reactions are described. NSA 5-1732.

1642

SUMMARY OF THE RESEARCH PROGRESS MEETING OF JULY 13, 1950. Henry P. Kramer. (Radiation Lab., Univ. of Calif.). Oct. 24, 1950. 12p. (UCRL-859).

E. coli were exposed to bombardment by neutrons, accelerated deuterons and α particles. Destructive action of energetic particles was smaller than that of less energetic particles. NSA 5-1733.

1643

SUMMARY OF THE RESEARCH PROGRESS MEETING OF OCTOBER 5, 1950. Henry P. Kramer. (Radiation Lab., Univ. of Calif.). Oct. 25, 1950. 8p. (UCRL-964).

Rats given labeled Na and K were subjected to various doses of radiation. Data indicate that one cause of radiation injury is K deficiency induced in radiation sensitive tissue. NSA 5-1734.

1644

THE PATHOLOGICAL CHANGES EXHIBITED BY ANIMALS EXPOSED TO SINGLE DOSES OF X-RADIATION. R. G. Metcalf, R. J. Blandau, and T. B. Barnett. (Atomic Energy Project, Univ. of Rochester). July 17, 1950. 44p. (UR-123).

Irradiated rats (550 r) were sacrificed at intervals from 15 minutes to 42 days post-exposure. Study was made of organ sections, peripheral blood, bone marrow and sperm from vas deferens. NSA 5-1735.

1645

ACUTE INTESTINAL RADIATION DEATH. STUDIES ON ROENTGEN DEATH IN MICE. III. Henry Quastler, Elizabeth F. Lanzl, Mildred E. Keller, and James W. Osborne. Am. J. Physiol. 164, 546-56 (1951). Feb.

Survival time of 3 1/2 days was stable over wide range of doses in mice. NSA 5-1736.

1646

EFFECT OF PHYSICAL AND CHEMICAL FACTORS ON PHAGOCYTOSIS IN THE PRESENCE OF IRRADIATED HUMAN BLOOD AND PLASMA. Jirair N. Sarian. Am. J. Roentgenol. Radium Therapy 65, 465-71 (1951). Mar.

Citration, x-irradiation and heating effects on phagocytosis opsonins and agglutinins are described. X ray doses employed were 50 and 100 r and hard and soft x rays were compared. NSA 5-1741.

1647

THE EFFECT OF VARIATION IN DOSAGE RATE OF ROENTGEN RAYS ON SURVIVAL IN YOUNG BIRDS. S. Phyllis Stearner. Am. J. Roentgenol. Radium Therapy 65, 265-71 (1951). Feb. (ANL-4291, 90-98 (1949)).

Post-irradiation survival of young birds depends on total dose, dose rate, and age at time of exposure. NSA 5-1742.

1648

STUDIES OF RADIOACTIVE PHOSPHORUS (P^{32}) APPLIED TO HUMAN SKIN. I. ERYTHEMA AND AUTO-RADIOGRAPHIC FINDINGS FOLLOWING APPLICATIONS IN VARIOUS FORMS. Victor H. Witten, Earle W. Brauer, Robert Loevinger, and Vera Holmstrom. (New York Univ. Post-Graduate Medical

School and New York Univ. Hospital). J. Invest. Dermatol. 26, 437-47 (1956).

Development of erythema in human skin after topical application of P^{32} , a pure β emitter, (1) in aqueous solution, (2) on blotting paper discs and (3) in scaled plaques is the same whether the P^{32} penetrates the skin (determined by autoradiography of biopsy specimens) or is confined to surface. Results are contrasted with results of similar studies using thorium x, and α emitters. NSA 10-11658.

1649

FAILURE OF PUPATION OF EPHESTIA LARVAE FOLLOWING EXPOSURE TO X-RAYS. Anna R. Whiting. Paper presented at the 47th Annual Meeting of the American Society of Zoologists, Cleveland, Ohio, Dec. 27-30, 1950. NSA 5-1745.

1650

IRRADIATION DAMAGE OF THE INTESTINES FOLLOWING 1,000-KV ROENTGEN THERAPY. EVALUATION OF TOLERANCE DOSE. Harold I. Amory and Irving B. Brick. Radiology 56, 49-57 (1951). Jan.

Effects of 1000-kv irradiation on small and large intestine in group of 20 patients are reported. NSA 5-1746.

1651

IRRADIATIONS BY ROENTGEN RAYS AND HEPARINEMIA AND LEUKERGY. Feliks Stanski and Roman Kordecki. Med. Weterinaryjna 6, 453-5 (1950). Aug. (In Polish).

Small x-ray doses cause prolongation of coagulation time; leukergy appears only when coagulation time is considerably prolonged (5X). Heparin effect is described. NSA 5-1747.

1652

THE SIGNIFICANCE OF THE ACTION OF RADIOACTIVE PHOSPHORUS ON HABROBRACON JUGLANDES ASHMEAD. Albert Martin Jr. Proc. Penn. Acad. Sci. 24, 60-4 (1950).

Abnormalities in progeny of irradiated wasps are described. NSA 5-1748.

1653

THE MORTALITY OF BACTERIOPHAGE CONTAINING ASSIMILATED RADIOACTIVE PHOSPHORUS. A. D. Hershey, M. D. Kamen, J. W. Kennedy, and H. Gest. J. Gen. Physiol. 34, 305-19 (1951). Jan. 20.

Bacteriophage TH containing P^{32} is inactivated at rate proportional to specific radioactivity of the constituent P. NSA 5-1749.

1654

STUDIES ON THE MUTATION OF STREPTOMYCES GRISEUS NO. 200 BY X-RAY IRRADIATION. Yoshiro Okami and Hamoa Umezawa. J. Antibiotics (Japan) 3, Suppl. B, 7-9 (1950). Sept.

S. griseus was irradiated (300,000 r/hr--time not given). Morphological mutants (6) did not produce streptomycin. NSA 5-1750.

1655

STUDIES OF RADIUM IN HUMAN BONE. Frank E. Hoecker and Paul G. Roofe. Radiology 56, 89-98 (1951). Jan.

Portions of several bones from 2 cases of osteogenic sarcoma attributed to radioactive substances in bones were examined microscopically and autoradiographically. NSA 5-1751.

1656

UNUSUAL GLOMERULONEPHRITIS IN YOUNG CHILDREN, PROBABLY RADIATION NEPHRITIS. REPORT OF THREE CASES. Wolf W. Zuelzer, Harold D. Palmer, and William A. Newton, Jr. Am. J. Path. 26, 1019-40 (1950). Nov.

Development of an unusual nephritis with fatal outcome following radiation exposure in conventional therapeutic dosage is reported. NSA 5-1752.

1657

VITAL STAINING WITH THE FLUOROCHROME ACRIDINE ORANGE AND ITS APPLICATION TO RADIOBIOLOGY. I. ALPHA-RAY EFFECTS. A. T. Krebs and Z. S. Gierlach. Am. J. Roentgenol. Radium Therapy 65, 93-8 (1951). Jan. NSA 5-1753.

1658

BIBLIOGRAPHY RADIATION PROTECTION OF PERSONNEL AND RADIOCHEMICAL LABORATORIES THEIR DESIGN AND OPERATION. Eunice Whittlesey and Eloise Givens. (Knolls Atomic Power Lab.). July 1950. 23p. (AECU-1020). NSA 5-1754.

1659

X-RADIATION FROM ELECTRON MICROSCOPE. John H. L. Watson and Luther E. Preuss. Science 112, 407-9 (1950). Oct. 6.

Unusual conditions resulting in dangerously high exposures of personnel are described. NSA 5-1759.

1660

EFFECT OF EARLY CROSS TRANSFUSION ON X-IRRADIATION DISEASE. Peter F. Salisbury, Paul E. Rekers, Joseph H. Miller, and Norman F. Marti. Science 113, 6-7 (1951). Jan. 5.

A group of 6 dogs was given 450 r dose and cross transfused; 19 similarly irradiated dogs were used as control group. Depression of total leukocytes was greater in controls. Reticulocyte response was greater in transfused animals. NSA 5-1760.

1661

PATHOGENESIS AND TREATMENT OF THE POST-IRRADIATION SYNDROME. J. Garrott Allen, Peter V. Moulder, and Daniel M. Enerson. J. Am. Med. Assoc. 145, 704-11 (1951). Mar. 10. NSA 5-1761.

1662

SOME APPLICATIONS OF NUCLEAR PHYSICS TO MEDICINE. W. V. Mayneord. London, The British Institute of Radiology, 1950. 290p. NSA 5-1773.

1663

RATE OF ABSORPTION OF COBALT FROM THE PERITONEAL CAVITY AND RATE OF ELIMINATION FROM THE BLOOD. Nathaniel I. Berlin and Wilham Siri. Am. J. Physiol. 164, 221-5 (1951). Jan. 1. NSA 5-1778.

1664

THE EFFECTS OF ATOMIC WEAPONS. (Los Alamos Scientific Laboratory). Washington, U.S. Government Printing Office. Rev. Sept. 1950. 456p.

Results to be expected from detonation of atomic weapons are described shock waves and blast damage; thermal radiation and incendiary effects; nuclear radiation and instrumentation; effects on personnel and personnel protection. NSA 5-2004.

1665

ON THE DETERMINATION OF RETENTION BEHAVIOR AND TOTAL METABOLIC EXCRETION OF RADIO-ISOTOPES FROM DAILY EXCRETION DATA. Sylvanus A. Tyler and Joan Gurian. (Argonne National Lab.), p.12-13 of BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT NOVEMBER, DECEMBER, 1949, JANUARY, 1950. (ANL-4401(p.12-13)).

Excretion data are described by sums of exponentials, and total excreted material is estimated. Corresponding retention function is derived. NSA 5-2010.

1666

PROGRESS REPORT; ABNORMAL BLEEDING. J. Garrott Allen. (Argonne National Lab.). Mar. 1950. 167p. (ANL-4474).

Studied. *in vitro* clotting time and changes caused by total-body x irradiation; protamine titration and platelet level in certain diseases; aminopterin in normal dogs; antiheparin activity of protamine sulfate, gelatin, lysine and toluidine blue; plasma antithrombin in irradiated and heparinized dogs; irradiation effect on coagulation. NSA 5-2017.

1667

FURTHER STUDIES ON FACTORS INFLUENCING RECOVERY FROM RADIATION INJURY. L. O. Jacobson, E. K. Marks, E. L. Simmons, M. J. Robson, and E. O. Gaston. p.31-2 OF BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT NOVEMBER, DECEMBER, 1949, JANUARY, 1950. (Argonne National Lab.). (ANL-4401(p.31-2)).

Protective effects of appendix- and spleen-shielding against radiation injury in mice, rats, and rabbits are described. NSA 5-2027.

1668

THE EFFECT OF SPLEEN PROTECTION ON IRON DISTRIBUTION IN IRRADIATED RATS. R. L. Huff, W. F. Bethard, J. F. Garcia, B. M. Roberts, L. O. Jacobson, and J. H. Lawrence. p.33-4 OF BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT NOVEMBER, DECEMBER, 1949, JANUARY, 1950. (Argonne National Lab.). (ANL-4401(p.33-4)).

Of 80 rats x-rayed with 500 r, total-body, and given 10,000 cpm of Fe^{59} 3 days post-irradiation, those spleen-shielded showed significantly greater bone-marrow Fe uptake than those with spleen unprotected. NSA 5-2028.

1669

PROGRESS REPORT CHRONIC EXTERNAL IRRADIATION. E. Lorenz, L. O. Jacobson, A. B. Eschenbrenner, D. Uphoff, H. Sutton, and R. Schweisthal. p.35-7 OF BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT FOR NOVEMBER, DECEMBER, 1949, JANUARY, 1950. (Argonne National Lab.). (ANL-4401(p.35-7)).

LD_{50-30} for guinea pigs was studied. Survival, blood changes and carcinogenesis in total-body x rayed spleen-shielded mice are reported. NSA 5-2029.

1670

SUMMARY OF FINISHED EXPERIMENTS PART I. SURVIVAL AND BLOOD PICTURE OF HYBRID GUINEA PIGS EXPOSED TO LONG-CONTINUED TOTAL-BODY γ RADIATION. E. Lorenz, L. O. Jacobson, and H. Sutton. p.38-52 OF BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT NOVEMBER, DECEMBER, 1949, JANUARY, 1950. (Argonne National Lab.). (ANL-4401(p.38-52)).

In guinea pigs, death from radiation-induced pancytopenia appears to be a function of dose rate rather than total dose; no linear relationship was observed between mean survival time and mean lethal total dose. NSA 5-2030.

1671

SUMMARY OF FINISHED EXPERIMENTS; PART II. RECOVERY FROM ANEMIA INDUCED IN GUINEA PIGS BY A LIMITED EXPOSURE TO CHRONIC TOTAL-BODY γ RADIATION. E. Lorenz, L. O. Jacobson, Harriet Sutton, and R. Schweisthal. p.53-71 OF BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT, NOVEMBER, DECEMBER, 1949, JANUARY, 1950. (Argonne National Lab.). (ANL-4401(p.53-71)). NSA 5-2031.

1672

PROGRESS REPORT; NOTES ON THE EVALUATION OF MATERIALS THAT MIGHT BE EXPECTED TO ALTER RADIOSENSITIVITY. D. E. Smith, H. M. Patt, and

E. B. Tyree. p.72-4 OF BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT NOVEMBER, DECEMBER, 1949, JANUARY, 1950. (Argonne National Lab.). (ANL-4401(p.72-4)).

BAL and cysteine plus KCN administered before irradiation (1000 r) decreased radiosensitivity, the latter combination to the same degree as cysteine alone. Thiamine-HCl, L-taurine and tyrosine had no effect. NSA 5-2032.

1673

PROGRESS REPORT; THE EFFECT OF X RAYS ON THE OXIDIZABLE SULPHYDRYL GROUPS OF RATS RECEIVING CYSTEINE. H. M. Patt, D. E. Smith, M. Blackford, and R. L. Straube. p.75-7 OF BIOLOGICAL AND MEDICAL DIVISION QUARTERLY REPORT NOVEMBER, DECEMBER, 1949, JANUARY, 1950. (Argonne National Lab.). (ANL-4401(p.75-7)).

Cysteine apparently does not protect against x rays by acting as substrate for oxidation by free radicals presumably formed during exposure. NSA 5-2033.

1674

PROGRESS OF THE LONG-TERM POLONIUM-MOUSE EXPERIMENT. Miriam Finkel, Gertrude Hirsh, Donald Gardiner, and Ruth McNunis. p.78-95 OF BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT, NOVEMBER, DECEMBER, 1949, JANUARY, 1950. (Argonne National Lab.). (ANL-4401(p.78-95)).

Deleterious effects of 0.027-0.008 $\mu\text{c/g}$ of polonium chloride on survival, weight, intestinal infection, spleen weight and leucocyte count of mice are described. NSA 5-2034.

1675

THE EFFECT OF RADIUM ON CANCER OF THE CERVIX. J. V. Meigs and F. Parker, Jr. New Engl. J. Med. 203, 247 (1930).

1676

PROGRESS REPORT; INFLUENCE OF DOSAGE RATE ON X-RAY EFFECTS IN YOUNG CHICKS AND RATS. S. Phyllis Stearner and Emily J. B. Christian. p.125-9 OF BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT, NOVEMBER, DECEMBER, 1949, JANUARY, 1950. (Argonne National Lab.). (ANL-4401(p.125-9)).

Includes reports on chicks, 2-3 days old, exposed to 1000 r at 43 r/min; Vitamin P in irradiated chicks, Histamine as an etiological agent in early deaths; role of autonomic nervous system in early deaths; hemoconcentration in pre-mortality; effect of exposure of rats to 600 r at 80 r/min in contrast to 6 r/min (increased frequency of cerebral hemorrhages in the former); histopathological studies in planning stage. NSA 5-2036.

1677

PRELIMINARY REPORT, CYSTEINE PROTECTION OF TUMOR FRAGMENTS *IN VITRO* FROM IRRADIATION WITH LETHAL DOSAGES OF X RAYS. B. Vincent Hall. p. 120-42 OF BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT, NOVEMBER, DECEMBER, 1949, JANUARY, 1950. (Argonne National Lab.). (ANL-4401(p.130-42)). NSA 5-2037.

1678

PROGRESS REPORT, PHYTORADIOLOGY. S. A. Gordon, R. Stutz, and R. Weber. p.144-51 OF BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT, NOVEMBER, DECEMBER, 1949, JANUARY, 1950. (ANL-4401(p.144-51)).

Cellular expansion phase of growth in oat seedlings appears radioresistant. Post-irradiation growth inhibition is reversed by auxin and sulphydryl activants. Synthesis of C^{14} -labeled indoleacetic acid is described. NSA 5-2038.

1679

RADIOPATHOLOGY OF ISLETS OF LANGERHANS IN RATS. J. F. Spalding and C. C. Lushbaugh. Federation Proc. 14, 420 (1955).

Ionizing radiations have a necrotizing effect upon the islets of Langerhans when the whole body is exposed to 2500 r or more. Alpha cells are more sensitive than beta cells. In order to produce necrosis in beta cells 5000 r are required. Changes in both types of cells occur in 8 hours. Within 1 hour 50,000 r doses produce total islet necrosis. (from authors' summary).

1680

PRELIMINARY REPORT: MAGNITUDE OF THE MATING RESPONSE AS A FUNCTION OF IRRADIANCE IN PARAMECIUM BURSARIA. C. F. Ehret. p.168-9 OF BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT, NOVEMBER, DECEMBER, 1949, JANUARY, 1950. (Argonne National Lab.). (ANL-4401(p.168-9)). NSA 5-2041.

1681

PRELIMINARY REPORT: EFFECT OF TEMPERATURES ON INACTIVATION OF BACTERIOPHAGE BY X RAYS. C. S. Bachofer, C. F. Ehret, and S. Mayer. p.170 OF BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT NOVEMBER, DECEMBER, 1949, JANUARY, 1950. (Argonne National Lab.). (ANL-4401(p.170)).

In study of temperature effect at points from 77 to 310° K, it was established that lower temperatures decrease rate of x ray inactivation. NSA 5-2042.

1682

SOME LATE HISTOLOGICAL CHANGES IN MICE AFTER LOW DOSES OF PLUTONIUM AND RADIUM. William Bloom and Margaret A. Bloom. p.174-84 OF BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT, NOVEMBER, DECEMBER, 1949, JANUARY, 1950. (Argonne National Lab.). (ANL-4401(p.174-84)).

Mice were injected intravenously with plutonium nitrate (0.03 or 0.003 $\mu\text{C/g}$) or intraperitoneally with Ra (0.3 or 0.03 $\mu\text{C/g}$) and sacrificed at intervals of 2 mo-1 yr. Histological study of spleen, lymph node, thymus, liver, testis, lung, skin, gastro-intestinal tract and pancreas is reported. NSA 5-2043.

1683

CLOTTING TIME CHANGES AFTER TOTAL BODY X IRRADIATION. J. G. Allen, L. J. Savage, P. V. Moulder, and D. M. Enerson. p. 19-23 OF PROGRESS REPORT: ABNORMAL BLEEDING. (Argonne National Lab.). Mar. 1950. (ANL-4474(p.19-23)).

Analysis of clotting time in 79 irradiated dogs indicates increased clotting time is not attributable to chance alone. NSA 5-2044.

1684

PLASMA ANTITHROMBIN IN IRRADIATED AND HEPARINIZED DOGS; A PRELIMINARY STUDY. D. M. Enerson, B. J. Grossman, and J. G. Allen. p.88-98 OF PROGRESS REPORT: ABNORMAL BLEEDING. (Argonne National Lab.). Mar. 1950. (ANL-4474(p.88-98)).

Blood of 4 normal dogs given 0.5 mg/kg intravenous heparin injections displayed pronounced increase in whole-blood clotting time; slight increase in antithrombin titer. Of 17 x-rayed dogs, 15 had moderately increased clotting time; pronounced increase in antithrombin titer. NSA 5-2046.

1685

PHYSICAL PHENOMENA IN BLOOD COAGULATION. N. J. Galluzzi, D. M. Enerson, D. J. Glotzer, P. V. Moulder, and J. G. Allen. p.99-111 OF PROGRESS REPORT, ABNORMAL BLEEDING. (Argonne National Lab.). Mar. 1950. 13p. (ANL-4474(p.99-111)).

Increased plasma surface tension follows total body x irradiation in dogs. NSA 5-2047.

1686

FURTHER STUDIES ON THE ISOLATION OF HEPARIN FROM BLOOD OF IRRADIATED DOGS. J. M. Sutherland and J. G. Allen. p.112-22 OF PROGRESS REPORT: ABNORMAL BLEEDING. (Argonne National Lab.). Mar. 1950. (ANL-4474(p.112-22)).

By procedure described, no anticoagulant could be extracted from blood of irradiated dogs. NSA 5-2048.

1687

IN VIVO CHANGES IN THE ULTRAVIOLET ABSORPTION SPECTRUM OF DOG PLASMA FOLLOWING EXPOSURE TO X IRRADIATION. K. A. Lathrop, R. F. Gilmore, and J. G. Allen. p.123-7 OF PROGRESS REPORT: ABNORMAL BLEEDING. (Argonne National Lab.). Mar. 1950. (ANL-4474(p.123-7)).

Ultraviolet absorption at 278 m μ closely parallels protein level, irrespective of quantitative changes in albumins and globulins. NSA 5-2049.

1688

CORRELATED STUDIES ON THE IRRADIATED DOG. P. V. Moulder, K. A. Lathrop, B. J. Grossman, N. J. Galluzzi, M. H. Sanderson, E. M. Burnham, and J. G. Allen. p.128-47 OF PROGRESS REPORT: ABNORMAL BLEEDING. (Argonne National Lab.). Mar. 1950. (ANL-4474(p.128-47)).

The following were studied in 3 dogs given 450 r total-body exposure: (1) complete hemocytology; (2) coagulation; (3) plasma proteins; (4) surface tension and viscosity measurements; (5) plasma ultraviolet light absorption; (6) protein and protease sulphydryl polarographic curves. NSA 5-2050.

1689

SUMMARY OF IRRADIATION EFFECTS OF THE BLOOD COAGULATION MECHANISM. J. G. Allen, P. V. Moulder, D. M. Enerson, K. A. Lathrop, and M. H. Sanderson. p.148-67 OF PROGRESS REPORT: ABNORMAL BLEEDING. (Argonne National Lab.). Mar. 1950. (ANL-4474(p.148-67)). NSA 5-2051.

1690

ALTERATIONS IN THERMAL FRAGILITY OF RAT ERYTHROCYTES FOLLOWING TOTAL BODY X-IRRADIATION. Leontine Goldschmidt, Robert L. Rosenthal, Victor P. Bond, and Maurice C. Fishler. Am. J. Physiol. 164, 202-6 (1951). Jan. 1.

Definite increase in red-cell fragility was demonstrated in rats 4-12 hr after 500 and 600 r total-body x ray exposure. NSA 5-2052.

1691

THE CHANGES IN CELL MORPHOLOGY AND HISTOCHEMISTRY OF THE TESTIS FOLLOWING IRRADIATION AND THEIR RELATION TO OTHER INDUCED TESTICULAR CHANGES. I. QUANTITATIVE RANDOM SAMPLING OF GERMINAL CELLS AT INTERVALS FOLLOWING DIRECT IRRADIATION. Lloyd C. Fogg and Russell F. Cowing. Cancer Research 11, 23-8 (1951). Jan.

Authors plotted all population types (frequency of various types) against time post-irradiation. NSA 5-2053.

1692

CYTOLOGICAL LOCALIZATION OF THE TRANSLOCATION POINT FOR THE BARLEY MUTANT ELECTOIDES 7. Arne Hagberg and Joe Hin Tjio. Hereditas 36, No. 4, 487-91 (1950).

By applying oxiquinoline technique, translocation point was localized to long arm of chromosome I, between secondary constriction and chromosome end, or to shortest arm of chromosome V. NSA 5-2054.

1693

DO X-RAYS RESUSCITATE HEAT-KILLED SEEDS? Nils Nybom. *Hereditas* 36, No. 4, 516-17 (1950).

Barley seeds were treated with (1) heat (90° C for 30 minutes), (2) irradiation (20,000 r, 170 kv, 6 ma, 1 mm Al), or (3) both. Percentage of germinating seeds increased from 46% for (1) to 80% for (3). Both (1) and (2) gave full and positive peroxidase reactions. NSA 5-2055.

1694

THE EFFECTS OF ELECTRONS, POSITRONS AND α -PARTICLES IN PLANT DEVELOPMENT. A. Gustafsson, L. Ehrenberg, and M. Brunnberg. *Hereditas* 36, No. 4, 419-44 (1950).

Effects of electron-emitting P^{32} and S^{35} , positron- and γ -emitting Na^{22} , and α -particle-emitting Rn^{222} and Po^{210} on seedling lethality, growth, induced chromosomal aberrations are reported. Uptake of radioisotopes is described. NSA 5-2056.

1695

THE EFFECT OF RADIOACTIVE PHOSPHORUS UPON THE DEVELOPMENT OF THE EMBRYONIC TOOTH BUD AND SUPPORTING STRUCTURES. M. S. Burstone. *Am. J. Path.* 27, 21-32 (1951). Jan.-Feb.

Administration of P^{32} to pregnant mice results in disturbances of osteogenesis and odontogenesis in offspring. Dosages producing these changes are less than those required to produce similar changes by injecting immature mice. NSA 5-2057.

1696

THE EFFECT OF RADIOACTIVE PHOSPHORUS UPON THE DEVELOPMENT OF THE TEETH AND MANDIBULAR JOINT OF THE MOUSE. M. S. Burstone. *J. Am. Dental Assoc.* 41, 1-18 (1950). July.

Disturbances of osteogenesis and/or odontogenesis in young mice given P^{32} are described. Effect of β radiation on teeth and jaws is similar to that of x radiation. NSA 5-2058.

1697

EFFECT OF RADIOPHOSPHORUS ON RATS WITH COBALT-INDUCED POLYCYTHEMIA. W. F. Bethard, E. Skirmont, and L. O. Jacobson. Paper presented at the Central Society for Clinical Research, 23d Annual Meeting. Chicago, Nov. 3-4, 1950.

No significant difference in sensitivity to P^{32} appears to exist between normal rats and those with an established Co polycythemia. NSA 5-2059.

1698

THE EFFECTS OF ROENTGEN, γ , AND β RAYS ON THE EPIDERMAL CELL. EXPERIMENTS ON THE "NIPPLE TEST" ASSOCIATED WITH THE DUSTIN REACTION. W. Jadassohn, E. Bujard, R. Paillard, P. Wenger, and P. Gaudin. *Acta. Radiol.* 34, 469-87 (1950). Dec. (In French).

Combined action of irradiation therapy and treatment by estrogenic hormones on nipple of male guinea pig was studied. NSA 5-2060.

1699

THE EFFECT OF X-RADIATION ON EXPERIMENTALLY PRODUCED CUTANEOUS SENSITIVITY. Sheldon G. Cohen, Lloyd D. Mayer, and Leo H. Crip. *J. Investigative Dermatol.* 16, 91-6 (1951). Feb.

Of 37 guinea pigs sensitized to p-phenylenediamine with production of cutaneous hypersensitivity, 19 received 175 r, total-body x ray dose. Attenuation of sensitivity occurred in majority of irradiated animals. NSA 5-2061.

1700

EFFECT OF X-RAYS ON IMMUNITY A REVIEW.

William H. Taliaferro and Lucy Graves Taliaferro. *J. Immunol.* 66, 181-212 (1951). Feb. NSA 5-2062.

1701

EFFECT OF X-RAYS ON NUCLEIC ACID AND PROTEIN SYNTHESIS. Richard Abrams. *Arch. Biochem.* 30, 90-9 (1951). Jan.

X ray effect on nucleic acid purines was studied in rat intestine and rabbit intestine and bone marrow. DNA and RNA synthesis rate were depressed by x rays; proteins relatively unaffected. Radiation did not effect purine composition of nucleic acids, but relative concentration of RNA was lowered. NSA 5-2063.

1702

FAILURE OF A FLAVONOID TO REDUCE RADIATION MORTALITY IN MICE. E. P. Cronkite, W. H. Chapman, and F. W. Chambers. *Proc. Soc. Exptl. Biol. Med.* 76, 282-4 (1951). Feb.

Vitamin P was apparently of no value in treating radiation injury in LD_{60} - LD_{100} range in mice. NSA 5-2064.

1703

THE INABILITY OF GLUTATHIONE TO PROTECT ERYTHROPOIETIC BONE MARROW AGAINST IRRADIATION INJURY AT A DOSE LEVEL OF 300 r. Thomas G. Hennessy, Fleming B. Folsom, and John K. Grover. (Naval Radiological Defense Lab.). Nov. 6, 1950. 11p. (AD-267(B)).

Glutathione gave no protection to rats against radiation from x-ray using Fe^{59} to measure erythropoietic depression. NSA 5-2066.

1704

INDUCED PREGNANCY IN A MAMMALIAN HOST FOLLOWING SEVERE TOTAL BODY X-IRRADIATION. Paul E. Rekers. *J. Lab. Clin. Med.* 37, 331-41 (1951). Mar.

Pregnancy was readily and naturally induced in dogs after large doses of total-body irradiation of LD_{90} or more. Protective action of embryonic tissue and benefit from fetal endocrine systems are discussed. NSA 5-2067.

1705

IRRADIATION INJURIES OF THE HAND. Michael L. Mason. *Quart. Bull. Northwestern Univ. Med. School* 25, No. 1, 51-9 (1951). Spring.

Real cause of irradiation dermatitis is reported to lie in effect of rays upon cells of skin and subcutaneous tissue. Reaction depends upon amount and quality of irradiation delivered and individual susceptibility of tissues. NSA 5-2068.

1706

OCULAR CHANGES PRODUCED BY TOTAL BODY IRRADIATION. Helenor Campbell Wilder and Russell M. Maynard. *Am. J. Path.* 27, 1-19 (1951). Jan.-Feb.

Study of pathological changes in eyes of goats and pigs irradiated at Bikini as compared with x rayed animals, showed effects in both cases to be similar. NSA 5-2069.

1707

REGENERATION OF HEMATOPOIETIC ORGANS IN HEAVILY-IRRADIATED MICE PROTECTED BY KCN INJECTION. H. Betz and L. Fruhling. *Compt. rend. soc. biol.* 144, 1013-15 (1950). July. (In French).

Mice were exposed to 700 r of 250 kv x rays immediately after intraperitoneal injection of 0.05 mg KCN. Regeneration of blood, bone marrow, spleen, thymus, lymphatic nodes and liver are described. NSA 5-2070.

1708

A STUDY OF THE HEMORRHAGIC STATE IN DOGS AFTER A LETHAL DOSE OF TWO MILLION VOLT

X-RAYS. E. P. Cronkite, B. Halpern, D. P. Jackson, and George V. LeRoy. Paper presented at the Central Society for Clinical Research 23d Annual Meeting. Chicago, Nov. 3-4, 1950.

Post-irradiation hemorrhagic state of animals given lethal x ray doses is not identical with any hemorrhagic diseases encountered in clinical practice. NSA 5-2071.

1709
X-RAY INDUCED DOMINANT LETHALS IN *DROSOPHILA MELANOGASTER*. G. Bonnier and K. G. Luning. *Hereditas* 36, No. 4, 445-56 (1950).

Age of males at fertilization and time lapse between irradiation and fertilization are both factors in decreasing hatching rate in eggs. NSA 5-2072.

1710
EVALUATION OF PRESENT DAY KNOWLEDGE OF COSMIC RADIATION AT EXTREME ALTITUDE IN TERMS OF THE HAZARD TO HEALTH. Hermann J. Schaefer. (Naval School of Aviation Medicine and Research, Pensacola). Apr. 30, 1950. 32p. (NP-1735). NSA-2076.

1711
PUBLIC HEALTH ASPECTS OF ATOMIC ENERGY. A. Wolman. *Am. J. Pub. Health* 40, 1502-7 (1950). Dec.

Public health considerations in regard to atomic energy industry are discussed. NSA 5-2080.

1712
TOLERANCE DOSE PROBLEMS IN RADIOLOGICAL WORK. P. Bjerre Hansen and C. B. Madsen. *Acta. Radiol.* 34, 519-28 (1950). Dec.

Proposal to reduce tolerance dose to 100 mr/wk is presented. NSA 5-2081.

1713
CITRUS VITAMIN P AS PROTECTION AGAINST ATOMIC RADIATION. Boris Sokoloff and Walter H. Eddy. *Citrus Ind.* 16, 5-8 (1951). Feb.

Radiation illness after dose of 1100-1200 r is described. X ray effect on capillaries is noted. Vitamin P increases post-radiation recovery power of rats. NSA 5-2082.

1714
THE DIAGNOSIS AND TREATMENT OF RADIATION SICKNESS IN ATOMIC WARFARE. Eugene P. Cronkite. *Western J. Surg. Obstet. Gynecol.* 59, 55-61 (1951). Feb. NSA 5-2083.

1715
INVESTIGATION OF IMMEDIATE EFFECTS OF X-RAYS ON LIVING ANIMAL TISSUES. J. G. Stephens and H. Florey. *Brit. J. Radiol.* 32, 159-166 (1957).

Contrary to the results obtained by previous workers, no immediate fall of blood pressure or alteration in respiratory rate occurred during prolonged irradiation of living animal tissues.

1716
THE ROLE OF INFECTION IN RADIATION INJURY. C. Phillip Miller and Carolyn W. Hammond. *Trans. Assoc. Am. Physicians* 63, 155-60 (1950). May 2-3.

Results indicate that infection plays an important role in death from x radiation. NSA 5-2085.

1717
CHROMOSOME BREAKAGE IN PLANTS INDUCED BY RADIOACTIVE PHOSPHORUS (P^{32}). T. J. Arnason, E. Cumming and J. W. T. Spinks. *Science* 107, 198-199 (1948).

Seeds were divided into two lots supplied with 0.18 and 0.018 microcurie of P^{32} . Seedlings were transferred to untreated soil 13 days after germination. Irregularities were most frequent in tetraploid durum and hexaploid aestivum wheat. No clear aberration was observed in

barley. Aberrations in division I chromosome fragments, chains of 3 or 4 chromosomes, rings of 4, and unequal pairs; in division II anaphase and telophase bridges and fragments. (from abstract). BA 22-15506.

1718
DECREASE OF ADRENAL ASCORBIC ACID AND CHOLESTEROL IN RAT AND GUINEA PIG, FOLLOWING LARGE DOSES OF GLUTATHIONE. M. M. Carey, E. P. Vollmer, R. L. Zwemer, and D. L. Spence. *Am. J. Physiol.* 164, 770-3 (1951). Mar. 1.

Glutathione, in dosage that protects mice against irradiation and potassium poisoning, produces toxic reactions in rats and guinea pigs. Adrenal cholesterol and ascorbic acid are lowered, indicating stimulus to adrenal cortex. NSA 5-2096.

1719
THE USE OF RADIOACTIVE AND STABLE ISOTOPES IN HEMATOLOGY. L. R. Wasserman, I. A. Rashkoff, and T. F. Yoh. *J. Mt. Sinai Hosp. N. Y.* 17, 1037-47 (1951). Mar.-Apr.

Use of N^{15} , Fe^{55} , Fe^{59} , Zn^{65} , P^{32} , N^{14} , and Au^{198} in hematological investigations is reviewed. NSA 5-2110.

1720
CONCERNING X-RAY TREATMENT OF PYOGENIC INFECTIONS. Ger Eilermann. *Strahlentherapie* 78, 609-18 (1949). NSA 4-1873.

1721
PROGRESS REPORT RADIOBIOLOGY EXPERIMENT STATION, BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT. p.152-4 OF BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT NOVEMBER, DECEMBER, 1949, JANUARY, 1950. Austin M. Brues, Director. (Argonne National Lab.). (ANL-4401(p.152-4)).

Biosynthesis was studied using radiovitamin B and rutin, Co^{60} , P^{32} , and C^{14} . Effect of slow neutrons on growth and development of hemp plants after irradiation of seeds is outlined. NSA 5-2154.

1722
INDUSTRIAL AND SAFETY PROBLEMS OF NUCLEAR TECHNOLOGY. Morris H. Shamos and Sidney G. Roth, ed. New York, Harper and Brothers, 1950. 368p.

Discussion of the Atomic Energy Commission and its activities, radiochemistry and isotopes, the radiochemical laboratory, hazards, safety, and insurance. NSA 5-2304.

1723
BIOLOGY DEPARTMENT; p.111-20 OF QUARTERLY PROGRESS REPORT JULY 1-SEPTEMBER 30, 1950. (Brookhaven National Lab.). Nov. 1950. (BNL-82 (p.111-20)).

Measurement of nucleic acids in cells of *Lilium longiflorum* by 2 methods showed little quantitative agreement between the two. Action of x rays on enzymes, seeds, bacteria, and corn is described. NSA 5-2312.

1724
QUARTERLY TECHNICAL REPORT JULY 1, 1950, THROUGH SEPTEMBER 30, 1950. Henry A. Blair, Director, ed. (Atomic Energy Project, Univ. of Rochester). Nov. 1, 1950. 135p. (UR-142).

Includes reports on x ray effect on rat testes; uranium poisoning; fast neutron survey of small cyclotron. NSA 5-2315.

1725
ORGAN WEIGHTS AND THE CALCULATIONS OF TRANSPORT OF INSOLUBLE PARTICLES FROM THE LUNG. C. W. LaBelle, H. E. Stokinger, and J. M. Dohl. p.41-51 OF QUARTERLY TECHNICAL REPORT;

JULY 1, 1950 THROUGH SEPTEMBER 30, 1950. (Atomic Energy Project, Univ. of Rochester). Nov. 1, 1950. (UR-142(p.41-51)).

Normal organs of rats and their variation are described. Elementary calculations based on inhalation exposure show how results may be affected in specific cases. NSA 5-2316.

1726

THE SURVIVAL OF RATS ADRENALECTOMIZED AFTER X-IRRADIATION. Abraham Edelmann and Seymour Katsh. (Brookhaven National Lab.). 1p. (AECU-1137). Am. J. Physiol. 168, 626-7 (1952).

Life span of irradiated rats (600 r, 160 kvp, 10 ma, 0.2 mm Cu) was reduced when time between exposure and adrenalectomy was decreased. Need for adrenal hormones is apparently most acute immediately after irradiation, diminishing after 3-5 days. NSA 5-2317.

1727

THE EFFECTS OF X-IRRADIATION ON A NATURALLY OCCURRING ENDEMIC INFECTION. V. P. Bond, I. L. Schechmeister, M. N. Swift, and M. C. Fishler. (Naval Radiological Defense Lab.). Nov. 29, 1950. 17p. (AD-273(B)). J. Infectious Diseases 91, 26-32 (1952).

Study of x ray effect on rats from laboratory colony in which a pulmonary infection was endemic is reported. NSA 5-2318.

1728

PRELIMINARY REPORT FURTHER STUDIES OF THE PROTECTIVE EFFECTS OF SHIELDING. E. L. Simmons. p.27 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, MAY, JUNE, JULY, 1950. (Argonne National Lab.). (ANL-4488(p.27)).

Marked increase in survival occurs in rats with intestine surgically mobilized and lead-shielded during total-body x irradiation. Effects of spleen-shielding of mice are also reported. NSA 5-2320.

1729

ON THE NATURE OF CYSTEINE-INDUCED RADIO-RESISTANCE; SULFHYDRYL LEVELS AND DISTRIBUTION OF CYSTEINE SULFUR. H. M. Patt, R. L. Straube, Margaret E. Blackford, and D. E. Smith. p.38 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, MAY, JUNE, JULY, 1950. (Argonne National Lab.). (ANL-4488(p.38)). NSA 5-2321.

1730

PROGRESS REPORT RENAL FUNCTION IN THE CHICKEN FOLLOWING X IRRADIATION. S. Phyllis Stearner, A. M. Brues, and Emily J. B. Christian. p.52-3 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, MAY, JUNE, JULY, 1950. (Argonne National Lab.). (ANL-4488(p.52-3)).

Blood uric acid increases rapidly in the chicken after 1000 r, 43 r/minute, x-ray dose. It is suggested that increase results from renal failure rather than from altered nitrogen metabolism. NSA 5-2322.

1731

EFFECT OF WHOLE BODY ROENTGEN RADIATION ON PHAGOCYTIC FUNCTION IN RABBITS. G. V. Taplin, J. S. Grevior, C. Finnegan, M. L. LaNier and A. Dunn. Federation Proc. 11, 396 (1952).

Pre- and post-irradiation studies on several hundred rabbits subjected to 300 to 1200 r acute whole body x-irradiation revealed that dose of 300 r had little effect upon the blood clearance of prodigiosin. After 800 r there was depression of the macrophage system during the first 2 weeks and then a return to normal in the fourth week. (from authors' summary).

1732

FAILURE OF INTRAPERITONEAL GRAFTS OF HETEROLOGOUS GUINEA PIG MARROW TO FUNCTION IN THE IRRADIATED RAT. STUDIES WITH FE⁵⁹. H. Maisin, A. Dunjic, P. Maldague and J. Maisin. Compt. Rend. Soc. Biol. 150, 828-31 (1956).

1733

PRELIMINARY REPORT AUTOAGGLUTINATION IN PARAMECIUM BURSARIA FOLLOWING EXPOSURE TO ULTRAVIOLET AND TO X-RADIATION. C. F. Ehret. p.74-7 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, MAY, JUNE, JULY, 1950. (Argonne National Lab.). (ANL-4488(p.74-7)).

Autoagglutination observed after ultraviolet and x irradiation in *P. bursaria* is grossly similar to agglutination between opposite mating types of sexually reactive normal animals during their light period. NSA 5-2325.

1734

PROGRESS REPORT STUDIES ON THE MECHANISM OF ACTION OF IRRADIATED WATER ON CELL METABOLISM. E. S. G. Barron and Betty Redfield. p.78-81 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, MAY, JUNE, JULY, 1950. (Argonne National Lab.). (ANL-4488(p.78-81)).

Mechanism of inhibited respiration in sea-urchin sperm suspended in x-irradiated H₂O was investigated. NSA 5-2326.

1735

THE ABSENCE OF INHIBITION OF --SH ENZYMES BY MODERATE AMOUNTS OF X RADIATION. Marjorie Le May. p.92 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, MAY, JUNE, JULY, 1950. (Argonne National Lab.). (ANL-4488(p.92)).

X-ray doses high enough to cause hematological changes and death in rats do not cause measurable effects in metabolism of rat kidney slices nor in enzyme systems studied (succinic dehydrogenase included). NSA 5-2327.

1736

PRELIMINARY REPORT THE EFFECT OF X IRRADIATION ON FIGHTING BEHAVIOR IN MALE MICE. H. H. Vogel, Jr. p.93-104 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, MAY, JUNE, JULY, 1950. (Argonne National Lab.). (ANL-4488(p.93-104)).

Fighting behavior in mice conditioned to fight is not completely suppressed, post irradiation, until shortly before death. NSA 5-2328.

1737

PRELIMINARY REPORT A COMPARATIVE STUDY OF RADIATION LETHALITY IN SEVERAL SPECIES OF EXPERIMENTAL ANIMALS IRRADIATED FOR THE DURATION-OF-LIFE. p.105-22 OF DIVISION OF BIOLOGICAL AND MEDICAL RESEARCH QUARTERLY REPORT, MAY, JUNE, JULY, 1950. George Sacher. (Argonne National Lab.). (ANL-4488(p.105-22)). NSA 5-2329.

1738

THE DEGENERATIVE CHANGES IN THE TESTES OF THE ADULT RAT AFTER X-IRRADIATION. K. E. Mason and S. L. Shaver. p.16-28 OF QUARTERLY TECHNICAL REPORT, JULY 1, 1950 THROUGH SEPTEMBER 30, 1950. Nov. 1, 1950. (Atomic Energy Project, Univ. of Rochester). (UR-142(p.16-28)).

Degeneration in rat testes after 500 r total body irradiation is possibly due to combined effect of a secondary mediator and direct x ray effect, neither

of which alone produces observable degeneration. NSA 5-2330.

1739

ACTION OF 1:4-NAPHTHOHYDROQUINONE-DIPHOSPHATE AND ITS 2-METHYL DERIVATIVES ON IRRADIATED AND NON-IRRADIATED RATS WITH HENSEN SARCOMA. E. Friedmann and Norman T. J. Bailey. *Biochem. et Biophys. Acta.* 274-82 (1950). Feb.

Neither agent has significant effect on growth of non-irradiated Jensen sarcoma in rats. NSA 5-2331.

1740

BIOELECTRIC POTENTIALS AS A MEASURE OF RADIATION INJURY. A. A. Bless. *Proc. Natl. Acad. Sci. U.S.* 36, 617-23 (1950). Nov.

Potentials measured from tip of coleoptile to seed coat were compared with coleoptile length in wheat seedlings irradiated with up to 6000 r of x rays at various ages. NSA 5-2332.

1741

BIOLOGIC EFFECTS OF RADIOACTIVE PHOSPHORUS POISONING IN RATS. Simon Koletsky and James H. Christie. *Am. J. Path.* 27, 175-94 (1951). Mar.-Apr.

Extensive morphologic lesions caused by lethal doses of P^{32} are described. NSA 5-2333.

1742

THE CHANGES IN CELL MORPHOLOGY AND HISTOCHEMISTRY OF THE TESTIS FOLLOWING IRRADIATION AND THEIR RELATION TO OTHER INDUCED TESTICULAR CHANGES; II. COMPARISON OF EFFECTS OF DOSES OF 1,440 r AND 5,050 r WITH 300 r. Lloyd C. Fogg and Russell F. Cowing. *Cancer Research* 11, 81-6 (1951). Feb. NSA 5-2334.

1743

EFFECT OF HIGH-VOLTAGE CATHODE RAYS ON ASCORBIC ACID; IN VITRO AND IN SITU EXPERIMENTS. Bernard E. Proctor and John P. O'Meara. *Ind. Eng. Chem.* 43, 718-21 (1951). Mar.

Loss of ascorbic acid on irradiation is less *in situ* (orange juice) than *in vitro* (0.25% oxalic acid). Dilute solutions of ascorbic acid are more radiosensitive than concentrated ones. NSA 5-2335.

1744

INHIBITION OF NUCLEIC ACID SYNTHESIS BY X-RAY IRRADIATION AT DIFFERENT STAGES OF THE MITOTIC CYCLE. p.12-17 OF PROGRESS RADIO-BIOLOGY. Lorna K. Mee. F. J. Mitchell, B. E. Holmes, and C. L. Smith, eds. Springfield, Ill., Charles C. Thomas, Publisher. 1955.

1745

THE LOCI OF ACTION OF ULTRA-VIOLET AND X-RADIATION, AND OF PHOTO-RECOVERY, IN THE EGG AND SPERM OF THE SEA URCHIN. Harold F. Blum, J. Courtland Robinson, and Gordon M. Loos. *Proc. Natl. Acad. Sci. U.S.* 36, 623-7 (1950). Nov.

Moderate doses of ultraviolet and x radiation delay cell division in eggs of *A. punctulata*. Locus of action appears to be cell nuclei. Photo recovery has locus in egg cytoplasm. NSA 5-2338.

1746

MASCULINIZATION OF XIPHOPHORES FEMALES BY X-IRRADIATION OF THE GONAD. Jean-Henri Vivien. *Compt. rend.* 231, 1166-8 (1950). Nov. 20. (In French).

Although 1200 r applied to gonads caused masculine development of anal and caudal fins, autopsy of female *X helleri* fish revealed normal appearing ovary. NSA 5-2339.

1747

MECHANISM OF PROTECTIVE ACTION OF GLUTA-

THIONE AGAINST WHOLE BODY IRRADIATION. E. P. Cronkite, G. Brecher, and W. H. Chapman. *Proc. Soc. Exptl. Biol. Med.* 76, 396-8 (1951). Feb. NSA 5-2340.

1748

PROLONGATION OF SURVIVAL OF SKIN HOMO-TRANSPLANTS IN THE RABBIT BY IRRADIATION OF THE HOST. W. J. Dempster, B. Lennox, and J. W. Boag. *Brit. J. Exptl. Path.* 31, 670-9 (1950). Oct.

Dose of 250 r given rabbits before application of skin grafts from another rabbit markedly improved survival of grafts. NSA 5-2342.

1749

QUANTITATIVE EFFECTS OF RADON IMPLANTED IN THE MEDULLA OBLONGATA; A TECHNIQUE FOR PRODUCING DISCRETE LESIONS. Herbert L. Borison and S. C. Wang. *J. Comp. Neurol.* 94, 33-53 (1951). Feb. NSA 5-2343.

1750

ON CERTAIN BIOLOGICAL EFFECTS OF PENETRATING RADIATION. S. E. Monoilov and K. P. Ivanov. *Doklady Akad. Nauk. S.S.S.R.* 105, 180-1 (1955). (Russian).

Aerobic phases of biological oxidation in tissues exposed to radiation were investigated. Isolated frog hearts were analyzed and the electrocardiographs are presented. NSA 10-2582.

1751

MEDICAL ASPECTS OF ATOMIC WARFARE; MARCH 27-31, 1950. (Atomic Energy Commission Training Program). Mar. 1950. 77p. (M-4517).

Topics include clinical radiation disease; radiation health protection; large-scale medical problems. NSA 5-2346.

1752

ATOMIC RADIATION HAZARDS FOR FISH. Elmer Higgins. *J. Wildlife Management* 15, 1-12 (1951). Jan.

Discussion of atomic wastes as source of radiation exposure, biological effects of acute radiation; radiation levels in contaminated streams; effects of low level exposure. NSA 5-2348.

1753

FOOD INSPECTION AND NUCLEAR ENERGY. John H. Rust. *J. Am. Vet. Med. Assoc.* 118, 135-8 (1951). Mar.

Procedures are suggested to prevent radioactive animals from being processed for food products. NSA 5-2349.

1754

HAZARDS IN RADIOTHERAPY. B. Jolles. *Med. Press.* 225, 40-3 (1951). Jan. 10. NSA 5-2350.

1755

INTERNATIONAL RECOMMENDATIONS ON RADIOLOGICAL PROTECTION. *Radiology* 56, 431-9 (1951). Mar.

New radiation safety standards with more rigid criteria are adopted. NSA 5-2352.

1756

ROENTGEN-RAY PROTECTION. R. Glocker. *Z. angew. Phys.* 2, 266-71 (1950). June. (In German).

Discusses concept of dose and roentgen units, types of x ray damage, tolerance dose, radiation-safe apparatus, shielding materials and requirements. NSA 5-2353.

1757

SOME MEDICAL ASPECTS OF ATOMIC WARFARE. S. R. Burstson. *Med. J. Australia* 38, Vol. I, 281-6 (1951). Feb. 24. NSA 5-2354.

1758

STUDIES OF THE HAZARD INVOLVED IN USE OF C^{14} III. LONG TERM RETENTION IN BONE. Howard E.

Skapper, Constance Nolan, and Linda Simpson. J. Biol. Chem. 189, 159-66 (1951). Mar. NSA 5-2355.

1759

THE EFFECT OF AUREOMYCIN ON THE RADIATION SYNDROME IN DOGS. F. W. Furth and M. P. Coulter. (Atomic Energy Project, Univ. of Rochester). Dec. 15, 1950. 18p. (UR-146). Am. J. Path. 28, 25-35 (1952).

Dogs treated post-radiation (450 r of 250-kv x rays) with clinical doses of aureomycin show decreased mortality as compared with controls. NSA 5-2356.

1760

PROBLEMS OF CLINICAL RADIOBIOLOGY. Jorgen E. Thygesen. Radiology 56, 403-7 (1951). Mar. NSA 5-2357.

1761

PUBLIC HEALTH ASPECTS OF CIVIL DEFENSE FROM ATOMIC WEAPONS. James P. Cooney. p.129-32 OF LECTURES PRESENTED AT THE INSERVICE TRAINING COURSE IN RADIOLOGICAL HEALTH, Feb. 5-8, 1951. Ann Arbor, University of Michigan School of Public Health.

A discussion of problems likely to be encountered by physicians after an atomic bomb explosion. NSA 5-6947.

1762

RADIOISOTOPES TECHNIQUES CONFERENCE--Oxford, 1951. J. L. Putman. Nucleonics 9, No. 4, 5-16 (1951). Oct.

A review of papers presented at the Radioisotopes Techniques Conference, indicating the wide variety of applications of radioisotopes in medicine and industry. The review gives some inkling of the preventive medical problems to be solved with respect to radiation work. NSA 5-6949.

1763

THE EFFECT OF EARLY SMALL EXCHANGE TRANSFUSION ON THE X-IRRADIATED DOG. S. N. Swisher and F. W. Furth. (Atomic Energy Project, Univ. of Rochester). Oct. 11, 1951. 12p. (UR-186). Proc. Soc. Exptl. Biol. Med. 78, 226-9 (1951).

Removal of 250 cc of blood from 20 lb. dogs immediately after 550 r whole body exposure and replacement with an equal volume of normal compatible whole blood produces delay in onset of radiation syndrome and mortality; possibly a decrease in mortality; no effect on trends of leukocytes, platelets or hematocrit of peripheral blood. NSA 5-6956.

1764

THE PROTECTIVE EFFECT OF PITRESSIN AND OF EPINEPHRINE AGAINST TOTAL BODY X-RADIATION. John L. Gray, Elizabeth J. Moulden, John T. Tew, and H. Jensen. (Army Medical Research Lab., Ft. Knox.). Sept. 18, 1951. 12p. (AMRL-64). Proc. Soc. Exptl. Biol. Med. 79, 384-7 (1952).

Pre-exposure treatment with pitressin or epinephrine caused increased survival of rats exposed to lethal dose of x rays. Protective effect is attributed to production of temporary tissue anoxia. NSA 5-6957.

1765

THE PRESENCE AND IDENTITY OF VASOTROPIC SUBSTANCES IN THE BLOOD OF RATS SUBJECTED TO ACUTE WHOLE BODY ROENTGEN RAY IRRADIATION. T. J. Haley, Margaret R. Andem, Richard F. Riley, and Idamae Williams. (Atomic Energy Project, Univ. of Calif., Los Angeles). Oct. 18, 1951. 17p. (UCLA-161). Am. J. Physiol. 168, 628-36 (1952).

Effect of x radiation on peripheral vascular function (rat) is attributed to a vasodepressor material released by the liver and present in circulation during 1st post-exposure week. It fits criteria for ferritin. Vaso-excitor material is present in blood during 2nd post-exposure week. NSA 5-6958.

1766

LOW-TEMPERATURE STERILIZATION OF ORGANIC TISSUE BY HIGH-VOLTAGE CATHODE-RAY IRRADIATION. Irving A. Meeker, Jr. and Robert E. Gross. Science 114, 283-5 (1951). Sept. 14.

At low temperatures there is a zone of radiation damage which lies above sterilization dose but below dose causing tissue damage. Authors report two aortic segments preserved in this way (human) were grafted with good results 4 and 6 months postoperatively. NSA 5-6959.

1767

THE EFFECT OF SINGLE MASSIVE DOSES OF ROENTGEN RADIATION UPON THE LIVER. Irving M. Ariel. Radiology 57, 561-75 (1951). Oct.

Author studied morphological changes in rabbit liver after single doses of x radiation, 300 to 100,000 r, 90 kv. NSA 5-6960.

1768

ANIMAL-EXPERIMENTAL INVESTIGATION OF PARENTERAL THORIUM X APPLICATION. Heinz Spieß. Z. ges. exptl. Med. 117, No. 6, 567-86 (1951). (In German).

Author studied clinical effects (rabbits) of intravenous injection of Th X (Ra²²⁴) in single or divided doses up to 1000 esu. Results reported include hematological changes; effects on blood sugar, proteins, Ca and P; effects on kidneys, reproductive system, metabolism; localization of injected Th X; effect on fracture healing. NSA 5-6961.

1769

ALTERATION IN SHAPE AND SIZE OF PLASTICS IN THE PROTHALLIA OF POLYPODIACEAE AND EQUISETACEAE UNDER THE INFLUENCE OF X RADIATION. L. P. Breslavets. Doklady Akad. Nauk. S.S.S.R. 78, No. 6, 1235-8 (1951). June 21. (In Russian).

Effects of 15,000 to 120,000 r of x radiation on plastids in prothallium of the fern *Pteris longifolia* and of 7500 to 100,000 r on those in prothallium of the horsetail *Equisetum arvense* are illustrated. NSA 5-6962.

1770

BIOLOGICAL AND MEDICAL EFFECTS OF RADIATION AT LOW LEVELS. Titus C. Evans. p.60-6 OF LECTURES PRESENTED AT THE INSERVICE TRAINING COURSE IN RADIOLOGICAL HEALTH, Feb. 5-8, 1951. Ann Arbor, University of Michigan School of Public Health, 1951. NSA 5-6963.

1771

EFFECT OF X RADIATION ON WHEAT SEED IN RELATION TO DEGREE OF RIPENESS. O. S. Engel. Doklady Akad. Nauk. S.S.S.R. 78, No. 4, 811-14 (1951). June 1. (In Russian).

Data on growth of roots and stalks of wheat sprouts from seed exposed at various stages of ripeness to 500 to 64,000 r of x radiation are tabulated and plotted. NSA 5-6964.

1772

EFFECT OF X-RADIATION ON THE DESOXYRIBONUCLEIC ACID AND ON THE SIZE OF GRASSHOPPER EMBRYONIC NUCLEI. Nyra J. Harrington and Robert W. Hoza. Biol. Bull. 101, 138-50 (1951). Oct.

Visually apparent loss of Feulgen-stainability after irradiation probably is not due to decrease in DNA desoxypentose, but to swelling of nuclei. Loss of methyl green stainability by nuclei is interpreted as indication of radiation-induced depolymerization of nucleic acid. NSA 5-6965.

1773

THE EFFECT OF OXYGEN CONCENTRATION ON THE

MUTAGENIC ACTION OF MUSTARD GAS. C. Auerbach and J. M. Robson. *Experientia* 7, 341-2 (1951). Sept. 15.

Production of mutations in *Drosophila* by treatment with mustard gas is independent of atmosphere (O_2 or N_2) during exposure. Contrasting results with radiation are interpreted as indicating that O_2 is specifically involved in the production of mutations by x rays. NSA 5-6967.

1774
ELECTROMAGNETIC RADIATION FUNDAMENTALS AND THEIR APPLICATIONS IN FOOD TECHNOLOGY. Bernard E. Proctor and Samuel A. Goldblith. *Advances in Food Research* 3, 119-96 (1951).

Includes tabulation of effects of x rays, cathode rays and radiations from radioisotopes on bacterial and enzymatic activities and on vitamins. NSA 5-6966.

1775
THE EFFECT OF IONIZING RADIATIONS ON THE BROAD BEAN ROOT. PART IX. CHROMOSOME BREAKAGE AND THE LETHALITY OF IONIZING RADIATIONS TO THE ROOT MERISTEM. J. M. Thoday. *Brit. J. Radiol.* 24, 572-6 (1951). Oct.

Data show α rays more efficient, per ionization, in producing chromosome aberrations of all types in *Vicia* meristems than are x rays. Relations between frequencies of the various aberrations and dose are presented. NSA 5-6968.

1776
RADIUM HAZARD IN A MILITARY AIRCRAFT INSTRUMENT SHOP FINAL REPORT. (Technical Objective AW-5B). R. K. Skow, O. J. Sobol, and Willa Wadleigh. (Naval Radiological Defense Lab.). June 19, 1951. 20p. (AD-238(H)).

Survey of radium contamination in a military-aircraft instrument shop revealed contamination in excess of permissible AEC standards. Hazard-control measures put into effect (after decontamination of the shop) effected considerable reduction in spread of contamination. NSA 5-6969.

1777
UNITS OF RADIATION AND RADIOACTIVITY. Elda E. Anderson. p.45-7 OF LECTURES PRESENTED AT THE INSERVICE TRAINING COURSE IN RADIOLOGICAL HEALTH, Feb. 5-8, 1951. Ann Arbor, University of Michigan School of Public Health, 1951.

Includes definition of maximal permissible tissue doses. NSA 5-6978.

1778
PUBLIC HEALTH ASPECTS OF ATOMIC POWER INSTALLATIONS. p.16 OF LECTURES PRESENTED AT THE INSERVICE TRAINING COURSE IN RADIOLOGICAL HEALTH, Feb. 5-8, 1951. Ann Arbor, University of Michigan School of Public Health, 1951. Lyle B. Borst.

Includes discussion of public health aspects of radiation work and need for public health personnel trained to work in this field. NSA 5-6979.

1779
QUANTITATIVE LIMITS OF PERMISSIBLE EXPOSURE OF PERSONNEL (EXTERNAL AND INTERNAL). K. Z. Morgan. p.67-76 OF LECTURES PRESENTED AT THE INSERVICE TRAINING COURSE IN RADIOLOGICAL HEALTH, Feb. 5-8, 1951. Ann Arbor, University of Michigan School of Public Health, 1951. NSA 5-6980.

1780
BASIC PRINCIPLES OF RADIATION PROTECTION. Elda E. Anderson. IN LECTURES PRESENTED AT THE INSERVICE TRAINING COURSE IN RADIOLOGICAL HEALTH, Feb. 5-8, 1951. Ann Arbor, University of Michigan School of Public Health, 1951.

A review, emphasizing the need for day to day application of knowledge relative to radiation protection now that radiation work is becoming so common in medicine and industry. NSA 5-6981.

1781
RADIOLOGICAL HEALTH. Edwin G. Williams. p.126-8 OF LECTURES PRESENTED AT THE INSERVICE TRAINING CENTER IN RADIOLOGICAL HEALTH, Feb. 5-8, 1951. Ann Arbor, University of Michigan School of Public Health, 1951.

Recommends community-wide program to acquaint public with facts relative to health aspects of radiation. Responsibilities of public health officers for control of radiation hazards are discussed. NSA 5-6985.

1782
COSMIC RAYS AND THEIR RADIATION-BIOLOGICAL ACTION. E. Schopper. *Rontgen Blatt* 4, 224-36 (1951). Sept. (In German)

A definite hazard would be expected to exist in space for larger terrestrial creatures in whose bodies the secondary radiation could reach its maximum. Effective protection would be offered by at least 1 to 2 m of water equivalent. NSA 5-6987

1783
PARTIAL OR COMPLETE PELVIC EXENTERATION FOR EXTENSIVE IRRADIATION NECROSIS OF PELVIC VISCERA IN THE FEMALE. Alexander Brunschwig. *Surg. Gynecol. Obstet.* 93, 431-8 (1951). Oct. NSA 5-6990.

1784
ACUTE RADIATION INJURIES IN MAN. Louis H. Hempelmann. *Surg. Gynecol. Obstet.* 93, 385-403 (1951). Oct.

Author presents a review of biological reactions produced by ionizing radiation and types of radiation injury, followed by four case histories taken from the files of the Los Alamos Scientific Laboratory and Los Alamos Hospital (1 case of acute localized injury; 3 cases of acute generalized injury). NSA 5-6991.

1785
PRESENT DAY RADIOTHERAPEUTICAL PROBLEMS. A. Herve. *Rev. med. Liege* 6, 651-60 (1951). Oct.

Author includes examples of the use of ionizing radiation in cell physiology of carcinogenesis and of uses of chemical agents for protection against radiation injuries. NSA 5-6997.

1786
HEMIN SYNTHESIS IN POLONIUM-INDUCED ANEMIA IN THE RAT. R. G. Thomas, K. I. Altman, J. N. Stannard, and K. Salomon. *Federation Proc.* 12, 143-44 (1953).

The incorporation of ^{14}C -glycine into circulating erythrocytes has been studied in anemic rats. Relative rates of incorporation of ^{14}C into hemin and globin fractions remained unchanged. Lowering of the millimolar isotope concentration in hemoglobin occurred in four groups of rats receiving 40 μC of polonium kg (from authors' summary).

1787
INDUCED REVERSIONS OF BIOCHEMICAL MUTANTS IN *NEUROSPORA CRASSA*. N. H. Giles, Jr. *Genetics* 33, 105 (1948). Jan. NSA 1-229.

1788
OBSERVATIONS ON MORTALITY AND CARCINOGENESIS IN FEMALE CBA MICE GIVEN SUBACUTE AND CHRONIC IRRADIATION. F. J. Mitchell, B. E. Holmes, and C. L. Smith, eds. Springfield, Ill., Charles C. Thomas, 1955. R. H. Mole. *Prog. Radiobiol.* p. 468-75.

1789
ACTION OF TEMPERATURE DURING X-RAY TREATMENT

OF TRADESCANTIA CHROMOSOMES. A. C. Faberg. Genetics 33, 104(1948). Jan.

With short irradiation time (500 r/80 sec.) and short period of temperature change (half period, 15 sec.) relative to the time a chromosome break remains free (about 4 min.), temperature effect on production of chromosome aberrations exists during treatment only. NSA 1-231.

1790

THE BIOLOGICAL EFFECTS OF X-RAYS ON MATING TYPES AND CONJUGATION OF PARAMECIUM BURSARIA Ralph Wichterman. Biol. Bull. 94, 113-127(1948). Apr.

Individuals of opposite mating types (P. bursaria) received x ray doses of 100,000 r to 1,000,000 r in steps of 100,000 r. Locomotion rate increased after 100,000 r, decreased after higher doses. Clones obtained from 300,000 r-600,000 r dose specimens had green symbiotic zoochlorellae destroyed by the radiation. Effect of x rays on mating reaction is described NSA 1-232.

1791

CHROMOSOME BREAKAGE INDUCED BY ABSORBED RADIOACTIVE PHOSPHORUS P^{32} T. J. Arnason, Elame Cumming, and J. W. T. Spinks. Can. J. Research 26, 109-14(1948). Apr.

Germinating seeds and seedlings of Triticum vulgare, T. durum, T. monococcum and Hordeum distichon were provided with 0.18 or 0.018 μ c of P^{32} . Both concentrations caused chromosome breaks or rearrangements suggesting that effectiveness of P^{32} is increased by its incorporation into chromosome molecules. NSA 1-233.

1792

COMPARISON OF THE LETHAL EFFECT OF NEUTRONS AND GAMMA RAYS ON MOUSE TUMORS (a) BY IRRADIATION OF GRAFTED TUMORS IN VIVO, (b) BY IRRADIATION OF TUMOR FRAGMENTS IN VITRO. L. H. Gray and John Read. Brit. J. Radiol. 21, 5-10(1948). Jan

When dose is measured on the basis of ion pair production/cc tissue, the mean lethal dose of neutrons (mouse carcinoma 2146) is 24 times smaller in vivo and 9.5 times smaller in vitro than γ radiation. NSA 1-234.

1793

DEATH AFTER AUTOGAMY IN PARAMECIUM AURELIA FOLLOWING EXPOSURE IN SOLUTION TO THE RADIOACTIVE ISOTOPES P^{32} AND $Sr^{89,90}$ Y^{90} . E. L. Powers, Jr. Genetics 33, 120(1948). Jan. NSA 1-235.

1794

THE DIFFERENTIAL EFFECTS OF COMBINED RADIATIONS ON CHROMOSOME BREAKAGE AND MUTATION RATE. C. P. Swanson. Science 107, 458 (1948). May 7.

Gene mutations result from initial energy absorptions and are not affected by combined treatments (X, uv and infrared rays); chromosome changes (breakage followed by recombination) are influenced by agents which influence recombination rather than by initial breakage. NSA 1-236.

1795

EFFECTS OF GRADED DOSAGE OF X-RAYS ON THE PRODUCTION OF EYE FACETS IN THE BAR-EYED RACE OF DROSOPHILA MELANOGASTER. W. M. Luce, H. B. Chase, and Henry Quastler. Genetics 33, 115(1948). Jan.

Irradiation with x rays (115, 460, 920, or 1380 r) of Bar-eyed mutant of Drosophila between 48 and 72 hr of egg-larval life caused reduction in number of eye facets. Reduction was greater with higher doses. Significance of time limits of this x ray effect are discussed NSA 1-237.

1796

EXPERIMENTS TO TEST THE VALIDITY OF THE LINEAR R-DOSE/MUTATION FREQUENCY RELATION

IN DROSOPHILA AT LOW DOSAGE. Warren P. Spencer and Curt Stern. Genetics 33, 43-73(1948). Jan.

Even for x-ray dosages as low as 50 r and 25 r the linear r-dose/mutation frequency relation holds. NSA1-238.

1797

THE GENETIC EFFECTS OF NON-STERILIZING DOSES OF PENETRATING RADIATION. Frank Ellis. Brit. J. Radiol. 21, 1-4(1948). Jan. NSA 1-239.

1798

GENETIC EFFECTS OF ATOMIC BOMBING. Lancet 294, 292-3(1948) NSA 1-240.

1799

HUMAN PATHOLOGIC ANATOMY OF IONIZING RADIATION EFFECTS OF THE ATOMIC BOMB EXPLOSIONS. E. DeCoursey. Military Surgeon 102, 427-32(1948) June

Necropsy findings conducted on A-bomb victims in Nagasaki and Hiroshima are described. NSA 1-241.

1800

INACTIVATION OF BACTERIOPHAGE BY RADIATIONS, AND THEIR BEARINGS ON NATURE OF BACTERIOPHAGE. D. E. Lea and M. H. Salaman. Proc. Roy. Soc. (London) 133B, 434-44(1946).

Bacteriophages (1) S-13, (2) C-36 and (3) Staph-K were irradiated with γ -, x-, and α -rays. Effect was independent of exposure time, survival curve was exponential. For any one radiation, inactivation dose for the three phages increased in the order (1), (2), (3); for any one phage, inactivation dose increase in the order γ -, x-, and α -rays. NSA 1-242.

1801

Chicago. Univ. Air Force Radiation Lab. QUARTERLY PROGRESS REPORT NO. 19. Apr. 15, 1956 14sp. Contract AF41(657)-25 (NP-5964).

Various compounds were evaluated as protective or therapeutic agents against radiation injury. Data are included on the effects of several thioctic acids, a number of unrelated chemical compounds, metabolic antagonists, cortical steroids, and thiourea on the mortality of rats and mice, the effects of whole-body x irradiation and starvation on the free amino acid content of rat plasma; the effect of environmental factors and whole-body x irradiation on citrate synthesis in rats (For preceding period see NP-5877.) NSA 10-9037.

1802

THE INFLUENCE OF COSMIC RADIATION SHOWERS ARISING FROM LEAD PLATES ON THE RATE OF CARCINOGENESIS. F. H. J. Figge. Anat. Record 97, 386-7 (1947).

Mice injected with methylcholanthrene were exposed to cosmic rays directly or through lead plates and rates of carcinogenesis in the two groups were compared. NSA 1-244.

1803

INFLUENCE OF ROENTGEN RAYS ON ISOLATED CELL NUCLEI. Hans von Euler and L. Hahn. Acta Radiologica 27, 268-80(1946).

Calf thymus nuclei at pH 4-6 were irradiated with 25,000 and 65,000 r; nucleoproteins were prepared from them and characterized by chemical analysis, viscosity, dialysis and adsorption measurements. No significant changes due to radiation were found. NSA 1-245.

1804

THE RELATIVE EFFECTIVENESS OF FAST NEUTRONS AND GAMMA RAYS IN PRODUCING SOMATIC CROSSING OVER IN DROSOPHILA. George Lefevre, Jr. Genetics 33, 113 (1948). Jan.

Neutrons were relatively much more effective per ionization than were γ rays in producing eye color mosaics

in heterozygous white and eosin-white female *Drosophila* exposed as larvae 24 to 30 hr after egg laying. Possible mechanisms causing somatic crossing over which requires 2 hits within a limited period are discussed. NSA 1-247.

1805
THE RELATIVE EFFECTIVENESS OF FAST NEUTRONS AND GAMMA RAYS IN PRODUCING SOMATIC MUTATION IN *DROSOPHILA*. George Lefevre, Jr. Genetics **33**, 112(1948). Jan.

Mosaic incidence following exposures to neutrons 26 hours after egg laying was higher than expected when compared to γ ray exposures. Authors conclude that neutrons are not less effective than γ rays per ionization in producing mosaics. NSA 1-248.

1806
EFFECT OF RADIOACTIVE MATERIALS ON STIMULATING PLANT GROWTH. Carl B. French. Can. Chem. Process Ind **32**, 225-6(1948). Mar.

As a result of experiments on five vegetables, the author concludes that the use of radioactive materials in conjunction with commercial fertilizers tends to increase the yield of many crops. NSA 1-254.

1807
ARMY DOCTORS SAY MASS HYSTERIA NEED NOT FOLLOW ATOMIC BOMB EXPLOSION. Military Surgeon **102** No. 6, 501-3(1948). NSA 1-265.

1808
EFFECT OF DESOXYCORTICOSTERONE ON MICE IRRADIATED WITH X-RAYS. F. Ellinger Proc. Soc. Exptl. Biol. Med. **64**, 31-5(1947).

Author postulates that action of x rays is due to liberation of histamine-like substance by tissue breakdown. Studied effect of desoxycorticosterone on mortality of mice irradiated with LD_{50} x ray dose. Death of mice is attributed to fatty changes in liver. NSA 1-322.

1809
PREVENTION OF RADIATION HEMORRHAGE. Lancet **254**, 489(1948). Mar 27

Survey of the work done by Rekers and Field with the flavonol compound, rutin, in reducing excessive capillary fragility following x radiation. NSA 1-323.

1810
STOP BLEEDING IN PATIENTS. Science News Letter **53**, 196-7(1948). Mar. 27.

The development of toluidin blue and protamine sulfate as therapeutic agents for control of hemorrhages induced by x rays is described NSA 1-324.

1811
EFFECTS OF RADIOACTIVE SODIUM ON LEUKEMIA AND ALLIED DISEASES, PRELIMINARY REPORT T. C. Evand, M. Lenz, C. P. Donlan, and M. J. LeMay. Am. J. Roentgenol. Radium Therapy **59**, 469-81(1948). Apr. NSA 1-348.

1812
THE VALUE OF PLATELET COUNTS IN RADIOTHERAPY. W. M. Court Brown. Brit. J. Radiol. **21**, 221-5(1948). May.

The effect of wide-field irradiation on the blood platelet level is described, and it is suggested that blood platelet level is a more reliable indicator of the effect of radiation on the bone marrow than is the total white cell count NSA 1-356.

1813
A SYMPOSIUM ON THE USE OF ISOTOPES IN BIOLOGY AND MEDICINE. Madison University of Wisconsin Press, 1948. 445p. (Addresses given at the Univ. of Wisconsin, Sept. 10-13, 1947).

Includes section on health hazards and personnel protection NSA 1-370.

1814
Technical Information Div., Library of Congress
RADIOACTIVE MANGANESE, IRON, COBALT, COPPER, ZINC, AND STRONTIUM. A SELECTED BIBLIOGRAPHY OF RECENT LITERATURE WITH SPECIAL REFERENCE TO BIOLOGICAL AND MEDICAL APPLICATIONS M. C. Leikind and M. H. Eller. Feb. 24, 1948. 19p. (NP-232, U807). NSA 1-387.

1815
Argonne National Lab.
THE HEMATOLOGICAL EFFECTS OF IONIZING RADIATIONS L. O. Jacobson, E. K. Marks, and E. Lorenz Oct. 1947. Decl. July 1, 1948. 93p. (AECD-2085, CH-3864). Radiology **52**, 371-95(1949), NNS Div. IV. Vol. 20, pt. A, Paper 5.

A summary of Plutonium project hematological studies covering: the effects of (1) acute and (2) chronic whole body exposure to externally administered penetrating radiations; (3) acute and (4) chronic toxicity of internally administered radioisotopes on peripheral blood and hematopoietic system. NSA 1-404.

1816
COMPARISON OF EFFECTS OF MUSTARD, ULTRAVIOLET AND X-RADIATION, AND COLCHICINE ON CORNEA. J. S. Friedenwald, W. Buschke, and Sylvia G. Moses. Bull. of John Hopkins Hosp **82**, 312(1948). Feb.

Of the agents compared, U-V resembled nitrogen mustard most closely with respect to cellular effects. With both mustard and U-V there may be some relationship between factors inhibiting mitosis and those leading to nuclear fragmentation, but nuclear fragmentation was not found in x irradiated corneae in spite of markedly inhibited mitosis. Neither mitotic inhibition nor nuclear fragmentation appeared to be directly connected with the loosening of corneal epithelium nor with increased NPN content of the cornea after exposure to U-V or mustard. (Beef and rat cornea were studied.) NSA 1-405.

1817
CYTOGENETIC EFFECTS IN CORN EXPOSED TO ATOMIC BOMB IONIZING RADIATION AT BIKINI. L. F. Randolph, A. E. Longley, and Ching Hsiung Li. Science **108**, 13-15 (1948).

It is concluded from the experiments reported that radiation from the A-bomb produced effects in corn comparable to those induced by exposure to approximately 15,000 r of x rays Bomb produced relatively more chlorophyll deficiencies and dead tissue sectors. NSA 1-406.

1818
EFFECTS OF SMALL DAILY DOSES OF FAST NEUTRONS ON MICE Titus C. Evans, Radiology **50**, 811-834(1948). June.

Daily exposures of 0.14 n (total dose of 60 n) reduced survival time, reduced growth in hematopoietic organs and gonads, slightly increased frequency of cataracts. Effects of larger doses is also described. Daily exposures of 1.4 n were more effective than doses of 11 r. Effective r/n ratio varied with effects observed. NSA 1-407.

1819
THE GENETICAL EFFECTS OF MUSTARD GAS SUBSTANCES AND NEUTRONS. A. Gustafsson and J. MacKey Hereditas **34**, 371-385(1948).

Cyclotron-produced neutrons differ from x rays with regard to their immediate effect on dormant seeds of barley. High x ray doses decrease the number of mature plants to a few percent, but average fertility remains 40-50%, neutrons give numerous surviving plants but greatly decrease fertility. NSA 1-408.

1820
THE INFLUENCE OF CHRONIC IRRADIATION WITH

GAMMA RAYS AT LOW DOSAGES ON THE MUTATION RATE IN DROSOPHILA MELANOGASTER. Ernst Caspari and Curt Stern. Genetics 33, 75-94(1948). Jan.

Rate of occurrence of lethal sex-linked mutations in Drosophila exposed to 2.5 r γ rays/day for 21 days was determined. Results indicate that the fractionation of dosage results in genetic effectiveness different from that of same total dose administered at one time. NSA 1-409.

1821

NAGASAKI SURVIVORS AS SEEN IN 1947. S. Warren. Military Surgeon 102, 98(1948). Feb.

Report of follow-up studies of the surviving population of Hiroshima and Nagasaki. NSA 1-410

1822

RADIANT ENERGY INJURIES. T. Leucutia. Am. J. Roentgenol. Radium Therapy 59, 890-3(1948).

A consideration of some of the medical aspects of the atomic bombing of Hiroshima and Nagasaki. NSA 1-411

1823

A NEW THEORY OF THE MECHANISM OF IRRADIATION EFFECTS. W. Minder. Radiol. Clin. 16, 73-81(1947)

An attempt to explain changes brought about by irradiation of known mixtures by a simple theory correlating the amount of substance changed by radiation with radiation intensity and time of radiation. NSA 1-412.

1824

THE PROBLEM OF TRANSFERENCE OF ENERGY IN BIOLOGICAL IRRADIATION. W. Minder. Radiol. Clin. 15, Suppl. 81-5(1946)

Author cites experimental observations on effects of radiation on solutions in support of hypothesis that energy-transfer and therefore radiation effect is only possible when there is freedom of molecular movement (diffusion). NSA 1-413.

1825

OCULAR LESIONS FOLLOWING ATOMIC BOMBING OF HIROSHIMA AND NAGASAKI. J. J. Flick. Am. J. Ophthalmol. 31, 137(1948). Feb.

Ocular lesions secondary to hematological changes are described. These lesions disappeared without residual damage in persons who recovered from the hemopoietic depression. NSA 1-414

1826

PRELIMINARY OBSERVATIONS ON THE EFFECTS OF IRRADIATION UPON THE CHYLOMICRONS IN HUMAN BLOOD. Kai Setala. Radiology 50, 803-9(1948). June.

Irradiation regularly caused changes in amount and metabolism of visible blood lipids when exposure was within a given time after ingestion of fatty food. Exposure of abdomen, pelvis and bifurcation of common carotid were followed by a particularly marked effect. NSA 1-415.

1827

DOSAGE LEVELS IN ADMINISTRATION OF ISOTOPES TO ANIMALS AND MAN. Hermann Lisco. U. S. Naval Med. Bull. Suppl. 161-3(1948). Mar-Apr.

Tentative conclusions (based on laboratory studies) relative to dose levels of radioactive isotopes likely to produce injurious effects in man are presented. NSA 1-416.

1828

Argonne National Lab

DISTRIBUTION AND EXCRETION OF PLUTONIUM

E. R. Russell and J. J. Nickson, June 11, 1946. Decl. July 7, 1948. 20p (MDDC-503, MUC-ERR-209) NNS Div IV, Vol. 20, pt. A, Paper 8)

Rate of excretion of plutonium in the urine was found to be nearly 0.01% of that contained in body. Excretion rate may be lower after 155 days. NSA 1-417.

1829

Atomic Energy Project, Univ. of Rochester

THE LYMPHOCYTE: STUDIES ON ITS RELATIONSHIP TO IMMUNOLOGIC PROCESSES IN THE CAT. Charles G. Craddock, William N. Valentine, and John S. Lawrence. Decl. July 9, 1948. 44p. (AECD-2095, UR-32) J. Lab. Clin. Med. 34, 158-77(1948)

Authors found no significant amounts of antibody in thoracic duct lymphocytes in spite of significant amounts of antibody in serum and cell-free lymph. Exposure of immunized cats to 1500 r failed to alter antibody concentration of cell free lymph. NSA 1-418

1830

Radiation Lab., Univ. of Calif.

THE RADIOLOGICAL USE OF HIGH ENERGY DEUTERON BEAMS. Cornelius A. Tobias, Hal Anger, P. P. Weymouth, and R. Lowry Dobson. May 28, 1948. Decl. July 9, 1948. 19p. (AECD-2099A)

An investigation of the suitability of the 190 MEV deuteron beam as radiation source for producing biological effects is reported. LD₅₀ was 150 rep for exposure time (mice) of 15 seconds. LD₅₀ appeared to change roughly in proportion to 4th root of exposure time. NSA 1-419A.

1831

ABOUT THE ACTION OF THE ROENTGEN RAYS ON THE ISOLATED FROG HEART. T. Toyoma. Tohoku, J. Exptl. Med. 20, 591-595(1933). (In German)

The irradiation of the isolated frog heart by 150 or 170 kv, 2 MA, from a distance of 25 cm caused an increase in frequency of contractions due to stimulation of the pacemaker.

1832

ORIGIN OF THE ANTIBIOTIC OBTAINED BY IRRADIATION OF AMMONIUM LACTATE WITH RADIUM. F. Chodat and A. de Yakimach. Arch. sci. phys. et Nat. 28, Suppl. 63, 143-4(1946).

Radium irradiation of a synthetic medium containing NH₄ lactate, MgSO₄ and K₂HPO₄ gives rise to a substance which inhibits growth of gram negative organisms. Chemical nature of the antibiotic is not known. NSA 1-422.

1833

PATHOGENIC ACTION OF THORIUM DIOXIDE. Amandio Tavares and Ernesto Moraes. Trabajos inst. nac. de cienc. med. (Madrid) 6, 253-74(1945-46). (In Spanish).

Pathological changes and tumor induction following injections of thorotrast are described. NSA 1-423.

1834

TOXICITY OF INHALED OR INGESTED RADIOACTIVE PRODUCTS. Waldo E. Cohn. Nucleonics 3, 21-26(1948). July.

Author presents a general formulation permitting calculation of radiation dosage consequent upon internal deposition of radioactive materials. The formula is based upon consideration of physiological behavior of the material as well as source and type of radiation emitted. NSA 1-424.

1835

DOCTORS GET GUIDE FOR USE IN ATOMIC ATTACK. Science News Letter 54-8(1948). July 3. NSA 1-536.

1836

EFFECTS OF LETHAL AND SUBLETHAL DOSES OF X RAY ON SPLEEN NUCLEOTIDE LEVELS. E. M. Uyckl. Federation Proc. 13, 413(1954).

The author describes studies on effects of lethal and sublethal doses of x ray on the spleen adenosine nucleotide levels of rats, mice, and guinea pigs. Changes were noted in the adenosinetriphosphate levels, the total adenosine nucleotide, adenylic acid and adenosine-diphosphate levels of the spleen. (from authors' summary)

1837

NEUTRON THERAPY AND SPECIFIC IONIZATION. Robert

S. Stone. Am. J. Roentgenol. Radium Therapy 59, 771-785(1948). June.

The author stresses the importance of late effects of radiation therapy. NSA 1-555.

1838
RADIOACTIVE PHOSPHORUS, P^{32} , A SIX-YEAR CLINICAL EVALUATION OF INTERNAL RADIATION THERAPY. C. A. Doan, B. K. Wiseman, C. S. Wright, J. H. Geyer, W. Myers, and J. W. Myers. J. Lab. Clin. Med. 32 943-69 (1947). Aug.

Complete hematological studies and clinical observations of 100 patients treated with P^{32} at Ohio State University are reported. NSA 1-558.

1839
Argonne National Lab.
EFFECT OF X IRRADIATION ON THE MATURATION OF THE CIRCULATING RETICULOCYTE. Evelyn O. Gaston, Edna K. Marks, and Leon O. Jacobson. May 10, 1948. Decl. July 22, 1948. 34p. (AECD-2132, CH-3870).

Authors studied rate of disappearance of reticulocytes from blood of normal and x irradiated rabbits (with and without anemia) in vivo and in vitro; disappearance of human reticulocytes in health and disease. X ray dose of 800 r (total body) retards disappearance rate of rabbit reticulocytes from blood drawn 24 hr (but not 3 hr) post exposure. NSA 1-602.

1840
CHEMICAL BREAKAGE OF CHROMOSOMES. C. B. Allsopp and D. G. Catchside. Nature 161, 1011-12(1948). June 26.

Authors cite references which indicate that the target theory must be retained as the most satisfactory working hypothesis explaining the breakage of chromosomes by radiation. They take exception to the conclusions of Darlington and Koller who reject the target theory. NSA 1-603.

1841
CHROMOSOME IRREGULARITIES PRODUCED BY ATOMIC IRRADIATION Meta S. Brown, Genetics 33, 98(1948). Jan.

Examination of acetocarmine smears of the pollen mother cells of eleven cotton plants grown from seed exposed to atomic bomb radiation at Bikini indicated that γ radiation produced translocations loss of chromosomes and possibly an inversion in embryonic tissue of seed. Morphologically, plants were normal. NSA 1-604.

1842
CHROMOSOME STRUCTURAL CHANGES IN TRADE-SCANTIA MICROSPORES PRODUCED BY ABSORBED RADIOPHOSPHORUS. Norman H. Giles. Proc. Natl. Acad. Sci. 33, 283-7(1947). NSA 1-605.

1843
Atomic Energy Project, Univ. of Rochester
RADIUM POISONING; A SURVEY OF THE LITERATURE DEALING WITH THE TOXICITY AND METABOLISM OF ABSORBED RADIUM. Hannah E. Silberstein. May 26, 1945. Decl. July 19, 1948. 31p. (AECD-2122, M-1695).

Author presents a detailed survey of literature concerning radium poisoning from 1908 through 1944. NSA 1-610.

1844
Atomic Energy Project, Univ. of Rochester
INSUFFLATION STUDIES IN RABBITS WITH DUSTS OF URANIUM COMPOUNDS. Herbert E. Thompson and Luville T. Steadman. June 11, 1948. Decl. July 21, 1948. 125p. (AECD-2127; M-1984(R)). NNES Div. IV, Vol. 1, Pt. III, Chap. 22. NSA 1-611.

1845
Argonne National Lab.
HEMATOLOGICAL STUDIES OF PLUTONIUM PROJECT

PERSONNEL: EFFECT OF EXERCISE ON LEUCOPENIA, A STATISTICAL ANALYSIS. E. K. Marks, George Sacher, and L. O. Jacobson. Feb. 1948. Decl. July 22, 1948. 20p. (AECD-2133, ANL-HDY-466). NNES Div. IV, Vol. 20, pt. B, paper 6.

There is no difference in response to normal and leukopenic individuals to "standing running exercise" test. All responded with increased peripheral blood leukocyte counts immediately after exercise. Test is felt to be of little value in detecting radiation-induced leukopenia. NSA 1-613.

1846
INFLUENCE OF RADIOACTIVE MATERIALS ON CROPS. J. Am. Med. Assoc. 137, 976(1948). July 10.

A study to be carried out for purpose of determining the effects of radioactive materials used in fertilizer applications on fertilized crops is described. Investigations to date reveal no basis for the claim that radiation from the atomic bomb benefited crops at Nagasaki. NSA 1-615.

1847
THE TOLERANCE DOSE AND PREVENTION OF INJURIES CAUSED BY IONIZING RADIATIONS. Rolf M. Sievert. Brit. J. Radiol. 20, 306-18(1947). Aug.

Studies indicate that skin tolerance dose is between 0.1 and 0.5 r/day; safety tolerance dose for blood changes is about 0.01 r/day; equivalent of 10^{-11} to 10^{-10} curies/liter should not be exceeded for radiations originating within the body. NSA 1-637.

1848
ATOMIC WARFARE AND THE VETERINARY PROFESSION. Wayne O. Kester and Everett B. Miller. J. Am. Vet. Med. Assoc. 114, 113-19(1949). Mar. NSA 2-1309.

1849
THE MEDICAL ASPECTS OF THE ATOMIC BOMB. W. B. Looney. Virginia Med. Monthly 76, 73-5(1949). Feb. NSA 2-1311.

1850
CHANGES IN THE WATER CONTENT AND DISTRIBUTION IN RATS AND MICE AFTER CHRONIC AND ACUTE TOTAL-BODY X IRRADIATION. Owen France June 1946. 34p. (AECU-131, CH-3889).

X ray dose of about 15% of LD_{50} caused transient increase in thiocyanate space in rats; dose of 30% of LD_{50} caused similar increase in mice. With near-lethal doses of x rays, increases were observed (negative H_2O balance) in water content of muscle, plasma and entire carcass. Effects of chronic irradiation on hydration were also studied. NSA 2-1319.

1851
EFFECTS OF ROENTGEN IRRADIATION ON THE GASTRIC MUCOSA. Wm. E. Ricketts, Joseph B. Kirsner, Eleanor M. Humphreys and Walter Lincoln Palmer. Gastroenterology 11, 818-32(1948). Dec.

Roentgen irradiation with 1100 to 2500 r applied in divided doses to fundus and body of stomach produces an acute transitory gastritis. Atrophy of mucosa often ensues. Pathological and histological changes are described. NSA 2-1321.

1852
FOAM CELL PLAQUES IN INTIMA OF MYOMETRIAL ARTERIES: A PRESUMPTIVE SIGN OF PREVIOUS IRRADIATION. John F. Sheehan. Am. J. Clin. Path. 19, 30-4(1949). Jan.

Foam cell intimal plaque is a strongly presumptive sign of previous radium and roentgen irradiation, at least in the human uterus. It is found in 89% of irradiated uteri; in only 2% of non-irradiated uteri. NSA 2-1322.

1853
GREYING OF HAIR. I. EFFECTS PRODUCED BY SINGLE

DOSES OF X-RAY ON MICE. Herman B. Chase. J. Morphol. **84**, 57-76(1949). Jan.

Threshold response for follicles treated in the inactive phase occurs with 200 r of 100 kv x rays, 550 r/min, and 250 r of 200 kv x rays, 102 r/min. Hair development and pigmentation are separate processes. Inactive follicles give maximum greying for a particular dose. NSA 2-1323.

1854

THE RESPONSE OF GERM CELLS TO GONADOTROPIC HORMONES IN X-RAY INJURED OVARIES OF YOUNG WHITE MICE. J. M. Essenberg. Western J. Surg. Obstet. Gynecol. **57**, 61-6(1949). Feb.

Ovaries of 3-4 weeks old mice x rayed with 244 to 300 r remained sterile for 3-6 months but reacted to gonadotropic hormones by regenerating germ cells and follicles of all sizes except fully formed (graafian) follicles. Degeneration and formation of germ cells and follicles occur simultaneously. NSA 2-1324.

1855

TOTAL X-IRRADIATION OF RATS UNDER URETHANE ANESTHESIA. J. A. Henry. Nature **163**, 134-5(1949). Jan. 22.

Irradiation with LD₅₀/14 (600r) resulted in death of 50% of controls compared with 90% of anesthetized rats. NSA 2-1325.

1856

U. S. Army, Manhattan Engineer District
THE ATOMIC BOMBING OF HIROSHIMA AND NAGASAKI. nd. 45p. (LATER AND MORE COMPLETE INFORMATION IS CONTAINED IN: NP-3036, AM-2737(Vol. 1), NP-3037, AM-2737 (Vol. 2), NP-3038, AM-2737(Vol. 3), NP-3039, AM-2737(Vol. 4), NP-3040, AM-2737(Vol. 5), NP-3041) AM-2737(Vol. 6)).

A summary of effect of bombs on buildings and personnel, including an eyewitness account of the bombing of Hiroshima. NSA 2-18.

1857

United States Strategic Bombing Survey
THE EFFECTS OF ATOMIC BOMBS ON HIROSHIMA AND NAGASAKI. June 30, 1946. 50p. (Later and more complete information is contained in: NP-3036, AM-2737 (Vol. 1), NP-3037, AM-2737 (Vol. 2), NP-3038, AM-2737 (Vol. 3), NP-3039, AM-2737 (Vol. 4), NP-3040, AM-2737 (Vol. 5), NP-3041, AM-2737(Vol. 6)). NSA 2-19.

1858

Atomic Energy Project, Univ. of Rochester
A STUDY OF BLOOD AND SALIVARY LYSOZYME IN THE X-IRRADIATED DOG. L. R. Bennett, Vera Collier, Marion Kresage and Paul E. Rekers. Nov. 1, 1948. 12p. (UR-46).

Blood lysozyme activity is depressed in dogs exposed to 350 r total body x radiation, the depression paralleling the depression of the leukocyte count. Depression is less marked in animals which survive. There is no change in salivary lysozyme. NSA 2-23.

1859

COMPLICATIONS FOLLOWING IRRADIATION OF THE THYROID GLAND. R. M. Lukens. Ann. Otol. Rhinol. and Laryngol. **57**, 633-42(1948) Sept.

Five case histories are presented demonstrating that therapeutic x irradiation of the thyroid gland may damage blood vessels, overlying tissues and larynx and trachea. NSA 2-24.

1860

CYTOLOGIC CHANGES IN THYMIC GLANDS EXPOSED IN VIVO TO X-RAYS. Robert Schrek. Am. J. Pathol. **24**, 1055-64(1948) Sept.

Spontaneous and x ray (1000 r) induced degeneration of lymphocytes of thymus of rats was associated with

formation of intranuclear vacuoles, pyknosis, and fragmentation

1861

EFFECT OF FLAVONOIDS (VITAMIN P) ON MORTALITY FROM TOTAL BODY ROENTGEN IRRADIATION. William G. Clark, Rex P. Uncapher and Mary L. Jordan. Science **108**, 629-30(1948) Dec. 3.

Administration of flavonoids as 0.2% "calcium flavonate" in drinking water one week before and during post-exposure period gave some protection against petechiae, ecchymoses and generalized purpura of guinea pigs exposed to 200-225 r, 200 kv x rays, as compared to controls which received vitamin C but no flavonoids. NSA 2-26.

1862

THE EFFECTS OF ROENTGEN RAYS ON THE EMBRYOS AND LARVAE OF THE CHINOOK SALMON. Arthur D. Welander, Lauren R. Donaldson, Richard F. Foster, Kelshaw Bonham and Allyn H. Seymour. Growth **12**, 203-42(1948). Sept.

Effects of 250, 500, 1000, 2500 and 10,000 r of x rays on eyed embryos of chinook salmon are described. Gonads were found to be most sensitive to x rays, hematopoietic tissues ranked second. Most tissues and organs reacted to 1000 r or more NSA 2-27.

1863

EFFECTS OF X-RAYS ON LYMPHOID AND HEMOPOIETIC TISSUES OF ALBINO MICE. G. Brecher, K. M. Endicott, H. Gump, and H. P. Brawner. Blood **3**, 1259-74(1948). Nov.

Authors describe initial damage to hematopoietic tissues and reticuloendothelial system, extent and duration of suppression of their activity and time and rate of recovery in mice following total body exposure to 400 r, 186 kv x rays. NSA 2-28.

1864

HYDROGEN PEROXIDE AND THE INDIRECT EFFECT OF IONIZING RADIATIONS. Tikvah Alper, Nature **162**, 615-16 (1948). Oct. 16.

Studies relative to the role of H₂O₂ in the inactivation of bacteriophage S13 in vitro by ionizing radiation are described. When phage is in dilute solution, the H₂O₂ formed by ionizing radiation will inactivate it. The "active radical" mechanism is discussed NSA 2-29.

1865

INTESTINAL EFFECTS OF PELVIC IRRADIATION. Jerome M. Maas. Modern Med. (Minneapolis) **16**, No. 21, 47-8(1948). Nov. 1.

Authors estimate that 50-70% of all women treated for gynecological conditions by radiation have permanent rectal sequelae, including scarring, fistulae, hemorrhage or complete occlusion. NSA 2-30.

1866

THE "MYSTERY" OF BIOLOGICAL RADIATION EFFECTS. Austin M. Brues. Bull. Atomic Scientists **4**, 341-2 (1948). Nov.

Author considers mechanisms by which radiation produces biological effects and suggest these effects need not be considered as "mysterious." NSA 2-31.

1867

OBSERVATIONS UPON THE LYMPHOPENIA OF X-RAY IRRADIATION. C. H. G. Price. Brit. J. Radiol. **21**, 481-93(1948). Oct.

Alterations in the lymphocyte count in 16 women treated for carcinoma with deep x ray irradiation are described in detail and discussed. NSA 2-32.

1868

A PRELIMINARY NOTE ON SOME BIOLOGICAL EFFECTS OF ALPHA RADIATION ON THE FROG TADPOLE.

K. Tansley, L. H. Gray and F. G. Spear. Brit. J. Radiol. 21, 567-70(1948). Nov.

Small doses of α rays and γ rays are compared with respect to their ability to influence mitosis and degeneration in eye and brain of frog tadpoles. NSA 2-33.

1869

RADIO-BIOLOGICAL RESEARCH WITH FAST NEUTRONS. A Catsch, K. G. Zimmer, and O. Peter. Z. Naturforsch 2, 1-5(1947). Jan.-Feb. (In German).

Author found that changes in peripheral blood picture were produced by smaller doses of neutrons than of x rays, that there was no correlation of effect with radiation intensity and that rapid recovery did not occur following fast neutron irradiation. NSA 2-34.

1870

RELATIVE X-RAY SENSITIVITY OF METAPHASE AND INTERPHASE CHROMOSOMES. Arnold H. Sparrow. Nature 162, 651-2(1948) Oct. 23.

The number of chromosome fragments at microspore metaphase in Trillium erectum were counted following irradiation with 50 r of x rays. Metaphase was found to be highly sensitive, early interphase relatively resistant. Fragmentation was about 50 times greater for irradiation metaphase chromosomes. NSA 2-35.

1871

Naval Medical Research Inst., Bethesda

THE RESPONSE OF TISSUE TO TOTAL BODY IRRADIATION. Report No. 11. John L. Tullis. July 22, 1948. 27p. (NP-473).

A comparative study of lesions produced in swine after total body exposure to (1) ionizing radiations from A-bomb at Bikini, and (2) million volt x rays is described. Lesions from two types of radiation are indistinguishable, consist mostly of hemorrhage, necrosis and secondary infection. NSA 2-36.

1872

STUDIES ON THE BEHAVIOR OF FUNGI IN THE PRESENCE OF RADIOACTIVE ISOTOPES. I. A. Pearson, J. M. Hammer, K. E. Corrigan and H. S. Hayden. J. Bacteriol. 56, 397-402(1948). Oct.

P^{32} , I^{131} and x ray in amounts used were not lethal; caused no changes in morphology of pathogenicity of 43 pathogenic and non-pathogenic fungi studied. Fungi became radioactive. NSA 2-37.

1873

A STUDY OF THE HANDS OF RADIOLOGISTS. Nancy K. Braasch and Margaret J. Nickson. Radiology 51, 719-27(1948). Nov. NSA 2-38.

1874

THE SURGICAL REPAIR OF IRRADIATION DEFECTS. David W. Robinson J. Kansas Med. Soc. 49, 456-61 (1948) Nov.

Types of injuries and surgical repair techniques are described for (1) accidental x ray burns, (2) injury from intentional massive therapeutic x ray doses, (3) late changes from repeated small doses for superficial therapy and (4) burns from prolonged fluoroscopy. NSA 2-39.

1875

THRESHOLD AND LETHAL DOSES OF IONIZING RADIATIONS. L. Mallet and R. Maurin, J. radio, et electrol. 29, 63-65(1948). (In French)

Authors described their experimental determination of the minimum effective dose, LD_{50} , and absolute lethal dose for totally irradiated rats and mice, using various qualities of radiation and exposure times (x rays). NSA 2-40.

1876

TRAUMA RESULTING FROM ATOMIC EXPLOSIONS. R. P. Parsons Am. J. Surg. 76, 559-62(1948). Nov.

The types of injuries to be expected after explosion of an atomic bomb are reviewed. NSA 2-42.

1877

NATURE OF TRAUMA IN ATOMIC WARFARE. Austin M. Brues. Am. J. Surg. 76, 563-6(1948). Nov

This is a general review of events and injuries suffered at Hiroshima and Nagasaki after the atomic bomb attacks. NSA 2-43.

1878

VARIATION INDUCED BY URANIUM NITRATE IN CORN SMUT AND THE CULTIVATED MUSHROOM. E. C. Stakman, J. M. Daly, M. L. Gattani and I. Wahl. Science 108, 554-5(1948). Nov. 19. NSA 2-44.

1879

United States Strategic Bombing Survey

THE EFFECTS OF ATOMIC BOMBS ON HEALTH AND MEDICAL SERVICES IN HIROSHIMA AND NAGASAKI. May 1947. 91p. (More complete information contained in: NP-1557; NP-1558; NP-1559; NP-1560; NP-1561; and NP-1562).

Immediate and remote measurable effects of the atomic bombs and the subsequent widespread fires on the health of the civilian population are outlined.

NSA 2-136.

1880

EFFECTS OF NEW FORMS OF ENERGY ON INDUSTRY AND MEDICAL SERVICE. Jean Spencer Felton. Occupational Med 5, 73-7(1948). Jan.

A review of the implications of the wide spread use of ionizing radiation for industrial health programs.

NSA 2-137.

1881

CLINICAL REACTIONS AND INJURIES IN SUPERVOLTAGE THERAPY. Arthur Jones. Proc. Roy. Soc. Med. 41, 703-9(1948). Oct.

A consideration of the clinical effects of supervoltage radiation and of injuries following its application in the treatment of malignant disease NSA 2-279.

1882

RADIOTHERAPY IN DERMATOLOGICAL CONDITIONS. R. T. Brain. Brit. J. Radiol. 21, 501-7(1948). Oct.

Includes discussion of biological effects of radiation especially with regard to effects of radiation on skin NSA 2-310.

1883

THE RELATION OF RADIOSENSITIVITY AND RADIO-CURABILITY TO THE HISTOLOGY OF TUMOR TISSUE. Alfred Glucksmann. Brit. J. Radiol. 21, 559-66(1948). Nov.

Tumor radiosensitivity is not linked with its curability. Degree of anaplasia largely determines radiosensitivity. Radiocurability varies with degree of tissue differentiation and varies inversely with growth coefficient and tendency to metastasize. Lymph node involvement per se does not influence radiosensitivity. NSA 2-311.

1884

Argonne National Lab.

BLOOD CHANGES IN HUMANS FOLLOWING TOTAL BODY IRRADIATION. J. J. Nickson. June 2, 1947. Decl. Dec. 21, 1948. 64p. (AECD-2432, CH-3868); NNES Div. IV, Vol. 20, Pt. 3, Paper 2.

Decrease in peripheral blood lymphocytes was the most definite change noted after total body x radiation of (1) 8 individuals, single exposure and (2) 3 individuals irradiated with divided dose. No abnormalities were detected in 3 normal individuals exposed to 3 doses of 7 r each. NSA 2-395.

1885

ASYMMETRICAL SUPPRESSION OF VERTEBRAL

EPIPHYSEAL GROWTH WITH IONIZING RADIATION.

Alvin Arkin, Norman Simon and Robert Siffert. Proc. Soc. Exptl. Biol. Med. 69, 171-3(1948) Oct.

Lumbar spines of 30 young rabbits were unilaterally irradiated (radon seeds, x rays). Doses of 700 to 1000 r to epiphysis of vertebral bodies were sufficient to suppress growth of vertebrae. Five of 9 survivors showed wedging of vertebral bodies, narrowing of bodies on exposed side. NSA 2-396.

1886

California Univ.

THE BIOLOGICAL EFFECTS OF RADIATION, PROGRESS REPORT FOR THE PERIOD JANUARY 1947 TO JUNE 1947. J. H. Lawrence and H. B. Jones. June 30, 1947. 6p. (NP-516).

Includes reports on: comparison of growth inhibitors and radiation with regard to inhibition of nucleic acid metabolism, irradiation of bone marrow by injected radioactive colloid, radiosensitivity of bone marrow nucleic acid metabolism, radioresistance of enzyme systems responsible for thyroxine synthesis. NSA 2-397.

1887

CYTOLOGY OF RABBIT THYMUS AND REGENERATION OF ITS THYMOCYTES AFTER IRRADIATION, WITH SOME NOTES ON THE HUMAN THYMUS. Hal Downey. Blood 3, 1315-41(1948). Dec. NSA 2-398.

1888

DISFIGURING SEQUELAE FROM RADIUM THERAPY. G. B. Underwood and L. E. Gaul. Arch. Dermatol. and Syphilol. 57, 918-19(1948). May.

Author reports dwarfing and abnormal glandular development of left breast of a 12 yr old girl who had radium treatment of a 6 cm angioma cavernosum at 3 months of age. NSA 2-399.

1889

THE EFFECT OF DISCONTINUOUS X-IRRADIATION ON RETICULOCYTOSIS IN THE MOUSE. I. G. Heeren. Strahlentherapie 77, 383-86(1948). (In German).

Male white mice were exposed to 100 r x rays in 9 minutes either in continuous or discontinuous dose. Reticulocyte count fell from preexposure level of 5.5 to 2.5% 2-3 days after continuous radiation, fell to 3.6-4% 3 days after discontinuous radiation produced by rotating lead shutter. NSA 2-400.

1890

THE EFFECTS OF SINGLE DOSE TOTAL BODY X-IRRADIATION ON THE PERIPHERAL BLOOD OF THE RAT. S. P. Stearner, F. I. Simmons, and L. O. Jacobson. Anat. Record 99, 576-7(1947). Dec. NSA 2-401.

1891

EFFECTS RESULTING FROM ATOMIC BOMB EXPLOSION. F. L. Price. J. Florida Med. Assoc. 34, 651-3(1948). May.

Clinical and pathological changes observed in Hiroshima and Nagasaki populace after atomic bomb explosions are summarized. NSA 2-402.

1892

California Univ.

IMMEDIATE AND DELAYED BIOCHEMICAL AND BIOLOGICAL EFFECTS OF IRRADIATION ON ANIMAL TISSUES. STATUS REPORT NO. 3 FOR THE PERIOD JUNE 1947 TO DECEMBER 1947. [nd]. 14p. (NP-512).

Status of various investigations dealing with selectively radiated tissues (liver, spleen, bone marrow, thyroid) are reviewed. NSA 2-403.

1893

INCREASE OF I^{131} UPTAKE OF THYROID AFTER WHOLE BODY ROENTGEN IRRADIATION. T. C. Evans, Grace Clarke and Estelle Sobel. Anat. Record 99, 577(1947). Dec.

Adult male rats were exposed to 500 or 1000 r of x rays and two days later were given tracer dose of I^{131} . Thyroids were removed 24 hrs after I^{131} administration. Activity in thyroids of irradiated animals was found to be much higher than that of controls. Increased activity was not related to irradiation of thyroid per se. NSA 2-404.

1894

Chicago. Univ. Air Force Radiation Lab.

QUARTERLY PROGRESS REPORT NO. 20, JULY 15, 1956. 145p. Contract AF-41(657)-25. (NP-6067).

This report covers studies on: ATP-ase activity of rat peritoneal leukocytes and hematopoietic tissues after irradiation, 5-nucleotidase activity in spleen and thymus of rats after continuous Co^{60} γ irradiation; plasma free amino acids level in rats after 100 r-1200 r whole body x ray exposure temperature and environment effects on susceptibility to radiation damage, radiation protective effects of various compounds, weight loss and mortality after exposure of mice and rats to lethal x-ray doses. NSA 10-9038.

1895

AN EXPERIMENTAL STUDY OF THE EFFECT OF ZIRCONIUM AND SODIUM CITRATE TREATMENT ON THE METABOLISM OF PLUTONIUM AND RADIOYTTTRIUM. Jack Schubert Aug. 1, 1948. 11p. (AECU-38, ANL-4206), J. Lab. Clin. Med. 34, 313-25(1949).

Author describes an extension of earlier studies showing that zirconium, administered as the citrate, increases the excretion of plutonium and yttrium. NSA 2-407.

1896

PREVENTATIVE MEDICINE IN THE ATOMIC AGE. W. C. Cox. Bull. U.S. Army Med. Dept. 8, 862-76(1948). Nov NSA 2-488.

1897

THE NEGATIVE EFFECT OF FOLIC ACID ON IRRADIATION LEUKOPENIA IN THE CAT. William S. Adams and John S. Lawrence. Am. J. Med. Sci. 216, 656-60 (1948) Dec.

Prophylactic and therapeutic administration of folic acid to cats did not alter the occurrence or the magnitude of leukopenia caused by exposure to 200 r whole body irradiation. NSA 2-614.

1898

RADIATION SICKNESS. Brit. Med. J. No. 4585, 909-10 (1948). Nov. 20.

Possible causes of radiation sickness in terms of metabolic derangements and various remedies which have been used with good results by various workers are reviewed. NSA 2-615.

1899

VITAMINS AND RADIATION INJURY. Nutrition Revs. 6, 336-8(1949). Nov.

Several reports of the therapeutic effectiveness of folic acid and pyridoxine in radiation injury are reviewed. NSA 2-616.

1900

POST-IRRADIATION NEUROPATHY. Maurice M. Greenfield and Frederick M. Stark. Am. J. Roentgenol. and Radium Therapy 60, 617-22(1948). Nov.

In a series of 180 cases of carcinoma of the testis treated by intensive 1000 KV x ray, three patients developed neurologic disturbance characterized by flaccid paralysis of lower extremities without sensory loss. Chief site of nerve injury believed to be anterior horn cells in lumbosacral segments of spinal cord. NSA 2-643.

1901

MEDICAL PROGRAM OF THE ATOMIC ENERGY COMMISSION. Shields Warren. J. Am. Med. Assoc. 138, 1227-8(1948). Dec. 25.

The types of work being carried out under the medical program of the AEC are described. NSA 2-655.

1902

THE SURGICAL TREATMENT OF THE EFFECTS OF THE ATOMIC BOMB. Orville C. King. Philadelphia Med. 44, 47, 49, 51(1948). Aug. 21. NSA 2-699.

1903

THE EFFECT OF NITROGEN MUSTARD AND X IRRADIATION ON BLOOD COAGULATION. Leon O. Jacobson, Edna K. Marks, Evelyn Gaston, J. Garrett Allen and Matthew H. Block. J. Lab. Clin. Med. 33, 1566-77(1948). Dec.

A consideration of the nature of the clotting defect produced by nitrogen mustard and whole body x irradiation in rabbits. NSA 2-703.

1904

INCIDENCE AND ORIGIN OF ANDROGENETIC MALES IN X-RAYED HABROBRACON EGGS. Anna R. Whiting. Biol. Bull. 95, 354-60(1948). Dec.

Experiments were performed to determine whether (1) low incidence of androgenic males (*Habrobracon*) or (2) high embryonic mortality is the cause of low ratio of adult males. Results showed that (2) was not the cause. Chromatin bridges in 2nd meiotic division (but not in the 1st) retarded and distorted egg pronucleus to such an extent that sperm pronucleus developed in some cases into fertile haploid male with paternal traits only. NSA 2-704.

1905

INFLUENCE OF FRACTIONED ROENTGEN RADIATION ON BACTERIAL AGGLUTINATION TITRE. Johannes Clemmesen and Else Krag Andersen. Acta Pathol. Microbiol. Scand. 25, 611-14(1948).

Rabbits were given 5 doses of 120 r of x rays and their response to single intravenous injection of paratyphoid B antigen was studied. Found; fractionated doses more effective than single doses in lowering resistance to inoculation, immunization could be prevented without harming general health, effect on immunization was obtained only when all or most of irradiation was administered prior to injection. NSA 2-705.

1906

INFLUENCE OF ROENTGEN RADIATION ON THE SPREAD OF VACCINIA VIRUS IN YOUNG RABBITS. Johannes Clemmesen and Else Krag Andersen. Acta Pathol. Microbiol. Scand. 25, 615-18(1948).

Irradiation with 540 r of x ray failed to favor spread of vaccinia virus in two month old rabbits, while irradiation of 30 day old rabbits with 420 r caused definite spread of vaccinia in most irradiated animals but none in controls. NSA 2-706.

1907

EFFECT OF X-IRRADIATION ON RAT SPLEEN ADENYLATE KINASE ACTIVITY. E. M. Uyeki. Federation Proc. 14, 295(1955).

Adenylate kinase activity of rat spleens was measured. In rats exposed to 390 r and 780 r of x-ray the adenylate kinase values were increased over the control values, the maximum values occurring 3 days following x irradiation. Adenosinetriphosphate values were not significantly altered (from authors' summary).

1908

NUCLEIC ACID CONTENT IN INTESTINES OF RATS AFTER X-RADIATION. J. O. Ely and M. H. Ross. Cancer Research 8, 285-94(1948). June.

Total body exposure to 600 r of x rays caused a decrease in amount of U-V light-absorbing material in crypts of Lieberkuhn of rat intestines from 4 hrs to 17 days after exposure. DNA, RNA and structural framework of tissue all were reduced. NSA 2-708.

1909

REDUCTION OF UNDESIRABLE BY-EFFECTS IN PRODUCTS TREATED BY RADIATION. Arno Brasch and Wolfgang Huber. Science 108, 536-7(1948). Nov. 12.

Some methods are given for reducing undesirable side reactions in sterilization and preservation of foods and therapeutics by irradiation. In the case of food-stuffs, cooling before irradiation has definite beneficial effect. Ultrashort irradiation time and evacuated or special glass containers are also helpful. NSA 2-709.

1910

ANTIHISTAMINE DRUGS AND RADIATION SICKNESS. W. M. Court Brown and R. B. Hunter. Brit. Med. J. No. 4587, 984(1948). Dec. 4.

The antihistamine "Anthisan" was found to be of no value in the treatment of radiation sickness in patients undergoing post-operative x ray therapy for carcinoma of the breast. NSA 2-835.

1911

THE CLINICAL MANIFESTATIONS OF ACUTE RADIATION ILLNESS PRODUCED IN GOATS BY EXPOSURE TO AN ATOMIC BOMB, TEST ABLE, BIKINI, 1946, WITH COMMENTS ON THERAPY. Eugene P. Cronkite. Mar. 8, 1948. 42p. (NP-574).

Acute radiation syndrome is described. Results of therapeutic use of penicillin and transfusions suggest these agents may be of value. NSA 2-836.

1912

A CRITICAL ANALYSIS OF THE SYNDROME OF ACUTE TOTAL BODY RADIATION ILLNESS, ITS ROLE IN ATOMIC WARFARE AND ITS INFLUENCE ON THE FUTURE PRACTICE OF MILITARY MEDICINE. Eugene P. Cronkite and William H. Chapman. Military Surgeon 104, 7-21 (1949). Jan. NSA 2-837.

1913

MEDICAL ASPECTS OF RADIATION SAFETY. Bernard S. Wolf. Nucleonics 3, No. 4, 25-9(1948). Oct.

Author considers hazardous aspects of ionizing radiation with respect to (1) inability to detect exposure through 5 senses, (2) penetrating power of radiation, (3) delayed effects of overexposure, (4) sterilizing effect and (5) genetic effect. NSA 2-839.

1914

RECONSTRUCTION FOLLOWING IRRADIATION INJURIES. Paul W. Greeley. Arch. Surgery 56, 741-9(1948). June.

A consideration of surgical treatment of x ray induced lesions. NSA 2-840.

1915

THROMBOCYTOPENIC PURPURA FOLLOWING THERAPEUTIC ADMINISTRATION OF RADIOACTIVE SODIUM. Harold W. Jacox. Radiology 51, 860-1(1948). Dec.

Author describes a case of thrombocytopenic purpura following administration of 202 mc of radiosodium (285 r) over a period of 5 months to a 21 year old male with metastatic sympatheticoblastoma. Hemorrhagic manifestations and thrombocytopenia developed after last treatment. Death is attributed to aplastic anemia due to radiosodium. NSA 2-860.

1916

TREATMENT OF ASTHMA BY RADIOTHERAPY (RESULTS OF 680 CASES). Pasteur Vallery-Radot and Pierre Blamoutier. Presse med. 56, 813-4(1948). Nov. 20. (In French)

Authors review 23 years of study of radiation therapy for asthma and its respiratory equivalents. Radiation of lungs was most effective treatment, but splenic irradiation was also helpful, suggesting a humoral agent produced as result of irradiation. NSA 2-861.

1917

NO PLACE TO HIDE. David Bradley. Boston, Little Brown and Co. 1948. 182p.

This is the log of a doctor assigned to duty with Operations Crossroads. He believes there is no defense against atomic weapons and no satisfactory counter-measures or methods of decontamination. NSA 2-896.

1918

THE EFFECT OF FOLIC ACID ON THE RESPONSE OF THE PERIPHERAL BLOOD AND BLOOD-FORMING TISSUE OF THE RAT TO PARENTERALLY ADMINISTERED STRONTIUM⁸⁹. L. O. Jacobson, S. P. Stearner, E. L. Simmons and M. H. Block. Oct. 1, 1948. 41p. (AECU-78, ANL-4125 (Rev.)).

Authors studied peripheral blood and hemopoietic tissues of female rats after intraperitoneally administered Sr⁸⁹. Erythrocyto-, megakaryocyto- and granulocytopoieses were noted in spleens; lymphopoiesis was reduced in white pulp of spleen less reduced in lymph nodes and thymus. NSA 2-983.

1919

EFFECTS OF FOLIC ACID ON THE ANEMIA INDUCED BY X IRRADIATION. S. Phyllis Stearner. *Proc. Soc. Exp. Biol. and Med.* 69, 518-21(1948). Dec.

No definite evidence of therapeutic effect of folic acid on x ray damage was found. NSA 2-984.

1920

A FURTHER SURVEY OF RADIATION SICKNESS WITH PARTICULAR REFERENCE TO ITS TREATMENT BY PYRIDOXINE. L. M. Shorvon. *Brit. J. Radiol.* 22, 49-55 (1949). Jan.

Radiation sickness is described, various suggested remedies are reviewed and results of pyridoxine therapy in 69 cases are analyzed. Author concludes that pyridoxine is useful but not infallible in treatment of radiation sickness, has beneficial effect on the leukopenia. NSA 2-985.

1921

THE SURGICAL TREATMENT OF IRRADIATION INJURIES. Michael L. Mason. *Illinois Med. J.* 95, 20-6 (1949). Jan.

Treatment of radiation injury of skin and subcutaneous tissues consists in removal of all involved skin and plastic repair of defect. NSA 2-986.

1922

NECROSIS OF THE BRAIN DUE TO RADIATION THERAPY. Joe Pennybacker and Dorothy S. Russell. *J. Neurol. Neurosurg. Psychiat.* 11, 183-98(1948). Aug.

Clinical and pathological features of 5 cases of necrosis of brain following radiation therapy, using accepted techniques, are described. All cases had latent periods (9 months to 5 years). Pathology is considered to be related to reactions in smaller blood vessels. NSA 2-1010.

1923

POSTIRRADIATION ULCERATIONS OF THE UTERINE CERVIX. Harold W. Jacox. *Am. J. Roentgenol.* 60, 795-7(1948). Dec.

Four cases are presented in which lesions suggestive of recurrence of malignant growth developed at or near site of original cervical carcinoma. Lesions showed characteristic radiation-induced vascular changes, necrosis and ulceration, latent period of about 8 months. Lesions were not treated by further radiation therapy. NSA 2-1011.

1924

Radiation Lab., Univ. of Calif.
THE GENETIC EFFECTS OF LOW INTENSITY IRRADIATION. D. E. Uphoff and Curt Stern Dec. 15, 1948. 5p. (AECU-93, UCRL-255).

Reduced radiosensitivity of aged sperm, dependence of induced mutation frequency at low doses on time factor,

and sampling errors are considered to be possible causes of apparent genetic ineffectiveness of 52.5 r γ radiation administered continuously for 21 days (2.5 r/day). When three new tests were used, low dose, low intensity irradiation did appear to induce mutations in *Drosophila* sperm. NSA 2-1055.

1925

ACTION OF GONADOTROPHINS AND OF OESTROGENS ON X-RAYED MOUSE OVARIES. G. J. Van Eck-Vermande and J. Freud. *Arch. Intern. Pharmacodynamic* 78, 67-78 (1949). Jan. 1. NSA 2-1056.

1926

EFFECT OF IONIZING RADIATIONS ON REPRODUCTIVE CELLS AND WHITE BLOOD CELLS. Harry W. Mixer. *X-Ray Technician* 20, 215-18(1949). Jan. NSA 2-1057.

1927

EFFECT OF X-RAYS ON FERTILITY IN WHITE LEGHORN MALE CHICKENS TREATED BEFORE PUBERTY. Paul D. Sturkie, John A. Pino, J. L. Weatherwax, A. J. Donnelly and G. M. Dorrance. *Radiology* 52, 112-17 (1949). Jan.

White male leghorn chicks 4-6 weeks old were irradiated with 1,200-8,400 r, over area including testes, adrenals and part of kidneys. Most males receiving 2,100-2,800 r were sterile when mated at maturity; all were sterile after 5,600 and 8,400 r, most were fertile after 1,600 r or less. NSA 2-1058.

1928

Naval Medical Inst., Bethesda
THE INCREASED TOLERANCE OF MICE TO A LETHAL DOSE OF X-RAY RADIATION AS A RESULT OF PREVIOUS SUBLETHAL DOSES. Eugene P. Cronkite, Clyde R. Sipe, Dean Eltzholtz, William H. Chapman and F. W. Chambers. Aug. 17, 1948. 6p. (NP-589).

Three weekly exposures to 144 r followed by 30 day rest period increased the resistance of mice to subsequent lethal dose of x rays. Results are interpreted statistically. NSA 2-1059.

1929

INDUCED AND NATURALLY OCCURRING MUTATIONS. Donald F. Jones p. 120-3 of Proceedings of the Auburn Conference on the Use of Radioactive Isotopes in Agricultural Research, December 18-20, 1947, Auburn, the Alabama Polytechnic Institute. 1948.

The possible role of atomic energy in the field of plant and animal breeding is reviewed. NSA 2-1060.

1930

QUANTITATIVE HISTOLOGIC ANALYSIS OF THE EFFECT OF CHRONIC WHOLE-BODY IRRADIATION WITH GAMMA RAYS ON THE SPERMATOGENIC ELEMENTS AND THE INTERSTITIAL TISSUE OF THE TESTES OF MICE. Allen B. Eschenbrenner, Eliza Miller and Egon Lorenz. *J. Natl. Cancer Inst.* 9, 133-47 (1948). Dec.

After 2 and 4 months of exposure of male LAF₁ mice to 8.8 r, or 4.4 r γ rays in 8 hr daily, testes showed sharp fall in weight, relative increase in interstitial tissue. Spermatogenic elements decreased but all stages were present in normal proportions in 4.4 r mice, spermatogenesis was incomplete after 6 months of 8.8 r/day. NSA 2-1061.

1931

RADIATION DAMAGE OF GENETIC ORIGIN. H. J. Muller. *J. Heredity* 39, 357-8(1948). Dec.

High energy radiations are capable of affecting mutation frequency to a marked degree, most gene mutations are harmful. Dose received during fluoroscopic examination of abdomen if received by gonads would

cause about as many mutations as occur naturally during the individual's reproductive life. NSA 2-1062.

1932

Naval Medical Research Inst., Bethesda
FAILURE OF RUTIN TO DECREASE THE MORTALITY OF ACUTE IONIZING RADIATION ILLNESS IN MICE. Eugene P. Cronkite, Dean C. Eltzholtz, Clyde R. Sipe, William H. Chapman, and F. W. Chambers. Aug. 19, 1948. 10p. (NP-590). NSA 2-1126.

1933

IONIZING RADIATION INJURY. Eugene P. Cronkite. J. Amer. Med. Assoc. 139, 366-9(1949). Feb. 5.

The symptomatology and diagnosis of acute radiation sickness are discussed. NSA 2-1127.

1934

PREVENTION AND TREATMENT OF RADIOMUCITIS. Rene Huquenin, J. Fauvet and J. Ponthieu. Bull. Mem. Soc. Med. Hop (Paris) 64, 983(1948) NSA 2-1128.

1935

USE OF ROENTGEN THERAPY FOR RETINAL DISEASES CHARACTERIZED BY NEW-FORMED BLOOD VESSELS. Jack S. Guyton and Algernon B. Reese. Arch. Ophthalmol 40, 389-407(1948). Oct.

Promising results were obtained in treatment of 22 eyes in 14 patients with ocular diseases characterized by retinal and vitreous hemorrhages and by new-formed blood vessels and fibrous tissues extending from retina into vitreous. NSA 2-1147.

1936

THE RELATION OF ATMOSPHERE TO BIOLOGICAL EFFECTS OF X-RAYS. Barbara Hayden and Luther Smith. Genetics 34, 26-41(1949). Jan.

Barley seeds x rayed in a vacuum consistently showed better germination and growth, lower frequency of chromosomal aberrations than seeds exposed in air. Root tip cells from seeds irradiated in air averaged 4.7 times as many chromatid bridges as root-tip cells from seeds irradiated in vacuum. NSA 2-1510.

1937

THE CLINICAL MANIFESTATIONS OF ACUTE RADIATION ILLNESS IN GOATS. Eugene P. Cronkite. U.S. Naval Med. Bull. 49, 199-215(1949). Mar.-Apr.

Goats exposed at Bikini to ionizing radiation in amounts ranging from 100 r to more than 10,000 r are classified into 4 groups according to severity of symptoms and depression of leukocyte counts. The clinical picture is similar to that in man except for absence of vomiting and more rapid progression. NSA 2-1655.

1938

Naval Medical Research Inst., Bethesda
THE FAILURE OF FOLIC ACID TO ALTER THE CLINICAL COURSE AND HEMATOLOGIC PICTURE OF FATAL SINGLE TOTAL BODY IRRADIATION IN SWINE. E. P. Cronkite, J. L. Tullis, C. Tessmer, and T. W. Ullrich. Sept. 30, 1948. 7p. (NP-603).

Eight swine were exposed to 400 r total body radiation, 4 of these were treated with intramuscular folic acid, 45 mg/day. No difference was observed between treated and untreated swine as regards to clinical and hematological course or postmortem findings. NSA 2-1656.

1939

FURTHER STUDIES ON THE RADIOSENSITIVITY OF TUMORS AUTOGENOUS TO HOMOZYGOUS HOSTS. Anna Goldfeder. Radiology 52, 230-8(1949). Feb.

A great difference was observed in radiosensitivity of 2 analogous mammary mouse adenocarcinomata in culture. Growth characteristics of the two cultures are described and considered in light of radiosensitivity in vitro and in vivo. NSA 2-1698.

1940

ROENTGENTHERAPY OF PAIN. Origene Dufresne. Can. Med. Assoc. J. 60, 227-9(1949). Mar.

Author suggests that x rays may control pain by (1) inhibition or paralysis of nerve fibers (especially nerves of sympathetic system) or (2) indirect action on nervous elements through humoral modification. X rays also relieve pain by destroying inflammatory or tumor tissue pressing on nerves. NSA 2-1700.

1941

EFFECTS OF IONIZING RADIATIONS ON ENZYME ACTIVITIES OF YEAST CELLS. I. RELATION BETWEEN ANAEROBIC CO₂ PRODUCTION AND COLONY PRODUCTION AT INTERVALS AFTER X-RADIATION. Frederick G. Sherman and Herman B. Chase. J. Cellular and Comp. Physiol 33, 17-25(1949). Feb.

Anaerobic CO₂ production by S. cerevisiae is inhibited approximately 30% by 90,000 r dose of x rays, and approximately 85% of cells unable to form colonies on solid medium. Authors postulate that irradiated yeast cells release proliferation-promoting substances. NSA 2-1753.

1942

INFLUENCE OF TEMPERATURE ON THE RESPONSE OF FROGS TO X IRRADIATION. Harvey M. Patt and Marguerite N. Swift. Am. J. Physiol. 155, 388-93 (1948). Dec.

Radiation toxicity is not altered by altering body temperature of frogs during or 24 hr after exposure to 1000 r and 3000 r, but survival is enhanced as long as animals are kept in cold post-exposure. When removed from cold, expected mortality rate is observed, indicating no repair of radiation damage during period of lowered metabolism. NSA 2-1754.

1943

QUANTITATIVE INFERENCES CONCERNING THE GENETIC EFFECTS OF RADIATION ON HUMANS. Robley D. Evans. Science 109, 299-304(1949). Mar. 25.

Author predicts that no detectable increase in hereditary abnormalities is likely to result, even after many generations, if small fraction of population receives daily radiation doses up to 0.1 r/day. Average daily dose at Hanford, Oak Ridge, etc., stated to be about 0.005 r. NSA 2-1756.

1944

Argonne National Laboratory
RADIATION HAZARD CONTROL. May 3, 1948. 60p. (AECU-168, ANL-4146).

Includes discussion of permissible exposures for both external and internal radiations, as well as general safety and emergency procedures. NSA 2-1792.

1945

INFLUENCE OF COSMIC RADIATION ON EXPERIMENTAL TUBERCULOSIS. S. G. Ong. Nature 163, 244-5(1949). Feb. 12.

Influence of cosmic radiation on experimental tbc in mice was studied at 3500 meter altitude. Found weight of mice in group exposed to cosmic radiation higher than for other groups but mortality curves were the same. Two different experiments are reported. Hemorrhages were observed in mice exposed to cosmic radiation in both series of experiments. NSA 2-1844.

1946

THE EFFECT OF ROENTGEN RAYS ON ADULT RAINBOW TROUT. Arthur D. Welander, Lauren R. Donaldson, Richard F. Foster, Kelshaw Bonham, Allyn H. Seymour and Frank G. Lowman. [nd]. 20p. (AECU-188, UWFL-17).

Nearly mature rainbow trout received 50, 100, 500, 750, 1000, 1500 or 2500 r of 200 kv x rays (25 ma, CU,

and A1 filters). Mortality increased after 1000 r or more. All fish died within 13 wk after 2500 r. After 1500 r, 56% died within 13 wk, 87% in 64 wk. Injuries seen after 500 r or more, growth depressed after 750 r or more NSA 2-1888.

1947

THE EFFECT OF ROENTGEN RADIATION ON THE PRODUCTION OF THORACIC DUCT LYMPHOCYTES. William N. Valentine, Charles G. Craddock and John S. Lawrence. Am. J. Med. Sci. 217, 379-82(1949). Apr.

Heavy whole body irradiation causes total number of lymphocytes in thoracic duct lymph to fall rapidly in cats. Data suggest that, from time of exposure, total production potential of lymphoid tissue drained by thoracic duct is not more than 4 hr normal supply. NSA 2-1889.

1948

EXAMINATION OF THE TARGET THEORY BY DEUTERON BOMBARDMENT OF T-1 PHAGE. Ernest C. Pollard and Frederick Forro, Jr. Science 109, 374-5, 386(1949). Apr. 15.

Experiments were performed to test target theory using deuterium-bombarded T-1 bacteriophage. Data suggest Lea's theory should be modified to include the possibility of inactivation caused by secondary radiation reaching target from ion path which does not go through the target. NSA 2-1890.

1949

HYPOTHROMBOPLASTINEMIA FOLLOWING TOTAL BODY IRRADIATION. William D. Holden, Jack W. Cole, A. F. Portmann and J. P. Storaasli. Proc. Soc. Expt Biol. Med. 70, 553-6(1949). Mar.

Hemorrhagic syndrome was produced and studied in dogs by irradiation with 450 r (LD-100) 22 kvp x rays. Anemia, leukopenia, thrombocytopenia, prolongation of clot retraction, and hypothromboplastinemia were observed NSA 2-1891.

1950

NUCLEIC ACID CONTENT IN INTESTINES OF RATS AFTER NEUTRON RADIATION. J. O. Ely and M. H. Ross. Cancer Research 8, 607-12(1948). Nov.

Neutron radiation caused decreased U-V light absorption in crypts of Lieberkuhn of rat duodenum from 4-48 hr after exposure. Results were similar to those following x-irradiation. NSA 2-1892.

1951

Naval Radiological Defense Lab.

DECREASE IN THE SULFHYDRYL CONTENT OF RAT PLASMA FOLLOWING X-IRRADIATION. Bernard Shacter and M. C. Fishler. Apr. 26, 1950. 10p. (AD-214(B)).

A 750-r total-body exposure of rats is followed after several days by marked decrease in sulfhydryl content of blood plasma. NSA 4-4422.

1952

ACTION OF FAST ELECTRONS ON HUMAN SKIN. Richard Kurt Kepp. Strahlentherapie 81, 201-14(1950). (In German)

Comparative study of effects produced on human skin (thigh) by hard x-rays and by fast electrons from betatron is reported. Electron beam elicited considerably stronger effect than did x rays NSA 4-4423.

1953

THE ACTION OF PLESIOROENTGEN RAYS ON M. PYROGENES AUREUS. C. Gastaldi. Giorn. batteriol. immunol. 40, 257-80(1949). (In Italian)

M. pyogenes aureus exposed to plesio-roentgen rays (40-50 kv, 1-2 mm, no filter), was destroyed by 2,000 to 5,000 r and inhibited by 400 to 500 r. Oldest bacteria were most radiosensitive, young often survived. NSA 4-4424.

1954

ARREST OF DEVELOPMENT OF PLASMODIUM GALLINACEUM IN MOSQUITOES (AEDES AEGYPTI) BY RADIATION EFFECT OF P^{32} . P. F. Hahn, Victor H. Hass, and Aimee Wilcox. Science 111, 657-8(1950). June 16

Study indicates that radiation delivered by ingested P^{32} to mosquitoes was sufficient to arrest development of P. gallinaceum during oocyte stage. NSA 4-4425.

1955

ATROPHY OF THE GASTRIC GLANDS PRODUCED BY BETA RAYS, HISTOLOGICAL FINDINGS IN ANIMALS. D. M. Douglas, W. R. Ghent, and S. Rowlands. Lancet 1, 1035-8(1950). June 3.

Various degrees of atrophy of dog gastric glands were produced by P^{32} radiation, but underlying submucosa and muscularis were histologically normal. NSA 4-4426.

1956

CHANGES IN THE ROOT GROWTH OF BARLEY SEEDLINGS PRODUCED BY FAST ELECTRONS OF A 6-MEV BETATRON. K. H. Burns, W. Dittrich, W. Paul, and G. Schubert. Strahlentherapie 81, 173-6(1950). (In German)

Statistical analysis of results reveals weaker action of fast electrons as compared with that of x rays. NSA 4-4427.

1957

CHROMOSOME MODIFICATIONS PRODUCED IN BARLEY SEEDLINGS BY FAST ELECTRONS OF A 6-Mev BETATRON. H. J. Schmermund, H. Beck, and H. L. Heinrich. Strahlentherapie 81-177-86(1950). (In German) NSA 4-4428.

1958

A COMPARATIVE STUDY OF THE ACTION OF FAST ELECTRONS AND X-RAYS ON THE CORNEA OF SALAMANDER LARVAE. H. Czech, R. Czech, and H. J. Schmermund. Strahlentherapie 81, 187-92(1950). (In German) NSA 4-4429.

1959

DAMAGE OF THE CELL NUCLEUS BY X-RADIATION. H. Marquardt. Experientia 5, 31-43(1949).

Aberrations produced in the cell nucleus by x rays are reviewed and classified. Primary and secondary effects of x rays on B. romana are reviewed and illustrated. NSA 4-4430.

1960

DIFFERENCES IN THE BIOLOGICAL ACTION OF ORDINARY AND ULTRA-HARD RADIATIONS. F. Wachsmann. Strahlentherapie 81, 273-80(1950). (In German).

Differences vary with the biological object exposed. From shape of survival curves of irradiated tadpoles, it appears that the biological structures attacked are not the same for the two energies. Differences were also observed in rate of disappearance of reticulocytes in irradiated rabbits and in tumor regression. NSA 4-4431.

1961

DIFFERENTIAL RADIOSENSITIVITY OF HAPLOID AND DIPLOID PREPUPAE AND PUPAE OF HABROBRACON. A. M. Clark and E. M. Kelly. Cancer Research 10, 348-52(1950). June. NSA 4-4432.

1962

THE DIFFERENTIAL RESPONSE OF MALE AND FEMALE GERM CELLS OF SCIARA COPROPHILA (DIPTERA) TO IRRADIATION. Helen V. Crouse. Am. Naturalist 84, 195-202(1950). May-June

No gross rearrangements are observed when adult females are x-irradiated 43-45.5 hours after eclosion, but oocytes irradiated between 46 and 72 hours of adult life do have inversions. Approximately the same number

of breaks leading to gross rearrangements are induced by 2000 r in oocytes and 4000 r in sperm. Irradiation of sperm induces both reciprocal translocations and inversions. Interchromosomal interchanges were not recovered. NSA 4-4433.

1963

HOMOZYGOUS TRANSLOCATION OBTAINED IN THE SECOND GENERATION FROM MATERIAL TREATED WITH NEUTRONS. Dontcho Kostoff. Proc. Indian Acad. Sci. 30B, 259-63(1949). Nov.

Crepis capillaris was irradiated with neutrons (20,000 r). Effect on chromosomes is reported and compared with that caused by x rays. NSA 4-4434.

1964

INFLUENCE OF ROENTGEN RAYS ON THE REACTIVITY OF THE SKIN TO THE USUAL TESTS. A. Agostini and C. Stuart. Studi Facolta med. senese 16, 48-52(1948). (In Italian)

X rays have a definite influence on reactivity of skin in 50% of cases. Influence is of intensifying or inhibiting nature. Action seems indirect, hyperemia may play an important part. NSA 4-4435.

1965

THE PRESENT STATE OF RADIOBIOLOGY. H. Langendorff. Med. Welt 1, 173-9(1950). Feb. (In German)

Experimental material and theoretical explanations concerning effect of radiation on living matter are summarized. NSA 4-4436.

1966

THE QUANTITATIVE EFFECT AND THE QUALITATIVE INJURY TO THE FUNCTIONING OF THROMBOCYTES RELATIVE TO THE RETRACTION OF BLOOD CLOTS. A. Fonc. Bull. schweiz. Akad. med. Wiss. 6, 115-20 (1950). May. (In German)

Retraction in platelet emulsions irradiated by ultraviolet and x rays decreases with increasing dose. Very short waves cause quicker and intensified retraction. Ra irradiation accelerates start and end of retraction. NSA 4-4437.

1967

RADIOACTIVE MATERIALS AS PLANT STIMULANTS-FIELD RESULTS. Lyle T. Alexander. Agronomy J. 42, 252-5(1950). May.

In a study of various crops grown under different climatic conditions, in soil mixed with actinium, radium and uranium salts, results indicate radioactive materials have neither beneficial nor harmful effect on growth. NSA 4-4438.

1968

THE RADIOSENSITIVITY OF THE PERIPHERAL NERVOUS SYSTEM. B. Lindenbaum. Fortschr. Gebiete Rontgenstrahlen 71, 988-93(1949).

After several deep x ray treatments, sensitivity changes occurred. Applications to tongue disturb taste. Changes are mostly reversible after a period of months. NSA 4-4439.

1969

SOME ASPECTS OF THE MECHANISM OF ACTION OF IONIZING RADIATION ON LIVING CELLS. L. G. Grimmett. Texas Repts. Biol. Med. 8, 134-46(1950).

Author reviews some theories about the mechanism of radiation effects on cells and cell sensitivity to radiation of varying intensity. Fundamental processes are believed to be radiochemical. NSA 4-4440.

1970

STRUCTURE AND FUNCTION OF MOUSE OVARIES AFTER X-RAYING. G. J. van Eck-Vermande and J. Freud. Arch. intern. pharmacodynamie 78, 49-62(1949). Jan. 1. NSA 4-4441.

1971

STUDIES ON LYMPHOCYTES FROM PERSONS TREATED WITH RADIOACTIVE IODINE. William E. Watts and Don R. Matheson. J. Lab. Clin. Med. 35, 885-9(1950). June.

Significant change in the number of refractile granules in lymphocytes from persons exposed to ionizing radiation was not found. No other concise cytologic radiation effects were found. NSA 4-4442.

1972

STUDIES ON THE PROTEINS AND LIPIDES OF PLASMA FRACTIONS OF X-RAY IRRADIATED RATS. Erland C. Gjessing and Alfred Chanutin. Arch. Biochem. 27, 191-7 (1950). Oct. NSA 4-4443.

1973

ALLERGENIC EFFECTS OF RADIOTHERAPY. P. Le Goff. J. radiol. electrol. 30, 624-6(1949). (In French)

Allergic symptoms of 5 patients receiving total x ray doses up to 10,000 r (150 to 250 kv, 60 to 100 cm, 0.1 to 1.0 mm Cu) where characterized by rash and edema and seem to depend on a secondary sensitivity factor as yet unexplained. NSA 4-4444.

1974

THE APPEARANCE OF THE CHIEF SYNDROMES KNOWN IN EXPERIMENTAL RADIO-PHYSIOLOGY IN PERSONS SUBJECTED TO ATOMIC BOMB EXPLOSION. A. Lacassagne. Bull. Akad. Nat. Med. 132, 104-7(1948).

NSA 4-4445.

1975

CONTRAINDICATIONS OF RADIOTHERAPY ON THE GENITAL REGIONS OF YOUNG WOMEN, PRIMARILY CONSIDERING SAFETY. Alan Nicolle. J. radiol. electrol. 30, 662(1949). (In French)

Factors influencing the decision to use radiotherapy on diseases involving genital systems are discussed. NSA 4-4446.

1976

ON THE RADIOACTIVITY OF THOROTRAST: A CONTRIBUTION TO THE QUESTION OF ITS POSSIBLE HARMFUL AFTER-EFFECTS WHEN USED FOR RADIOLOGICAL VISUALIZATION. Fritz Ruf and Kurt Philipp. Langenbecks Arch. klin. Chir. 263, 573-87(1950). (In German)

Extreme caution is advised in the use of thorotrast for arteriography of extremities or for neurosurgery. NSA 4-4447.

1977

SOME MEASUREMENTS OF GAMMA-RAY DOSES RECEIVED BY A RADIOTHERAPIST DURING RADIUM OPERATIONS. J. L. Howarth, H. Miller and J. Walter. Brit. J. Radiol. 23, 245-55(1950). Apr.

Radiation doses received by Ra therapist (a) on fingers and hands, (b) by total body, (c) by gonads (estimated) and tabulated and discussed. NSA 4-4450.

1978

SOME MEDICAL ASPECTS OF ATOMIC WARFARE. A. Lundie. J. Roy. Army Med. Corps. 94, 246-58 (1950). May.

Medical, thermal, and radiation injuries caused by atomic bomb explosion are described. NSA 4-4451.

1979

STRUCTURE OF THE MESOPHARYNX AS LATE REACTION FOLLOWING X-IRRADIATION OF CARCINOMA OF THE LARYNX. H. Steinmann. Oncologia 2, 217-32 (1949). (In German) NSA 4-4452.

1980

STUDIES ON THE HAZARD INVOLVED IN THE USE OF C¹⁴. II. THE EFFECT OF A SINGLE DOSE OF C¹⁴-LABELED SODIUM BICARBONATE ON THE PATTERN

OF DEATHS FROM SPONTANEOUS LEUKEMIA IN AKM MICE. Howard E. Skipper, Martelia J. Bell, and Juanita B. Chapman. Cancer Research 10, 362-3(1950). June.

Dose of 18 μ c/mouse had no significant effect on pattern of mortality from leukemia. NSA 4-4453.

1981
TUBERCLE-LIKE STRUCTURES IN LATE IRRADIATION INJURIES OF THE SKIN. Lars-Gunnar Larsson. Acta Radiol. 31, 17-27(1949).

Tubercle-like changes in late irradiation injury of skin are regarded as a peculiar type of tissue reaction due to advanced regressive changes in connective tissue. NSA 4-4454.

1982
Naval Radiological Defense Lab.
HEMATOLOGIC CHANGES IN RATS PROTECTED BY CYSTEINE AGAINST TOTAL BODY X-IRRADIATION. Robert L. Rosenthal, Leontine Goldschmidt, and Bryant L. Pickering. May 3, 1950. 13p. (AD-215(B); Am. J. Physiol. 166, 15-19(1951).

After 800 r total-body x raying, cysteine-protected rats had significantly more neutrophils in blood and more myeloid cells in bone marrow than did saline-injected rats. NSA 4-4456.

1983
IRRADIATION PROPHYLAXIS. J. Am. Med. Assoc. 143, 817(1950). July 1.

Cysteine and sodium cyanide injections increase postirradiation survival of rats given large doses of radiation. Postirradiation therapy proved ineffective. NSA 4-4457.

1984
LACK OF ANTAGONISMS OF MALONONITRILE AND DESOXYRIBONUCLEIC ACID TO TRY PANOSOMIASIS, ALLOXAN DIABETES, AND LETHAL EFFECTS OF X-IRRADIATION. James Preston Parker, Paul L. Ewing, and G. A. Emerson. Texas Repts. Biol. Med. 8, 257-61 (1950). NSA 4-4458.

1985
PROTECTIVE EFFECT OF PARA-AMINOPROPIOPHENONE AGAINST LETHAL DOSES OF X-RADIATION. John B. Storer and Julius M. Coon. Proc. Soc. Exptl. Biol. Med. 74, 202-4(1950). May. NSA 4-4459.

1986
REMARKS ON THE USE OF TOLUIDINE BLUE IN VIVO IN PRESENCE OF EXCESS ANTICOAGULANTS. D. Quivy. Compt. rend. soc. biol. 143, 22-5(1949). Jan. (In French)

No specific toluidine blue action was observed on clotting of venous blood (of dogs) diluted with thrombokinase. NSA 4-4460.

1987
CONSIDERATIONS OF THE PROGNOSTIC VALUE OF VARIATIONS OF THE SEDIMENTATION RATE IN THE ROENTGENTHERAPEUTIC TREATMENT OF MALIGNANT LYMPHOGRANULOMA. Paolo Emilio Panzironi and Mariano Guttadauro. Radiologia (Buenos Aires) 5, 441-6(1949). Oct.-Dec. (In Italian)

Authors maintain that sedimentation rate is an index of high prognostic value superior to other clinical and laboratory examinations. NSA 4-4468.

1988
INVESTIGATIONS INTO DIFFERENTIATION AND OTHER MORPHOLOGICAL CHANGES IN MALIGNANT TUMORS FOLLOWING THERAPEUTIC IRRADIATION WITH X-RAYS AND RADIUM. S. Ry Andersen Copenhagen, Emar Munksgaard, 1949. 112p.

Author concludes that therapeutic irradiation of malignant tumors with x rays or Ra does not cause

demonstrable changes interpretable as criteria of differentiation. NSA 4-4471.

1989
ROENTGEN RAY TREATMENT OF TINEA CAPITIS. Charles F. Roland. Grace Hospt. Bull. 27, 29-33(1949). Jan.

Author concludes that cure rate of 98% indicates x-ray epilation is the preferred treatment of Tinea capitis. NSA 4-4492.

1990
Atomic Energy Project, Univ. of Rochester
THE ACTIVATION OF LATENT BARTONELLOSIS IN THE RAT FOLLOWING INTRAVENOUS ADMINISTRATION OF POLONIUM. Mildred Carr, Helen Haydon, James K. Scott, and J. N. Stannard. Nov. 29, 1950. Decl. Jan. 23, 1951. 18p. (AECD-3046, UR-145). NSA 5-2647.

1991
Brookhaven National Lab.
THE ADRENAL CORTICAL REQUIREMENTS OF ADRENALECTOMIZED, X-IRRADIATED RATS. Seymour Katsh and Abraham Edelmann. 1p. (AECU-1134), Federation Proc. 10, 73 No. 1 Pt. 1. (1951). Mar.

Adrenalectomized rats showed a need for increased cortical hormones in order to inhibit weight loss for 3-4 days after 600 r of x rays (160 kvp, 10 ma, 0.2 mm Cu). (Report appears in NSA in its entirety). NSA 5-2648.

1992
Brookhaven National Lab.
THE EFFECTS OF X-RAYS ON DESOXYPENTOSE NUCLEIC ACID IN SITU, QUANTITATIVE CYTOCHEMICAL STUDIES ON TRILLIUM. M. J. Moses, R. DuBow, and A. H. Sparrow. [nd] 1p. (AECU-1162).

Trillium erectum buds were exposed to 50, 200, and 20,000 r to determine whether depolymerization occurs in the intact cell. Cytochemical tests (methyl green and Feulgen reactions) did not indicate that depolymerization had been induced by irradiation. (The report appears in NSA in its entirety). NSA 5-2649.

1993
REPORT UPON SOME PRELIMINARY EXPERIMENTS WITH THE ROENTGEN RAYS ON PLANTS. G. F. Atkinson. Nature 56, 600(1897)

After experiments with leaves of Caladium, flowers Begonia, and various seedlings exposed for 1 to 10 hours, in which no perceptible injury resulted, several seedlings were exposed for 45 hours in a dark room. Removed from the dark, seedlings slowly became green, but those exposed to Roentgen rays recovered the green more slowly. This suggest that rays may injure chloroplastids.

1994
THE INABILITY OF THIOUREA TO MODIFY ROENTGEN RAY IRRADIATION MORTALITY IN RATS. Thomas J. Haley, Samuel Mann, and Andrew H. Dowdy. Feb. 16, 1951. 7p. (UCLA-112), Science 114, 153-4 (1951). Aug. 10.

Hypothyroidism induced by feeding 0.1% thiourea gives no protection to rats given 600 r whole-body x-ray dose. Hyperthyroidism caused by thyroxin injections results in slight increase in mortality rate. NSA 5-2651.

1995
PROACCELERIN DEFICIENCY FOLLOWING IRRADIATION WITH THERAPEUTIC DOSES OF RADIOPHOSPHORUS. H. Vetter and H. Vinazzer. Blood 9, 163-72(1954).

In six of seven polycythemic patients treated with radiophosphorus a significant decrease of proaccelerin content of plasma was observed. This diminution lasted 3 to 16 days. The degree of deficiency seemed to depend on the amount of radiophosphorus administered.

1996

Naval Radiological Defense Lab.

THE SUSCEPTIBILITY OF IRRADIATED MICE TO INFECTION AS A FUNCTION OF POST-IRRADIATION TIME. L. L. Shechmeister, V. P. Bond, and M. N. Swift. Dec. 12, 1950. 22p. (AD-279(B)), J. Immunol. 68, 87-95(1952).

Susceptibility of mice to airborne Streptococcus zooepidemicus was determined over a period of 50 days post-irradiation (350 r). Linear increase in susceptibility for 15 days reached a level 5 times that of control; then was followed by an exponential drop, reaching control level after 30 days. NSA 5-2653.

1997

TITRATED, REGULARLY SPACED RADIOACTIVE PHOSPHORUS OR SPRAY ROENTGEN THERAPY OF LEUKEMIAS. Edwin E. Osgood. Arch. Internal Med. 87, 329-48(1951). Mar. NSA 5-2660.

1998

Argonne National Lab.

AN INTERRELATIONSHIP BETWEEN TIME-RETENTION CURVES IN SHORT VS. PROLONGED ISOTOPE EXPOSURES. Donald L. Buchanan. Nov. 1950. 13p. (AECU-1193, UAC-329). NSA 5-2976.

1999

CHANGES IN MEAN BLOOD LEVELS OF METALLURGICAL LABORATORY EMPLOYEES DURING THE FIRST YEAR OF EMPLOYMENT AS RELATED TO WORKING CONDITIONS. Norman Pearlman and G. A. Sacher. p.419-424 of Industrial Medicine on the Plutonium Project. (NNES-IV-20). Robert S. Stone, ed. New York, McGraw-Hill Book Co., Inc. 1951.

Mean levels of several blood elements were investigated for groups exposed to radiation and uranium-toxicity hazards. No significant decrease in the mean level was found for any blood element. The average exposure was less than 0.1 r per day. (from authors' abstract).

2000

INHERITANCE OF CORN GRASS: A MACROMUTATION IN MAIZE, AND ITS POSSIBLE SIGNIFICANCE AS AN ANCESTRAL TYPE. W. Ralph Singleton. [nd]. 27p. (AECU-1165); Am. Naturalist 85, 81-95(1951).

Preliminary attempts failed to induce somatic mutations using β radiation from P^{32} and γ radiation from Co^{60} , in corn-grass-type plant. NSA 5-2983.

2001

HEALTH PHYSICS AND MEDICAL ASPECTS OF A STRONTIUM-90 INHALATION INCIDENT. Frederick P. Cowan, Lawrence B. Farabee, and Robert A. Love. [nd]. 12p. (AECU-1169), Am. J. Roentgenol. Radium Therapy Nucl. Med. 67, 805-9(1952).

Results of analysis of urinary elimination of Sr^{90} - Y^{90} for period after inhalation are presented. NSA 5-2984.

2002

Brookhaven National Lab.

EFFECTS OF RADIATION ON BIOLOGICAL SYSTEMS. A. H. Sparrow and B. A. Rubin. Feb. 15, 1951. 94p. (AECU-1207), Biol. Progress 2, 1-52(1952).

Types of radiation and dosage units, radiation energy transfer mechanisms, "target" theory, relation between chemical and biological effects of radiation, cytological, genetic, physiological and embryological effects, carcinogenesis, and radiosensitivity are discussed. NSA 5-2985.

2003

THE BIOELECTRIC POTENTIAL OF SEEDS AS A FUNCTION OF GROWTH AND OF X-RAY DOSAGE.

M. W. Jones, B. Kivel, and A. A. Bless. Plant Physiol. 26, 19-29(1951). Jan.

X rays, in general, decrease bioelectric potential of plant seeds and lower their vitality. NSA 5-2987.

2004

THE EFFECT OF RADIATIONS ON GALACTOZYMASE FORMATION IN YEAST. C. L. Brandt, P. J. Freeman, and P. A. Swenson. Science 113, 383-4(1951). Apr. 6.

Galactozymase formation was subjected to (1) ultra-violet radiation, (2) x radiation, and (3) visible light. Photodynamic action of (3) was confined to surface, (1) appears to strike deeper and prevent galactozymase synthesis, (2) prevents division but doesn't effect galactozymase formation.

2005

HEPATIC GLYCOGENESIS IN WHOLE-BODY X-IRRADIATED ANIMALS. Marguerite Lourau and Odette Lartigue. Compt. rend. 232, 1144-6(1951). (French)

Glycogenesis in the guinea pig diminished after sub-lethal x irradiation, not due to inability of hepatic cell to synthesize glycogen, but to absence of substrate. Circulating glucose was probably metabolized to substance incapable of entering into glycogen synthesis. NSA 5-2989.

2006

Naval Medical Research Inst., Bethesda

MUTATIONS PRODUCED BY ATOMIC BOMB IRRADIATION OF NEUROSPORA CRASSA, APPENDIX NO. 16 TO THE FINAL REPORT. Carroll E. Wagner, Naval Medical Research Inst., Bethesda and G. W. Beadle, California Inst. of Tech. March 7, 1949. 8p. (NP-1904).

Eighty biochemical mutants were observed in red bread mold exposed to Tests Able and Baker and are classified. NSA 5-2990.

2007

MUTATIONS INDUCED BY CHRONIC RADIATION. PAPERS PRESENTED AT THE 1950 MEETING OF THE GENETICS SOCIETY OF AMERICA, COLUMBUS, OHIO, SEPT. 11 TO 14. B. Wallace. Genetics 35, 698(1950). NSA 5-2991.

2008

ON THE VARIATION OF PENICILLIUM CHRYSOGENUM Q 176 INDUCED BY RADIUM IRRADIATION. Shohei Otani and Hyuga Okada. J. Antibiotics (Japan) 3, 819-32 Dec. (In Japanese) NSA 5-2992.

2009

PATHOLOGY OF IONIZING RADIATION. Russell M. Maynard. Rhode Island Med. J. 34, 23-5(1951). Jan.

Effects of ionizing radiations on tissues and organs of body are summarized. NSA 5-2993.

2010

PRODUCTION OF HYPOCHLORHYDRIA BY BETA RADIATION OF THE STOMACH. D. M. Douglas, W. R. Ghent, and S. Rowlands. Lancet 260, 492-5(1951; Vol. 1). Mar. 3.

Study of secretion from gastric mucosa of dogs irradiated with β rays from intragastric balloon containing P^{32} showed reduced free HCl in gastric juice. NSA 5-2995.

2011

X-RAY SENSITIVITY OF E. COLI AS MODIFIED BY OXYGEN TENSION. Alexander Hollaender, G. F. Stapleton, and F. L. Martin. Nature 167, 103-4(1951). Jan. 20.

State of oxidation or reduction inside an organism during x ray exposure and possible modifying effect of various types of pre-irradiation metabolism are discussed NSA 5-2997.

2012

DRUGS WHICH MAY GIVE PROTECTION AGAINST

ATOMIC RADIATION. J. F. Loutit. Mfg. Chemist 22, 49-51(1951). Feb.

Among substances discussed as protective devices are: amino acids, thiourea, sodium ethane, dithiophosphonate, protamine sulfate and toluidine blue. NSA 5-3001.

2013

ESTIMATING RADIOELEMENTS IN EXPOSED INDIVIDUALS II. RADIATION DOSAGE AND PERMISSIBLE LEVELS.

Jack Schubert. Nucleonics 8, No. 3, 66-78(1951). Mar.

Practical side of judging amounts and fates of radioactive substances entering a worker's body involves consideration of arbitrary standards that interrelate physiological data on "standard man" and properties of radioelements most harmful to him. NSA 5-3002.

2014

ON THE BRITISH RECOMMENDATIONS FOR PROTECTION IN ATOMIC BOMB ATTACKS. Rudolf Hanslian. Chem. Ztg. 74, 757-8(1950). Dec. 21. (In German)

Critical remarks concerning a British civil defense pamphlet are presented. Author questions sections on neutron danger and radioactive contamination NSA 5-3003.

2015

THE PHYSICIAN'S PROBLEM IN ATOMIC WARFARE.

James P. Cooney. J. Am. Med. Assoc. 145, 634-7 (1951). Mar. 3.

Types of atom bomb casualties are described. NSA 5-3004.

2016

SAFETY CONSIDERATIONS IN THE THERAPEUTIC USE OF RADIOACTIVE SUBSTANCES. George K. Schweitzer. J. Tenn. State Med. Assoc. 43, 164-6 (1950). May.

Health hazards and their detection x ray effects on body, and laboratory operation and construction are discussed. NSA 5-3005.

2017

WARFARE WITH RADIOACTIVE AGENTS. A MEDICAL APPRAISAL. PART I. GENERAL SURVEY. Finn Devik, Leiv Kreyberg, and Erik Poppe. p. 442-86 of Forsvarets Forskningsinstitutt, Arbok II, 1948-9. (In Norwegian)

An analysis of bodily damages wrought by atomic bombs in Japan is presented. NSA 5-3006.

2018

THE PATHOLOGICAL HISTORY OF CHRONIC X-RAY DERMATITIS AND EARLY X-RAY CARCINOMA.

S. B. Wolbach. J. Med. Research 21, 415-49(1909).

Author studied multiple carcinomata in skin of people who have repeated injuries from exposures to X rays. Repair fails to occur because of vascular changes. Other effects are atrophy of the glands and absorption of fat tissue and replacement by connective tissue. Changes in blood supply and connective tissue are responsible for eventual malignancy.

2019

RADIATION DOSES FROM DIAGNOSTIC X-RAY STUDIES. John S. Handloser and Robert A. Love. [nd]. 7p. (AECU-1177); RadioLOGY 57, 252-4(1951).

Doses received in various diagnostic x ray procedures, based on machines used by the medical department at Brookhaven National Laboratories are recorded as obtained using Al filters and from x-ray-tube data. NSA 5-3190.

2020

Radiation Lab., Univ. of Calif.

MEDICAL AND HEALTH PHYSICS QUARTERLY REPORT JULY, AUGUST, AND SEPTEMBER, 1950-NOV. 8, 1950. Decl. Apr. 24, 1951. 75p. (AECU-3141; UCRL-960).

Includes reports on: metabolic properties of plutonium and allied materials, parallelism between indirect mechanism and target theories of radiation effects. NSA 5-3286.

2021

S GENE STRUCTURE-NEW EVIDENCE FROM TETRA-POLYD AND MUTATION. D. Lewis. Heredity 8, 435(1954)

Mutant S. Alleles, produced by x-rays, spontaneously have lost their 'pollen' specificity. When these specificity deficient alleles are incorporated into diploid pollen grains of autotetraploids, they show the full competition but not dominance effects of their unmutated predecessors. (from abstract)

2022

ANEMIA CAUSED IN RABBITS BY X-IRRADIATING THE EXTERIORIZED SPLEEN B R. Allen. Radiation Research 1, 487(1954)

A significant anemia is caused by x irradiating the surgically exteriorized spleens of rabbits with 1600 r. Data are presented showing the comparative peripheral blood counts of five groups of rabbits as follows: (1) spleen exteriorized and irradiated with 1600 r; (2) spleen exteriorized with no irradiation; (3) 1600 r total-body irradiation, (4) splenectomized and 1600 r total-body irradiation, (5) splenectomized but no irradiation.

2023

Washington Univ., St. Louis School of Medicine
RADIOSENSITIVE AND RADIORESISTANT PHASES IN ANTIBODY PRODUCTION. F. J. Dixon, D. W. Talmage, and S. C. Bukantz. [nd]. 2p. (AECU-1241).

Radiosensitive portion of antibody response lasts only a few hours (rabbits), remainder of response (antibody protein being produced) lasts several weeks and can be carried on undiminished in spite of radiation. NSA 5-3294.

2024

THE EFFECT OF WHOLE-BODY X-IRRADIATION ON THE METABOLISM OF THE RAT. D. E. Smith, E. B. Tyree, H. M. Patt, and E. M. Jackson. Mar. 1951. 13p. (AECU-1253; UAC-367), Proc. Soc. Exptl. Biol. Med. 78, 774-77(1951).

Single whole-body x irradiation had no effect upon rate of weight loss of starving rats nor upon level of basal O₂ consumption of starved and fed rats. NSA 5-3295.

2025

Argonne National Lab.

MORPHOLOGICAL AND RESPIRATORY CHANGES INDUCED IN MELANOPLUS DIFFERENTIALIS BY β IRRADIATION. Theodore N. Tahmisian and Jean Gasvoda. Feb. 1951. 1p. (AECU-1258, UAC-350)

Extensive damage was seen in prediapause grasshopper eggs exposed to 3.07 to 1215 r of β radiation from P³² or Sr⁸⁹ solutions. NSA 5-3296.

2026

Office of Research and Medical, ORE, AEC
MEDICAL RECORDS PILOT STUDY. Jack Moshman. [nd]. 44p. (ORO-13).

Medical records of AEC operating contractors were analyzed. Pilot study of 1050 cases included investigation of RBC and WBC counts, percentage of lymphocytes, polymorphonuclear neutrophils, and hemoglobin. NSA 5-3297.

2027

Tennessee Univ.

QUARTERLY PROGRESS AND WORK ACCOMPLISHMENT REPORT FOR QUARTER ENDING MARCH 31, 1950; AGRICULTURAL RESEARCH PROGRAM. Mar. 31, 1950. 13p. (ORO-21).

Includes reports on: bomb radiation effects on farm animals, calcium and fission product metabolism in animals, radiation effects on reproductive functions in farm animals; blood analysis of cattle. NSA 5-3298.

2028

Radiation Lab., Univ. of Calif.
LETHAL RADIATION EFFECTS OF X-RAYS, DEUTERONS,
AND ALPHA PARTICLES ON THE BACTERIUM
ESCHERICHIA COLI. R. Lowry Dobson. Feb. 28, 1951.
64p. (UCRL-1140). NSA 5-3299.

2029

AAAS SYMPOSIUM ON RADIOBIOLOGY. Abraham
Edelmann. Nucleonics 8, No. 4, 28-36(1951). Apr.

Subject matter of 22 papers includes: radiation
effect on plant growth and development, radiation-induced
mutations, x ray action on cells and rodent testicles,
effect of I^{131} on thyroid tissue; spleen shielding, C^{14}
metabolism; radiation-sickness therapy. NSA 5-3300.

2030

CHANGES IN CARCINOMA OF THE BREAST FOLLOWING
IRRADIATION. George Lumb. Brit. J. Surg. 38, 82-93
(1950). July.

Histological changes in 60 cases of breast cancer
removed by radical mastectomy after x-ray therapy (220
kv) are described and illustrated. NSA 5-3301.

2031

HISTOLOGICAL AND CYTOLOGICAL CHANGES
PRODUCED BY ALPHA-PARTICLES IN THE SKIN OF
MICE. Finn Devik. Acta Radiol. 35, 149-64(1951).
Feb.-Mar.

In this study of histological and cytological changes
in skin of hairless mice after external α irradiation,
it was found that some epidermal cells survived 100,000 r.
NSA 5-3303.

2032

THE IMPORTANCE OF THE RESISTANCE PHASE OF
THE ORGANISM AT THE TIME OF APPLICATION OF A
LETHAL DOSE OF X RADIATION. H. Betz. Comp.
rend. soc. biol. 144, 1439-42(1950). Oct. (In French).

Nonlethal 500 r x ray dose (in mice) was followed
at 7, 10 or 15 days by 700 r. Protective action of the
non-lethal exposure is discussed but no firm conclusions
are considered to be justifiable. NSA 5-3304.

2033

PATHOLOGICAL EFFECTS OF ATOMIC RADIATIONS.
G. Capretti. Giorn. clin. med. (Parma) 32, 319-55
(1951). Mar. (In Italian)

General survey of pathological symptoms and lesions
produced by ionizing radiations and atomic bomb explosions
is presented. NSA 5-3305.

2034

QUANTITATIVE EVALUATION OF GROWTH RATES IN
TUMORS BEFORE AND AFTER RADIATION. Anna
Goldfeder. Cancer Research 11, 169-73(1951). Mar.
NSA 5-3306.

2035

ROLE OF THE TIME ELEMENT IN FAST-ELECTRON
IRRADIATIONS OF HUMAN SKIN. Richard Kurt Kepp,
Kurt Muller, and Herbert Reich. Strahlentherapie 84,
No. 2, 225-44(1951). (In German)

Test irradiations of human skin with 3 Mev electrons
from a betatron showed that time factor plays a notable
part even in dose-efficiency range of 300-1800 r/min.
NSA 5-3307.

2036

STUDIES ON THE ALTERATIONS OF DEVELOPMENT OF
THE TEETH AND ADJACENT STRUCTURES FOLLOWING
LOCAL ADMINISTRATION OF CHROMIC PHOSPHATE
CONTAINING P^{32} . M. S. Burstone. J. Am. Dental
Assoc. 42, 418-23(1951). Apr.

P^{32} irradiation of developing jaws of mice produced
changes in histodifferentiation and morphodifferentiation
of dentition. Changes and abnormalities are described.
NSA 5-3308.

2037

HEALTH HAZARDS IN RADIATION WORK. M. Ingram.
Science 111, 103-9(1950).

A general discussion of health hazards in work with
ionizing radiations is presented. Education of personnel
to appreciate the need for strict observance of routine
safety measures is stressed. NSA 5-3310.

2038

ESTIMATING RADIOELEMENTS IN EXPOSED
INDIVIDUALS -III. BIOASSAY OPERATIONS AND
PROCEDURES. Jack Schubert. Nucleonics 8, 59-67
(1951). Apr.

Author outlines practical recommendations for
administrative and analytical procedures designed to
safeguard laboratory personnel from overexposure
to radioelements. NSA 5-3311.

2039

PROBLEMS IN RADIOISOTOPE THERAPY NURSING.
Pauline Gazay. Ind. Med. Surg. 20, 234-5(1951). May.

Precautions in therapeutic use of radioisotopes for
both nurse and patient are given with reference to
intravenous injection and oral dosage. NSA 5-3313.

2040

BIOLOGICAL ACTIONS OF IONIZING RADIATIONS.
L. H. Gray. VOLUME 2. CHAPTER 8, p.240-305
OF PROGRESS IN BIOPHYSICS AND BIOPHYSICAL
CHEMISTRY. J. A. V. Butler and J. T. Randall,
eds. New York, Academic Press, Inc. 1951.

The author discusses the effects on animals of whole
body exposure to ionizing radiations, including repair of
radiation damage to cells. The author also reports on
chemical agents which often result in abnormalities
similar to those produced by ionizing radiations and on
radiation damage in protozoa, yeasts, fungi, bacteria,
and viruses.

2041

SAFETY IN THE USE OF RADIOACTIVE ISOTOPES.

Edith H. Qumby. Am. J. Nursing 51, 240-3(1951). Apr.

Fundamentals of nuclear physics and precautions in
handling radioisotopes are explained, and administration
of radioelements to patients described. NSA 5-3316.

2042

FURTHER STUDIES ON RECOVERY FROM RADIATION
INJURY. L. O. Jacobson, E. L. Simmons, E. K. Marks,
E. O. Gaston, M. J. Robson, and J. H. Eldredge. J. Lab.
Clin. Med. 37, 683-97(1951). May.

In spleen-shielding studies with mice and rats it is
assumed that either (1) shielded tissues produce noncellular
substance beneficial to recovery, or (2) cells migrate
from shielded tissue to enhance recovery of irradiated
tissues. NSA 5-3317.

2043

RADIATION SICKNESS AND ITS TREATMENT WITH
DRAMAMINE. Edward DeFoe, Paul H. Ritman, and M.
Herbert Nathan. Radiology 56, 420-2(1951). Mar.

Effectiveness of dramamine in radiation sickness is
believed to be related to its antihistaminic effect.
Importance of psychogenic factors in treatment of
radiation sickness is emphasized. NSA 5-3318.

2044

THE TREATMENT OF DISTURBANCES FOLLOWING
RADIUM THERAPY WITH DESOXYCORTICOSTERONE.
R. Grattarola and M. Bassi. Minerva ginecol. 2, 188
(1950). (In Italian) NSA 5-3319.

STUDIES ON THE RADIOSENSITIVITY OF BONE MARROW,
III. THE DYNAMICS OF ERYTHROCYTE REGENERATION
AFTER HEMORRHAGE AND IRRADIATION. M. L.
Pearce, M. A. Greenfield, and W. N. Valentine. Apr.
19, 1951. 15p. (UCLA-125), Blood 7, 207-13(1952).
NSA 5-3603.

2048

Naval Medical Research Section, Joint Task Force One
ABERRATIONS FOUND IN THE PROGENIES OF PLANTS
GROWN FROM IRRADIATED COTTON SEED. Meta S.
Brown. [nd]. 10p. (NP-1903).

Second generation of Gossypium hirsutum plants from
seeds exposed to γ radiation at Bikini showed that although
chromosome breaks are readily induced, gene mutations
are infrequent. NSA 5-3604.

2049

CHANGES IN THE ELECTRIC CHARGE OF ERYTHROCYTES
OBSERVED IN IRRADIATED ANIMALS. Gaston Meyniel
and Suzanne Bazin. Compt. rend. soc. biol. 144, 1463-5
(1950). Nov. (In French)

In guinea pigs irradiated with slightly less than the
lethal x ray dose, electrophoretic study of erythrocytes
showed a 25% diminution of their surface charge appearing
7 days post-irradiation, observed only in presence of
animal's own serum. NSA 5-3605.

2050

Naval Radiological Defense Lab.
CHANGES IN THE PLASMA PHOSPHOLIPIDS IN RATS
FOLLOWING WHOLE BODY X-IRRADIATION. R. A.
Neve and Cecil Entenman. Apr. 10, 1951. 17p. (AD-307
(B)).

Changes in PLP³¹ of fasted female rats were determined
after whole-body, 250-kv, x-irradiation, with doses from
750 to 5000 r. Marked increase in plasma level of PLP³¹
was observed. NSA 5-3606.

2051

EFFECT OF HIGH CONCENTRATION OF PHOSPHORUS-
32 ON GROWTH OF THE POTATO. W. K. Sinclair and
W. R. Stanton. Nature 167, 234-5(1951). Feb. 10,

Abnormalities in plants treated with 10 and 100 μ c
P³² per plant included increased fleshiness of leaves,
loss of secondary leaflets and increased branching.
NSA 5-3607.

2052

EFFECT OF ROENTGEN-RAY RADIATION ON THE
BIOSYNTHESIS OF NUCLEIC ACIDS AND NUCLEIC
ACID PURINES. Howard E. Skipper and Jack H. Mitchell,
Jr. Cancer 4, 363-6(1951). Mar.

X radiation (950 r) inhibits incorporation of radio-
carbon from bicarbonate and formate into visceral

nucleic acids and nucleic acid purines over a 6 hr period.
NSA 5-3608.

2053

Naval Radiological Defense Lab.
EFFECTS OF TOTAL BODY X-IRRADIATION ON BLOOD
COAGULATION IN THE RAT. (Technical Objective
AW-6). Stanton H. Cohn. Mar. 2, 1951. 23p. (AD-298(B)).

Hemorrhagic syndrome after exposure of rats to
400 r of x rays was studied, and a blood coagulation
defect was found. NSA 5-3609.

2054

IONIZING RADIATION AND BLOOD-FORMING TISSUES.
J. Am. Med. Assoc. 144, 1182-3(1950). Dec. 2.

This is a discussion based on studies of normal
laboratory animals exposed to single whole-body x ray
doses in LD₅₀ range. NSA 5-3610.

2055

ON THE MUTATION THEORY OF THE ORIGIN OF
CANCER. B. Rajewsky. Z. Krebsforsch. 56, 274-84
(1949). (In German)

Strong tumor-producing effect of small α -ray doses
is described NSA 5-3611.

2056

PATHOLOGY OF IONIZING RADIATION. Elbert De
Coursey. Minnesota Med. 34, 313-18, 318(1951). Apr.

Lymphoid and hematopoietic tissues, skin, genital
organs and gastrointestinal tract are reported to be most
severely affected by ionizing radiation from an atomic
bomb explosion. NSA 5-3612.

2057

RADIATION EFFECTS IN PLANT NUTRITION
EXPERIMENTS WITH PHOSPHORUS-32. C. Bould, D. J.
D. Nicholas, and W. D. F. Thomas. Nature 167, 140-2
(1951). Jan. 27.

In a study of radiation effects on growth and physiology
of barley and tomato plants using P³²-labeled NaH₂PO₄,
data show radiation effects are slight and insufficient
to preclude the use of P³² in plant-nutrition studies.
NSA 5-3613.

2058

RADIATION EFFECTS ON LIVER GLYCOGEN IN THE
RAT. M. H. Ross and J. O. Ely. J. Cellular Comp.
Physiol. 37, 163-71(1951). Feb.

Results indicate that the effect of radiation on
glycogen deposition in rats is not a primary one.
NSA 5-3614.

2059

STUDIES IN THE GENETICS OF SOME X-RAY-INDUCED
MORPHOLOGICAL MUTANTS IN COPRINUS LAGOPUS.
Ursula Mittwoch. J. Genetics 50, 202-5(1951). Jan.
NSA 5-3615.

2060

Atomic Energy Project. Univ. of Calif., Los Angeles
RECOMMENDATIONS FOR CIVIL DEFENSE RELATIVE
TO RADIOLOGICAL SAFETY. Andrew H. Dowdy. Feb.
15, 1951. 57p. (UCLA-113).

Topics include: atomic bomb phenomena pertaining
to radiation hazards, anti-personnel effects and emergency
exposure levels, prevention of contamination, diagnosis
and treatment of radiation injuries. NSA 5-2617.

2061

HEALTH HAZARDS FROM COSMIC RADIATION AT HIGH
ALTITUDE. H. J. Schaefer. Tech. Data Dig. 15, No. 10,
21-6(1950). Oct.

It is concluded that there is no danger of human
beings above 70,000 ft being killed instantly or within a
short time by heavy-nuclei rays but that harmful effects
are slowly accumulated. Average energy of cosmic ray
primaries is 20 billion ev. Energy dissipation is classified

as "penetrating shower" due to heavy particles (protons, neutrons, mesons) or "cascade shower" due to electrons, positrons, and α particles. NSA 5-3618.

2062

Atomic Energy Project, Univ. of Rochester
BACTERIOLOGICAL STUDIES IN THE X-RADIATED DOG. F. W. Furth, M. P. Coulter, and J. W. Howland. Feb. 23, 1951. 20p. (UR-157); Am. J. pathol. 28, 171-83 1952.

Bacteriological studies were carried out on 24 dogs given 450 r whole-body x-ray dose. Aureomycin was administered to 12 dogs post-irradiation. NSA 5-3621.

2063

THE EFFECT OF AUREOMYCIN AND TERRAMYCIN ON THE X-RADIATED RAT. F. W. Furth, M. P. Coulter, and J. W. Howland, Feb. 14, 1951. 14p. (UR-158); Am. J. Pathol. 28, 185-95(1952). (UR-158).

Aureomycin and terramycin administered to rats after 700 r lowered incidence of diarrhea, common in x radiated rats, favorably influenced regain of weight. Aureomycin did not effect mortality while terramycin decreased it. NSA 5-3622.

2064

EFFECT OF PERORAL ADMINISTRATION OF AUREOMYCIN ON THE SURVIVAL OF RATS EXPOSED TO LETHAL DOSES OF X-RAYS. G. Lambert, J. Maisin, M. Mandart, E. Plugers, and G. Podio. Compt. rend. soc. biol. 144, 1558-60 (1950). Nov. (In French)

Aureomycin hydrochloride administration increased survival after 500 r irradiation of rats, but not after 600 r irradiation. NSA 5-3623.

2065

Chicago Univ.
TREATMENT OF INFECTION FOLLOWING EXPOSURE TO IONIZING RADIATION. C. Phillip Muller and Carolyn W. Hammond. [nd]. 6p. (NP-1927).

Control of post-irradiation bacteremia in mice was studied using streptomycin, chloramphenicol, aureomycin and terramycin as therapeutic agents. NSA 5-3624.

2066

THE EFFECT OF INTENSITY OF INFRARED ON X-RAY-INDUCED CHROMOSOME ABERRATIONS IN TRADE-SCANTIA. H. T. Yost, Jr. Genetics 37, 457-68(1952).

2067

Atomic Energy Project. Univ. of Rochester
THE EFFECTS OF WHOLE BODY X-IRRADIATION ON THE BLOOD GLUCOSE LEVELS IN RABBITS. H. E. Thompson and L. T. Steadman. p. 13-33 of Quarterly Technical Report, October 1, 1950 thru December 31, 1950. Feb. 1, 1951. (UR-152(p.13-33)). NSA 5-3817.

2068

Atomic Energy Project, Univ. of Rochester
FAILURE OF ALPHA TOCOPHEROL TO PROTECT AGAINST RADIATION INJURY IN THE RAT. F. W. Furth, M. P. Coulter, and J. W. Howland. p. 34-8 of Quarterly Technical Report; October 1, 1950 thru December 31, 1950. Feb. 1, 1951. (UR-152(p.34-8)).

Administration of large alpha tocopherol or aureomycin doses prior to large x ray doses fails to alter irradiation lethality for rats. NSA 5-3818.

2069

Atomic Energy Project, Univ. of Rochester
THE INCIDENCE OF BACTEREMIA IN THE X-RADIATED RAT. M. P. Coulter, F. W. Furth, and J. W. Howland. p. 44-6 of Quarterly Technical Report; October 1, 1950, thru December 31, 1950. Feb. 1, 1951. (UR-152(p.44-6)). NSA 5-3819

2070

Atomic Energy Project, Univ. of Rochester

EFFECTS OF A SECOND LARGE DOSE OF X-RADIATION ON DOGS SURVIVING ONE DOSE OF X-RADIATION. F. W. Furth, M. P. Coulter, and J. W. Howland. p. 47-53 of Quarterly Technical Report; October 1, 1950 thru December 31, 1950. Feb. 1, 1951. (UR-152(p.47-53)).

After 1st 450 r x ray dose, 30% of the 19 dogs showed signs of radiation toxicity. After second dose all developed radiation sickness and only 1 survived. NSA 5-3820.

2071

ACTION OF RADIATIONS ON BIOCHEMICAL PROCESSES IN THE LIVING CELL. A. Santos Ruiz. Rev. geofis. 9, 296-316(1950). July-Sept. (In Spanish) NSA 5-3822.

2072

CATION EXCHANGE IN MAMMALIAN ERYTHROCYTES. III THE PROLYTIC EFFECT OF X-RAYS ON HUMAN CELLS. C. W. Sheppard and Gertrude E. Beyl. J. Gen. Physiol. 34, 391-704(1951).

Heparinized human whole blood was exposed to 54,000 r in vitro, then equilibrated under controlled atmosphere at 24° or 38° C. There was progressive loss of K and quantitative replacement with Na in rbc, with no osmotic disturbance over a 26 hr. period. At dose of 20,000 r and 24° C mean rate of loss of K is about 0.4% of cell's initial K/hr. Rate doubles when dose is increased by 20,000 r and is greater when storage temperature is 5° C. Rate of entrance of K into rbc is not altered by irradiation. Authors suggest that radiation may interfere with selective K accumulation by the cell (preferential retention). NSA 5-3823.

2073

DAMAGES IN GROWING BONES PRODUCED BY X-RAYS, AND WAYS TO AVOID THEM. Caspar Montag. Strahlentherapie 84, 314-24(1951). (In German). NSA 5-3824.

2074

COMPARISON OF X- AND BETA-RADIATION EFFECTS IN RABBITS. F. W. Bishop. p.194-203, of Biological Effects of External Radiation. (NNES VI-2). Henry A. Blair, ed. New York, McGraw-Hill Book Co., Inc. 1954.

The minimal dosage necessary to produce an erythematous reaction in the ear of the rabbit with 30-kv x-rays is about 1000 r. With 900 r there was epilation without erythema. The lower dose of beta rays capable of causing an erythema in the rabbit ear is about 3000 r. Epilation was not observed until 3500 rep had been given. (from authors' summary). NSA 5-3827.

2075

EFFECT OF X-IRRADIATION ON INTESTINAL MOTILITY OF THE RAT. Robert A. Conrad. Am. J. Physiol. 165, 375-85(1951). May 1.

Increased tone and motility of rat intestine following x ray doses of 100 r and above are apparently due to stimulation of cholinergic nerves.

2076

ENDOTHELIAL DAMAGE BY X-RAYS DISCLOSED BY LYMPH FISTULA STUDIES. R. R. Bigelow, J. Furth, M. C. Woods, and R. H. Storey. Proc. Soc. Exptl. Biol. Med. 76, 734-6(1951).

Increased capillary permeability was observed in dogs and rats exposed to LD₅₀ of x rays (appearance of many erythrocytes in lymph). Loss due to capillary damage, death of aging erythrocytes, and inhibited erythropoiesis are considered main causes of radiation anemia. NSA 5-3828.

2077

INDUCED AND OTHER VARIATIONS IN BACTERIAL CULTURES. PART II. GENERAL SURVEY OF CHANGES PRODUCED IN BACT. LACTIS AEROGENES

(*AEROBACTER AEROGENES*) BY ULTRA-VIOLET LIGHT AND SOME OTHER MUTAGENIC AGENTS. A. C. R. Dean and Cyril Hinshelwood. *J. Chem. Soc.*, 1159-68 (1951). May.

Agents used: U-V, β and γ from S^{35} , chemicals (proflavine and Fenton's reagent). Chief effects; decreased growth rate in minimally adequate medium, modification of sugar fermentation tests. Specific amino acid requirements seldom appeared, absolute ones, never. A significant proportion of mutants appeared only when fraction surviving exposure was small. NSA 5-3829.

2078

INFLUENCE OF AGE, BODY WEIGHT, AND SEX ON SUSCEPTIBILITY OF MICE TO THE LETHAL EFFECTS OF X-RADIATION. Herbert L. Abrams. *Proc. Soc. Exptl. Biol. Med.* 76, 729-32 (1951). Apr.

Age of mice at time of irradiation profoundly alters resistance to a single whole-body x ray dose. Body weight and sex have no apparent significance with regard to capacity to withstand irradiation. NSA 5-3830.

2079

THE INFLUENCE OF POLYPOIDITY ON THE X-RAY SENSITIVITY OF CELLS. C. J. Bishop. *Records Genetics Soc. Am.*, No. 19, 88 (1950).

When microspores and pollen grains of diploid and tetraploid species of *Tradescantia* were treated with equal x ray doses, results showed sensitivity of the two was the same when compared on the basis of breaks/chromosomes. Comparison of breaks/cell shows that tetraploid species has twice as many breaks as the diploid plants. NSA 5-3831.

2080

LIFE SPAN OF WHITE BLOOD CELLS AS MEASURED IN IRRADIATED PARABiotic RATS. Donald C. Van Dyke and Rex L. Huff. *Am. J. Physiol.* 165, 341-7 (1951). May 1.

Average survival time of mononuclear leukocytes in the blood of irradiated parabiotic rat is calculated to be 170 min; of polymorphonuclear leukocytes, 23 min. NSA 5-3833.

2081

RESEARCH AND DISCUSSION ON DIFFERENT MECHANISMS OF RADIATION ACTION IN SOME BIOLOGICAL SYSTEMS. Wolfgang Huber. *Naturwissenschaften* 38, 21-9 (1951). Jan. (In German)

Reproduction of cells is impaired by chemical action of ionizing radiations on nucleic acid molecule. Any reaction of biological objects to radiation dose and dose efficiency must be considered in conjunction with such accompanying factors as temperature, medium, and atmospheric conditions. NSA 5-3834

2082

Brookhaven National Lab.

THE THEORETICAL GROUND-LEVEL DOSE-RATE FROM THE RADIOARGON EMITTED BY THE BROOKHAVEN REACTOR STACK. Phillip H. Lowry, July 1950. 33p. (BNL-81). NSA 5-3835.

2083

Metallurgical Lab., Univ. of Chicago
MEDICAL SERVICES OF THE PLUTONIUM PROJECT; [NNES DIV. IV, VOL. 20, PART A, CHAP. 1]. John E. Wirth. July 24, 1946. 24p. (CH-3543).

Nature of preemployment physical examination and criteria for acceptance or rejection of personnel are discussed. Dispensary care, laboratory facilities, special hazards, and clinical manifestations of radiation damage are reviewed. NSA 5-3836.

2084

PROTECTION AGAINST NEUTRONS. Hermann Muth. *Strahlentherapie* 78, 551-562 (1949). NSA 4-1854.

2085

RADIATION OF VAGINAL CELLS IN CERVICAL CARCINOMA. I. DESCRIPTION OF CELLULAR CHANGES. R. M. Graham. *Surg., Gynecol. Obstet.* 84, 153 (1947).

Two hundred and six cases of cervical carcinoma, in which patients were treated by radiation, have been studied by vaginal smear. Immediate and late changes in cells in vaginal secretion are described, correlation with studies by biopsy is discussed and applicability of method to the study of radiation effects in cervical cancer is suggested.

2086

Atomic Energy Project, Univ. of Rochester
RADIUM ANALYSIS OF SOURCE AND TAP WATER. J. B. Hursh and A. A. Gates. p. 100-5 of Quarterly Technical Report, October 1, 1950 thru December 31, 1950. Feb. 1, 1951. 6p. (UR-152(p. 100-5)).

Ra content of H_2O samples (source and tap) from 18 Western U. S. cities was measured. Ra in source water ranged from 20×10^{-16} to 0.3×10^{-16} g of Ra/ml; for tap water, 3×10^{-16} to 0.3×10^{-16} g of Ra/ml. NSA 5-3839.

2087

TOLERABLE RADIATION DOSES. Larkin Kerwin. *Laval med.* 16, 489-505 (1951). Apr. (In French)

Results show that a maximum daily dose of 0.1 r, often accepted as tolerable, produces observable effects and, if multiplied by a factor of only 5, can become damaging. NSA 5-3843.

2088

EFFECT OF CRUDE AND CRYSTALLIZED AUREOMYCIN ON THE WEIGHT OF NORMAL AND X-RADIATED RATS. F. W. Furth, M. P. Coulter, and J. W. Howland. p. 39-43 of Quarterly Technical Report; October 1, 1950 thru December 31, 1950. Feb. 1, 1951. 5p. (UR-152(p. 39-43)).

Aureomycin administered orally in either crude or crystalline form failed to increase weight gain of normal or x rayed rats, although incidence of diarrhea of x rayed rats was markedly diminished. NSA 5-3845.

2089

THE BIOLOGICAL ACTIVITY OF A FLAVONOID (VITAMIN "P") COMPOUND. Boris Sokoloff, Walter H. Eddy, and James B. Redd. *J. Clin. Invest.* 30, 395-400 (1951). Apr.

A flavonoid preparation from citrus fruit protects against leukotoxine and bacterial polysaccharide, protects rats somewhat against x ray damage and reduces erythema of skin in patients undergoing deep x ray therapy. NSA 5-3846.

2090

IRRADIATION DAMAGE TO MICE. Oscar Felsenfeld, Sachiko Janet Ishihara, Thora Waters, and Jeannette Norsen. *Lab. Digest* 14, 18-19 (1951). Mar.

Neomycin, Glucomycin, Neobacm and Prodigiosin increased survival of mice following LD_{50} exposure. NSA 5-3847.

2091

TREATMENT OF LEUKEMIA WITH ARTIFICIAL RADIOACTIVE SODIUM. A PRELIMINARY REPORT. Orgen E. Thygesen, Aage Videbaek, and Irgens Villaume. *Acta Radiol.* 25, 305-16 (1944).

Author believes preliminary results of treating chronic lymphatic leukosis with intravenous Na^{24} indicate

the need for further investigation of Na²⁴ on a broader basis. NSA 5-3850.

2092

Atomic Energy Project, Univ. of Calif., Los Angeles
PULMONARY DISTRIBUTION OF RADIOACTIVE PARTICLES IN RABBITS AFTER INHALATION AND INTRAVENOUS INJECTION. George V. Taplin, James S. Grevior, Mary Louise Gautschi, Camille Finnegan, and Arthur Dunn. Ann. Allergy 9, 703-13, 726(1951).

Results show that a single short inhalation exposure to insoluble radioactive particles about 1 μ in size may be hazardous. Efficiency of respiratory tract clearance is an important physiological safety factor. NSA 5-3859.

2093

Notre Dame Univ.
SOME ELEMENTARY PHYSICAL AND CHEMICAL PROCESSES IN RADIOBIOLOGY. Milton Burton. [nd]. 14p. (AECU-1328).

Radiobiological observations, particularly relating to target theory, are reviewed. Effect of O₂ and inhibition of O₂ effects are explained in terms of elementary physical and chemical processes of radiation chemistry. NSA 5-3910.

2094

Notre Dame Univ.
ELEMENTARY PROCESSES IN THE RADIATION CHEMISTRY OF WATER AND IMPLICATIONS FOR RADIOBIOLOGY. Milton Burton. [nd]. 22p (AECU-1326). Brit. J. Radiol. 24, 416-22(1951).

Effect of radiation on a simple biological entity suspended in water is described. NSA 5-3911.

2095

National Research Council, Committee on Nuclear Science
RESEARCH AND TRAINING FACILITIES FOR RADIOBIOLOGY AND FOR USE OF ISOTOPES IN BIOLOGY AND MEDICINE IN THE UNITED STATES AND CANADA. Harold D. Copp. June 1950. 156p. (NP-3083).

For 130 institutions the following are listed; research, clinical use of isotopes, and training for such use; future work; health-protection, and number of staff members and students. NSA 5-4053.

2096

Brookhaven National Lab.
BIOLOGY DEPARTMENT, p. 115-24 of Quarterly Progress report; October 1-December 31, 1950. Mar. 1951. (BNL-93(p. 115-24)).

Topics include chromosome breakage and mitotic inhibition; regeneration of x rayed *Tradescantia*, cytochemical analysis of x ray effects, effect of x ray on fibrinogen, H₂O metabolism, effect of glucose on radiation syndrome; role of adrenal in irradiation syndrome. NSA 5-4054.

2097

Atomic Energy Project, Univ. of Calif., Los Angeles
THE EFFECT OF ROENTGEN RAY IRRADIATION ON RATS PREMEDITATED WITH THYROXIN AND THIOURACIL DERIVATIVES. Thomas J. Haley, Samuel Mann, and Andrew N. Dowdy. May 18, 1951. 11p. (UCLA-135), J. Am. Pharm. Assoc. Sci. Ed. 41, 39-41(1952)

Potential sulfhydryl groups in the molecules of thiouracil compounds are available for protecting sulfhydryl groups in the animal but a great excess of the compounds is necessary before protective effect is observed. NSA 5-4057.

2098

Atomic Energy Project, Univ. of Rochester
CROSS CIRCULATION STUDIES ON THE IRRADIATED DOG. P. Rekers, P. Salisbury, J. Miller, N. Marti, and N. Papageorge's, Jr. Mar. 30, 1950. 12p. (UR-159).

Cross circulation through carotid to carotid anastomosis or cross transfusion was performed using one dog 6-10 days after 450 r x ray dose and one normal dog. The procedure caused an increase in rbc and wbc in irradiated animals during cross-circulation, and a somewhat more sustained (returned to leukopenic levels 48 hours after cross-transfusion) elevation of wbc with cross-transfusion. NSA 5-4058.

2099

Atomic Energy Project, Univ. of Rochester
EFFECT OF SINGLE DOSES OF X-RAY ON THE SURVIVAL OF RATS. T. Noonan, F. Van Slyke, and J. Hursh. Apr. 20, 1951. 12p. (UR-161).

Mean survival times of irradiated rats (150, 300 or 600 r, 250 kvp x rays, 18.5 r/min) was reduced by an amount proportional to dose. NSA 5-4059.

2100

Naval Medical Research Section, Joint Task Force One
CYTOLOGICAL ANALYSIS OF TRANSLOCATIONS IN CORN CHROMOSOMES RESULTING FROM IONIZING RADIATION OF THE TEST ABLE ATOMIC BOMB AND X-RAYS AND OF TRANSLOCATIONS FROM OTHER SOURCES. A. E. Longley. June 10, 1950. 60p. (NP-3072). NSA 5-4061.

2101

Oklahoma Univ., Research Inst.
STUDIES IN ISOLATION AND IDENTIFICATION OF FLAVONOID PIGMENTS OF USE IN THE CONTROL OF RADIATION INJURY, PROGRESS REPORT FOR 1950. Dec. 29, 1950. 17p. (ORO-32). NSA 5-4063.

2102

Naval Radiological Defense Lab.
RELATIVE IMPORTANCE OF EXTERNAL AND INTERNAL RADIATION HAZARDS FROM AN ATOMIC BOMB DETONATION. A. L. Baietti and F. R. Holden. Nov. 8, 1950. 13p. (AD-268(H)).

Although for 1st 24 hr after atom bomb detonation external radiation is of greater tactical importance, internal hazards, developing later, may persist for longer periods producing serious internal effects in man. NSA 5-4064.

2103

Radiation Lab., Univ. of Calif.
MEDICAL AND HEALTH PHYSICS QUARTERLY REPORT; OCTOBER, NOVEMBER, DECEMBER, 1950. Feb. 27, 1951. Decl. July 16, 1951. 61p. (AECU-3200, UCRL-1143).

Extensive radiotracer program is outlined, Specific liver irradiation lowers the disappearance constant of injected chromic phosphate in rabbits and mice, partly by decreasing efficiency of liver phagocytes, partly by decreasing liver blood flow. NSA 5-4306.

2104

Argonne National Lab.
TRITIUM-INDUCED EFFECTS IN PARAMECIUM AURELIA. E. L. Powers and Deborah Shefner. May 1951. 13p. (AECU-1485, UAC-403). Proc. Soc. Exptl. Biol. Med. 78, 493-97(1951).

An increasing death rate was observed with increasing radioactivity of the medium. NSA 5-4311.

2105

Oak Ridge National Lab., Y-12 Area
THE EFFECT OF X IRRADIATION ON ERYTHROGENESIS, PLASMA, AND CELL VOLUMES. Jacob Furth, G. A. Andrews, R. H. Storey, and Leon Wish. June 11, 1951. 32p. (ORNL-878), Southern Med. J. 44, 85-92(1951).

Continuous leakage of erythrocytes through damaged endothelium to tissue spaces and lymph channels is believed to be a major cause of post-irradiation shock and anemia. NSA 5-4312.

2106

Atomic Energy Project, Univ. of Calif., Los Angeles
THE EFFECT OF ROENTGEN IRRADIATION UPON
PROTEIN ABSORPTION IN THE MOUSE. Leslie R.
Bennett, Sarah M. Chastain, Arthur B. Decker, and
James F. Mead. May 31, 1951. 13p. (UCLA-137).
Proc. Soc. Exptl. Biol. Med. 77, 715-18(1951).

No change in protein absorption rate occurs in mice
exposed to 600-r whole-body dose of x rays, although a
change in tone and mobility of the gastrointestinal tract
was noted. NSA 5-4313.

2107

Radiation Lab., Univ. of Calif.

THE MOVEMENT OF SODIUM AND POTASSIUM IN THE
TISSUES OF THE RAT FOLLOWING ACUTE RADIATION
INJURY USING Na²² AND K^{42,43} AS TRACERS. John Z.
Bowers and Kenneth G. Scott. Jan. 1951. 20p. (UCRL-
1101). NSA 5-4314.

2108

DEVELOPMENT OF THYROID NEOPLASMS IN THE
RAT FOLLOWING A SINGLE INJECTION OF RADIO-
ACTIVE IODINE. R. C. Goldberg and I. L. Chaikoff.
Proc. Soc. Exptl. Biol. Med. 76, 563-6(1951). Mar.

Thyroid gland changes in 10 rats sacrificed 18 months
after single injection of 400 μ c of I¹³¹ are reported
NSA 5-4315

2109

RADIOACTIVITY, A FACTOR IN PLANT ENVIRONMENT.
C. Stuart Gager. Science 25, 263-4(1907).

This article mentions researches that lead to the
conclusion that the phenomenon of radioactivity is not
confined to the so-called radioactive elements, radium,
uranium, thorium, and others but is a general property
of matter. It is a factor in the normal environment of
living things.

2110

THE EFFECT OF IONIZING RADIATIONS ON THE
BROAD BEAN ROOT. PART VIII. L. H. Gray and M. E.
Scholes. Brit. J. Radiol. 24, 285-91(1951). May.

After exposures to doses of γ radiation up to 250 r,
x radiation to 140 r and α radiation to 36 rep, growth
rate of *Vicia faba* roots falls, then returns to normal.
Chromosome structural damage is believed to be the
major factor in growth inhibition by all 3 radiations.
NSA 5-4317.

2111

THE EFFECT OF IONIZING RADIATIONS ON THE BROAD
BEAN ROOT. VIII. (continued). L. H. Gray and M. E.
Scholes. Brit. J. Radiol. 24, 348-52(1951). June.

Two appendices to the previous articles are presented,
covering methods of handling and irradiation, methods of
estimating number of cells per unit volume of tissue of
particular region. NSA 5-4318.

2112

EFFECTS OF IRRADIATION ON EMBRYONIC DEVELOP-
MENT. I. X-RAYS ON THE 10TH DAY OF GESTATION
IN THE RAT. James G. Wilson and John W. Karr.
Am. J. Anat. 88, 1-34(1951). Jan.

Exposure of intrauterine rat embryos to 50, 100,
200, or 400 r on 10th day of gestation results in: general
and localized growth retardation, aberrant growth or
malformation, or embryonic death. NSA 5-4319.

2113

THE EFFECT OF X-RADIATION ON THE BIOSYNTHESIS
OF HEMOGLOBIN. Jonas E. Richmond, Kurt L. Altman
and Kurt Salomon. J. Biol. Chem. 190, 817-25(1951).
June.

Hemin and globin synthesis are differently affected
by radiation, both evidently occurring at different rates.
NSA 5-4320.

2114

THE FREQUENCY OF X-RAY INDUCED CHROMOSOME
ABERRATIONS IN TRADESCANTIA AS MODIFIED BY
NEAR INFRARED RADIATION. Henry T. Yost, Jr.
Genetics 36, 176-84(1951). Mar. NSA 5-4321.

2115

INHIBITION OF CITRIC ACID SYNTHESIS IN VIVO BY
X-RADIATION. Kenneth P. DuBois, Kenneth W. Cochran,
and John Doull. Proc. Soc. Exptl. Biol. Med. 76, 422-7
(1951). Mar.

Lethal doses of x ray inhibited citrate accumulation
in spleen, thymus, ileum, pancreas and testes of
fluoroacetate-treated rats. No effect was observed on
citrate accumulation in brain and heart. Sublethal doses
were inhibitory only in spleen and thymus. Inhibition was
greater with increasing x ray doses, was reversible after
sublethal but not lethal doses. Citrate accumulated in
livers of fluoroacetate-treated, x irradiated rats in contrast
to normal rats treated with fluoroacetate. NSA 5-4322.

2116

IRRADIATED HUMAN PLASMA AND PHAGOCYTOSIS.
Jirair N. Sarian. Am. J. Roentgenol. Radium Therapy
65, 940-6(1951). June.

Irradiation enhances phagocytosis, probably due to
activation of opsonins of plasma. Use of irradiated sera
is discussed. NSA 5-4323.

2117

NEUTRON CATARACTS. Arlington C. Krause and James
O. Bond. Am. J. Ophthalmol. 34, 25-35(1951). Jan.

X and neutron radiation-induced cataracts are described
and actions of the two radiations are discussed.
NSA 5-4324.

2118

Naval Radiological Defense Lab.

PLASMA PROTEINS AND PLASMA VOLUMES IN RATS
FOLLOWING TOTAL BODY X-IRRADIATION.
(TECHNICAL OBJECTIVE AW-6). Helen Supplee, James
D. Hauschildt, and Cecil Entenman. May 17, 1951.
21p. (AD-318(b)); Am. J. Physiol. 169, 483-90(1952).
NSA 5-4325.

2119

RELATION OF CLEARANCE AND DISTRIBUTION OF
INJECTED GLUTATHIONE TO PROTECTION AGAINST
RADIATION INJURY. E. P. Cronkite, W. H. Chapman,
and George Brecher. Proc. Soc. Exptl. Biol. Med. 76,
456-9(1951). Mar.

Data suggest concentration of glutathione at sites vital
for survival may be prime factor in glutathione pro-
tection of irradiated mammals. NSA 5-4326.

2120

STUDIES ON THE EFFECT OF RADIOACTIVE
PHOSPHORUS ON THE BIOCHEMICAL OXIDATION OF
SEWAGE. W. N. Grune and Rolf Eliassen. Sewage and
Ind. Wastes 23, 141-54(1951). Feb.

P³² concentrations of 10 mc/liter exert no significant
effect on first stage of biochemical oxidation of sewage.
NSA 5-4327.

2121

Hanford Works

THE GROSS RETENTION AND METABOLISM OF
TRITIUM OXIDE IN THE MOUSE. R. C. Thompson.
Jan. 23, 1951. 13p. (HW-20092). NSA 5-4329.

2122

Hanford Works

DEPOSITION OF RADIOACTIVITY IN RATS DRINKING
PILE EFFLUENT WATER. K. E. Herde. Jan. 24, 1951.
13p. (HW-20102).

Growth rate of rats was unaffected by drinking
nuclear reactor cooling water with an activity of 3×10^{-4}
and 3×10^{-6} μ c/ml for 200-500 days. NSA 5-4330.

2123

Department of the Navy, Bureau of Naval Personnel
FUNDAMENTALS OF RADIOLOGICAL DEFENSE. 1950.
88p. (NavPers-10870).

Fundamentals of atomic structure, radiation, nuclear physics and reactors, explosion phenomena, physiological aspects of an atomic explosion, radiation detection and decontamination are presented. NSA 5-4334.

2124

Oak Ridge National Lab.

EFFECT OF IMMATURITY, HYPOPHYSECTOMY AND ADRENALECTOMY UPON THE CHANGES IN THE BLOOD PLASMA DURING THE ACUTE RADIATION SYNDROME IN THE RAT. Henry I. Kohn, Nancy Swingley, W. J. Robertson, and Marian Kirshlis. June 7, 1951. 32p. (ORNL-656), Am. J. Physiol. 165, 43-56(1951).

Plasma levels of glucose, NPN, P, total protein, albumin/globulin ratio, chloride and cholesterol were studied in rats 10-14 days following x irradiation (whole body). Immature animals were more radiosensitive than mature, age also altered response of hypophysectomized, adrenalectomized animals. Radiation effects are classified as primary (effects in irradiated cells) and secondary (effects elsewhere). NSA 5-4337.

2125

BENEFICIAL EFFECTS OF VITAMIN B₁₂ AND FOLIC ACID ON RECOVERY FROM INTERNAL RADIATION BY P³². W. E. Cornatzer, Camillo Arton, George T. Harrell, Jr., and David Cayer. Proc. Soc. Exptl. Biol. Med. 76, 552-4(1951). Mar. NSA 5-4338.

2126

INHIBITION OF RUTIN OF CAPILLARY INJURY BY ALPHA-RADIATION IN RATS. John Q. Griffith and James F. Couch. Blood 6, 552-4(1951). June.

Twenty milligrams of rutin given by pellet and 25 mg in solution gave good protection against up to 200 μ c (radon ointment) of α radiation. NSA 5-4339

2127

THE PRESSOR AMINES IN THE ADRENAL MEDULLA AFTER IRRADIATION. C. T. Anderson, H. Blaschko, J. H. Burn, and R. H. Mole. Brit. J. Pharmacol. 6, 342-50(1951). June.

Pressor amines in the adrenal gland are decreased in mice 48 hours after total body x irradiation. Dopadecarboxylase (possibly important in synthesis of the pressor amines) in the liver was somewhat less after x irradiation, and could be restored to normal levels by feeding the mice pyridoxine, but this did not influence fall of pressor amines. Adrenal glands were hypertrophied after irradiation. Pyridoxine HCl appeared to protect against radiation sickness and to reduce mortality after total body x irradiation of mice. NSA 5-4340.

2128

EXCRETION OF YTTRIUM-91 IN RABBITS. Barbara Kidman, Margaret Tutti, and Janet Vaughan. Nature 167, 858(1951). May 26.

Effect of age on excretion and retention of Y in rabbits is described. Findings confirm validity of decay-curve method for estimating excretion of Y⁹⁰. NSA 5-4356.

2129

PERIPHERAL-BLOOD AND BONE-MARROW TESTS DURING EXPERIMENTAL INTOXICATION WITH URANIUM. Aldo Masturzo. Folio Med. (Naples) 33, 643-71(1950). Nov. (In Italian)

Results of gradual intoxication of guinea pigs and rabbits with uranium chloride include normochromic anemia with hyperchromic tendency and hyperplasias of bone marrow, the hyperactivity extending mainly to less mature elements. NSA 5-4357.

2130

Cancer Research Inst., New England Deaconess Hospital.

THE MECHANISM OF ACUTE HYPOTENSION FOLLOWING TOTAL BODY IRRADIATION. Philip O. B. Montgomery and Shields Warren. [nd]. 18p. (AECU-1488). Proc. Soc. Exptl. Biol. Med. 77, 803-7(1951).

Cause of immediate hypotension following large doses of total-body irradiation is believed to be depression of the nervous system. NSA 5-4645.

2131

Argonne National Lab.

EFFECTS OF X IRRADIATION IN NEWBORN RATS. S. Phyllis Stearner and Emily J. B. Christian. June 1951. J. Exptl. Zool. 118, 495-505(1951).

Results of x irradiating newborn rats with 400 to 1000 r at 6, 40 and 80 r/min is described. NSA 5-4646.

2132

Chicago. Univ. Air Force Radiation Lab.

QUARTERLY PROGRESS REPORT NO. 21. (1956). 125p. Contract AF41(657)-26. (NP-6176).

Included reports on: survival time, weight loss, mortality of mice treated with various compounds before and after various whole body x ray exposures, effect of dose fractionation on certain enzyme systems(*in vivo*) in tissues of rats and guinea pigs; changes in survival and spleen ATP-ase in irradiated mice receiving spleen cells from donor mice recovering from treatment with 6-MP, aminopterin, Myleran, or TEM; effects of small γ and fast neutron doses on life span of mice. NSA 11-2779.

2133

ADRENAL SHIELDING AND SURVIVAL OF RATS AFTER X-IRRADIATION. Abraham Edelman. Am. J. Physiol. 165, 57-60(1951). Apr. 1.

Shielding of adrenal glands of rats appreciably decreased the number of deaths following 700 or 800 r whole-body x irradiation NSA 5-4648.

2134

COMBINED EFFECTS OF X-RAYS AND TEMPERATURE ON MITOSIS. L. F. La Cour. Nature 167, 318-19(1951). Feb. 24.

Combined cold and x rays show mitosis, and when applied simultaneously suppress it. No chromosome sickness present, no breakage observed following irradiation in *Trillium grandiflorum* chilled at 0 to 3°C for 3 days pre-irradiation of root tips. NSA 5-4649.

2135

CRITICAL INTRODUCTION TO THE STUDY OF THE TARGET THEORY. I GENERAL OUTLINE OF THE THEORY. Aldo Piergrossi. Radiol. med. 37, 389-411(1951). May. (In Italian) NSA 5-4650.

2136

CRITICAL INTRODUCTION TO THE STUDY OF THE "HIT" THEORY. PART II. RADIOBIOLOGICAL EFFECTS AND DENSITY OF IONIZATION. Aldo Piergrossi. Radiol. med. 37, 471-88(1951). June. (In Italian)

Effects of various spacial distributions of ions and concept of elementary radiosensitive volumes within the living cell are discussed. NSA 5-4651.

2137

Naval Radiological Defense Lab.

THE RELATIONSHIP OF RADIATION DOSE TO LETHALITY AMONG EXERCISED ANIMALS EXPOSED TO ROENTGEN RAYS. (TECHNICAL OBJECTIVE AW-6). D. I. Kumeldorf and D. C. Jones. July 11, 1951. 18p. (AD-521(B)). Am. J. Physiol. 167, 626-32(1951).

Mortality of x irradiated rats is significantly greater when exposure is followed by daily exhaustive exercise. Specific environment associated with method of exercise is not responsible for increased mortality. NSA 5-4652.

2138

Los Alamos Scientific Lab.

RADIOLOGIC HAZARDS PREDICTED FOR A GIVEN HEIGHT BURST OF AN ATOMIC BOMB. Charles H. Perry Apr. 6, 1951. Decl. July 30, 1951. 14p. (AECD-3210).

Radiologic hazard created by a 1000-ft high air burst of a nominal sized nuclear bomb is appraised. NSA 5-4653.

2139

Brookhaven National Lab.

RADIOLOGICAL MONITORING FOR CIVIL DEFENSE. J. B. H. Kuper. [nd]. 7p. (AECU-1507).

Suggestions are presented for a practical radiological monitoring system employing "wardens" and "surveyors" to determine dosage from mixed radiation field and to compute permissible working times for emergency personnel. NSA 5-4654.

2140

Clinton Labs.

AN ATTEMPT TO DETECT SMALL AMOUNTS OF IRRADIATION INJURY. M. B. Cupp. Sept. 1945. Decl. May 28, 1951. 6p. (AECD-3183; MonH-21).

Serum of irradiated animals was injected into leukemic animals in a search for more sensitive tests for radiation injury. NSA 5-4661.

2141

GENETIC CONTROL OF GLUTATHIONE SYNTHESIS IN GLOMERELLA. C. L. Market. Genetics 37, 603-4 (1952).

2142

THE EFFECT OF OXYGEN ON MUTATION INDUCTION BY X-RAYS. Edward H. Anderson. Proc. Natl. Acad. Sci. U. S. 37, 340-49(1951). Juné.

Sensitivity of 2 strains of *E. coli* to lethal x ray effects was increased by presence of O_2 during exposure. Mutation rates increased with length of x ray exposure in presence of either O_2 or N_2 . NSA 5-4899.

2143

Argonne National Lab.

EXHIBIT-RADIOAUTOGRAPHS OF U^{233} IN BONE AND SOFT TISSUE. James S. Arnold. Mar. 1951. Decl. June 6, 1951. 17p. (AECD-3176).

Radioautographs show deposition of U^{233} and Pu in bone and soft tissues of animals sacrificed at periods of 24 hr to 4 yr following injection. NSA 5-4932.

2144

LESIONS OF THE ALIMENTARY TRACT OF DOGS EXPOSED TO WHOLE-BODY X-RADIATION OF 300-3,000 r. G. Brecher and E. P. Cronkite. Am. J. Pathol. 27, 676-7 (1951).

Deaths following doses of less than 1000 r were primarily due to the sequelae of pancytopenia, with the tonsils serving as the portal of entry for bacteria. In dogs exposed to 2000 or 3000 r, the functional disturbances produced by the extensive denudation of the mucosa of the small intestine were probably responsible for the extreme dehydration and shortened survival time.

2145

CLINICAL RADIATION DOSAGE. III. BIOLOGICAL FACTORS IN RADON AND ISOTOPE DOSAGE. L. Cohen. Brit. J. Radiology 23, 25-7(1950). NSA 4-1865.

2146

Western Reserve Univ.

MONTHLY PROGRESS REPORT, MAY, 1951. Hymer L. Friedell. July 6, 1951. 8p. (NYO-1631).

Includes report on: effect of further irradiation upon irradiation-damaged hematopoietic systems of animals using P^{32} and Au^{198} , toxicity and distribution of $CrPO_4$, effect of peritoneal lavage on survival of x rayed dogs; x ray effect on protein digestion and absorption in dogs. NSA 5-4941.

2147

Oak Ridge National Lab

STUDIES OF RADIOACTIVITY IN FISH FROM WHITE OAK LAKE AND THE CLINCH RIVER. Venus I. Knobl July 9, 1951. 39p. (ORNL-1031).

Sr^{89} , Sr^{90} , Y^{90} and Cs^{137} in bodies of fish in White Oak Lake made then unsafe as food. Fish in Clinch River are not recommended for consumption but appear to have insignificant activity. NSA 5-4942.

2148

Radiation Lab, Univ of Calif

BIOLOGICAL STUDIES OF RADIATION EFFECTS. p. 41-72 of Medical and Health Physics Quarterly Report, January, February, March, 1951 J. H. Lawrence May 8, 1951. (AECD-3219(p. 41-72))

Includes reports on: effect of cyclotron irradiation on pituitary gland of rats, fate of Fe^{59} -tagged red blood cells injected into rats, in vivo kinetics of iron turnover in tissues of normal persons and those with blood disorders. NSA 5-4950.

2149

Brookhaven National Lab.

EFFECTS OF CONTINUOUS GAMMA RADIATION ON CORN! W. Ralph Singleton [nd] 2p (AECU-1391). NSA 5-4951.

Brookhaven National Lab

THE RELATION OF NUCLEIC ACID METABOLISM TO THE GENETIC EFFECT OF RADIATION IN BACTERIA. B. A. Rubin. [nd]. 1p. (AECU-1436)

This report appears in its entirety in NSA NSA 5-4953.

2151

Brookhaven National Lab

A CYTOLOGICAL AND CYTOCHEMICAL APPROACH TO AN UNDERSTANDING OF RADIATION DAMAGE IN DIVIDING CELLS A. H. Sparrow, M. J. Moses, and R. Steele [nd] 17p. (AECU-1438), Brit. J. Radiology 25, 182-9(1952)

A study of the amount of chromosome fragmentation induced by dosage of 50 r at various stages in the meiotic nuclear cycle of *Trillium erectum*. NSA 5-4954.

2152

New England Deaconess Hospital, Boston, Cancer Research Inst.

SOME ACUTE CYTOLOGIC EFFECTS OF IONIZING RADIATION. Shields Warren, Margaret W. Holt, and Sheldon C. Sommers. [nd]. 10p. (AECU-1443), Am. J. Clin. Pathol. 22, 411-17(1952).

Lethal radiation effects in radiosensitive rat and mouse cells include formation of large intranuclear vacuoles and stretched nuclear membranes. Nonlethal changes are smaller intranuclear vacuoles, decreased Feulgen stain of nuclear chromatin and sap, and loss of sharp staining of nuclear membranes. NSA 5-4955

2153

Delaware Univ

RADIOSENSITIVITY OF HAPLOID AND DIPLOID HABROBRACON DURING PUPAL DEVELOPMENT. A. M. Clark. Delaware Univ and C. J. Mitchell, Marine Biological Lab., Woods Hole, Mass. [nd] 15p. (AECU-1444)

Differential radiosensitivity of haploid and diploid wasps was studied using x rays. Diploids were more resistant than haploids at all stages of pupal development. NSA 5-4956.

2154

Brookhaven National Lab

EFFECTS OF CONTINUOUS GAMMA RADIATION ON MUTATION RATE IN MAIZE W. R. Singleton. [nd]. 1p. (AECU-1461).

Continuous γ radiation from Co^{60} was used in study of mutations induced in maize pollen. (The report appears in its entirety in NSA). NSA 5-4957.

2155

Brookhaven National Lab.

THE EFFECT OF CONTINUOUS GAMMA RADIATION UPON STARCH FORMATION IN ZEA MAYS POLLEN.

M. L. Koester [nd]. 1p. (AECU-1463).

Pollen from corn receiving up to 1.3 r/day showed no increase over control in percent abnormal pollen, above 2.6 r/day gradual increase occurred in percent abnormal pollen grains (The report appears in its entirety in NSA). NSA 5-4958.

2156

Brookhaven National Lab. and New York Univ.

EFFECTS OF DIRECT CATHODE RAY PARTICLE IRRADIATION OF THE HYPOPHYSIS AND WHOLE BODY X-IRRADIATION ON THE ADRENOCORTICOTROPHIN, GONADOTROPHINS, AND THYROTROPHIN OF THE PITUITARY GLAND OF THE RAT. G. M. Mateyko, A. Edelman, H. A. Charipper, and A. S. Gordon. [nd]. 1p. (AECU-1513), *Am. J. Physiol.* **167**, 808-9 (1951).

This report appears in its entirety in NSA. NSA 5-4959.

2157

Argonne National Lab.

EFFECT OF CYSTEINE ON THE RADIOSENSITIVITY OF THYMIC CELLS IN VITRO! R. L. Staube, George Svihla, M. E. Blackford, and H. M. Patt. July 1951. 1p. (AECU-1532, UAC-407)

Cysteine (0.02 M) does not alter activity of normal cells. At 24 hr post irradiation (1000 r) control thymic cell suspensions showed reduced survival with many cells nonmotile, those with cysteine contain near normal complement of motile forms. NSA 5-4960.

2158

COSMIC RAYS AND THE ORIGIN OF SPECIES. M. Delbruck and N. W. Timofeef-Ressovsky. *Nature* **137**, 358-9 (1936).

Dr. Hamskaw Thomas suggested that the large variety of species and high percentage of endemics found at high altitudes might be due to mutants produced by irradiation with cosmic rays. Authors consider this argument invalidated because: 1) mutation rate induced by cosmic rays in any species can be derived if x-ray induced mutability for this species is known, 2) difference between mutations at sea level and those at great altitudes is negligible.

2159

Argonne National Lab

PLANNED CONTROLS OF EXPERIMENTAL CONDITIONS IN THE NEUTRON TOXICITY PROGRAM AT ARGONNE NATIONAL LABORATORY. Howard H. Vogel, Jr. July 1951. 1p. (AECU-1555, UAC-413).

Acute lethal action of radiobiological additivity of fast neutrons and γ rays was studied in mice. Effect of transportation on longevity of experimental animals is described (The report appears in its entirety in NSA). NSA 5-4962.

2160

Argonne National Lab.

THE EFFECT OF X RAYS ON THYMOCYTES AND ITS MODIFICATION BY CHEMICAL MEANS. H. M. Patt, M. E. Blackford, R. L. Straube, and D. E. Smith, July 1951. 1p. (AECU-1557, UAC-409), *Am. J. Physiol.* **167**, 816 (1951).

X rays decreased life span of rabbit thymocytes in vitro, % surviving cells decreasing exponentially with increasing dosage. Results show at least two mechanisms concerned in cytotoxic action of x rays, one of which is subject to action of cysteine and anoxia. (The report appears in its entirety in NSA). NSA 5-4963.

for x, γ , β -radiation and uranium. NSA 5-4988.

2178

Army Inst. of Pathology
MEDICAL EFFECTS OF ATOMIC BOMBS, THE REPORT
OF THE JOINT COMMISSION FOR THE INVESTIGATION
OF THE EFFECTS OF THE ATOMIC BOMB IN JAPAN,
VOLUME V. Ashley W. Oughterson, George V. LeRoy,
Averill A. Liebow, E. Cuyler Hammond, Henry L.
Barnett, Jack D. Rosenbaum, and B. Aubrey Schneider.
[nd]. 343p. (NP-3040, AM-2837(vol. V)).

Statistical analysis of medical histories of over 13,000
Japanese alive 20 days after bombing is presented.
NSA 5-4987.

2179

Atomic Energy Commission
HEALTH PHYSICS INSURANCE SEMINAR, (FEBRUARY
6-10, 1950). K. Z. Morgan, E. Pollard, F. P. Cowan,
J. B. H. Kuper, D. Balber, N. H. Woodruff, P. C.
Aebersold, G. Failla, M. Eisenbud, H. Blatz, and G.
W. Morgan. Mar. 12, 1951. 161p. (TID-388).

Topics of 15 papers include; atomic and nuclear physics,
radiation units, effects, uses, maximum permissible
exposures, radioisotopes; decontamination and waste
disposal. NSA 5-4986.

2180

PROMPT EFFECT OF GAMMA RADIATION ON RESPIRATION
OF MONKEYS. M. Brooks. Federation Proc. 14, 20-21
(1955).

After total-body irradiation, there was an increase
in the respiratory rate with all doses above 1000 r. The
oxygen consumption rate was unchanged with a dose of
2500 r and tended to be depressed with higher doses.

2181

New Univ. Hospital and New York Univ.
STUDIES OF THORIUM X APPLIED TO HUMAN SKIN,
I. ROUTES AND DEGREE OF PENETRATION AND
SITES OF DEPOSITION OF THORIUM X APPLIED IN
SELECTED VEHICLES Victor H. Witten, Milton S.
Ross, Eleanor Oshry, Arthur B. Hyman, and Vera
Holmstrom. [nd]. 22p (AECU-1470). J. Invest. Dermatol.
17, 311-22(1951).

Radioautographs show Ra^{224} penetrates epidermis, is
distributed through prickle cell and basal layers, flows
down hair follicle penetrating wall and passes down sweat
duct into sweat gland. NSA 5-4999.

2182

Radiation Lab., Univ. of Calif.
METABOLIC PROPERTIES OF VARIOUS MATERIALS.
J. G. Hamilton. p. 4-40 of Medical and Health Physics
Quarterly report, January, February, and March, 1951.
May 8, 1951. Decl. Aug. 6, 1951. (AECU-3219(p. 4-40)).

Includes report on; thyroid uptake of At^{211} by monkeys,
tissue distribution of At^{211} given intravenously to rats,
preparation of various radiotracers NSA 5-5001.

2183

CYTOLOGIC CHANGES FOLLOWING INTRAVENOUS
INJECTION OF THORIUM DIOXIDE. William R. Christensen
and Sheldon C. Sommers. [nd]. 7p. (AECU-1535).

Precancerous condition was observed in rat tissues 15 mo. after injection of colloidal thorium dioxide. Microscopic studies of livers 15 mo. after injection revealed marked R-E hyperplasia and anaplasia without invasiveness. NSA 5-5002.

2184

Tennessee Univ.

QUARTERLY PROGRESS AND WORK ACCOMPLISHMENT REPORT FOR QUARTER ENDING MARCH 31, 1951. Mar. 31, 1951. 23p. (ORO-35).

Includes report on: effect of irradiation on O_2 consumption of spermatozoa, tissue distribution of Ca, Sr, P and effect of developmental stage on uptake of Ca (bone studies). NSA 5-5027.

2185

Vogel, F. Stephen and John C. Ballin. Proc. Soc. Exptl. Morphological Changes in Thymus of Rats Following Whole-Body Exposure to Massive Doses of Radiation. F. Stephen Vogel and John C. Ballin. Proc. Soc. Exptl. Biol. Med. 90, 419-23(1955). NSA 10-1990.

2186

THE LOCATION OF LITERATURE ON ATOMIC ENERGY. Fred E. Croxton. Coll. and Research Libraries 12, 103-8(1951). Apr. NSA 5-5350.

2187

Atomic Energy Project, Univ. of Rochester. BIOLOGICAL EFFECTS OF EXTERNAL RADIATION (X RAYS AND γ RAYS). p. 13-33 of Quarterly Technical Report, January 1, 1951 through March 31, 1951. Henry A. Blair, Director. May 9, 1951. (UR-164(p. 13-33)).

Includes reports on: urinary excretion of 17-ketosteroids in dogs after 350 r total-body x ray dose, blood cultures of antibiotic-treated dogs post irradiation, glucose tolerance in dogs after 450 r total-body x rays. NSA 5-5464.

2188

Argonne National Lab.

β -IRRADIATION EFFECTS FROM DIFFUSE AND POINT SOURCES OF Sr^{90} , PROGRESS REPORT. Janet V. Passonneau and Katherine Hamilton. p. 123-5 of Division of Biological and Medical Research, Quarterly Report, August, September, October, 1950. Austin M. Brues, Director. (ANL-4531(p. 123-5)).

Skin of rats was exposed for 48 hr to Sr^{90} -impregnated paper or glass beads, effects are described. NSA 5-5466.

2189

Argonne National Lab.

EFFECTS OF EXTERNAL X IRRADIATION. p. 14-63, 107-19, 126-42, and 177-82 of Division of Biological and Medical Research, Quarterly Report, August, September, October 1950. Austin M. Brues, Director. (ANL-4531 (p. 14-63, 107-19, 126-42 177-82)).

External-radiation effects were studied in various animals including mice, guinea pigs, rats, C. paramecium, grasshoppers, and chicks. NSA 5-5465.

2190

CONCERNING X-RAY THERAPY OF TUBERCULOUS LYMPH NODES OF THE NECK. Karl Umbach. Strahlentherapie 78, 403-10(1949). NSA 4-1871

2191

STUDIES ON THE BIOLOGICAL EFFECT OF RADIATION OF VARIOUS WAVELENGTHS. M. Bolaffio. Strahlentherapie 20, 673-736(1925).

2192

Carbide and Carbon Chemicals Co., Y-12 Area. RADIATION EFFECTS ON THE BLOOD. Francis Sachs. July 23, 1951. 11p. (Y-B4-22).

Bibliography of 51 titles from Nuclear Science Abstracts on the subject of radiation effects on blood is presented. NSA 5-5469.

2193

Atomic Energy Project, Univ. of Calif., Los Angeles. THE EFFECT OF ANOXIA ON THE HEMATOLOGICAL INJURY IN RATS CAUSED BY ROENTGEN IRRADIATION. Leslie R. Bennett, Robert A. Hansen, and Andrew H. Dowdy. Sept. 12, 1954. 18p (UCLA-156)

Hemograms of rats after 500 or 1000 r of x rays whole body exposure administered to animals subjected to 4% O_2 atmosphere, show peripheral blood elements received partial protection against injury NSA 5-5471.

2194

Western Reserve Univ., School of Medicine. SOME BIOCHEMICAL EFFECTS OF RADIATION ON LYMPHATIC TISSUE. Paul S. Lavik and Helen Harrington, July 15, 1951. 30p (NYO-1626)

Effect of toxic dose of P^{32} or x rays on P composition and P^{32} incorporation in thymus, spleen, and liver were studied in adult rats NSA 5-5472.

2195

Argonne National Lab.

RADIATION EFFECTS ON TUMORS, p.17-20, 48-57 of Quarterly Report November, December, 1950 and January 1951, Division of Biological and Medical Research. Austin M. Brues, Director. (ANL-4571(p. 17-20, 48-57)).

Effect of various radiation exposures on various mouse tumors was studied. Account of pretreatment with NaCN and methylene blue is given NSA 5-5473.

2196

Argonne National Lab.

PHYSIOLOGICAL EFFECTS OF X RADIATION, p. 21-4, 28-9, 58-9, 94-100, 106-25 of Quarterly Report November, December, 1950 and January, 1951, Division of Biological and Medical Research. Austin M. Brues, Director. (ANL-4571(p. 21-4, 28-9, 58-9, 94-100, 106-25))

Includes report on: changes in bone marrow of guinea pigs with γ -ray induced anemia, fast neutron effect on mice, x ray effect on newborn rats, erythrocyte sedimentation in x rayed dogs, respiration of x rayed C. creatinovorans. NSA 5-5474.

2197

Argonne National Lab.

RADIATION PROTECTION, p. 30-46 of Quarterly Report November, December, 1950 and January, 1951, Division of Biological and Medical Research. Austin M. Brues, Director. (ANL-4571(p. 30-46)).

Includes report on: spleen shielding and cysteine pretreatment of x rayed mice, O_2 consumption and weight loss of x irradiated rats, post irradiation survival of primitive red blood cells and lymphocytes in estrogen-treated animals. NSA 5-5475.

2198

Argonne National Lab.

[CYTOLOGICAL EFFECTS OF RADIATION]. p. 64-70, 79-88, and 93 of Quarterly Report November, December, 1950 and January, 1951, Division of Biological and Medical Research. Austin M. Brues, Director. (ANL-4571(p. 64-70, 79-88, 93)).

Includes report on: x ray effect on anaerobic diapause grasshopper embryos treated with N_2CO_2 , thermal-neutron irradiation of hemp seed, genetic effects of metabolized tritium in P. aurelia. NSA 5-5476.

2199

Atomic Energy Project. Univ. of Calif., Los Angeles. LATE EFFECTS OF ROENTGEN IRRADIATION, I. STUDIES ON RATS IRRADIATED UNDER ANOXIC ANOXIA. Leslie R. Bennett, Sarah M. Chastain, Jerry S. Flint, Robert A. Hansen, and Alvin E. Lewis. Sept. 7, 1951. 24p. (UCLA-154), Radiology 61, 411-18(1953).

Rats were studied as long as 540 days after 600-1400 r whole-body x ray exposure. Life span was shortened,

with high death rate due to pneumonia. Nephrosclerosis and generalized arteriosclerosis, hypertension, blood dyscrasias, cataracts, cachexia and late epilation were also observed. NSA 5-5478.

2200
MORTALITY AND SKIN TRANSPLANTABILITY IN X-IRRADIATED MICE RECEIVING ISOLOGOUS, HOMOLOGOUS OR HETEROLOGOUS BONE MARROW. J. J. Trentin. *J. Proc. Soc. Exptl. Biol. Med.* **92**, 688-93(1956). (Baylor Univ. Coll. of Medicine and Univ. of Texas Dental Branch, Houston).

The degree and duration of protection afforded by isologous, homologous, and heterologous sources of bone marrow administered after lethal doses of x-irradiation in mice was directly proportional to the closeness of genetic relationship of the marrow donor to the irradiated mice. NSA 10-11668.

2201
THE EFFECT OF X RADIATION AND RAPID ELECTRONS (4-Mev) ON MITOSIS IN ROOT ENDS OF *VICIA FABAE*. H. L. Heinrich, W. Paul, and G. Schubert. *Naturwissenschaften* **37**, 544-5(1950). Dec.

Changes noted: shortening of chromosomes; decreased mitoses, increased damage to cells in telo- and anaphase. Rapid electrons were less effective than x rays. NSA 5-5480.

2202
PROTECTIVE PROPERTIES OF SODIUM CYANIDE AND SODIUM NITRIDE AGAINST X-RAYS. A. Herve, Z. M. Bacq, and H. Betz. *J. chim. phys.* **48**, 256-7(1951). May-June. (In French)

Injection of 0.1 mg NaCN immediately prior to irradiation (700 r) reduces mortality of mice 50 to 80% Na₂N or glutathione reduce mortality 40 to 50% while simultaneous administration of the latter two give an additive effect, reducing mortality 90 to 95%. NSA 5-5481.

2203
EFFECT OF HIBERNATION UPON SURVIVAL TIME FOLLOWING WHOLE-BODY IRRADIATION IN THE MARMOT (*MARMOTA MONAX*). Falconer Smith and Marie M. Grenan. *Science* **113**, 686-8(1951). June 15.

Results indicate that delayed development of lethal processes after irradiation accompanies lowered body temperature and reduced metabolic rate in the marmot. NSA 5-5483.

2204
CHANGES IN THE TOTAL CIRCULATING EOSINOPHILE COUNT IN CYCLOTRON WORKERS. Campbell Moses and Madeline Platt. *Science* **113**, 676(1951). June 15.

Eosinophil counts of three workers who received indeterminate cyclotron exposure were markedly increased over period of 12 wk. Eosinophil count is suggested as radiation exposure indicator. NSA 5-5484.

2205
SOME EARLY NUCLEAR EFFECTS OF IONIZING RADIATION. Shields Warren, Margaret W. Hold, and Sheldon C. Sommers. *Proc. Soc. Exptl. Biol. Med.* **77**, 288-91(1951). June.

Tissues of P³²-injected rats and mice showed large intranuclear vacuoles and stretching of nuclear membranes in radiosensitive cells, small intranuclear vacuoles and lighter staining in parts of radioresistant tissues. NSA 5-5485.

2206
INCREASE IN THE NUMBER OF LABROCYTES IN THE HEMATOPOIETIC TISSUES OF MICE FOLLOWING X-IRRADIATION. Lucie Arvy, Jacques-Andre Boiffard,

and Manfred Gabe. *Compt. rend.* **232**, 1022-4(1951). Mar. 5. (In French)

Labrocytes (heparinocytes, tissular basophils) increase in the medulla of lymphatic ganglia and bone marrow of mice after 2000 r whole-body exposure. NSA 5-5486.

2207
INHIBITION BY TESTOSTERONE OF RADIATION-INDUCED LYMPHOID TUMOR DEVELOPMENT IN INTACT AND CASTRATE MALE MICE. Henry S. Kaplan and Mary B. Brown. *Cancer Research* **11**, 262(1951). Apr.

Testosterone was found to exert a striking inhibitory effect on the development of lymphoid tumors in irradiated male mice. Castration did not significantly modify lymphoid tumor incidence. NSA 5-5487.

2208
EFFECT ON LYMPHOID TUMOR INCIDENCE OF CHANGES IN TOTAL DOSE, FRACTIONATION, AND PERIODICITY OF WHOLE-BODY ROENTGEN IRRADIATION. Henry S. Kaplan and Mary B. Brown. *Cancer Research* **11**, 262(1951). Apr. NSA 5-5488.

2209
STERILIZATION AND INTERSEXUALITY OBTAINED IN CHICKEN EMBRYOS BY X-IRRADIATION. PRELIMINARY REPORT. Berthe Salzgeber. *Bull. Biol. France, Belg.* **84**, No. 3, 225-33(1950). July-Sept. (In French) NSA 5-5490.

2210
THE EFFECT OF IONIZING RADIATIONS ON THE BROAD BEAN ROOT. PART VIII (continued). L. H. Gray and M. E. Scholes. *Brit. J. Radiol.* **24**, 82-92, 176-80, 228-36(1951). Feb.-Apr.

Detailed study of x and α radiation effects on normal root growth of *Vicia faba* is reported. Growth is first depressed, then returns to normal, the extent of effect depending on dose (duration of exposure). NSA 5-5491.

2211
THE PROTECTION OF BACTERIA BY PYRUVATE AGAINST RADIATION EFFECTS. T. L. Thompson, Roy B. Mefferd, Jr., and Orville Wyss. *J. Bacteriol.* **62**, 39-43(1951). July. NSA 5-5492.

2212
RESPONSES OF MITOTIC CELLS IN LIVER AND CARCINOMA TO CONTINUOUS INTERNAL IRRADIATION. Austin M. Brues and Leola Rietz. *Cancer Research* **11**, 240(1951). Apr.

Cellular changes in rat liver exposed to β radiation from glass beads containing Y⁹¹ or Ce¹⁴⁴-Pr¹⁴⁴ are described NSA 5-5493.

2213
ADRENAL CORTICAL FUNCTION AND LYMPHOID TUMOR INCIDENCE IN IRRADIATED MICE. Henry S. Kaplan, Mary Brown, and Sumner N. Marder. *Cancer Research* **11**, 262-3(1951). Apr.

Adrenalectomized mice proved more susceptible to lymphoma induction than did controls. NSA 5-5494.

2214
THE EFFECT OF IRRADIATION ON AZO DYE NEOPLASIA IN THE RAT LIVER. I. INFLUENCE OF X-RAY AND RADIOGOLD ON THE INCIDENCE OF HEPATOMA AND THE HISTOLOGY OF THE LIVER IN RATS FED DIMETHYLAMINOAZOBENZENE. George Z. Williams, Nelson F. Young, and Jeffries P. Moore. *Cancer Research* **11**, 289(1951). Apr. NSA 5-5495.

2215
SUCCESSFUL GROWTH AND SERIAL TRANSPLANTATION OF HUMAN TUMORS IN RATS AND MICE IRRADIATED BY X-RAYS. Helene Wallace Toolan. *Cancer Research* **11**, 285-6(1951). Apr. NSA 5-5497.

2216

CHANGES IN THE RADIOSENSITIVITY OF TUMOR FRAGMENTS INDUCED BY PRE-TREATMENT IN VITRO WITH CYSTEINE, METHYLENE BLUE, AND SODIUM CYANIDE B. Vincent Hall. Cancer Research **11**, 254 (1951) Apr. NSA 5-5498.

2217

BIOLOGICAL EFFECTS OF VERY SMALL X-RAY DOSES ADMINISTERED DAILY FOR ONE YEAR. Rudolf Pape. Strahlentherapie **84**, No. 2, 245-54(1951). (In German)
Blood-forming tissues were apparently stimulated by daily doses of 0.25 r given for 3 mon to 1 rat, and for 1 yr to 2 rats. NSA 5-5499.

2218

EFFECT OF LOCAL ROENTGEN IRRADIATION ON THE PERMEABILITY OF CAPILLARIES IN MAN. Anton Neumayr and Bruno Thurnher. Strahlentherapie **84**, No. 2, 297-305(1951). (In German)

Increased capillary permeability was observed in man, with a threshold effect varying from 3 to 100 r. NSA 5-5500.

2219

CONTRIBUTION TO THE PATHOLOGY OF GENERAL X-RAY INJURIES, WITH SPECIAL EMPHASIS ON THE ROLE PLAYED BY HISTAMINE. Willi Hiemsch. Strahlentherapie **84**, No. 2, 255-71(1951). (In German)

Results indicate that histamine accumulation does not play a decisive part in general injury of the body produced by x rays. NSA 5-5501.

2220

FUTHER OBSERVATIONS ON INHIBITION OF LYMPHOID TUMOR DEVELOPMENT BY SHIELDING AND PARTIAL-BODY IRRADIATION OF MICE Henry S. Kaplan. Cancer Research **11**, 261-2(1951). Apr. NSA 5-5502.

2221

EFFECT OF X-RADIATION AND OF RADIOMIMETIC SUBSTANCES ON THE SULFHYDRYL CONTENT OF PLASMA: RELATIONSHIP TO ADRENAL ACTIVITY FOLLOWING STRESS Bernard Shacter. Cancer Research **11**, 277-8(1951). Apr. NSA 5-5503.

2222

Carbide and Carbon Chemical Co., Y-12 Area
LITERATURE SURVEY ON SKIN DECONTAMINATION-UNCLASSIFIED MATERIAL, PART III Francis L. Sachs. July 5, 1951. 23p. (Y-B4-10).

Total of 169 titles on: toxicity of various compounds, skin permeability, x ray effects on skin, hazards in use of radioisotopes, carcinogens, decontamination, protective ointments, effects of atom bomb explosions are listed. NSA 5-5506.

2223

Atomic Energy Research Establishment, Harwell, Berks (England)
STATISTICAL REVIEW OF HAEMATOLOGICAL TECHNIQUES AND RECORDS. A. C. Chamberlain and F. M. Turner. Mar. 1951. 36p. (AERE-Med/R-708), Brit. J. Radiol. **25**, No. 292, 169-76(1952).

Causes and extent of normal variations in total white cell, lymphocyte and neutrophil count are considered. Author concludes that WBC counts are not as valuable a tool in detecting radiation injury as previously reported. NSA 5-5507.

2224

MEDICAL ASPECTS OF THE ATOMIC BOMB. Albert Rabinowitz. S. African Med. J. **25**, 489-93(1951). July 14 NSA 5-5510.

2225

Brookhaven National Lab.
SURVIVAL OF ADRENALECTOMIZED RATS WITH AND

WITHOUT REPLACEMENT THERAPY FOLLOWING X-IRRADIATION. Abraham Edelmann. [nd]. 13p. (AECU-1599), Am. J. Physiol. **167**, 345-8(1951).

Daily doses of adrenal extract or desoxycorticosterone acetate increased survival time of 650-r irradiated, adrenalectomized rats. NSA 5-5512.

2226

THE DISTRIBUTION OF PARENTERAL RADIOACTIVE GOLD COLLOID (Au¹⁹⁸) IN THE RAT Mary Lynn Haigler and George Z. Williams. Cancer Research **11**, 253(1951). Apr. NSA 5-5523.

2227

LES ISOTOPES RADIOACTIFS EN MEDICINE ET EN BIOLOGIE. M. Tubiana Paris, Masson et Cie. 1950. 391p.

Book summarizes physical, biological and medical uses and aspects of radiation and radioisotopes. NSA 5-5525.

2228

Argonne National Lab.
TOXICOLOGY. p. 72-106, 120-2, 157-62, 183-91 of Division of Biological and Medical Research, Quarterly Report, August, September, October, 1950. Austin M Brues, Director. (ANL-4531(p. 72-106, 120-2, 157-62, 183-91)).

Includes reports on: Ra removal from patient, determination of Rn in expired air, result of Po injection in mice HTO administration effects on rats, toxicity of U²³³, ²³⁸, ²³² in mice. NSA 5-5526.

2229

ON INDUSTRIAL RADIUM POISONINGS. Helmut Roth. Deut. med Wochschr. **76**, 776-7(1951). June 8. (In German)

A case of Ra poisoning is analyzed and suggestions are made for protection of workers NSA 5-5533.

2230

PART PLAYED BY NATURAL RADIOACTIVE ELEMENTS IN BIOLOGICAL PROCESSES. A. A. Drobkov. Uspekhi Sovremennoi Biol. **31**, No. 1, 82-100(1951). (In Russian)

Investigations on role of natural radioactive elements (K, Ra, U, Th, Rb, C¹⁴) in physiological processes in plants and animals are outlined with special emphasis on works of Russian authors. NSA 5-5554.

2231

THE RELATIONSHIP BETWEEN CHOLESTEROL AND RADIATION SICKNESS. Rudolf Hummel. Strahlentherapie **28**, 308-314(1930). (In German)

Author believes there is parallelism between decrease in cholesterol level in whole blood and x ray sickness, but not between decrease in serum cholesterol and x ray sickness. BA 5-19629.

2232

Brookhaven National Lab.
BIOLOGY AND MEDICINE. p. 44-9, 94-121 of Quarterly Progress Report, April 1-June 30, 1951. Aug. 1951. 34p. (BNL-117(p 44-9, 94-121)).

Includes reports on: x ray effects on Trillium and rats, γ -ray effect of Z. mays, relation of nucleic acid metabolism to genetic effect of radiation, intraocular tissue transplants and other medical studies on radiation effects NSA 5-6044.

2233

Argonne National Lab.
RADIUM TOXICITY PROGRAM; A PROGRESS REPORT OF CLINICAL STUDIES ON TWENTY-FOUR PATIENTS. William B. Looney. July 1951. 48p. (ANL-4666).

Author reports on clinical study of 24 patients who had received radium chloride 20 yr previously. From extensive tests made it was concluded that radium plus

unknown factor(s) combine to produce bone degeneration. NSA 5-6046.

2234

New York Univ. Hospital
SKIN CHANGES PRODUCED BY LOW VOLTAGE ROENTGEN RAY IRRADIATION, FINAL REPORT. Marion B. Sulzberger, Rudolf L. Baer, and Alexander Borota. [nd]. (AECU-1616). NSA 5-6049.

2235

Brookhaven National Lab.
THE ACTION OF X-RAYS ON FIBRINOGEN SOLUTIONS. H. A. Scheraga and L. F. Nims. [nd]. 21p. (AECU-1628), Arch Biochem. Biophys. 36, 336-44(1952).

Irradiation of fibrinogen solutions leads to fragmentation and polymerization of original fibrinogen molecule. NSA 5-6050.

2236

Brookhaven National Lab.
LUNG CARCINOMA IN AN INDUSTRIAL POPULATION AT AN ATOMIC PILE SITE. Robert A. Love. [nd] 3p. (AECU-1620).

Radiation exposure is shown not to be responsible for high incidence of primary lung carcinoma in industrial population at Brookhaven National Laboratory.

NSA 5-6051.

2237

Metallurgical Lab., Univ. of Chicago
THE ACUTE LETHAL ACTION OF SINGLE DOSES OF X-RAYS ON GUINEA PIGS. C. W. Hagen, Jr and G. A. Sacher. Aug. 1951. 12p. (CH-3907).

LD₅₀ was found to be 200 r for guinea pigs and mean survival times following lethal doses was quantitatively similar to those of other experimental animals.

NSA 5-6052.

2238

Western Reserve Univ., School of Medicine
THE EFFECT OF IONIZING RADIATION ON THE DESOXYRIBONUCLEIC ACID CONTENT OF RAT THYMUS NUCLEI. Helen Harrington and Paul S. Lavik. Sept. 27, 1951. 16p. (NYO-1627).

Data show irradiation causes no significant change in DNA phosphorus content/ nucleus of thymus cells of normal and x-rayed rats. Observed decrease in entire tissue is explained as being due to inhibited DNA synthesis resulting in decreased production of new cells followed by elimination of old lymphocytes from the thymus.

NSA 5-6053.

2239

EFFECT OF WHOLE BODY X-IRRADIATION ON THE STORAGE OF IRON IN LIVER, SPLEEN, AND KIDNEY OF RATS. Stephan Ludewig and Alfred Chanutin Am. J. Physiol. 166, 384-6(1951). Aug. 1.

After 500 r x ray exposure Fe contents of liver and spleen increased during 1st 2wk, decreased during 3rd wk, small increases noted in Fe contents of kidneys during 2nd post-irradiation week. NSA 5-6054.

2240

EFFECT OF WHOLE BODY X-IRRADIATION ON SERUM IRON CONCENTRATION OF RATS. Alfred Chanutin and Stephan Ludewig. Am. J. Physiol. 166, 380-3(1951). Aug. 1. NSA 5-6055.

2241

HEMATOLOGY OF THE DOG FOLLOWING INTRAVENOUS ADMINISTRATION OF RADIOACTIVE COLLOIDAL GOLD. Brownell Wheeler, Marvin A. Jackson, and Paul F. Hahn. Am. J. Physiol. 166, 323-7(1951). Aug. 1.

White blood cell count sedimentation rate, hemoglobin, hematocrit, and liver function changes are described in 14 dogs following injection of 1 mc/kg of Au¹⁹⁸. NSA 5-6056.

2242

ON THE POSSIBILITY OF DEMONSTRATING X-RAY AND Ra DAMAGE IN PERSONNEL BY OBSERVATION OF THE PROTHROMBIN LEVEL IN THE BLOOD. F. K. Beller, Jr. Fortschr. Gebiete Roentgenstrahlen 75, 95-8 (1951). July. (In German)

Observations indicate that slight radiation injury cannot be demonstrated by a decrease in prothrombin level, as x rays do not generally affect clotting potential of the blood. NSA 5-6057.

2243

STUDIES ON THE EFFECT OF X-IRRADIATION UPON PELOMYXA CAROLINENSIS WITH SPECIAL REFERENCE TO NUCLEAR DIVISION AND PLASMOTOMY E. W. Daniels. J. Expt. Zool. 117, 189-209(1951). June.

M L D. for this amoeboid protozoan was 96,000 r of x rays, survival curve was sigmoid. Doses between 15,000 and 140,000 r caused marked division delay when irradiation was administered during interphase and delay was proportional to dose with higher doses. Frequency of simple divisions (plasmotomies) was not altered. Fusion (plasmogamy) of irradiated and normal organisms tended to prevent x ray induced delay before the first mitosis. NSA 5-6058.

2244

EXPERIMENTAL RADIATION CATARACTS. David G. Cogan and David D. Donaldson Arch. Ophthalmol. (Chicago) 45, 508-22(1951). May.

Effects of x rays on eyes of rabbits 3 wk to 3 yr old were studied. NSA 5-6059.

2245

ROENTGEN IRRADIATION OF DESOXYRIBONUCLEIC ACID. III. THE RELATION OF DOSE TO DEGREE OF DEPOLYMERIZATION IN VIVO AND THE INFLUENCE OF OXYGEN TENSION. George Limperos. Cancer Research 11, 325-29(1951). May.

Depolymerization of DNA in rat thymus is proportional to x ray dose, reduced oxygen tension inhibits depolymerization. Prevention of involution of rat thymus tissue is described. NSA 5-6060.

2246

HISTOLOGICAL AND CHEMICAL ALTERATIONS PRODUCED IN MOUSE EPIDERMIS BY SOFT X-RADIATION. M. H. Toosy. Cancer Research 11, 361-5(1951) May.

Areas of epidermis on backs of mice were exposed to 50 kv x rays, at a distance of 20 mm, 2 ma, 100 r/sec, no filter. Histological and chemical studies made. Changes in irradiated mice are compared with changes in normal mice and mice exposed to methylcholanthrene. Chemical criteria of effect: Ca content of skin, iodine number of skin lipids, total skin lipids, reducible substances from skin lipids. NSA 5-6061.

2247

THE EXPERIMENTAL USE OF BONE MARROW IN ACUTE RADIATION INJURY. John M. Talbot and Ernest A. Pinson. Military Surgeon 108, 412-17(1951). May.

Studies of bone marrow homotransplants in rats with marrow depressed by benzene and x rays suggest that such transplants will survive in healthy condition for an approximate minimum of 4 weeks. Data on marrow injections are included. NSA 5-6062.

2248

EFFECTS OF EXTERNAL AND INTERNAL RADIATION ON CELL DIVISION. Austin M. Brues and Leola Reitz. Ann. N. Y. Acad. Sci. 51, 1497-1507(1951). Mar

Effect of ionizing radiations on mitosis include reversible delay in cell division, followed by visible chromosome damage and changes in mitotic figures. Study was made on regenerating rat liver. NSA 5-6063.

2249

EARLY HYPERTENSION IN RABBITS WHO HAVE BEEN EXPOSED TO WHOLE-BODY IRRADIATION. P. Brooks and H. B. Gerstner. *Federation Proc.* **15**, 25(1956).

All irradiated rabbits showed a pronounced initial reaction characterized by severe-hypotension and acceleration of respiratory rate. Blood of 16 irradiated animals was withdrawn during the collapse phase and the plasma was lyophilized. The lyophilized irradiated material produced a consistent blood pressure fall when injected into nonirradiated rabbits.

2250

THE RELATION OF OXYGEN UPTAKE TO HEMOGLOBIN SYNTHESIS. Jonas E. Richmond, Kurt I. Altman, and Kurt Salomon. *Science* **113**, 404-5(1951). Apr. 13.

Authors studied homogenates of bone marrow of (1) normal rabbits and (2) rabbits at various intervals after exposure to 800 r of x rays. Using C^{14} glycine as a hemoglobin precursor, they measured O_2 consumption and synthesis of hemin and globin. Findings are evaluated in parallel with histological findings. NSA 5-6065.

2251

RECOVERY FROM RADIATION INJURY. L. O. Jacobson, E. L. Simmons, E. K. Marks, and J. H. Eldredge. *Science* **113**, 510-11(1951). May 4.

Results indicate that factor involved in shielding or transplant experiments is definitely effective after irradiation and is probably of noncellular nature. NSA 5-6066.

2252

EFFECT OF X-RADIATION UPON SUCCINOXIDASE OF RAT KIDNEY (18772). M. LeMay. *Proc. Soc. Exptl. Biol. Med.* **77**, 337-9(1951). June.

No x ray alteration of succinic dehydrogenase or cytochrome oxidase was apparent in vitro using rat kidney homogenates from rats receiving whole body x ray exposure to 400 or 800 r. NSA 5-6067.

2253

PHOTORESTORATION FOLLOWING X IRRADIATION OF LYSOGENIC BACTERIA. Raymond Latarjet. *Compt. rend.* **232**, 1713-15(1951). Apr. 30. (In French) NSA 5-6068.

2254

OBSERVATIONS ON THE SKIN REACTION TO THE SUBCUTANEOUS APPLICATION OF METALLIC POLONIUM IN MICE. Leif Kreyberg and Finn Devik. *Acta. Radiol.* **35**, 356-62(1951). May-June.

Local changes and mechanism of the severe hyperplastic phenomenon observed in the mice are discussed. Authors emphasize possibility of an indirect effect mediated through the connective tissue vascular system. (Po on Ni plate was placed subcutaneously, some was absorbed). NSA 5-6069.

2255

NEGATIVE RESULTS FOLLOWING EXPOSURE OF SEVERAL KINDS OF SEEDS TO COSMIC RAYS AND OTHER RADIATION AT HIGH ALTITUDES. J. M. Beal. *Botan. Gaz.* **112**, 533-4(1951). June.

No mutagenic effects were observed in angiosperm seedlings grown from seeds exposed to cosmic radiations at high altitudes. NSA 5-6070.

2256

POST-RADIATION PARABIOSIS AND SURVIVAL IN RATS. G. Brecher and F. P. Cronkite. *Proc. Soc. Exptl. Biol. Med.* **77**, 292-4(1951). June.

Rats survive an otherwise fatal x ray dose if joined after irradiation to nonirradiated litter mates. Myelopoiesis was accelerated by transfer of some material from the nonirradiated partner. NSA 5-6071.

2257

NUCLEAR AND CELL DIVISION IN ALLIUM CEPA AS INFLUENCED BY SLOW NEUTRONS AND X-RAYS. Ellen Myrberg Rasch. *Botan. Gaz.* **112**, 331-47(1951). June.

Plants from all irradiated bulbs were markedly retarded in growth, while all those from bulbs irradiated with slow neutrons or 10,000 r of x rays died. Cytological analysis of root tips is included. NSA 5-6072.

2258

EFFECT OF TOTAL BODY X-IRRADIATION ON GLUTATHIONE LEVELS IN RATS. Ruth D. Peterson, Clarissa H. Beatty, and Edward S. West. *Proc. Soc. Exptl. Biol. Med.* **77**, 747-9(1951). Aug.

Irradiation with 500 r, total body, causes decrease in blood glutathione of rats, and in some cases a decrease in liver glutathione. NSA 5-6073.

2259

THE INTERACTION OF NUCLEIC ACID AND X-RADIATION ON THE CHROMATIN OF RYE AND PEA. Louise R. Sieburth. *Northwest Sci.* **25**, 132-6(1951). Aug.

Seeds were exposed to x ray or ribose nucleate or to both. Effects of 5000 r: pycnosis and multinucleolated cells, dense clumping of nucleolar chromatin (both rye and pea). Effects of 200 r: same effects but to a lesser degree were observed in rye only. NSA 5-6074.

2260

CYTOLOGIC AND PATHOLOGIC EFFECTS OF IONIZING RADIATION OF INTEREST TO THE VETERINARIAN. John H. Rust. *J. Am. Vet. Med. Assoc.* **118**, 355-62(1951). June. NSA 5-6075.

2261

THE VALUE OF SMALL LEAD SHIELDS AGAINST THE INJURIOUS EFFECT OF TOTAL-BODY IRRADIATION. J. Gershon-Cohen, M. B. Hermel, and J. Q. Griffith, Jr. *Science* **114**, 157-8(1951). Aug. 10.

Survival times, weights and blood data of rats with liver, lung and/or abdomen shielded during exposure are tabulated. NSA 5-6076.

2262

EFFECT OF PRETREATMENT WITH CYSTEINE ON SURVIVAL OF MICE EXPOSED TO EXTERNAL AND INTERNAL IRRADIATION. Horace Goldie, Gadson J. Tarleton, Jr., and Paul F. Hahn. *Proc. Soc. Exptl. Biol. Med.* **77**, 790-4(1951). Aug.

Mice pretreated with small doses of cysteine before lethal x ray doses showed high percentage of survival 10-14 days post irradiation. NSA 5-6077.

2263

REDUCTION OF X-RAY SENSITIVITY OF ESCHERICHIA COLI B/R BY SULFHYDRYL COMPOUNDS, ALCOHOLS, GLYCOLS, AND SODIUM HYDROSULFITE. W. T. Burnett, Jr., G. E. Stapleton, M. L. Morse, and Alexander Hollaender. *Proc. Soc. Exptl. Biol. Med.* **77**, 636-8(1951). Aug. NSA 5-6078.

2264

PRODUCTION OF POLYPOIDS BY COLCHICINE AND X-RAYS. D. Lewis. *Nature* **167**, 891-2(1951). June 2.

X rays were used to make colchicine more effective in producing tetraploid instead of diploid or chemical plants. NSA 5-6079.

2265

DIAGNOSIS OF RADIATION INJURY AS PRODUCED BY ATOMIC BOMBS. Eugene P. Cronkite. *Med. ann. Dist. Columbia* **20**, 661-9(1951).

Nontechnical summary of radiation injuries to be expected from atomic bomb blast is presented. NSA 5-6095.

2266

Atomic Energy Project, Univ. of Rochester
NEOPLASIA INDUCED IN RAT EMBRYOS BY ROENTGEN

IRRADIATION. James G. Wilson, Robert L. Brent, and H. Charles Jordan. Sept. 5, 1951. 30p. (UR-183); Cancer Research 12, 222-8(1952).

Rat embryos x-rayed on 9th day of gestation developed discrete tumor-like growths in and around the brain, incidence was directly related to dosage. NSA 5-6563.

2267

Brookhaven National Lab.

SOME CYTOLOGICAL AND MORPHOLOGICAL CHANGES INDUCED IN PLANTS BY IONIZING RADIATION. Arnold H. Sparrow. [nd]. 1p. (AECU-1645). Science 114 488 (1951).

Several species were exposed to chronic Co^{60} γ radiation for periods up to 4 mo. Changes are described and possible explanations discussed. Recovery to a normal growth pattern indicates that most morphological aberrations were not genetic but were probably the result of radiation-induced physiological changes. The report appears in its entirety in NSA. NSA 5-6564.

2268

RECOVERY PATTERN OF THE BLOOD PICTURE IN GUINEA PIGS FOLLOWING A LIMITED TOTAL BODY EXPOSURE TO CHRONIC GAMMA RADIATION. Egon Lorenz. J. Chm. phys. 48, 264-74(1951). May-June.

Guinea pigs were given 8.8 r daily until erythrocyte count fell to 2.8 million/mm. Blood and bone marrow studies indicate a hematopoietic sensitivity comparable to that of man. NSA 5-6566.

2269

ANALOGOUS EFFECTS OF RADIATION AND TRYPAN BLUE ON RATS RESISTANT TO TRANSPLANTED HEPATOMA. Annabelle Cohen and Lionel Cohen. Nature 167, 1063(1951). June 30. NSA 5-6567.

2270

RESULTS AND PROBLEMS OF THE TARGET THEORY IN RADIOBIOLOGY. K. Sommermeyer. Naturwissenschaften 38, 289-98(1951). July. NSA 5-6568.

2271

GENETIC, EMBRYOLOGIC, AND NEONATAL PROBLEMS RELATED TO IONIZING RADIATIONS OF INTEREST TO VETERINARIANS. John H. Rust. J. Am. Vet. Med. Assoc. 119, 103-7(1951). Aug.

X ray effects on amphibia, fruit flies, and small laboratory animals are presented and results are extrapolated to large animals. NSA 5-6569.

2272

ATOMIC BOMB INJURY: RADIATION. Charles L. Dunham, Eugene P. Cronkite, George V. LeRoy, and Shields Warren. J. Am. Med. Assoc. 147, 50-4(1951). Sept. 1.

Acute radiation syndrome observed after total-body x ray exposure is described NSA 5-6570.

2273

A STUDY OF GENETIC EFFECTS OF COSMIC RADIATION ON COTTON SEED. Govan N. Stroman and Thomas H. Lewis. J. Heredity 42, 210-13(1951). July-Aug.

Cotton seed was sent to an altitude of 90.5 miles in a V-2 rocket. Exposed seed was grown through second generation, but changes remain to be finally evaluated NSA 5-6572.

2274

OBSERVATIONS UPON THE LYMPHOPENIA OF X-RAY IRRADIATION, PART II. C. H. G. Price. Brit. J. Radiol. 24, 556-67(1951). Oct.

In a study of rats exposed to fractional doses of 95-kv x rays, total lymphocyte count was definitely related to total radiation dose. Lymphocyte survival/dose curve is of double exponential form. Major effect is best explained as a direct effect of radiation which can be regarded as a single hit target phenomenon. NSA 5-6574.

2275

EFFECTS OF ANTISPLENIC TISSUE SERUM ON ROENTGEN-RAY DAMAGE (WHOLE BODY IRRADIATION). Norman Molomot, Milton Friedman, Irene Jacob Ryby, and Alvin Harber. Am. J. Roentgenol. Radium Therapy 66, 245-47(1951). Aug.

Under conditions used, antispleen serum did not affect increased susceptibility of x rayed mice to infection with Rickettsia pox. NSA 5-6575.

2276

MAMMARY-TUMOR INCIDENCE IN FEMALE C_2Hb MICE FOLLOWING LONG CONTINUED GAMMA IRRADIATION. Egon Lorenz, Allen B. Eschenbrenner, Walter E. Heston, and Delta Uphoff. J. Natl. Cancer Inst. 11, 947-61(1951). Apr.

Mean survival time of chronically irradiated mice was shortened 36% compared with controls. Tumor incidence was increased by radiation. Physiological and hormonal factors are discussed. NSA 5-6576.

2277

DEPENDENCE OF THE HUMAN SKIN REACTION PRODUCED BY IONIZING RADIATION UPON THE TYPE OF RADIATION. C. W. Wilson. Radiology 57, 83-9(1951). July.

Speculations presented are based on the assumption that the human skin reaction to ionizing radiation is due to the production of chromosome abnormalities arising from chromosome breaks. Relative effects are demonstrated by data from experiments with Tradescantia and rough extrapolations are made to conditions for thinner chromatids. NSA 5-6577.

2278

SUCCESSFUL SUBCUTANEOUS GROWTH AND TRANSPLANTATION OF HUMAN TUMORS IN X-IRRADIATED LABORATORY ANIMALS. Helene Wallace Toolan. Proc. Soc. Exptl. Biol. Med. 77, 572-8(1951). July. NSA 5-6578.

2279

ON THE NATURE OF RETINAL EXCITATION BY X-RAYS. Vasco Ronchi. Atti fondazione "Giorgio Ronchi" 6, 221-4 (1951). Aug. (In Italian) NSA 5-6579.

2280

ADENOSINE TRIPHOSPHATE LEVELS IN MOUSE BLOOD AFTER WHOLE-BODY IRRADIATION AND DURING TUMOR GROWTH. Paul A. Zahl and Harry G. Albaum. Proc. Soc. Exptl. Biol. Med. 77, 388-93(1951). July.

During wasting in whole body x irradiated mice, no changes occurred in blood levels of total nucleotide or of adenylic acid, ADP or ATP. Massive doses of ATP given by injection did not induce shock in mice. Mice with implanted tumors had decrease in blood ATP, until 10th post-exposure day, then a rise. Tumor growth was not accompanied by changes in blood level of total nucleotide, adenylic acid or ATP. NSA 5-6581.

2281

COMPARATIVE EFFECTS OF THERMAL NEUTRON IRRADIATION OF MAIZE POLLEN AND MAIZE SEED ON SUBSEQUENT SEEDING GROWTH. John W. Schmidt and E. F. Frolik. J. Heredity 42, 173-7(1951). July-Aug.

On basis of x ray comparison, thermal neutrons were 6-12 times as effective on maize seed as on maize pollen in reducing subsequent seedling height. NSA 5-6571.

2282

EXPERIMENTAL STUDIES ON EARLY LENS CHANGES AFTER ROENTGEN IRRADIATION. Ludwig Von Sallmann and Beatrice D. Locke. Arch. Ophthalmol. (Chicago) 45, 431(1951).

In radiotracer studies, increased permeability of blood-aqueous barrier was demonstrated up to 6 wk after

irradiation of rabbit's eye with 2000 r. Theories on x ray injury are presented. NSA 5-6582.

2283

EFFECTS OF X-RAYS PRODUCED AT TWO MEGAVOLTS ON SOME ASCOSPOROGENOUS YEASTS. Cecil G. Dunn Am. Brewer 84, No. 5, 27-9, 84(1951).

Five genera of ascosporogenous yeast showed different degrees of x-ray sensitivity (500-25,000 r), 80% of cells of all genera were destroyed by 25,000 r. Susceptibility rather than number of cells determines percent of survival. NSA 5-6583.

2284

LETHAL IRRADIATION OF MICE WITH HIGH DOSES OF ROENTGEN AND GAMMA RAYS. P. Bonet-Maury and F. Patti Radiology 57, 419-23(1951). Sept.

Greater amount of γ energy than of x ray energy is required for similar biological effects in mice. Result is attributed to different primary radiochemical reactions resulting from unequal distribution along electronic path of the two radiations. NSA 5-6584.

2285

GROWTH OF BACTERIA IN THE PRESENCE OF RADIO-ACTIVE PHOSPHORUS. Francis E. Clark and C. A. I. Goring. J. Bacteriol 62, 352-4(1951). Sept.

P^{32} has lethal effect on many individual cells, but those surviving continue to multiply until growth is limited by other factors. Some delay in aging may be caused by low levels of P^{32} . NSA 5-6585.

2286

THE ELECTROLYTIC RESISTANCE OF THE BLOOD CLOT IN POLYCYTHEMIA VERA BEFORE AND AFTER RADIATION AND ITS RELATIONSHIP TO CLOT RETRACTION. Henry H. Henstell, Irma S. Henstell, and Edward M. Ornitz, Jr. Am. J. Clin. Path. 21, 820-7(1951). Sept. NSA 5-6586.

2287

MECHANISMS OF BIOLOGICAL EFFECTS OF PENETRATING RADIATIONS. Cornelius A. Tobias. Federation Proc. 10, 595-601(1951). Sept.

Author describes interaction of radiation with matter, various biological effects of breakdown of macromolecules by direct radiation action and recent experimental approaches to study indirect radiation action. NSA 5-6587.

2288

LIVER CIRRHOSIS WITH ASCITES, INDUCED IN DOGS BY CHRONIC MASSIVE HEPATIC IRRADIATION WITH RADIOACTIVE COLLOIDAL GOLD. P. F. Hahn, Marvin A. Jackson, and Horace Goldie. Science 114, 303-5 (1951). Sept. NSA 5-6588.

2289

EFFECT OF THYROID HORMONE ON RADIATION LETHALITY. Willie W. Smith and Falconer Smith. Am. J. Physiol. 165, 639-50(1951). June. NSA 5-6595.

2290

EFFECTS OF THYROID AND RADIATION ON SENSITIVITY TO HYPOXIA, BASAL RATE OF O_2 CONSUMPTION, AND TOLERANCE TO EXERCISE. Willie W. Smith and Falconer Smith. Am. J. Physiol. 165, 651-61(1951). June. NSA 5-6597.

2291

STUDIES ON THE PROBLEM OF PROTECTION AGAINST THE EFFECTS OF X RAYS. Arne Forssberg. J. chim. phys. 48, 262-3(1951). May-June.

Protective properties of cysteine against radiation injury are reported. NSA 5-6598.

2292

EXERCISE EFFECTS ON TOLERANCE TO RADIATION. Falconer Smith and William W. Smith. Am. J. Physiol. 165, 662-6(1951). June.

Effect of moderate exercise for 8 consecutive hr/day, or for 12 hr a day in spaced periods of 3 hr decreased slightly the tolerance of mice to whole-body x rays. Radiation lethality apparently does not parallel rate of O_2 utilization under these conditions. NSA 5-6599.

2293

PROTECTION FROM WHOLE-BODY IRRADIATION BY CHEMICAL MEANS. R. H. Mole. J. chim. phys. 48, 258-61(1951). May-June.

Thiourea given immediately before irradiation gave some radiation protection to mice, while sodium dithionate, sodium ethane-di-thiophosphate, glycerol and sodium thiosulfate did not. NSA 5-6600.

2294

HEMATOLOGY, DIAGNOSIS, AND THERAPY OF RADIATION INJURY. E. P. Cronkite. U S Armed Forces Med. J. 2, 1019-25(1951). July. NSA 5-6602.

2295

EFFECTS OF BETA RADIATION ON THE GASTRIC MUCOSA OF DOGS. D. M. Douglas, W. R. Ghent, and S. Rowlands. J. chim. phys. 48, 249-51(1951). May-June.

Methods of reducing gastric acidity of dogs by direct irradiation of stomach walls with β rays is described. Applicators are inflatable balloons impregnated with P^{32} . NSA 5-6612.

2296

COLCHICINE, X-RAYS AND MUTATION PROCESS. Ake, Gustafsson, and Niles Nybom. Hereditas 35, 280-4(1949).

Special strain of Ymer barley seed was tested for effects of irradiation and colchicine. Course of mutation process was found to be considerably altered by application of colchicine previous to irradiation. Xantha and albobivridis types and very rare mutants increase in number after colchicine pre-treatment (Colchicine solutions of 0.1 to 0.001%, x ray doses of 5000 to 15,000 r.) NSA 4-640.

2297

THE INFLUENCE OF THE Y-CHROMOSOME ON X-RAY INDUCED MUTATION RATE IN DROSOPHILA MELANOGASTER. Jean Kerschner. Proc. Natl. Acad. Sci. U S. 35, 647-51(1949). Nov.

An extra y-chromosome decreased x-ray induced visible and sex-linked lethal mutation frequency in male fly, in female it appeared to be without effect. NSA 4-641.

2298

MUTANT STRAINS OF ESCHERICHIA COLI UNABLE TO SYNTHESIZE P-AMINOBENZOIC ACID. J. O. Lampen, M. J. Jones, and R. R. Roepke. J. Biol. Chem. 180, 423-34 (1949). Aug. NSA 4-642.

2299

STUDIES ON X-RAY MUTATIONS IN THE WHITE AND FORKED LOCI OF DROSOPHILA MELANOGASTER. II. STUDY OF THE FORMATION OF GYNANDROMORPHS AND OTHER KINDS OF MOSAICS. G. Bonnier, K. G. Luning, and Ann Margret Perje. Hereditas 35, 301-35 (1949). NSA 4-643.

2300

ROENTGEN THERAPY FOR PITUITARY ADENOMA. CORRELATION OF TUMOR DOSE WITH RESPONSE IN 64 CASES. Arnold L. Bachman and William Harris. Radiology 53, 331-41(1949). Sept. NSA 4-647.

2301

FURTHER STUDIES ON THE EFFECTS OF IRRADIATION THERAPY FOR CARCINOMA OF THE CERVIX UPON THE URINARY TRACT. Houston S. Everett, C. Bernard Brack, and George J. Farber. Am. J. Obstet. Gynecol. 58, 908-19(1949). Nov. NSA 4-650.

2302

THE BIOLOGICAL EFFECT OF ROENTGEN RAY IN

TUBERCULOSIS. I. THE LEUKOCYTE PICTURE IN PULMONARY TUBERCULOSIS TREATED WITH ROENTGEN RADIATION. Georg. Brdiczka. Beitr. Klin. Tuberk. 72, 298-311(1929). (In German)

Differential leukocyte counts and erythrocyte sedimentation rate determinations were made 2-3 times weekly on 31 patients with tuberculosis during and after 1/40-1/10 skin unit doses of filtered (1/2 mm Zn) radiation weekly (total dose 20-70% of skin unit dose) No consistent pattern of leukocyte response was observed. BA 6-7259.

2303

PROTECTION OF OPTICAL INSTRUMENTS BY RADIUM EMANATIONS. Richard E. Vicklund. U S. Patent 2,478,955 Aug. 15, 1949.

Lenses and optical instruments may be protected against discoloration, clouding or etching due to fungi by placing metal foil, spread with thin coat of α -ray emitter, on rim of optical instrument NSA 4-731.

2304

A COMPARISON OF THE RADIOSENSITIVITIES OF TUMORS AUTOGENOUS TO INBRED STRAINS OF ANIMALS. Anna Goldfeder. Acta Unio Intern. contra Cancrum 6, 787-93(1949)

Distinctive relationship appears to exist in various tumors between their radiosensitivities and their grades of differentiation after irradiation, even among analogous tumors. NSA 4-985.

2305

THE CHANGES INDUCED IN IODINE METABOLISM OF THE RAT BY INTERNAL RADIATION OF ITS THYROID WITH I^{131} . D. D. Feller, I. L. Chaikoff, Alvin Taurog, and Hardin B. Jones. Endocrinology 45, 464-79(1949) Nov.

Under conditions of this experiment thyroid function was undisturbed in rats up to 10 days after injection of 24 or 30 μ c of I^{131} . Changes caused by 300 and 875 μ c are discussed. NSA 4-984.

2306

THE BIOLOGIC EFFECT OF HIGH ENERGY ROENTGEN RAYS. Henry Quastler Acta Unio Intern. contra Cancrum 6, 825-30(1949).

In a clinical and histological study of mice irradiated with 20 MeV roentgen rays and in other studies on plant seedlings, no specific effect of high energy rays was found. Observed: survival time, greying of hair in mice, stunting of growth of beans, sex-linked mutations in *Drosophila*; and other biological indicators. Found efficiency of high energy protons approx. 3/4 as effective as conventional x rays if both were measured and referred to 25 r thimble chamber. Main advantages of high energy rays lies in their ability to deliver optimum tumor doses without severe skin burns and systemic reactions. NSA 4-983.

2307

THE BEHAVIOR OF THE TUMOR CELL UNDER THE INFLUENCE OF IRRADIATION AND CHEMICALS. P. C. Koller. Acta Unio Intern. contra Cancrum 6, 812-15(1949).

Alterations in mitosis and chromosome structure induced in tumor cells by x ray doses of 200 to 600 r are described. NSA 4-982.

2308

ATOM BOMB CATARACTS. David G. Cogan, S. Forrest Martin, and Samuel J. Kimura. Science 110, 654-5(1949) Dec. 16.

Description of ten cases of cataracts believed to have been caused by exposure to atomic bomb explosions in Japan are presented. NSA 4-981.

2309

A COMPARISON OF THE REACTION OF CELLS TO NITRO-

GEN MUSTARD AND X-RAYS. Robert Schreck Acta Unio Intern. contra Cancrum 6, 848-56(1949).

Reactions of nitrogen mustard and x rays on cells from rabbit thymus and bone marrow, and on human blood cells in suspension were studied. Results suggest that the two agents may produce different effects on the same nuclear compound. NSA 4-986.

2310

CYCLOTRON-INDUCED RADIATION CATARACTS. P. H. Abelson and P. G. Kurger. Science 110, 655-7(1949) Dec. 16.

Case studies of 10 scientists who developed cataracts, probably as a result of chronic exposure to neutrons in energy range 0 to 20 Mev are presented. NSA 4-987.

2311

EFFECT OF ADRENAL CORTICAL EXTRACT AND OF X-RADIATION ON SERUM PROTEINS OF MICE. John Milne, and Abraham White. Proc. Soc. Exptl. Biol. Med. 72, 424-8(1949) Nov.

Large increase in serum protein levels was found in mice after adrenal cortical extract injection or exposure to 200 r of x rays. There was no significant difference in relative distribution of serum proteins. NSA 4-988.

2312

EFFECT OF PROTEIN DEPLETION UPON SUSCEPTIBILITY OF RATS TO TOTAL BODY IRRADIATION.

F. Lamont Jennings. Proc. Soc. Exptl. Biol. Med. 72, 487-91(1949) Nov.

Protein depletion before exposure materially increases rat susceptibility to total body irradiation and its effects. (Rats were on low protein diet for 10 weeks before irradiation, lost approximately 25% of body weight.) NSA 4-989.

2313

THE EFFECT OF RADIATION ON THE BIOLOGICAL BEHAVIOR OF A MOUSE MAMMARY CARCINOMA. Henry S. Kaplan and Edwin D. Murphy. Acta Unio Intern. contra Cancrum 6, 810-11(1949).

Authors suggest on basis of results reported that moderate x ray irradiation may alter behavior of a tumor in direction of increased autonomy. NSA 4-990.

2314

THE EFFECT OF RADIOACTIVE STRONTIUM ON THE PERIPHERAL BLOOD PICTURE OF THE NORMAL DOG. J. Eugene Nelson, John G. Gibson, 2nd, Bert L. Vallee, and Marvin A. Van Dilla. Acta Unio Intern. contra Cancrum 6, 819-24(1949).

A mixture of Sr^{89} and Sr^{90} was given intravenously to three dogs, 2 normal; 1 castrated. Leucopenia was maximum 21 days after injection. Fall in count was due to decrease in granulocytes, there being no change in absolute lymphocytes or monocytes. Hematocrit fell at all 3 dosage levels. One dog died during maximal leukopenia, the other two survived this stage but died later. All showed aplastic marrow at autopsy. Clinical changes are described. NSA 4-991.

2315

THE EFFECT OF SPLENECTOMY ON THE TOXICITY OF Sr^{89} TO THE HEMATOPOIETIC SYSTEM OF MICE. Leon O. Jacobson, Eric I. Simmons, and Matthew H. Block. J. Lab. Clin. Med. 34, 1640-55(1949) Dec.

Rapid development and persistence of ectopic erythrocytopoiesis in spleen prevents anemia in mice irradiated with 2.0 μ c/g of Sr^{89} (injected intraperitoneally). NSA 4-992.

2316

THE EFFECT OF X-IRRADIATION ON ANTIBODY FORMATION. L. O. Jacobson, M. E. Robson, E. K. Marks, and M. C. Goldman. J. Lab. Clin. Med. 34, 1612-13(1949) Nov.

Antibody formation is suppressed by total body irradiation. Capacity to produce antibodies to an injected particulate antigen is not lost when a part of the body (spleen or appendix) is shielded from radiations which destroy lymphatic tissue. NSA 4-993.

2317
THE EFFECTS OF ATOMIC RADIATION ON THE ORAL AND PHARYNGEAL MUCOSA. Joseph L. Bernier. *J. Am. Dental Assoc.* 39, 647-57(1949). Dec. NSA 4-994.

2318
EFFECTS OF IONIZING RADIATIONS ON ENZYME ACTIVITIES OF YEAST CELLS. II. INFLUENCE OF DILUTION ON X-RAY INDUCED INHIBITION OF ANEROBIC CO₂ PRODUCTION AND COLONY FORMATION Frederick G. Sherman and Herman B. Chase. *J. Cellular Comp. Physiol.* 34, 207-19(1949) Oct.

Dilution of yeast cell suspension results in marked augmentation of radiation effect on anaerobic CO₂ production in yeast grown in Reader's solution. NSA 4-995.

2319
THE EFFECTS OF ROENTGEN RAYS ON THE INFLAMMATORY CELLS OF THE MOUSE AND RABBIT. William A. Townsend and Berry Campbell. *Blood* 4, 1346-56(1949) Dec.

No acceleration of cell differentiation during the inflammatory cycle was induced by x-raying inflammatory cells of mice. Structural abnormalities appear in cells of mice after 250 r, in rabbits after 700 r. NSA 4-996.

2320
EFFECTS OF X-RAY DOSES ON THE CONTROLLED GREYING RESPONSE IN MICE. Hermann B. Chase. *Acta Unio Intern. contra Cancrum* 6, 768-70(1949).

Age, sex, weight and specific location do not influence hair response to irradiation, but stage of hair development does. Maximum graying occurs when inactive or resting follicles are irradiated. Threshold of effect is 250 r. NSA 4-997.

2321
EXPERIMENTAL STUDIES OF THE INFLUENCE OF RADIATION QUALITY. DOSE RATE, AND FRACTIONATION ON THE DIRECT INJURY OF CELLS BY IONIZING RADIATIONS. L. H. Gray. *Acta Unio Intern. contra Cancrum* 6, 794-8(1949).

More densely ionizing radiations may be either more or less effective in producing gene mutations, in inactivating enzymes in dilute aqueous solution and in affecting growth of many tissues including tumor tissue. Root tip meristems are selected as an example, demonstrating that growth inhibition is highly dependent on dose rate and fractionation with x or γ radiation but not with densely ionizing radiation. No dose rate dependence was observed with α radiation. Types of chromosome structural changes observed appear to account for interdependence of effects of varying dose rate and radiation quality. NSA 4-998

2322
FACTORS OF INDUCTION OF OVARIAN TUMORS BY X-RAYS: TYPES, CHARACTER AND HISTOGENESIS OF THESE GROWTHS. J. Furth. *Acta Unio Intern. contra Cancrum* 6, 785-6(1949)

Mice 4-6 weeks old were exposed to x ray doses of 87 r, 175r or 350r. Ovarian tumors began to appear when mice reached 11 months of age and their frequency increased with time. NSA 4-999

2323
INFLUENCE OF COSMIC RADIATION ON INDUCED CARCINOGENESIS IN MICE. E. P. George, M. George, Joan Booth, and E. S. Horning. *Nature* 164, 1044-5 (1949). Dec. 17. NSA 4-1000.

2324
EXPERIENCES RELATIVE TO THE ACTION OF X-RAYS ON A PHYCOMYCES. L. Errera. *Compt. rend.* 122, 787(1896). (In French).

2325
FACTORS INFLUENCING RESPONSE TO RADIATION THERAPY. Henry Schmitz. *Amer. J. Roentgenol.* 7, 52(1920).

Factors influencing the response to radiation therapy are discussed, especially differences in the sensitivity of various changes observed in irradiated cells and tissue is described in detail. Radium is considered to exert its primary effect on cell nucleus, injuring it so that it will not divide.

2326
NEUTRON EFFECTS ON ALKALINE PHOSPHATASE OF RAT INTESTINE. M. H. Ross and J. O. Ely. *Am. J. Roentgenol. Radium Therapy* 62, 725-5(1949) Nov. NSA 4-1004.

2327
NEUTRON AND ROENTGEN-RAY EFFECTS ON PROTEIN CONTENT OF RAT INTESTINE. M. H. Ross and J. O. Ely. *Am. J. Roentgenol. Radium Therapy* 62, 718-22 (1949) Nov. NSA 4-1005.

2328
NEW EXPERIMENTS ON THE RESTORATION FACTOR OF RADIOBIOLOGY. Paul Lamarque and Charles Gros. *J. Radiol. Electrol.* 30, 539-42(1949) (In French.)

Further studies of the postirradiation recuperative power of *B. mori* eggs are reported. These properties are suspended by refrigeration and are greatest when dose is fractionated and eggs are incubated between exposures. NSA 4-1006.

2329
THE POSSIBLE CARCINOGENIC EFFECTS OF THE ATOMIC BOMB AT HIROSHIMA AND NAGASAKI. Shields Warren. *Acta Unio Intern. contra Cancrum* 6, 874-7(1949). NSA 4-1007.

2330
RADIATION EFFECTS DUE TO PHOSPHORUS-32 IN FERTILIZER EXPERIMENTS. R. Scott Russell, S. N. Adams, and R. P. Martin. *Nature* 164, 993-5(1949) Dec. 10.

Studies carried out with winter wheat and barley show that the amount of fertilizer phosphate absorbed is significantly depressed by the presence of tracer, although growth of roots and shoots may not be affected. NSA 4-1008.

2331
RADIOPHOSPHORUS, SEEDLING LETHALITY, AND CHROMOSOME DISTURBANCES. L. Ehrenberg, A. Gustafsson, A. Levan, and U. von Wettstein. *Hereditas* 35, 469-89(1949).

Cytogenetical effects of P³² on cereal seed of two-rowed barley, hexaploid spring wheat and tetraploid wheat were studied. Wheat seeds were found to be more susceptible than barley. NSA 4-1009.

2332
THE RESISTANCE OF SCIARA (DIPTERA) TO THE MUTAGENIC EFFECTS OF IRRADIATION. Helen V. Crouse. *Biol. Bull.* 97, 311-14(1949). Dec. NSA 4-1010.

2333
STUDIES ON THE INFLUENCE OF PENETRATING RADIATIONS ON CARCINOGENESIS. Frank H. Figge. *Acta Unio Intern. contra Cancrum* 6, 782-4(1949).

Author concludes that potency of such powerful carcinogens as methylcholanthrene may be altered by slight variations in intensity of penetrating environmental radiation. NSA 4-1011.

2334

RADIATION INJURY FOLLOWING AN A-BOMB EXPLOSION. Colin F. Bruegge and M. C. Vorder. (United States Army, Washington, D. C.). (Armed Forces Institute of Pathology.). *Ann. Internal Med.* **36**, 1444-58(1952).

Blast injuries and burns account for approximately 85% of the casualties from an atomic bomb explosion high in the air. The lymphoid and hematopoietic tissues, skin, genital organs and gastrointestinal tract were most severely affected by ionizing radiation.

2335

CLINICAL AND PATHOLOGICAL OBSERVATIONS ON THE EFFECTS OF THE ATOMIC BOMB. Atomic Bomb Investigating Groups, Manhattan District. [nd] 32p. (NP-1202).

Cases of skin burn and radiation disease occurring after Nagasaki bombing described. NSA 4-1017.

2336

ATOMIC ENERGY IN MEDICINE. Irving Rubin. *Am. Druggist* **121**, 81-83, 94, 96, 98(1950). Jan.

Author presents a general description and discussion of structure, types, uses and effects of radioisotopes in medicine. NSA 4-1018.

2337

CLINICAL RADIATION DOSAGE II. INTER-RELATION OF TIME, AREA, AND THERAPEUTIC RATIO. Lionel Cohen. *Brit. J. Radiology* **22**, 706-13(1949) Dec.

It is concluded that optimal fractionation scheme, therapeutic ratio and maximum permissible heterogeneity can be calculated and determined for tumor of a specific dimensions. NSA 4-1022.

2338

CULTURE OF HUMAN LEUKEMIC BLOOD CELLS IN VITRO, SOME EFFECTS OF X-RAYS. F. W. Gunz. *Brit. J. Cancer* **3**, 330-44(1949) Sept. NSA 4-1023

2339

HERPES ZOSTER AFTER IRRADIATION. Frank Ellis and Basil A. Stoll. *Brit. Med. J.* **1323-8**(1949) Dec. 10.

Herpes zoster may result from either a systemic mechanism following release of substances set free by irradiation or from an effect at level of the cord concerned, through afferent nerves of the irradiated area. NSA 4-1026.

2340

THE INFLUENCE OF THE PROTEIN CONTENT OF THE DIET ON THE RESPONSE OF WALKER RAT CARCINOMA 256 TO X-RADIATION. L. A. Elson and L. F. Lamberton. *Brit. J. Cancer* **3**, 414-26(1949) Sept.

Response of tumors to radiation is divided into phase (1) initial inhibition of tumor growth, which appears favored by low protein diet, and phase (2) elimination of inhibited tumor and cure of animal, favored by high protein diet. NSA 4-1027.

2341

THE CALCULATION OF THE ENERGY DEPOSITION IN SOFT TISSUE BY THERMAL NEUTRONS Atomic Energy Research Establishment. J. H. Tait. Oct. 1949. 20p. (AERE-T/R-416). NSA 4-1325.

2342

EFFECTS OF X-RAYS AND NITROGEN MUSTARD ON LYMPHATIC NODULE OF THE RABBIT. P. P. H. De Bruyn and R. C. Robertson. *Proc. Soc. Exptl. Biol. Med.* **72**, 717-18(1949) Dec.

No quantitative histological difference was found in response of lymphatic nodules in rabbits to LD₅₀ doses of these two agents. Difference was minor in mesenteric lymph node, in appendix, nitrogen mustard was twice as effective as x rays. NSA 4-1327.

2343

LIMB REGENERATION IN *TRITURUS VIRIDESCENS* AS AFFECTED BY LETHAL DOSES OF RADIOACTIVE PHOSPHORUS. J. N. Dent. *Anat. Record* **105**, 325-35 (1949) Oct. NSA 4-1329.

2344

Atomic Energy Research Establishment, Harwell, Berks (England)
SOME PAPERS ON THE EFFECTS OF RADIATIONS ON BACTERIA AND MOULDS. Oct. 14, 1949. 7p. (AERE-Inf/Bib-51).

Bibliography listing 60 references in period 1930-1949. NSA 4-1330

2345

SYNERGISTIC ACTION OF ESTROGENIC HORMONE AND X-RAYS IN INDUCING THYMIC LYMPHOSARCOMA OF MICE Arthur Kirschbaum, Joyce R. Shapiro, and Harry W. Mixer. *Proc. Soc. Expt. Biol. Med.* **72**, 632-4(1949). Dec. NSA 4-1331

2346

TARGET-THEORETICAL INTERPRETATION OF THE RELATION BETWEEN THE STEEPNESS OF THE DOSAGE-EFFECT CURVE AND THE IONIZATION DENSITY Kurt von Sanden. *Z. Naturforsch.* **4b**, 257-62(1949) Oct.-Nov. (In German) NSA 4-1332.

2347

AMYLOID DEGENERATION OF THE HUMAN BRAIN FOLLOWING X-RAY THERAPY K. Lowenberg-Scharenberg and R. C. Bassett. *J. Neuropathol. Exptl. Neurol.* **9**, 93-102(1950) Jan. NSA 4-1334

2348

LESIONS OF THE EYE FROM RADIANT ENERGY. David G. Cogan. *J. Am. Med. Assoc.* **142**, 145-51(1950) Jan. 21.

Author discusses sources and types of radiation, transmission and absorption of radiant energy in ocular media and clinical characteristics of eye lesions caused by radiant energy. NSA 4-1335.

2349

Fairchild Airplane and Engine Corp.
ATTEMPTS TO PREVENT AND COUNTERACT EFFECTS OF IONIZING RADIATIONS BY CHEMICAL AND PHARMACOLOGICAL MEANS. W. A. Selle. Sept. 15, 1949. 30p (NEPA-1127). NSA 4-1339.

2350

THE HEMORRHAGIC SYNDROME OF ACUTE IONIZING RADIATION ILLNESS PRODUCED IN GOATS AND SWINE BY EXPOSURE TO THE ATOMIC BOMB AT BIKINI, 1946. E. P. Cronkite. *Blood* **5**, 32-45(1950) Jan. NSA 4-1340.

2351

Argonne National Lab.
ARGONNE NATIONAL LABORATORY BIOLOGICAL AND MEDICAL DIVISIONS QUARTERLY REPORT MAY, JUNE, JULY, 1949. Austin M. Brues and Herman Lisco. 143p. (ANL-4333).

Includes reports on: x ray effect on antibody formation and mouse lymphoma, 30-day LD₅₀ for an blood picture of irradiated guinea pigs, comparison of 186-kv and 11.4 Mev x rays, 30-day LD₅₀ for mice after x rays and radon, polonium effect on mice, survival of x rayed chicks. NSA 4-1616

2352

THE INFLUENCE OF X-RAYS ON GERMINATION. J. Mالدني and M. Thouvenin. *Compt. rend.* **126**, 548-9 (1898). (In French).

2353

TOLERANCE OF *TRADESCANTIA* TO CONTINUOUS EXPOSURES TO GAMMA RADIATION FROM COBALT⁶⁰. Arnold H. Sparrow. *Genetics* **35**, 135(1950). (AECU-681)

Tradescantia paludosa plants exposed to (continuous) doses of 122 and 30.4 r per day γ radiation showed little growth, while normal growth occurred at 7.5 r per day or less. Complete pollen abortion was produced after 16 days at 122 r per day. A significant increase in frequency of micronuclei was obtained with 84 mr per day after 32 days exposure (total dose 2.69 r). (from abstract) NSA 4-1618

2354

NON-RANDOM DISTRIBUTION OF CHROMOSOME FRAGMENTATION IN UNIRRADIATED *TRILLIUM*. A. H. Sparrow and E. Christensen. [nd] 1 p. (AECU-691), *Genetics* 35, 135 (1950). NSA 4-1619

2355

THE PATTERN AND SIGNIFICANCE OF DELAYED PHENOTYPIC EXPRESSION OF MUTATIONS INDUCED IN *E. COLI* BY ABSORBED P^{32} . B. A. Rubin. [nd] 1p. (AECU-693). *Genetics* 35, 133 (1950).

Absorbed P^{32} has been shown to induce increases in the proportion of streptomycin-resistant cells among populations of *E. Coli*. Absorption of P^{32} by bacteria is greatly influenced by concentration of carrier P. Large increases in intracellular produce insignificant changes in specific ionization in a cell the size of *E. Coli* but produce a disproportionately great increases with radiation dose but the relative size of mutant populations changes with continued culture. Complete phenotypic expression of mutations appear also to depend upon the number of cell divisions (resting v. dividing cultures). There is both a quantitative and a qualitative difference in distribution of mutant types produced by an effect not accounted for by ionization alone. The effect may be due to transmutation of P^{32} to S^{32} . NSA 4-1620.

2356

Atomic Energy Project, Univ. of Calif., Los Angeles RELATION OF LOW TEMPERATURES TO X-RAY INJURY OF HEMATOPOIETIC TISSUE OF TADPOLES. (PRELIMINARY ACCOUNT). Bennet M. Allen, Ole Arne Schjelde, and Lynette B. Hochwald. Nov. 30, 1949. 9p. (UCLA-50), *Proc. Soc. Exptl. Biol. Med.* 73, 60-2 (1950).

Temperature of *R. catesbeiana* tadpoles at time of exposure matters little in destructive processes developing later. These destructive effects depend primarily upon temperature to which tadpoles are subjected post-irradiation. NSA 4-1622

2357

THE ACTION OF IONIZING RADIATIONS ON STRIATED FROG MUSCLE. Z. M. Bacq, J. Lecomte, and A. Herve. *Arch. intern. physiol.* 57, 142-53 (1949) Dec. (In French)

Both x rays and β radiation from P^{32} determine appearance of Lundsgaard effect (contraction of striated muscle after work). Authors consider this proof of muscular glucidic metabolism. Irradiation is considered to act like an enzyme poison. H_2O_2 content of Ringer's solution (the suspending medium) was measured after doses of 4000 r to 8000 r. NSA 4-1623

2358

CYANIDE AND X-RAYS. Z. M. Bacq and A. Herve. *J. physiologie* 41, 124-A-125-A (1949). (In French).

Protective influence of NaCN against x-ray damage is believed to be due to its action on peroxides formed in the cells by radiation. NSA 4-1624

2359

FRACTURES OF THE FEMORAL NECK AND OSSEOUS ALTERATIONS AFTER PELVIC IRRADIATION. Henri Kritter. *Semaine Hopitaux Paris* 25, 2999-3001 (1949) Oct. (In French)

Author reports 17 cases of pathological fractures of neck of the femur discovered after high therapeutic doses

of x ray (up to 20,000 r) for uterine maladies. Radio-therapeutic bone effect appears to be similar to radio-therapeutic lung effect. NSA 4-1625.

2360

FURTHER STUDIES ON THE INFLUENCE OF DOSE FRACTIONATION ON THE LETHAL X-RAY EFFECT PRODUCED BY TOTAL BODY IRRADIATION IN MICE. Friedrich Ellinger and James C. Barnett. *Radiology* 54, 90-2 (1950) Jan.

Effect of 1000 r of 200 kV x rays (air dose) at 23.4 r/minute in 1 exposure (LD_{100}) was compared with effect of same dose given in fractions of 100-50 r in air within 10-20 days. Effect of dose fractionation was found to depend on size of single fraction as well as on over-all exposure time, the size of the fractions being more important. With respect to tumor destruction there appeared also to be a definite optimum for dose fractionation in total body exposure. NSA 4-1626.

2361

THE HISTOLOGICAL STRUCTURE OF THE OVARIES OF FETAL MICE AFTER THE DESTRUCTION OF THE HYPOPHYSIS BY X-RAYS. Albert Raynaud and Marcel Frilley. *Compt. rend. soc. biol.* 143, 959-63 (1949) July (In French).

After hypophyseal destruction general growth of the ovaries is not affected noticeably. Animals were irradiated with 150,000 r to 200,000 r to the base of the cranium at 12-13 days of fetal age and sacrificed when 18 days old. NSA 4-1627

2362

THE HISTOLOGICAL STRUCTURE OF THE TESTICLES OF FETAL MICE AFTER DESTRUCTION OF THE HYPOPHYSIS BY X-RADIATIONS. Albert Raynaud, and Marcel Frilley. *Compt. rend. soc. biol.* 143, 954-8 (1949) July (In French).

Studies indicate that if destruction of the hypophyseal line occurs rapidly and completely on 12th - 13th day of fetal life, testicular growth and development of the interstitial gland may then be accomplished in a nearly normal fashion. NSA 4-1628.

2363

MUTATIONS INDUCED IN *DROSOPHILA* BY INGESTED PHOSPHORUS-32. A. J. Bateman and W. K. Sinclair. *Nature* 165, 117-18 (1950) Jan. 21. NSA 4-1629.

2364

THE DESTRUCTIVE ACTION OF ASTATINE²¹¹ (ELEMENT 85) ON THE THYROID GLAND OF THE RAT. J. G. Hamilton, C. W. Asling, W. M. Garrison, K. G. Scott, and D. Axelrod Heller. Oct. 1, 1949. 8p. (UCRL-477), *Proc. Soc. Exptl. Biol. Med.* 73, 51-3 (1950).

Astatine induces extreme degree of radiation injury of thyroid gland in rat without apparent involvement of adjoining parathyroid gland. NSA 4-1635.

2365

X-RAY THERAPY OF NON-MALIGNANT CONDITIONS. Paul W. Roman and Stanley H. Macht. *Virginia Med. Monthly* 77, 71-4 (1950) Feb

Review of literature on results of radiation therapy of nonmalignant conditions and on theories of action of x ray therapy is presented with results of treatment of 70 patients. NSA 4-1653.

2366

Naval Radiological Defense Lab.

THE EFFECT OF EXERCISE UPON THE LETHALITY OF ROENTGEN RAYS FOR RATS. D. J. Kimeldorf, D. C. Jones, J. L. Lee, T. A. Gonzalez, and M. C. Fishler. Dec. 12, 1949. 10p. (AD-178(B)).

Lethality of x rays at doses of 600, 700 and 860 r was increased by repeated performance of vigorous exercise postirradiation. Relation of radiosensitivity to metabolic level is discussed. NSA 4-1838.

2367

EFFECTS OF IONIZING RADIATIONS ON CARBOHYDRATE EXCHANGE IN ANIMAL ORGANS. B. M. Graevskaya and R. Ja. Keilina. *Uspekhi Sovremennoi Biol.* 40, 230-8 (1955). (In Russian).

This is a review with 63 references. NSA 10-1175

2368

A CONTRIBUTION TO THE PROBLEM OF RADIOTOXINS. J. Zacek. *Spisy Lekarske Fakulty Masarykovy Univ.* 22, 1-10(1948). (In Czech).

Effect of parenteral injection of radiotoxins is concluded to be the same as that provoked by direct x irradiation. NSA 4-1840.

2369

EFFECT OF WHOLE BODY X-RADIATION AND OF INTRAPERITONEAL HYDROGEN PEROXIDE ON MOUSE LIVER CATALASE. Robert N. Feinstein, Carrie L. Butler, and Daniel D. Hendley. *Science* 111, 149-50 (1950) Feb. 10.

Authors compared effects on liver catalase of single whole-body exposure to 800 r with intraperitoneal injection of 20 milliequivalents of H_2O_2 as 4% solution. Results agree with *in vitro* experiments NSA 4-1841

2370

EFFECT OF X-RADIATION ON *TRYPANOSOMA CRUZI* John Emmett. *J. Parasitol.* 36, 45-7(1950) Feb.

Doses of 10,000 r and upwards decrease infective power of *T. cruzi*, paralleling radiosensitivity of *T. gambiense* and *T. brucei*. NSA 4-1842.

2371

THE EFFECTS OF IONIZING RADIATIONS ON THE CELL NUCLEI OF EXPERIMENTAL AND SPONTANEOUS TUMORS. L. Cusmano. *Tumori* 23, 63-85(1949) (In Italian).

Nuclei of malignant cells were studied in benzpyrene sarcomas of rats postirradiation and in uterine cancer of women after Ra therapy. In both types of cases, tumors showed rapid decrease of proliferating A cells, temporary increase of hyperplod A cells and increase of sublethal B cells. NSA 4-1843

2372

THE INDIRECT EFFECT OF X-RAYS ON THE HEART AND CIRCULATION IN MAN. Gerd Bedurftig, and Gunther Grussner. *Strahlentherapie* 78, 445-58(1949) (In German)

Changes in pulse rate and blood pressure of carcinoma patients following x ray therapy are described. NSA 4-1844

2373

MALIGNANT TUMORS OF THE UTERINE FUNDUS SUBSEQUENT TO IRRADIATION FOR BENIGN PELVIC CONDITIONS. H. Speert, and T. C. Peightal. *Am J. Obstet. Gynecol.* 57, 261-73(1949) Feb. NSA 4-1845.

2374

OBSERVATIONS ON DISORDERS OF THE THYROID GLAND ASSOCIATED WITH EXPOSURE OF THE SUPRARENAL GLANDS TO X-RAYS. K. A. Jarvinen. *Ann. Med. intern. fenn.* 37, 227-44(1948). NSA 4-1846.

2375

QUARTERLY RESEARCH REPORT. School of Aviation Medicine, United States Air Force, Oct. 1 to Dec 31, 1949.

Research projects include study of antibody response of x rayed animals and isotopic oxygen consumption at low oxygen tensions. NSA 4-1848.

2376

THE RADIOBIOLOGICAL COURSE OF A REACTION IN THE VEGETATIVE NERVOUS SYSTEM Heinz Vieten. *Strahlentherapie* 79, 13-58(1949) (In German)

Author reviews the effect of radiation on the sympathetic nervous system and on blood levels of glucose, K, Ca and eosinophils. A total of 110 papers is cited NSA 4-1849.

2377

THE RECIPROCAL VICINITY EFFECT OF IRRADIATED TISSUES ON A "DIFFUSIBLE SUBSTANCE" IN IRRADIATED TISSUES. Benjamin Jolles. *Brit. J. Radiology* 23, 18-24 (1950) Jan.

Reaction to x rays was significantly more marked when dose was given over 2 small adjacent areas of skin than over one area of skin at a symmetrical site. When space between 2 paired areas exceeded a certain minimum, reaction equally that seen on single area. NSA 4-1850

2378

CYTOLOGICAL ASPECTS OF PROTECTION FROM IONIZING RADIATIONS. A. Glucksmann. *Brit. J. Radiol* 23, 41-5(1950) Jan.

Target theory and intracellular poison concept of x ray effects are reviewed. NSA 4-1852.

2379

MEDICAL ASPECTS OF PROTECTION FROM IONIZING RADIATIONS. F. Ellis. *Brit. J. Radiol.* 23, 28-34(1950) Jan NSA 4-1853

2380

THE TREATMENT OF X-RAY ILLNESS WITH ANTISTINE. H. Fetzner and E. Werle. *Strahlentherapie* 78, 619-24 (1949) (In German).

Antistine was used to treat x ray illness on the theory that reactions are caused by intoxication with histamine. NSA 4-1859

2381

CONCERNING THE POSSIBLE INFLUENCE OF X-RAY THERAPY ON ABDOMINAL DISEASES, ESPECIALLY ULCER OF THE STOMACH AND OF THE DUODENUM. R. Birkner and W. Werner. *Strahlentherapie* 79, 81-92 (1949) (In German). NSA 4-1867.

2382

RADIATION RESULTS IN LEUKEMIA DURING THE LAST TEN YEARS. Horst Muller. *Strahlentherapie* 79, 193-200 (1949) (In German). NSA 4-1885.

2383

SPLENIC CHANGES IN CF1 FEMALE MICE OVER A FORTY-ONE DAY PERIOD POST X-IRRADIATION. Robert E. Carter. [nd]. 9p. (AECU-709).

Between 3 and 8 days post irradiation, decrease in splenic weight may serve as remarkably accurate indication of radiation received NSA 4-2113.

2384

Oak Ridge National Lab. THE CYTOGENETIC EFFECT OF SLOW NEUTRONS. Alan D. Conger and Norman H. Giles, Jr. Feb. 6, 1950. 55p. (ORNL-409), *Genetics* 35, 397-419(1950)

Production of chromosome aberrations in trades-cantia microspores by (1) slow neutrons and (2) x rays was studied H, N, and Bo are responsible for about 99% of ionization by neutron capture and about 77% of this dose is due to protons and α particles from N and Bo. NSA 4-2114

2385

Oak Ridge National Lab. THE EFFECT OF RADIATIONS ON GENETIC MECHANISMS OF *PARAMECIUM AURELIA*. R. F. Kimball. Feb. 15, 1950. 17p. (ORNL-565), *J. Cellular Comp. Physiol* 35, Suppl 1, 157-69 (1950) NSA 4-2115.

2386

Oak Ridge National Lab. EFFECTS OF RADIATION ON MITOSIS. J. Gordon Carlson. Feb. 15, 1950. (ORNL-570), *J. Cellular Comp. Physiol.* 35, (Suppl. 1), 89-101(1950).

A discussion of effects of x- and ultraviolet radiations upon mitosis of grasshopper embryo neuroblasts. Author believes effectiveness of very low ionizing radiation dosages in interfering with enzyme systems may be very important in understanding radiation effects on mitosis. NSA 4-2116

2387

Oak Ridge National Lab.

THE EFFECT OF OXYGEN CONCENTRATION ON THE RATE OF X-RAY INDUCED MUTATIONS IN DROSOPHILA. William K. Baker and Elizabeth Sgourakis. Feb. 1, 1950. 18p. (ORNL-575), Proc Soc Natl. Acad. Sci. U. S. 36, 176-84(1950).

Striking reduction was found in number of recessive sex-linked lethal mutations induced in D. melanogaster males x rayed in atmosphere of low O₂ concentration. NSA 4-2117

2388

Oak Ridge National Lab.

RESUSCITATION OF HEAT-INACTIVATED SEEDS BY X RADIATION. S. R. Suskind. Feb. 9, 1950. 21p. (ORNL-579), J. Heredity 41, 97-102(1950).

Studies were made to test previously reported "resuscitation" of heat-inactivated seeds by x-radiation. Results were not confirmed. NSA 4-2118.

2389

Oak Ridge National Lab.

INTERNAL DOSE DETERMINATIONS OF SEVERAL RADIOISOTOPES. Charles H. Perry. Feb. 27, 1950. 97p. (ORNL-591).

Methods of calculation and tabulated results are presented for tissue doses produced by radioisotopes of those elements which are common in body metabolism. NSA 4-2119.

2390

Oak Ridge National Lab.

X-RAY INDUCED DEVELOPMENT ABNORMALITIES IN THE MOUSE AND THEIR USE IN THE ANALYSIS OF EMBRYOLOGICAL PATTERNS. I. EXTERNAL AND GROSS VISCERAL CHANGES. Liane Brauch Russell. Feb. 17, 1950. 76p. (ORNL-595) J. Exptl. Zool. 114, 545-611(1950). NSA 4-2120.

2391

University Calif., Los Angeles

STUDY OF THE EFFECTS OF VARYING OXYGEN TENSIONS ON THE RESPONSE OF MAMMALIAN TISSUES TO ROENTGEN IRRADIATION. Andrew H. Dowdy, Leshe R. Bennett, and Sarah M. Chastain. Jan. 3, 1950. 20p. (UCLA-55).

Effects of brief extreme anoxia on LD₅₀ and on the acute radiation syndrome observed in mammals after total body x irradiation were investigated. NSA 4-2121.

2392

University Calif., Los Angeles

A COMPARISON OF THE RESPONSE OF NORMAL AND HYPOTHYROID MICE TO ACUTE WHOLE BODY ROENTGEN RADIATION. Thomas J. Haley, Samuel Mann, and Andrew H. Dowdy. Feb. 20, 1950. 9p. (UCLA-66), Science 112, 33-4(1950).

Results show hypothyroid state does not protect mouse from x irradiation damage. Amount of available O₂ and not its rate of utilization determines extent of such damage. NSA 4-2122

2393

CYTOGENETICAL EFFECTS OF INTERNAL RADIATIONS FROM RADIOISOTOPES. Norman H. Giles, Jr., and Rene A. Bolomey. p. 104-12 of Cold Spring Harbor Symposia on Quantitative Biology, Vol. XIII. Cold Spring Harbor, L. I., N. Y., Biological Laboratory. 1948.

Results of cytological analysis to determine amount of change caused by radiations from isotopes in Tradescantia buds and microspore nuclei grown on P³² and C¹⁴ media are presented. NSA 4-2127.

2394

A CONTRIBUTION TO THE STUDY OF TRANSIENT PLEURO-PULMONARY MODIFICATIONS OCCURRING AFTER RADIOTHERAPY OF BREAST CARCINOMA.

R. Sarasin, G. Voluter and J. Garcia-Calderon. J. Radiol. Electrol. 29, 445-52(1948) (In French)

Nine case histories of pulmonary complications developing after use of up to 12,000 r on breast cancer are given with radiographs of affected areas.

2395

CYANIDE PROTECTION AGAINST X-IRRADIATION.

Z. M. Bacq, A. Herve, J. Lecomte, and P. Fischer. Science 111, 356-7(1950) Apr. 7.

Protective action of NaCN against x rays in mice described. NSA 4-2876.

2396

DISEASES OF THE HANDS AND NAILS. Arthur C. Curtis

and Lewis W. Kirkman. Oral Surg. Oral Med. Oral Pathol. 3, 289-355(1950). Mar.

Symptoms and treatment are described for various ailments of skin and nails. Radiodermatitis is discussed, skin reactions to x rays and Ra compared.

NSA 4-2877

2397

Field Information Agency Technical, Office of Military Government for Germany.

DAMAGES BY RADIATION. B. Rajewsky, A. Schraub, G. Kahlau, W. Drebow, A. Krebs, and H. Schaefer. p. 123-75 of Fiat Review of German Science, 1939-46; Biophysics, pt. I. Boris Rajewsky and Michael Schon. 1948. (In German).

Topics include: radiation-induced cancer, radiation-produced changes in blood, radium poisoning, measurement and distribution of radioelements in the body; radiography. NSA 4-2879.

2398

British Mission to Japan

THE EFFECTS OF THE ATOMIC BOMBS AT HIROSHIMA AND NAGASAKI. [nd] 39p. (NP-1156).

General effects on the two cities are presented in this report by the official mission of the British government. NSA 4-2880.

2399

MEDICAL ASPECTS OF THE ATOMIC BOMB. G. M. McDonnell. Ordnance. 34, 308-10(1950) Mar.-Apr.

Atomic casualties produced by blast, heat and ionizing radiation are discussed. Detonation in air, on the ground and underwater are described and effects listed. Author states radiation danger is highly overrated relative to other bomb associated causes of death.

NSA 4-2883

2400

POST-RADIOTHERAPEUTIC ESOPHAGEAL STENOSES.

R. Nadal and J. Piequet. J. Radiol. Electrol. 29, 296-7(1948). (In French).

Three cases of stenosis occurring after x irradiation are presented. NSA 4-2884.

2401

FOUNDATIONS AND RESULTS OF ELECTRON THERAPY WITH A 6-Mev BETATRON. Gerhard Schubert. Schweiz. Med. Wochschr. 80, 193-200(1950) Feb. 25. (In German).

Radiobiological effect of fast electrons is somewhat smaller than that of x rays as ionization per unit path is less. Studies were made on barley seeds, B. coli and D. melanogaster flies. NSA 4-2901.

2402

MANUAL OF ROENTGEN THERAPY. F. Purzer, Stuttgart, Wissenschaftliche Verlagsgesellschaft m. b. H 1949. 144p. (In German)

Includes discussions of: physical-chemical basis and biological effects of x rays on an organism, radiation sickness, x ray therapy, details of technique and dosimetry. NSA 4-2909

2403

OBSERVATIONS CONCERNING A COMBINED COLCHICINE-X-RAY THERAPY OF LEUKEMIA. Edwin Keibl and Anny Lotsch. Schweiz med. Wochschr. 80, 228-31(1940) Mar. 4 (In German).

From studies on leukemia patients it was concluded that although colchicine alone has no therapeutic value, it has a selective effect of making leucocytes sensitive to x rays, thus increasing effectiveness of irradiation. NSA 4-2911.

2404

BIOLOGICAL EVALUATION OF 20 MILLION VOLT ROENTGEN RAYS. Henry Quastler and Elisabeth F. Lenzl. Am. J. Roentgenol. Radium Therapy 63, 566-74 (1950) Apr.

Efficiency of 20 million volt roentgen rays produced by betatron was compared with that of conventional roentgen rays at different dose levels in studies on mice. At low dosage levels, high-energy rays are significantly lower in efficiency. NSA 4-3274.

2405

THE BIOLOGICAL SIGNIFICANCE OF THE TISSUE DOSE OF IONIZING RADIATION. Harald H. Rossi. Trans. New York Acad. Sci. 2, 270-5(1949) June. NSA 4-3275

2406

DEPRESSION OF TRACER ION UPTAKE CURVE IN RAT ERYTHROCYTES FOLLOWING TOTAL BODY X-IRRADIATION. Thomas G. Hennessy and Rex L. Huff. Proc. Soc. Exptl. Biol. Med. 73, 436-9(1950) Mar.

Radioiron red cell uptake curve appears to be a sensitive indicator of x ray damage to bone marrow, histological evidence of sensitivity of erythroid tissue to x rays confirmed. NSA 4-3276

2407

THE "LAW OF INITIAL VALUES" IN FUNCTIONAL X-RAY THERAPY. Heinz Vieten. Strahlentherapie 78, 429-40(1949). NSA 4-1875

2408

THE EFFECT OF X-RAY IRRADIATION ON THE TEETH AND SUPPORTING STRUCTURES OF THE MOUSE M. S. Burstone. J. Dental Research 29, 220-31(1950) Apr.

Degree of radiation damage to teeth and jaws of mice appears dependent upon age at which animals are irradiated and stage of histogenesis of individual teeth. NSA 4-3278.

2409

THE EFFECT OF X-RAYS UPON MUTATION OF THE GENE A IN MAIZE. L. J. Stadler and Herschel Roman. Genetics 33, 273-303(1948) May. NSA 4-3279.

2410

THE EFFECT OF LOCAL X-RAY IRRADIATION ON THE TAIL DEVELOPMENT OF YOUNG AXOLOTLIS. V. V. Brunst. J. Morphology 86, 115-41(1950) Jan.

Effects of 1,000, 2,000, 3,000, or 6,000 r (43 kv, no filter, 17 cm) delivered to localized areas in tail region of axolotls described. Treated animals were studied histologically 35-40 days or 85-100 days after irradiation. Primary effect was inflammation, degeneration of epithelium, notochord and neural tube and inhibition of growth. Secondary effect, which followed primary effect, was characterized by inhibition of growth of exposed

portions and subsequent growth of second tail in many animals, the second tail being smaller than normal and having varying anatomical aberrations. NSA 4-3280.

2411

HISTOLOGICAL AND HISTOCHEMICAL STUDIES OF THE SKIN OF GUINEA PIGS TREATED WITH X-RAYS.

J. Fredericq. Compt. rend. soc. biol. 142, 850-3 (1948) June (In French).

Radiation; x ray (filtered through 1 mm Al) in doses of 3000 r, 15000 r, or 1000 r. Studied; morphological changes in epidermis over a period of 30 days. Histochemical studies were included to estimate sulfhydryl content in regenerating areas. Sulfhydryl groups are considered to be a requirement of cells regenerating after radiation injury. NSA 4-3281.

2412

PROCEEDINGS OF THE SECOND CONFERENCE ON THE BIOLOGY OF NORMAL AND ATYPICAL PIGMENT CELL GROWTH, HELD AT NEW YORK. Nov. 18-19, 1949.

Herman B. Chase and Virginia W. Smith. Zoological 35, 1-32(1950) Apr. 17

From study of x ray effects of mouse pigmentation as related to melanoblast distribution, authors conclude reservoir of melanoblasts is within epidermal follicle and x irradiation destroys source of supply of granules (epidermal melanoblasts of the follicle). NSA 4-3286.

2413

"A" BOMB BURNS. Patrick Clarkson. Guy's Hosp. Gaz. 64, 86-94(1950) Mar. 11.

Physics of nuclear fissions, pattern of disaster (types of effects) and acute diffuse ionizing radiation illness are described. NSA 4-3288.

2414

"A" BOMB BURNS. Patrick Clarkson. Guy's Hosp. Gaz. 64, 120-4(1950) Mar. 25.

This is the second part of general article on atomic bomb effects. Dosage and types of radiation necessary to produce local radiation burns and typical manifestations of radiation burns are outlined. NSA 4-3289.

2415

THE ATOMIC BOMB VERSUS SURVIVAL. Melville J. Aston. Military Surgeon 106, 270-5(1950) Apr.

Elementary mechanics of atomic bomb is discussed, radiation, blast and burn effects attendant on atomic bombing is described. NSA 4-3290.

2416

ATOMIC WARFARE AND ANIMALS. J. H. Wilkins. Ft. Dodge Biochem. Rev. 21, 3-5, 21(1950) March

Four atomic blast effects, flash, blast, fission products and radiations are discussed. Radiation sickness symptoms in dogs are outlined and treatment described. NSA 4-3291

2417

BLOOD CHANGES IN LUMINIZERS USING RADIOACTIVE MATERIAL. Ethel Browning. Brit. Med. J. 1, 428-31 (1949) Mar. 12.

Transient lymphocytosis, presence of Turk cells, premyelocytes and premature large mononuclear cells and the rare occurrence of anemia were found. Author concludes blood changes are due to slight temporary hyperstimulation of reticulo-endothelial system. NSA 4-3292

2418

DESTRUCTIVE ASPECTS OF ATOMIC EXPLOSION.

Elbert DeCoursey. S. Dakota J. Med. Pharm. 3, 71-3 (1950) Mar.

Author presents a general discussion of symptoms and pathology of ionizing radiations such as those seen after atomic explosions at Nagasaki and Hiroshima. NSA 4-3293.

2419

LATE RADIATION EFFECTS IN ROENTGEN THERAPY FOR HYPERTHYROIDISM, THEIR POSSIBLE BEARING ON THE USE OF RADIOACTIVE IODINE Edith H. Qumby and Sidney C. Werner. J. Am. Med. Assoc. **140**, 1046-7(1949) July 23.

Long-term follow ups on I^{131} -treated patients are necessary before it can be determined if such therapy results in late degenerative malignancy in treated areas NSA 4-3295.

2420

REMARKS ON SEVERAL CASES OF CUTANEOUS HYPERSENSITIVITY. J. Reboul and J. M. Meynard. J. Radiol. Electrol. **30**, 732-3(1949) (In French).

Four cases of reaction to radiotherapy are described in detail. Authors conclude that certain individuals are hypersensitive to certain doses and discuss possibility that percentage plots of population reacting against dose may show sigmoid population distribution for sensitivity. NSA 4-3299.

2421

CONSIDERATIONS OF RADIATION SICKNESS AND ITS THERAPY. A. Herve. Brux. Med. **29**, 445-50(1949) (In French).

Study of 210 cases receiving radiation delivered at 151 to 200 kv and 59 to 400 kv shows that higher voltages are better tolerated for the same dose than lower voltages. Other physical factors and specific radiation sensitivity must be considered. NSA 4-3301

2422

BETA IRRADIATION AS A POSSIBLE THERAPEUTIC AGENT IN GLAUCOMA George M. Halik, Louis A. Breffeilli, and Aeleta Barber. Am. J. Ophthalmology **31**, 945-52(1948) Aug.

Ra-irradiated rabbits were studied for effects of β irradiation of ciliary body and to determine degree of destruction which could be brought about in that body without lens injury. NSA 4-3304

2423

COEXISTENT BRONCHOGENIC CARCINOMA AND ACTIVE PULMONARY TUBERCULOSIS. Edward Robbins and Gertrude Silverman. Cancer **2**, 65-97(1949) Jan.

Eleven cases of bronchogenic carcinoma and one of bronchial adenoma are presented. Four cases were irradiated, and in three, tuberculosis was apparently activated, a strong contraindication for use of irradiation where tuberculosis has not been definitely eliminated. NSA 4-3310

2424

THE EFFECT OF LOW-VOLTAGE ROENTGEN RAYS ON THE NORMAL AND VASCULARIZED CORNEA OF THE RABBIT. A PRELIMINARY REPORT ON THE PHILLIPS MACHINE. Harold G. Scheie, Richard H. Dennis, Richard C. Ripple, Larry L. Calkins, and John A. Buesseler. Am. J. Ophthalmology **33**, 549-71(1950) Apr.

Species: rabbits, preliminary studies in patients. Radiation: 44KV x rays compared with β radiation. Doses: few hundred r up to 5000 r, fractionated in various ways (mostly weekly doses). Changes: corneal opacity, cataract, prevention of vascularization after caustic chemicals in rabbit's eye. Effects varied with dose, schedule and radiation. NSA 4-3316

2425

EFFECTS OF ROENTGEN IRRADIATION ON GERM PLASMA IN RELATION TO INFERTILITY. Ira I Kaplan. Fertility and Sterility **1**, 123-45(1950) Mar.

Results of treating patients for testicular tumors and similar condition involving the testes with x-irradiation and radiotherapeutic treatment of amenorrhea and

sterility in women indicate to the author that the method, properly used, is safe and valuable therapeutically. NSA 4-3317

2426

LOW DOSAGE IRRADIATION IN MALE INFERTILITY, A NEGATIVE REPORT. Charles W. Charney. Fertility and Sterility **1**, 150-7(1950) Mar.

X rays applied to pituitary and/or testes failed to change infertile condition to 20 male patients, dose was apparently too high, as degenerative testicular changes occurred. NSA 4-3321.

2427

Argonne National Lab. AN INTERSPECIES COMPARISON OF THE RADIO-TOXICITIES OF X-RAY, Sr^{89} , and Pu^{239} . C. Ladd Prosser and Marguerite N. Swift. June 1949. Decl. Apr. 18, 1950. 10p. (AEC-2828).

Radiotoxicity of the radioactive isotopes was determined in mouse, rat, rabbit, dog and goat. NSA 4-3343.

2428

Atomic Energy Project, Univ. of Rochester APLASTIC ANEMIA. William Valentine. Jan. 22, 1945. Decl. Apr. 28, 1950. 12p. (AEC-2833).

Literature survey was made to discover: (1) incidence of aplastic anemia, particularly secondary type in individuals exposed to noxious agents and (2) blood picture in aplastic anemia, especially early hematological changes which might serve as warning signs. NSA 4-3567

2429

Rochester Univ., School of Medicine and Dentistry SELECTIVE TESTICULAR DAMAGE IN RATS DUE TO X-RAYS. Samuel L. Shaver and Karl E. Mason. [nd] 1p. (AECU-747).

Dosage of 500 r total-body x irradiation, administered in approximately 8 min. proved most suitable for producing minimal but selective effects upon the testis or the rat. NSA 4-3580.

2430

Rochester Univ., School of Medicine and Dentistry. THE EFFECT OF AUREOMYCIN AND ANTIBIOTICS ON WHOLE BODY IRRADIATION. Joe W. Howland, Frank Furth, and M. Coulter. [nd] 2p. (AECU-748), Federation Proc. **9**, 334-5(1950).

Results are presented from experimental exposure of more than 1,200 rats and 18 dogs to lethal doses of filtered 250 kvp x irradiation and subsequent treatment with aureomycin or other (combined) antibiotics. NSA 4-3581.

2431

Brookhaven National Lab. THE EFFECT OF GROWTH IN A RADIOACTIVE CULTURE MEDIUM ON THE MUTATION RATE OF E. COLI TO STREPTOMYCIN RESISTANCE. B. A. Rubin [nd] 2p. (AECU-762). NSA 4-3582.

2432

Brookhaven National Lab. THE GENETICS OF STREPTOMYCIN RESISTANCE INDUCED BY ADSORBED RADIOACTIVE PHOSPHORUS (P^{32}). B. A. Rubin and P. Steinglass. [nd] 2p. (AECU-765). NSA 4-3583

2433

Brookhaven National Lab. SENSITIVITY OF CHROMOSOMES TO BREAKAGE BY X-RAYS AND ITS RELATIONSHIP TO THE NUCLEIC ACID CYCLE IN DIVIDING CELLS. Arnold H. Sparrow, Montrose J. Moses, and Robert Steele. [nd] 1p. (AECU-790). Cancer Research **10**, 241-2(1950).

Number of chromosome breaks produced after irradiation by 50 r of 160 KV x rays at various stages of mitotic nuclear cycles was studied in Trillium erectum.

A change of at least 50 fold was observed throughout the mitotic cycle. NSA 4-3585

2434

Brookhaven National Lab.

NO STIMULATION FROM X-RAYS OR GAMMA RAYS.

W. Ralph Singleton, [nd] 2p. (AECU-804).

Study was made of growth of Co^{60} -irradiated seeds of standard early field corn to determine whether there is a stimulating effect of x or γ rays. Neither stimulating nor depressing effect was found using doses of 2,000, 4,000, 8,000 and 16,000 r of both x and γ rays.

NSA 4-3587

2435

Brookhaven National Lab.

A CYTOLOGICAL AND CYTOCHEMICAL APPROACH TO AN UNDERSTANDING OF RADIATION DAMAGE IN DIVIDING CELLS. Arnold H. Sparrow. [nd] 2p. (AECU-821).

Analysis of induced chromosome fragmentation following irradiation at different stages of mitosis in *Trillium erectum* indicates that major changes occur in radiosensitivity of the chromosomes. NSA 4-3588.

2436

Brookhaven National Lab.

CONSIDERATION OF THE RELATIONSHIP BETWEEN CHROMOSOME BREAKAGE AND MITOTIC INHIBITION INDUCED BY IONIZING RADIATION. Arnold H. Sparrow. [nd]. 1p. (AECU-822), 5th Intl. Congress of Cancer, Paris. July 1950, p. 132

From this study it appears that both inhibition and breakage may be related to the same primary changes produced in nucleoprotein by ionizing radiation.

NSA 4-3589

2437

Rochester Univ.

DIFFERENCE IN THE EFFECTS OF X-IRRADIATION IN RAT EMBRYOS OF DIFFERENT AGES. James G. Wilson and John W. Karr. [nd] 1p. (AECU-830).

Subsequent development was altered much more severely by x irradiation on 9th than on 10th day of gestation. Eye was most common site of mal-development. NSA 4-3590

2438

Argonne National Lab.

QUARTERLY REPORT AUGUST, SEPTEMBER, OCTOBER, 1949. Biological and Medical Divisions. Austin M. Brues and Hermann Lisco. 139p. (ANL-4360).

Included reports on: influence of spleen on post-irradiation hematopoietic recovery, effect of cysteine on peripheral blood and body weight of irradiated rat, statistical analysis of serial blood counts on human subjects.

NSA 4-3591

2439

Los Alamos Scientific Lab.

THE EFFECT OF ACUTE DOSES OF X-IRRADIATION ON THE SPLENIC AND THYMIC WEIGHT OF CF-1 FEMALE MICE. Robert E. Carter, Payne S. Harris, and James T. Brennan. Mar. 7, 1950. 8p. (LA-1075).

High positive correlation was obtained between total x-radiation received during single exposure and loss of weight of spleen and thymus of mice. NSA 4-3592.

2440

Oak Ridge National Lab.

CHANGES IN THE COMPOSITION OF THE BLOOD PLASMA OF THE GUINEA PIG DURING THE ACUTE RADIATION SYNDROME. Henry I. Kohn. Apr. 14, 1950. 12p. (ORNL-464), *Am. J. Physiol.* **162**, 703-08 (1950).

Changes are described in glucose concentration, nonprotein nitrogen level, albumin-globulin ratio, total

protein level, chloride concentration and cholesterol in the blood of irradiated guinea pigs. NSA 4-3593.

2441

DIFFERENTIAL X-RAY SENSITIVITY OF *TRADESCANTIA*

CHROMOSOMES DURING THE MITOTIC CYCLE. Charles J. Bishop. *Genetics* **35**, 175-87(1950) Mar. NS. 3595.

2442

HEMOPOIETIC FUNCTION AND IRRADIATION OF THE PYLORIC-DUODENAL TRACT. PART I. BEHAVIOR OF ERYTHROPENIA AND OF DIGESTIVE LEUCOCYTOSIS IN NORMAL PERSONS SUBJECTED TO IRRADIATION OF THE PYLORIC-DUODENAL TRACT. Cesare Tripodo and Giuseppe del Buono. *Haematologica* **31**, 693-710(1949) (In Italian).

Digestive erythropenia is confirmed as the initial mechanism that in normal conditions determines and regulates physiological erythropoiesis. NSA 4-3596

2443

OCULAR LESIONS INDUCED BY ACUTE EXPOSURE OF THE WHOLE BODY OF NEWBORN MICE TO ROENTGEN RADIATION. Egon Lorenz and Thelma B. Dunn. *Arch. Ophthalmology* **43**, 742-9(1950) Apr.

After single 400-r x ray dose at birth, survivors exhibited opacity of lens, partial opacity and vascularization of cornea, or atrophy of retina NSA 4-3598

2444

ON THE EXISTENCE OF BUFFERS, INHIBITORS OF THE RADIATION DETOXIFICATION OF STRYCHNINE. Jean Loiseleur and Georges Velley. *Compt. rend.* **230**, 784-6 (1950) Feb. 20. (In French).

Authors conclude that radiation detoxification is the result of activated oxygen, dissolved in solution, combining with strychnine to form less toxic molecule. Buffers act by removing this oxygen. NSA 4-3599.

2445

POSITIVE CEPHALIN-CHOLESTEROL FLOCCULATION

TEST IN X-RAY WORKERS. Nell Butler and James F. Crenshaw. *Am. J. Med. Technol.* **14**, 255-8(1948) Sept.

Of 28 x ray workers exposed for periods ranging between 4 mo and 20 yr, 82% show positive tests. Author suggest this may be an indication of slight changes in liver function due to x irradiation. NSA 4-3600

2446

RADIATION SCOLIOSIS: AN EXPERIMENTAL STUDY.

Alvin M. Arkin and Norman Simon. *J. Bone Joint Surg* **32A**, 396-40(1950) Apr.

In a study of production of scolioses in rabbits by direct action of radiation upon spine epiphyseal plates it was concluded that a single dose of 1,000 r is required to produce definite wedging in spines of young rabbits. NSA 4-3601

2447

SOME HISTOLOGICAL EFFECTS OF CARBON 14 ON THE LEAVES OF CERTAIN MEDICINAL PLANTS.

J. M. Beal. *Botan. Gaz.* **110**, 600-4(1949) June.

Cytological description of leaves of *Digitalis purpurea*, *D. lanata*, *Papaver somniferum*, *Nicotiana rustica* and *Atropa belladonna* grown in C^{14}O_2 atmosphere for various periods of time is presented. NSA 4-3602.

2448

CARCINOGENS AND CARCINOGENESIS. W. C. Hueper.

Am. J. Med. **8**, 355-71(1950) Mar.

Extensive survey of known and suggested carcinogenic agents is presented including discussion of radioactive substances, and their properties as carcinogens NSA 4-3611

2449

EVALUATION OF HORMONAL AND RADIATION THERAPY IN CASES OF FUNCTIONAL STERILITY AND SECONDARY

AMENORRHEA. PRELIMINARY REPORT. Rita S. Finkler. Am. J. Obstet. Gynecol. 58, 559-64(1949) Sept.

Author concludes that radiation appears to be therapy of choice because of high percentage of success, more rapid response, and economy, but mentions that great care must be taken in accurate diagnosis and in proper selection of cases for this therapy. NSA 4-3612

2450

THE EFFECTS OF IRRADIATION ON AZO DYE NEOPLASIA IN THE RAT LIVER. II. CATALASE, ALKALINE PHOSPHATASE, ARGINASE, AND RIBOFLAVIN LEVELS OF THE LIVER FOLLOWING X-RAY AND RADIOGOLD IRRADIATION OF RATS FED DIMETHYLAMINOAZO-BENZENE. Nelson F. Young and George Z. Williams. Paper Presented at a meeting of the American Association for Cancer Research, Inc., Apr. 27-29, 1951. Cancer Research 11, 291(1951) Apr. NSA 5-5496

2451

RADIOACTIVE PHOSPHORUS II. IN THE TREATMENT OF MYELOID LEUKEMIA. Henry D. Diamond and Lloyd F. Craver. Cancer 4, 999-1008(1951) Sept.

From study of 77 myeloid leukemia patients it was concluded that orally administered P^{32} is effective as palliative method of treatment; used with local x raying, hematological phase and bulky tumefaction of spleen may be controlled in early stages. NSA 5-6614.

2452

PATHOLOGICAL EFFECTS AND RADIOAUTOGRAPHIC LOCALIZATION OF I^{131} IN HUMANS. John T. Godwin, B. J. Duffy, Jr., Patrick J. Fitzgerald, J. B. Trunnell, and Rulon W. Rawson. Cancer 4, 936-51(1951) Sept. NSA 5-6615

2453

EFFECTS OF THE ACTIVATION OF THE ATMOSPHERE BY THE RADIUM EMANATION ON THE GERMINATION AND GROWTH OF DIFFERENT VEGETABLE ORGANISMS. G. Fabre. Compt. rend. soc. biol. 70, 187-88(1911). (In French).

2454

THE APPLICATION OF RADIOCARBON IN THE STUDY OF RADIOLESIONS. G. Hevesy. J. chim. phys. 48, 275-9(1951) May-June.

Postirradiation effect of mitotic arrest is discussed. X ray effect on C^{14} incorporation into purine of DNA and RNA is described. NSA 5-6715

2455

CAPILLARY FRAGILITY AND VITAMIN P PROTECTIVE ACTION AGAINST RADIATION. Boris Sokoloff, James B. Redd, and Raymond Dutcher. Proc. Soc. Exptl. Biol. Med. 75, 6(1950) Oct.

Increased capillary fragility brought about by administration of leukotaxine, a bacterial polysaccharide, or by x ray exposure, can be prevented by vitamin P (flavonoids of citrus fruit). NSA 5-1161.

2456

Atomic Energy Project, Univ. of Calif, Los Angeles THE INFLUENCE OF ANOXIA UPON DESTRUCTION AND MITOSIS OF THE HEMATOPOIETIC CELLS OF X-IRRADIATED TADPOLES. Bennet M Allen, Ole Arne Schjeide, and Ronald Piccirillo. Aug. 14, 1951. 13p. (UCLA-149).

Anoxia markedly reduces hematopoietic cell destruction due to x irradiation (500 r) and reduces colchicine effect (pycnosis and arrested mitosis) on R. catesbiana tadpoles during 24 hr post irradiation period. NSA 5-4972.

2457

Atomic Energy Project, Univ. of Calif., Los Angeles THE RELATION OF MITOSIS TO THE MANIFESTATION OF X-RAY DAMAGE IN HEMATOPOIETIC CELLS OF

TADPOLES. Ole Arne Schjeide and Bennet M Allen. Oct. 2, 1950. 22p. (UCLA-94), J. Cell. and Comp. Physiol. 38, 51-68(1951).

Hematopoietic cell destruction after 500 r x rays was directly correlated with mitotic rate during this same time. Mitotic rate and rate of cell destruction by 500 r were proportional to temperature, but at 10,000 and 20,000 r, the cell destruction exceeded mitotic rate NSA 5-287.

2458

GENETIC CHANGES WITHIN POPULATIONS AFTER X-IRRADIATION Bruce Wallace [nd] 26p. (AECU-1107), Genetics 36, 612-628(1951)

Study of genetic changes in offspring of irradiated D. melanogaster parents is presented. NSA 5-909.

2459

CONCERNING RECENT RESEARCH ON PROTECTION AGAINST HIGH-INTENSITY WHOLE-BODY EXPOSURE TO PENETRATING RADIATIONS. A. Lacassagne Fortschr. Gebiete Rontgenstrahlen 75, Suppl., 98-105(1951) Dec. (In French).

Adult rats were injected with Loiseleur's solution (glucose, cysteine, thiourea, ascorbic acid and succinic acid) 16 minutes before or after x irradiation with 666 to 836 r. Lower mortality of treated animals was apparently caused by survival of a greater number of stem cells in hematopoietic tissue. NSA 6-3917

2460

STUDY OF RECOVERY AFTER IRRADIATION WITH X RAYS. Paul Lamarque. J. chim. phys. 48, 252-5(1951) May-June (In French).

Total dose required to produce a given damaging effect is smaller when radiation is delivered as single exposure than when it is delivered in 2 exposures separated by a time interval. (Bombyx mori eggs). NSA 5-5482

2461

THE TREATMENT OF MALIGNANT DISEASE BY RADIUM AND X RAYS, BEING A PRACTICE OF RADIOTHERAPY. Ralston Paterson. London, Edward Arnold, 1948. 662p

This textbook on therapeutic applications of ionizing radiations contains a chapter on biological action of radiation. NSA 2-862

2462

GENETIC CHANGES IN POPULATION UNDER IRRADIATION. Bruce Wallace and J. C. King. [nd] 19p. (AECU-1442), Am. Naturalist 85, 209-22(1951).

Consideration of frequencies of lethals, semilethals and subvitals within populations of D. melanogaster, and of estimated adaptive values of the populations suggests the development of heterotic gene combinations. NSA 5-5463.

2463

THE DEVELOPMENT OF SECONDARY TAILS IN YOUNG AXOLOTLS AFTER LOCAL X-RAY IRRADIATION. V. V. Brunst and Frank H. Figge. J. Morphol. 89, 111-33 (1951) July.

X-ray doses of 600-12,000 r applied to tail areas of 10 day axolotls caused formation of secondary tails. NSA 5-6573

2464

Atomic Energy Project, Univ. of Rochester BIOLOGICAL EFFECTS OF EXTERNAL RADIATION [X RAYS AND γ RAYS] p. 13-51 OF QUARTERLY TECHNICAL REPORT, APR. 1, 1951 THROUGH JUNE 30, 1951. Henry A. Blair, Director. July 31, 1951. 38p. (UR-174(p-13-51)).

Includes reports on: effect of nutrition and antibiotic on post-irradiation survival of rats, effort of Aureomycin on reduced post-irradiation leucocyte and platelet volumes in dogs, prognostic significance of postirradiation flocculation test on serum of dogs. NSA 5-5470

2465

RADON IMPLANTATION IN THE MEDULLA OBLONGATA OF THE DOG; EFFECTS ON THE DEGREE AND EXTENT OF CELLULAR REACTIONS Joseph H. Globus, S. C. Wang, and H. I. Maibach J. Neuropathol. Exptl. Neurol. **11**, 429-42 (1952) Oct. NSA 7-1342.

2466

BURNS IN ATOMIC WARFARE. George F. Lull. Today's Health, **28**, 18-19, **44**(1950) Oct.

Medical problems of an atomic bomb attack are reviewed. Emphasis is placed on necessity for treatment of thousands of burn casualties. NSA 4-6493.

2467

THE RELATION OF BREAK SENSITIVITY AND REJOINING IN TRILLIUM FOLLOWING X-IRRADIATION. E. R. Deschner. Genetics **38**, 660-1 (1953).

2468

Naval Radiological Defense Lab.

PERFORMANCE STUDIES ON ANIMALS EXPOSED TO EXTERNAL RADIATION II. EXHAUSTIVE EXERCISE TESTS ON RATS EXPOSED TO X-RAYS IN THE LETHAL DOSE RANGE D. J. Kimeldorf and D. C. Jones. Aug. **25**, 1950. **23p.** (AD-241(B)).

Performance of rats in standardized exhaustive performance test was depressed after whole-body irradiation with x-ray doses of 700 and 860 r NSA 4-6501

2469

Oak Ridge National Lab.

SOME EFFECTS OF GAMMA RAYS ON RECOMBINATION AND ON CROSSING OVER IN DROSOPHILA MELANOGASTER. Maurice Whittinghill. Sept. **11**, 1950. **43p.** (ORNL-817), Genetics **36**, 352-55 (1951) July. NSA 4-6502

2470

Oak Ridge National Lab.

THE EFFECT OF X-IRRADIATION IN OXYGEN AND IN HYDROGEN AT NORMAL AND POSITIVE PRESSURES ON CHROMOSOME ABERRATION FREQUENCY IN TRADESCANTIA MICROSPORES. Norman H. Giles, Jr and Alvin V. Beatty. Sept. **15**, 1950. **15p.** (ORNL-822), Genetics **35**, 666-7 (1950), Science **112**, 643-5 (1950)

Oxygen increases frequency of x-ray-induced chromosome aberrations and amount of O₂ present during exposure determines extent of effect. NSA 4-6503.

2471

Atomic Energy Project, Univ. of Calif., Los Angeles
THE EFFECT OF X-IRRADIATION UPON FAT ABSORPTION IN THE MOUSE. James F. Mead, Arthur B. Decker, and Leslie R. Bennett. Sept. **12**, 1950. **21p.** (UCLA-90), J. Nutrition **43**, 485-500 (1951).

It was concluded that there is no evidence for post-irradiation impairment of fat absorption NSA 4-6504

2472

ACTION OF α RAYS AND OF ULTRAVIOLET LIGHT ON BACTERIUM COLI. Hermann Engelhard and Thea Houtermans. Z. Naturforsch. **5b**, 264-9 (1950) July-Aug. (In German)

Lethal effect of the α radiation on B. coli was determined as a function of dose. At equal doses, intensity has no effect. Ultraviolet radiation produces different type of survival curve indicating presence of some bacteria resistant to U-V. Morphological pictures indicate a many-hit process while shape of curves indicates 2 mechanisms, one of 1-hit and one of many-hit variety NSA 4-6505

2473

THE EFFECT OF ISOTOPIC (¹³¹I) RADIATION AND X-RADIATION ON THE TOTAL COPROPORPHYRIN EXCRETION IN HUMANS. Henry J. Koch, Jr., Timothy R. Talbot, Michel Bernstein, Jean MacKinnon, and Catherine Elias. J. Clin. Endocrinol. **10**, 1029-53 (1950) Sept

Increased excretion of coproporphyrin in urine and feces of patients receiving ¹³¹I and x radiation, and one receiving ACTH. Lymphopenia preceded or was concomitant with this increase in all cases. NSA 4-6506.

2474

EXPERIMENTAL HISTOPLASMOSIS AND X-RAYS. F. A. Brandt. S. African J. Med. Sci. **15**, 1-4 (1950) July.

Mice, gerbils and guinea pigs were irradiated (800 r, x rays) and inoculated with Histoplasma capsulatum. Observations are reported NSA 4-6507.

2475

HISTOLOGICAL CHANGES PRODUCED IN THE EPITHELIUM OF THE FROG'S CORNEA BY TOTAL AND PARTIAL IRRADIATIONS WITH X-RAYS G. S. Streln. Doklady Akad. Nauk S. S. R. **73**, 1283-6 (1950) Aug. **21**. NSA 4-6508.

2476

BENIGN TUMORS, NEVI, AND PRECANCEROUS. Carl W. Laymon. Minnesota Med. **33**, 908-9, 913 (1950) Sept.

Treatments of warts, fibromas, pigmented moles, nevi, keratoses and precancerous lesions including radiodermatitis are described. NSA 4-6509.

2477

CURATIVE TREATMENT OF RADIOLESIONS RESULTING FROM THE ADMINISTRATION OF LETHAL DOSES OF X-RAYS Jean Loiseleur and George Velley. Compt. rend. **231**, 529-31 (1950) Sept. **4** (In French)

Of 18 rabbits exposed to 950 r whole-body x ray exposure, 10 were injected immediately with a solution of cysteine and ascorbic acid, with additional doses given after 30 min and 2 hr. Six of 10 survived in good health, untreated controls died NSA 4-6510.

2478

RECONSTRUCTIVE SURGERY OF THE HAND AND INDUSTRIAL REHABILITATION Michael L. Lewin Ind. Med. Surg. **19**, 457-61 (1950) Oct

Case report of patient with chronic ulcerative radiodermatitis of the hand caused by overexposure to fluoroscope x radiation is included in discussion of reconstructive surgery NSA 4-6511

2479

REDUCTION IN LETHAL EFFECT OF X-RADIATION BY PRETREATMENT WITH THIOUREA OR SODIUM ETHANE DITHIOPHOSPHONATE. R. H. Mole, J. St. L. Philpot, and G. R. V. Hodges. Nature **166**, 515 (1950) Sept. **23**.

Protective effects of thiourea and dithiophosphonate in mice was highly significant, those of glycerol barely so. Postirradiation thiourea was ineffective. NSA 4-6512

2480

Oak Ridge National Lab.

RECENT EVIDENCE ON THE MECHANISM OF CHROMOSOME ABERRATION PRODUCTION BY IONIZING RADIATIONS. Norman H. Giles, Jr. Aug. **29**, 1950. **27p.** (ORNL-811)

Increased frequency of aberrations in Tradescantia arises from increased production of chromosome breaks when O₂ is present NSA 4-5822

2481

THE EFFECT OF ROENTGEN RAY IRRADIATION ON NORMAL, HYPOTHYROID, AND HYPERTHYROID RATS Thomas J. Haley, Samuel Mann, and Andrew H. Dowdy. July **10**, 1950. **13p.** (UCLA-81), Endocrinology **48**, 365-9 (1951)

Thyroparathyroidectomy did not significantly increase survival time nor decrease total mortality of x-rayed rats. Hypothyroidism significantly increased mortality rate as compared with normal and hypothyroid animals NSA 4-5823

2482

ATTEMPT TO DETECT A MAMMARY TUMOR-AGENT

IN STRAIN C MICE BY X-RADIATION Howard B. Andervont and Thelma B. Dunn J. Natl. Cancer Inst. 10, 1157-90 (1950) Apr

No significant differences were found between tumor incidences or average ages at which tumors arose in hybrids born to irradiated and nonirradiated C mothers NSA 4-5824

2483
BIOLOGICAL EFFECTS OF RADIATION IN THE KARAKUL Richard T. Street Fur Farming J. 3, No. 5, 9 (1950) Mar-Apr

Karakul sheep described as one of the most radio-resistant of animals NSA 4-5825.

2484
Atomic Energy Research Establishment, Harwell Berks (England)
SOME PUBLISHED REPORTS ON THE EFFECTS OF RADIATION ON REPRODUCTION AND ON THE GENETIC EFFECTS OF RADIATION A. Lundie Mar 8, 1950 10p (AERE Inf/Bib-61)

This is a bibliography of 61 publications NSA 4-5826.

2485
THE TOXICITY AND PATHOLOGICAL EFFECTS OF ROENTGEN RAYS IN THE CHICKEN John A. Jacques and David A. Karnofsky Am. J. Roentgenol. Radium Therapy 64, 289-97 (1950) Aug

Acute deaths in young chicks are produced by dose rates greater than 10r/min and total doses of 1000 r or more. Delayed LD₅₀ in chicks surviving acute effects of high dose rates is about 800 r, at low dose rates about 1, 100-1,200 r. Adult males and females may die acutely following 1250-3000 r but some individuals survive 5000 r for several days. Those surviving acute effects die within 3-10 days. LD₅₀ in these is 600-800 r. Chickens dying acutely show: necrotic foci in liver pyknosis and fragmentation of lymphatic cells. Those dying delayed deaths: no liver injury but severe involution of all hematopoietic tissues, ulceration and degeneration of GI tract, bacterial infection NSA 4-5827.

2486
THE TOXICITY OF ROENTGEN RAYS TO THE CHICK EMBRYO David A. Karnofsky, Priscilla A. Patterson and Lois P. Ridgway. Am. J. Roentgenol. Radium Therapy 64, 280-8 (1950) Aug NSA 4-5828.

2487
Hanford Works
BIOLOGICAL MONITORING OF THE LABORATORY AREA BY ANALYSES OF RODENTS AND OTHER FORMS OF WILDLIFE K. E. Herde May 26, 1947. Dec. 1 July 12, 1950 14p (AECD-2888)

Waterfowl, rodents and carnivores trapped near radioactive-waste disposal pond or in radiation laboratory were examined for alpha- and beta-emitting elements NSA 4-5829.

2488
Radiation Lab. Univ. of Calif.
MEDICAL AND HEALTH PHYSICS QUARTERLY REPORT: JAN., FEB., MAR., 1950 May 2, 1950 Dec. 1 Aug 23, 1950 105p (AECD-2901)

Includes reports on: metabolic properties of Pu and allied materials, tracer studies on metabolism of fission products, Sr deposition in young, adult, and rachitic rats NSA 4-5845

2489
HEMATOLOGICAL EFFECTS OF IONIZING RADIATIONS VII. PROGRESS REPORT APR. 1, 1949-FEB. 28, 1950 B. V. A. Low-Beer and Paul M. Aggeler [nd] 87p. (UCRL-862)

Patients followed hematologically include: group treated with 100-, 200-, or 1000 kv x rays, arthritic

group given P³², group given I¹³¹ orally for Grave's disease Dose-effect relations are analyzed NSA 4-6018

2490
THE DISTRIBUTION OF PHOSPHATASES IN THE RABBIT APPENDIX AFTER X-IRRADIATION William L. Doyle. Am. J. Anat. 87, 79-117 (1950) July. NSA 4-6019.

2491
EFFECTS OF X-RAYS PRODUCED AT 50 KILOVOLTS ON DIFFERENT SPECIES OF BACTERIA Harvey Fram, Bernard E. Proctor, and Cecil G. Dunn J. Bact. 60, 263-7 (1950) Sept

E. coli, A. aerogenes, S. marcescens, P. aeruginosa, P. fluorescens, and S. aureus destruction rates were studied S. aureus proved most radioresistant NSA 4-6021

2492
THE IMMEDIATE ACTION OF X-RAYS ON THE CHONDRIOSOMES AND LACUNOMES OF THE INTESTINAL EPITHELIUM Antonietta Guardabassi Atti accad. nazl. Lincei, Classe sci. fis. mat. e nat. 7, 334-8 (1949) Dec. (In Italian).

Cytoplasmic elements underwent modifications more readily than nuclear elements in rats and mice given 150-900 r NSA 4-6022

2493
INHIBITION OF GROWTH AND THE PRODUCTION OF OEDEMA BY X-IRRADIATION Robert Rugh. J. Exptl. Zool. 114, 137-57 (1950) June.

R. pipiens tadpoles were exposed to 10,000 to 50,000 r. Inhibition of growth, lordosis, edema and other morphological changes were studied and are described NSA 4-6023

2494
PENICILLIN-SCREENED AUXOTROPHIC MUTATIONS IN SALMONELLA TYPHIMURIUM AND THEIR RELATION TO X-RAY DOSAGE H. H. Plough, Helen N. Young, and Madelon R. Grimm J. Bact. 60, 145-57 (1950) Aug NSA 4-6024

2495
THORIUM-X INVESTIGATIONS HISTOLOGICAL STUDY OF THORIUM-X APPLICATION ON RABBIT SKIN Harold C. Fishman. J. Investigative Dermatol. 15, 71-4 (1950) Aug NSA 4-6025.

2496
X-RAY-INDUCED GENETIC EFFECTS IN GERMINAL AND SOMATIC TISSUE OF DROSOPHILA MELANOGASTER George Lefevre, Jr. Am. Naturalist 84, 341-65 (1950) Sept-Oct NSA 4-6026

2497
LEUKEMIA IN RADIOLOGISTS IN A 20-YEAR PERIOD Herman C. March Am. J. Med. Sci. 220, 282-6 (1950) Sept

Leukemia occurred 9 times as frequently in radiologists as in nonradiological physicians during a 20 year period NSA 4-6028.

2498
POTENTIAL BIOLOGIC DANGERS OF NASOPHARYNGEAL BETA IRRADIATION Isadore Lampe Trans. Am. Acad. Ophthalmol. Otol. 502-7 (1950) May-June NSA 4-6030.

2499
HAEMORRHAGIC DISEASES. A. F. Robertson Bull. Vancouver Med. Assoc. 26, 278-82 (1950) Aug

Diagnosis and treatment of diseases characterized by hemorrhages, including radiation sickness, are briefly discussed NSA 4-6032

2500
THE ABUSE OF NASOPHARYNGEAL IRRADIATION. Kenneth M. Day Trans. Am. Acad. Ophthalmol. Otol. 522-5 (1950) May-June NSA 4-6035

2501
THE PRIMARY CANCER-PRODUCING EVENT IN THE LIGHT OF THE MUTATION THEORY AND THE "HIT"

PRINCIPLE. Friedrich Hartmut Dost. Arztliche Forsch. 4, 116-34(1950) Mar. 10. (In German). NSA 4-6040.

2502

ADVANCES IN RADIOBIOLOGY BETWEEN 1937 AND 1950. Antoine Lacassagne. Nucleonics 7, No. 4, 62-7(1950) Oct. NSA 4-6251.

2503

CHANGES PRODUCED BY X-RAYS IN BLOOD CORPUSCLES PART 3. E. A. Zimmer. Strahlentherapie 82, 129-42 (1950) May 15, (In German).

Author reports observations on blood changes produced in experimental animals and in patients with cancer, splenectomy, skull irradiation or hyperthyroidism, i.e. effect of irradiating various organs especially effects observed following irradiation of bone marrow, spleen and liver. NSA 4-6252

2504

CHANGES PRODUCED BY X-RAYS IN BLOOD CORPUSCLES PART 4. E. A. Zimmer. Strahlentherapie 82, 261-80 (1950) June 12. (In German).

Author describes effect of therapeutic x radiation for polycythemia vera on formed elements of blood and hematopoietic tissue. Doses were given in increments of 100 r for the most part. NSA 4-6253.

2505

THE CYTOLOGICAL EFFECTS OF LOW-INTENSITY RADIATION. Karl Sax. Science 112, 332-3(1950) Sept. 22.

Tradescantia paludosa was exposed to low intensities of γ radiation for several months. Chromosome aberrations and pollen sterility level fell off after a few weeks of exposure. NSA 4-6254

2506

EFFECT OF BETA IRRADIATION ON GASTRIC ACIDITY. Raymond F. Hedin, Winston R. Miller, and Demetrius G. Jelatis. Arch. Surg. 61, 748-57(1950) Oct.

From these data it appears a dosage of 10,000 rep from P^{32} produces a marked reduction in gastric acidity for prolonged time in dogs without complete achlorhydria. NSA 4-6255

2507

EFFECT OF INTERNAL IRRADIATION OF MICE WITH P^{32} . PART I: SPLEEN, LYMPH NODES, THYMUS, BONE, AND BONE MARROW. Shields Warren, Jane C. MacMillan, and Frank J. Dixon. Radiology 55, 375-89 (1950) Sept.

Histological studies on mice receiving continuous internal irradiation from P^{32} are described. Detailed description of injury and recovery phases in various hematopoietic tissues in mice receiving various doses is presented. NSA 4-6256.

2508

EFFECTS OF PHOSPHORUS³² ON THE HAMSTER Clem Russ. Proc. Soc. Exptl. Biol. Med. 74, 729-31 (1950) Aug.

Single doses of 1, 6, 8, or 10 μ c/g body weight were administered to hamsters. The largest dose caused death in 11 days, 6 or 8 mc/g caused severe testicular damage and sterility, 1 mc/g caused some testicular damage by 30 days after injection but no immediate damage. Spermatogenic cells were more sensitive than Sertoli cells. NSA 4-6257.

2509

EFFECTS OF X-IRRADIATION AND URETHANE TREATMENT ON CHICKEN BONE MARROW ENZYMES. James S. Dinning, I. Meschan, Cecilia K. Keith, and Paul L. Day. Proc. Soc. Exptl. Biol. Med. 74, 776-7 (1950) Aug.

Hens exposed to 300 r of x rays showed reduced bone marrow endogenous respiration, choline oxidase and succinoxidase. Injected urethane reduced marrow choline

oxidase and succinoxidase. Combination of the two rendered hens leucopenic. NSA 4-6258.

2510

EFFECTS OF X-RAYS ON SIZE OF YEAST CELLS. Kirkland C. Brace. Proc. Soc. Exptl. Biol. Med. 74, (1950) Aug.

After 20,000 r of x rays, yeast cells and descendants achieved mean cell volume twice that of controls. This enlargement is a nonselective increase in cell constituents rather than a swelling due to H_2O uptake. NSA 4-6259.

2511

KILLING OF DROSOPHILA EGGS BY ENERGETIC RAYS, AS A BIOPHYSICAL PROBLEM. H. Langendorff and K. Sommermeyer. Strahlentherapie 82, 316-20(1950) June 12. (In German)

Authors present an interpretation of the lethal effect of x rays on Drosophila eggs. Younger stages of egg development showed considerable variability and demonstrated that many hits were required to produce the lethal effect. NSA 4-6260

2512

THE MUTAGENIC EFFECT OF RADIOPHOSPHORUS IN BARLEY K. F. Thompson, J. MacKey, A. Gustafsson, and L. Ehrenberg. Hereditas 36, 220-3(1950) Apr. 22.

Mutagenic effect of P^{32} on barley was studied by soaking seeds in H_2O containing various quantities of radioactive phosphate ions, and measuring chlorophyll mutation rates per spike progeny in second generation. P^{32} was found to be highly mutagenic. NSA 4-6261.

2513

ON THE MATHEMATICAL THEORY OF THE REACTION OF CELLS TO X-RAY IRRADIATION. Edmund Pinney. Bull. Math. Biophys. 12, 199-206(1950) Sept.

A solution by means of LaPlace transformation methods is offered for the equation proposed by Sievert (Acta Radiol. 22: 233 (1941)) to describe variation in concentration of certain substances in cells exposed to x rays for a finite time. Author affirms that concentration approaches a constant value, otherwise oscillations in concentration may occur or oscillations appear and increase steadily in amplitude until cell dies or mathematical model no longer applies. NSA 4-6262

2514

ON THE PROBLEM OF MEMBRANE PERMEABILITY Ladislaus Neu. Strahlentherapie 82, 257-60(1950) June 12 (In German).

With aid of author's "radiation equation" membrane potentials of a living tissue irradiated with electromagnetic waves can be calculated if tissue's electric conductivity is known. Membranes can be regarded as equipotential surfaces of electric field. NSA 4-6263.

2515

ON X-RAY DAMAGES IN THE INTESTINE W. Ceelen. Strahlentherapie 82, 13-22(1950) May 15. (In German).

Radiation affects mesenchymal tissue and blood vessels, resulting in (1) altered circulation and epithelial necrosis, (2) preneurotic state of all tissues or (3) ulcerative necrosis of intestinal wall. Bacterial action is not distinguishable from radiation effect. NSA 4-6264.

2516

PRELIMINARY REPORT OF X-RAY EFFECTS ON THE NEMATODE RHABDITIS STRONGYLOIDES. Lyell J. Thomas and Henry Quastler. Science 112, 356-7(1950) Sept. 29.

Non-lethal effects of x irradiation on this bisexual nematode were studied. Doses of 100-10,000 r caused no visible change. After 20,000 r to wet cultures, larvae showed altered refractive index of rhabditis granules of intestine. Dose of 40,000 r produced vacuolate, probably sterile, reproductive systems, looped intestines, variation

in egg size and shell structure, appearance of "dauer" like worms. Dry cultures receiving 40,000 r showed effects similar to those obtained after 20,000 r to wet cultures. NSA 4-6265.

2517

RADIOBIOLOGY AND ITS PLACE IN RESEARCH AND THERAPY. H. Langendorff. Strahlentherapie 82, 1-12 (1950) May 15 (In German).

Mechanisms of action of radiation considered are: (1) hit theory and (2) alterations in metabolism of cell produced indirectly by chemical action on one of the constituents, e.g. water. NSA 4-6266.

2518

STUDIES ON THE EFFECT OF RADIOACTIVE COLLOIDAL GOLD ON THE DEVELOPMENT OF THE ORAL STRUCTURE OF THE MOUSE. M. S. Burstone. Arch. Path. 50, 419-26 (1950) Oct.

Injection of colloidal Au¹⁹⁸ adjacent to jaw of immature mouse results in abnormalities of osteogenesis and odontogenesis including failure of root formation. NSA 4-6267

2519

ULTRA-FRACTIONING IN X-RAY TREATMENTS. I. EXPERIMENTAL STUDY OF THE BIOLOGICAL EFFECT OF AN INTERMITTENT IRRADIATION. E. Witte. Strahlentherapie 82, 209-22 (1950) June 12 (In German)

Effect of "ultrafractionated" x irradiation is a weakening of the x ray effect by 50% or more. Observations on experimental studies on Drosophila pupae are interpreted in light of the target theory. NSA 4-6268.

2520

A RAPID METHOD FOR THE ESTIMATION OF THE GLUTAMIC-ASPARTIC TRANSAMINASE IN TISSUES AND ITS APPLICATION TO RADIATION SICKNESS. N. E. Tonhazy, N. G. White, and W. W. Umbriet. Arch. Biochem. 28, 36-42 (1950) Aug.

Method is described for determining transaminase activities of normal and x-rayed mouse tissue. Within limits of measurement there was no significant decrease in transaminase activity in irradiated mice from that seen in controls. NSA 4-6274.

2521

ON THE HISTORY OF THERAPEUTICAL APPLICATIONS OF X-RAYS IN DERMATOLOGY. Richard Schmitz. Strahlentherapie 82, 401-18 (1950) July 7. (In German).

This paper includes a historical review of therapy of skin diseases and a bibliography, mostly of German publications since 1917. NSA 4-6289.

2522

THE EFFECT OF CYSTEINE ON THE PERIPHERAL BLOOD OF THE IRRADIATED RAT. Harvey M. Patt, Douglas E. Smith, and Eugenia Jackson. Blood 5, 758-63 (1950) Aug.

Single intravenous cysteine injection (950 mg/kg), 5 min prior to 800-r total-body x ray dose significantly modified x ray induced hematologic changes (depression of heterophils, lymphocytes and erythrocytes less severe and recovery more rapid). NSA 4-5349.

2523

THE BIOLOGIC ACTION OF X-RAYS ON EMBRYOS OF AMPHIBIANS. EXPERIMENTS IN TRANSPLANTATION. Teodoro Perrin. Riv. biol. 42, 119-54 (1950) Jan-Mar. (In Italian).

The development of tissues from an irradiated embryo after transplantation to normal embryos is described. NSA 4-5348.

2524

Atomic Energy Project, Univ. of Rochester
EFFECTS OF POLONIUM²¹⁰ AND SELENIUM⁷⁵ IN
EXPERIMENTAL SCHISTOSOMA MANSONI INFECTION

IN MICE. N. P. Watts and K. P. McConnell. Apr. 27, 1950. Decl. July 6, 1950. 13p. (AECD-2874); Am. J. Hyg. 53, 11-6 (1951)

Neither α nor γ radiation as supplied by Po²¹⁰ and Se⁷⁵ were observed to damage worm form of S. mansoni in experimental infection in mice. NSA 4-5346.

2525

EFFECTS OF IRRADIATION ON NUCLEIC ACID FORMATION. Lola S. Kelly and Hardin B. Jones. Proc. Soc. Exptl. Biol. Med. 74, 493-7 (1950) July.

Existence of indirect effect of x radiation on DNA turnover rate is confirmed in studies on mice. Radiation was administered as injected Y⁹⁰ colloids which localize in the liver. Mice studied had bilateral transplants of mammary carcinoma. NSA 4-5350.

2526

THE INFLUENCE OF CERTAIN METALLIC IONS ON THE SURVIVAL OF RATS RECEIVING A LETHAL DOSE OF X-RAYS. G. Lambert, J. Maisin, M. Mandart, M. Meersseman, G. Podio, and E. Plugers. Compt. rend. soc. biol. 144, 444-8 (1950) Mar. (In French).

Ba and Li ions hastened death of rats exposed to 600 r (180 kv) of x rays for 13 min. Mercuric ions seemed to decrease mortality. Salts were administered either before or after radiation. NSA 4-5351.

2527

IRRADIATION NECROSIS OF THE HEAD OF THE FEMUR. J. T. MacDougall, A. Gibson, and T. H. Williams. Arch. Surg. 61, 325-45 (1950) Aug.

Case history is given and brief survey of literature included. NSA 4-5352.

2528

LETHAL IRRADIATION OF THE MOUSE BY X- AND γ RAYS. THERAPEUTIC ATTEMPTS. P. Bonet-Maury and F. Patti. J. Radiol. Electrol. 31, 286-9 (1950). (In French).

X ray and γ ray effects were studied in mice. Survival rates as function of total dose and time of death after exposure are presented. The γ/x ratio of effectiveness varies from 2.1 to 3.6. NSA 4-5353.

2529

PHYSIOLOGICAL EFFECTS OF RADIANT ENERGY. R. Lowry Dobson and John H. Lawrence. p. 479-500 of Annual Review of Physiology, Vol. X. Stanford, Calif., Annual Reviews, Inc., 1948.

Highlights of recent developments in this field are presented. Effects of α , β , γ and x rays, neutrons and fission fragments are included. NSA 4-5354.

2530

PROTECTION OF MICE AGAINST X-RADIATION BY THIOUREA. G. Limperos and W. A. Mosher. Science 112, 86-7 (1950) July 21.

Mice given oral and intraperitoneal thiourea prior to 650 r of x rays have lower mortality rate than control mice. NSA 4-5355

2531

SEVERAL BIOLOGICAL EFFECTS OF WEAK RADIO-ACTIVITIES. C. Champy. Bull. acad. natl. med. 134, 407-8 (1950) June 13. (In French)

X ray stimulation of growth of frog eggs and effect on barley root of immersion in water containing radio-materials are discussed. NSA 4-5356.

2532

SOME EFFECTS OF TESTOSTERONE PROPIONATE ON MICE IRRADIATED WITH X-RAYS. Friedrich Ellinger. Proc. Soc. Exptl. Biol. Med. 74, 616-19 (1950) July

Postirradiation administration of testosterone propionate to mice markedly increased lethal effect of irradiation. NSA 4-5357

2533

VITAMIN P PROTECTION AGAINST RADIATION. Boris Sokoloff, James B. Redd, and Raymond Dutcher. Science **112**, 112-13(1950) July 28.

Vitamin P(CVP compound) isolated from citrus waste fed to rats before and after 800-r x ray dose gave considerable protection. Author believes flavonoids prevent increase in capillary fragility. NSA 4-5358

2534

U. S. Armed Forces Special Weapons Project
RADIOLOGICAL DEFENSE, VOL. III. [nd] 140p. (NP-1609)

This is based on a series of lectures dealing with handling radioactive materials, biological effects of radiation, decontamination, radiation illness and tracer techniques. NSA 4-5363.

2535

A PROTAMINE TITRATION AS AN INDICATION OF A CLOTTING DEFECT IN CERTAIN HEMORRHAGIC STATES. J. Garrott Allen, Peter V. Moulder, Richard M. Elghammer, Burton J. Grossman, Charles L. McKeen, Margaret Sanderson, Willadene Egner, and James M. Crosbie. J. Lab. Clin. Med. **34**, 473-6(1949) Apr. NSA 4-5559

2536

Chicago Univ.
THE EFFECT OF TERRAMYCIN ON POST-IRRADIATION INFECTION IN MICE. Carolyn W. Hammond and C. Philip Miller. [nd] 12p (AECU-873), Ann. N. Y. Acad. Sci. **53**, 303-8(1950).

Preliminary studies suggest that administration of streptomycin together with terramycin may be more effective than terramycin alone in controlling infections caused by drug-sensitive organisms. NSA 4-5560.

2537

Notre Dame Univ.
ELEMENTARY CHEMICAL PROCESSES IN RADIO-BIOLOGICAL REACTIONS. Milton Burton. [nd] 28p. (AECU-889).

Elementary chemical effects of high energy radiation on aqueous solutions containing O₂, or pure organic matter, and on organic matter suspended in aqueous solution are discussed in relation to "target theory." NSA 4-5561.

2538

Brookhaven National Lab.
EFFECTS OF X-RAY, NEUTRON AND CHRONIC GAMMA IRRADIATION ON GROWTH AND YIELD OF POTATOES. A. H. Sparrow and E. Christensen. [nd] 1p. (AECU-898), Ann. J. Botany **37**, 667(1950). NSA 4-5562.

2539

Western Reserve Univ.
THE SYNERGISTIC EFFECT OF PHOSPHORUS³² AND COLLOIDAL GOLD¹⁹⁸ ON SURVIVAL IN MALE ALBINO RATS. Hymer L. Friedell and James H. Christie. June 26, 1950. 19p (NYO-1609), Proc. Soc. Exptl. Biol. Med. **76**, 207-10(1951).

Data indicate colloidal Au¹⁹⁸ and P³² administered as NaHP³²O₄ are synergistic in their killing effect on rats. NSA 4-5563

2540

Atomic Energy Project, Univ. of Calif, Los Angeles.
THE RELATIONSHIP BETWEEN ESSENTIAL FATTY ACID DEFICIENCY AND RADIATION DAMAGE IN THE MOUSE. Arthur B. Decker and James F. Mead. Dec. 1, 1949. 64p (UCLA-52).

Both chronic and acute essential fatty acid deficiency markedly increase mortality of x rayed mice. Such deficiency and radiation damage are similar and each aggravates the other. NSA 4-5565.

2541

EFFECT OF X-RAYS ON THE METABOLISM OF CELL

NUCLEI OF NON-DIVIDING TISSUES. S. R. Pelc. Nature **178**, 359(1956).

Adult mice were given injections of either S³⁵-DL-methionine or C¹⁴-adenine immediately after whole body x ray exposure. Protein synthesis was studied in thyroid, seminal vesicle, tracheal epithelium, nerve cells and epididymis.

2542

Atomic Energy Project, Univ. of Calif., Los Angeles.
METHODS AND BACKGROUND VALUES OF BETA-GAMMA RADIOACTIVITY IN SOME PLANTS FROM NEW MEXICO AND CALIFORNIA. David B. Dunn, Margaret R. Lewis, and Sydney H. Gordon. June 9, 1950. 23p. (UCLA-75). NSA 4-5566.

2543

THE ACTION OF X-RAYS ON THE MEMBRANE OF RED CORPUSCLES. J. Zacek and R. Rosenberg. Compt. rend. Soc. Biol. **144**, 462-4(1950) Mar. (In French).

Blood was x rayed (24,000 r at 80 kv), hemolyzed, dried and examined with electron microscope. Size and shape of cell membrane was unchanged, but ordinary granular surface was replaced in some spots by fine fibrous protein-like structures. NSA 4-5567

2544

COTTON FROM BIKINI CHROMOSOME IRREGULARITIES FOUND IN PLANTS GROWN FROM SEED EXPOSED TO GAMMA RADIATION. Meta S. Brown, J. Heredity **41**, 115-21(1950). May.

Irregularities in chromosome pairing found in cotton plants exposed at Bikini is attributed to changes in chromosome structure. NSA 4-5568.

2545

CYTOLOGICAL AND PHENOTYPICAL EFFECTS INDUCED IN MAIZE BY X-RAYS AND THE BIKINI TEST ABLE ATOMIC BOMB. L. F. Randolph. J. Cellular Comp. Physiol. **35**, Suppl. 1, 103-17(1950) June. NSA 4-5569.

2546

EFFECTS OF ATOMIC BOMB RADIATIONS AND X-RAYS ON SEEDS OF CEREALS. Luther Smith. J. Heredity **41**, 125-30(1950) May. NSA 4-5570.

2547

IMMUNITY CONFERRED BY HYPERGLYCEMIA AGAINST LETHAL DOSES OF X-RAYS. Jean Loiseleur and Georges Velley. Compt. rend. **231**, 182-4(1950) July 10. (In French).

Glucose injection was given to 27 rats prior to irradiation (950 r, 180 kv, 45 min). All except 5 showed no ill effects and gained weight, while all controls died. NSA 4-5571.

2548

THE INACTIVATION BY X-RAYS OF THE VIRUS RESPONSIBLE FOR THE SENSITIVITY TO CO₂ IN DROSOPHILA, Philippe L. Heritier and Nadine Plus. Compt. rend. **231**, 192-4(1950) July 10. (In French). NSA 4-5572

2549

INDUCTION OF MUTATION BY HIGH-ENERGY X-RADIATION PRODUCED BY A 23-Mev BETATRON. Hulda Regehr, T. J. Arnason, and H. E. Johns. Nature **166**, 228-9(1950) Aug. 5.

Drosophila males were exposed to dose of 2000, 5000 or 7000 r of x radiation at 100 r/min. Mutation inductions is documented. NSA 4-5573

2550

INFLUENCE OF LOCAL X-RAY TREATMENT ON THE DEVELOPMENT OF EXTREMITIES OF THE YOUNG AXOLOTL (SIREDON MEXICANUM). V. V. Brunst. J. Exptl. Zool. **114**, 1-35(1950) June.

Study was made of changes in irradiated parts of axolotl body during development. Possibility of stimulating development by means of weak irradiation was investigated. NSA 4-5574.

2551
SEARCH FOR AN EFFECT OF OXYGEN ON THE DIRECT X-RAY INACTIVATION OF BACTERIOPHAGE. H. B. Hewitt. Brit. J. radiology 23, 416-23(1950) July. NSA 4-5575.

2552
Atomic Energy Project, Univ. of Calif., Los Angeles
THE SKELETAL DEPOSITION OF NONRADIOACTIVE STRONTIUM. N. S. MacDonald, R. E. Nusbaum, Florida Ezmirlian, R. Stearns, Clare McArthur, and Patricia Spain. July 7, 1950. 21p (UCLA-80), J. Biol. chem. 188, 137-43(1951).

Chronic effects of strontium lactate in drinking water of growing mice are described. Sr deposition in bones is reviewed. NSA 4-5583.

2553
U. S. Atomic Energy Commission.
A TOMIC ENERGY AND THE LIFE SCIENCES. Washington Printing Office (1949). 203p.

Biological and physical research programs supervised by A. E. C. are outlined NSA 4-5091.

2554
Hanford Works.
SOME PHYSICAL ASPECTS OF THE EFFECTS OF BETA RADIATION ON TISSUE. H. M. Parker. Sept. 10, 1943. Decl. June 20, 1950. 55p. (AECD-2859). NSA 4-5092.

2555
Department of Agriculture.
EFFECTS OF "ALPHATRON" AND OTHER RADIOACTIVE MATERIALS ON GERMINATION AND EARLY GROWTH OF VARIOUS CROPS. E. H. Toole, Vivian K. Toole, J. M. Power, Victor J. Kilmer, and L. T. Alexander. Apr. 24, 1950. 12p. (AECU-852).

Results indicate no consistent trend of any effect either on amount of germination or on early growth of young seedlings NSA 4-5094.

2556
Argonne National Lab
THE SURVIVAL OF MICE UNDER DURATION-OF-LIFE EXPOSURE TO X-RAYS AT VARIOUS DOSE RATES
George A. Sacher. Apr. 1950. 43p (CH-3900).

Survival of two strains of mice is reported for dose rates extending from 20-1000 r/day NSA 4-5095.

2557
Oak Ridge National Lab.
A FACTOR IN THE PLASMA OF THE IRRADIATED RAT WHICH CHANGES THE A/G RATIO Elliot Volkin and Henry L. Kohn July 10, 1950. 16p. (ORNL-734), Arch Biochem 30, 326-32(1951). NSA 4-5096.

2558
ACTION OF IONIZING RAYS UPON ANTIGEN VI OF SALMONELLA TYPHI (INAGGLUTINABLE O AND AGGLUTINABLE VI) A. Jude, P. Bonet-Maury, and P. Servant. Compt. rend. soc. biol. 144, 214-16(1950) Feb. (In French).

Neither inagglutinable antigen O nor agglutinable antigen Vi is destroyed by radiation dosages nearly three times the sterilizing dose. NSA 4-5097

2559
THE ACTION OF RADON RAYS ON THE ANTIGENIC POWER OF SALMONELLA BALLERUP (THE PRODUCTION OF AGGLUTINANT ANTIBODIES) P. Servant, P. Bonet-Maury, and A. Jude. Compt. rend. soc. biol. 144, 216-17 (1950) Feb. (In French)

Antigens Vi and H are thermolabile and antigen O, thermostable. Apparently α rays of radon do not affect

antibody producing powers of antigens Vi, O and H NSA 4-5098

2560
THE ADDITIVE ACTION OF METHYLCHOLANTHRENE AND X RAYS ON THE GUINEA PIG P. Mendeleeff. Compt. rend. soc. biol. 144, 301-2(1950) Feb. (In French).

Four guinea pigs were injected subcutaneously with 30 mg methylcholanthrene and exposed 5-6 days later to 400 r, 85 kv x rays at point of injection Tumors developed in 3 animals, 2 of which were cancerous. NSA 4-5099.

2561
THE BIOLOGICAL SIGNIFICANCE OF THE ROENTGEN A. Mutscheller. J. Investigative Dermatol 14, 471-81 (1950) June

Author studied erythema produced in skin exposed to x ray directed through a layer of ground beef on the skin surface. NSA 4-5100.

2562
SELF-FERTILITY IN FRUIT TREES. HOW IT HAS BEEN PRODUCED AND ITS ADVANTAGES D. Lewis and L. K. Crowe. Discovery 15, 371-374(1954).

An account of genetical causes of self sterility in fruit trees and of the use of x-ray-induced mutations to break down this sterility barrier is given. (from abstract)

2563
DISCUSSION ON POPULATION GENETICS AND RADIATION. Sewall Wright. J. Cellular Comp. Physiol. 35, Suppl. 1, 187-205(1950) June. BA 24-35099.

2564
EFFECTS OF RADIATION ON FUNGI. E. L. Tatum. J. Cellular Comp. Physiol. 35, Suppl. 1, 119-31(1950) June

Discussion of Neurospora's fundamental sensitivity to radiation is presented. NSA 4-5105

2565
THE EFFECT OF X-RAYS ON CHROMOSOME STRUCTURE. Karl Sax. J. Cellular Comp. Physiol. 35, Suppl. 1, 71-81 (1950) June.

X ray effect on Tradescantia chromosomes is discussed NSA 4-5106

2566
EFFECT OF X-RAYS ON PREGNANCY AND OF PREGNANCY ON CANCER (IN CONNECTION WITH A PERSONAL CASE). G. Pinsonneault. L'Union Med. Can. 8, 945-9(1949). NSA 4-5107

2567
HEMATOPOIETIC REACTIONS FOLLOWING REMOTE IRRADIATION OF RABBITS. H. Betz and J. Lecomte. Compt. rend. soc. biol. 144, 303-5(1950) Feb (In French).

Rear paws of 12 rabbits were exposed to 2000 r, body was shielded Animals were sacrificed from 3 hr to 14 days postirradiation. Blood and histologic (spleen, cervical ganglions, bone marrow) changes are described. NSA 4-5108

2568
DISCUSSION ON THE RADIATION SYNDROME. SOME CLINICAL AND BIOCHEMICAL OBSERVATIONS FOLLOWING A SINGLE THERAPEUTIC DOSE OF X-RAYS (REVIEW). Court W. M. Brown and R. F. Mahler. Proc. Roy. Soc. Med. 46, 245-50(1953).

Response to a dose of x rays was studied in 50 patients. First complaints were fatigue, anorexia, and nausea. No significant change was noted in red cell counts or hemoglobin levels. At first white cells increased, later the white cell counts dropped A rise in excretion of sodium, chloride and phosphorus was often accompanied by a rise in the rate of urine flow.

2569

RADIATION INDUCED MUTATIONS IN CHEMICAL REQUIREMENTS IN SALMONELLA TYPHIMURIUM

Harold H. Plough. J. Cellular Comp. Physiol. 35, Suppl. 1, 141-55(1950) June.

Change in antigenicity is also suggested. NSA 4-5110.

2570

SOME PRESENT PROBLEMS IN THE GENETIC EFFECTS OF RADIATION. H. J. Muller. J. Cellular Comp. Physiol. 35, Suppl. 1, 9-70(1950) June. NSA 4-5111.

2571

THE HAZARDS OF RADIATION. P. C. Koller. Discovery 10, 241-9(1949) Aug.

Biological effects of radiation are outlined, including discussion of chromosomal damage and pathological changes. NSA 4-5117.

2572

THE MEDICAL ASPECTS OF ATOMIC WEAPONS. Irwin M. Pochapin. Pennsylvania Med. J. 53, 703-7(1950) July. NSA 4-5118

2573

MEDICAL ASPECTS OF ATOMIC WEAPONS. Washington, National Security Resources Board. 1950. 24p. NSA 4-5119.

2574

RADIOBIOLOGICAL RESEARCH. J. J. Jaklitsch, Jr. Mech. Eng. 72, 17-18(1950) Jan.

The study of long-term effects of atomic bomb radiation at Bikini is described. NSA 4-5120

2575

TRACER IRON DISTRIBUTION STUDIES IN IRRADIATED RATS WITH LEAD-SHIELDED SPLEENS. R. L. Huff, W. F. Bethard, J. F. Garcia, B. M. Roberts, L. O. Jacobson, and J. H. Lawrence. J. Lab. Clin. Med. 36, 40-51(1950) July. NSA 4-5168.

2576

EXPERIMENTS WITH A 6-Mev BETATRON. K. Gund and W. Paul. Nucleonics 7, No. 1, 36-45(1950) July.

Construction of the Betatron is described. Preliminary physical and biological experiments and results are reviewed. Direct comparisons are made between biological effects of fast electrons and x rays. NSA 4-5311

2577

Oak Ridge National Lab.

ACTIVITY IN TISSUES INDUCED BY SLOW NEUTRON BOMBARDMENT. H. J. Curtis and J. D. Teresi. Feb. 25, 1946. Dec. June 27, 1950. 21p. (AECD-2872). NSA 4-4727.

2578

Naval Radiological Defense Lab.

A SEMI-QUANTITATIVE STUDY OF BONE MARROW IN RATS FOLLOWING TOTAL BODY X-IRRADIATION. Robert L. Rosenthal, Bryant I. Pickering, and Leontine Goldschmidt. May 8, 1950. 19p. (AD-217(B)), Blood 6, 600-13(1951).

Method is presented for quantitative enumeration of bone marrow cells by adjusting differential count for degree of cellularity, which is derived from imprint preparations of femoral marrow. NSA 4-4728

2579

AUGMENTATION OF THE CUTANEOUS RADIOSENSITIVITY OF THE RABBIT RESULTING FROM THE ACTION OF INSULIN. Georges Velley and Jean Loiseleur. Compt. rend. 230, 2132-3(1950) June 12. (In French).

Rabbits were x irradiated with doses of 2250 to 3000 r after insulin injection of 0.5 clinical units/kg. Onset of epilation at exposed area was greatly accelerated by insulin. NSA 4-4730

2580

KILLING OF BACTERIUM COLI WITH FAST ELECTRONS

OF A 6-Mev BETATRON. C. Dieckmann and W. Dittrich. Strahlentherapie 81, 215-22(1950). (In German).

In dose range of 500 to 4000 r, 3-Mev electrons were more effective in destroying E. coli than equal doses of x rays (180 kv, 6 ma, 0.27 mm half value layer, 500 r/min) NSA 4-4732.

2581

MEDICAL ASPECTS OF ATOMIC ENERGY. G. H. Henry. Proc. Staff Meeting Hillcrest Memorial Hosp. 8, 172-7 (1950) Mar.

Author presents general description of atomic particles and natural radioactive decay. Basic principles of physics and operation of atomic pile are described; effects of atomic bomb explosion on human body are listed NSA 4-4733.

2582

MODIFICATION OF GLYCEMIA UNDER THE INFLUENCE OF TOTAL X-RAY RADIATION. Marguerite Lourau, and Odette Lartigue. Compt. rend. 230, 1426-8(1950) Apr. (In French).

Hyperglycemia occurring after ingestion of saccharose by guinea pigs after 14 and 48 hr fasts was significantly increased by 500 r total-body x ray dose, glucose tolerance was decreased by irradiation. NSA 4-4734

2583

THE MODIFICATION OF RESISTANCE TO IONIZING RADIATION BY HUMORAL AGENTS. J. B. Graham, and R. M. Graham. Cancer 3, 709-17(1950) July.

Methods of modifying radio-resistance of animals are reviewed and experiments on whole-body irradiated Swiss mice are cited. Substances tested included horse serum, stilbestrol, estradiol, estrone, testosterone and adrenal cortical extract administered before or after irradiation. Radiation sensitivity was reflected in appearance of epithelial cells of the animals and characteristic findings are described. NSA 4-4735

2584

PARTIAL BREAKAGE OF SALIVARY GLAND CHROMOSOMES. B. M. Slizynski. Genetics 35, 279-87(1950) May.

Low dosage x-ray treatment (400-600 r) of D. melanogaster embryos, applied in early development stages, produces in salivary gland chromosomes partial structural changes which are described. Changes affected only a few of the chromonemata of the chromosomes. NSA 4-4736.

2585

PHYSIOLOGICAL GENETICS. D. G. Catcheside. Ann. Rev. Physiol. 12, 47-70(1950).

Author reviews knowledge concerning the gene, its structure, reproduction and method of controlling development and differentiation. Literature of 1947-49 is covered. NSA 4-4737.

2586

RADIATION DAMAGE TO THE GENETIC MATERIAL. II. EFFECTS MANIFESTED MAINLY IN THE EXPOSED INDIVIDUALS. H. J. Muller. Am. Scientist 38, 399-425 (1950) July. NSA 4-4739.

2587

SOME CYTOLOGICAL OBSERVATIONS OF X-RAY ACTION ON TRITICUM MONOCOCCUM. Alberto Garde. Argonomia Lusitana 10, No. 1, 25-73(1948). NSA 4-4740.

2588

SOME RECENT FINDINGS IN RADIOBIOLOGY. Arne Forssberg. Strahlentherapie 81, 161-72(1950). (In German).

This is a review article. NSA 4-4741.

2589

Army Medical Department.

THE TETRAZOLES AS INDICATORS OF RADIATION DAMAGE. Z. S. Gierlach, and A. T. Krebs. Jan. 3, 1950. 14p (NP-1419)

Plant seeds x rayed and treated with tetrazolium salts show that irradiation effect can be detected by changes in reducing power of enzyme systems and measured by amounts of colored formazan formed NSA 4-4743.

2590

XENIA EFFECTS OF IRRADIATING CORN POLLEN IN A NUCLEAR REACTOR. E. F. Frolík and Rosalind Morris. Agronomy J. 42, 293-7(1950) June.

Xenia effects in corn crosses involving tassels exposed in nuclear reactor were compared with those occurring at crosses involving x rayed and nonirradiated tassels NSA 4-4744.

2591

ATTACK OF HYPERTENSION FOLLOWING PLESIOTHERAPY OF A LINGUAL NEOPLASIA. Giandomenico Botti. Radio-terapia, radiobiologia e fisica medica 2, 253-7(1949). (In Italian) NSA 4-4746.

2592

INDIVIDUAL FLUCTUATIONS OF THE THRESHOLD OF ERYTHEMA AND OF THE LATENCY PERIOD AND DURATION OF EARLY ERYTHEMA PRODUCED AT THE RADIATION THRESHOLD. Roderich Helmke. Strahlentherapie 81, 117-22(1950). (In German)

Postirradiation study of 100 persons with healthy skin indicates threshold is 200 to 300 r, latency period, 3 to 20 hr, and duration, 1 to 30 hr. NSA 4-4748

2593

OSTEORADIONECROSIS OF THE JAW Claude S. LaDow. Oral Surg. Oral. Med. Oral Pathol. 3, 582-9(1950) May NSA 4-4749.

2594

SOME CRITICAL REMARKS ON EPILATION OF THE SCALP BY X-RAYS. Gastone Meldolesi. Radiologia 5, 291-302(1949). (In Italian).

In case of very young children infected with ring worm, therapy combining thallium acetate with x rays is recommended. Author studied spinal fluid pressure and content of glucose and of protein and non-protein nitrogen in spinal fluid and blood of the patients. Results indicate that radiation produced congestion of endocranial tissues without altering the blood-brain barrier. NSA 4-4751.

2595

USE OF ANTICOAGULANT (DICUMAROL) IN PREVENTING POST-IRRADIATION TISSUE CHANGES IN THE HUMAN LUNGS; PRELIMINARY REPORT. Stanley H. Macht, and Harry Perlberg, Jr. Am. J. Roentgenol. Radium Therapy 63, 335-41(1950) Mar. NSA 4-4752.

2596

CHEMISTRY OF NEOPLASTIC TISSUE. E. Boyland. Ann. Rev. Biochem. 18, 217-42(1949).

Topics included in review: treatment of cancer by P^{32} and I^{131} , cancer producing properties of radioactive fission products (Pu and Y^{91}), chemical inhibition of skin cancer due to radiation, effect of cosmic radiations on carcinogenesis NSA 4-4756.

2597

NUCLEOPROTEINS, NUCLEIC ACIDS, AND DERIVED SUBSTANCES. J. N. Davidson. Ann. Rev. Biochem. 18, 155-90(1949).

Extensive literature review covering period from November 1947 to October 1948 is presented Effect of x and γ radiation in blocking normal process of conversion of cytoplasmic pentose nucleotides to nuclear DNA is discussed. NSA 4-4802.

2598

THE PERIPHERAL CIRCULATION. O. G. Edholm. Ann. Rev. Physiol. 12, 311-44(1950).

Literature of 1948-49 is reviewed and, discussion of x ray effect on arterial pressure is included NSA 4-4803.

2599

BIOLOGICAL MODIFICATION OF EFFECTS OF ROENTGEN RAYS. I. REDUCED TEMPERATURE. Frederick M. Allen. Am. J. Roentgenol. Radium Therapy 73, 70(1955). Thirty-seven references are reviewed.

2600

University of Chicago Toxicity Laboratory. QUARTERLY PROGRESS REPORT NO. 4 ON RADIO-BIOLOGY. Jan. 15, 1950. 88p. (TID-364).

Includes reports on: γ ray effect on mice and other animals, distribution of phosphorus in irradiated rabbit bone marrow, metabolism and toxicity of radioactive metals, x ray effect on intestinal cathepsins NSA 4-3842.

2601

Atomic Energy Project. Univ. of Calif., Los Angeles. IRRADIATION RESPONSES IN DAPHNIA MAGNA. I. INCREASED RESISTANCE TO X-IRRADIATION UNDER LOW OXYGEN TENSION Edward F. Held and Albert W. Bellamy. Apr. 20, 1950. 10p. (UCLA-69).

D. magna x rayed under conditions of O_2 depletion show marked increase in radioresistance which is evident from survival curves and productivity records. NSA 4-3843.

2602

CHROMOSOMAL REARRANGEMENTS FROM EXPOSURE TO RADIATION A. E. Longley Maize Genetics Coop. News Letter (Cornell) 24, 7-8(1950) Mar. 17

An analysis of chromosomal arrangements resulting from exposure of corn seeds to the Bikini explosion and to control x-ray treatment is presented. NSA 4-3845.

2603

EFFECT OF X-RAY RADIATION ON HYPERSENSITIVENESS. Leo H. Crip, Lloyd D. Mayer, and Sheldon G. Cohen. J. Allergy 21, 269(1950) May.

Authors recount their own experiences in evaluating effects of x ray on collagen diseases, Arthus phenomenon, Schultz-Dale reaction, and production of precipitins in experimental animals. They believe that interference with the R-E system accounts for depressed precipitin titres and other phenomena. NSA 4-3847.

2604

EXPERIMENTAL HYPERSENSITIVITY IN THE RABBIT. Louis Schwab, Frederick C. Moll, Thomas Hall, Henry Brean, Marjorie Kirk, Clinton Van Zandt Hawn, and Charles A. Janeway. J. Exptl. Med. 91, 505-26(1950) May 1.

X ray inhibition of antibody formation, relation of complement and serologic sequences relation between complement, serologic sequence and histologic changes are discussed. NSA 4-3848.

2605

GENETIC EFFECTS OF RADIATIONS D. G. Catcheside. Advances in Genetics 2, 271-358(1948).

Comprehensive review of recent data concerning influences of radiation in genetical processes is presented. NSA 4-3849.

2606

HISTOLOGICAL CHANGES PRODUCED BY A SINGLE LARGE INJECTION OF RADIOACTIVE PHOSPHORUS (P^{32}) IN ALBINO RATS AND IN C3H MICE. B. Grad and C. E. Stevens. Cancer Research 10, 289-96(1950) May.

Destructive effects of P^{32} are most marked in lymphatic organs and bone marrow, small intestine, granulosa of ovarian follicles and mammary tumors. NSA 4-3850.

2607

IRRADIATION EXPERIMENT. H. C. Eyster. Maize Genetics Coop. News Letter (Cornell) **24**, 15-17(1950) Mar. 17.

Sweet corn kernels, irradiated with slow neutrons and γ rays from a Ra-Be source behind paraffin, produced phenotypically normal plants. Self-pollination produced progeny, all of which showed variation, some variants being further transmissible as bona fide mutants.

NSA 4-3852

2608

IRRADIATION OF SMALL VOLUMES BY CONTAINED RADIOISOTOPES. Paul I. Richards and Benjamin A. Rubin. Nucleonics **6**, No. 6, 42-9(1950) June.

Author considers problem of radiation dose where the average path length of the emitted β particle is a significant fraction of the dimensions of the volume being irradiated internally, a problem pertinent to radioactive decay in small organisms. The fraction of ionizing energy escaping from a slab is calculated for low energy radiation and for very energetic radiation and is plotted as a function of S/R where S is slab thickness and R is range. Other special cases are also considered. NSA 4-3853.

2609

RESPONSE OF FIELD GROWN TOMATOES TO RADIOACTIVE MATERIALS. R. E. Larson, B. L. Pollack, and H. K. Fleming. Agr. Expt. Station, State College, Pa., Progress Rep. No. 27, 1-3(1950) Mar.

Tomato plants showed no significant response to fertilization with α -emitting materials. NSA 4-3855

2610

EPILATION BY X-RAYS. H. K. Zink. Strahlentherapie **80**, 399-406(1949). (In German). NSA 4-3857

2611

PERFORATION OF A GASTRIC ULCER FOLLOWING INTENSIVE RADIATION THERAPY. William Feiring, and Morris L. Jampol. New England J. Med. **242**, 751-3 (1950) May 11. NSA 4-3858.

2612

THE NATURE AND THERAPY OF RADIATION SICKNESS. A. M. Brues. Chicago Med. School Quart. **11**, 105-8 (1950) Apr. NSA 4-3861.

2613

PATHOPHYSIOLOGICAL EFFECTS OF TOTAL BODY IRRADIATION. Elizabeth E. Painter. Chicago Med. School Quart. **11**, 96-9(1950) Apr.

Various physiological changes representing direct and indirect effects of large doses of radiation delivered to the whole body of animals are described and discussed. A table of LD₅₀ doses for various species is included. Effects of relatively small (25r-200r) single doses in various species are also described and discussed.

NSA 4-3862.

2614

Radiation Lab., Univ. of Calif.
SUMMARY OF THE RESEARCH PROGRESS MEETING OF MARCH 16, 1950. Henry P. Kramer. Apr. 7, 1950. 6p (UCRL-647).

Topics include short-term effect of At²¹¹ on blood picture in rats. NSA 4-3972.

2615

SUPPRESSION OF LOCAL TISSUES REACTIVITY (SHWARTZMAN PHENOMENON) BY NITROGEN MUSTARD, BENZOL, AND X-RAY IRRADIATION. Robert Mettler Becker. Proc. Soc. Exptl. Biol. Med. **69**, 247-50(1948) Nov.

Shwartzman phenomenon produced by meningococcus in rabbits is completely suppressed by pretreatment with nitrogen or benzol as well as by x-ray irradiation. NSA 4-2522

2616

SURVIVORS OF BOMBING OF HIROSHIMA THREE YEARS LATER. Frederick George Novy, Jr. Arch. Dermatol. and Syphilol. **61**, 379-83(1950) Mar.

After examination of atomic explosion survivors for radiation skin injury it was concluded that in no case could burns be unquestionably attributed to irradiation injury. NSA 4-2523

2617

THE CLINICAL PATHOLOGIST IN AN ATOMIC AGE. Shields Warren. Am. J. Clin. Path. **20**, 1-2(1950) Jan. NSA 4-2525

2618

COMPLICATIONS DUE TO RADIUM TREATMENT OF COLLUM CARCINOMA AND THEIR SIGNIFICANCE FOR SUCCESSFUL TREATMENT. Friedrich Gauwerky. Strahlentherapie **80**, 51-70(1949). (In German).

Total of 590 cases of collum carcinoma were analyzed for complications due to radium treatment. Where inflammatory processes developed, changes for successful treatment were greatly reduced even in otherwise mild cases. NSA 4-2526.

2619

CONCERNING LOCAL INJURIES THROUGH IRRADIATION AS A CONSEQUENCE OF THE TREATMENT OF COLLUM CARCINOMA. H. Drescher. Strahlentherapie **80**, 99-106 (1949). (In German).

Observations on 1,039 patients treated with radiation therapy are reported. Injuries of bladder and rectum occurred in 26 (2.5%). Other changes were also observed and are described. Increasing the usually tolerated dose of 7000 r to the bladder to 8500 r to obtain better therapeutic results failed to induce x ray ulcers, carcinoma or spontaneous fractures of femoral neck. NSA 4-2527.

2620

DANGER FROM RADIATION AND THE BLOOD PICTURE. Lothar Diethelm and Wolfgang Hilscher. Rontgen Blatter **2**, 145-63(1949).

In an extensive statistical study of blood data on individuals subjected to radiation exposure up to 10 yr, it was found that leucocytes, reticulocytes and hemoglobin were sensitive but eosinophils, monocytes and erythrocytes were not affected. NSA 4-2529

2621

DELAYED INJURIES OF THE CRANIUM AFTER X-RAY THERAPY OF INTRACEREBRAL TUMORS. Alfred Vogt. Strahlentherapie **80**, 165-74(1949). (In German).

Radiogenous fibroses developed in two patients 5 to 6 yr after x ray treatment for hypophyseal lesions. Both patients were relieved of their original symptoms, by x ray therapy and were able to return to work, demonstrating that the possibility of radiation-induced fibrosis is not a contraindication to radiation therapy for brain lesions where it is otherwise indicated. NSA 4-2530.

2622

PHYSICIANS IN AN ATOMIC WAR. Leon O. Jacobson, R. S. Stone, and J. Garrott Allen. J. Am. Med. Assoc. **139**, 138-40(1949) Jan. 15. NSA 4-2531.

2623

RADIATION CATARACTS. Shields Warren. J. Am. Med. Assoc. **141**, 407(1949) Oct. 8.

Author believes development of radiation cataracts is due not to overestimation of maximum permissible doses but to acute exposure of individuals to doses

of 20 to 100 r during adjustments of machinery and work inside protective barriers. NSA 4-2533.

2624

SARCOMA AND CARCINOMA INTERRELATIONSHIP IN X-RAY TREATED LUPUS VULGARIS. W. Schneider. Strahlentherapie 80, 335-66(1949). (In German).

Nine cases of sarcoma occurring after x ray therapy of lupus vulgaris are described in detail, clinically and histologically NSA 4-2537.

2625

THROMBOCYTOPENIC PURPURA COMPLICATING RADIOACTIVE PHOSPHORUS TREATMENT IN A PATIENT WITH POLYCYTHEMIA VERA Gould A. Andrews. Am. J. Med. 7, 564-8(1949) Oct.

Author suggests P^{32} should be used with caution especially in patients who already have thrombocytopenia. NSA 4-2538

2626

Chicago. Univ. Air Force Radiation Lab
QUARTERLY PROGRESS REPORT NO. 22. Jan. 15, 1957. 113p. (NP-6199).

Includes reports on: toxic effects of various single doses of x radiation given to rats immediately following repeated exposures to 25 and 50 r per day, protective effects of several materials in irradiated rats and mice, survival time of mice exposed to fractionated γ ray irradiation at dosage levels of 0.33, 1.0, 3.0 rep/hr, cage effect on survival of x rayed mice. NSA 11-4226.

2627

INTERPRETATION OF RADIATION RESULTS BASED ON TARGET THEORY. Aadne Ore (Yale Univ., New Haven, Conn.). Radiation Research 6, 27-39(1957). NSA 11-4243.

2628

THE X-RAY DOSE-BODY SIZE RELATIONSHIP IN RADIATION SICKNESS. W. M. C. Brown and R. F. Mahler. Science 118, 271-72(1953).

Following doses of x rays within the range of integral dose of $2\frac{1}{2}$ to 5 megagram roentgens, there is a sudden onset of nausea and fatigue. If the size of the patient is taken into consideration along with the integral dose, a satisfactory correlation can be obtained with the length of the latent period.

2629

THE DIAGNOSIS OF RADIATION INJURY. Richard T. Street and John B. Street. Dental Students Mag. 28, 14-17 34(1950) Feb.

Author presents a general discussion on diagnosis of radiation injury. Blood picture, cell changes, effects of cumulative exposures, superficial lesions, pre-exposure blood counts are briefly considered. NSA 4-2542.

2630

INDIRECT X-RAY IRRADIATION AND THE STATE OF REACTION OF THE SKIN. Margaret Zingsheim. Strahlentherapie 80, 115-20(1949). (In German).

Results of a study to evaluate therapeutic effects of indirect (secondary) irradiation on skin diseases indicate that indirect irradiation of 200 r lowers skin sensitivity. NSA 4-2555.

2631

IRRADIATION OF THE PITUITARY GLAND IN HYPERTENSIVE VASCULAR DISEASE. Maurice M. Best, Walter S. Coe, John Walker Moore, Edsel S. Reed, and Herbert L. Clay. Am. J. Med. Sci. 219, 276-80(1950) Mar.

A group of 25 patients with essential hypertension was treated with 2000 r total dose (200-kv, 50 cm, 2mm Cu) to the pituitary. No significant lowering of blood pressure resulted in group as a whole despite pressure decrease in 12% of the patients NSA 4-2556.

2632

DENTISTRY AND THE ATOMIC ENERGY PROGRAM.

Wm Ward Wainwright. N. Y. J. Dentistry 19, 325-32 (1949).

U^{233} , Pu^{239} and Am^{241} were shown by radioautographs to localize in dental tissues. NSA 4-2583.

2633

ATOMIC PHYSICS AND MEDICINE. M. Wolff. Med. Monatsschrift 3, 804-8(1949) Nov. (In German).

Elementary description of radioactive phenomena, applications in medicine, and medical aspects of devastations caused by the atomic bomb are presented. NSA 4-2592.

2634

MEDICINE IN THE ATOMIC AGE. H. L. Pugh. Diplomate 21, 247-54(1949) Nov.

Research on radioactivity and its effect on medicine are discussed. Clinical applications in therapeutics and diagnostics are reviewed and radiation sickness and precautions are described. NSA 4-2605.

2635

Oak Ridge National Lab.

THE EFFECT OF TOTAL-BODY X-IRRADIATION UPON THE HEMOLYSIN RESPONSE OF THE RAT TO SHEEP ERYTHROCYTES. Henry I. Kohn. Oct. 14, 1949. 15p. (ORNL-391), J. Immunol. 66, 525-33(1951).

Extension data show that x rays given either before or after immunization can inhibit antibody production. Significance of results is discussed. NSA 4-2852.

2636

BIOCHEMICAL MUTANT STRAINS OF NEUROSPORA PRODUCED BY PHYSICAL AND CHEMICAL TREATMENT. E. L. Tatum, R. W. Barratt, Nils Fries, and David Bonner Am. J. Botany 37, 38-46(1950) Jan.

Ultra-violet, x ray, bis- and tris-nitrogen mustards and methylcholanthrene were evaluated in terms of their ability to produce biochemical mutants in Neurospora. Details of procedures and results are presented. Results are evaluated in terms of their implications with respect to the nature of the processes controlling biochemical deficiencies. NSA 4-2854.

2637

BIOLOGICAL EFFECTS OF RADIATION. H. Langendorff, H. Bauer, W. Luther, R. Schulze, and U. Henschke. p. 51-122 of FIAT Review of German Science, 1939-46, Biophysics, Part I. Office of Military Government for Germany, Field Information Agencies Technical, 1948. (In German).

This is a review of work done between 1939 and 1946 including 150 references. NSA 4-2855.

2638

BIOLOGIE Hermann Holthausen. p. 26-54 of FIAT Review of German Science, 1939-1946; Radiology, Diagnostic (senior author). Office of Military Government for Germany, Field Information Agencies Technical, 1947. (In German).

Author presents a summary and guide to recent German literature about general biological effects of radiation. NSA 4-2856

2639

EFFECT OF BODY EXPOSURE TO X-RAYS UPON BONE MARROW. C. Lutwak-Mann, and F. W. Gunz, Biochem. J. 44, 111(1949) No. 2.

Study of rabbits irradiated with 1,000 r x ray dose and of rats with a 500-r dose is described. NSA 4-2857.

2640

THE EFFECT OF RADIOACTIVE PHOSPHORUS ON THE GROWTH OF THE ALBINO RAT. Morton M. Kligerman. Am. J. Roentgenol. Radium Therapy 63, 380-95(1950) Mar.

Five different doses of P^{32} were administered to 5 groups of 21-day old white male rats and to 5 groups of 42-day old rats. Doses were 44, 132, 400, 1,200 and 3600 μ c/Kg body weight. A detailed description of the

effect of various doses on growth of the animals is presented. NSA 4-2858

2641

EFFECTS OF TRANSPLANTATION OF BONE MARROW INTO IRRADIATED ANIMALS. Paul E. Rekers, Molly P. Coulter, and Stafford L. Warren. Arch. surg. **60**, 635-67(1950) Apr.

Transplantation of normal marrow to intramedullary marrow sites was not very beneficial to irradiated animals (dogs, rabbits). Transplants of bone and marrow failed to survive. Transplantation of normal marrow to normal or irradiated spleen or liver was also without benefit. NSA 4-2859

2642

EFFECT OF X-RAYS ON THE MIGRATION OF CELLS FROM ADULT TISSUE EXPLANTS. R. S. Hoffman, and S. H. Wollman. Proc. Soc. Exptl. Biol. Med. **70**, 38-40 (1949) Jan.

Authors conclude that less than 30 r stimulates migration of cells from fresh explants; over 30 r induces gradually more extended latent period. Superimposed inhibition is suggested, which exceeds excitation effect when dosages exceed 1000 r level. NSA 4-2860

2643

MODIFICATION OF THE X-RAY AND ULTRAVIOLET INDUCED MUTATION RATE IN ASPERGILLUS TERREUS BY PRETREATMENT WITH NEAR INFRARED RADIATION C. P. Swanson, Alexander Hollaender, and B. N. Kaufmann. Genetics **33**, 429-37(1948) July.

With respect to x ray induced mutations, infrared pretreatment causes a significantly increased mutation rate through range of doses tested. NSA 4-2861.

2644

NEW FORMS OF EUTORULOPSIS DUBIA CIF. AND RED. OBTAINED THROUGH THE ACTION OF X-RAYS. Elisa Corberi. Boll. soc. ital. biol. sper. **25**, 526-28(1949). (In Italian).

X irradiated Eutorulopsis produced new forms with altered pigmentation. The new forms resembled the parent strain with respect to proteolysis of gelatin and fermentation of sugars but differed in that they produced less catalase and had altered oxidative metabolism. NSA 4-2862.

2645

PRODUCTION OF MALIGNANT TUMORS IN RATS WITH RADIOACTIVE PHOSPHORUS. Simon Koletsky, Frederick J. Bonte, and Hymer L. Friedell. Cancer Research **10**, 129-38(1950) Mar.

Of 19 white male Wistar rats (weight 150g) given one injection of 4.5 μ c/g of P^{32} , the LD_{50} dose, 9 developed malignant neoplasms. Of 15 similar rats given a dose of 1.5 μ c of P^{32} /g every 3 weeks for a total dose of 9 or 12 μ c/g, 4 were discarded and 4 of the remaining 11 developed neoplasms. Of the total of 13 neoplasms, 3 were squamous cell carcinoma (face), 10 were osteogenic sarcomas (jaw, 4, spine; 2, tibia; 2, femur and pelvis; 1 each). Total tumor incidence was approximately 40%. Histology of the lesions and of non-tumorous but proliferating bone is described. NSA 4-2864

2646

THE EFFECTS OF INFRARED TREATMENT ON THE PRODUCTION OF X-RAY INDUCED CHANGES OF THE CHROMOSOMES OF TRADESCANTIA. C. P. Swanson. Am. J. Botany **34**, 590(1947).

2647

QUANTITATIVE ASPECTS OF THE PROTECTIVE ACTION OF CYSTEINE AGAINST X-RADIATION. D. E. Smith, H. M. Patt, E. B. Tyree, and R. L. Straube. Proc. Soc. Exptl. Biol. Med. **73**, 198-200(1950)Feb.

Authors conclude from study of rats that protection is roughly proportional to amount of cysteine given. NSA 4-2866.

2648

QUANTUM PHYSICS AND STATISTICS IN BIOLOGY. M. Schon, B. Rajewsky, K. Sommermeyer, and H. Friedrich-Freska. p. 1-49 of FIAT Review of German Science, 1939-1946: Biophysics, Part I. Boris Rajewsky and Michael Schon (senior authors). Office of Military Government for Germany, Field Information Agencies Technical, 1948. (In German).

Reviews includes sections on: quantum theoretical features of biological problems; target theory; energy migration in molecular complexes and structural units, forces influencing composition of biological structural units. NSA 4-2867.

2649

Chicago Univ.

REDUCTION OF MORTALITY FROM X-RADIATION BY TREATMENT WITH ANTIBIOTICS. C. Phillip Miller, Carolyn W. Hammond, and Marianne Tompkins. [nd] 6p. (AECU-738); Science **111**, 719-20(1950).

Streptomycin alone or with penicillin reduced the 30-day mortality of mice after 450-r total-body x irradiation. Chloramphenicol was less effective. NSA 4-2869.

2650

THE INCIDENCE OF BACTEREMIA IN MICE SUBJECTED TO TOTAL BODY X- RADIATION. C. Phillip Miller, Carolyn W. Hammond, and Marianne Tompkins. [nd] 9p. (AECU-739); Science **111**, 540-1(1950).

Bacteremia was most frequent during the period of greatest mortality and its incidence tended to parallel the death rate among mice receiving single total body x ray doses in excess of the $LD_{50/30}$. In almost all instances, the bacteria were species comprising part of the normal flora of the lower intestinal tract of the strain of mice studied. NSA 4-2870

2651

BALLISTIC ROENTGENTHERAPY. Gaston Daniel. J. Radiol. Electrol. **29**, 486-90(1948). (In French).

Author discusses possibility of stray radiation as a cause of many radiation reactions. NSA 4-2873.

2652

CALCULATIONS FOR MAXIMUM PERMISSIBLE EXPOSURE TO THERMAL NEUTRONS. Walter S. Snyder. Nucleonics **6**, 46-50(1950)Feb.

Critical flux of thermal neutrons is believed to lie between 1,712 and 1,951 neutrons/cm²/sec. NSA 4-2874.

2653

ABSORPTION EFFECTS IN VOLUME IRRADIATION OF MICROORGANISMS. Harold J. Morowitz. Science **111**, 229-30(1950) Mar. 3.

From target theory, a relation was derived giving percentage of organisms, suspended in a medium, which would survive irradiation of a given dosage. Corresponding expression was derived for radiation absorbing suspending materials, and for the case in which organisms are constantly stirred. NSA 4-2123.

2654

ACTION OF ROENTGEN IRRADIATION OF THE SPLEEN ON EASILY EXTRACTED BLOOD IRON. C. Scartozzi and G. Silvestri. Patologia Sperimentale **36**, 65-80(1948). (In Italian).

A daily x ray dose of 21 or 28r to the spleen of rabbits for 3 consecutive days caused an elevation of easily extractable plasma Fe which persisted over a period of 15-25 days. A single dose of 110r 140 days after the initial radiation produced a decrease in the easily extractable Fe beginning 8 days after exposure and persisting

for 45 days. Irradiation of liver or muscle instead of spleen had little effect. NSA 4-2124.

2655

CONCERNING INDIVIDUAL DIFFERENCES IN THE X-RAY SENSITIVITY OF HUMAN SKIN, EXAMINED BY THE APPEARANCE OF AN ERYTHEMA. Roderich Helmke. Strahlentherapie 80, 585-90(1949). (In German).

There was an individual variation range of 100 r among men and women for appearance of early erythema following 200-400 r x ray dose, variation range of 50 r in men and 75 r in women for primary erythema. NSA 4-2125.

2656

THE CYTOLOGICAL CHANGES THAT OCCUR IN THE ANTERIOR PITUITARY GLANDS OF RATS INJECTED WITH VARIOUS DOSES OF I^{131} AND THEIR SIGNIFICANCE IN THE ESTIMATION OF THYROID FUNCTION. R. C. Goldberg and I. L. Chaikoff. Endocrinology 46, 91-104 (1950) Jan.

Changes occurring in the anterior pituitaries of rats after injection of 300 μ c I^{131} (or more) are not the result of direct injury to the pituitary but are secondary to thyroid destruction. A dose of 18 μ c produced no detectable cytological effect in the pituitary. The histological picture of the thyroid and pituitary after the doses used is described. NSA 4-2126.

2657

EFFECTS OF IRRADIATING MAIZE POLLEN IN A NUCLEAR REACTOR ON F_1 PLANTS. E. F. Frolik and Rosalind Morris. Science 111, 153-4(1950) Feb. 10. NSA 4-2129.

2658

THE EFFECT OF X-IRRADIATION ON TISSUE RHODANATE. M. C. Bowman and W. R. Franks. Acta Univ Intern. contra Cancrum 6, 765-7(1949).

Nembutal did not affect either rhodanate activity or respiration and glycolysis of mouse brain grey matter; x-irradiation did not inhibit rhodanate activity in the liver homogenate in vitro but was lethal to mice in 10 days. NSA 4-2130.

2659

EFFECTS OF REPEATED X-RADIATION OF THE WHOLE BODY ON THE DEVELOPMENT OF TUMORS IN RATS DUE TO FEEDING p-DIMETHYLAMINOAZOBENZENE. Cornelia Hoch-Ligeti. Brit. J. Cancer 3, 562-9(1949) Dec.

All nonirradiated rats receiving p-dimethylaminoazobenzene developed hepatic tumors, tumor growth was retarded or inhibited in rats given soft radiation. Hepatic tumors were slightly retarded in rats treated with penetrating rays; skin tumors developed in 2 of these. NSA 4-2131.

2660

THE EFFECT OF X-RAY IRRADIATION ON THE PITUITARY BODY OF INFANTILE RATS TREATED WITH α -ESTRADIOL MONOBENZOATE. A. Baudins, L. Claesson, and A. Westman. Acta Endocrinologica 1, 133-40(1948).

Under the influence of estrogen, the pituitary of the infantile rat is sensitive to radiation doses (1-1,000 r) which fail to affect gland of normal infantile rats. NSA 4-2132.

2661

EPILATION IN THE NON-IRRADIATED MEMBER OF PARABIOTICALLY UNITED RATS. Donald C. Van Dyke and Rex L. Huff. Proc. Soc. Exptl. Biol. Med. 72, 266-9 (1949) Oct. NSA 4-2133

2662

EPITHELIOMA AND PAPILLOMA ARISING ON RECENTLY IRRADIATED SKIN; REPORT OF THREE CASES. J. Walter. Brit. Med. J. No. 4648, 273-4(1950) Feb. 4. NSA 4-2134.

2663

EXPERIMENTS RELATIVE TO THE ANTIPHLOGISTIC EFFECT OF X-RAYS. B. Wald and V. Varteresz. Radiologia Clin. 17, 348-62(1948) Nov.

Anti-inflammation effect of x rays were found to be due to reversible temporary paralysis of capillary endothelium, thereby preventing exudation. NSA 4-2135.

2664

FETAL TOLERANCE TO ROENTGEN RAYS. A CASE REPORT. Arthur A. Hobbs, Jr. Radiology 54, 242-6 (1950) Feb.

Author reports a case of a pregnant woman with advanced, metastatic breast cancer who received a total dose of 125r to the mid pelvis in order to terminate pregnancy when she refused surgical intervention. The pregnancy was terminated by delivery, one month later, of an apparently normal child. Fetal age is considered to be the factor responsible for the failure to induce abortion by x radiation. NSA 4-2136.

2665

FURTHER STUDIES ON THE RELATION BETWEEN RADIATION EFFECTS, CELL VIABILITY AND INDUCED RESISTANCE TO MALIGNANT GROWTH. VI. ANOMALOUS RADIOSENSITIVITIES OF ANALOGOUS MOUSE MAMMARY ADENOCARCINOMAS. Anna Goldfeder. Radiology 54, 93-114(1950) Jan. NSA 4-2137.

2666

A HISTOPATHOLOGIC STUDY OF RADIATION INJURIES OF THE SKIN. H. A. Teloh, M. L. Mason, and M. C. Wheelock. Surg. Gynecol. Obstet. 90, 335-48(1950) Mar.

Authors conclude that therapy of benign cutaneous or subcutaneous lesions by irradiation, with potential production of more severe irradiation dermatitis, is not justified unless it is carried out by a roentgenologist trained in limitations and potentialities of such therapy. NSA 4-2138.

2667

HISTOPATHOLOGICAL CHANGES INDUCED IN THE NORMAL THYROID AND OTHER TISSUES OF THE RAT BY INTERNAL RADIATION WITH VARIOUS DOSES OF RADIOACTIVE IODINE. R. C. Goldberg, I. L. Chaikoff, Stuart Lindsay, and D. D. Feller. Endocrinology 46, 72-90(1950) Jan.

The development of changes in the thyroid of rats given single doses of I^{131} ranging from 300 to 875 μ c is described in terms of histopathological changes in the glands at 3 days, 1, 5, 6 and 8 months after injection. Organs and tissues other than thyroid were also studied histologically. NSA 4-2139

2668

IRRADIATION OF MIXED TISSUES. W. H. Love. Nature 165, 227-8(1950) Feb. 11.

Erroneous conclusions may result from use of given formula for calculating tissue dose when two different tissues are included in irradiated area. NSA 4-2140.

2669

THE QUESTION OF X-RAY ATROPHY OF THE TESTES. Eberhard Günsel. Strahlentherapie 80, 467-74(1949). (In German).

Thermolabile testes of rats, exposed to hot water baths of 40-45°C, developed the same type of atrophy as that observed after high radiation doses. Other x ray effects described. NSA 4-2141

2670

RADIOBIOLOGICAL ADDITIVITY OF VARIOUS IONIZING RADIATIONS. Raymond E. Zirkle. Am. J. Roentgenol. Radium Therapy 63, 170-75(1950) Feb.

Additivity of fast neutrons and γ rays is assumed to be complete, i. e., mechanisms of action of radiations

are identical in their most essential feature, promotion of the same determinative events, but are not necessarily alike otherwise. The author includes a summary showing the degree of additivity (found in his experimental studies and studies by others) for combinations of α , β , γ , fast-neutron and x rays on the mouse, bean roots, *Drosophila* eggs, and pupae and on human skin. Incomplete additivity indicates some difference in the mechanism of action of the radiations. NSA 4-2142

2671
SULFOCYANATE, TOCOPHEROL AND X-RAYS. A. Herve and Z. M. Bacq. Compt. rend. soc. biol. **143**, 1158-9(1949)Aug. (In French).

Protection by cyanide against x ray effects in mice is due to action of CN-ion. Protection is limited in the sense that it is weak if x ray dose is increased, and is very weak if injection is made as late as 15 min after irradiation. NSA 4-2143.

2672
TENTATIVE DOSE UNITS FOR MIXED RADIATIONS. H. M. Parker. Radiology **54**, 257-62(1950)Feb.

Report concludes that energy absorption dose in irradiated tissue should be stated in ergs/g in scientific reports. NSA 4-2144

2673
THEORETICAL AND EXPERIMENTAL INVESTIGATIONS OF CELL MEMBRANE PERMEABILITY. Ladislaus Neu. Strahlentherapie **79**, 141-63(1949). (In German).

By applying laws of classical mechanics, author attempts to explain and coordinate certain features of cell membrane permeability including changes after x irradiation NSA 4-2145.

2674
PULMONARY CANCER PRODUCED BY RADIOACTIVE EMANATIONS. M. S. Vesin. Arch. maladies profess. med. travail et securite sociale **9**, 280-3(1948). (In French).

Effects of radioactive emanations on lungs of mine workers are described. NSA 4-2148

2675
THE ACUTE RADIATION SYNDROME IN MAN. Shields Warren and John Z. Bowers. Ann. Internal Med. **32**, 207-16(1950)Feb.

Pathogenesis, histopathology, symptomatology, clinical course, laboratory findings, complications, sequelae, therapy and prognosis of acute radiation syndrome in man are discussed. NSA 4-2149.

2676
ON IRRADIATION SICKNESS. K. Stetala and P. Ermala. Annales Chirurg. Gynaecol. Fenniae **37**, Suppl. 1, 1-59 (1948).

Relationship between irradiation sickness and mobile visible blood lipid is discussed in this report based on 65 cases. NSA 4-2150.

2677
RADIATION SICKNESS. W. Warner Watkins. Arizona Med. **7**, 17-21(1950)Feb.

Changes in radiation techniques for treatment of various diseases and in consequent incidence of radiation illness from 1900 to present are described. NSA 4-2151.

2678
TREATMENT OF LEUCOPENIA DUE TO IRRADIATION WITH VITAMIN B₆. F. Rovello and L. Ferri. Haematologica **32**, 319-32(1948). (In Italian)

In 10 patients treated with x rays for different types of tumors, decrease in number of leucocytes was controlled by administration of pyridoxine (B₆), 100 mg daily. NSA 4-2152.

2679
CHANGES IN THE PROTHROMBIN LEVEL IN WOMEN WITH CANCER TREATED BY IRRADIATION. E. Soykova-

Pachnerova and O. Soyka. Casopis Lekaru Ceskych **88**, 169-71(1949). (In Czech). NSA 4-2159

2680
Radiation Lab., Univ. of Calif.
SUMMARY OF THE RESEARCH PROGRESS MEETING OF OCTOBER 27, 1949. Henry P. Kramer. Jan. 25, 1950 6p. (UCRL-564).

Results of irradiation of microorganisms with deuterons and α particles are reviewed. NSA 4-2339.

2681
New York Operations Office.
THE NEGATION OF SQUID EMBRYO TROPISMS BY X-RADIATION. Roberts Rugh. Jan. 16, 1950. 18p. (NYOO-1502). NSA 4-2503.

2682
Oak Ridge National Lab.
CHROMOSOMAL INTERCHANGES INDUCED IN *TRADESCANTIA* MICROSPORES BY FAST NEUTRONS FROM URANIUM FISSION. Norman H. Giles, Jr., and Alan D. Conger. Feb. 28, 1950. 11p. (ORNL-586), J. Cellular Comp. Physiol. **35** (Suppl. 1) 83-8(1950).

Linear relationship was found to exist between neutron dose and chromosome interchange frequency, confirming previous evidence that fast neutron-induced interchanges are one-hit phenomena. NSA 4-2504.

2683
ABSTRACTS OF PAPERS ACCEPTED FOR PRESENTATION AT THE FORTY-FIRST ANNUAL MEETING OF THE [AMERICAN PHYTOPATHOLOGICAL] SOCIETY, NEW YORK CITY, NEW YORK, DECEMBER 28-30, 1949. Phytopathology **40**, 1-33(1950)Jan.

Continuous γ irradiation of tomato plants and cultures of *Fusarium lycopersici* are described. NSA 4-2505.

2684
RETENTION OF RADIOACTIVE IODINE IN THYROID CARCINOMAS HISTOPATHOLOGIC AND RADIO-AUTOGRAPHIC STUDIES L. D. Marinelli. Amer. J. Roentgenol **58**, 17(1947).

2685
THE ACTION OF RADIOACTIVE PHOSPHORUS IN *DROSOPHILA*. Johanna Blumel. Science **111**, 205-6 (1950)Feb. 24.

Drosophila melanogaster and *D. virilis* were maintained on a culture medium containing P³² (approximately 265,000 cpm/ml). The distribution of radioactivity in the flies 12 days after exposure was determined and hatchability and development of offspring hatched in the radioactive solution were observed. Data on mutation production are also included. NSA 4-2507.

2686
ANALYSIS BY RADIATION OF BIOLOGICAL ELEMENTARY STRUCTURES. Gerhard Schubert. Strahlentherapie **80**, 1-16(1949). (In German).

Author reviews radiation effect on genes, bacteriophages, and viruses. NSA 4-2508.

2687
BIOLOGICAL RADIATION EFFECTS OF FAST ELECTRONS ON GERMINATING BARLEY. W. Dittrich, W. Paul, M. Riedel, and G. Schubert. Strahlentherapie **80**, 17-34 (1949). (In German).

With increased dosages, inhibition of germinal growth became greater and percentage of coleoptiles breaking through soil was smaller, length of growth of leaf was retarded. NSA 4-2509.

2688
EFFECT OF LARGE DOSES OF X-RAYS ON THE DISTRIBUTION OF ALKALINE PHOSPHATASES IN SOME ORGANS OF THE MOUSE. L. Arvy, J. A. Boiffard, and M. Gabe. Compt. rend. soc. biol. **143**, 233-4(1949).

Histological changes in adult white mice given 2,000 r whole-body x ray doses are described. Gomori technique showed characteristic shifts in alkaline phosphatase in cells of spleen, intestine and kidney. NSA 4-2511

2689

ADRENAL ASCORBIC ACID AND HISTOLOGICAL CHANGES IN MALE AND FEMALE RATS AFTER HALF-BODY X-RAY IRRADIATION Bernard C. Wexler, Richard Pencharz, and Sydney F. Thomas. *Am. J. Physiol.* 183, 71-4(1955). NSA 10-1174

2690

EFFECTS OF X-IRRADIATION ON PLASMODIUM GALLINACEUM AND PLASMODIUM LOPHURAE INFECTIONS IN YOUNG CHICKS. B. E. Bennison and G. Robert Coatney. *J. Natl. Malaria Soc.* 8, 280-9(1949) Dec.

X-rayed chicks showed significantly higher parasite counts than unirradiated controls. Parasite counts of irradiated quinine-treated chicks (inoculated with P. gallinaceum) were slightly higher than those of unirradiated quinine-treated controls. NSA 4-2513.

2691

LETHAL INJURIES OF DROSOPHILA EGGS BY X-RAYS AND FAST ELECTRONS FROM A 6-Mev BETATRON. H. Fass, G. Hohne, W. Paul, and G. Schubert. *Naturwissenschaften* 36, 381-2(1949). (In German).

Lethal dosage curves are given for Drosophila eggs, aged 3, 4 and 7.5 hr exposed to x rays and 3-Mev electrons. Relative biological effectiveness of electrons as compared to x rays is found to be 1.0, 0.4, and 0.8 respectively for the 3 age groups. NSA 4-2515.

2692

THE NATURE OF RADIATION INJURY TO AMPHIBIAN CELL NUCLEI William R. Duryee. *J. Natl. Cancer Inst.* 10, 735-96(1949) Dec.

Cellular radiation damage is apparently a triple phenomenon and includes primary physical or radiochemical changes in cytoplasm; chemical metabolic processes which allow protoplasmic nuclear toxins to form or accumulate in cytoplasm and transmission of toxic substances into nucleus. NSA 4-2516

2693

ON THE INTERPRETATION OF THE DOSE-FREQUENCY CURVE IN RADIOGENETICS. I. Opatowski. *Genetics* 35, 56-9(1950) Jan.

Author feels that apparent linearity of experimental data on dependence of mutation frequency upon the administered dose cannot be considered as proof that mutation is caused by a single primary event. NSA 4-2517.

2694

PREGNANCY FOLLOWING PELVIC IRRADIATION Alan M. Giles. *J. Obstet. Gynaecol. Brit. Empire* 56, 1041-3 (1949) Dec.

Failure of radium irradiation to prevent pregnancy in certain cases leads author to believe that patients treated by this method should be followed up for minimum period of 12 mo and in event of failure to induce menopause, contraceptive measures should be advised. NSA 4-2518

2695

THE PROBLEM OF RADIOTOXINS. II. Zacek, Jan, VI. Klimecky, and D. Motacek. *Spisy Lekarske Fakulty Masarykovy Univ.* 22, 8(1948).

Rat erythrocytes were irradiated with 6,030 r and injected subcutaneously into healthy animals as 5 cc suspensions to determine severity and nature of radio-toxic effects (leukopenia). Radiotoxins were found to be formed only in intact, live erythrocytes, probably by complex chain reactions. NSA 4-2519

THE IMMEDIATE AND DELAYED MORPHOLOGICAL EFFECTS OF X-RADIATIONS ON MEIOTIC CHROMOSOMES. Roberts Rugh. Nov. 1, 1949. 20p. (AECU-649; CUF-3); J. Cellular Comp. Physiol. 36, 185-203(1950).

Mitotic and meiotic stages in spermatogenesis of *Triturus pyrrhogaster* were studied immediately and 48 hr after 5,000 to 50,000 r x-ray dose. Chromosome changes are described. NSA 4-383

2706

HEREDITARY EFFECTS PRODUCED IN MAIZE BY RADIATIONS FROM THE BIKINI ATOMIC BOMB. I. STUDIES ON SEEDLINGS AND POLLEN OF THE EXPOSED GENERATION. E. G. Anderson, A. E. Longley, C. H. Li, and K. L. Retherford. Genetics 34, 639-46 (1949) Nov.

Maize plants grown from seed exposed at Bikini showed effects slightly less than those of an experimental lot exposed to 15,000 r. NSA 4-386

2707

MORPHOLOGICAL ASPECTS OF THE REGENERATION OF NERVES SECTIONED AND SUBJECTED TO THE ACTION OF X-RAYS. Gillo Gastaldi. Rivista Sperimentale di Freniatria 73, 5-41(1949) June 30. (In Italian).

Rabbits and guinea pigs received local irradiation daily (80r/day for total dose of 160-720r) over the area of hemisection of the sciatic nerve, beginning immediately after sectioning. A control animal was studied for each irradiated animal and received only nerve section. Animals were sacrificed in pairs from the second to the 19th day after nerve section and the progress of repair was studied histologically. Among postirradiation effects exhibited by rabbits and guinea pigs were accentuated leucocyte migration, accentuated phagocytic activity and prolonged disorientation of nerve fibres. NSA 4-388

2708

PHYSIOLOGICAL EFFECTS OF RADIATIONS; EXTENT OF DAMAGE TO LIVING TISSUES. Franklin Hutchinson. Yale Sci. Mag. 24, 9-10, 18, 28, 30(1949) Nov.

This is a general review and discussion of hazards and dangers of ionizing radiation. NSA 4-389

2709

PRODUCTION OF RADIOACTIVITY IN ANIMAL TISSUES BY HIGH-ENERGY X-RAYS. W. V. Mayneord, J. H. Martin, and D. A. Layne. Nature 164, 728-30(1949) Oct. 29.

Authors describe their experiments to determine amount of induced radioactivity it is possible to produce in rat tissues with x rays, and biological significance of this phenomenon. They conclude that induced radioactivity does not explain biological effects of x rays on tissues. Calculated rate of energy absorption from x ray beam gives a value of 0.93 ergs/g sec. In contrast energy absorption from disintegration of O_2 is 0.4×10^{-4} ergs/cc/sec. Even if C disintegration is included, rate of absorption of energy due to activation would be only

of the order of 0.01 per cent of that due to electron recoil and pair absorption. NSA 4-391

2710

RADIATION-ITS BIOLOGICAL EFFECTS AND PROBLEMS. J. R. Martin. Mech. Eng. 71, 893-8(1949) Nov. NSA 4-392.

2711

RADIOBIOLOGICAL EXPERIMENTS ON DROSOPHILA PUPAE, USING FAST ELECTRONS AND X-RAYS. Wolfgang Dittrich, Wolfgang Paul, Gotthold Salz, and Gerhard Schubert. Z. Naturforsch 4b, 226-9(1949) Aug.-Sept. (In German).

LD_{50} is somewhat larger for fast electrons than that for x rays. Authors observed that in the "formal" target region the most probable number of hits is smaller for fast electrons than for x rays. NSA 4-393

2712

STUDIES CONCERNING THE EGG-WHITE BODIES OF THE BONE MARROW. IV. REPORT: THE CHANGES IN THE EGG-WHITE FRACTION OF THE BONE MARROW AFTER ROENTGEN IRRADIATION. Yutaka Nihei. Tohoku J. Exp. Med. 49, 233-8(1948) Oct. 11. (In German).

Large x ray doses apparently seriously injure egg-white bodies in irradiated and shielded marrow of dogs which have 4000 r of x rays applied to one thigh from which marrow samples are taken for comparison with samples from non-irradiated thigh. NSA 4-394

2713

SURVIVAL CURVES OF HAPLOID AND DIPLOID YEASTS SUBMITTED TO X-RAYS. Raymond Latarjet and Boris Ephrussi. Compt. rend. 229, 306-8(1949) July 25. (In French).

A haploid and a diploid strain derived from the same parent strain of *Saccharomyces cerevisiae* received various x ray doses and lesions were observed microscopically and counted after 20 hours of incubation. Lesions of haploid yeasts are all irreversible; diploid yeasts show frequent cases of restoration and further colony production. Survival curves were sigmoid for diploid yeasts, simple exponential for haploids, confirming authors' hypothesis that previously observed sigmoid curves (two-hit) might be due to the diploid nature of the yeasts studied. NSA 4-395.

2714

X-RAY EFFECTS IN FRUIT TREES. I. Granhall, A. Gustafsson, Fr. Nilsson, and E. J. Olden. Hereditas 35, 269-79(1949).

Results of irradiating scions of apples, pears and cherries with 500 to 25,000 r indicate that this method may be usable for production of better fruit of increased size, flavor, resistance to disease and other desirable qualities. NSA 4-396.

TIME-DOSE STUDY OF BIOCHEMICAL RESPONSES OF RATS TO X-RADIATION. N. North and L. F. Nims. (nd) 1p. (AECU-266). *Fed. Proc.* 8, 119-20(1949).

Time-dose study of biochemical responses of adrenal-pituitary system in fasted rats following whole body x irradiation indicates a pattern of changes comparable to that following other stresses. (Appears in its entirety in NSA). NSA 3-503.

2722

Brookhaven National Lab.

THE EFFECT OF ABSORBED RADIOACTIVE PHOSPHORUS (P³²) ON THE GENETICS OF *E. COLI*. Benjamin A. Rubin and Paul Steinglass. (nd) 1p. (AECU-269).

The intent of this study was to determine whether the genetic effects of P³² could be accounted for by β -ionization alone. A mathematical basis was developed for the detection of the mutagenic effect of chemical transmutation in the presence of ionizing radiation. In order to fulfill the requirements of the theoretical calculation, experiments were designed to produce great differences in the amounts of radioactive material taken up by the bacteria. This was achieved by varying the concentration of total phosphorus but maintaining a constant P³² level. A quantitative genetic effect was sought in the ability of the organisms to synthesize certain metabolites, utilize carbohydrates, and resist antibacterial agents. Results indicate that an effect beyond that attributable to ionization was present. The data, however, were complicated by the necessity for post treatment before mutants could be detected. The most effective post treatment was fractional heat killing, which sometimes caused great increases in mutation rate. The significance of this necessity may be related to the "nuclear" organization of bacteria since it was noted that the kinetics of the heat killing did not resemble a first order reaction but indicated the presence of multiple genetic and heat sensitive loci in each organism. Cultures grown in P³² and subsequently reduced with heat to about 1% of the original population had a total of more mutants than a culture before either treatment. (Entire report). NSA 3-504

2723

OBSERVATIONS OF THE BLOOD OF CYCLOTRON WORKERS. M. Ingram and S. W. Barnes. (nd) 3p. (AECU-334). *Phys. Rev.* 75, 1765-6(1949).

Two types of unusual cells in blood of cyclotron personnel are described, early mononuclear cells and lymphocytes with bilobed nuclei. The latter are present in statistically significantly increased numbers. NSA 3-507

2724

THE ATOMIC BOMB'S EFFECTS ON PLANTS AND SOILS Francis M. Journin. *Fertilizer Review* 23, No. 4, 7-11, 14; No. 5, 7-9, 11-3(1948).

Author investigated claims that crop yields after the bombing of Nagasaki and Hiroshima were accelerated. Increased yields are believed to be the result of extensive fertilization, not of irradiation. NSA 3-508

CONCERNING INFORMATION OF A COLD-AGGLUTINATION IN VITRO AFTER ROENTGEN RADIATION OF BLOOD SERUM. Adolf Frank and Waldemar Punin. *Klin. Wochschr.* 27, 121-2(1949) Feb. 15. (In German). NSA 3-511

2728

EFFECT OF URETHANE COMBINED WITH X-RAYS ON CHICK FIBROBLASTS. Edith Paterson and Mary V. Thompson. *Nature* 163, 563(1949) Apr. 9.

Authors conclude that x ray action is incomplete at time of irradiation and is partly reversible and that urethane produces effects similar to those of x rays and partially reverses x ray effects when the two are combined. NSA 3-512.

2729

EFFECT OF X-RAYS ON THE INCORPORATION OF C¹⁴ INTO DESOXYRIBONUCLEIC ACID. G. Hevesy. *Nature* 163, 869-870(1949) June 4. NSA 3-513.

2730

FURTHER STUDIES ON SENSITIVITY OF CHROMOSOMES TO IRRADIATION AT DIFFERENT MEIOTIC STAGES IN OOCYTES OF *SCIARA*. Martha L. Bozeman and Charles W. Metz. *Genetics* 34, 285-314(1949) May.

Chromosome sensitivity to 1,100 r x ray dose is almost zero for a long period preceding breakdown of nuclear membrane at the beginning of the first meiotic division. It then reaches a peak in anaphase, decreasing in late anaphase when mitotic activity is arrested, pending fertilization. Different types of chromosome rearrangements differ greatly in frequency. Author believes that data suggest the intervention of a cytoplasmic agent that reaches the chromosomes after nuclear membrane has broken down. Other possible interpretations are also discussed. No significant difference in survival was apparent between treated animals and inoculated controls. NSA 3-919

2756

THE PRESENT STATUS OF THE HEMORRHAGIC ASPECTS OF RADIATION INJURY. E. P. Cronkite, D. P. Jackson, G. V. LeRoy and R. T. Lempie. Proc. Intern. Soc. Hematol. 144, 449-50(1951).

A serious, often fatal, hemorrhagic state is a frequent complication of radiation injury due to large single doses of ionizing radiation. Aside from thrombocytopenia, the pathogenesis of this hemorrhagic state is very obscure.

2757

Atomic Energy Project, Univ. of Calif., Los Angeles. TABULATION OF AVAILABLE DATA RELATIVE TO RADIATION BIOLOGY. Andrew H. Dowdy. Feb. 1, 1949. 48p. (AECU-353).

Data on various subjects relating to radiation effects are given in tabular form for humans, rats, mice, guinea pigs, dogs, fruit flies and grasshoppers. NSA 3-1036.

2758

Atomic Energy Project, Univ. of Calif., Los Angeles. THE RESPONSE OF THE GUINEA PIG TO 200 R ACUTE WHOLE BODY X-IRRADIATION. Thomas J. Haley and D. Harriette Harris. July 1, 1949. 10p. (AECU-357), Science 111, 88-90(1950).

The guinea pig is similar to other animals in its response to x rays and for many purposes is much more suitable for studies than are the mouse and rat. NSA 3-1037

2759

THE ACTION OF RADIATION ON LIVING CELLS. Radiology 52, 428-30(1949) Mar. Editorial.

Effects of various amounts of radiation on normal tissues and tumors through inhibition of mitosis and

destruction of chromosomes are discussed and pertinent literature is cited. NSA 3-1038

2760

BIOLOGICAL REACTIONS CAUSED BY ELECTRIC CURRENTS AND BY X-RAYS. J. Th. Van der Werff. Elsevier Publishing Company, Amsterdam and London. 1948. 203p.

Author proposes that in all living organisms, parts are continuously being destroyed, then regenerated. A beam of radiation is thought to change dissimulation coefficient and thereby the assimilation process. Mathematical basis for theory is included. NSA 3-1039

2761

EFFECTS OF CONTINUOUS RADIATION ON CHICK EMBRYOS AND DEVELOPING CHICKS I. GROWTH, AND BONE II. BONE MARROW, LYMPHOID TISSUE, AND PERIPHERAL BLOOD. Shields Warren and Frank J. Dixon. Radiology 52, 714-29, 869-80(1949) May and June

Author presents an extensive description of effects of P³² irradiation. NSA 3-1040

2762

EFFECT OF RADIATION ON HEMOPOIESIS. IS THERE INDIRECT EFFECT? J. S. Lawrence, W. N. Valentine, and A. H. Dowdy. Blood 3, 593-611(1948).

Twenty six cross-circulation experiments using one normal and one irradiated cat in each pair, were performed in which cross circulation was established at various times after irradiation of the one cat or prior to irradiation in which case one cat was shielded. Detailed blood studies carried out on both partners for a period of 28 days after cross-circulation fail to support the concept of an indirect effect of radiation. NSA 3-1042

2763

THE LETHAL DOSE OF TOTAL-BODY X-RAY IRRADIATION IN SWINE John L. Tullis, Carl F. Tessmer, Eugene P. Cronkite, and F. W. Chambers, Jr. Radiology 52, 396-400(1949) Mar.

LD₅₀₋₃₀ for swine was found to be 275 r. NSA 3-1043.

2764

RELATIONSHIPS BETWEEN CHEMICAL AND BIOLOGICAL EFFECTS OF IONIZING RADIATIONS. Raymond E. Zirkle. Radiology 52, 846-55(1949) June.

Author discusses the nature of connecting events occurring in latent period which intervenes between absorption of energy from ionizing radiation and the biological effects produced by the radiations. NSA 3-1045.

2765

TUMOROUS GROWTHS IN THE PITUITARY AND TRACHEA FOLLOWING RADIOTOXIC DOSAGES OF I¹³¹. Aubrey Gorbman. Proc. Soc. Exptl. Biol. Med. 71, 237-40(1949). June.

Doses of 10, 50, 80, 100, 160, 200, 300, 400, 500 or 1,000 mc of I¹³¹ were given to 158 mice. Changes in pituitary glands and tracheas were observed and are described. NSA 3-1046

2766

Argonne National Lab. PLUTONIUM AND YTTRIUM CONTENT OF THE BLOOD, LIVER, AND SKELETON OF THE RAT AT DIFFERENT TIMES AFTER INTRAVENOUS ADMINISTRATION. Jack Schubert, Marium P. Finkel, Marcia R. White, and Gertrude M. Hersch. May 19, 1949. Decl. July 19, 1949. 16p. J. Biol. Chem. 182, 635-42(1950) NSA 3-1047

2767

Los Alamos Scientific Lab. THE USE OF X-RAYS TO DETERMINE THE MITOTIC AND INTERMITOTIC TIME OF VARIOUS MOUSE TISSUES. Norman P. Knowlton, Jr., and William R. Widner. (nd) 22p. (AECU-366), Cancer Research 10, 59-63(1950).

Mitotic time was found to vary from 20 to 36 min in 7 mouse tissues studied. Mitotic index varies inversely with intermitotic time; the shorter the intermitotic time, the greater the radiosensitivity of the tissues. NSA 3-1051

2768

STRUCTURAL DIFFERENCES IN BONE MATRIX ASSOCIATED WITH METABOLIZED RADIUM. Frank E. Hoecker and Paul G. Roofe. *Radiology* 52, 856-65 (1949) June.

From this study with rats it is concluded that a consideration of tissue dose due to α particle bombardment and resultant tissue reaction in sublethal dose region may offer a basis for a theory of production of bone sarcomas in chronic Ra poisoning. NSA 3-1053

2769

Atomic Energy Project, Univ. of Calif., Los Angeles. THE EFFECT OF SEVERAL ANTIHISTAMINIC DRUGS ON MORTALITY DUE TO X-IRRADIATION. Thomas J. Haley and D. Harriette Harris. July 18, 1949. 23p. (AECU-362), Stanford Med. Bull. 8, 1-7(1950).

Drugs investigated were synergistic with radiation and increased its lethality for guinea pigs. Drugs caused pronounced leukocytosis in normal guinea pigs, also gall bladder rupture and enlargement of common bile duct. NSA 3-1054.

2770

ATOMIC RADIATION EFFECTS; THE RELEASE AND NEUTRALIZATION OF HUMORAL TOXIC AGENTS. R. deRohan Barondes and David I. Levine. *Military Surgeon* 105, 153-60(1949) Aug.

Methods and measures for combatting toxic agents released in body during radiation exposure are described. Immediate effects of strong radiation, low dose effects, radiation resistance and carcinogens are also discussed NSA 3-1055

2771

ENDOCRINE FACTORS IN HYPERTENSION, TREATMENT BY ROENTGEN IRRADIATION OF THE PITUITARY AND ADRENAL REGIONS. James H. Hutton, James T. Case, Ernest C. Olson, Warren W. Furey, Stanley Fahlstrom, William L. Culpepper, and Earl E. Madden. *Radiology* 52, 819-28(1949) June.

Of 85 patients followed, 70.4% showed improvement after three or more x ray treatments and no evidence of x ray damage was noted. NSA 3-1066

2772

THE SEQUENCE OF MORPHOLOGICAL CHANGES PRODUCED IN CELLS BY X-RAYS AND RADON. G. Iasswoine. *Ann. Roentgenol. et Radiol.* 2, 357-65(1927).

Cytoplasm is considered to be the site of primary damage and to be more sensitive than the nucleus.

2773

BIOPHYSICS AND QUANTUM THEORY. H. A. Bomke. *Naturw. Rundschau* 2, 49-57(1949) Feb. (In German). NSA 3-1169.

2774

EFFECT OF ENVIRONMENTAL TEMPERATURE ON THE RESPONSE OF MICE TO WHOLE-BODY ROENTGEN RADIATION. Willie W. Smith, Benjamin J. Highman, J. R. Mitchell, and Henry C. Blount, Jr. *Proc. Soc. Exptl. Biol. Med.* 71, 489-501(1949) July.

Net result of sufficiently cold environment is to lower the resistance of mice to lethal x ray action, preirradiation subjection to cold environment favors survival. NSA 3-1171

2775

Naval Radiological Defense Lab. THE EFFECT OF WHOLE BODY X-IRRADIATION UPON THE TOTAL NITROGEN, TOTAL PROTEIN AND REFRACTIVE INDEX OF RAT PLASMA, INTERIM

REPORT. James D. Hauschildt and Helen Supplee. June 13, 1949. 11p. (AD-131(B)).

Marked decrease was observed during 2-4 day post-irradiation period in plasma refractive index, plasma protein and plasma nitrogen of rats given 650 r. NSA 3-1172.

2776

INHIBITION OF PLANT GROWTH BY IRRADIATION. II. SENSITIVITY AND DEVELOPMENT. Henry Quastler and Marianne Baer. *J. Cellular and Comp. Physiol.* 33, 349-63(1949) July.

Growing bean seedlings were more sensitive to x rays than were dry seeds. Most sensitive type of response was elicited with doses of 1,500-3,500 r for seedlings, equivalent to 29,000-66,000 r delivered to dry seeds. NSA 3-1173.

2777

Department of Agriculture.

1948 FIELD RESULTS WITH CERTAIN RADIOACTIVE MATERIALS AS PLANT STIMULANT. May 1949. 45p. (M-4376).

Alphatron (containing Ac and dolomitic limestone), RaBr in dolomitic limestone and $\text{UO}_2(\text{NO}_3)_2$ used in field tests had no apparent effects, either beneficial or harmful on plant growth. NSA 3-1174

2778

RADIORESISTANT CELLS IN CERTAIN RADIOSENSITIVE TISSUES OF SWINE EXPOSED TO ATOMIC BOMB RADIATION John L. Tufts. *Arch. Path.* 48, 171-7(1949) Aug.

Morphological changes were noted in lymph nodes, bone marrow, intestinal epithelium, gonads, spleen, thymus, tonsils, lymphoid aggregations in bowel wall and lymphocytes in peripheral blood stream of swine after irradiation. Stem cells (reticular cells, primordial ova, etc.) of highly radiosensitive organs were comparatively radioresistant. NSA 3-1175

2779

THE TREATMENT OF DIPHTHERIA CARRIERS WITH SMALL DOSES OF ROENTGEN RAYS. J. Th. Van der Werff. *Nederland. Tijdschr. Geneesk. Haarlem* 3, No. 38, 2900-3(1948). (In Dutch).

Within two weeks after x irradiation with 200 r to both lateral fields of nasopharynx and larynx cultures from 90% of 110 patients were negative for the diphtheria bacillus. Negative culture rate without treatment was usually 30%. NSA 3-1188

2780

Oak Ridge National Lab.

MUTANTS OF *BACILLUS SUBTILIS* THAT REQUIRE THREONINE OR THREONINE PLUS METHIONINE. Howard J. Teas. Aug. 15, 1949. 32p. (AECU-405).

Study of nutrition of 12 *B. subtilis* mutants, as regards amino acid requirements, indicates that homoserine is a precursor of threonine and methionine in *Neurospora*. One mutant reverted to wild type with frequency of 3×10^{-7} after a dose of 90,000 to 100,000 r of x rays. NSA 3-1319

2781

Atomic Energy Project, Univ. of Rochester. SUMMARY OF MOUSE GENETICS WORK. Donald R. Charles. (nd) 2p. (AECU-378).

Occurrence of mutations in sperm of mice x rayed daily, and importance of similar mutations when occurring in humans was investigated. Extent and duration of chromosome damage produced by single x ray doses of 58 to 229 r are described. NSA 3-1326

2782

Los Alamos Scientific Lab.

THE VALUE OF BLOOD COUNTS IN INDIVIDUALS EXPOSED TO IONIZING RADIATION. Norman P. Knowlton, Jr. (nd) 25p. (AECU-397).

Ten men exposed to 0.2 r of γ rays/wk for 117 wks had small significant decrease in white blood cell count, absolute neutrophils and absolute lymphocytes. Routine blood count is considered best clinical test available for detecting radiation injury. NSA 3-1327

2783

EFFECT OF HIGH-VOLTAGE X-RAYS AND CATHODE RAYS ON VITAMINS (RIBOFLAVIN AND CAROTENE). Samuel A. Goldblith and Bernard E. Proctor. *Nucleonics* 5, 50-8(1949) Aug.

Riboflavin is radiosensitive to cathode and x rays, carotene radiosensitive to cathode rays. Destruction of both increased with dilution of solutions, indicating an indirect action of the radiations. NSA3-1339

2784

Columbia Univ.

HISTOLOGICAL EFFECTS ON THE EMBRYO FOLLOWING X-RADIATION. Roberts Rugh. *J. Morphol* 85, 683-95 (1949). (AEC-2596).

Amblystoma punctatum larvae were given 15,000 r x-ray dose and studied histologically. Tissues most radioresistant are cartilage and muscle, most radio-sensitive, central nervous system and related sense organs. NSA 3-3

2785

Atomic Energy Project, Univ. of Rochester.

EXPERIMENTAL RADIATION PATHOLOGY Thomas B. Barnett. (nd) Decl. May 31, 1949. 12p. (AEC-2614).

Brief descriptive review of characteristic alterations observed in certain radiosensitive mammalian organs postirradiation is presented. NSA 3-4

2786

Argonne National Lab.

THE EFFECT OF TOTAL-BODY X RADIATION ON A PRE-EXISTING INDUCED ANEMIA IN RABBITS. III. HISTOPATHOLOGICAL STUDIES. Matthew H. Black, Leon O. Jacobson, Edna K. Marks, and Evelyn Gaston. June 1946. 45p. (AECU-229), NNES Div. IV, Vol. 22B, chap. 12.

Changes in the blood and hematopoietic tissues of rabbits receiving whole body exposure to 800 r of x rays are described in detail. The more immature erythroblasts appeared to have a greater ability to withstand the radiation than did more mature cells of the series, in contradiction to the commonly held belief that more immature and more rapidly dividing cells are more radiosensitive. NSA 3-5.

2787

Oak Ridge National Lab.

THE EFFECT OF TOTAL BODY X-RADIATION ON THE ACTIVITY OF SEVERAL ENZYMIC SYSTEMS OF RAT SPLEEN. C. E. Carter. Apr. 26, 1949. 24p. (AECU-231).

Of the enzymes studied, ribonuclease shows most striking postirradiation alteration, depressions of activity were found 24 hr after 100-r dose. After 500 r exposure, no evidence of recovery was found in spleen ribonuclease activity after 12 days. NSA 3-6

2788

ACTION OF THE SEMI-CARBAZONE OF ADENOCROME ON PETECHIAE CAUSED BY X-RADIATION. A. Herve and J. Lecomte. *Arch. intern. pharmaco. dynamique* 79, 109-12(1949) Apr. 15. (In French).

Cutaneous purpura was greatly reduced but survival time was not significantly increased in mice that received whole body exposure to 400 r of x ray for four consecutive days. NSA 3-7

2789

EFFECTS OF NEUTRON RADIATION ON THE HUMAN

TESTES: A CASE REPORT. John N. Robinson and Earl T. Engle. *J. Urol.* 61, 781-4(1949) Apr.

Following accidental exposure of one man to neutrons, testicular biopsies and semen analysis were performed. Results are presented. Spermatogenesis was absent three weeks after exposure but had begun to return between 12-15 months post-exposure. NSA 3-8

2790

EFFECT OF RADIOACTIVE PHOSPHORUS (P^{32}) IN THE CULTURE MEDIUM ON GROWTH AND VIABILITY OF *PHOMOPSIS CITRI* AND *DIPLODIA NATALENSIS*. Erston V. Miller and Jerome J. Wolken. *Science* 109, 492-3 (1949) May 13.

Activity of these fungi which are pathogenic for plants, was seriously impaired by P^{32} treatment. NSA 3-9

2791

GENETIC RECOMBINATIONS LEADING TO PRODUCTION OF ACTIVE BACTERIOPHAGE FROM ULTRAVIOLET INACTIVATED BACTERIOPHAGE PARTICLES. S. E. Luria and R. Dulbecco. *Genetics* 34, 93-125(1949) Mar.

Experiments determining amount of adsorption by bacteria of bacteriophages activated or inactivated under several conditions are described. Observations relative to genetic mechanisms of phages after x irradiation are included. NSA 3-10

2792

IMPROVEMENT IN STREPTOMYCIN-PRODUCING STRAINS OF *STREPTOMYCES GRISEUS* BY ULTRAVIOLET AND X-RAY ENERGY. George M. Savage. *J. Bact.* 57, 429-41(1949) Apr. NSA 3-11

2803

DEGENERATIVE AND REGENERATIVE CHANGES IN THE THYROID GLAND FOLLOWING HIGH DOSAGES OF RADIOACTIVE IODINE. Aubrey Gorbman. Trans. N. Y. Acad. Sci. 2, 201-3(1949) Apr.

Under conditions of the experiment, 200 μ c or more of I^{131} caused complete thyroid destruction in mice. Doses of 100 μ c permit survival of small bits of atypical thyroided tissue, which show no trend toward regeneration even after 400 days. NSA 3-200.

2804

THE EFFECT OF ADRENOCORTICOTROPIC HORMONE AND X-RAY ON THE AMOUNT OF CIRCULATING ANTIBODY. Edward E. Fischel, Marjorie LeMay, and Elvin A. Kabat. J. Immunol. 61, 89-93(1949) Jan.

To determine whether x rays and adrenocorticotrophic hormone are able to cause an anamnestic response in circulating rabbit anti-ovalbumin, rabbits received either 25 mg of 75% potent ACTH subcutaneously or 50 r total body x ray dose. Bleeding times, leukocyte counts and antibody levels were determined after treatment. The serum anti-ovalbumin content was unchanged or diminished in all animals, i.e. no anamnestic response was demonstratable. NSA 3-201

2805

THE EFFECT OF LOCAL ROENTGEN IRRADIATION ON THE BIOLOGICAL BEHAVIOR OF A TRANSPLANTABLE MOUSE CARCINOMA I. INCREASED FREQUENCY OF PULMONARY METASTASIS. Henry S. Kaplan and Edwin D. Murphy. J. Natl. Cancer Inst. 9, 407-13(1949) Apr. - June. NSA 3-202

2806

EFFECTS OF REPEATED LOW DOSES OF NEUTRONS ON THE ESTROUS CYCLE OF THE WHITE RAT. James L. Leitch, Douglas M. Gay, and George A. Neville. Am. J. Roentgenol. Radium Therapy 61, 530-3(1949) Apr.

Daily dose of 3 n were given to 23 rats 6 days/wk until 111 n had been delivered. Slight weight loss and retardation of growth occurred. Main effect was disruption of estrous cycle. NSA 3-203

2807

HISTOLOGICAL AND HISTOCHEMICAL STUDY OF THE

SKIN OF THE GUINEA PIG TREATED WITH X-RAYS.

J. Frederic. Arch. biol. (Liege) 60, 79-101(1949). (In French).

Particular attention was paid to histological changes in x irradiated epidermis and especially to -SH containing substances in the skin and paws of guinea pigs irradiated with 3000, 2000 or 1,500 r. Sequence of changes observed is illustrated. NSA 3-204

2808

PRELIMINARY OBSERVATIONS ON THE BIOLOGICAL EFFECTS OF RADIATION ON THE LIFE CYCLE OF *TRICHINELLA SPIRALIS*. Joseph E. Alicata and George O. Burr. Science 109, 595-6(1949) June 10.

One gram packets of trichinous rat meat were placed between radiocobalt tubes in refrigerator at 4°C. Dose of 2000 r of γ rays was delivered over each 24 hr period. Dose intensity and temperature applied were not lethal to trichinal larvae encysted in meat. Under proper dosage, female worms were rendered sterile and unable to complete life cycle. NSA 3-205

BIOLOGICAL EVALUATION OF 20 MILLION VOLT ROENTGEN RAYS. III. RECESSIVE SEX-LINKED LETHALS IN DROSOPHILA MELANOGASTER. Wilbur M. Luce, Henry Quastler, and Lester S. Skaggs. *Am J. Roentgenol. Radium Therapy* 62, 555-8(1949).

Results from conventional x ray therapy machines are compared with those from the betatron. Betatron has mutagenic effectiveness about 70% that of conventional machines. NSA 4-18

2825

CIRCULATING ANTIBODIES AND THE ALARM SYNDROME BROUGHT ON BY X-IRRADIATION. J. Lecomte and P. Fischer. *Compt. rend. soc. biol.* 143, 878-9(1949) June. (In French).

Destruction of lymphocytes which accompanied alarm syndrome caused by x rays (200 r applied to hind legs) was accompanied by simultaneous increase in amount of circulating antibody. NSA 4-20

2826

CYANIDE AND A LETHAL DOSE OF X-RAYS. A. Herve

and Z. M. Bacq. *Compt. rend. soc. biol.* 143, 881-3 (1949) June. (In French).

NaCN injection reduced mortality of mice from 100% to 30% for an x-ray dose of 500-600 r, 230 kv, 0.25 mm Cu filter, focal distance of 50 cm, rate of 30 r/min. NSA 4-21

2827

EARLY REACTIONS FOLLOWING ROENTGEN RAY EPILATIONS. I. Zuger. *Arch. Dermatol. and Syphilol.* 60, 722-5(1949) Nov.

Radiation reactions of 312 children to 300 r x ray dose treatment for ringworm of scalp included: restlessness, nausea, vomiting, headache, loss of appetite and elevated temperature. NSA 4-22

2828

EFFECTS OF BETA RAYS ON CENTRAL NERVOUS TISSUES. Berry Campbell and Rosalind Novick. *Proc. Soc. Exptl. Biol. Med.* 72, 34-8(1949) Oct.

Gross morphological changes evoked in neurons and glial cells of nervous system of cat by high β -ray doses are described. NSA 4-23.

2829

EXPERIMENTAL INVESTIGATIONS CONCERNING ROENTGEN EFFECTS AND CHEMICAL EFFECTS ON PLANT MITOSIS. K. Hohl. Stuttgart, Georg Thieme Verlag 1949. 87p. (In German).

Special effects of some agents in the production of plant anomalies are discussed; effective groups are outlined and described. NSA 4-24

2830

HEMATOLOGIC STUDIES IN HIROSHIMA AND A CONTROL CITY TWO YEARS AFTER THE ATOMIC BOMBING. Fred M. Snell, James V. Neel, and K. Ishibashi. *Arch. Internal Med.* 84, 569-604(1949) Oct.

Erythrocyte count, hemoglobin, hematocrit and lymphocyte count of irradiated subjects were significantly reduced. Eosinophil count and plasma protein values were slightly higher. NSA 4-26

2831

ON THE SENSITIZATION OF TISSUES TO X-RAYS. E. E. Umanski, B. M. Varshavskii, and V. P. Kudokotsev. *Doklady Akad. Nauk. S.S.S.R.* 65, 581-3(1949). (In Russian).

Attempts were made to increase radiosensitivity of organs or tumors using fluorescein, neutral red, and congo red. NSA 4-27

2832

ON "PETEOSTHOR" AND ITS COMPONENTS. I. FIRST REPORT ON THE EFFECT OF THORIUM X ON TUBERCLE BACILLI (TBB) IN VITRO. Ludwig Popp and Hermann Egelhaaf. *Zentr. Bakt. Parasitenk.* 154, 49-56(1949). May 15. (In German) NSA 4-28.

2833

SUPRARENAL CORTEX REACTIONS FOLLOWING THE ADMINISTRATION OF X-RAYS FROM A DISTANCE IN THE RABBIT. E. Nizet, C. Heusghem, and A. Herve. *Compt. rend. soc. biol.* 143, 876-7(1949) June. (In French).

Experimental results show that x rays produce increased loss of lipids from suprarenal cortex; loss occurs much more rapidly than during periods of emotional stress and persists for shorter time. NSA 4-31.

2834

RAPID MODIFICATION OF THE OLIGODENDROGLIA AFTER THE APPLICATION OF X-RAYS TO THE HIND LEGS OF THE RABBIT. M. A. Gerebtzoff and A. Herve. *Compt. rend. soc. biol.* 143, 880-1(1949) June.

NSA 4-30

2835

THE TIME FACTOR IN LETHAL EFFECTS OF TOTAL ROENTGEN IRRADIATION IN TRITON. V. V. Brunst and E. A. Sheremetieva-Brunst. *Am. J. Roentgenol. Radium Therapy* 62, 550-4(1949) Oct.

Lethal effect of total-body irradiation on the adult animals was not dependent on distribution of dosage in time. The triton apparently accumulates even small doses during a long period of protracted or fractionated treatment. NSA 4-32.

2836

X-RADIATION OF EGGS OF RANA PIPIENS AT VARIOUS MATURATION STAGES. Grace Saunders Rollason. Biol. Bull. 97, 169-86(1949) Oct.

Egg fertilized during the second maturation division (20 min. after fertilization) were the most sensitive of three stages tested for radiosensitivity by counting cleaved eggs, gastrulae, neurale, hatched embryos and normal tadpoles after x ray doses ranging from 100-41, 600 r. Types of abnormalities were similar to those resulting from irradiation of sperm. NSA 4-33.

2837

X-RAY TOLERANCE OF LIVING CELLS AS MEASURED BY CYTOPLASMIC STREAMING. Charles J. Bishop, Victor D. McLaughlin, and Donald F. Tapley. Can. J. Research 27, 262-8(1949) Oct.

Stamen hairs and pollen tubes of (1) T. paludosa, diploid species, and (2) T. virginiana, tetraploid species, were used for study. Stamen hairs of both species stopped streaming after 700,000 r; in pollen tubes, streaming was stopped by 250,000 r in (1) and 200,000 r in (2). NSA 4-34

2838

THE ATOMIC BOMB AND HAZARDOUS RADIATION.

Donald H. Hale. Armed Forces Chem. J. 3, No. 5 18-19, 38, 40(1949). NSA 4-35

2839

ATOMIC DEFENSE-A CONSTRUCTIVE APPROACH

Richard D. Wolfe. Military Engr. 41, 417-20(1949) Nov.-Dec. NSA 4-36

2840

HOW MUCH RADIOACTIVE SUBSTANCE IS A MAN PERMITTED TO TAKE WITHOUT HARMFUL RESULTS?

Walter Rave. Naturw. Rundschau 2, 326-8(1949) July. (In German). NSA 4-37

2841

RADIATION BURNS, INCLUDING VOCATIONAL AND ATOMIC EXPOSURES. TREATMENT, AND SURGICAL PREVENTION OF CHRONIC LESIONS. James Barrett Brown, Frank McDowell, and Minot P. Fryer. Ann Surg. 130, 593-607(1949) Oct. NSA 4-38

2842

EFFECT OF ATROPINE ON ACUTE IRRADIATION SICKNESS IN MICE. John C. Larkin. Am. J. Roentgenol. Radium Therapy 62, 547-9(1949) Oct.

Results indicate that ionizing radiations produce multiple injurious reactions. The particular effect which atropine produces does not alter the most important of the radiation reactions since protection afforded by this drug is incomplete. NSA 4-43.

2843

TREATMENT OF RADIATION DISEASE BY A SYNTHETIC ANTIHISTAMINIC DRUG. J. A. Salva and M. Badell. Presse med. 57, 888(1949) Oct. 8.

Several drugs are considered for use in treating radiation disease including benadryl, neoantergan and phenergan. NSA 4-44.

2844

ATOMIC MEDICINE. C. F. Behrens, ed. New York, Thomas Nelson and Sons. 1949. 448p.

Contents include: radiobiology and pathology; hematology of irradiation, radiation illness; detection and measurement of radiations, atomic disaster planning; tracer methods; radioisotopes of medical interest, radiation effects in dentistry, research in atomic medicine. NSA 4-48

2845

CHANGES IN THE COAGULABILITY OF THE BLOOD

AFTER RADIATION THERAPY. THE RESULTS OF STUDIES USING THE MODIFIED WAUGH-RUDDICK TEST FOR INCREASED COAGULABILITY. Seymour B. Silverman. Am. J. Roentgenol. Radium Therapy 62, 541-6(1949) Oct. NSA 4-52.

2846

EFFECT OF SOFT X-RAYS ON VITAMINS (NIACIN, RIBOFLAVIN, AND ASCORBIC ACID). Bernard E. Proctor and Samuel E. Goldblith. Nucleonics 5, 56-62 (1949) Sept.

Vitamins affected indirectly; each was more sensitive in higher dilutions. Pure solutions of niacin riboflavin and ascorbic acid were used in the study. NSA 4-107

2847

Monsanto Chemical Co.

INFLUENCE OF TOTAL SURFACE BETA IRRADIATION ON THE GROSS METABOLIC PATTERN OF RATS.

Elizabeth Anderson. July 30, 1946. Decl. Aug. 23, 1948. 20p. (AECD-2228; MonH-122), National Nuclear Energy Series IV, Vol. 22E, Page 8.

Food intake, weight of feces, water intake and volume of urine, body weight, specific gravity of urine and presence or absence of urine albumen were followed in rats given total surface irradiation of 5,000, 7,500 and 10,000 rep of β rays. NSA 1-1086.

2848

THE EFFECT OF X-RAY ON MORTALITY, WEIGHT, LENGTH, AND COUNTS OF ERYTHROCYTES AND HEMATOPOIETIC CELLS IN FINGERLING CHINOOK SALMON, ONCORHYNCHUS TSCAWYTSCHA WALBAUM. Helshaw Bonham, Lau'en R. Donaldson, Richard F. Foster, Arthur D. Welander, and Allyn H. Seymour. Growth 12, 107-21(1948) June.

Effect of x ray doses of 100 to 5000 r are described. NSA 1-1087.

2849

THE BIOLOGICAL EFFECTS OF RADIATIONS Howard J. Curtis, p. 1-51 of ADVANCES IN BIOLOGICAL AND MEDICAL PHYSICS. VOLUME II. John H. Lawrence and Joseph G. Hamilton, eds, New York, Academic Press, Inc. 1951.

Author discusses the physical properties as well as the measurement of α rays, β rays, x rays, gamma rays, neutrons, and neutrinos. Physiological effects are also discussed. There is a review of the effects of penetrating radiation and β radiation. Reference is made to the different susceptibilities and responses to damage by various cells.

2850

RESUSCITATION OF HEAT-INACTIVATED SEEDS WITH X-RADIATION. Richard S. Caldecott and Luther Smith. J. Heredity 39, 195-8(1948) July.

Einkorn and barley seeds were protected against radiation effects by heat treatment given immediately after exposure. NSA 1-1089.

2851

SOME OBSERVATIONS ON THE NATURE OF RADIATIONS EMITTED BY X-RAY TUBES. Jean Manoukhine. Compt. Rend. 227, 56-8(1948) July 5. (In French).

Spleens of four patients were irradiated with: (1) air-type x ray tube, (2) Securix type, and (3) Standard type. Only in case of (1) was leucocytolysis observed. Irradiation by (2) or (3) depressed splenic activity. Coolidge Standard tube also had depressant action. NSA 1-1090.

2852

DEMONSTRATION OF ALTERED VASCULAR FUNCTION IN THE ROENTGEN IRRADIATED ISOLATED, PERFUSED RABBIT EAR. H. J. Heite and W. Schrader. Strahlentherapie 97, 395-402(1955). (In German).

Three-33 days after irradiation of the rabbit ear in situ with 10,000 r, the isolated ears were tested for

vascular susceptibility to arterenol and for tendency to edema formation. Significance of the observations is discussed and is compared with observations following phlogogenic excitants.

2853

ISOTOPES AND RADIATION HAZARDS. Frank Howarth. *Lancet* 255, 51-3(1948) July 10.

Effect of various isotopes and their radiations on skin, blood and sperm are discussed. Author concludes that in human experimentation, there is no excuse for use of isotopes when ordinary chemical procedures will suffice. NSA 1-1116.

2854

THE ANTIBODY RESPONSE IN CASES OF RADIATION LYMPHOPENIA, AND IN THE RETICULOSES. R. Winston Evans. *J. Pathol. Bacteriol.* 60, 123-30(1948) Jan.

Antibody response was tested in 30 patients with radiation induced lymphopenia and in control group (17) with normal blood lymphocyte levels. *B. paratyphosum* A(H) was used as antigen. Lower level of antibody production were recorded in patients with low lymphocyte counts. NSA 1-1179

2855

INFANTILE BLOOD SYSTEM. *Science News Letter* 54, 146(1948) Sept. 4.

Findings from a study of material collected at Nagasaki and Hiroshima indicate plasma cells like those of lesions in multiple myelomas are formed during postirradiation bone marrow regeneration. Recovery of red blood cell, granulocyte and lymphocyte production is described. NSA 1-1180

2856

UNUSUAL REMISSION AFTER RADIOPHOSPHORUS THERAPY IN A CASE OF "ACUTE PLASMA CELL LEUKEMIA." Edwin D. Bayrd and Byron E. Hall. *Blood* 3, 1019-23(1948) Sept.

The case of patient suffering from acute plasma cell leukemia, considered phase of multiple myeloma is described. Following treatment with penicillin, whole blood and P^{32} the patient recovered; after 1 yr no evidence of disease could be found. NSA 1-1198

2857

Argonne National Lab.

THE HISTOLOGICAL EFFECTS OF X-RAYS ON CHICKENS WITH SPECIAL REFERENCE TO THE PERIPHERAL BLOOD AND HEMOPOIETIC ORGANS. Raymond Murray, Mila Pierce, and Leon O. Jacobson. Mar. 2, 1948. Decl. Sept. 17, 1948. 69p. (AECD-2303, CH-3873).

Chickens 3-11 wk old were exposed to 200 kv x rays, receiving doses of 2-1200 r. Dramatic decrease in cellular blood constituents were seen in 3 and 5-week-old chicks after 600 r and 800 r, respectively. Numerous degenerating cells were seen on dry smears. NSA 1-1237

2858

Argonne National Lab.

EFFECTS OF X-RAYS ON TISSUE METABOLISM. E. S. Guzman Barron. Oct. 29, 1946. Decl. Sept. 17, 1948. 22p. (AECD-2316; CH-3654). National Nuclear Energy Series Div. IV, Vol. 22B, Chapter 16.

Rats were exposed to 900 r to 100 r x ray dose. Respiration of all tissues and oxidation of substrates requiring sulfhydryl enzymes was diminished immediately postirradiation; thymus was the only exception. Oxidation of pyruvate, succinate, d-amino acids and l(+) glutamate was inhibited in tissues. NSA 1-1238

2859

Argonne National Lab.

ACUTE HISTOPATHOLOGICAL EFFECTS OF SINGLE DOSES OF SLOW NEUTRONS ON MICE. R. Snider.

Feb. 5, 1947. Decl. Sept. 15, 1948. 15p. (AECD-2326; CH-3766).

Author reports studies of histopathology of: liver, pancreas, thymus, bone, cartilage, mesenteric lymph node, heart, lung, kidney, bone marrow, adrenal, ovary, fallopian tube, stomach, duodenum, ileum, colon, peripheral nerve, autonomic ganglia and skeletal muscle in CF₁ female mice after 400 n (slow neutrons). NSA 1-1239

2860

Argonne National Lab.

ADDITIVITY OF FAST NEUTRONS AND GAMMA RAYS IN THEIR ACUTE LETHAL ACTION ON MICE. R. E. Zirkle, J. R. Raper, E. F. Riley, and G. E. Stapleton. June 5, 1945. Decl. Sept. 17, 1948. 19p. (AECD-2328, CH-2571). NSA 1-1240

2861

EFFECTS OF RADIATION ON HEMOPOIESIS. John S. Lawrence, Andrew H. Dowdy, and William N. Valentine. *Radiology* 51, 400-13(1948) Sept. NSA 1-1241

2862

THE EFFECTS OF RADIATION ON VACCINIA VIRUS, AND ON BACTERIOPHAGES. M. H. Salaman. *Brit. Radiol.*, Supplement No. 1, 29-34(1947).

Effects of γ -, x-, and α -radiation on vaccinia include: loss of infectivity for rabbits, effect on phages, loss of power to lyse the sensitive bacterium. NSA 1-1242

2863

INFLUENCE OF AGE ON SUSCEPTIBILITY OF MICE TO THE DEVELOPMENT OF LYMPHOID TUMORS AFTER IRRADIATION. Henry S. Kaplan. *J. Nat. Cancer Inst.* 9, 55-6(1948) Aug.

Mice were found to have maximal susceptibility to lymphatic leukemias and lymphosarcomas at 1 month of age following irradiation with 1,000 r, (12 consecutive daily doses at 125 kv, 5 milliamperes, 30 cm, 3 mm added filtration, 42 r/min, 84 r/day). NSA 1-1243

2864

CONTENT OF STEROID HORMONES IN SUPRARENAL BLOOD OF IRRADIATED RABBITS. L. V. Orlova and V. M. Rodionov. (Inst. of Biological and Medical Chemistry Acad. of Medical Sciences U.S.S.R.). *Med. Radiol.* 2, No. 2, 54-9(1957). NSA 11-7059

2865

MODIFICATION OF X-RAY EFFECTS ON BARLEY SEEDS BY PRE- AND POST-TREATMENT WITH HEAT. Luther Smith and R. S. Caldecott. *J. Heredity* 39, 173-6(1948) June.

The frequency of chromosomal bridges, a measure of frequency of induced chromosomal aberrations, in root tips of Himalaya barley was reduced by half when seeds were heat-treated immediately before or after x raying. NSA 1-1245

2866

SOME EFFECTS OF RADIANT ENERGIES ON THE EYE. Cortez F. Enloe, *Sight-Saving Rev.* 18, 77-83(1948).

Retinal changes and hemorrhage that were observed in people subjected to atomic bombing are believed by author to have been directly related to deficiency in blood elements, and not directly related to radiation effects. NSA 1-1247

2867

Atomic Energy Project, Univ. of Rochester.

ORAL CONDITIONS UPON CHRONIC EXPOSURE TO UF₆. Peter P. Dale. Aug. 1945. Decl. Oct. 5, 1948. 5p. (AECD-2329).

Thorough physical, medical and dental examinations of 10 volunteers chronically exposed to UF₆ for 6 mo disclosed normal findings. Data indicated substantial uranium storage in dental root tips and alveolar bone deposited by systemic or hematogenous route. NSA 1-1248

2868

OBSERVATIONS OF BURN SCARS SUSTAINED BY ATOMIC BOMB SURVIVORS. Melvin A. Block and Masao Tsuzuki. *Am. J. Surg.* 75, 417-33(1948) March.

Relatively high incidence of scar keloid and hypertrophic scar formation of severe degree in atom bomb survivors does not seem a specific effect of the explosion. Probably similar results could be expected in burns of same severity from other causes. NSA 1-1249.

2869

VETERINARY ASPECTS OF ATOMIC EXPLOSION. Wayne O. Kester and Everett B. Miller. *J. Am. Vet. Med. Assoc.* 63, 325-9(1948) Oct.

Conditions likely to be found by a veterinarian in area where an atomic bomb had been exploded are presented. NSA 1-1269.

2870

STUDY BY THE NEWER RENAL FUNCTION TESTS OF AN UNUSUAL CASE OF HYPERTENSION FOLLOWING IRRADIATION OF ONE KIDNEY AND THE RELIEF OF THE PATIENT BY NEPHRECTOMY. A. H. Dean and J. C. Abels. *J. Urol.* 52, 497-501(1944).

After partial body irradiation of a 20-yr old female for a tumor of the upper quadrant of the abdomen, a variety of abnormalities began to appear. Tests showed the left kidney to be deficient in all activities. After removal of the sclerosed kidney the blood pressure returned to normal and vascular lability also appeared normal.

2871

THE USE OF ADRENAL CORTICAL HORMONE IN RADIATION SICKNESS. Friedrich Ellinger. *Radiology* 51, 394-9(1948) Sept.

Influence of desoxycorticosterone acetate on effect of x rays (500 r) on spleen, bone marrow and adrenal cortex of mice was studied. NSA 1-1315

2872

REDUCTION OF MORTALITY IN SWINE FROM COMBINED TOTAL BODY RADIATION AND THERMAL BURNS BY STREPTOMYCIN. H. J. A. Baxter, J. A. Drummond, L. G. Stephens Newshan and R. G. Randall. *Ann Surg.* 137, 450(1953).

A flash burn known to cause 20% mortality in swine resulted in 90% mortality when coupled with x ray dose of 400 r. The increased mortality could be prevented by administration of streptomycin (500 mg daily).

2873

THE REACTION OF THE PLEURA AND LUNGS TO ROENTGEN RAYS. A. U. Desjardins. *Am. J. Roentgenol.* 16, 444-8(1926).

Inflammatory reaction of pleura and lungs to irradiation may occur following local exposure to radium or roentgen rays. Symptoms of pleuropneumonitis appear after 2 to 4 weeks. The acute phase subsides in 1 to 3 weeks, but cough and dyspnea may persist. Symptoms may disappear in a short time, but return if the patient receives further roentgen irradiation.

2874

EFFECT OF RADIATION FROM RADIUM IN THE DEVELOPMENT AND GROWTH OF LOWER FUNGI. J. Dauphin. *Compt. rend.* 138, 154-6(1904). (In French).

2875

Oak Ridge National Lab.

THE EFFECT OF LOCAL BETA IRRADIATION FROM AN EXTERNAL SOURCE UPON THE GROWTH OF THE BONES AND SOME OTHER TISSUES OF RATS. M. N. Cupp, H. Kohn, and G. E. Stapleton. July 22, 1948. *Decl.* Aug. 16, 1948. (AECD-2219).

One-day-old rats were subjected to one-half (anterior or posterior) body irradiation by beta rays of P^{32} . Changes were seen only in part directly irradiated (skin dose,

1700-2000 rep to trunk, roughly half this to extremities of irradiated half). Skeletal growth was inhibited in the exposed half as shown by the various measurements of body parts at 200 days of age. No effect was observed in parenchymatous organs. NSA 1-893.

2876

THE DISTRIBUTION OF THE IONS RESULTING FROM THE IRRADIATION OF LIVING CELLS. L. H. Gray. *Brit. J. Radiol.*, Supplement No. 1, 7-15(1947). NSA 1-894

2877

EFFECTS OF RADIATION ON GERM CELLS; DOMINANT LETHALS AND HEREDITARY PARTIAL STERILITY. D. E. Lea. *Brit. J. Radiol.*, Supplement No. 1, 120-41(1947).

Experimental data on induction of dominant lethals by x rays and neutrons in *Drosophila*, *Habrobracon*, mouse, rat, guinea pig, rabbit, and frog, and on induction of viable chromosome structural changes in *Drosophila* and mouse reviewed. NSA 1-895

2878

EFFECTS OF X-RAYS ON THE BLOOD CELLS OF THE CHICK. E. Roberts, L. E. Card, and G. L. Clark. *Biodynamica* 6, 165-76(1948) June.

Decrease in lymphocyte count and decrease in resistance of baby chicks to pullorum disease caused by *Salmonella pullorum* follows x ray exposure of 360 r or 720 r (total dosage over period of 120 to 6 min.). NSA 1-896.

2879

THE EFFECT OF X-RAYS ON THE LYMPHATIC NODULE, WITH REFERENCE TO THE DOSE AND RELATIVE SENSITIVITIES OF DIFFERENT SPECIES. P. P. H. De Bruyn. *Anat. Record* 101, 373-405(1948) July.

Guinea pigs, rabbits, and rats were irradiated (200 kvp x rays, 0.5 mm Cu and 1.0 mm Al). Results suggest intensity of damage to lymph node is related to absolute dosage and is independent (at LD_{50-30}) of species in those species studied. NSA 1-897

2880

THE INDUCTION OF CHROMOSOME STRUCTURAL CHANGES BY RADIATION; DETAILED QUANTITATIVE INTERPRETATION. D. E. Lea. *Brit. J. Radiol.*, Supplement No. 1, 75-83(1947).

Author presents observations and deductions based on his analysis of quantitative data of frequency and types of chromosome aberrations obtained when *Tradescantia* microspores are irradiated at early prophase of 1st haploid mitosis. NSA 1-898

2881

THE IRRADIATION OF VIRUSES. P. Bonet-Maury. *Brit. J. Radiol.*, Supplement No. 1, 21-9(1947).

Action of α and x rays on viruses described. NSA 1-899

2882

THE NATURE OF VIRUSES AND THE IRRADIATION OF PLANT VIRUSES. Roy Markham. *Brit. J. Radiol.*, Supplement No. 1, 16-20(1947).

Size, appearance, behavior and composition of viruses are described. Plant virus of known size was irradiated and used to inoculate leaves. Number of lesions resulting from irradiated and unirradiated virus are compared. NSA 1-900

2883

LETHAL EFFECT OF ABSORBED RADIOISOTOPES ON PLANTS. J. W. T. Spinks, E. Cumming, R. L. B. Irwin, and T. J. Arnason. *Can. J. Research* 26C, 249-62(1948). June.

Approximate lethal dose of P^{32} and Sr^{90} solutions used on wheat, barley and sunflower seeds was found to be 1.4 microcuries. NSA 1-901

2884

OBSERVATIONS ON CROSSING OVER INDUCED BY X-RAYS

IN THE MALES OF DROSOPHILA. D. R. Parker. Genetics 33, 304-10(1948) May. NSA 1-902

2885

SIMULATED HIGH ALTITUDE FOLLOWING WHOLE-BODY RADIATION OF MICE. Willie W. Smith, Robert Dooley, and Edwin C. Thompson. J. Aviation Med. 19, 227-37(1948) Aug.

Mice exposed to single doses of 400 to 500 r were subjected to simulated high altitudes of 20,000 to 25,000 feet while circulating leukocytes, platelets and erythrocytes were undergoing reduction. Course of blood cell count depression and recovery of blood elements were unaltered by altitude. NSA 1-903.

2886

TIME-INTENSITY FACTORS IN X-IRRADIATION. PART II. THE INFLUENCE OF THE DOSAGE RATE. Edith Paterson and M. V. Thompson. Brit. J. Radiol. 21, 414-19(1948) Aug.

From experiments on chick fibroblasts grown in vitro and x rayed with dose levels of 10,000-12,000 r, it was concluded that in comparisons between high dosage-rate irradiation given over short time and low dosage rate given over longer period, the operative factor is over-all time. NSA 1-904

2887

Oak Ridge National Lab.

THE EFFECT OF RUTIN UPON THE RESPONSE OF THE RAT TO TOTAL BODY X IRRADIATION. Henry I. Kohn, P. W. Robinett, and M. N. Cupp. June 7, 1948. Decl. July 22, 1948. 13p. (AEC-2176).

Rutin given prior to 250-kv x ray dose did not affect: LD₅₀ survival following two sublethal exposures, coagulation time, thrombocyte counts, total white cell count, or hemorrhage into lymph nodes and gastro-intestinal tract. NSA 1-905

2888

Atomic Energy Project, Univ. of Rochester.

URANIUM TOLERANCE AND CITRATE EXCRETION. Janet Grunschow and Walter Mann. Apr. 15, 1948. Decl. Aug. 10, 1948. 18p. (AEC-2212, UR-23), National Nuclear Energy Series Div. VI, Vol. 1, Pt. IV, Chapter 23.

In rats and dogs made tolerant by repeated injections of uranium, excretion of urinary citrate was increased. NSA 1-907

2889

Pondville Hospital, Walpole, Mass.

ACUTE NECROSIS AND MALFORMATION OF DEVELOPING MAMMALIAN BRAIN CAUSED BY X-RAY. Samuel P. Hicks. 9p. (AECU-949), Proc. Soc. Exptl. Biol. Med. 75, 485-9(1950).

Irradiation of pregnant rats and mice with 200 or 600 r, total-body x ray exposure, results in acute necrosis of rapidly growing parts of fetal brain, spinal cord and retinas. After 150 r, damage was less and was followed after 2 days by malformations in neuroblast zones. NSA 4-6692.

2890

New York Medical College.

A NEW CONCEPT AND STUDIES OF CAPILLARY HEMORRHAGIC DIATHESIS. Alfred L. Copley. (nd) 9p. (AECU-950).

On basis of observations including radiation-induced hemorrhage in rabbits, mice, rats and hamsters, a new concept of capillary hemorrhagic diathesis was developed and is presented in schematic form. New blood coagulation phase was found. NSA 4-6693

2891

Brookhaven National Lab.

CORN GRASS, A DOMINANT MONOGENIC SPONTANEOUS MUTANT AND ITS POSSIBLE SIGNIFICANCE AS AN

ANCESTRAL TYPE OF CORN. W. R. Singleton. (nd) 1p. (AECU-953); Genetics 35, 691-2(1950).

Attempts to induce reverse somatic mutations in corn grass by x rays, P³², or Co⁶⁰ were unsuccessful. NSA 4-6694

2892

Columbia Univ.

REPORT ON STUDIES OF THE EFFECT OF X-RAY IRRADIATION ON THE RABBIT'S LENS. Ludwig von Sallmann. Apr. 1, 1950. 4p. (NYO-1508). NSA 4-4128

2893

Oak Ridge National Lab.

CHANGES IN CELL AND PLASMA VOLUMES PRODUCED BY TOTAL BODY X-RADIATION. R. H. Storey, L. Wish, and J. Furth. May 16, 1950. 15p. (ORNL-687), Proc. Soc. Exptl. Biol. Med. 74, 242-4(1950).

After 1000 r of x rays, rabbits exhibited large drop in total erythrocyte volume beginning on the 3rd post-exposure day. There was at first a slight concomitant plasma volume drop followed by a rise. Similar changes occurred in mice after 575 r. NSA 4-4129

2894

Oak Ridge National Lab.

STUDIES ON THE MECHANISMS OF THE OXYGEN EFFECT ON THE RADIOSENSITIVITY OF TRADESCANTIA CHROMOSOMES. Norman H. Giles, Jr., and Herbert Parkes Riley. May 24, 1950. 17p. (ORNL-688); Proc. Natl. Acad. Sci. 36, 337-44(1950).

Presence or absence of O₂ during actual x ray exposure rather than during postirradiation period is the important factor in increasing radiosensitivity of *Tradescantia* chromosomes. Increased sensitivity is due to production of more initial breaks, not to effect on reunion of broken ends. NSA 4-4130

2895

ATOMIC ENERGY IN THE SERVICE OF PLANT

AMELIORATING. R. DeVriese. Tuinbouw-Berichten 14, 28-9(1950). (In Dutch).

Mutations produced in tulips by neutrons and x irradiation are described. NSA 4-4131.

2896

THE EFFECT OF IONIZING RADIATIONS ON THE BROAD BEAN ROOT. VII. THE INHIBITION OF MITOSIS BY ALPHA RADIATION. L. H. Gray and John Read. Brit. J. Radiol. 23, 300-3(1950) May.

A dose of 12-137 rad of α particle radiation was delivered over a period of 20-90 min. to broad bean roots in radon solutions. Mitoses were counted in roots fixed 3 hrs. after exposure and compared with number in unexposed roots and roots exposed to neutrons and γ rays. Results suggest that the effect of α rays and neutrons may be due to a single recoil proton or α particle. Relative efficiencies of γ rays, neutrons and α rays were 1:2. 1:0.6 for mitotic inhibition and 1:9:9 for lethal effect. NSA 4-4133

2897

THE INFLUENCE OF ADRENAL CORTICAL HORMONES ON SENSITIVITY OF MICE TO IONIZING RADIATION.

J. B. Graham, R. M. Graham, and A. J. Graffeo. Endocrinology 46, 434-40(1950) May.

Adrenal cortical extract given 10 days prior to irradiation increases survival rate in both sexes, but given immediately before irradiation raises female mortality and does not alter survival rate under any other conditions. NSA 4-4134

2898

THE LETHAL EFFECTS OF FAST ELECTRONS FROM A 6-Mev BETATRON ON *BACTERIUM COLI* COMM. C.

Dieckmann, W. Dittrich, H. Reich, and G. Schubert. Naturwissenschaften 37, 140-1(1950). (In German).

Electrons were 40% more efficient than 180-kev x rays in killing bacteria. NSA 4-4135

2899

ON THE EFFECT OF METHYLTHIOURACIL AND X-RAYS ON THE THYROID GLAND. C. Montag. *Strahlentherapie* 81, 1-38(1950). (In German).

Thyroid glands of rats were irradiated with 1500 r of x rays. Histological changes are described. NSA 4-4136

2900

MEDICINE AT THE CROSSROADS. R. H. Draeger and S. Warren. *U. S. Naval Med. Bull.* 47, 219-25(1947).

Author reports on the study of animals used in Bikini tests. Goats, pigs and rats were chosen to determine effect on personnel, because they react similarly to man. The majority of early deaths were due to air blast. Fur of the animals protected them from flash burns. First animals to die showed atrophy of lymphoid tissue. Varying degrees of leukopenia were observed.

2901

ROENTGEN IRRADIATION OF DESOXYRIBOSENUCLEIC ACID. II. PHYSICOCHEMICAL PROPERTIES OF DESOXYRIBOSENUCLEIC ACID FROM IRRADIATED RATS. G. Limperos and W. A. Mosher. *Am. J. Roentgenol. Radium Therapy* 63, 691-700(1950) May.

Pre-irradiation injection to thiourea did not inhibit splitting off of purine bases from DNA in thymus of rats, but did inhibit depolymerization to some extent. NSA 4-4138

2902

THE ROLE OF THE SPLEEN IN RADIATION INJURY AND RECOVERY. L. O. Jacobson, E. L. Simmons, E. K. Marks, M. J. Robson, W. F. Bethard, and E. O. Gatson. *J. Lab. Clin. Med.* 35, 746-70(1950) May.

Effect of 1025 r on blood and blood-forming tissue of spleen-shielded mice is compared to effect on unprotected animals. The nature of the protective action of the spleen is discussed in light of the extensive data presented. NSA 4-4139

2903

STUDIES OF ELECTROPHORETIC SERUM PROTEIN PATTERNS IN SUBJECTS TREATED WITH PITUITARY-ADRENAL CORTICAL HORMONES, NITROGEN MUSTARD, OR X-RADIATION. Julian Frieden and Abraham White. *Yale J. Biol. and Med.* 22, 395-406(1950) May.

Serum protein levels of carcinoma patients and dogs were unchanged after x irradiation and nitrogen mustard therapy. NSA 4-4140

THE RESPONSE OF TISSUE TO TOTAL BODY IRRADIATION. John L. Tullis. Am. J. Path. 25, 829-52(1949) Sept.

Radiation effects on swine are described. Author emphasizes that the most primitive hematopoietic stem cells, the reticular cells, are relatively radioresistant and efforts to reduce radiation mortality should not be considered hopeless. NSA 3-1829

2938

STUDIES ON THE MECHANISMS OF ACTION OF IONIZING RADIATIONS. V. THE EFFECT OF HYDROGEN PEROXIDE AND OF X-RAY IRRADIATED SEA WATER ON THE RESPIRATION OF SEA URCHIN SPERM AND EGGS. E. S. Guzman-Barron, Veronica Flood, and Betty Gasvoda. Biol. Bull. 97, 51-5(1949) Aug.

The results of experiments on the sea urchin sperm respiration rate after the addition of hydrogen peroxide to the medium and after x-irradiation of the medium are presented. The hydrogen peroxide to the medium and after x-irradiation of the medium are presented. The hydrogen peroxide was used at concentrations of 0.01-0.0001 M in a 1:200 sperm solution; x-ray dosages of 50,000-200,000 r were given. Total inhibition by hydrogen peroxide occurred at 0.001 M concentration; the inhibition decreased with peroxide concentration and approached zero at 0.0005 M. When sea water was irradiated with 200,000 r, at 60%

sperm inhibition occurred; 50,000 r produced a 10% inhibition, while the addition of catalase, previous to the sperm addition and after irradiation, had no effect on the inhibition. Since the sea water irradiated with 200,000 r gave no positive test for hydrogen peroxide it is postulated that inhibition is not due to the action of H_2O_2 but to stable organic peroxides. NSA 3-1830.

2939

STUDY OF THE REVIVESCENCE OF THE THYMUS.

V. THYMAL-ADRENAL RELATIONSHIPS. THE ACTION OF ADRENALINE ON THE REVIVESCENCE OF THE IRRADIATED THYMUS. Luigi Viale and Cesare Ravazzoni. Arch. "E. Maragliano" Patol. e clin. 3, 1171-80(1948). (In Italian).

From studies on guinea pigs it was concluded that the revivescence process for thymus (postirradiation with 85r) is remarkably enhanced by administration of adrenalin. NSA 3-1831

Argonne National Lab.

THE EFFECT OF X-RADIATION ON THE METABOLIC

PROCESSES OF THE RESTING CELL. Theodore N. Tahmisian. (nd) 24p. (AECU-539, UAC-128), J. Exptl. Zool. 112, 449-64(1949).

X-ray dosages of 10,000 to 200,000 r do not completely inhibit respiration in diapause grasshopper embryo (*M. differentialis*). Respiratory, morphological, and cytological studies showed anabolic enzymes of nuclear materials to be more radiosensitive than catabolic enzymes. NSA 3-1826

2961

THE INFLUENCE OF ENERGY ABSORPTION AND ELECTRON RANGE ON DOSAGE IN IRRADIATED BONE. F. W. Spiers. Brit. J. Radiol. 22, 521-33(1949) Sept.

Author suggests that for 200-250 kv x-radiation, tolerance dose of soft tissue elements in bone may be only one half that of soft tissues in other situations, for medium voltage and superficial x rays relative tolerance may be no more than one-third for short wavelengths (1 Mev). Ionization in living elements in bone approaches that in other soft tissues only with short wavelengths (1 Mev). NSA 3-1827

2962

MECHANISM OF INDUCTION OF OVARIAN TUMORS BY X-RAYS. Louis Lick, Arthur Kirschbaum, and Harry Mixer. Cancer Research 9, 532-6(1949) Sept.

Results of experiments to determine whether x rays induce tumors in mice in presence of normal ovarian function are presented and discussed. NSA 3-1828

2963

Atomic Energy Project, Univ. of Rochester. THE INFLUENCE OF INFECTION ON THE HEMATOLOGICAL EFFECTS AND MORTALITY FOLLOWING MID-LETHAL X-RADIATION. L. R. Bennett, Paul E. Rekers, Marion Kresge, and Joe W. Howland. May 24, 1949. 16p. (AECU-421, UR-76).

Infection appeared to be definitely related to mortality in dogs surviving 1st 2 postirradiation weeks. No direct correlation was found between leucocyte level and bacteremia. NSA 3-1635

2964

Atomic Energy Project, Univ. of Calif., Los Angeles. STUDIES IN THE HYALURONIDASE-HYALURONIC ACID SYSTEM. II. THE REACTION OF X-IRRADIATED HYALURONATE WITH HYALURONIDASE. Robert E. Brooks and Herman Schneiderman. July 14, 1949. 22p. (AECU-425; UCLA-36).

Results suggest any damage resulting from x irradiation of the hyaluronidase-hyaluronic acid system is due more to reduction in viscosity of hyaluronic acid than to x-ray action on enzyme. NSA 3-1636

2965

INCREASED RADIORESISTANCE OF RED BONE MARROW AFTER ANOXIA. Jerome A. Schack and Robert C. MacDuffee. Science 110, 259-60(1949) Sept. 9.

Hyperplasia of red marrow produced by exposure to low oxygen tension increased resistance of erythroid elements of mouse bone marrow to subsequent x ray exposure. NSA 3-1639

2966

THE INDIRECT EFFECT OF X-RAYS ON THE SYNTHESIS OF NUCLEIC ACID IN VIVO. Barbara E. Holmes. Brit. J. Radiology 22, 487-91(1949) Aug.

Synthesis of thymo- and ribo-nucleic acid in Jensen rat sarcoma was studied in irradiated and other tumors in a previously irradiated animal. Dose delivered to the irradiated tumors was 2000 r x rays. P^{32} was used as a tracer in nucleic acid studies. NSA 3-1640

2967

MORPHOLOGICAL AND BIOLOGICAL CHARACTERISTICS OF X-RAY INDUCED TRANSPLANTABLE OVARIAN

TUMORS. Talia Bali and Jacob Furth, Cancer Research 9, 449-72(1949) Aug. NSA 3-1641.

2968

RADIOACTIVE SUBSTANCES ACT, 1948. London, H. M. Stationery Office. 1948. 12p.

Act covers powers of British Minister of Supply in relation to radioactive substances, control of their import and export, sale, supply, control of use of irradiating apparatus for therapeutic purposes, safety regulations involving their use. NSA 3-1642

2969

TREATMENT OF RADIO-NECROSIS BY THE APPLICATION OF ALUMINUM SHEETS. Giulio Tori. Boll. Soc. Ital. Biol. Sper. 25, 74-6(1949) Jan.-Feb.

Application of aluminum sheets or powdered aluminum to necrotic ulcers produced by x irradiation produced results that are considered satisfactory. Further use of aluminum in therapy of radiation ulcers is encouraged. NSA 3-1643

2970

Los Alamos Scientific Lab. THE EFFECT OF VITAMIN B_{12} ON THE LEUKOPENIA INDUCED BY RADIATION. Robert E. Carter, Elizabeth Busch, and Verda Strang. (nd) 14p. (AECU-416, LADC-694); Blood 5, 753-7(1950).

Crystalline vitamin B_{12} , administered in single and multiple intramuscular doses, had no effect on leucopenia induced in rats by 400 r of 250 kv x rays. NSA 3-1644

2971

CYSTEINE PROTECTION AGAINST X IRRADIATION. H. M. Patt, E. B. Tyree, R. L. Straube, and D. E. Smith. Science 110, 213-14(1949) Aug. 26.

Cysteine, but not cystine, administered to rats prior to x irradiation in nearly completely lethal dose range greatly diminishes lethality. Effectiveness of cysteine as a radiation protective agent varied with time of administration relative to time of irradiation, with cysteine dosage and with pH of the cysteine solution injected. NSA 3-1645

2972

Radiation Lab., Univ. of Calif., Berkeley. THE CONTROL OF POLYCYTHEMIA BY MARROW INHIBITION. John H. Lawrence. Aug. 9, 1949. 26p. (AECU-456; UCRL-410).

Author presents a detailed evaluation of P^{32} therapy. Treatment of 121 patients and the therapeutic results are described. NSA 3-1647.

2973

EXPERIMENTAL STUDY OF THE INFLUENCE OF GENERAL IRRADIATION BY X-RAYS ON A TRANSPLANTABLE RAT CHLOROMA. Guerin. Bull. l'assoc. franc. l'etude cancer 36, 71-6(1949). (In French).

Findings indicate x rays act not only on the developing tumor, but also on production of leukemia-like manifestations. NSA 3-1649

2974

BIOLOGICAL EFFECTS OF ROENTGEN RAYS ON VARIOUS WAVE-LENGTHS. V. V. Brunst and E. A. Sheremetieva-Brunst. Am. J. Roentgenol. Radium Therapy 62, 252-6 (1949) Aug.

Doses of 500-10,000 r were administered to tails of 510 tritons (*Triton cristatus*). In series (1) unfiltered, low voltage x rays were used, in series (2), high voltage x rays. Some biological effects of (1) and (2) were the same but there were major differences in structure of regenerated portions due to tissue absorption of (1). NSA 3-1509.

2975

EXPERIMENTAL RADIO-NECROSIS OF THE BRAIN IN RABBITS. Dorothy S. Russell, C. W. Wilson, and

Katharine Tansely. *J. Neurol. Neurosurg. Psychiatry* **12**, 187-95(1949) Aug.

Brain necrosis is produced in the rabbit brain approximately 100 days after a single surface dose of 2850 r of 200 Kv x rays to an area 3 x 4 cm over the cranium, and after a somewhat longer period following a dose of 2440 r. Histology of the brain lesions at various stages in their development is described. Once established, the lesions tended to extend rapidly, involving non-irradiated parts of the brain. Major changes were observed in blood vessels and glia. Neurones were affected only secondarily and meninges and their blood vessels escaped injury. NSA 3-1510

2976

MODIFICATION OF THE FREQUENCY OF CHROMOSOMAL REARRANGEMENTS INDUCED BY X-RAYS IN *DROSOPHILA*. IV. POST-TREATMENT WITH NEAR INFRARED RADIATION. Berwin P. Kaufmann and Katherine Wilson. *Genetics* **34**, 425-36(1949) July. NSA 3-1511

2977

ON A NEW PROCEDURE FOR OBTAINING EXPERIMENTAL INTERSEXUALITY IN THE BIRD EMBRYO. Etienne Wolff and Berthe Salzgeber. *Compt. rend. soc. biol.* **143**, 532-3 (1949) Apr.

Chick embryos x rayed with a dose of (650-1,500 r) delivered either to the total body or to the gonads. Intersexuality of gonads and of male genital tract occurring postirradiation is the same as that produced by injection of feminizing hormones or ovarian grafts. NSA 3-1512

2978

THE PRODUCTION OF DOMINANT LETHALS WITH X-RAYS IN AGED *DROSOPHILA MELANOGASTER* SPERM. Oistern Stromnaes. *Genetics* **34**, 462-74(1949) July.

Sperm of *D. melanogaster* irradiated (2,219 to 2,308 r, 200 kv, 1 π Al, 0.25 Cu, 31-41 cm) after aging 1-23 days. X ray sensitivity increased with age of both sperm and eggs. Age effect noted only in sperm from early-developing males. NSA 3-1513

2979

STUDIES ON THE MECHANISM OF ACTION OF IONIZING RADIATIONS. IV. EFFECT OF X-RAY IRRADIATION ON THE RESPIRATION OF SEA URCHIN SPERM. E. S. Guzman Barron, Betty Gasvoda, and Veronica Flood. *Biol. Bull.* **97**, 44-50(1949) Aug.

Respiration of sperm was studied at various sperm dilutions after x ray doses of 100-20,000 r. NSA 3-1514

2980

CONCERNING HEALTHY OFFSPRING AFTER RADIUM-RADIATION OF THE MALE GONADS. Juraj Korbler. *Radiologia Clin.* **18**, 240-4(1949) July. (In German).

Birth of a healthy child whose father had been apparently sterilized by x ray therapy is reported. Examination of the father indicated regeneration of damaged gonadal tissue. NSA 3-1518

2981

THE CONTROL OF POLYCYTHEMIA BY MARROW INHIBITION. A TEN-YEAR STUDY ON 172 PATIENTS. John H. Lawrence. *J. Am. Med. Assoc.* **141**, 13-18 (1949) Sept. 3.

Results of treatment by sodium radiophosphate, of patients with polycythemia are described. NSA 3-1519

2982

RADIOTHERAPY FOR PARKINSON'S DISEASE. J. P. May and R. Adam, *Semaine Hopitaux Paris* **25**, 2330-3 (1949) July 20. (In French).

Results of treatment of 12 cases of 4 types of Parkinson's disease with radiotherapy are presented. NSA 3-1524

2983

PLANT INJURY FROM P³². G. Dion, C. F. Bedford,

R. J. St. Arnaud, and J. W. T. Spinks. *Nature* **163**, 906-7(1949) June 11.

Two rows of Saskatchewan wheat were treated with inactive fertilizer and one row with P³² fertilizer. Fertilizer was applied to give 12, 24 and 48 lb P₂O₅/acre. Two dilutions of tracer were used, 25 mc or 260 mc/gm of phosphorus. No harmful effects from P³² were apparent. NSA 3-520

2984

Washington Univ., Applied Fisheries Lab. EFFECTS OF X-RAYS UPON THE FRESH-WATER SNAIL, *RADIX JAPONICA*. Kelshaw Bonham. May 16, 1949. 33p. (AECU-309).

Mortalities significantly higher than in controls were observed in groups of snails receiving 10,000 r or more. Egg masses were retarded in development by 1,000 r and 10,000 r. Crawling activity of newly hatched young was inhibited by 10,000 r. NSA 3-505

2985

Brookhaven National Lab.

THE EFFECT OF ADRENALECTOMY UPON SURVIVAL OF RATS AFTER X-RADIATION. Abraham Edelman. (nd). 3p. (AECU-325); *Am. J. Physiol.* **167**, 345-48(1951).

Bilaterally adrenalectomized rats exposed to 650 r, whole body x radiation survived 4.1 days compared to 7.8 days for adrenalectomized controls. NSA 3-506

2986

Argonne National Lab.

EFFECTS OF Sr⁸⁹ AND X-RADIATION ON GOATS. Marguerite N. Swift, C. Ladd Prosser and Edward S. Mika. June 1946. 74p. (AECU-108; CH-3888).

Thirty-day LD₅₀ for intramuscularly injected Sr⁸⁹ lies between 1.0 and 1.5 μ c/g (for goats). LD₅₀₋₃₀ for total-body x rays is about 350 r. Some indication of greater depression of leucocyte count following x rays was observed. NSA 2-1175

2987

Argonne National Lab.

THE EFFECT OF TOTAL-BODY X-IRRADIATION ON THE PERIPHERAL BLOOD AND BLOOD-FORMING TISSUES OF THE RAT. S. Phyllis Stearner, Eric L. Simmons and Leon O. Jacobson. Dec. 1, 1948. 43p. (AECU-112, ANL-4100(Rev.)).

Five days after splenectomy, rats were exposed to doses of 600 r and 100 r of x rays. Changes in blood counts and hematopoietic tissues of these rats are described and compared with changes in similarly irradiated, non-splenectomized rats. NSA 2-1176

2988

EFFECT OF ROENTGEN RAYS UPON BARTONELLA-INFECTED AND NORMAL RATS. Dorothy Neuhof Nauman. *Am. J. Roentgenol. Radium Therapy* **61**, 95-7(1949) Jan.

Rats were given single continuous exposures of 300-1000 r to determine whether *B. muris* infection affects resistance of rats to x rays. Infected rats were slightly less radioresistant than normal rats. NSA 2-1177

2989

EFFECTS OF RADIATION ON NORMAL TISSUES. III. EFFECTS OF RADIATION ON THE BLOOD AND THE HEMOPOIETIC TISSUES INCLUDING THE SPLEEN, THE THYMUS, AND THE LYMPH NODES. S. Warren and C. E. Dunlap. *Arch. Pathol.* **34**, 562-608 (1942).

Routine radiation therapy seldom produces permanent or dangerous modifications in the blood. Sufficient irradiation will cause a decrease in the number of cells in the blood-forming organs. Large doses may lead to hypoplasia.

2990

THE METABOLIC PROPERTIES OF THE FISSION

PRODUCTS AND ACTINIDE ELEMENTS. Joseph G. Hamilton. *Revs. Mod. Phys.* 20, 718-728(1948). NSA 2-1181

2991

Radiation Lab., Univ. of Calif.
OPALESCENCE OF SERUM AFTER TOTAL BODY RADIATION AS A PROGNOSTIC SIGN OF DEATH. Robert L. Rosenthal. *Jan. 14, 1949*. 6p. (AECU-105;UCRL-273), *Science* 110, 43-4(1949).

After 200 kv x rays, marked opalescence was noted in serum and plasma of rabbits which subsequently died. NSA 2-1263

2992

ATOMIC ENERGY DEVELOPMENT, 1947-1948. Washington, Government Printing Office. 1948 213p.

This annual report describes some aspects of U. S. Atomic Energy Commission's program in production of fissionable materials, military application of nuclear power and research activities in physical and biological sciences. NSA 2-1283

2993

USE OF RADIOACTIVE PHOSPHORUS IN PLANT NUTRITIONAL STUDIES. R. Scott Russell and R. P. Martin. *Nature* 163, 71-2(1949) Jan. 8.

Young barley plants were treated with P^{32} in the form of phosphate, varying from 0.5 to 50 mc/liter of culture solution over period of 4-6 days. Results suggest that radiation damage may be a greater hazard in tracer experiments than was formerly supposed. NSA 2-1299

2994

THE BIOLOGIC EFFECT OF IRRADIATION BY RADIOACTIVE IODINE. Bengt N. Skanse. *J. Clin. Endocrinol.* 8, 707-16(1948) Sept.

This study was made to determine minimal amount of I^{131} which may interfere with normal thyroid function and its actual effect on thyroid function. So-called "tracer" doses of I^{131} may alter normal thyroid functions in chicks. Thyroid functions vary in their sensitivity to irradiation from this isotope. NSA 1-1350

2995

THE COLLECTION OF RADIOACTIVE IODINE BY THE HUMAN FETAL THYROID. Earle M. Chapman, G. W. Cornet, David Robinson, and R. D. Evans. *J. Clin. Endocrinol.* 8, 717-20(1948) Sept.

From a study of fetuses of pregnant women given tracer doses of I^{131} it appears that the human fetal thyroid does not take up iodine in 1st 12 wk of life. NSA 1-1351

2996

EFFECT OF RADIATION OF GERM PLASMA. Ira I. Kaplan. *Urol. and Cutaneous Rev.* 52, 608(1948) Oct.

Author reports 2 cases in which sperm-forming function was restored and cites statistics of 402 cases wherein ability to reproduce was unharmed in women treated with radiation. NSA 1-1384

2997

RESPONSE OF KALANCHOE TUBIFLORA TO X-RADIATION. Edna L. Johnson. *Plant Physiol* 23, 544-56 (1948) Oct.

As a result of 2500 r irradiation, a branching which delayed time of blooming occurred in 20% of K. tubiflora plants. NSA 1-1385

2998

THE DEPOSITION OF URANIUM IN BONE. PART I. ANIMAL STUDIES. W. F. Neuman, M. W. Neuman, and B. J. Mulryan. *J. Biol. Chem.* 175, 705-9(1948).

Large portion of injected uranium was found to accumulate in bone (rats and rabbits). Growth activity and bone deposition of uranium as directly related in the rat. More uranium was found in bones of young rats than in those of older animals. Lower concentration of uranium

was found in bone of rabbits than of rats of corresponding age. NSA 1-1386

2999

THE DEPOSITION OF URANIUM IN BONE. PART II. RADIOAUTOGRAPHIC STUDIES. M. W. Neuman and W. F. Neuman. *J. Biol. Chem.* 175, 711-14(1948) Sept.

Rat radioautographs show U^{233} to be deposited only in mineral portions of bone and particularly concentrated on surfaces adjacent to circulation and in areas of calcification. NSA 1-1387

3000

THE DEPOSITION OF URANIUM IN BONE. PART III. THE EFFECT OF DIET. W. F. Neuman, M. W. Neuman, Edna R. Main, and B. J. Mulryan. *J. Biol. Chem.* 175, 715-19(1948) Sept.

Neither alkaline nor acidic diet had an effect on removal of uranium from bone of rats, while rachitogenic diet increased removal. NSA 1-1388

3001

PROTECTION AGAINST RADIATION HAZARDS AND MAXIMUM ALLOWABLE EXPOSURE VALUES. Karl Z. Morgan. *J. Ind. Hyg. Toxicol.* 30, 286-93(1948).

Table gives daily tolerance values (MPE) for γ radiation, α particles, β particles, fast neutrons and thermal neutrons. NSA 1-1412

3002

ATOMIC ARTILLERY. Maurice Elie Nahmias. Paris, Librairie Polytechnique C. Beranger. 1947. 201p. (In French).

Book reviews advances made in such fields as: modern techniques for acceleration of ionized particles; electronic projectiles and x rays, electron microscope, biological action of radiations; radioactivity in biology; nuclear chemistry, astrophysics and cosmic rays, atomic bomb and industrial use of atomic energy. NSA 1-1436

3003

RUTIN TREATMENT OF CAPILLARY FRAGILITY. *Nutrition Revs.* 6, 301-3(1948) Oct.

It is concluded that under certain circumstances rutin has definite antihemorrhagic tendency. Positive results with dogs are cited. NSA 1-1473

3004

HEMATOLOGICAL COMPLICATIONS FOLLOWING THERAPEUTIC TREATMENT WITH RADIOACTIVE PHOSPHORUS. *Semana Med. (Buenos Aires)* 55, No. 2852, 538(1948) Sept. 9. (In Spanish).

P^{32} treatment of 49 patients suffering from various blood disorders is described. NSA 1-1494

3005

THE SIMULTANEOUS DISAPPEARANCE OF TREATED AND UNTREATED TUMORS AFTER IRRADIATION. A. J. Delario. *Am. J. Roentgenol. Radium Therapy* 60, 207-12 (1948) Aug.

Author cites cases from literature of patients with apparently hopeless cases of malignant growths in which cures resulted after seemingly inadequate procedures. Possible experiments for the observations are proposed. NSA 1-1496

3006

Argonne National Lab.
HEMATOLOGICAL STUDIES ON PATIENTS TREATED BY TOTAL BODY EXPOSURE TO X-RAYS; A REPORT OF STUDIES UP TO JUNE 30, 1946. B. V. A. Low-Beer and R. S. Stone. Feb. 1948. Dec. 22, 1948. 89p. (AEC-2348; CH-3863); National Nuclear Energy Series, Div. IV, Vol. 20, Part B, Paper 3.

Changes observed in 29 patients given total-body x-ray exposure include decrease in absolute lymphocytes, decrease in absolute lymphocytes, decrease in nuclear

lobes/100 neutrophils, increase in absolute monocytes, occasional decrease in erythrocyte count and hemoglobin concentration. Radiation was administered in daily doses of 5, 10, 15, 20, 30 or 50 r and total doses were approximately 100 r or 300 r. NSA 1-1528

3007

Oak Ridge National Lab.

INHERITANCE OF MUTATIONAL CHANGES INDUCED BY RADIATION IN PARAMECIUM AURELIA. R. F. Kimball. Oct. 1, 1948, 27p (ORNL-175) Anat. Rec. 99(4), 47(1947).

It is concluded that reduced vigor observed in exautogamous progeny of irradiated paramecia is an expression of micronuclear mutations induced by β and x radiation. NSA 1-1529.

3008

THE EFFECT OF ROENTGEN IRRADIATION ON ANTIBODY FORMATION IN RABBITS. Charles G. Craddock, Jr. and John S. Lawrence. J. Immunol. 60, 241-54(1948) Oct.

Rabbits were exposed to 250 r whole body x irradiation and given (1) pre- or (2) post-irradiation injections of antigen. Antibody production was markedly decreased in (2) but not in (1). NSA 1-1530

3009

THE GASTROSCOPIC PICTURE IN POST-IRRADIATION GASTRITIS. Eddy D. Palmer. Am. J. Roentgenol. Radium Therapy 60, 360-7(1948) Sept

Results of gastroscopic studies of 12 patients developing post-irradiation gastritis after intensive radiation treatment for malignant disease are reported. NSA 1-1531.

3010

WHAT EVERY MEDICAL OFFICER SHOULD KNOW ABOUT THE ATOMIC BOMB. PART VI. PATHOLOGIC ANATOMY OF RADIATION EFFECTS OF ATOMIC EXPLOSION. Bull. U. S. Army Med. Dept. 8, 422-8(1948) June.

Radiation effects of an atomic explosion on skin, pituitary, adrenals, heart, lungs, genitourinary system, gastrointestinal tract, spleen, lymph nodes, bone marrow, and reticuloendothelial system are reviewed. NSA 1-1532

3011

Argonne National Lab.

TOLERANCE CONCENTRATION OF RADIOACTIVE GASES IN AIR. G. Failla. Feb. 15, 1944, Dec. 1, Oct. 28, 1948. 11p. (AECD-2362, CH-1347; A-1897).

Relation of lung cancer to prolonged inhalation of radioactive gas is discussed. NSA 1-1597

3012

WHAT EVERY MEDICAL OFFICER SHOULD KNOW ABOUT THE ATOMIC BOMB. PART VIII. PUBLIC HEALTH ASPECTS OF ATOMIC EXPLOSION. Bull. U. S. Army Med. Dept. 8, 431-3(1948) June.

Precautions to be taken with food and water in radiation-contaminated area are described. NSA 1-1599

3013

RADIATION-INDUCED HEMORRHAGIC DISEASE IN CHICKENS. Frank J. Dixon. Proc. Soc. Exptl. Biol. Med. 68, 505-7(1948) July - Aug.

Results of a study of chickens given a dose of P^{32} which caused 25% mortality within 17 days indicate that the chicken is relatively radioresistant when compared with mammals. Hemorrhagic manifestations of radiation injury were much less severe than those reported for lethally irradiated mammals. Complete blood studies are reported. NSA 1-1696

3014

WHAT EVERY MEDICAL OFFICER SHOULD KNOW ABOUT THE ATOMIC BOMB. PART VII. DETECTION OF

OVEREXPOSURE TO IONIZING RADIATION. Bull. U. S. Army Med. Dept. 8, 428-31(1948) June. NSA 1-1697

Atomic Energy Project, Univ. of Rochester.

STUDIES OF THE EFFECTS OF FLAVONOIDS IN ROENTGEN IRRADIATION DISEASE. II. COMPARISON OF THE PROTECTIVE INFLUENCE OF SOME FLAVONOIDS AND VITAMIN C IN DOGS. John B. Field and Paul E. Rekers. Jan. 19, 1949. 18p. (AECU-149, UR-57), J. Clin. Invest. 88, 746-51 (1949).

Of those dogs given a 350-r x ray dose and treated with rutin, 11% died, with hesperidin, 16%, with epimerized d-catechin 10%, with homoeriodictyol, none of 5, with morin, none of 6, compared to 60% mortality of untreated controls. NSA 2-1434

3026

DANGERS OF IRRADIATION OF HYPERTROPHIED LYMPHOID TISSUE OF THE NASOPHARYNX. Milford D. Schulz and Laurence L. Robbins. Trans. Am. Acad. Ophthalmol. Otolaryngol., 243-252 (1949).

Eleven cases are cited to demonstrate dangers involved in irradiation. Degenerative changes may not appear for many years. Multiple doses are more hazardous than single applications. NSA 2-1443

3027

EFFECT OF ROENTGENOTHERAPY ON URINARY 17-KETOSTEROID EXCRETION IN ANKYLOSING SPONDYL-ARTHRITIS. Roland A. Davison, Peter Koets and William C. Kuzell. J. Clin. Endocrinol 9, 79-88 (1949) Jan.

Urinary 17-ketosteroid excretion was found to be increased in spondylarthritis of ankylosing type in both male and female patients. Roentgenotherapy seemed to stimulate excretion and was followed by a relative decrease after therapy was discontinued. NSA 2-1444

3028

ATOMIC ENERGY IN MEDICINE. John Z. Bowers. Diplomat 21, 39-46 (1949) Feb.

Activities of the division of biology and medicine of the Atomic Energy Commission are summarized. A detailed account of effects of atomic explosion on human beings is presented. NSA 2-1452

3029

THE TREATMENT OF RADIATION SICKNESS WITH

ADRENAL CORTICAL HORMONE (DESOXYCORTICOSTERONE ACETATE). A PRELIMINARY REPORT ON FIFTY CASES. Friedrich Ellinger, Bernard Roswit, and Samuel M. Glasser. Am. J. Roentgenol. Radium Therapy 61, 387-96 (1949) Mar.

Only 3 of 50 patients given DCA for radiation sickness failed to respond to the therapy. In 37 cases complete relief from nausea and/or vomiting was obtained. NSA 2-2019.

3030

Atomic Energy Project, Univ. of Rochester.

THE DEPOSITION OF URANIUM IN BONE. PART IV. IN VITRO ADSORPTION STUDIES. W. F. Neuman, M. W. Neuman, E. R. Main, and B. J. Mulryan. Mar. 10, 1948. Decl. Aug. 11, 1948. 15p. (AECU-2215; M-2) J. Biol. Chem. 179, 325-33 (1949). National Nuclear Energy Series, Div. VI, Vol. 1, Pt. IV, Chapter 24.

Bone ash and fresh bone were equilibrated with uranium in bicarbonate buffer under various conditions, especially those considered to simulate conditions existing in an animal during uranium poisoning, and transfer of uranium from solution to bone phase was studied. NSA 1-908

3031

PROBLEMS OF MEDICAL CARE IN THE ATOMIC AGE. Harold C. Lueth. Illinois Med. J. 94, 93-9 (1948) Aug.

Author feels invention of atomic bomb portends social change and is a threat to physical well-being as was invention of gunpowder. Medical profession's problem of developing plans for medical care in an atomic age are discussed. NSA 1-944

3032

EFFECT OF HIGH-VOLTAGE X-RAYS AND CATHODE RAYS ON VITAMINS (NIACIN). Bernard E. Proctor and Samuel A. Goldblith. Nucleonics 3, No. 2, 32-43 (1948) Aug.

X rays in total dosages of 125,000 to 850,000 r did not destroy niacin in concentrations of 100 micrograms/ml, but cathode rays destroyed as much as 49% within short period of 15 sec. at 10 microamperes. NSA 1-1036

3033

THE EFFECT OF URETHANE ON THE NUCLEAR MORPHOLOGY OF CELLS OF THE GRANULOCYTE SERIES AS OBSERVED IN MARROW CULTURES AND LEUKEMIC BLOOD. Edwin E. Osgood and I. T. Chu. Blood 3, 911-17 (1948).

Authors conclude that either P³² or total body x irradiations in small regularly spaced doses is far superior to urethane in treatment of leukemias. NSA 1-1038

3034

ADVANCES IN BIOLOGICAL AND MEDICAL PHYSICS, VOL. 1. John H. Lawrence and J. G. Hamilton. New York, Academic Press. 1948. 484p.

Topics discussed include: heavy and radioactive isotopes in medicine; nitrogen and carbon isotopes, artificial radioactivity, health physics; study of iron and hemoglobin metabolism, P³² applications, iron metabolism; atomic bomb effects on Japanese; nucleic acid metabolism. NSA 1-1051.

3035

ON THE FERMENTATION PROPERTIES OF *EUTORULOPSIS DUBIA* CIF. AND RED. SUBMITTED TO X-RAY ACTION. R. M. Cioffi and C. Walter. Boll. soc. ital. biol. sper. 25, 529 (1949). (In Italian).

A form of *E. dubia* differing in pigmentation from the normal was tested to find if modification was due to altered metabolism. Tests demonstrated identical action on glycocoll of both normal and irradiated forms. NSA 4-2863

3036

BIOLOGICAL AND PHOTO-CHEMICAL EFFECTS OF HIGH ENERGY, ELECTROSTATICALLY PRODUCED ROENTGEN RAYS AND CATHODE RAYS. Cecil G. Dunn, William L. Campbell, Harvey Fram, and Ardelia Hutchins. *J. Appl. Phys.* 19, 605-16(1948) July.

Authors report on: lethal action of high voltage x rays on pure cultures of microorganisms and on those found in spices, apple juice, milk, soil, water and catgut structures. Preliminary data on cathode rays are included. NSA 1-733

3037

COSMIC RADIATION AND CANCER MORTALITY. P. A. Morris and W. J. Nickerson. *Experientia* 4, 251-5(1948) July 15.

Authors attempt to correlate fluctuations in intensity of cosmic radiation with cancer incidence or mortality. Radiation at various locations of geomagnetic latitude and geographic latitude are plotted against cancer mortalities per 10^5 of population. NSA 1-734

3038

EFFECT OF DEUTERON IRRADIATION OF THE SKIN. G. Schubert, W. Riezler, and V. Dubrausky. *Strahlentherapie* 76, 417-24(1947).

Results of study using guinea pigs indicate that accidental skin damage from deuterons has good tendency to heal. Possible therapeutic implications of the observations with report to treatment of certain skin diseases are discussed. NSA 1-735.

3039

EFFECT OF LOW DOSAGE ROENTGEN RADIATION ON THE GONADOTROPIC FUNCTION OF THE HYPOPHYSIS OF THE MATURE AND IMMATURE FEMALE ALBINO RAT. John H. Freed, Edmond J. Farris, Douglas P. Murphy, and Eugene P. Pendergrass. *J. Clin. Endocrinol.* 8, 461-81(1948) June.

Low dosage radiation produced only a transient effect on normal pituitary function and had no apparent harmful effect on either mature or immature rats. NSA 1-736.

3040

THE EFFECT OF THE SMALLEST X-RAY DOSES. R. Pape. *Wien. klin. Wochschr.* 60, 40(1948). NSA 1-737.

3041

THE EFFECT OF WAVE-LENGTH UPON RADIO-LESIONS PRODUCED IN THE MOUSE. A. Lacassagne. *Atomes et radiations* 1, 91-8(1947). *Proc. Roy. Soc. Med.* 39, 605-12(1946).

Localized irradiation over the dorso-lumbar region in mice was carried out with 2 wave lengths of x rays (K radiation of Mo and L radiation of Ag) and with U-V. Only Mo K rays produced deep skin lesions, 3000 r causing epilation without ulceration although there was complete sterilization of the ovary and destruction of kidney tubules. NSA 1-738

3042

THE EFFECTS OF X-RAYS ON THE LYMPHATIC ORGANS OF NORMAL AND ADRENALECTOMIZED RATS. L. Halberstaedter and M. Ickowicz. *Radiol Clin.* 16, 240-57(1947).

A series of normal and adrenalectomized rats were irradiated with an X-ray dose of 2000 r. Histologic reactions are reported concerning the pycnotic reaction in thymus, spleen, and mesenteric lymph node within a few hours following the irradiation. It was found that: (a) The greater the volume dose, the stronger the pycnotic reaction. (b) Following irradiation of one part of the body, an indirect influence is demonstrable in the non-irradiated part of the body. (c) Adrenalectomy diminishes the X-ray effect, especially the indirect effect. (d) Thymus, spleen, and mesenteric lymph node do not react to X ray with equal pycnotic intensity, especially if the effect is an indirect one. NSA 1-739.

3043

EXPERIMENTS ON THE MECHANISM OF THE BIOLOGICAL ACTION OF FAST NEUTRONS USING THE SUMMATION METHOD FOR LETHAL EFFECTS IN MICE (WITH A SECTION ON DOSIMETRY OF FAST NEUTRONS). J. S. Mitchell. *Brit. J. Radiol.* 20, 368-80(1947).

Normal and adrenalectomized rats received a single localized x ray dose of 2000r. Histological studies within a few hours after exposure showed pyknosis of cells in spleen, thymus, and mesenteric lymph nodes. The reaction was greater with greater volume-doses and occurred in shielded as well as exposed lymphatic tissue. Adrenalectomy decreased the indirect effects. The 3 types of lymphatic tissue differ in the intensity of their reaction, thymus being the most sensitive. NSA 1-740.

3044

THE HISTAMINE HYPOTHESIS OF BIOLOGICAL RADIATION EFFECTS. F. Ellinger. *Schweiz. med. Wochschr.* 81, 61-5(1951) (In German).

The author evaluates experimental and clinical evidence demonstrating the distribution of pharmacologically active substances that are formed locally or released from irradiated cells. The importance of histamine, acetylcholine and adenosine compounds as mediators of radiation effects is discussed. Histamine is considered to be the most likely chemical mediator of both local and systemic effects of radiation.

3045

INTRACELLULAR GROWTH OF BACTERIOPHAGE STUDIED BY ROENTGEN IRRADIATION. Raymond Latarjet. *J. Gen. Physiol.* 31, 529-44(1948) July 20. NSA 1-742

3046

IRRADIATION OF BIOLOGICAL MATERIALS BY HIGH ENERGY ROENTGEN RAYS AND CATHODE RAYS. J. C. Trump and R. J. Van de Graaff. *J. Appl. Phys.* 19, 599-604(1948) July.

High energy cathode rays and x rays offer a new and effective means of producing biological, bactericidal and chemical changes on a practical scale. NSA 1-743

3047

LESIONS OF THE URINARY TRACT FOLLOWING RADIOTHERAPY FOR CARCINOMA OF THE CERVIX UTERI. T. J. D. Lane. *Brit. J. Urol.* 20, 67-71(1948) June.

Complications following radiation treatment of carcinoma of cervix mimic the natural progress of disease itself. Literature review includes two case histories. NSA 1-744

3048

PHOTOCHEMICAL PROCESSES AT THE CELL BORDERS AS PRIMARY PROCESSES IN IRRADIATION. E. Heintz Graul. *Klin. Wochschr.* 24/25, 789-91(1947). NSA 1-745

3049

PHYSIOLOGICAL EFFECTS OF THE ATOMIC BOMB. *Atomes* 3, 244(1948) July. (In French).

Radiation effects on survivors of Nagasaki and Hiroshima bombings are discussed briefly. NSA 1-746

3050

CLINICAL, PATHOLOGICAL, AND HEMATOLOGICAL EFFECTS OF CHRONIC NEUTRON RADIATION. J. O. Ely, M. H. Ross, Roger G. Metcalf, Frank A. Inda, Thomas B. Barnett, and George W. Casarett. p. 419-497 of BIOLOGICAL EFFECTS OF EXTERNAL RADIATION (NRES VI-2). Henry A. Blair, ed. New York, McGraw Hill Book Co., Inc. 1954.

Animals were given neutron radiation of 0.012, 0.06, 0.11, and 17 n/day 6 days a week, for a year. Results: no clinical effects, except with 1.7 n/day. Pathological effects included: hypoplasia of the spleen, atrophic changes in the gonads, hemorrhage; high

incidence of spontaneous infectious diseases and a high incidence of neoplasmas. Changes in peripheral blood were limited to depression of lymphocyte counts and late depression of erythrocyte counts.

3051

RADIATION REACTION IN THE LUNGS OF THE HUMAN. R. B. Englestad. *Acta Radiol.* **18**, 32-44(1937).

The author discusses 36 cases of pulmonary lesions in man, 21 cases of breast cancer, 10 cases of cancer of the esophagus and 4 cases of pulmonary metastasis. The radiation reaction frequency was 5.4% in breast cancer, and 20.4% in cancer of the esophagus.

3052

THE FORMATION OF MALIGNANT TUMORS IN MICE BY DEUTERON-BOMBARDED METHYLCHOLANTHRENE. B. F. Barnes, F. C. Freytag, W. M. Garrison, and I. Rosenfeld. *Science* **108**, 82(1948) July 23.

C-57 mice were injected subcutaneously with various amounts of regular or irradiated methylcholanthrene. Results show significant increase in size of tumor produced by the irradiated material. NSA 1-751.

3053

Argonne National Lab.

CLINICAL PHYSIOLOGY OF DOGS INJECTED WITH PLUTONIUM. E. Painter, et al. June 1946. Decl. June 3, (AECD-2042; CH-3858). NSA 1-42.

3054

Calif. Univ., Radiation Lab.

STUDIES WITH COLLOIDS CONTAINING RADIOISOTOPES OF YTTRIUM, ZIRCONIUM, COLUMBIUM, AND LANTHANUM, PART II. THE CONTROLLED SELECTIVE LOCALIZATION OF RADIOISOTOPES OF YTTRIUM, ZIRCONIUM, AND COLUMBIUM IN THE BONE MARROW, LIVER, AND SPLEEN. E. L. Dobson, et al. Apr. 21, 1948. Decl. June 16, 1948. 16p. (AECD-2044, UCRL-92) *Jour. Lab. and Clin. Med.* **34**(3), 305-12(1949).

Studies with several colloids containing radioisotopes of zirconium, columbium, and yttrium have shown that the biological distribution of such materials depends upon the nature of the colloidal particles. Colloids of zirconium of relatively large particle size show rapid disappearance from the blood stream (half-life = 30 seconds to 1 minute), and are deposited primarily in the liver and spleen. Colloids of intermediate particle size, both of zirconium and yttrium, disappear much more slowly from the blood stream (half-life = 30 minutes to 80 minutes) and are deposited primarily in the bone marrow and spleen, the liver acquiring only 1/3 the specific activity of marrow. Both types of colloids once deposited show no significant change in distribution pattern, at least over 2 to 4 week period, and only slow excretion from the body. NSA 1-43.

3055

THE DISTRIBUTION AND EXCRETION OF INJECTED URANIUM. W. F. Neuman, R. W. Fleming, Alexander L. Dounce, A. B. Carlson, J. O'Leary, and B. Mulryan. *J. Biol. Chem.* **173**, 737-48(1948) Apr.

Distribution and excretion of injected uranium was studied in rats, rabbits, cats. NSA 1-46

3056

DETERMINATION OF THE THORON CONTENT OF AIR AND ITS BEARING ON LUNG CANCER HAZARDS IN INDUSTRY. R. D. Evans and L. Goodman. A. M. A. *Arch. Ind. Health* **22**, 89-99(1940).

Consideration of all available quantitative evidence suggests that long continued breathing of air containing 10^{-9} curies per liter results in high incidence of lung cancer. A recommendation of 10^{-11} curies as M. P. C. for safe working conditions is made.

3057

US AEC PROGRESS. *Sci. American* **178**, 24(1948) June.

New developments in the program of medical and economic applications of atomic energy are reviewed, including the use of radioactive cobalt. NSA 1-205

3058

INVESTIGATIONS ON THE EXPERIMENTAL INDUCTION OF MUTATIONS IN ANTIRRHINUM MAJUS. II. (SEED AND SEEDLING TREATMENT WITH ROENTGEN RAYS AND CHEMICALS. Hans Stubbe. *Z. Induk. Abstamm. u. Vererbh.* **56**, 202-32(1930). (In German).

Seeds and seedlings of two races of Antirrhinum majus were exposed to x rays and organic chemicals. Mutations appeared in F_1 without plan or clear relation to dose. Within each race the same general mutant forms appeared, no matter what the treatment. BA 6-9159

3059

EFFECT OF X-RAYS ON GROWTH OF H. ORIENTALIS. G. Scaglia and O. Businco. *Arch. fisol.* **29**(1): 48-87 (1930).

Upon irradiation with increasing dosages of x rays, 1 or more examples of each group showed greater development than controls. Some dosages delayed development of other members of same group. Possibility of hypersensitivity of plant protoplasm to x rays is considered. BA 6-9349

3060

ON THE EFFECT OF COMBINED X- AND ULTRAVIOLET RADIATION (EXPERIMENT ON THE CORNEA OF SALAMANDER LARVAE). Karl Steiner. *Strahlentherapie* **39**(3), 500-6(1931).

Reactions to x rays and ultraviolet occurred concomitantly, never having a cumulative effect (sensitization), but only one of summation. BA 6-9414

3061

HEPATOSPLENOGRAPHY. ROENTGENOLOGIC DEMONSTRATION OF PARENCHYMA OF THE SPLEEN AND LIVER BY A NEW INTRAVENOUS COLLOIDAL CONTRAST MEDIUM (THOROTRAST). Silvije Kadrnka. *Fortschr. Gebiete Rontgenstrahlen* **44**(1), 9-15(1931).

Thorotrast (25% thorium dioxide with 22% thorium metal diluted with glucose) was injected intravenously in increasing doses of 0.10 or 0.05 g thorotrast/kg followed by x-ray examination 24 hrs later. Appearance of organs and effects of contrast media are described. BA 6-9432

3062

THE EFFECT OF X- AND ULTRAVIOLET RAYS ON THE BLOOD SEDIMENTATION RATE. J. Leitner. *Fortschr. Gebiete Rontgenstrahlen* **41**(4), 743-7(1930).

In 43 experiments *in vitro* no clear effect on sedimentation rate or regularity in marked disturbances of blood corpuscles was noted following ultraviolet or x irradiation. BA 6-9501

3063

LUTEINIZATION AND MASCULINIZATION. E. Steinach and H. Kun. *Pflugers Arch. ges. Physiol.* **227**(3), 266-78 (1931).

X irradiation of female guinea pigs produced complete luteinization of ovaries and development of masculine attitude. Author believes ovaries develop a hormone acting specifically by masculinization, located in lutein tissue. BA 6-9854

3064

IRRADIATION OF THE OVARIES OF GUINEA-PIGS AND ITS EFFECTS ON THE OESTROUS CYCLE. Ida T. Gether. *Am. J. Anat.* **48**(1), 99-137(1931).

Long exposures with filtered x rays and short exposures with unfiltered x rays caused degeneration of follicles and their egg cells, usually without ovulation and formation of typical corpus luteum. Oestrous cycles continued but were irregular in length. BA 6-9977

3065

UNIVERSAL ATTRACTION AND VITAL ENERGY. A STUDY IN THEORETICAL ASTROBIOLOGY. E. Budai. Rev. pathol. comparee et hyg. gen. 30, 398-9, 712-23 (1930). (In French).

Relation of biological phenomena to astronomical influences is discussed. BA 6-12070

3066

THE SECRET OF LIFE COSMIC RAYS AND VITAL RADIATION. Georges Lakhovsky. Paris, Gauthier-Villars et Cie. 1929. 261p. (In French).

The author discusses his views on the relation of radiant energy to vital phenomena. BA 6-12078

3067

THE INFLUENCE OF QUANTITY AND QUALITY OF RADIATION ON THE BIOLOGIC EFFECT. T. C. Evans. p. 393-413 of Symposium on Radiobiology. Chapter 20 J. J. Nickson, ed. New York, John Wiley and Sons. 1953.

3068

POSSIBLE TECHNIQUES IN DIRECT-ELECTRON-BEAM TUMOR THERAPY. W. H. Bostick. Physical Review 77, 564-5(1960). NSA 4-1882

3069

RELATION BETWEEN THE X-RAY DOSAGE AND THE FREQUENCY OF PRIMARY NON-DISJUNCTIONS OF X-CHOMOSOMES IN DROSOPHILA VIRILIS M. Demerec and J. G. Farrow. Proc. Natl. Acad. Sci. U.S. 16(11) 711-14(1930).

At low dosages the increase in percentage of primary non-disjunctions is almost proportional to dosage. Between 1200 and 200 r increase is smaller and fertility of treated flies declines. Results suggest that flies showing non-disjunctions are killed in larger proportion than are regular offspring. BA 6-12536

3070

THE EFFECT OF X-RAYED MALES UPON MUTATION FREQUENCY IN DROSOPHILA. B. B. Harris. J. Heredity 20(6) 299-302(1929).

No correlation was found between production of mutations in spermatozoa and their viability or duration of functional capacity after x irradiation. Both gene and chromosome mutations are more readily produced (by x rays) in mature spermatozoa than in immature cells. BA 6-12541

3071

X-RAYS AND SOMATIC MUTATIONS. J. T. Patterson. J. Heredity 20(6), 260-67(1929).

Production of chromosome breaks is one of the main biological effects of irradiation. Somatic modifications like those caused by gene mutations are also produced by breaks in chromosomes of heterozygous individuals. BA 6-12554

3072

THE PRODUCTION OF GYNANDROMORPHS IN DROSOPHILA MELANOGASTER BY X-RAYS. J. T. Patterson. J. Exptl Zool. 60(2), 173-203(1931).

Effect of x raying germ cells on the production of mosaics, including sex mosaics or gynandromorphs was studied. By treating germ cells of one parent, frequency of gynandromorphs was increased 3x over that in untreated controls. Effects of irradiating the sperm are compared with effects of irradiating ova. Author concludes that if there is a gene for sex it must lie at some point on the x chromosome between the loci for singed and forked or their normal allelomorphs. BA 6-12555

3073

EFFECT OF ROENTGEN RAYS ON THE ORIGIN OF GENOVARIATIONS IN DROSOPHILA FUNEBRIS. E. A. Timofeeva-Resovskaja. Zhur. Eksptl'. Biol. 6(1), 9-14 (1930).

Males of D. funebris inbred for 30 generations were x rayed (about T4 Muller's dose) and crossed with normal females. In general irradiation very significantly stimulated gene mutations. The apparently low incidence of detectable lethals is attributed to difficulty in detecting them (absence of markers). BA 6-12569.

3074

REVERSE SOMATIC GENOVARIATIONS OF A DEFINITE GENE IN OPPOSITE DIRECTIONS UNDER THE INFLUENCE OF ROENTGEN RAYS. N. V. Timofeev-Resovskii. Zhur. Eksptl. Biol. 5(1), 25-31(1929).

Eggs and pupae of white and sc w^e ec and also F₁ pupae of the cross w/WQ x sc w of D. melanogaster were x irradiated in this study. Reverse somatic mutations in progeny are described. Mortality of x irradiated eggs and pupae was extremely high. BA 6-12570

3075

REVERSE GENOVARIATIONS AND VARIABILITY OF THE GENE IN OPPOSITE DIRECTIONS. N. V. Timofeev-Resovskii. Zhur. Eksptl'. Biol. 6(1), 3-8(1930). (German summary).

Both sex-linked and autosomal reverse mutations were obtained by x raying, showing that recessive mutations are not due simply to absence of formerly present genes and that effect of x rays is not destructive (shown by Muller). BA 6-12571

3076

IS THERE AN "AFTER-EFFECT" OF X-RAYS ON GENOVARIATION? N. V. Timofeev-Resovskii. Zhur. Eksptl. Biol. 6(2), 79-83(1930).

Studies on D. melanogaster showed no evidence for an after-effect of x-rays on mutation frequency. BA 6-12572

3077

X-RAYS AND PARASITIC WASPS. P. W. Whiting. J. Heredity 20(6), 268-76(1929).

X ray treatment of adult Habrobracon juglandis had little if any effect on duration of life or general vitality. Effects on fertility are described. BA 6-12573

3078

EFFECT OF RADIUM ON SEED GERMINATION. G. Mezzadrol and E. Vareton. Atti. accad. nazl. Lincei Rend. Classe. sci. fis. mat. e Nat. 12(1/2), 73-80(1930).

Dry seeds of various grains and legumes were exposed to RaBr₂ and germinated. Short duration of irradiation stimulated, longer irradiation injured the seeds. BA 6-12867

3079

EFFECT OF ACTIVATED FLUORESCENIN ON GROWING BEANS. Sylvia B. Wigoder. Brit. Med. J. 2(3641), 643 (1930).

Experiments on Vicia faba indicate that the intensifying effect of "activated" fluorescein on x rays is negligible. BA 6-12870

3080

EFFECT OF IRRADIATION ON MITOSIS IN MALIGNANT TUMORS. Nora Andreis. Arch. ital. anat. e istol. patol. (Milan) 2(2), 369-92(1931). (In Italian).

Histologic examination in 56 cases of malignant tumors treated with x rays and Ra indicates that irradiation retards karyokinetic process without restoring it to normal type and probably has more effect on number than on type of mitoses. BA 6-12896

3081

ON THE QUESTION OF INTENSITY DISTRIBUTION OF ROENTGEN RAYS IN THE BODY IN DEEP ROENTGEN RAY THERAPY. I. CRITICAL REVIEW AND PRINCIPLES. M. Dorneich. Strahlentherapie 38(4), 591-622(1930). (In German).

Intensity distribution of x rays within phantom and its measurement is discussed. BA 6-12898

3082

THE STIMULATIVE EFFECT OF RONTGEN RAYS UPON THE GLANDS OF INTERNAL SECRETION. A REVIEW OF THE LITERATURE. Murray B. Gordon. *Endocrinology* 14(6), 411-37(1930). BA 6-12899

3083

RADON EFFECT ON INTERMEDIATE DISTRIBUTION OF PHOSPHOROUS. (AS OBSERVED IN THE BLOODSTREAM OF THE DOG.) Nina Kotschneff and Anna Arapoff. *Strahlentherapie* 36(2), 360-7(1930). (In German).

Introduction of 10-30 millicuries of radon into bloodstream, stomach, intestine and gall bladder of dog during fasting or digestion reduced inorganic P in all vascular regions. BA 6-12900.

3084

ACTION OF X-RAYS ON THE CENTRAL NERVOUS SYSTEM B. N. Mogil' nitskii, and L. D. Polkiashuk *Izvest. Akad. Nauk S.S.S.R. Otdel. Fiz-Mat. Nauk* 1930(9), 883-96 (1930).

Fifty rabbits and two dogs were irradiated over the head with a large single x ray dose or several smaller doses and morphological changes in the brain were observed. Major effects were (1) altered reaction of mesenchymal elements to injected trypan blue or saccharated Fe, (2) endothelial proliferation and (3) fat accumulation. The hemato-encephalic barrier appears to be formed by blood vessels and capillaries and by mesoglia. BA 6-12903

3085

THE BIOLOGICAL EFFECTS OF SHORT RADIATIONS Charles Packard. *Quart. Rev. Biol.* 6(3), 253-80(1931).

Literature on the biological effect of x rays and radium is reviewed. Bibliography contains 125 references. BA 6-12904

3086

X-RAY EPILATION AND ERYTHEMA-DOSE FOR DOG SKIN. Alois Pommer and Walter Mahling. *Arch. wiss. u. prakt. Tierheilk.* 64(1), 35-60(1931).

First effect of x irradiation on hairless skin appeared after a dosage of 180 r (120kv, 4 m A, 1 mm. A1, 50 cm). Loosening of hair growing on shaved skin was observed following 300 r and on normal (hairy) skin following 600 r. Epilation dosages are given. BA 6-12905.

3087

THE EFFECT OF X-RAYS ON THE POTENTIAL DIFFERENCE ACROSS FROG'S SKIN. M. M. D. Williams. *Protoplasma* 9(1), 1-8(1930).

Small x ray doses increase the potential difference of frog skin in proportion to dose. Larger or lethal dose first increase then decrease the potential until death ensues BA 6-12906.

3088

THE RETICULOENDOTHELIAL SYSTEM AND HOMO-TRANSPLANTATION. B. E. Bruda, and W. M. Kreiner *Deut. Z. Chir.* 228(6), 421-3(1930).

Ovaries of normal female rats were grafted into 12 irradiated and 6 non-irradiated rats. Better healing of implants occurred following x irradiation and is attributed to inhibition of the reticulo-endothelial system. BA 6-13061.

3089

ON THE ORIGIN OF THE AUTOMATINE. H. Zwaardemaker and Ph. Arons. *Arch. Weerl. sci.* 3C-12(4), 520-8(1928)

Automatine is the active automatic cardiac substance formed from inactive automatinogen. β rays from K convert automatinogen to automatine which locates in nodal tissue and exerts a chronotropic action on heart. BA 6-13226.

3090

REVIVAL OF HEARTS WITH SOFT X RAYS AFTER STOPPAGE INDUCED BY REMOVAL OF PERMEABLE POTASSIUM SALTS. H. Zwaardemaker and T. P. Feenstra. *Strahlentherapie* 36(2), 368-9(1930). (In German).

Pulsation of isolated hearts of frogs and eels was restored by soft x rays in an average time of 10 min between critical stoppage and beginning of pulsation. BA 6-13227

3091

STUDIES IN THE VARIABILITY OF TUBERCLE BACILLI. III. INFLUENCE OF X-RAYS UPON DISSOCIATION. Christine E. Rice and Guilford B. Reed *Can. J. Research* 5(7), 122-9(1931).

X ray treatment of cultures of a rapid growing strain of bovine tubercle bacillus, tending to change from R to S, promoted the change to a considerable degree. Stable R cultures were unaffected. Larger doses have a lethal effect. BA 6-13821

3092

SOME GENETIC EFFECTS OF IRRADIATION IN PLANTS L. J. Stadler. *J. Heredity* 21(1), 3-19(1930).

Ninety percent of visible mutations in barley were recognizable in seedling stage. No dominant mutations were found. Studies using maize wheat and oats are described. BA 6-15240

3093

RECOVERY FOLLOWING GENETIC DEFICIENCY IN MAIZE. L. J. Stadler. *Proc. Natl. Acad. Sci. U. S.* 16(11), 714-20(1930).

Deficiency is defined as loss or inactivation of a part or of a whole chromosome; recovery as the return to normal activity of previously deficient genes. These phenomena are described in x irradiated maize. BA 6-15241

3094

A MUTUAL TRANSLOCATION INVOLVING THE FOURTH AND THE X CHROMOSOMES OF DROSOPHILA. Homer R. Bolen. *Am. Naturalist* 65(700), 417-22(1931). BA 6-15249.

3095

TYPES OF VISIBLE VARIATIONS INDUCED BY X-RAYS IN DROSOPHILA. H. J. Muller. *J. Genetics* 22(3), 299-334(1930). BA 6-15287

3096

DOES X-RAY TREATMENT PRODUCE A GENETIC AFTER EFFECT? N. V. Timofeev-Resovskii. *J. Heredity* 22(7), 221-23(1931).

No pronounced "after-effect" of x-ray treatment upon mutability was found in experiments with *D. melanogaster*. (Number of lethal mutations was tested for immediately after irradiation and, in flies found to be mutations-free, in a subsequent test). BA 6-15296

3097

THE EFFECTS OF X-RAYS AND RADIUM ON SPECIES OF THE GENUS NICOTIANA. T. H. Goodspeed. *J. Heredity* 20(6), 243-59(1929).

Heavy x or γ ray irradiation of dry or soaked seed has a retarding but no lethal influence on germination and early seedling growth. Light dosage proves immediately or ultimately lethal to all germinating seed or young seedlings. Older seedlings often exhibit great deformity after irradiation. BA 6-15619

3098

ON THE DEPRESSANT EFFECT OF HIGH X-RAY DOSES ON MITOSIS IN *VICIA FABA EQUINA*. O. Jungling and H. Langendorff. *Strahlentherapie* 38(1), 1-10(1930).

X irradiation of *V. f. equina* roots disturbs the course of cell division. Small doses reportedly accelerate mitosis while large doses depress it. BA 6-15621

3099

INFLUENCE OF RADIUM ON THE PRODUCTION OF ZYGOSPORES IN *MUCOR SPINOSUS* VAN TIEGHEM (*ZYGONHYNCHUS SPINOSUS*). A. Sartory, R. Sartory and J. Meyer. *Compt. Rend. Acad. Sci.* 186(15), 1010-12 (1928).

Irradiation in dosages of 5 mc/cm² occasioned sexual phenomena. Other phenomena, similar to those previously encountered in studying action of Ra upon lower fungi, were also observed. BA 6-15627

3100

CELLULAR WAVES. COLLECTION OF EXPERIMENTAL STUDIES. Georges Lakhovsky. Paris, G. Doin and Cie. 1931. 319p. (In French).

This is a reissue, in French, of 33 papers from French and Italian journals dealing with relations of radiant energy to plant and animal life, and to their clinical effects upon man, especially in cancer. BA 6-15733.

3101

EXPERIMENTAL INVESTIGATION OF THE EFFECT OF X RAYS ON THE EYE OF RABBITS. Rauno Aulamo. Klin. Monatsbl. Augenheilk. 86(4), 473-82(1931).

Single doses of 2-10 erythema doses of soft x rays were applied to left eye in 8 rabbits, and 1-13 E. D. of hard rays to 11, both groups having the bodies lead-shielded. Changes occurring in all those exposed to soft x-rays and in 6 of those exposed to hard x rays are described. BA 6-15738

3102

ACTION OF ROENTGEN RAYS AND RADIUM ON THE GASTROINTESTINAL TRACT, EXPERIMENTAL DATA AND CLINICAL RADIOTHERAPY. Arthur U. Desjardins. Am. J. Roentgenol. 26(1), 145-90, (2) 335-70, (3) 493-510(1931).

Author presents a summary with critical analysis and evaluation of published material on experimental and clinical studies in the field. BA 6-15741.

3103

ACTION OF ROENTGEN RAYS AND RADIUM ON THE EYE AND EAR, EXPERIMENTAL DATA AND CLINICAL RADIOTHERAPY. Arthur U. Desjardins. Am. J. Roentgenol. 26(4); 639-79; (5) 787-819; (6) 921-42(1931).

Author presents a summary with critical analysis and evaluation of published material on experimental and clinical studies in the field. BA 6-15742

3104

A METHOD OF CONTROLLING THE DESTRUCTIVE ACTION OF THE ROENTGEN RAY ON LIVING TISSUE. Archibald P. Evans. Arch. Phys. Therapy, X-Ray, Radium 10(4), 158-67(1929).

Author describes use of high oscillating electric circuit for neutralizing effect of x rays on colloid systems. BA 6-15745.

3105

MESOTHORIUM IRRADIATION OF FIBROBLASTS IN VITRO. Albert Fischer. Strahlentherapie 40(1), 54-96(1931).

Effects of irradiating fibroblasts with mesothorium (equivalent to 5 and 40 mgm of radium) are described. Radiation effect has a latent period. Cultures irradiated at low temperatures had greater decrease in growth than those exposed at body temperature. BA 6-15746

3106

ALTERATIONS IN TRANSCAPILLARY EXCHANGE AND HEMODYNAMICS IN MONKEYS SUBJECTED TO WHOLE BODY X-RADIATION. C. B. Ferrell, M. D. Turner, and R. R. Overman. Federation Proc. 13, 43(1954).

The results indicated that the plasma volumes of the x-irradiated animals were elevated over those of the controls both in 24 and 48 hr post-exposure studies, and at both the 400 and 500 r dose levels. The disappearance rate of Na²⁴ from the vascular system of the experimental animals is consistently increased over the controls.

3107

THE EFFECTS OF HIGH VOLTAGE CATHODE RAYS ON

THE GERMINAL EPITHELIUM OF THE RAT. Victor C. Jacobsen. Arch. Pathol. 9(5): 967-83(1930).

Germinal epithelium of adult male rats was exposed to cathode rays from Coolidge cathode ray tube, 200,000-250,000 volts, 1 ma, for .5 to 30 sec. From effects it is concluded that x-ray effects are due to electrons or cathode rays set free in tissues. BA 6-15750

3108

INFLUENCE OF VARIOUS AGENTS (X-RAYS, RADIUM, HEAT, ETHER) UPON MITOSIS IN TISSUE CULTURES. Tage Kemp and Jens Juul. Acta. Pathol. Microbiol. Scand. 7(3), 279-308(1930).

Tissue cultures of fibroblasts from chick embryos were exposed to Ra and x rays in various doses, to ether vapor and to heating to 50° for various periods. Effects on mitosis are described. BA 6-15751

3109

ON THE INFLUENCE OF WEAK X-RAYS ON OVARIES ON OFFSPRING OF WHITE MICE. A. I. Krupski and M. F. Eisenberg. Strahlentherapie 30(3), 527-43(1928).

Doses of 12, 24, and 36% erythemas units were delivered to ovarian tissues of mice. Three generations of offspring were observed to be normal. Six children of x ray technicians were found to be normal. Question of what intensity of radiation is dangerous discussed. BA 6-15752

3110

RADIOBIOLOGICAL STUDIES ON SEA URCHIN EGGS. H. Langendorff and M. Langendorff. Strahlentherapie 42(4), 793-9(1931). (In German).

First, second and third segmentation stages of sea urchin eggs were exposed to various x-ray doses. In 2nd and 3rd segmentation divisions the cell was least sensitive during metaphase. BA 6-15755

3111

THE DIFFERENTIAL ACTION OF X-RAYS ON TISSUE, GROWTH, AND VITALITY. II. THE BIOLOGICAL REACTIONS TO X-RADIATION IN RELATION TO A PHENOMENON TERMED ANTAGONISM. III. THE BIOLOGICAL REACTION TO X-RADIATION IN RELATION TO THE AREA OF TISSUE IRRADIATED. IV. THE BIOLOGICAL REACTION TO X-RADIATION IN RELATION TO TIME. Warnford Mopett. Proc. Roy. Soc. (London) B107(751), 293-312(1930).

A reaction of hypertrophy and atrophy in chick allantoic membrane is maximal following x-irradiation with energies in a narrow range of frequencies. Prior dose of mixed frequencies or simultaneous dose of frequencies outside the exciting band prevent or depress the reaction. Threshold dose for allantoic membrane reaction varies inversely as the square of the exposed summation of stimuli from adjacent areas which may appear to be unaffected. Similar laws hold for reaction of rat skin to soft mixed x radiation. BA 6-15757.

3112

THE ACTION OF X-RAYS ON THE SEGMENTATION OF THE OVUM AND ON ELEMENTARY MORPHOGENETIC PROCESSES IN *B. VULGARIS*. Francesco Olivieri. Riv. Radiol. e Fis. Med. 1(5); 5-30(1929).

Irradiation of *B. vulgaris* eggs during segmentation interfered with development; during gastrulation effects were limited to enterovitellic portion, susceptibility or resistance being induced in some areas, stimulation in others; during neural groove stage, there was no interference in morphogenesis. BA 6-15758.

3113

SKIN TOLERANCE DOSE AND RADIATION QUALITY. A. Reisner and Th. C. Neeff. Strahlentherapie 34(2), 313-39(1929). (In German).

Dependence of skin tolerance dose on wave length of x ray radiation used (measured in half-value thickness of Cu and r units) was investigated by a series of observations on skin erythema on skin of thigh in women. BA 6-15761.

3114

THE PHYSIOLOGICAL AND CYTOLOGICAL EFFECTS OF PENETRATING X-RAYS UPON THE CAT AND RABBIT. S. Russ, Samson Wright, H. A. Bulman and L. H. Clark. *Proc. Roy. Soc. Med.* 23(12): 1671-88 (1930).

Clinical changes in cat and rabbits following lethal x irradiation are described, including effects on alimentary canal, intestines, stomach, liver, kidney, respiratory tract, spleen, blood, and bone marrow. BA 6-15762

3115

THE DETECTION AND ESTIMATION OF RADIUM IN LIVING PERSONS III. THE NORMAL ELIMINATION OF RADIUM. Herman Schlundt and G. Failla, *Am. J. Roentgenol.* 26(2): 265-71 (1931).

Cases of two girls who had contracted Ra poisoning are described. After 12 yrs both were still radioactive. Rate and mode of Ra elimination is described. BA 6-15763

3116

EXPERIMENTAL INVESTIGATION OF ROENTGEN RAY INDUCED INJURY OF PROGENY. P. Schugt. *Strahlentherapie* 28(3), 546-67 (1928). (In German).

In studies on mice histological ovarian damage was produced by a dose of 54 r. Females were irradiated with doses ranging from 9 r to 140 r and then mated to normal males. One pregnancy soon after exposure was studied and a second pregnancy $3\frac{1}{2}$ - $4\frac{1}{2}$ mo. after exposure. Ovaries were studied histologically. Author also studied fetuses *in utero* after sacrificing the mother. BA 6-15764

3117

SELECTIVE ACTION OF X-RAYS ON THE BLOOD CELLS OF THE CAT. Samson Wright and H. A. Bulman. *Lancet* 217(5527), 217-19 (1929).

Following lethal x ray doses, death results in 5-12 days. After sub-lethal doses lymphocytes show early and marked decrease in numbers, polymorphonuclear leukocytes decrease more slowly. Red cells and platelets decrease slowly, recover gradually. BA 6-15768

3118

EFFECTS OF RADIOACTIVE COLLOIDAL GOLD (Au^{191}) ON GUINEA PIGS. E. R. Fisher, J. C. Neering, J. B. Hazard and R. A. Hayes. *Am. J. Med. Sci.* 223, 502-11 (1952).

The instillation of radioactive colloidal gold intra-peritoneally in guinea pigs produced effects similar to those of total-body irradiation. There was loss of body weight and hair in all animals. The outstanding morphologic changes were focal hepatic necrosis, hypoplasia of bone marrow, myeloid metaplasia of liver and spleen, and atrophy of testes.

3119

RA EMANATION AND PHYSIOLOGICAL ACTION OF SOME DRUGS. P. Mascherpa and G. Belluzzi. *Boll. soc. ital. biol. sper.* 5(6), 944-46 (1930).

In animals treated with Ra emanation, poisoning following strychnine and morphine was more quickly manifested and more severe than in absence of Ra emanation. BA 6-16198

3120

THE REACTION OF LYMPHOID TISSUE TO ROENTGEN RADIATION. Hachiro Akaiwa and Mitsuzo Takeshima. *Am. J. Roentgenol.* 24(1), 42-6 (1930).

Rabbits received x ray doses of $1/3$, $1/2$ or 1 skin unit dose (Sud) or $1/2$ Sud daily for 5 days or 10 days locally to one knee, the contralateral knee serving as a

control. Animals were killed from 30 min. to 3 wk. after exposure and popliteal nodes were studied histologically. There were three periods of reaction. In the early period (up to 12 hrs.) the irradiated node was increased in size and showed nuclear disintegration, decomposition of germinal centers, infiltration by inflammatory cells, congestion, exudation, and absence of mitotic figures except in the lowest dosage group. The middle period, 12 hr to 5 days, showed phagocytic clearing of debris and the late period, 5 days to 3 weeks, showed fibrosis of the nodes. Similar, but much less extensive changes were noted in the control node. BA 6-16296

3121

SOME OF THE EFFECTS OF X-RAYS ON THE NEURORETICULUM OF DONAGGIO IN NEW-BORN MAMMALS. Gastone Lambertini and Pietro Mainoldi. *Riv. Radiol. e Fis. Med.* 1(4), 3-17 (1929). (Summaries in Fr., Eng., and Gerr).

Neuroreticulum of Donaggio in spinal nerve cells of newborn but not adult dogs is extremely radiosensitive. Appearance of lesions is followed by disintegration of neuroreticulum, appearance of granulosity and vacuolization, lysis and disappearance. BA 6-16333

3122

ACTION OF RADIUM ON AMPHIBIAN EGGS. I. DIFFERENTIAL SUSCEPTIBILITY IN THE VARIOUS STAGES OF DEVELOPMENT. II. SPECIFIC ALTERATIONS AND MALFORMATIONS SECONDARILY DUE TO DIFFERENTIAL SUSCEPTIBILITY IN *R. ESCULENTA*. P. Pasquini and G. Meldolesi. *Atti accad. naz. Lincei Rend. Classe. Sci. fis. mat. e Nat.* 10(5/6), 298-306 (1929). 11(7), 705-12 (1930).

Radiation damage increases with increasing dose, but less than linearly. Small doses cause inhibited cephalogenesis but no histologically detectable effects. Abnormal morphogenesis depends on the developmental stage irradiated, early gastrulation being most sensitive. Later in gastrulation, radiation damages the neural tube selectively. BA 6-17405.

3123

A CASE OF MICROCEPHALY FOLLOWING EMBRYONIC ROENTGEN IRRADIATION. Edgar A. Doll and Douglas P. Murphy. *Am. J. Psychiatry* 9(5), 871-78 (1930).

Murphy had previously published studies on 74 fullterm children irradiated in utero, of whom 25 (33%) were defective at birth, 17 being microcephalic. Here, with Doll, he reports the case of microcephalous child, irradiated before birth, born of superior parents and with 2 brothers and a sister above average in mentality. BA 6-17418.

3124

THE EFFECTS OF INCREASING X-RAY VOLTAGES ON THE PRODUCTION OF LETHAL MUTATIONS IN *DROSOPHILA MELANOGASTER*. Frank Blair Hanson, Florence Heys, and Elizabeth Stanton. *Am. Naturalist* 65(697): 134-43 (1931).

The mutation rate increases with the increase of x ray voltages from 40-99 KV. Secondary β -rays are responsible for the mutations. BA 6-18169

3125

DOMINANT EYE-COLORS IN *DROSOPHILA*. Elvene W. Van Atta. *Am. Naturalist* 66(702), 93-5 (1932).

Dominant mutations were induced by x irradiation. BA 6-18185.

3126

A NOTE ON THE VISCOSITY CHANGES PRODUCED IN EGG ALBUMIN BY X RAYS. J. A. V. Fairbrother. *Brit. J. Radiol. (N.S.)* 1: 121-5 (1928).

K rays of Mo decreased the viscosity of albumin solutions by as much as 40%. The change was not reversible.

Coagulation was delayed in irradiated egg albumin heated to 61°.

3127

CHEMICAL REACTION OF ORGANIC COMPOUNDS WITH X-RAY ACTIVATED WATER. H. Fricke, E. J. Hart and H. P. Smith. *J. Chem. Phys.* 6, 229-40(1938) CA 32-5301

3128

RELATION OF CHEMICAL, COLLOIDAL AND BIOLOGICAL EFFECTS OF ROENTGEN RAYS OF DIFFERENT WAVE LENGTHS TO THE IONIZATION WHICH THEY PRODUCE IN AIR. I. ACTION OF ROENTGEN RAYS ON SOLUTIONS OF OXYHEMOGLOBIN IN WATER. H. Fricke and B. W. Petersen. *Am. J. Roentgenol. and Radium Therapy* 17 611-20(1927).

Oxyhemoglobin exposed to x rays of 0.248Å, 0.527Å or 0.754Å was transformed to methemoglobin and possibly other substances. A somewhat greater dose of the longer wave length x rays is required to bring about the reaction BA 2-9685

3129

ACTION OF X RAYS ON LACTATE, GLUCOSE, CITRATE AND SUCCINATE DEHYDROGENASES. R. E. Havard. *Brit. J. Radiol.* 8: 787-92(1935).

Author studied effect *in vitro* irradiation of lactate dehydrogenase prepared from muscle, and glucose and citrate dehydrogenase in minced fresh liver.

3130

EXPERIMENTAL RESEARCH ON THE EFFECT OF FRACTIONAL IRRADIATION ON SUBCUTANEOUS WALKER CARCINOMAS OF THE RAT UNDER INCREASED OXYGEN PRESSURES. Gunther Gruber and Harry Wieland. *Strahlentherapie* 100, 241-52(1956). (In German)

The report deals with experimental investigations into the irradiation of subcutaneous Walker carcinomas of rats with respiration under increased oxygen partial pressures. The authors have found that single irradiation produces an increase of the irradiation effect like that of Gray and collaborators and that of Schubert and collaborators. Furthermore, the effect could be strengthened considerably by means of fractionated irradiation. At a pressure of $P_{O_2} = 2$ at, and with a fractionation of 4 times 1000 r, the effect of x rays was 3 times as high as that of one single irradiation of the same quantity in air. The authors discuss the results and recommend the use of this method in human tumor therapy. NSA 10-11016

3131

REDUCTION OF OXYGEN TO HYDROGEN PEROXIDE BY THE IRRADIATION OF ITS AQUEOUS SOLUTION WITH X RAYS. H. Fricke. *J. Chem. Phys.* 2: 556(1934).

3132

A MICROSCOPIC STUDY OF THE EFFECTS OF X-RAYS ON THE OVARIOLES. Edward McCrady, Jr. *Proc. Penna. Acad. Sci.* 4, 79-91(1930).

Greatest effect of x rays on adult females, (*H. juglandis*), was destruction of the most actively dividing cells, causing degeneration of ovaries and sterility. BA 6-18188

3133

STUDY OF THE ACTION OF X-RAYS ON THE DEVELOPMENT OF PLANTS. S. Lallemand. *Arch. Anat. Hist. et Embryol.* 10 1/2: 1-233(1929).

Effects of x rays on *Phaseolus vulgaris*, *Brassica napus*, *Lens esculata*, *Panicum miliaceum*, *Lepidium sativum*, and *Triticum sativum* studied using X rays of 0.13-0.25Å. BA 6-18459

3134

RESISTANCE OF THE SPLEEN IRRADIATED IN THE ORGANISM AND ISOLATED FROM IT. ITS DEVELOPMENT IN CULTURES IN VITRO. A. H. Roffo. *Bol. Inst. Med. Exptl.* 22, 3-28(1929).

Spleens of day-old rats were removed and irradiated either 1, 3, 5, 6, 7 or 8 days after removal, then cultured. (Irradiation of 200 KV, 4 ma, no filter, 30 min.) Cultures of irradiated spleens grew as well as those of non-irradiated controls, those held 6 days before irradiation, gave better growth than controls. Data are given from similar studies of rats and chicks BA 6-18472

3135

BIOLOGICAL EFFECTS OF RADIATION. VOL. II. NEW YORK, UNITED NATIONS PUBLICATIONS. 1956. 413p. ON THE EARLY REACTIONS OF THE ORGANISM TO IRRADIATION AS DEPENDENT ON THE SITE OF APPLICATION. G. M. Frank. *Proc. of the Intern. Conf. on the Peaceful Uses of Atomic Energy*, Geneva, 1955 11, 93-104(1956).

Author refers to hemodynamic, hemolytic, histological and electroencephalographic changes observed after irradiation.

3136

IMPORTANCE OF CHRONOLOGICAL DISTRIBUTION OF THE DOSES IN RADIUM THERAPY. G. Carlo Segale and Alessandro Vallebona. *Pathological* 20(446), 622-33 (1928).

Experiments on transplants of rat sarcoma and on growth of *Milium paradoxum* L. showed greater action when larger doses were given over short period than when small doses were given over a long period. BA 6-18474.

3137

EXPERIMENTAL INVESTIGATION OF THE EFFECT OF ROENTGEN RAYS UPON THE VEGETATIVE NERVE. I. THE GENERAL ACTION OF X-RAYS, ESPECIALLY THE RELATION WITH BLOOD PRESSURE. II. PHARMACOLOGICAL INVESTIGATION OF THE EFFECTS OF IRRADIATION ON THE INFERIOR MESENTERIC GANGLION UPON THE UTERINE MOTION. III. EFFECT UPON THE VASCULAR NERVE (THE IRRIGATING EXAMINATION ON THE AURICLE OF RABBIT.) IV. HISTOLOGICAL INVESTIGATION OF THE EFFECT OF IRRADIATION OF THE INFERIOR MESENTERIC GANGLION ON THE FEMALE GENITALS. V. CLINICAL OBSERVATIONS. S. Suzuki. *Japan J. Obstet. and Gynecol.* 14(3), 207-13, 214-17; (5), 405-9; 410-15; 416-20(1931). BA 6-18476

3138

THE RELATIONSHIP OF TYPE OF RADIANT ENERGY TO ITS ACTIVATION OF VITAMINS IN YEAST. Louis H. Jorstad. *J. Lab. Clin. Med.* 16(12), 1169-74(1931).

Results show that Cooper-Hewitt lamp, quartz light, and low voltage x ray cause activation of vitamins A and D in brewer's yeast fed to rats along with deficient diet. BA 6-18530.

3139

VASCULAR EFFECTS IN THE HAMSTER CHEEK POUCH AFTER IRRADIATION. G. P. Fulton, B. R. Lutz, D. L. Jofte, and F. W. Maynard. *Anat. Record* 115, 448-57(1953).

Dense capillary networks developed around Sr^{90} beta-emitting glass beads implanted in the hamster cheek pouch. At 24 hours, 140 μ c beads produced increased vascularity, platelet thromboembolism, sticking of leukocytes to endothelium, edema and petechial hemorrhages.

3140

IRRADIATION OF THE THYROID IN EXPERIMENTAL INFECTIONS. Marino Lapenna. *Arch. Radiol. (Napoli)* 5(1), 220-34(1929).

Rabbits and guinea pigs were inoculated with typhoid, paratyphoid A or B, Friedlander bacillus, anthrax, *Staphylococcus aureus*, tubercle bacilli, or various fungi and x-rayed on thyroid or thigh. Results suggest defensive powers of thyroid may be heightened by x rays. BA 6-18877

3141

METHODS OF HEMOSTASIS. Vara Lopez. *Arch. klin. Chir.* 165(2), 375-82(1931).

Studies on 20 patients and 30 rabbits and dogs showed that transfusion, x raying (100 r to spleen and liver) "zimema" (fibrin ferment), parathyroid extract and Ca gave very good hemostatic results. Other preparations gave only limited result. BA 6-18884.

3142

A COMPARATIVE STUDY OF TOXICITIES OF CERTAIN GROUPS OF CHEMICAL SUBSTANCES USED IN CANCER TREATMENT. Leonora Neuffer and Robert J. Norris. Bull. Basic Sci. Research, 2(1), 32-45(1928).

Substances best adapted for use in increasing selective absorption by cancer tissues because of low toxicity and high absorption are described. Studies were made using white mice injected with substances having low toxicity but containing elements of high atomic number. BA 6-18905

3143

EXPERIMENTAL RENAL DISEASE PRODUCED BY X-RAYS, HISTOLOGICAL CHANGES IN THE KIDNEY EXPOSED TO A MEASURED AMOUNT OF UNFILTERED RAYS OF MEDIUM WAVE LENGTH. Adolph Bollinger and J. W. S. Laidley. Med. J. Australia 1(5) 136-46 (1930).

Attempt was made, using dogs, to produce an experimental nephritis which could be standardized and used in diagnostic and therapeutic research. BA 6-19019

3144

GLIA REACTIONS TO ACUTE INFECTIONS. INTOXICATIONS AND X-RAY IRRADIATION. B. N. Mogil' mtskii and V. S. Riazanova. Izvest. Akad. Nauk S.S.S.R. Otdel. Mat. i Estest. Nauk 1931(2), 229-57(1931). (Summary In French).

In acute infections, intoxications and x ray irradiations (rabbits and dogs) proliferation of Hartega elements and of adendritic glia occurred in the cerebrum, along with other changes which are described in detail. BA 6-19059

3145

EFFECT OF RADIATION ON MACROPHAGES. J. C. Mottram. Lancet 220 238-9(1931).

Jensen's rat sarcoma and mouse sarcoma t/63, and surrounding accumulated macrophages were exposed in vivo 1-2 hrs to β radiation. (59 mgm Ra, 2 x 2 cm, 0.12 mm silver). Effects noted after trypan blue injection are described. BA 6-19250

3146

DIRECT AND TRANSMITTED X-RAY EFFECTS ON GROWTH OF TOBACCO CALLUS IN VITRO. Gladys S. King. Am. J. Botany 36, 265-70(1949).

A 4,000 r dose stimulated growth, 10,000 r dose had growth-inhibiting effect. Growth inhibition was more pronounced when dose was raised to 20,000 r and growth period was completely inhibited by 60,000 r, arrest of cell formation occurred after 120,000 r. NSA 2-2076

3147

THE EFFECT OF X-RAYS ON THE MITOTIC ACTIVITY OF THE ADRENAL GLAND, JEJUNUM, LYMPH NODE AND EPIDERMIS OF THE MOUSE. Norman P. Knowlton, Jr. and Louis H. Hempelmann. J. Cellular Comp. Physiol 33, 73-91(1949).

Data are summarized in 7 curves and 4 tables. In general a quantitative relationship between dose and response was observed, although there is lack of correlation between sensitivity of mitotic activity to ionizing radiation and radiosensitivity of different tissues NSA 2-2077

3148

THE INFLUENCE OF THYROID AND THIOURACIL ON MICE EXPOSED TO ROENTGEN RADIATION. Henry C. Blount, Jr. and Willie W. Smith. Science 109, 83-84 (1949).

Experimental results indicate that metabolic activity rather than body temperature is the predominant factor in increasing mortality of x-rayed mice. NSA 2-2078

3149

X-RAY AND ULTRAVIOLET STUDIES ON POLLEN TUBE CHROMOSOMES. II. THE QUADRIPARTITE STRUCTURE OF THE PROPHASE CHROMOSOMES OF TRADESCANTIA. C. P. Swanson. Proc. Natl. Acad. Sci. U. S. 33 229-32 (1947).

Although the chromatid is the functional unit of the chromosome, the pollen-tube chromosomes of Tradescantia show aberrations following irradiation in very early prophase, which are interpreted in terms of $\frac{1}{2}$ -chromatid breaks and rearrangements. BA 22-540.

3150

THE FAILURE OF NON-ISOTOPIC URANIUM TO INHIBIT RESORPTIVE PROCESSES IN RAT FEMUR. W. F. Neuman, M. W. Neuman, and B. J. Mulryan. 1949. Dec1, May 2, 1949. (AECD-2580).

Upon repetition of their previous experiment, authors concluded that previously reported inhibition of resorptive processes of rat skeleton was caused by radiation, not by any specific chemical property of uranium itself. NSA 2-2080

3151

EFFECT OF PLUTONIUM IN THE LIVER. Austin M. Brues. Conf. on Liver Injury, Trans. 7th Conf., 59-61 (1948).

After receiving small doses of plutonium, rats and mice lived for several months but exhibited liver disease, cell damage, and atrophy of liver. Bone carcinomas frequently occurred nearly a year later. NSA 2-2083.

3152

CAN THE DEFENSE MECHANISM OF THE BODY BE INFLUENCED BY ROENTGEN IRRADIATION? REPORT ON A PRELIMINARY CLINICAL INVESTIGATION OF THE PLASMA OR SERUM PROTEIN PATTERN IN RHEUMATOID ARTHRITIS. H. Ney. Ann. Rheumatic Diseases 8, 191-204(1949). NSA 3-2103

3153

THE CYTOLOGY OF NEOPLASM OF THE FEMALE GENITAL APPARATUS BEFORE AND AFTER TREATMENT WITH RADIUM, STUDIED BY THE METHOD OF APPOSITION. Mario Bianchi. Tumori 22, 82-105(1948). (In Italian). NSA 3-2105

3154

PHYSICAL AND BIOLOGICAL BASIS OF BETATRON THERAPY. Gerhard Schubert. Arztliche Forschung 3, 377-86(1949). (In German).

Experiments on a variety of organisms indicate that fast electrons are of lower efficacy than 200 kv x rays, but total qualitative effect seems greater. NSA 3-2109

3155

USE OF RADIUM IN TREATMENT OF HYPERTROPHIC LYMPHOID TISSUE IN THE NASOPHARYNX. Charles H. Dow. Arch. Otolaryngol. 50, 417-28(1949).

Radium therapy was used in treating 74 cases of hypertrophic lymphoid tissue formation in the nasopharynx after adenoidectomy. Two groups were given Ra applications for 8.5 min/treatment or 12 min. Ra β rays stopped mitosis at time of treatment. NSA 3-2114

3156

THE EFFECT OF ROENTGEN AND RADIUM RAYS ON NERVE TISSUES. I. REACTION OF PERIPHERAL NERVES TO ROENTGEN AND RADIUM RAYS. M. N. Meissel. Virchow's Arch. pathol. Anat. u. Physiol. 276(1), 77-94 (1930). (In German).

Irradiation of skin of 35 white mice produced hyperplasia of epithelium and enlargement of subepithelial and intraepithelial nerves. Peripheral nerves are believed to be in unstable equilibrium, changing with changes in surrounding tissue. BA 6-10346

3157

STUDIES ON PRECANCEROUS LESIONS, PARTICULARLY WITH RESPECT TO ROENTGEN CARCINOMAS, II, III. O. Schurch. Z. Krebsforsch. 33(1/2), 1-34, 35-75 (1930). (In German).

Precancerous changes in x-irradiated ears of rabbits are described. Induction of cancer by this means required 2 yr or more of treatment. BA 6-10358.

3158

THE LETHAL ACTION OF SOFT X-RAYS ON MICRO-ORGANISMS. George N. Burger. Bull. Basic Sci. Research, 3, 71-81 (1931).

Soft x rays (2.0-0.5A) were lethal for *Staph. aureus*, *S. albus*, *Saccharomyces cerevisiae*, *B. subtilis*, *B. coli* and *B. tuberculosis* bovine type. Lethal action increased with tube voltage, but not in proportion to total energy emitted by the tube. At 30,000 volts, 100% mortality followed 3-10 min exposure at 3-4 cm. BA 6-21596.

3159

EFFECT OF RADIUM IRRADIATION ON *E. ELEGANS*. L. Halberstaedter and A. Luntz. Arch. Protistenk. 68(1), 177-86 (1929).

Eudorina Elegans was irradiated with various doses of radium radiation delivered at various dose rates to study the effect of the two variables, dose and dose rate, on lethal effect and on the number of colonies produced. BA 6-21599.

3160

EXPERIMENTAL INVESTIGATIONS ON THE FROG TONGUE RELATIVE TO THE EFFECT OF VARIOUS TYPES OF RAYS ON THE BLOOD VESSELS. R. Motojima. Strahlentherapie 30, 343-49 (1928). (In German).

Frog tongue preparations were irradiated with (1) ordinary light, (2) ultraviolet, (3) x-rays, and (4) radium rays to study effect on the vessels. (1) causes decreased flowing velocity, enlargement of vessels, stasis, thrombosis, and edematous changes, (2) changes only superficial capillaries, 3 skin unit dose of (3) produce dilation of small and medium vessels, an effect also produced by γ rays of radium. BA 6-21696.

3161

THE EFFECT OF DIRECT RADIATION OVER THE PRECORDIUM ON THE HEART SIZE, THE HEART MECHANISM AND THE MYOCARDIUM OF RABBITS. B. Gordon, G. F. Strong, and E. S. Emery, Jr. Am. J. Roentgenol. 11, 328-30 (1924).

After a single large dose or moderate fractionated dose delivered through a port over the precordium (total doses ranged from 75-1000 milliamperes minutes), no changes in heart size or histology attributable to a direct radiation effect were observed among 23 rabbits. Any histological changes seen were said to be similar to those in infection and nutritional disturbance. One rabbit developed ventricular extrasystoles after 2 hrs and 5 min of exposure at rate of 15 min once a week.

3162

FURTHER INVESTIGATIONS OF THE FLUORESCENCE OF IRRADIATED CELLS. Paul Wels. Pfluger's Arch. ges. Physiol. 228(6), 671-82 (1931).

Degree of fluorescence in individual egg cells of *Unio* and others was shown by a roughly quantitative measurement to be increased by radiation with x rays and ultraviolet light. Effect increased with duration of radiation and was greater in oxygen than in nitrogen. Increased fluorescence occurs particularly in nucleolus and to less extent in nucleus. BA 6-21703.

3163

THE PRODUCTION, MEASUREMENT AND APPLICATION OF X-RAYS. H. M. Terrill and C. T. Ulrey. New York, D. Van Nostrand Co., 1930. 256p. BA 6-21710.

3164

INVESTIGATIONS CONCERNING THE INFLUENCE OF

ROENTGEN IRRADIATION ON THE RESISTANCE TO CANCER IN WHITE MICE. Aage Wagner. Acta Radiol. 10(6), 539-53 (1929).

Number of successful implantations of carcinoma of low virulence was increased in irradiated as compared with control mice, and proportion of successful implantations varied with dosage of x rays applied, indicating that irradiation lowered resistance to cancer. Author suggests applications of this finding. BA 6-21711.

3165

THE EFFECTS ON THE BLOOD AND THE HEMOPOIETIC ORGANS OF REPEATED SHORT EXPOSURES TO X-RAYS. John Stephens Latta and Orrin C. Ehlers. Am. J. Anat. 47(2), 447-74 (1931).

Authors describe leukopenia, anemia, and hypoplasia of hemopoietic tissues after subjecting 12 rats to series of short x-ray exposures, in most cases totaling 4 1/3 hrs. Progressive changes in hemopoietic organs are described, and evidence is presented pointing to extravascular erythropoiesis, hemoblasts serving as cells of origin (aplastic and regeneration stages). BA 6-22082.

3166

EXPERIMENTAL RENAL DISEASE PRODUCED BY X-RAYS. M. S. S. Earlam and Adolph Bollinger. J. Pathol. Bacteriol. 34(5), 603-34 (1931).

Experimental unilateral renal lesions has been consistently produced in the dog by single direct exposure of the kidney to unfiltered x rays of medium wavelength equivalent to about 1900 r. Well-established x ray nephritis is characterized by N retention, acidosis, hypercholesterolemia, polyuria, uremia, and variable edema. BA 6-22155.

3167

ON THE EFFECT OF ROENTGEN AND RADIUM RADIATION ON METABOLISM IN PATIENTS WITH CANCER OF THE UTERUS. E. C. Gaessler. Strahlentherapie 37(2), 361-77 (1930). (In German).

Metabolism of patients with carcinoma of the uterus was studied before, during, and at various intervals post-irradiation. Graphs are presented for 10 cases, 5 clinically free from carcinoma 6 mo after treatment, others uninfluenced or showing recurrence. BA 6-22173.

3168

CHANGE IN CA CONTENT OF THE BLOOD DUE TO X-RAY THERAPY IN HYPOPHYSIS AFFECTIONS. R. G. Gurevich. Ann. roentgenol. et radiol. (U. S. S. R.) 6(1), 65-70 (1928).

Study of 19 patients showed that in hypophysis affections, Ca content in blood serum increased. No relation was established between amount of Ca in blood and alteration of any particular part of the hypophysis. In 14 patients after x ray therapy, Ca content of blood was decreased. BA 6-22187.

3169

THE STOMACH IN HYPOPHYSIS AFFECTIONS BEFORE AND AFTER X-RAY THERAPY. M. M. Mints. Ann. roentgenol. et radiol. (U. S. S. R.) 6(1), 57-64 (1928).

After x irradiation, 13 acromegaly patients showed decreased gastric secretion and acidity, the decrease remaining stable for many months. In 6 dystrophia adiposogenitalis patients x ray therapy was followed by a more gradual decrease in secretion; acidity was unaffected. BA 6-22278.

3170

THE ERYTHROCYTE SEDIMENTATION RATE IN TUBERCULOSIS OF CERVICAL LYMPH NODES AND ITS CHANGES DUE TO ROENTGEN THERAPY OF THE GLANDS. O. Pikkariainen. Acta. Soc. Med. Fennicae Duodecim 15B, 1-38 (Art. 8) (1931). (In German).

X irradiation (150 to 200 r in 1-3 regions, 6-8 times each) increased erythrocyte sedimentation rate of patients with tuberculosis of cervical lymph nodes. BA 6-22302.

3171

Ca CONTENT IN THE BLOOD IN BASEDOW'S DISEASE AND IN BRONCHIAL ASTHMA AND ITS CHANGE AFTER X-RAY THERAPY. L. R. Protas. Ann. roentgenol et radiol. (U. S. S. R.) 6(1), 71-78(1928).

After x ray therapy, elevated serum Ca of Basedow patients approached normal. In cases of low Ca content prior to exposure, Ca increased, approaching normal. BA 6-22309.

3172

THE QUESTION OF THE HISTOLOGICAL CHANGES IN CARCINOMA DUE TO RADIATION. G. Gambarov. Strahlentherapie 41, 531-542(1931).

Nuclear and cellular degeneration, leukocytic infiltration, connective tissue proliferation, formation of spindle cells and vacuolization of tumor cells were some of the changes observed in basal cells and other cancers studied by serial biopsy during radiation therapy.

3173

CYTOLOGICAL MAP OF THE SECOND CHROMOSOME OF DROSOPHILA MELANOGASTER. T. Dobzhansky. Biol. Zentr. 50(11), 671-85(1930). (In German).

Drosophila treated by x rays produced progeny among which were found 4 translocations involving the 2nd and 4th chromosomes and 10 translocations involving the 2nd and γ chromosomes. Genetic mapping procedure, making use of these translocations, is described. BA 6-24312.

3174

SOMATIC CHANGES INDUCED IN GOSSYPIMUM HIRSUTUM BY X-RAYING SEEDS. W. R. Horlacher and D. T. Killough. J. Heredity 22(8), 253-62(1931).

Dry seeds of different types of American upland cotton were x rayed with varying doses. Germination percentage was lowered only in case of seed 2 yr old. Abnormalities in plants from x rayed seed included variegations in leaf color, and changes from forked leaf toward normal leaf. BA 6-24363.

3175

THE EXPERIMENTAL MODIFICATION OF THE HEREDITY IN CROP PLANTS. II. INDUCED MUTATION. L. J. Stadler. Sci. Agr. 11(10), 645-61(1931).

Mutations induced in maize and barley by irradiation through available x ray range, including ultra soft x rays 2-4Å and Ra rays with extremes of .009.05Å are outlined. Temperature variations from 80-50° have little or no effect on mutation rate. Chlorophyll abnormalities are common; all mutations described are considered to be recessive. No clear case of induced dominant mutation is known. BA 6-24371.

3176

NON-DISJUNCTIONS OBTAINED IN DROSOPHILA VIRILIS BY X-RAY RADIATIONS. Y. Arai. Japan. J. Genet. 6(3/4), 178-9(1930).

Female Y flies were irradiated and crossed with wild-type males, 57% progeny from radiated mothers and 0.03% of control progeny were exceptionals. BA 6-24375.

3177

THE COMPOSITION AND PROPERTIES OF CERTAIN RED AND YELLOW PLANT PIGMENTS. Leonora N. Hilger. Bull. Basic. Sci. Research 3(1), 37-46(1931).

Bleaching effects of visible light, ultra-violet and soft x rays on carotin and red pepper pigment are described. BA 6-24554.

3178

THE EFFECTS OF X-RAYS ON THE GROWTH OF WHEAT SEEDLINGS. Ware Cattell. Science 73, 531-3(1931).

Results of 200,000 measurements of control and irradiated wheat seedlings taken 48 hr after irradiation

showed that each of the 4 growing parts of the seedling is affected to a different degree by the same dose. BA 6-24673.

3179

THE BIOLOGICAL STUDY OF RADIOSENSIBILITY I. THE EFFECT OF X-RAYS UPON THE IMMATURE TISSUES OF PLANT. J. Nakagawa. Japan. J. Obstet. Gynecol. 14(3), 218-14(1931).

Strong, medium, and continued strong irradiation of sprouted Vicia faba seed produced much the same biological changes. Development and growth of root tip was disturbed; there was no formation of root hairs or rootlets, and the tissues of the root tip took on a permanent aspect. BA 6-24679.

3180

INVESTIGATION OF THE HISTOLOGICAL CHANGE IN PLANT SHOOTS CAUSED BY X-RAYS. ESPECIALLY THE EFFECT UPON ARRANGEMENT OF TISSUES IN THE SEED OF VICIA FABA. K. Narimatsu. Japan. J. Obstet. Gynecol. 14(1), 50-8(1931). BA 6-24680.

3181

EFFECT OF X-RAYS ON DEVELOPING CORN. G. E. Snyder. Proc. Penna. Acad. Sci. 4, 32-4(1930).

Dry Golden Bantam seeds were exposed to x rays (31 kv, 8 ma at 15 mm). These preliminary experiments indicate that x radiation produces an accelerated growth which increases with increasing exposure up to 5-10 min. After this, beneficial effects decrease with longer exposure. Definite retardation and cessation of growth occurred with 3 hr exposure. BA 6-24686.

3182

THE EFFECTS OF X-RAYS, CATHODE, AND ULTRA-VIOLET RAYS ON YEAST. Ralph W. F. Wyckoff and Basile J. Luyet. Radiology 17(6), 1171-5(1931).

Preliminary results with S. cerevisiae show that survival ratios with all these radiations follow multiple hit-to-kill relations of similar slopes. Yeasts therefore can be injured without being killed outright. BA 6-24688.

3183

EXPERIMENTAL OBSERVATIONS ON THE ACTION OF RADON ON THE SPINAL CORD. Hugh Cairns and J. F. Fulton. Lancet 219, 16(1930).

Radon seeds (0.3 mm Pt. filter) were applied to dorsal surface of cord outside dura in cats and monkeys. Destruction proceeded in ventral direction, posterior columns being affected first and ventral tracts last. Monkeys are more resistant than cats to the radon implants. BA 6-24772.

3184

ANALGESIC PROPERTIES OF THE X-RAY. L. J. Carter. Radiology 12(1), 27-34(1929). BA 6-24773

3185

THE ACTION OF ROENTGEN RAYS ON THE LARVAE OF BUFO VULGARIS. Francesco Olivieri. Monit. zool. ital. 40(11/12), 442-4(1930).

Toad eggs were x rayed at 3 developmental stages. Segmentation proved to be least resistant to damage. Specific reaction characteristics were apparent in various germ layers during gastrulation. The neural groove stage was most resistant to radiation. Histological changes were dependent on increased ionic dissociation of molecules. Osmotic pressure of cells was increased. BA 6-24779

3186

A MAXIMUM POINT IN AN EFFECT OF PROLONGED X-RAY IRRADIATION UPON DROSOPHILA LARVAE. Robert Tennant, Jr. Science 73, 567-8(1931).

Different lots of larvae were irradiated for periods of 35-245 min. by intervals of 35 min. Maximum prolongation of prepupal period was produced by interval 35-

105 min. Decline, followed by attainment of level plateau, resulted from greater exposures. BA 6-24783

3187

THE INFLUENCE OF THE IRRADIATION OF THE HYPOPHYSIS UPON THE FEMALE GENITALS. S. Suzuki. Japan. J. Obstet. Gynecol. 14(5), 393-99(1931).

In 9 of 15 mature rats, x irradiation of hypophysis in varying total and divided dosages lengthened the sexual cycle. In immature rats, growth and development were markedly checked but no great change in estral period resulted. Result of hypophysis irradiation followed by hysterectomy of female rats is described. BA 6-24911.

3188

THE RADIOSENSIBILITY OF HUMAN LYMPHOSARCOMAS, DETERMINED BY HETEROLOGOUS TRANSPLANTATION. Carl Krebs and Fanny Busch. Acta Radiol. 12(4), 395-400(1931).

Results of study with mice indicates that the lethal x ray dose for lymphosarcoma is 2 E. D., as it is for mouse lymphosarcoma, and that both are much more sensitive than ordinary sarcoma or carcinoma. BA 6-25022

3189

EFFECT OF X RAYS ON SPECIFIC IMMUNE BODIES. Alexander Lusztag. Centr. Bakteriolog., Parasitenk. Abt. I. Orig. 111(4/5), 244-66(1929).

Effect of x rays on specific antibodies depends on: intensity of the rays, duration of radiation in relation to antigen-antitoxin incorporation; specific antigen and antitoxin and on individual sensitiveness to x ray stimulation. In warm-blooded animals, complement may be damaged by irradiation in vitro or in vivo, but precipitins are relatively radioresistant. BA 6-25079.

3190

STUDIES ON THE DETERMINATION OF RADIUM ELEMENTS IN PLANTS. E. Burkser, W. Kondoguri, W. Milgewska, and K. Bronstein. Biochem. Z. 233(1/3), 58-61(1931) In German.

Analyses of various seed and other plant parts for Ra, K, Rb, and Th give highest Ra content in Ruppia, oak leaves, and Hibiscus. Ra, Th and Rb were present in about the amount normally found in sea water. BA 6-34558

3191

THE INHIBITION OF COLONY GROWTH UNDER THE INFLUENCE OF LIGHTS. K. von Berde. Arch. Dermatol. u. Syphilis 158(1), 35-50(1929). (In German).

Effects of direct sunlight, 32 candle power lamps of various colors, a quartz lamp and x-rays on Microsporon audouinii, Achorion schoenleini, Sporotrichon beurmanni and Oidium albicans when grown on ordinary maltose agar and a maltose agar sensitized by addition of eosin or an acridine derivative of tryptaflavin, were studied. Effects of irradiating media before inoculation differed from effects of direct irradiation of the cultures. BA 6-24670.

3192

STUDY OF THE ACTION OF X RAYS ON GERMINATING SEEDS. S. Lallemand. Arch. phys. biol. 8(2), 53-81 (1930). (In French).

X rays (0.13-0.25A) produced in coolidge tube were administered in varying doses. 100 r or less did not accelerate germination of dry or soaked seed, nor growth of seedlings; 100-300 r retards growth, 300 r may cause death. Radiosensitivity is related to the physicochemical structure of cells (hydration, chemical composition). BA 6-24677.

3193

EFFECTS OF β AND γ RAYS OF RADIUM ON THE CHONDRIOSOMES OF PLANT CELLS. P. F. Milovidov. Acad. Tchèque Sci. Bull. Internat. Res. Trav. Pres. Cl. Sci. Math., Mat. et med. 30, 139-49(1929). (In French).

Roots of Pisum sativum were exposed to Ra rays. Results indicate that chondriosomes are much more resistant to these rays than is the nucleus. BA 6-24678.

3194

INVESTIGATION OF THE BIOLOGICAL EFFECT OF CATHODE RAYS. I. INTRODUCTION. B. Rajewsky. Strahlentherapie 42(1), 1-5(1931). (In German).

The essential character of cathode rays and their exact application in biological experiments are discussed. BA 6-24781.

3195

THE EFFECT OF ROENTGEN RADIATION OF THE SYMPATHETICS OF THE EYE. (CONTRIBUTION TO THE QUESTION OF THE EFFECTS OF ROENTGEN RAYS ON THE VEGETATIVE NERVOUS SYSTEM.) Hans Salinger and Rudolf Thiel. Strahlentherapie 42(1), 96-112 (1931). (In German)

Effect of x raying the vegetative nervous system was studied by irradiating superior cervical ganglion and cilio-spinal center in 6 subjects with normal intraocular pressure and 15 with glaucoma (one or more courses of 1/3 ESD per session in not more than 3 sessions at 8-day intervals.) BA 6-24782

3196

PRELIMINARY RESULTS OF EXPERIMENTS IN X-IRRADIATION FOR CARAUSIUS (DIXIPPUS) MOROSUS BR. AND REDT. C. Toumanoff and S. Veretennikoff. Bull. biol. France et Belg. 64(4), 495-510(1930). (In French).

Insects were exposed to Al-filtered 75,000 volt x rays for 10-60 min, distance of 23 cm. Irradiation for 10 min produced no effect, for 20-30 min: variation from no effect to complete castration, for 40 min: growth of young animals was retarded, no effect on older ones. Histological study indicated that sex cells were most sensitive to x rays. BA 6-24784

3197

INFLUENCE OF RADIUM EMANATION AND OF CERTAIN RADIOACTIVE METALS ON EXPERIMENTAL RICKETS. J. Y. Pourbaix Maisin and W. Mund. Bull. acad. roy. med. Belg. 10(7), 430-40(1930). (In French).

Experiments on rats maintained on rickets-producing diet showed equal preventive and curative effects from Ra-irradiated and ultraviolet irradiated ergosterol. Similar experiments with radioactive water and with Ra emanation dissolved in paraffin gave negative results. Results of inhalation of Ra emanation and injection of colloidal uranium and thorium are also described. BA 6-24871.

3198

FATAL PULMONARY FIBROSIS IN AN INDUSTRIAL RADIUM EXPOSURE. T. H. Belt. Frankfurt. Z. Pathol. 42(1), 170-87(1931). (In German).

Author presents the case history of a chemist who filled Ra needles in factory for 4 yr. and developed diffuse interstitial fibrosis of both lungs, apparently as a result of inhaling volatile fractions of the radioactive salts. BA 6-24982.

3199

SERUM REACTION STUDIES ON THE (AMINO ACID) DECOMPOSING ABILITY OF CANCER PATIENTS AND THE CHANGE FOLLOWING THERAPEUTIC RONTGEN RADIATION. Otto Heinrich Bucher. Strahlentherapie 29(1), 71-107(1928). (In German).

Author presents a comprehensive review of various serum reactions used for diagnosis of carcinoma, with discussion of their limitations. Relation of x ray action to the tests is outlined. BA 6-25013.

3200

WILHELM CONRAD RÖNTGEN AND THE HISTORY OF

RÖNTGEN RAYS. WITH A PERSONAL CONTRIBUTION ABOUT W. C. RÖNTGEN BY MARGARET BOVERL. Otto Glasset. Berlin, Julius Springer. 1931. 337p. (In German). BA 7-75.

3201

EXPERIMENTALLY INDUCED ALTERATIONS OF THE MORPHOLOGY OF CHROMOSOMES. G. Lewitzky, A. Araratian, J. Mardjanishvili, and H. Shelpelava. *Am Naturalist* **65**, 564-7(1931).

Exposure of seedlings of *Secale cereale* and *Crepis capillaris* to x rays and of *C. capillaris* to dilute alcohol caused fragmentations, losses of parts, and transpositions of parts of chromosomes. Similar sudden alterations of chromosome morphology may occur in evolution. BA 7-302.

3202

EFFECT OF RÖNTGEN RAYS ON MEIOSIS IN WHEAT. T. W. Plotnikowa. Z. Zucht. Reihe A. Z. Pflanzenzucht. **16**(4), 662-7(1931). (In German).

Heads of wheat undergoing meiosis were x rayed (Coolidge tube with Wolfram anticathode K. V. 50, MA 5, A1 filter 1 mm., 25 cm.) Treated material showed chromatin to be clumped or drawn out to some extent along spindle threads. Chromatin drops were found in plasma. Multinucleated cells and tetrads were variously formed. The observed effects were lethal. BA 7-318.

3203

THE EFFECTS OF X-RAYS ON FERTILITY IN *DROSOPHILA MELANOGASTER* TREATED AT DIFFERENT STAGES IN DEVELOPMENT. W. G. Moore. *Biol. Bull.* **62**(3), 294-305(1932).

Irradiation of adults reduced fertility of males 42%, females 16% corresponding reductions after irradiation of larvae 72-84 hr old: males 28% females 15% larvae 24-36 hr old: m 34%, females 0%. Exposure of early larval stages resulting in appreciable degree of sterility regardless of sex. All reductions in fertility transient. BA 7-389

3204

THE (ANIMAL) EXPERIMENTAL BASIS OF THE QUESTION OF LATE INJURY DUE TO RÖNTGEN RAYS. Ludwig Nurnberger. *Strahlentherapie* **37**(3), 432-90(1930). (In German).

Author finds no proof of late injury by x rays in this. Reviews of the subject. BA 7-391

3205

CONTINUOUS VERSUS INTERRUPTED IRRADIATION AND THE RATE OF MUTATION IN *DROSOPHILA*. J. T. Patterson. *Biol. Bull.* **61**(2), 133-8(1931).

Results of this study indicate that rate of mutation, as measured by number of sex-linked lethals produced, is the same whether treatment is given in one dose or in several fractional doses. BA 7-392.

3206

EXPERIMENTAL HEPATOSPLENOGRAPHY, OSTEOMYELOGRAPHY AND NEPHROGRAPHY INTRODUCTION OF A COLLOID, "THOROTRAST," INTO THE ORGANISM. ANATOMICAL RADIOLOGICAL STUDY. Silviye Kadrnka and Jean Rossier. *Acta Radiol.* **12**(4), 369-87(1931). (In French).

"Thorotrast," in small doses, accumulated in liver and spleen, rendering them opaque to x rays in 8 rabbits receiving the material by intravenous injection. Larger doses, required to show kidney and bone marrow, injured hepatic parenchyma and renal glomeruli. Refrangent granulation was observed in reticulum cells on slides of spleen and liver and marrow. BA 7-557.

3207

INFLUENCE OF RADIATION ON METABOLISM OF REGENERATING RAT LIVER. p.225-36 in CIBA FOUNDATION SYMPOSIUM ON IONIZING RADIATIONS AND CELL METABOLISM. Barbara E. Holmes. Wolstenholme, G. E. W. and C. M. O' Connor, eds.

Little, Brown and Co. Publishers 1956. Influence of Radiation on Metabolism of regenerating Rat Liver. p. 225-236.

DNA and RNA synthesis and the mitotic process were studied in the rat liver exposed to various doses of x ray at various times relative to partial extirpation of the liver. Other studies made on the regenerating tissue included determination of fat content and glucose oxidation. Results were compared with observations on the same biochemical processes in a transplantable mouse carcinoma.

3208

ON THE DISAPPEARANCE OF LYMPHOCYTES FROM THE BLOOD FOLLOWING EXPOSURES TO X-RAYS AND RADIUM. J. C. Mottram. *J. Pathol. Bacteriol.* **34**(6), 800-1(1931).

Evidence is presented demonstrating that, after irradiation, lymphocytes stick in radiated capillaries and later wander into surrounding tissues. BA 7-606.

3209

ANATOMICAL AND FUNCTIONAL CHANGES IN THE RÖNTGEN RADIATED KIDNEY. R. Enger and P. Preuschoff. *Virchow's Arch. pathol. anat. u. Physiol.* **283**(2), 489-512(1932). (In German).

Both kidneys of 4 dogs were exposed to 5.8-21 E. D. in 16 mo. as successive doses of 60-140% E. D. at intervals of 8 days to 3 mo. Clinical signs and progressive changes in kidney function studies are described. Two dogs developed blood pressure elevations. Histological changes observed at autopsy included contraction of kidneys, tubular changes and occasionally hyalinization of glomeruli and endarteritis. BA 7-757.

3210

BLOOD CHANGES IN THE LEUKEMIAS AND THE LYMPHOMATA AND THEIR BEARING ON ROENTGEN THERAPY. Raphael Isaacs. *Am. J. Roentgenol.* **24**(6), 648-56(1930).

Author concludes that roentgen irradiation stimulates primitive myeloblasts and lymphoblasts to rapid reproduction. Myelocytes and small lymphocytes are stimulated to finish their life history and then die or are excreted. Latent period between exposure and loss of cells represents period of maturation and development of cells to senility. Interpretations of other observations are also presented. BA 7-1012

3211

RESISTANCE OF DENGUE VIRUS. R. L. Holt, Wm. D. Fleming, and J. H. Kintner. *Philippine J. Sci.* **46**(4), 601-9(1931).

Aedes aegypti shows much greater resistance to effects of ultraviolet or x ray than does man. Unlike some bacteria and fungi, dengue virus is apparently not adversely affected by relatively large amounts of x ray or ultraviolet, giving little therapeutic promise for the radiations. BA 7-1283

3212

THE CYTOLOGICAL EXPRESSION OF CHANGES IN GENE ALIGNMENT PRODUCED BY X-RAYS IN *DROSOPHILA*. H. J. Muller and T. S. Painter. *Am. Naturalist* **63**, 193-200(1929).

Descriptions of frequently-occurring translocations and their detection by genetical tests are presented. BA 7-2605.

3213

PARALLEL CYTOLOGY AND GENETICS OF INDUCED TRANSLOCATIONS AND DELETIONS IN *DROSOPHILA*. T. S. Panter and H. J. Muller. *J. Heredity* **20**(6), 287-98(1929).

X rayed chromosomes show a marked tendency to break in one or more places and unite more or less randomly with other fragments. Inversion deletion, duplication and translocation are described. BA 7-2610.

3214

THE EFFECTS OF X-RAYS, ULTRA-VIOLET LIGHT, AND HEAT IN PRODUCING SALTANTS IN CHAETOMIUM COCHLIOIDES AND OTHER FUNGI. Hugh Dickson.

Ann. Botany (London) 46, 389-405(1932).

Development of Mucor genevensis, Phycomyces blakesleeana and C. cochliodes after various treatments is described. Effect of separate ions produced by rays on particular nuclear constituents is suggested as a possible cause of saltation. BA 7-2643

3215

COMPARISON OF THE BIOLOGICAL EFFECT OF RÖNTGEN AND GAMMA RAYS. R. Braun. Strahlentherapie 38(1), 11-18(1930). (In German).

Anaerobic cultures of Ascaris eggs were irradiated with x and γ rays (radium). Equal doses of x rays and radium applied to legs of 12 patients elicited the same type of skin reaction for the two types of radiation. BA 7-2890.

3216

TISSUE RESPIRATION AFTER RÖNTGEN RADIATION. EXPERIMENTAL STUDIES OF LIVER AND KIDNEY. J. Heeren and J. Pansdorf. Strahlentherapie 42(2), 307-27 (1931). (In German).

Rats and mice were irradiated over the abdomen (185 KV, 5 ma., 0.5 mm Cu filter, 30 cm T.S.D., 100% erythema or 550 r, 19 min.). Increased oxidation of liver and kidney in Ringer's solution, not in horse serum, was observed after exposure. (Measured by Warburg technique). BA 7-2891.

3217

STUDIES OF THE EFFECT OF ROENTGEN RAYS ON THE TIME OF THE FIRST CLEAVAGE IN SOME MARINE INVERTEBRATE EGGS. I. RECOVERY FROM ROENTGEN-RAY EFFECTS IN ARBACIA EGGS. P. S. Henshaw. Am. J. Roentgenol. Radium Therapy 27(6), 890-98(1932).

Interval between fertilization and 1st cleavage was prolonged by x irradiation before fertilization. Delay is a function of dose. A recovery process with an exponential rate begins immediately after exposure. Recovery rate is independent of magnitude of radiation effect. BA 7-2892.

3218

EFFECT OF RADIUM EMANATION ON THE HISTOCYTE IN THE LIVER OF THE WHITE RAT. G. M. Higgins and J. C. T. Rogers. Am. J. Pathol. 8(3), 355-65(1932).

Gold radon seeds, 3 mm long and 0.6 mm in outside diameter implanted in liver of rats destroyed parenchymal cells and local histocytes, and interrupted the characteristic foreign body reaction pattern observed in control lesions produced by non-radioactive gold seeds. Various stages of reaction to radon seeds are described. BA 7-2893

3219

ON A DIVERGENCE BETWEEN THE BIOLOGICAL AND GAMMA RAY EFFECTIVENESS OF RADIUM TUBES. S. Russ and G. M. Scott. Lancet 222, 82-3(1932).

Electroscopic measurement and comparison of radiation from 3 tubes of Ra having walls of Pt 2 mm, 0.6 mm and 0.3 mm thick respectively, showed widely different γ ray activities. Differences in biological effects are believed due to differences in β rays emitted from Pt containers due to bombardment by γ rays. BA 7-2896

3220

STUDIES ON THE EFFECT OF RÖNTGEN RAYS ON BIOLOGICAL TISSUES. RÖNTGEN MEASUREMENT STUDY OF THE MECHANISM OF THE BIOLOGICAL EFFECT OF RÖNTGEN RAYS. J. Schechtmann and W. Klupfel. Strahlentherapie 43(4), 792-5(1932). (In German).

Frog eggs were x irradiated (400 to 72,000 r) 10 min. - 2 hr after fertilization. While 400 r considerably

affected vital processes and killed eggs within 24 hrs, none of the doses given stopped cell division instantaneously. BA 7-2897

3221

EXPERIMENTAL OBSERVATIONS WITH LOW DOSE RADIATION. W. R. Spurrell. Brit. J. Exptl. Pathol. 12(6), 402-7(1931).

Mouse skin, rabbit lung and experimental embryomata in rabbits were exposed to doses of Ra radiation below traumatic limit. No evidence of any increase in growth activity as a result of treatment was found. The tissues selected for study had all been found capable of a hyperplastic response to other agents. BA 7-2899

3222

LIVER FUNCTION AND BLOOD FERMENTS. I. ON BLOOD AMYLASE IN EXPERIMENTAL HEPATIC DAMAGE. Tokusaburo Tomioka. J. Gastroenterol 3(9), 1093-1106 (1928/29). (In Japanese).

After experimental hepatic damage in rabbits provoked by chloroform, CCl_4 , P, x rays, and ligation of common bile duct, blood amylase increased slightly, then fell below normal. BA 7-3035.

3223

LIVER FUNCTION AND BLOOD FERMENTS. III. ON THE BLOOD CATALASE IN EXPERIMENTAL HEPATIC DAMAGE. Tokusaburo Tomioka. J. Gastroenterol. 3(11), 1391-1440(1928/29).

Partial excision of the liver, x rays, ligation of common bile duct and P poisoning in rabbits decreased blood catalase; chloroform and CCl_4 increased it. The observed phenomena may be provoked by altered metabolism following changes in hepatic functions. BA 7-3035.

3224

THE EFFECT ON A SUBSEQUENT PREGNANCY AFTER X-RAYING ONE OVARY OF A RAT FOLLOWING REMOVAL OF THE NORMAL OVARY DURING THE COURSE OF GESTATION. R. I. Pencharz and J. A. Long. Am. J. Anat. 50(1), 1-8(1932). BA 7-3130

3225

CICATRIZATION AND REGENERATION. Jacques Millot. Paris, Armand Colin. 1931. 202p. (In French).

Historical review of literature on regeneration is presented, followed by survey of experimental work on regeneration in various phyla. Regenerative process is correlated with histological changes in wound healing. Effects of external factors, including radiations, are described. BA 7-3154

3226

THE INCREASED METABOLISM OF THE SARTORIUS MUSCLE OF THE FROG FOLLOWING EXPOSURE TO ROENTGEN RADIATION. Wallace O. Fenn and W. B. Latchford. Am. J. Physiol. 99(2), 454-62(1932).

In 22 of 25 experiments a permanent 31% increase in O consumption was seen in frog sartorius muscles in vitro after intense irradiation with high-voltage unfiltered x rays. Possibility of contraction was excluded by careful insulation and recorded measurements of muscle length during exposure. Observed effect was probably the result of injury to muscle rather than a specific effect upon oxidation. BA 7-3261.

3227

HETEROLOGOUS TRANSPLANTATION FROM MAN TO RÖNTGEN RADIATED ANIMALS. C. Krebs and F. Busch. Z. Krebsforsch. 34(2/3), 234-44(1931). (In German).

A number of allegedly successful attempts at hetero-transplantation of human malignant tumors to intensively x rayed rats and mice are described. Growths so obtained, although they showed definite infiltration into tissues of new host, were of temporary character, and were ultimately absorbed. BA 7-3458

3228

THE EFFECT OF RADIATION ON THE RESISTANCE OF CHICKENS TO FOWL CHOLERA. D. D. Donahue. *Am. J. Hyg.* 15(1), 206-31(1932).

Chickens exposed to x rays for 15-30 min and inoculated 1 hr later with *Pasteurella avicida* were less resistant to the disease than were controls. BA 7-3558.

3229

EFFECTS OF HEAD X-IRRADIATION IN RABBITS ON AORTIC BLOOD PRESSURE, BRAIN WATER CONTENT AND CEREBRAL HISTOLOGY. H. B. Gerstner, P. M. Brooks and F. S. Vogel. *Federation Proc.* 15, 72-73 (1956).

During the 3 hour post-irradiation period, severe epileptoid seizures were observed. Continuous blood pressure recording revealed a marked hypotension developing about 30 min after the start of irradiation. The specific gravity of the irradiated brains was 1.0345 as compared with 1.0363 for non-irradiated controls. Water content was 80.4% as opposed to 78.4%.

3230

EFFECT OF X-RADIATION ON THE SPERMATOGENESIS OF *LEPISMA DOMESTICA*. R. N. Mukerji. *Proc. Roy. Soc. (London)* B105, 429-45(1929).

Golgi bodies and archiplasma of male germ cells swell and fuse and mitochondria of spermatids are destroyed by x irradiation. Sperm are the most resistant of germ cells, and a few apparently normal ones may persist. BA 7-5121.

3231

THE BAROID MUTATION IN *DROSOPHILA MELANOGASTER*. T. Dobzhansky. *Genetics* 17(4), 369-92(1932)

New mutation from wild-type to bar occurring in X chromosome of x-rayed wild-type male are described. New allelomorph (baroid) behaves as recessive allelomorph of wild type and of bar; appearance is associated with translocation involving breakage of X chromosome at locus of bar, breakage of 2nd chromosome near locus of vestigial, and exchange of fragments. BA 7-5130.

3232

RAY INTENSITY AND BIOLOGICAL EFFECT. (STUDIES ON PROTOZOA BY MEANS OF VITAL STAINS.) Carl Hoffmann. *Strahlentherapie* 43(1), 140-59(1932). (In German).

Excessive intracellular storage of certain stains (produced by the effect of x rays on *Opalina ranarum*) was studied for various conditions of radiation. No qualitative, quantitative or chronological differences in effect produced by equal doses of hard or soft rays were noted. Author assumes equal quantities of x rays of different wave lengths produce identical biological effects. BA 7-5356.

3233

SKIN REACTIONS TO INTRAMUSCULAR INJECTION OF RADIUM-E. P. Zadik. *Dermatol. Wochschr.* 94(12), 415-16(1932). (In German).

Following intramuscular injection of bismuth isotope Radium E, small round areas of pigmentation appear at site of injection after several weeks. Pigmented areas are similar to those found after local applications of x or γ rays without erythema. BA 7-5359

3234

PROTECTIVE MEASURES AGAINST DANGERS RESULTING FROM THE USE OF RADIUM, ROENTGEN AND ULTRA-VIOLET RAYS. Hermann Wintz and Walther Rump. *League of Nations, Geneva, Switzerland, 1931.* 114p. BA 7-5421

3235

HISTOLOGICAL STUDIES ON THE EFFECT OF RÖNTGEN RAYS ON THE HEMATOPOIETIC ORGANS. Masateru

Takaizumi and Yuji Ono. *Trans. Japan. Pathol. Soc.* 18, 161-5(1928).

X rays have a destructive effect on hematopoietic organs, particularly on lymphatic and myelocytic cells. Erythrocytes and erythroblasts are somewhat resistant. Regeneration begins a few weeks after exposure and is promoted by transfusion. After partial body exposure, the shielded marrow shows compensatory activity. Detailed descriptions of changes in hematopoietic and other organs are presented. BA 7-5862.

3236

THE INFLUENCE OF X-RAY LESIONS OF THE INTESTINAL MUCOSA ON ABSORPTION OF GLUCOSE AND OTHER SUGARS. K. W. Buchwald. *J. Exptl. Med.* 53(6), 827-33 (1931).

Sublethal x ray dose (5 ma. 140 kvp, 2.5 mm, Al, 25 cm. S.T.D.) was applied over abdomen of rats and over thorax for control purposes. 20 hr postirradiation, glucose absorption rate was reduced 19.4%, 40 hr postirradiation the rates of glucose, fructose and mannose absorption were diminished 56.5%, 36.6% and 60%, respectively. Despite decrease in absolute amounts absorbed, relative rate of absorption of the three remained nearly unchanged. BA 7-5898

3237

CONTRIBUTION TO THE STUDY OF THE EXPERIMENTAL PRODUCTION OF MALIGNANT TUMORS BY MEANS OF RADIOACTIVE SUBSTANCES. Fr. Daels and R. Biltris. *Bull. assoc. Franc. etude cancer* 20(1), 32-77(1931). (In French).

Malignant tumors were produced by introduction of foci of irradiation (paraffin plugs or glass tubes of, or threads containing Ra) into several hundred experimental animals (white rats, white mice, guinea pigs). BA 7-5910.

3238

ON THE EFFECT OF LIVER DAMAGE ON SERUM AMYLASE. Tanichi Kameo. *Fukuoka Ikwaigaaku Zasshi* 25(3), 514-22(1932). (Japanese with German Abstract)

By injecting rabbits with hepatotoxin or by radiating the liver region (hip in control) with hard rays it was found that the amylase in the serum distinctly decreased, a shorter exposure increased it. BA 7-5949.

3239

BIOCHEMICAL INVESTIGATION OF THE BLOOD IN CASES OF EXPERIMENTAL DISTURBANCE OF LIVER FUNCTION. I. LIVER FUNCTION AND CARBOHYDRATE METABOLISM. Tsunejiro Sawada. *Japan. J. Gastroenterol.* 2(4), 191-202(1930).

Following experimental liver damage, including that due to x-irradiation, blood sugar curves were studied after administration of 5 gm of glucose per Kgm body weight (rabbits). BA 7-6040.

3240

THE EFFECT OF "LOW-VOLTAGE" X-RAYS ON THE ELECTROPHORETIC MIGRATION VELOCITY, VIABILITY AND pH OF *ESCHERICHIA COLI* SUSPENSIONS. K. P. Dozois, R. P. Tittsler, M. W. Lisse, and W. P. Davey. *J. Bacteriol* 24(2), 123-32(1932).

Total radiation from Coolidge x ray tube at 30 Kv (no filters), with exposures as great as 3000 ma minutes at 15.2 cm. target-culture distance, produced no detectable changes in electrophoretic migration velocity, viability or pH of aqueous suspensions of *E. coli*. BA 7-6406.

3241

EFFECT OF IRRADIATION FROM P^{32} ON GLYCOLYSIS OF RAT LIVER. J. D. Perkinson and C. C. Irving. *Radiation Research* 5, 589(1956).

Anaerobic glycolysis was measured in livers of male rats 2, 24, 48, 72, and 96 hours, and 1 and 2 weeks

after intraperitoneal injection of P^{42} in doses ranging from 0.5 $\mu\text{C/g}$ body wt. to 10.0 $\mu\text{C/g}$. Dose of 5 $\mu\text{C/g}$ depressed liver respiration about 35% and inhibited anaerobic glycolysis 50% within 24 hours after injection. Results suggest that the observed effect on respiration may be secondary to effect on glycolysis or that both changes are secondary to some other, more fundamental, change.

3242

THE INFLUENCE OF ULTRA-VIOLET RAYS, X RAYS AND TEMPERATURE ON THE GERMINATION OF ZEA Mays. R. C. Malhotra. J. Indian Botan. Soc. 11(1): 1-27(1932).

Short exposures of dry seed of Golden Bantam and Shawnee to ultraviolet (253 m μ wave length) increased % germination and subsequent growth. Results were not uniform. Harmful effect occurred following all x ray exposures. BA 7-7794.

3243

EFFECTS OF ELECTROMAGNETIC WAVES ON FUNGI. Frank H. Johnson. Phytopathology 22(4), 277-300(1932).

X rays apparently had no effect on the fungi C. Dryophila, F. batatatis and S. bataticola. Gamma and β rays slightly retarded growth and development. More than 1500 cultures of the 3 fungi were studied to identify and compare effects of γ rays, x rays, Schumann rays, U-V visible light, infra-red and Hertzian waves. BA 7-7845.

3244

STUDY OF THE ACTION OF X RAYS ON THE DEVELOPMENT OF PLANTS. S. Lallemand. Arch. Electr. Med. 38, 28-33, 126-40, 179-90, 232-9, 256-66, 349-61, 468-75, 516-23 (1930). (In French).

Beans, lentils, turnips, cress and millet were exposed to various x ray doses in study of germination, growth, lethal dose, and temperature effects. BA 7-7847

3245

THE ACTION OF RADIOACTIVITY ON THE GERMINATION OF BULBS. D. Montet. Compt. rend. 194, 1093-5(1932). (In French).

Four hyacinth bulbs exposed every 4 days to emanations from radioactive water germinated more quickly the greater the dosage, sprout growth was also accelerated. Tulip bulbs grown in earth containing 0.5 gm uranium oxide/1500 gm. soil grew more rapidly than those in earth containing 5 or 10 gm/1500 gm and more rapidly than those in soil with no added radioactivity. BA 7-7848

3246

IN SUPPORT OF CASPARL'S NECROHORMONE HYPOTHESIS AS A NATURAL LAW. Y. Nakashima. Z. Krebsforsch. 35(4), 365-71(1932). (In German).

Author postulates that effects of secondary biological reactions induced by x rays show wave-like chronological variations. Such variations in serum content and excretion of Ca, N and K salts in x rayed animals are described. BA 7-8079

3247

THE EFFECT OF X-RAYS ON THE GASEOUS METABOLISM OF A CLADOCERAN. Vasil Obreshkove and A. J. King. Physiol. Zool. 5(3), 457-71(1932).

X rays (of relatively soft and intermediate range, average wave length 0.712 A; 164, 251, 327 and 404 r/min at 30 KV and 1 hr exposure) were applied to Simocephalus vetulus. With increasing intensity of radiation, there was a proportional decrease in gaseous metabolism. BA 7-8080.

3248

A CHANGE IN THE MORPHOLOGY OF A CLADOCERAN EFFECTED BY X-RAY TREATMENT. Vasil Obreshkove and A. J. King. Physiol. Zool. 5(3), 472-8(1932).

In every individual (S. vetulus x rays produced) invagination of the upper portion of the brood chamber. Radiosensitivity is believed to be related to degree of cellular activity with regard to secretory processes. BA 7-8081

3249

EFFECT OF SPINAL X-RAY IRRADIATION AT THE LEVEL OF THE 6TH, 7TH, AND 8TH DORSAL VERTEBRAE, ON GASTRIC SENSATION AND SECRETION. Carlo Chinaello. Clin. Chirur. 34(4), 371-85(1931).

In 5 of 8 patients, free HCl was markedly increased by spinal irradiation: pepsin was unaffected. In 2 cases HCl increased, total acidity remained unchanged. BA 7-8326

3250

BISMUTH AS A VEHICLE IN TUMOR TREATMENT. P. Zadik. Z. Krebsforsch. 35(1), 78-88(1931). (In German).

Water-soluble Bi salts show elective deposition in tumor tissues as does Radium-E. By suitable apparatus author believes it may be possible to use deposited Bi to absorb gaseous radium emanation. Trypan-blue, isamin-blue, and rose-bengal might be used similarly. BA 7-8625

3251

THE OCCURRENCE OF MALIGNANCY IN RADIOACTIVE PERSONS. A GENERAL REVIEW OF DATA GATHERED IN THE STUDY OF THE RADIUM DIAL PAINTERS, WITH SPECIAL REFERENCE TO THE OCCURRENCE OF OSTEOGENIC SARCOMA AND THE INTERRELATION OF CERTAIN BLOOD DISEASES. Harrison S. Martland. Am. J. Cancer 15(4), 2435-2516(1931). BA 7-8655.

3252

ON THE ANALYSIS OF TUMOR RESISTANCE. I. ENZYME STUDIES. II. RELATION BETWEEN LIPASE ACTIVITY, CYTOLOGICAL REACTION AND AUTOLYSIS. N. Waterman. Z. Krebsforsch. 34(4), 313-332(1931). (In German).

Author proposes that the cancer cell has increased permeability, increased electrical conductivity and decreased polarization, and that all these can be reversed by increasing Ca^{++} concentration or by irradiation. The properties are attributed to intracellular lipid levels and to active or available lipases. Organ extracts (especially of spleen) can induce tumor resistance in recipient animals and are believed to owe their effectiveness to their high level of lipases. X rays also influence the enzyme level and activity.

3253

EFFECT OF WEAK DOSES OF RADIATION ON THE SUPRARENAL GLANDS OF THE MALE RAT. J. LaFargue, J. Schiller, E. Tyan and S. Pitoy. Ann. Endocrinol. (Paris) 14, 422-24(1953).

Authors describe an increase in volume of adrenal cortex with doses less than 800 r in mice.

3254

X-RADIATION AND REGENERATION IN AMBLYSTOMA. Elmer G. Butler. Science 74, 100-1(1931).

Daily x ray exposures of 3-5 min (65 KV, 7 MA, 25 cm focal distance) inhibit regeneration of forelimb of Amblystoma at any stage of limb development, growth continues but not differentiation. Unmutilated appendages differentiate normally under the same x ray exposures. BA 7-9446.

3255

HEREDITARY RADIUM-INDUCED VARIATIONS IN THE TOMATO. E. W. Lindstrom. J. Heredity 24(4), 128-37(1933).

Six heritable, recessive variants were induced by radium-needle treatment (4 arose from irradiation of young growing tips, 2 from radiated seeds). Of these, 3 affected chlorophyll characters, 2 morphological characters and 1 caused sterility and stunting of entire plant. BA 8-159

3256

EXPERIMENTS ON THE CONTROL OF SEED-BORNE

DISEASES BY X-RAYS. W. R. Tascher. J. Agr. Research 46(10), 909-15(1933).

Wide range in tolerance of fungi in culture to X rays was noted. Decreasing order of tolerance of fungi used: *F. moniliforme*, *C. acremonium*, *G. saubinetii*, and *D. Zeae*. X ray treatment failed to kill parasite-infested seeds. Some control of parasite was noted when germinating seeds were used. BA 8-345.

3257

THE RELATION OF INTENSITY OF RADIUM RADIATIONS TO TISSUE REACTION USING A SEGMENT OF A GROWING MOUSE TAIL AS A BIOLOGICAL INDICATOR. Halsey J. Bagg and C. Robert Halter. Am. J. Roentgenol. Radium Therapy 27(1), 1-13(1932).

Variation of time factor in β radiation did not alter effect of equal doses. Similar effects were obtained with γ rays except for cases where lower intensities were used. Differences are probably due to arrested tissue growth during long treatment. Intensity was varied by ratios of 920:1 to 9:1. Tissue changes used as major criteria of effect were; linear growth, constriction, epilation and amputation. BA 8-520.

3258

THE RELATIVE EFFECTS PRODUCED BY 200 kv. ROENTGEN RAYS, 700 kv. ROENTGEN RAYS, AND GAMMA RAYS. III. COMPARISON BASED ON EFFECTS ON *DROSOPHILA* EGGS AND ON WHEAT SEEDLINGS. P. S. Henshaw, C. T. Henshaw, and D. S. Francis. Am. J. Roentgenol. Radium Therapy 29(3), 326-33(1933).

Roentgen rays of 165 KU and 700 KV were equally effective in producing mortality in *Drosophila* eggs, but γ rays were 32% more effective in producing effects on wheat seedlings. BA 8-522.

3259

THE RELATIVE EFFECTS PRODUCED BY 200 KV. ROENTGEN RAYS, 700 KV. ROENTGEN RAYS, AND GAMMA RAYS. IV. COMPARISONS BASED ON CHANGES PRODUCED IN MAMMALIAN TISSUES WITH 200 KV. ROENTGEN RAYS AND GAMMA RAYS. Halsey J. Bagg and C. Robert Halter. Am. J. Roentgenol. Radium Therapy 29(3), 334-42(1933).

Biological changes in the rabbit ear and growing mouse tail exposed to 200 KV x rays on radiation from a radon bulb varied from epilation to tissue necrosis in this study which was part of a series designed to study the effects of long vs. short wave length x rays. BA 8-522.

3260

THE RELATIVE EFFECTS PRODUCED BY 200 KV. ROENTGEN RAYS, 700 KV. ROENTGEN RAYS, AND GAMMA RAYS. V. COMPARISON BASED ON THE PRODUCTION OF ERYTHEMA IN HUMAN SKIN. James J. Duffy, Robert F. McNattin, Murray M. Copeland, and Edith H. Quimby. Am. J. Roentgenol. Radium Therapy 29(3), 343-5(1933).

Production of erythema on human skin does not agree with results of experiments studying other biological effects or with standard ionization chamber, indicating that skin is more resistant to shorter wave length (higher voltage) radiation. (This is one in a series of related experiments.) BA 8-522

3261

THE RELATIVE EFFECTS PRODUCED BY 200 KV. ROENTGEN RAYS, 700 KV. ROENTGEN RAYS AND GAMMA RAYS. VI. COMPARISON BASED ON CLINICAL OBSERVATION. Robert F. McNattin. Am. J. Roentgenol. Radium Therapy 29(3), 346-51(1933).

Clinical impression is that skin is more resistant to shorter wave length radiation but malignant tissue is not. Selective action of radiation for the 2 tissues is more marked at higher voltages. BA 8-522

3262

THE RELATIVE EFFECTS PRODUCED BY 200 KV. ROENTGEN RAYS, 700 KV. ROENTGEN RAYS, AND GAMMA RAYS. VII. CORRELATION OF EXPERIMENTAL RESULTS. G. Failla. Am. J. Roentgenol. Radium Therapy 29(3), 352-67(1933).

Although isolated biological effects show no differential action of radiation with respect to wave length, author feels this fact does not warrant the generalization that such action does not exist. BA 8-522.

3263

THE SKIN REACTIONS PRODUCED BY ALTERATIONS OF HEAT AND X-RAY AT VARIOUS TIME INTERVALS. James A. Hawkins. J. Exptl. Med. 53(3), 405-11(1931).

Effect of heat (below burn intensity) or soft x rays (suberythermal dose) alone on guinea pig abdomen was slight scaling of skin. Both agents given within 3 hr caused well-marked, persistent burns, within 24 hr, scaling of skin, more marked than that resulting from either agent alone. BA 8-523

3264

ON THE EFFECT OF RÖNTGEN RAYS ON THE ABILITY OF TUMORS TO STORE IODINE AND BISMUTH. THE QUESTION OF COMBINED RÖNTGEN-CHEMOTHERAPY OF MALIGNANT TUMORS. Gosta Jansson. Acta Radiol. 13(5), 533-50(1932). (In German).

Storage of I and Bi was observed in Jensen's sarcoma and Flexner's carcinomata implanted in rats and irradiated (1-3 and 3-5 E. D., i-4 mm Al filter.) Storage of I was decreased 24 hr after large doses; storage of Bi, was increased. BA 8-524

3265

RADIUM STERILIZATION OF THE FEMALE ALBINO RAT (*MUS NORVEGICUS*). Douglas P. Murphy. Surg. Gynecol. Obstet. 49(4), 440-6(1929).

Single exposures of each ovary to 450 millicurie hr or more resulted in permanent sterility in 74% of rats studied. BA 8-526

3266

IRREVERSIBLE MUCOUS MEMBRANE AND VASCULAR CHANGES OF THE URINARY BLADDER IN GYNECOLOGICAL RÖNTGEN AND RADIUM THERAPY. B. Ottow. Zentr. Gynakol. 56(28), 1722-9(1932) (In German).

Basic pathological changes produced in urinary bladder by irradiations (X and Ra) were essentially the same as those in other organs. X ray damage was more uniform but less intense than that produced by radium. BA 8-527.

3267

THE PATHOLOGY OF TOTAL BODY RADIATION IN DOGS WHICH DIED FOLLOWING EXPOSURE TO A LETHAL DOSE. C. A. Gleiser. Am. J. Vet. Research 15, 329-35(1954).

In irradiated dogs there was widespread destructive hemorrhagic and degenerative changes within the lymphoid elements, with practically no evidence of attempts at regeneration. There was also generalized evidence of a hemorrhagic tendency, manifested in the form of petechial, ecchymotic and massive hemorrhages.

3268

THE TIME FACTOR IN THE BIOLOGICAL ACTION OF X-RAYS. I. INVESTIGATIONS ON *DROSOPHILA* EGGS. Rolf Sievert and Arne Forssberg. Acta Radiol. 12(6), 535-51(1931).

Drosophila eggs were x irradiated with 83-220 r given in 3600-2 secs. Death rate was dependent only on total r for intensities over 5 r/min. Some evidence of slight periodic fluctuations of radio-sensitivity with time was observed. BA 8-530.

3269

THE BIOLOGICAL RESPONSE TO GAMMA RAYS OF RADIUM AS A FUNCTION OF THE INTENSITY OF RADIATION. F. G. Spear and L. G. Grimmet. *Brit. J. Radiol.* **6**, 387-404(1933).

Tissue cultures of embryo fowl choroid and sclera were γ -irradiated (3.6 gm Ra), intensity varied by changing target-tissue distance. Biological effect (dose requested to reduce all division by 40%) increased with intensity to a certain critical value, beyond which it remained practically constant. BA 8-531.

3270

X-RAY EXPERIMENTS IN EGG DEVELOPMENT OF *G. VIRIDULA* (COLEOPTERA, CHRYSOMELIDAE). (Russian with German Summary). G. S. Strelin. *Vestnik Rentgenol i Radiol.* **8**(3), 219-22(1930).

Eggs (510 sets) of *G. viridula* were given various x ray exposures. Large doses retarded or killed larvae (lethal dose varies with species). Shortening of normal development period was not observed. BA 8-532.

3271

THE EFFECTS OF ROENTGEN RAYS ON CYTOLOGY AND ABSORPTION FROM EXPERIMENTAL ABSCESSSES. Edwin T. Thorsness. *Am. J. Roentgenol. Radium Therapy* **28**(1), 81-6(1932).

Marked decrease in size was noted in early-irradiated experimental abscesses of rabbits as compared with non-irradiated or those over 5 days old. Absorption of particulate material (but not of true solutions) was markedly increased by early irradiation. BA 8-533.

3272

DEMONSTRATION OF LEUKOCYTE-ATTRACTING MATERIAL IN HUMAN LEUKEMIC BLOOD. C. Hallauer. *Z. ges. exptl. Med.* **76**(3/4), 577-86(1931). (In German).

Leukemic sera stimulate migration of leukocytes in cultures of bone marrow, spleen and blood (positive chemotaxis). Proteoses stimulating such action are absent in aleukemic sera and in x irradiated leukemic sera. Author believes the agents present in leukemic sera are eliologic agents in production of leukemia. BA 8-1030

3273

CHANGE OF BLOOD GROUP IN PATIENTS AFTER X-RAY THERAPY. B. G. Milhailovs'kii. *Ukrainisches Zentr. Blutgruppenforsch* **3**(4), 312-30(1929).

A study was made of 121 patients (malignant growths, benign tumors, bronchial asthma, Basedow's disease, eczema, psoriasis) before and after x irradiation. In a case of lympho-sarcoma, change from blood group I to III is reported to have occurred. BA 8-1196.

3274

ON THE INFLUENCE OF METALLIC RADIATIONS ON THE VIABILITY OF MICROBIAL CULTURES. Humbert Boucher. *Compt. rend. soc. biol.* **109**(15), 1377-8(1932). (In French).

Radiation of Au, Sn and Hg did not attenuate agar cultures of *B. coli*, *Staph.* or anthrax bacillus. Sn and Au prolonged vitality of *B. coli* and *Staph.* BA 8-1460.

3275

SUSCEPTIBILITY OF THE OMENTUM OF RABBITS TO A SINGLE ERYTHEMA DOSE (400 r) OF ROENTGEN RAYS. Nicholas A. Michels. *Am. J. Anat.* **52**(3), 333-95(1933).

Rabbits were sacrificed 5-96 hours after external irradiation over the omental area. Observations on whole-mount preparations showed: destruction of lymphoid cells at 5-45 hours, marked leukocytic infiltrations, disintegration of pseudo-eosinophils (5-18 hr), massive and diffuse hemorrhage (18-65 hr), blood stasis, tortuosity, occlusion and degeneration of capillaries and endothelial

reversion to mesenchyme. This was followed by lymphoid hypertrophy and profuse regrowth of capillaries filled with locally formed lymphocytes (65-77 hr) and progressive growth of connective tissue elements, progressing to fibrosis. BA 8-1923.

3276

NATURE AND SIGNIFICANCE OF STRUCTURAL CHROMOSOME ALTERATIONS INDUCED BY X-RAYS AND RADIUM. Thomas Harper Goodspeed and Priscilla Avery. *Cytologia* **1**(3), 308-27(1930).

Chromosome reorganizations observed in 2nd and 3rd generation progenies derived from X and Ra irradiated *Nicotiana tabacum* are discussed. BA 8-2690.

3277

TRANSLOCATIONS INVOLVING THE SECOND AND FOURTH CHROMOSOMES OF *DROSOPHILA MELANOGASTER*. T. Dobzhansky. *Genetics* **16**(6), 629-58(1931).

Four translocations involving the 2nd and 4th chromosomes were found in progeny of x rayed males. In each instance, a section of 2nd chromosome became broken off and reattached to 4th chromosome. One of the translocations produces a viable duplication. BA 8-2724.

3278

A NEW TYPE OF TRANSLOCATION IN *DROSOPHILA MELANOGASTER*. Marcus M. Rhoades. *Genetics* **16**(5), 490-504(1931).

A translocation involving 2nd and Y chromosomes was produced by x irradiation of a male fly. Observations relative to this translocation are presented in detail. BA 8-2739

3279

THE EFFECTS OF X-RADIATION OF LARVAE IN *HABROBRACON*. Anna R. Whiting and Carey H. Bostian. *Genetics* **16**(6), 659-80(1931).

Treatments of 730-4378 r of x rays given to homozygous male and female larvae. Observations were made of effects on survival, fertility and structural abnormalities induced by the irradiation. BA 8-2747

3280

DOUBLE CATARACT FROM THE APPLICATION OF X RAYS TO THE FACE. B. Adamantiadis and Uranie Rangabi. *Ann. Oculistique* **169**(8), 627-32(1932). (In French).

Patient received 20 H units of x rays filtered through 2 mm Al and 2 mm linen directed to face. Eyeballs were protected by lead. Subsequent cataract development is described. BA 8-3026.

3281

THE EFFECT OF RÖNTGEN RAYS ON THE RETINA. Wolfgang Hoffmann. *Z. Augenheilk.* **73**(4/5), 214-32(1931). (In German).

Two eye tumor cases are described. In both, irradiation of eye by intense hard rays produced degeneration of retinal cells. Previous results had indicated that retina was insensitive. BA 8-3027

3282

THE EFFECT OF GAMMA RAYS UPON THE METABOLISM OF TISSUES IN CULTURE. Barbara E. Holmes. *Brit. J. Radiol.* **6**, 461-7(1933).

Tissue cultures of embryo kidney were γ irradiated (300 mg Ra) for periods of 14 hr and studied during subsequent 34 hr. Utilization of glucose was inhibited, N metabolism was unaffected, gross appearance of cells was unchanged. BA 8-3028

3283

STUDY OF HETEROTRANSPLANTATION OF MOUSE LYMPHOSARCOMA. C. Krebs and M. Thrane. *Z. Krebsforsch.* **36**(1), 49-58(1932). (In German).

Authors report successful implantation of mouse lymphosarcoma into rats, following general x irradiation.

Growth persisted throughout the life of animals. Tumors were successfully re-inoculated into mice but not into untreated rats. BA 8-3569.

3284

THE NERVE NET OF DONAGGIO OF NEWBORN MAMMALS UNDER SPECIAL EXPERIMENTAL CONDITIONS. Gastone Lambertini. *Monit. zool. ital.* 40(11/12), 371-7 (1930). (In Italian).

Newborn dogs were given 8 H. E. D. of x rays in cervicodorsal region. Neurofibrillae of nerve cells were found to be radiosensitive. Lesions were manifest by lysis or of coagulation. BA 8-3571.

3285

II. APLASIA OF MARROW AND FATAL INTOXICATION IN DOGS PRODUCED BY ROENTGEN RADIATION OF ALL BONES. Samuel S. Shouse, Stafford L. Warren, and George H. Whipple. *J. Exptl. Med.* 53(3), 421-35 (1931).

Observations on behavior, clinical signs, symptoms, blood changes and autopsy findings in typical cases lethal irradiation of dogs are reported. A dose of 1050 ma min. was uniformly fatal. Doubling this dose did not appreciably hasten death. BA 8-3598.

3286

ON THE INDEPENDENCE OF GROWTH INHIBITION FROM METABOLIC ACTIVITY IN MALIGNANT CELLS. F. Eichholtz, W. Keil, and L. Kluge. *Biochem. Z.* 260(1/3), 139-42(1933). (In German).

Growth inhibition by x rays does not affect metabolism of rat sarcoma. Tumor growth rate is independent of its metabolism, respiration, fermentation, and its arginase, histidase, phosphatase, and lactic acid content. Anterior pituitary hormone did not affect rat sarcoma. BA 8-3624.

3287

THE PRODUCTION OF OSTEOGENIC SARCOMATA AND THE EFFECTS ON LYMPH NODES AND BONE MARROW OF INTRAVENOUS INJECTIONS OF RADIUM CHLORIDE AND MESOTHORIUM IN RABBITS. F. R. Sabin, C. A. Doan, and C. E. Forkner. *J. Exptl. med.* 56(2), 267-89 (1932). BA 8-3660

3288

ON THE DECREASE IN AGGLUTINATION TITRE UNDER THE INFLUENCE OF RADIUM EMANATION. Stephen Sterling-Okuniewski and Tadeusz Kaweck. *Bull. intern. acad. polon. sci. Classe Med.* 1931(1/2), 1-4(1931). (In German).

Seventy percent of agglutinating human sera submitted to Ra emanations showed definite weakening in agglutinating power as compared with unexposed sera. Change in serum was stable. BA 8-3757

3289

FURTHER OBSERVATIONS ON THE EFFECT OF X-RAYS ON REGENERATION IN AXOLOTL. E. Ia. Lichko. *Compt. rend. acad. sci. USSR. Ser. A.* 1932(3), 65-70 (1932).

X raying (88 r) of 9 mo. old axolotls prior to limb amputation, prevented regeneration. In other studies, connective tissue areas regenerated despite exposure. BA 8-4566.

3290

FURTHER STUDIES ON THE GENETICS OF ABNORMALITIES APPEARING IN THE DESCENDANTS OF X-RAYED MICE. C. C. Little and B. W. McPheters. *Genetics* 17(6), 674-88(1932).

Embryological development of abnormal eyes or limbs in descendants of x rayed mice is described. The aberration originates as blebs of colorless fluid in 7-9 mo. embryos, later becoming filled with extravasated blood and causing arrest in development of the part of the embryo affected. BA 7-10186

3291

GENETIC AND CYTOLOGICAL STUDIES ON X-RADIATION INDUCED DOMINANT EYE COLORS OF DROSOPHILA. E. A. Van Atta. *Genetics* 17(6), 637-59 (1932). BA 7-10192.

3292

POLARITY AND THE PRODUCTION OF ADVENTITIOUS GROWING POINTS IN MARCHANTIA POLYMORPHA. Hugh Dickson. *Ann. Botany (London)* 46, 683-701(1932).

Adventitious buds were produced by action of ultraviolet and x rays, by drying and by plasmolysing solutions. At any x-ray dose, number of gemmae with 1, 2, 3 etc. buds, took form of Poisson series. Alternative hypotheses offered to explain observed x ray effects, one based on target theory and one on inherent differences in radio-sensitivity of cells of different ages. BA 7-10313.

3293

ON THE ALLEGED STIMULATING ACTION OF X-RAYS UPON PLANTS. Edna L. Johnson. *Am. J. Botany* 18(8), 603-14(1931).

X ray exposures failed to stimulate growth (height, dry and green wt used as indicators) of tomato, sunberry, and vetch. Early report of x ray induced growth increase of tulip bulbs and potatoe tubers over controls was unconfirmed in further study. BA 7-10335

3294

THE EFFECTS OF ULTRAVIOLET, X-, AND CATHODE RAYS ON THE SPORES OF MUCORACEAE. Basile J. Luyet. *Radiology* 18(5), 1019-22(1932).

Author presents a statistical study of injurious effects of cathode rays, copper-K x rays ($\lambda = 1.537\text{\AA}$) and ultraviolet on spores and growing mycelium of *R. nigricans* (+). "Multiple-hits-to-kill" curves were obtained. Swollen giant spores were produced by cathode and x rays. Radiosensitivity of yeast cells and mucoraceae spores were compared. BA 7-10339.

3295

ON THE VARIATIONS IN MANIFESTATION OF LESIONS PRODUCED BY X-RAYS IN SEEDS AS A FUNCTION OF ENVIRONMENTAL TEMPERATURE AFTER IRRADIATION. S. Angel. *Compt. rend. soc. biol.* 93, 1671-2(1925). (In French).

3296

A NOTE ON THE X RAY ABSORPTION OF TISSUES. Warnford Moppett. *J. Cancer Research Comm. Univ. Sydney* 4(2), 98-100(1932).

Using mixed radiation (140 kv constant potential, 1 mm, Al 3 mm glass filter) and thermoelectric indicator of total x ray energy, steak showed 9.5% (mean) higher absorption than water. Absorption coefficient μ , was 0.29 for steak, 0.89 for compact bone. BA 7-10416.

3297

A CASE ILLUSTRATING THE EFFECTS OF PROLONGED ACTION OF RADIUM. Joan M. Ross. *J. Pathol. Bacteriol.* 35(6), 899-912(1932).

A Ra needle escaped from a carcinomatous breast and was buried in the myocardium for 3 yr causing considerable degeneration and fibrosis, and also apparently a hemangio-endothelioma of the liver. BA 7-10417.

3298

ERYTHROCYTE SEDIMENTATION RATE IMMEDIATELY BEFORE AND AFTER RÖNTGEN RADIATION. (CLINICAL STUDY OF 100 PATIENTS.) Edmund Christiani. *Strahlentherapie* 43(1), 126-39(1932). (In German).

Sedimentation rate in 100 patients after x irradiation showed: no change in about half; acceleration in many; slowing, rarely. Observed changes permit no conclusions relative to x ray effect on ESR. BA 7-10432

3299

FURTHER STUDIES ON THE RÖNTGENOLOGICAL DEMONSTRATION OF THE PLACENTA IN ANIMAL

EXPERIMENTS. K. Ehrhardt. Zentr. Gynakol. 56(14), 847-51(1932). (In German).

Author concludes from results of injecting thorotrast into mice and rabbits that the placenta is almost as good a storage organ as the reticuloendothelial system of liver and spleen. Effects of thorotrast before and after conception are described. BA 7-10579.

3300

CHANGES IN BLOOD LACTIC ACID AFTER RÖNTGEN RADIATION OF NORMAL AND PATHOLOGICAL TISSUES. J. Heeren and R. Hummel. Strahlentherapie 42(4), 784-92(1931). (In German).

Changes in blood lactic acid after irradiation of normal (thigh) and neoplastic tissue in tumor patients is described. In 20 patients, blood lactic acid increased 6-8 mm after irradiation of neoplasm; not after irradiation of normal tissue. BA 7-10981

3301

EXPERIMENTS ON THE SUSCEPTIBILITY OF TUMOURS AND TUMOUR CELLS TO RADIATION. J. C. Mottram. Acta Radiol. 12(1), 1-7(1931).

Sarcoma and carcinoma tissue of rats and mice were irradiated 87-254 mm with γ radiation in vitro (110 mgm Ra Br, 2 x 2 cm, 0.12 mm Ag + 3 mm Pb), then implanted into rats. No decided differences in susceptibility of the 2 tissues to γ radiation found, embryo rat skin showed same susceptibility. BA 7-11024

3302

ROSETTE FORMATION IN THE EYES OF IRRADIATED HUMAN EMBRYOS. Isadore Golstein and David Wexler. Arch. Ophthalmol (Chicago) 6(4), 591-600(1931).

Fetuses of 5 patients receiving 85-90% E. D. of 200 KV x rays during 2nd mo. of pregnancy, exhibited rosette formation and incompletely developed ectodermal portions of eye; other regions being unaffected. Reaction appears to be a specific result of irradiation given at this critical period of fetal development. BA 7-11991.

3303

POSSIBILITIES OF NATURAL RADIATIONS FROM THE GREAT BEAR LAKE PITCHBLLENDE DEPOSITS ON GENE MUTATIONS. W. C. Broadfoot. Science 75, 334-5 (1932).

Author suggests that effects of radiations from these deposits be tested on plants and animals since their uranium oxide content is 27.88-83.90%. Equivalent radium content = 70.79-213 mgm/ton. BA 7-12656

3304

ARE "PROGRESSIVE" MUTATIONS PRODUCED BY X-RAYS? J. T. Patterson and H. J. Muller. Genetics 15(6), 495-577(1930).

Evidence is presented from specially planned experiments on *Drosophila* relative to the effect of x rays on germinal material. Other experimental results are included. BA 7-12674.

3305

COSMIC RAYS AND CELL MULTIPLICATION (GERMINATING SEEDS). V. Rivera. Atti. r. accad. Nazl. Lincei, Rend., Classe sci. fis. mat. e nat. 11(5), 527-30(1930). (In Italian).

Petri dishes containing seeds of various plants on moist filter paper were put in bronze containers and sunk to depths of 30, 60, 90 and 112 m in a lake to eliminate all cosmic radiations. All examples germinated equally well. BA 7-12847.

3306

DEVELOPMENT OF PLANTS UNDER LEAD SCREEN. V. Rivera. Atti. accad. nazl. Lincei, Rend., Classe sci. fis. mat. e nat. 11, 718-720(1930). (In Italian).

Seeds of various kinds were germinated in lead chambers with walls 1.5-150 mm thick. Slightly better germination

was obtained in the thick chambers than in the thin ones and in controls. Authors conclude that all short waves (3800-.0004A) depress germination. BA 7-12848

3307

ON THE EFFECT OF RÖNTGEN RADIATION ON THE HEALING OF EXPERIMENTAL FRACTURES IN RABBITS. Wolfgang Latten. Arch. klin. Chir. 163(3), 427-51(1930). (In German).

Author obtained no unequivocal proof that x rays (10-90% E. D.) promoted callus formation on fractured tail vertebrae, nor was there any indication of an injurious action, regardless of dose. Study is based on observations of fractures of tail vertebrae in 40 irradiated rabbits, 18 controls. BA 7-12945.

3308

REGARDING THE QUESTION OF THE EFFECT OF X-IRRADIATION ON THE CENTRAL NERVOUS SYSTEM. (EXPERIMENTAL STUDIES.) B. N. Mogilnitsky and L. D. Podljaschuk. Fortschr. Gebiete Röntgenstrahlen 40(6), 1096-1108(1929). (In German).

Doses of 3/4-10 1/2 E. D. x rays through 3 mm Al or 0.5 mm Zn + 1 mm Al, 120-180 kv were applied in 1 or 2 fields to head of dogs and rabbits and to spinal cord of rabbits. Effects are described. Both age and constitution were found to influence x ray effects on brain. BA 7-12946.

3309

RÖNTGEN RAY EFFECTS ON THE RETICULOENDOTHELIAL SYSTEM AND ITS RELATIONSHIP TO RÖNTGEN SICKNESS. Albert Schöning. Strahlentherapie 33(1), 55-69(1929). (In German).

Uptake of congo red by the R-E system was slowed after x irradiation with carcinoma doses. The less congo red absorbed by the R-E system, the shorter the sickness after radiation. BA 7-12949

3310

HYPOPHYSIS AND BONE CALLUS. A. Spinelli and Ferdinando Talia. Arch. Radiol. 6(4/5), 748-62(1930).

Fractures of forelegs in dogs receiving stimulatory treatment of hypophysis (1/4 E. D. on temples alternately, one dose/wk) showed precocious formation of the osseous callus, more rapid callus growth and greater osteoblastic formation and periosteal thickening. BA 7-12950.

3311

THE PRESENCE OF COMPOUND CHROMOSOMES IN THE PRIMARY SPERMATOCYTES OF *CIRCOTETIX VERRUCULATUS* (ORTHOPTERA). Edwin R. Helwig. Science 76, 352(1932).

Numerous multiple chromosome forms were observed in *C. verruculatus* after x irradiation. BA 7-15122

3312

A NOTE ON THE DISAPPEARANCE OF THE MITOTIC PHASES FROM IRRADIATED TISSUE CULTURES. Wm. H. Love. Med. J. Australia 19(Vol. 1, No. 24), 829-30 (1932).

Assuming that number of cells entering mitosis per unit of time is constant, author presents equations and diagram representing rate of disappearance of various phases and diminution in number of mitotic figures after radiation. BA 7-15125

3313

THE CONSTITUTION OF PRIMARY EXCEPTIONS OBTAINED AFTER X-RAY TREATMENT OF *DROSOPHILA*. E. G. Anderson. Genetics 16(4), 386-96(1931).

Virgin females (*ScCvVi/e c g*) were x rayed; then mated to bar males, and exceptional daughters produced were bred to determine their x constitution. Relatively high values for homozygosity of garnet and forked are believed to be due to non-disjunction at both maturation divisions after x ray treatment. BA 7-15190.

3314

A STUDY OF THE EFFECT OF X-RAY RADIATION ON OCCURRENCE OF ABNORMAL INDIVIDUALS, MUTATION RATE, VIABILITY AND FERTILITY OF THE PARASITIC WASP, *HABROBRACON JUGLANDIS* (ASHMEAD). W. F. Dunning. *Genetics* **16**(6), 505-31(1931).

X radiation increased mutation rate at 4 loci: orange, reduced, bar and eyeless in directly x rayed individuals. For several generations, descendants of x rayed individuals showed greater proportions of eye and somatic abnormalities. Greater x ray doses had greater effects. BA 7-15193.

3315

GENE NUMBER, KIND, AND SIZE IN *DROSOPHILA*.

John W. Gowen and E. H. Gay. *Genetics* **18**(1), 1-31 (1933).

Adult males of *D. melanogaster* were exposed to monochromatic x rays from Cu and Cr for 8 different durations. Mathematical analysis of data indicates a minimum of 14,380 loci and an average gene size of 1×10^{-18} cm. BA 7-15196

3316

EFFECTS PRODUCED BY AGING AND X-RAYING EGGS OF *DROSOPHILA MELANOGASTER*. J. T. Patterson, Weldon Brewster, and A. M. Winchester. *J. Heredity* **23**(8), 325-33(1932).

X irradiation increases % of infertility, primary non-disjunction and breakage of x-chromosome, when applied to mature eggs aged in ovaries of virgin females. The nearer eggs are to maturity, the more susceptible they are to x rays, as regards production of these phenomena. BA 7-15213

3317

MUTANTS IN *HABROBRACON*. P. W. Whiting. *Genetics* **17**(1), 1-30(1932).

Author presents a brief description of 36 mutant types, 24 reported for first time. Striking increase in mutations due to x raying is noted. BA 7-15225.

3318

ACTION OF α RAYS ON *POLYTOMA UVELLA*. DETERMINATION OF TARGET SIZE CORRESPONDING TO PRINCIPLE LESIONS OBSERVED. F. Holweck and A. Lacassagne. *Compt. rend. soc. biol.* **107**(21), 812-14 (1931). (In French).

Irradiation of *P. uvela* by α rays of polonium (originally 1670 U. E. S., sending 1α particle per μ^2 every 64 sec), at distance of 15 mm caused 4 types of lesions which are described. Data are analyzed in terms of target theory. BA 7-15432

3319

ON SOME CELLULAR REACTIONS TO X-RADIATION. E. G. Butler. *J. Exptl. Biol.* **9**(1), 107-116(1932).

Steps in recovery of cells of developing neural tube (chick embryos, following single non-lethal x ray dose are described. Changes occurred in both mitotic and resting cells. BA 7-15520

3320

RADIO-SENSITIVITY FROM THE CHEMICAL VIEW-POINT. G. Harker. *J. Cancer Research Comm. Univ. Sydney* **4**(3), 109-17(1932).

On basis of chemical reactions studied, author postulates that biological changes produced in living tissues by therapeutic x radiation may be due to initiation of catalytic changes which can proceed once they are started. BA 7-15522

3321

THE EFFECT OF GAMMA-RAY IRRADIATION UPON THE GROWTH OF A PROTOZOAN, *BODO CAUDATUS*. Muriel Robertson. *Quart. J. Microscop. Sci.* **75**(3), 511-41(1932).

B. caudatus grew less rapidly when in presence of Ra. Growth capacity of irradiated strain was slightly impaired for 32 days postirradiation. Development of impairment during daily growth - period is traced. BA 7-15527

3322

EXPERIMENTAL CASTRATION OF FEMALES OF *GAMMARUS* AND ITS REPERCUSSIONS ON THE DEVELOPMENT OF OOSTEGITES. M. L. Le Roux, *Compt. rend.* **193**(19), 885-7(1931). (In French).

Prepubertal Ra-Ba irradiation of female *Gammarus pulex* caused failure of vitellogenesis (egg-laying) to appear. Postpubertal irradiation caused egg-laying to cease. Ovaries were not destroyed but were arrested in development. BA 7-15766.

3323

THE ORIGINATION OF PLANES OF DISCONTINUITY IN THE LENS. Hans Goldmann. *Graefes' Arch. Ophthalmol.* **122**(1), 198-218(1929). (In German).

Planes of discontinuity in lens surface in rats may be caused by x rays due to direct injury to surface of lens. Long latent period of roentgen cataract is demonstrated. Injury to lens fibers occurs in epithelial cell stage, visible changes follow much later. BA 7-15811

3324

EXPERIMENTAL STUDY ON HEART FUNCTION. 1. INFLUENCE OF EXPOSURE TO ULTRA-VIOLET RAY, ROENTGEN RAY AND RADIUM RADIATION ON THE FUNCTION OF EXTIRPATED TOAD HEART. Masanori Oana. *Japan. J. Exptl. Med.* **10**(2), 73-96(1932).

In controlled experiments under different conditions of perfusion, author found the various radiations studied had no promoting, stimulating or restraining influence on activity of hypofunctioning toad hearts. BA 7-15916.

3325

ON SOME PROPERTIES OF THE RADIATION-SUBSTANCES (WITH WEAK RADIATION). H. Zwaardemaker. *K. Akad. Wetenschap. Amsterdam Proc. Sect. Sci.* **30**(3), 420-22 (1927).

Ra emanations of slight intensity restored the beat in cold-blooded heart arrested by perfusion with Ringer's solution minus K. Activating substance generated can restore beat of a second heart in standstill. Long latency suggests catalytic type of influence. BA 7-15943.

3326

RADIATION-SUBSTANCE AND CARDIAC HORMONES. R. Zwaardemaker. *K. Akad. Wetenschap. Amsterdam Proc. Sect. Sci.* **30**(2), 184-8(1927).

Hearts perfused with solutions lacking K ceases to beat when 1/3 of the original store has been lost. Exposure to variety of irradiations restores the beat. Irradiation is believed to cause formation of activating substances, "automatins", whose energizing effect is demonstrable on a second ventricle. BA 7-15944

3327

CHANGES IN OMENTUM OF RABBITS AFTER SINGLE ERYTHEMA X-RAY DOSAGE. N. A. Michels. *Anat. Record* **52**(Suppl., Feb.), 25(1932).

Transformation of the omentum into a lymphoid organ is described in detail. Changes involve connective tissue cellular infiltration and changes in capillaries and endothelium. BA 7-16990.

3328

PRELIMINARY NOTE ON THE CHROMOSOME ALTERATIONS BY X-RAYS IN *LOXOBLEMMUS ARIC TULUS*, A SPECIES OF GRYLLOID FAMILY. Kazuo Suzuki. *Proc. Imp. Acad. (Tokyo)* **8**(10), 521-23(1932).

Translocation, duplication, inversion, and deletion of the 7 pairs of chromosomes of this cricket are described. BA 7-17705.

3329

EXPERIMENTS ON X-RAYING CULTIVATED PLANTS.

1. WHEAT L. N. Delone. Contrib. Plant Breeding Inst. (Kiev) 4, 3-16(1928).

Historical review of experimental work of mutations as influenced by x rays is presented. Experiments on wheat: Triticum vulgare albidum 0605, T. durum melanopus 069, and T. vulgare ferrugineum No. 100 are described. BA 7-17715.

3330

THE ORIGIN AND HEREDITY OF RADIUM INDUCED PHYTOCARCINOMA. Emmy Stein. Z. induk. Abstamm. -u. Vererbl. 62(1/2), 1-14(1932). (In German).

By radium irradiation of the embryos of Antirrhinum majus, chimeras may form in which the anlagen for tissue deterioration are confined to definite embryonic layers. BA 7-17745.

3331

STUDIES ON QUANTITATIVE INTERPRETATION OF VARIOUS LESIONS PRODUCED IN CELLS BY RADIATIONS. F. Holweck and A. Lacassagne. Compt. rend. soc. biol. 107(21), 814-17(1931). (In French).

Various types of lesions produced in Polytoma uvella by α rays are described, and hypothesis is offered to explain their cause. Lesions caused by α rays striking the karyosome do not affect growth or 1st cell division but do alter chromatin. When the centrosome is injured, division is prevented but growth and motility are unaffected. Observed effects are compared with effects of U-V BA 7-18052.

3332

EFFECT OF X-IRRADIATION UPON GROWTH AND REPRODUCTION OF TOMATO. Edna Louise Johnson. Plant Physiol. 6(4), 685-94(1931).

Irradiation of young tomato seedlings causes marked leaf anomalies in young growth which develops after irradiation. Other effects are also described. BA 7-18053.

3333

RADIUM AND NERVOUS TISSUE: AN EXPERIMENTAL STUDY. E. A. Carmichael and J. Paterson Ross. Proc. Roy. Soc. Med. 23(7), 897-904(1930).

Radon seeds were inserted within or placed on the dura mater, and Ra needles were placed on dura mater (rabbits). Histological studies on animals killed at 3 hour intervals up to 24 hours after exposure are described and include changes in endothelium, WBC emigration, destruction of cortex and hemorrhage treatment of 8 clinical cases of brain tumor gave inconclusive results. BA 7-18211.

3334

PRODUCTION AND BIOLOGICAL ACTION OF VERY LONG WAVE LENGTH X-RAYS. A. Dognon and J. Massa. J. radiol. et electrol. 15(1), 22-32(1931). (In French).

X ray tube follows design of Dauvillier. Variation of intensity of x rays with voltage of tube and thickness of cellophane window was determined. Tube was operated from $2\frac{1}{2}$ to $4\frac{1}{2}$ KV giving wave length of 5 Å. Irradiation of 50 sec with 3 KV and 50 m. a. at distance of 1 cm produces marked superficial erythema, but no lasting lesions. BA 7-18212.

3335

THE EFFECT OF RADON RADIATION UPON ISOLATED ORGANS. S. E. F. Gooding. J. Pharmacol. Exptl. Therap. 44(3), 269-77(1932).

Irradiation from radon increased activity and irritability of certain isolated organs, effect being greater if perfusion fluid was partially deprived of K ions. Irradiation rendered uterus much more sensitive to action of pituitrin. BA 7-18213

3336

ON THE EFFECT OF RÖNTGEN RAYS ON BLOOD GAS AND ALKALI RESERVE IN CANCER BEARING PATIENTS. A. Gremme. Arch. Gynakol. 152(3), 667-78(1933). (In German).

Changes in alkali reserve and CO₂ tension of blood of 5 carcinomatous women following x ray irradiation are described. Shift in CO₂ combining power of blood in these patients seemed dependent upon size of tumor and degree of disintegration. BA 7-18214

3337

INFLUENCE OF QUANTUM SIZE ON THE BIOLOGICAL KILLING EFFECT OF VARIOUS TYPES OF RAYS. II. THE DEPENDENCE OF THE INJURIOUS EFFECT IN ASCARIS MEGALOCOPHALA ON THE KIND OF RADIATION. H. Holthusen and C. Zweifel. Strahlentherapie 43(2), 249-72(1932). (In German).

No qualitative differences in damage to Ascaris eggs were found for x rays of different wave lengths or between x rays and γ rays. Ultra violet and thermal effects differed from effects of x and γ rays with respect to the course of damage and dose-effect curves. BA 7-18216

3338

THE EFFECT OF CATHODE RAYS ON NERVE CELLS AND COMPARISON WITH THAT OF ROENTGEN RAYS. Sadao Honjo. Okayama Igakkai Zasshi 42, 628-44, 1217-28 (1930). (In German). BA 7-18217

3339

STUDIES ON THE CONNECTION BETWEEN THE RADIATION REACTION OF PROTEINS AND OF BIOLOGICAL ORGANISMS. K. Schwerin. Strahlentherapie 31(2), 253-63 (1929). (In German).

Author found, by an ultramicroscopic method using 0.1% pseudoglobulin exposed to Hg quartz lamp, that latent period of effect and extent of effect increased with wave length. When x rays were used, increase of dosage shortened the latent period and augmented maximal effect. Experiments were done to check experiments by others showing that erythema-producing effect varied with wave length. BA 7-18219

3340

ACTION OF RADON SOLUTIONS ON THE LIPOLYTIC POWER OF GUINEA PIG BLOOD. Carlos Vidal. Compt. rend. soc. biol. 109(6), 495-7(1932). (In French).

Daily injection, for 23 days, of 2 cc of solution of 1.3 m μ c of radon in saline decreased the lipolytic power of serum of 7 rabbits and increased that of 3. Solution of 8 m μ c of activity in dist. water to which serum was exposed in vitro increased lipolytic power in 6 of 8 cases, while solution 2.5 m μ c of activity had no effect. BA 7-18220

3341

STRUCTURE, RAYS AND ENZYMES. N. Waterman. Arch. exptl. Zellforsch. Gewebezücht. 11(1/2), 89-92 (1931). (In German).

Biological action of x rays is attributed to change in state of emulsion of protoplasm. Ratio of polarization/resistance, characteristic of each tissue, is alterable by radiation. Periodic increase and decrease of ferment action on change in permeability of protoplasm of an irradiated cell is accompanied by periods of oxidation and reduction. BA 7-18221

3342

MODIFICATION IN THE CATALASE CONTENT OF THE BLOOD IN X-RAY THERAPY OF MALIGNANT TUMORS. Lorenzi Angelo. Tumori 18(3), 201-8(1932).

Catalases in blood of cancer patients were lower than in blood of control cases. After x ray therapy the enzymes dropped considerably probably because of the toxic effect of destroyed tumor cells. BA 7-18581

3343

BASAL METABOLISM OF SOME TUMOR PATIENTS. Dino Donati. Tumori 16(2), 126-58(1930). (In Italian).

Thirteen cases of malignant tumor were studied. In patients with carcinoma and in 2 patients with benign tumors, slight decrease in basal metabolic rate was noted. Rate was increased in cases of sarcoma, lymphosarcoma, and myeloid leukemia. Ra therapy raised metabolic rate 15-20%, x ray therapy, 6-10%. BA 7-18619

3344

RELATION OF X-RAYS TO LYMPHOMATOSIS. J. Furth, R. R. Rathbone, and H. Seibold. Proc. Soc. Exptl. Biol. Med. 30(6), 754-56(1933).

Preliminary paper. BA 7-18629

3345

MALIGNANT TUMORS PRODUCED IN THE RABBIT BY IRRADIATION OF INFLAMMATORY FOCI. A. Lacassagne. Compt. rend. 196(1), 69-71(1933). (In French).

By x irradiating abscess produced with *Streptobacillus caviae*, a sarcoma could be induced in rabbits. No tumor was produced with either agent alone. Irradiation of chronic tubercular abscesses gave no tumors. Irradiation of sterile diatomaceous earth injected subcutaneously into breast of rabbit produced epithelioma and fibrosarcoma. BA 7-18662

3346

A STUDY OF THE HISTOLOGICAL STRUCTURE OF MOUSE OVARIES FOLLOWING EXPOSURE TO ROENTGEN IRRADIATION. Joseph M. Murray. Am. J. Roentgenol. 25(1), 1-45(1931).

Postirradiation effects of: 27 r, no detectable changes, 54 r, changes in primary follicles of 90-215 day-old mice, evident 1 day postirradiation, 150 r or more, structural sterility (primary follicles absent after 2 days, all follicular elements, by 43rd day postirradiation). Dose of 1800 r was lethal for adult mice of this strain 4 days postexposure. BA 7-19598

3347

THE EFFECT OF X-RAYS ON THE DEVELOPING CHICK. J. M. Essenberg. Anat. Record 52(Suppl. Feb.), 12(1932).

Of the 572 eggs which had been x rayed and incubated, 255 died during or shortly after irradiation, 68 embryos continued development for 10-15 days before death occurred, 138 chicks died in the shell at full term without being able to break the shell. Some of those hatched were apparently normal, others had various kinds of deformities. Deformities included: 34 cases of inferior extremity deformities varying from distorted toes to absence of 1 or both feet, 10 cases of paralysis; seven cases of head deformities (cranium and cerebral cortex), 6 miscellaneous cases including acrania, bill, wing and eye malformations and polydactyly. BA 7-19642

3348

THE EFFECTS OF X-RAYS ON REGENERATION IN *TUBIFEX TUBIFEX*. Raymon G. Stone. J. Morphol. 53(2), 389-431(1932).

Inhibition of posterior regeneration by x rays is described and related to lack of cells present in normal regeneration. BA 7-19680

3349

CYTOLOGICAL MAP OF THE X CHROMOSOME OF *DROSOPHILA MELANOGASTER*. Th. Dobzhansky. Biol. Zentr. 52(8), 493-509(1932).

Two translocations involving the X and 2nd or 3rd chromosomes, respectively, and 8 duplications involving sections of the X chromosome were studied genetically and cytologically. Both translocations and all the duplications were obtained in progeny of flies treated with x rays. BA 7-20265

3350

STEP ALLELOMORPHISM IN *DROSOPHILA MELANOGASTER*. I. J. Agol. Genetics 16(3), 254-66(1931).

Author presents an extension of earlier discovery of 2 nonidentical "scute" genes from x ray treatment, and concludes that the gene may be represented by complex organization, composed to separate districts joined with each other, each having a specific action. He includes as allelomorphs those genes which coincide only in one or several districts and which produce a partial reversal to the normal (wild) type compounds. Crossing-over may pass only through, not between, genes since step allelomorphism excludes any space between genes. BA 7-20323

3351

AN X-RAY INDUCED CHROMOSOMAL TRANSLOCATION IN *APOTETIX EURYCEPHALI* HANCOCK (GROUSE LOCUSTS). Robert K. Nabours and W. R. B. Robertson. Proc. Natl. Acad. Sci. U. S. 19(2), 234-39(1933).

From this study it was ascertained that several factors for conspicuous, dominant color patterns of this species, closely linked, are carried by the smallest pair of chromosomes. Following x irradiation, a portion of chromosome carrying 3 closely linked factors was translocated to an entirely different linkage group. BA 7-20363

3352

LETHAL MUTATIONS AND DEFICIENCIES PRODUCED IN THE X-CHROMOSOME OF *DROSOPHILA MELANOGASTER* BY X-RADIATION. J. T. Patterson. Am. Naturalist 66, 193-206(1932). BA 7-20367

3353

EFFECTS OF X-RAYS IN AN INBRED STRAIN OF GUINEA-PIGS. H. H. Strandkov. J. Exptl. Zool. 63(1), 175-202(1932).

Litters sired by x rayed male guinea pigs were smaller than litters sired by control males, and the effect was greater with greater dosage. Author considers most plausible interpretation is that x radiation induced dominant lethal mutations. No visible mutations were observed among progeny of x rayed males through F₃. BA 7-20373.

3354

Chicago. Univ. Dept. of Medicine and Inst. of Radiobiology and Biophysics. THE TREATMENT OF POST IRRADIATION INFECTION. C. Phillip Miller, Carolyn W. Hammond, and Marianne Tompkins. (nd). 16p. (AECU-1816).

Results of experiments indicate that generalized infection, caused by bacteria belonging to intestinal flora, played a significant role in the death of mice exposed to moderate doses of total body x radiation. Antibiotic therapy significantly decreased mortality, streptomycin being the most effective.

3355

EFFECTS OF X-RAYS ON THE LENGTH OF THE VEGETATION PERIOD IN PLANTS. A. V. Doroshenko. Buil. Appl. Botany, Genet. Plant Breeding (Leningrad) 23(2), 511-35(1930). (English Summary).

Author describes the effects of x irradiation of germinated seeds of further development of the plants. BA 7-20675.

3356

THE BIOLOGICAL STUDY OF RADIOSENSIBILITY. II, III. J. Nakagawa. Japan J. Obstet, Gynaecol. 15(4), 304-12(1932).

Peas were grown in sand moistened with solutions of K, Mg, and Ca in concentrations of 0.025, 0.05, 0.1, 0.5, and 1%. When root was 1-2 cm long, plants were x rayed.

Ca, K, and Mg, in order named, increased sensitivity to x rays. Much greater disturbance was caused by salts of heavy metals. BA 7-20679

3357

SOME EFFECTS OF X-RAY IRRADIATION ON RESPIRATION AND DEVELOPMENT. J. H. Bodine and Titus Evans. Proc. Soc. Exptl. Biol. Med. 30(7), 863-4(1933).

This is a preliminary paper describing effects of various intensities of irradiation in oxygen consumption and development of the larvae of the wasp, Sceliphron caementarium. BA 7-20713

3358

ON THE EFFECT OF INTENSE ROENTGEN RADIATION ON ISOLATED SKELETAL MUSCLE. Gundo Boehm. Z. Biol. 92, 45-53(1931). (In German).

X irradiation of isolated cold-blooded muscle with intense, easily absorbed x rays (1.54 A units, 170,000 to 340,000 r, 30 to 60 sec) caused small reversible contraction, after additional doses, irreversible contraction. The contraction was phenomenon independent of excitability of muscle and of lactic acid formation. BA 7-20714

3359

INFLUENCE OF RADIUM EMANATIONS ON HORMONES. I. EMANATIONS AND ADRENALIN. Renzo Agnoli. Arch. intern. pharmacodynamie 41(2), 238-50(1931). (In Italian).

Effects of 1/100,000 and 1/50,000 epinephrine solutions on blood pressure of anesthetized rabbits (recorded from carotid) were not changed materially by exposure of solutions to Ra emanations of various intensities and durations. BA 7-21110

3360

EXPERIMENTAL LIVER DISEASE PRODUCED BY X-RAY IRRADIATION OF THE EXPOSED ORGAN. Adolph Bolliger and Keith Inglis. J. Pathol. Bacteriol. 36(1), 19-30 (1933).

Single x ray dose applied to exposed liver causes extensive necrosis, both superficial and deep. In survivors, cirrhosis and disorganization follow and animal dies 5-16 mo later with jaundice and ascites. Dosage varied from 1880-5250 international γ units. Eleven dogs were irradiated. BA 7-21191

3361

CANCERS AND RADIATIONS. Foveau de Courmelles. Neoplasmes 11, 207-262(1933). (In French).

Critical review of relation between cancer and various irradiations is presented. BA 7-21203

3362

SENSITIZATION OF NEOPLASTIC TISSUE TO X-RAYS BY LOCAL APPLICATION OF INSULIN. F. Gentil and S. F. Gomes da Costa. Compt. rend. soc. biol. 109, 511-12(1932). (In French).

Daily local application of insulin to neoplastic ulceration of the breast caused rapid cicatrization and skin repair and considerable reduction of neoplastic lesion within 6 weeks. Although x raying previously had no appreciable effects, neoplasm responded favorably to even weaker dose after insulin treatment. Neoplastic nodules disappeared and phlyctenae and scar tissue appeared, indicating radiosensitization by insulin. BA 7-21265

3363

CONTRIBUTION TO THE STUDY OF THE INNOCUOUS NATURE OF BCG IN ROENTGEN IRRADIATED GUINEA PIGS. P. Nelis and E. Picard. Compt. rend. soc. biol. 110(16), 31-2(1932). (In French).

Guinea pigs treated 4 times at 8-day intervals with 1500 r after inoculation with 0.001 gm. of virulent tubercle bacilli developed tuberculous lesions. No such lesions appeared in those irradiated after injection of

0.01 to 0.001 gm. of BCG, indicating that x rays do not affect development of tuberculosis or action of BCG in guinea pigs. BA 7-21398

3364

ON A PROCEDURE PERMITTING EXTENSION OF THE USE OF THE TECHNIQUE OF LOCAL IRRADIATION IN THE EMBRYOLOGICAL STUDY OF AMPHIBIAN EGGS. GENERAL RESULTS ON THE EGG OF THE FROG. P. Vintemberger. Compt. rend. soc. biol. 109(3), 208-12 (1932). (In French).

A system of Pb screening is described which permits x-raying (with suppression of most secondary rays) of 1 or 2 blastomeres of the amphibian egg (horizontal or vertical plane of separation of irradiated from shielded blastomeres.) BA 7-22273.

3365

HEREDITARY AND NON-HEREDITARY ABERRATIONS IN X-IRRADIATED HYACINTHS AND TULIPS VIEWED IN THE LIGHT OF THE DIVISION HYPOTHESIS. W. E. Mo de Mol. Natuurw. Tijdschr (Belg.) 14, 70-2(1932). (In German).

Irradiation sterilized some pollen grains, produced retarded development in some, polyploidy in others. Variations associated with tetraploidy or diploidy were heritable, x rays interfered with normal reduction. Radiation may not retard or accelerate all cell parts to the same degree. BA 8-5215

3366

STIMULATIVE EFFECTS OF X-RAYS ON PLANT GROWTH. Charles A. Shull and John W. Mitchell. Plant Physiol. 8(2), 287-96(1933).

From a few preliminary experiments, authors conclude that under appropriate conditions of treatment, (use of metal screens, high voltage and low amperage and brief exposures) x rays may stimulate growth of wheat, corn, oats and sunflower seedlings. Optimum growth occurs with about 115 r (3 min). Some evidence of increased sugar content and increased respiration of treated seedling was obtained. BA 8-5437.

3367

DIFFERENCES IN THE BIOLOGICAL ACTION OF ROENTGEN RAYS OF DIFFERENT WAVE LENGTHS ON SACCHAROMYCES CEREVISIAE IN THE PRESENCE OF GLUCOSE. V. Gronchi. Soc. Internaz. Microbiol. Boll. Sez. Ital. 3(11), 717-19(1931). (In French).

Yeast in glucose solution was exposed to 3 wave lengths of x rays. Fermentation, as measured by amount of CO₂ liberated, was increased by irradiation. Rate of production of CO₂ was proportional to intensity and increased with decreasing wavelength. BA 8-5462

3368

ACTION OF MONOCHROMATIC X RAYS OF DIFFERENT WAVE LENGTHS ON ASCARIS EGGS. A. Dognon. Compt. rend. 196(6), 437-8(1933). (In French).

Graphs of damage to function of Ascaris eggs for wave lengths of 1.54 and 4 Å showed the longer wave length to be biologically more effective, agreeing with previous work on same material using wave lengths of 0.7-2.25 Å. BA 8-5494.

3369

THE SCIENCE OF RADIOLOGY. Otto Glasser. Springfield, Ill. Charles C. Thomas. 1933. 250p.

Topics included in this history on development of radiology: discovery of x rays and radium; x ray physics, apparatus, dosimetry, therapeutic and diagnostic radiology; Ra physics and dosimetry, Curie therapy, x ray effects on genetic material; biological effects of x and Ra rays. BA 8-5495

3370

ACTION OF X-RAYS ON THE METAMORPHOSIS OF

INSECTS. Mme. Hufnagel and Marcel Joly. Compt. rend. 196(10), 727-9(1933). (In French).

Larvae of *Calliphora erythrocephala* on paraffin in petri dishes were exposed to 20-, 34-, and 86,000 r. External appearance of pupae from irradiated larvae was normal; internal modifications included persistence of larval organs, absence of some normal adult organs. Large larval hypodermal cells, defective adult muscles, disappearance of adult fat tissue, degeneration of larval salivary glands and other changes were noted. BA 8-5496

3371
ANIMAL EXPERIMENTS WITH THORIUM X AND RADIUM IN KIDNEYS AND URETHERS. E. Muhsam. *Strahlentherapie* 44(1), 131-46(1932). (In German).

Regions of necrosis developed in kidney and ureter tissues of dogs where thorium X rods were inserted. No control experiments for comparison with radon were performed. BA 8-5498

3372
EFFECTS OF THE X-RAY ON THE SPLEEN OF POIKILOTHERMS. P. V. Sspovskii. *Vestnik Rentgenol.* 1 Radiol. 8(2), 147-57(1930). (Russian with German Summary)

X ray effects on spleen of frogs and salamanders include: degeneration of erythrocytes, increase in reticulo-endothelial elements, and altered Fe metabolism (related to destruction of red cells), with Fe being deposited in reticular and pigment cells of spleen and in reticular and Kupffer cells of liver. BA 8-5499

3373
ELECTRICAL POTENTIAL MEASUREMENTS IN THE SINUS OF FROG HEARTS AND IN THE BLADDER UNDER VARIOUS EXPERIMENTAL CONDITIONS. Paul Wirz. *Z. Biol.* 93(3), 317-30(1933). (In German).

Radium irradiation reduces sinus potential to minimum of 1-2 mV. BA 8-5873

3374
HEPATITIS AND EXPERIMENTAL CIRRHOSIS DUE TO THORIUM DIOXIDE. Rene Huguennin, Auguste Nemours, and Gur Albot. *Compt. rend. soc. biol.* 108, 879-81(1931). (In French).

Hepatitis, involving cytolysis, atrophy and sclerosis, was caused by injection of Th of hepatosplenography. BA 8-5902

3375
NARCOSIS WITH CHLOROFORM AND RADON. P. Mascherpa. *Boll. soc. ital. biol. sper.* 5(11), 1167-72(1930). (In Italian).

CHCl₃ narcosis follows more promptly in mice kept in atmosphere of Ra emanation. Excitement and narcotic stages supervene more quickly; depth and duration of narcosis increase. Possible effects of Ra on absorption through pulmonary membrane and on CHCl₃ fixation by nerves are suggested as explanations of the observations. BA 8-5913

3376
THE VALUE OF SERUM REACTIONS IN RADIOTHERAPY OF CANCER. E. Cronin Lowe. *Brit. J. Radiol.* 6, 207-18(1933).

Serum reactions observed during course of radiotherapy of cancer patients are believed by the author to parallel or anticipate course of disease. BA 8-6014

3377
EXPERIMENTS WITH ROENTGEN IRRADIATION OF PURE VACCINIA LYMPH AND OF A LYMPH SAMPLE CONTAINED WITH FOOT-AND-MOUTH DISEASE VIRUS. Cark Krebs and H. O. Schmit-Jensen. *Acta Radiol.* 13(3/4), 349-61(1932).

Irradiation of vaccinia lymph with 3,600-36,000 r of x rays did not reduce infectivity in test on 275 children.

Doses of 38,000 and 25,000 r did not free cowpox vaccine of foot-and-mouth virus BA 8-6264

3378
IMPORTANCE OF DURATION OF IRRADIATION AND DOSE OF VIRUS IN THE PRODUCTION OF TOXIC ILLNESS BY INJECTION OF FILTERABLE TUBERCULOSIS VIRUS INTO GUINEA PIGS IRRADIATED WITH X-RAYS. M. Nasta, I. Jovin, and M. Blechmann. *Compt. rend. soc. biol.* 107, 847-8(1931). (In French). BA 8-6271

3379
TRANSMISSION BY PASSIVE TRANSFER OF FATAL TOXIC ILLNESS DUE TO THE FILTERABLE TUBERCLE VIRUS IN THE GUINEA PIG EXPOSED TO X-RAYS. M. Nasta, I. Jovin, and M. Blechmann. *Compt. rend. soc. biol.* 107, 849-51(1931). (In French).

Authors attempted to determine whether death of x rayed animals inoculated with filtrates of urine infected with filterable tubercle bacilli is actually due to virus or to some other substance in the filtrate. Results with guinea pigs indicate toxicity of filtrate is due to virus. X ray treatment appears to cause multiplication of the organisms. BA 8-6272

3380
DETERMINATION IN THE DEVELOPMENT OF AMPHIBIA. (DIFFERENTIAL RADIUM-SUSCEPTIBILITY AND CENTRIFUGATION.) Pasquale Pasquini. *Arch. zool. Ital.* 16(1/2), 501-5(1931).

Author compared results of centrifuging various developmental stages of *Rana* ova and effects of irradiating (radon) corresponding stages. Stages most traumatized by centrifugation were also most radiosensitive. BA 8-7087

3381
THE EFFECTS OF X-RAYS ON ANTERIOR REGENERATION IN *TUBIFEX TUBIFEX*. Raymond G. Stone. *J. Morphol.* 54(2), 303-20(1933).

Removal of anterior segments of *Tubifex tubifex* is followed by regeneration in 18 days in controls; no regeneration occurs in worms x irradiated with 9000 r following removal of segments. BA 8-7107

3382
THE CYTOLOGICAL CHANGES OBSERVABLE IN IRRADIATED BEAN ROOT TIPS. Ruth E. P. Patten and Sylvia B. Wigoder. *Quart. J. Microscop. Sci.* 73(4), 633-50(1930).

Presence of large numbers of abnormal mitotic figures in root tissues of x-rayed *Vicia faba* indicate that exposure seriously deranges mitotic processes started before treatment and prevents initiation of mitosis until after recovery. BA 8-7692

3383
CHLOROPHYLL DEFICIENCIES INDUCED IN COTTON (*GOSSYPIMUM HIRSUTUM*) BY RADIATIONS. W. R. Horlacher and D. T. Killough. *Trans. Texas Acad. Sci.* 15, 33-8(1932).

Yellow, a type devoid of chlorophyll, was induced in 3 different lines of cotton by x-raying dry seeds. Yellow is lethal, death occurring about 2 wk after emergency of seedling, and is inherited as simple recessive. Plants from x rayed dry seed developed large numbers of variegated leaves with chlorophyll-deficient areas. BA 8-7720.

3384
A STUDY ON *DROSOPHILA MELANOGASTER* RELATIVE TO THE NATURE OF THE RONTGEN RAY EFFECT ON THE MUTATION PROCESS. N. W. Timofeeff-Ressovsky. *Z. wiss. Biol. Abt. D. Wilhelm Roux' Arch. Entwicklungsmech. Organ.* 124(3/4), 654-65(1931). (In German).

X rayed X chromosomes free from mutations postirradiation gave no increase in mutation rate subsequently, indicating that mutations are induced only during direct x ray exposure. Comparison between effect of x raying young and old sperm is included. BA 8-7756.

3385
STUDIES ON EXPERIMENTAL INFLUENCING THE GROWTH PHENOMENA IN VEGETATIVE REPRODUCTION AND REGENERATION. Annemarie Harig. Z. wiss. Biol. Abt. E. Planta 15(1/2), 43-104(1931). (In German).

Ra-irradiation inhibited regeneration in Cardamine pratensis leaves which normally produce adventitious roots and shoots in moist air following removal from plant. BA 8-7959.

3386
EXPERIMENTAL OBSERVATIONS ON THE EFFECT OF RADIUM ON A PRECANCEROUS SKIN AREA. W. Cramer. Brit. J. Radiol. 5, 618-30(1932).

A precancerous area was produced in mice by tarring skin for limited period. Applications of Ra delayed and inhibited development of malignancy. In no case did Ra accelerate carcinogenesis. Application of these results to radiotherapy is suggested. BA 8-8016

3387
AUDITORY EFFECTS OF ROENTGEN RAYS IN DOGS. Edward Girden, Elmer Culler, G. L. Clark and K. E. Carrigan. Am. J. Roentgenol. Radium Therapy 30(2) (1933).

Two dogs conditioned to respond to given audible tone were irradiated at intervals with x rays. In both there was transient increase in auditory acuity followed by relapse to normal. BA 8-8018

3388
THE INCREASE IN THE FRAGILITY OF THE RED BLOOD CORPUSCLES AFTER EXPOSURE TO RADIUM. Daphne Goulson. Brit. J. Radiol. 5, 775-9(1932).

Defibrinated human, rat or fowl blood (1 cc) in blood film in preparation 1 cm in diameter, 4 mm high, was exposed at 22° to 2 Ra preparations of 60 mgm each on 4 sq cm area. Exposure for up to 70 hr with 0.12 mm Ag for β radiation and up to 119 hrs with 0.12 mm Ag + 3 mm Pb filters for γ radiation. Increased in fragility was observed after 50-70 hr with β rays in both nucleated and non-nucleated erythrocytes. There was only slight hemolysis after 119 hr of γ radiation. BA 8-8019

3389
THE SKIN ERYTHEMA REACTION TO FRACTIONATED LARGE DOSES OF X-RAYS. Alfred Reisner. Fortschr. Gebiete Rontgenstrahlen 45(3), 293-307(1932). (In German).

Skin erythema reaction after x irradiation (180 kv, $\frac{1}{2}$ mm Cu, 30 cm, 1 mm half value layer and 42 r/min) applied in fractional doses, was studied in detail. Skin tolerance is shown in tables and graphs for various conditions of treatment. BA 8-8021.

3390
STUDIES ON PROTOZOA. IV. LETHAL EFFECTS OF THE X-RADIATION OF A STERILE CULTURE MEDIUM FOR COLPIDIUM CAMPYLOIDES. C. V. Taylor, J. O. Thomas, and M. G. Brown. Physiol. Zool. 6(4), 467-92 (1933).

X irradiation of sterile medium of 10% yeast extract rendered the medium lethal to Colpidium campyloides. X rayed tap or distilled water was also highly toxic to Colpidia. Organic materials, including sheep's blood, agar, gelatin, and bacteria added to tap water before and after its exposure protected Colpidia against toxic action. Role of H_2O_2 in the toxicity is discussed. BA 8-8023.

3391
EXPERIMENTAL RESEARCHES ON THE PRIMARY TUMORS OF THE LUNG IN WHITE MICE TREATED WITH TAR AND X-RADIATION. Luciano Cirio and Giovanni Balestra. Pathologica 23, 755-8(1931).

Of 130 mice treated with tar, 80 were x irradiated in this study of the influence of general and local x irradiation on primary tumors of the lung. No significant difference was seen between irradiated and control groups. BA 8-8664

3392
MELANOPHORES INDUCED BY X-RAY COMPARED WITH THOSE EXISTING IN PATTERNS AS SEEN IN CARASSIUS AURATUS. George Milton Smith. Biol. Bull. 63(3), 484-9(1932).

X raying of goldfishes produced temporary eruption of melanophores, usually without changes in preexisting black patterns. Occasionally degeneration of black patterns was noted. BA 8-9585

3393
ACTION OF X-RAYS ON THE PATHOGENICITY OF A BOTRYTIS. L. Pasinetti. Riv. patol. vegetale 22(7/8), 201-17(1932). (In Italian).

When x rayed cultures of B. cinerea were tested on bean and pea seedlings, no attenuation in pathogenicity was found. Certain doses are believed to cause more rapid growth of mycelium. BA 8-10486

3394
RESEARCH ON VICIA FABA MINOR. EXTERNAL MORPHOLOGY. INTERNAL RADIOEXCITATION AND RADIOLESIONS. BIOLOGICAL ACTION OF HARD, SEMI-SOFT, AND SOFT RÖNTGEN RAYS. Edmondo Ingber. Atti ist. botan. "Giovanni Briosi" e lab. crittogam. univ. Pavia 2, 173-268(1930-31); 3, 95-145, 223-307 (1932). (In Italian).

Seedlings were subjected to 11-550 r of (1) hard x rays and of (2) semi-soft and soft rays. Action of (2) more severe than (1). Doses of 11 r - 88r of hard x rays stimulated growth during 1st 10 days. Larger doses weakened or killed plants, some of the weakened plants demonstrating early flowering and maturation. BA 8-10539

3395
THE BIOLOGICAL ACTION OF HARD, SEMI-HARD AND SOFT X-RAYS. RESEARCHES ON VICIA FABA MINOR. Edmondo Ingber. Atti ist. botan. "Giovanni Briosi" e lab. crittogam. univ. Pavia 3, 9-13(1932). (In Italian). BA 8-10540.

3396
MICRO-THERMO-ELECTRICAL VARIATIONS IN SOME PHYTOPATHOGENIC EUMYCETES. L. Pasinetti. Riv. patol. vegetale 22(7/8), 219-63(1932). (In Italian).

Cultures of Botrytis cinerea and Pythium de baryanum were x rayed (3 ma, 100 kv, 30 cm D.F., no filter) for 5-30 min. Temperatures of irradiated cultures at 24 hr intervals were consistently higher than those of controls. Observations considered to be an indication of stimulation of vital activity. BA 8-10542

3397
AN EXPERIMENTAL COMPARISON OF DIFFERENT CRITERIA OF DEATH IN YEAST. Otto Rahn and Margaret Noble Barnes. J. Gen. Physiol. 16(4), 579-92(1933).

Following exposure to heat, $HgCl_2$, ultraviolet or x rays, yeast cells lost power of: reproduction, fermentation, staining reaction with methylene blue, permeability of plasma membrane and coagulation of protoplasm, in that order. Relative effectiveness of H_2C_2 and heat on rates of loss of the 4 criteria of death differed from that of ultraviolet and x ray. BA 8-10575

3398
THE EFFECT OF SINGLE AND FRACTIONATED DOSES OF SELECTIVELY APPLIED X RAY IRRADIATION ON THE

HISTOLOGIC STRUCTURE OF THE MAJOR SALIVARY GLANDS OF THE RAT. W. G. Shafer. J. Dental Research 32, 796-806(1953).

Histological and clinical changes in salivary glands of animals several months after x irradiation are described. **3399**

EXPERIMENTAL STUDIES ON THE EFFECT OF X-RAY, UPON ANIMALS. ON THE BLOOD PICTURE OF RABBITS EXPOSED TO X RAYS. Katsutochi Oba. Sei-i-kai Zasshi 48(1), 1-18(1929). (In Japanese).

Irradiation effect depends on susceptibility of each rabbit. Common effects: slight decrease in Hg content, decreased erythrocyte count; slight polychromasia and anisocytosis; leucopenia, lymphopenia and relative increase and absolute decrease of pseudoeosinophil leucocytes. BA 8-10627.

3400

MEDICAL USES OF RADIUM. SUMMARY OF REPORTS FROM RESEARCH CENTERS FOR 1932. Radiol Comm. Author. Med. Research Council (Gt. Brit.) Privy Council Med. Res. Council, Spec. Rept. Ser. 186, 5-36(1933). BA 8-10630

3401

EXPERIMENTS ON THE GROWTH AND LONGEVITY OF THE WHITE MOUSE. I. THE INFLUENCE OF INJECTIONS OF THORIUM OLEATE IN OLEIC ACID, AND OF OLEIC ACID ALONE, ON GROWTH AND LONGEVITY. Robertson T. Brailsford, Mary C. Dawbarn, R. G. Thomas, J. W. Walters, and J. D. O. Wilson. Australian J. Exptl. Biol. Med. Sci. 11(2), 99-108(1933).

Oleic acid had no appreciable effect on growth curve of males or females, but mean life duration of males was reduced. Thorium oleate depressed growth and had directly injurious effects as well. BA 8-10719

3402

THE EFFECTS OF X-RAYS ON THE GONADS OF AMPHIBIAN LARVAE. William T. Levine. J. Exptl. Zool. 62(2), 409-31(1932).

Relative resistance to x rays of the 2 types of antagonistic sex indicators in gonad of anurans was studied. High resistance of granulosa cells together with low sensitivity of primary germs cells prevents total sterility or sex reversal. Pattern of response of irradiated larval testes and ovaries is described. (Localized irradiation with 4000-10,000 r or 1500-4000 r.) BA 8-10894

3403

THE EFFECT OF X RAYS ON THE BLOOD AND SPLEEN OF WHITE MICE. A PRELIMINARY INVESTIGATION. G. Bourne. Med. J. Australia 19(Vol. 2, No. 24), 722-3(1932).

Mice were irradiated (Metallix therapy tube, 190 kv) in wooden boxes or fastened to board, some spleen-shielded. Spleen and blood reacted the same, irrespective of spleen shielding. General leucopenia occurred in all mice, also decreased in polymorphs and relative lymphocytosis. BA 8-11131

3404

HISTOLOGICAL CHANGES IN NON-REGENERATING LIMBS OF X-RAYED AMBLYSTOMA LARVAE. E. G. Butler. Anat. Record 54(3, Suppl.), 37-58(1932). (Abstract) BA 8-12165

3405

THE EFFECTS OF X-RADIATION ON THE DEVELOPMENT AND REGNERATION OF THE EARLY FORE-LIMB BUD OF AMBLYSTOMA PUNCTATUM. W. O. Puckett. Anat. Record 54(3, Suppl.), 79(1932). (Abstract) BA 8-12165

3406

EYES OF IRRADIATED HUMAN EMBRYOS; FURTHER OBSERVATIONS. Isadore Goldstein and David Wexler. Arch. Ophthalmol. 7(3), 434-8(1932).

X ray action on embryologic tissues is discussed and mode of origin of rosettes on retina studied by reconstructions from serial sections. Authors conclude that rosettes result not from folding or contraction, but from scattering of formed neuro-epithelial cells into the anterior layer, presumably an x ray effect. BA 8-12194

3407

THE EFFECT OF X-RADIATION ON THE MEIOTIC AND MITOTIC DIVISIONS OF CERTAIN PLANTS. L. H. A. Stone. Ann. Botany 47, 815-26(1933).

X ray effects on meiosis in *T. silvestris* and *R. discolor* and on mitosis in *C. olivieri* are described. Exposure 1-3 mo. prior to meiosis has no serious effect, but exposure 24 hr before division causes destructive changes which are apparent at anaphase. Mitosis stops following treatment, then continues, exhibiting abnormal divisions. BA 8-12800

3408

THE EFFECT OF X-RAYS ON THE LINKAGE OF MENDELIAN CHARACTERS IN THE FIRST CHROMOSOME OF *DROSOPHILA VIRILIS*. Sukeichi Fujii. Japan J. Genet. 8(2/3), 137-49(1933). (Japanese with Eng. Summary).

It is concluded that x raying decreases amount of crossing-over in distal region of 1st chromosome, increases it in proximal region, and has no effect in middle region. Effects appear on 6th day, attain climax 7-9th day, disappear on 16-18th day. BA 8-12870

3409

ON THE LETHAL GENES INDUCED BY X-RAY IN *DROSOPHILA MELANOGASTER*. Daigoro Moriwaki. Japan. J. Genet. 8(4), 248-50(1933). (Japanese). BA 8-12884.

3410

PRODUCTION OF DOMINANT LETHAL GENETIC EFFECTS BY X-RADIATION OF SPERM IN *HABROBRACON*. M. F. Stancati. Science 76, 197-8(1932).

Production of true zygotic dominant lethal effect by x raying of sperm was established for the wasp. Evidence consists of lowering the mean number of progeny per female per vial of females mated to x rayed males, and production of large numbers of small "unisexual" fraternities (distinct from ordinary unisexual fraternities which are regularly larger than bisexual). BA 8-12888

3411

PHYSIOLOGICAL VARIATIONS IN CERTAIN CROP PLANTS FOLLOWING SEED EXPOSURE TO HIGH-VOLTAGE X-RAYS. C. N. Moore and C. P. Haskins. Botan. Gaz. 94(4), 801-7(1933).

Seeds of cotton, tung oil tree (*Aleurites*), snapdragon, phlox and sour orange were exposed dry to unfiltered radiation from Coolidge tungsten-target x ray tube, 200 kv, 30 ma, 50 cm, 300 r/min. Dwarfing, delayed growth, fasciation, tissue inversion and replacement were observed. No histological study was made. BA 8-13033

3412

GROWTH IRREGULARITIES IN HYBRID FREESIAS INDUCED BY X-RAYS. W. P. Morgan. Proc. Indiana Acad. Sci. 41, 139-44(1932).

X rayed corms, (3 min exposures up to 21 min. 105 kv, 30 ma, 16 in., no Al screen) exhibited stimulated lateral bud growth, curled and twisted leaves and stems, split, deformed flowers, uneven chlorophyll distribution. Plants from seeds or bulbs of treated plants were normal. Result of exposing flower buds is described. BA 8-13034

3413

Argonne National Lab., Lemont, Ill. EFFECTS OF SINGLE DOSES OF X-RAYS ON RABBITS. C. W. Hagen, Jr., L. O. Jacobson, R. Murray, and P. Lear. Sept. 9, 1944. Decl. June 4, 1947. 47p. (MDDC-999).

Rabbits were exposed to 200 kvp x rays filtered with 0.5 mm of copper and 1 mm of aluminum; median lethal dose was 790 ± 20 r. Heavy rabbits were more resistant to lethal effects. Clinical effects were most severe at 1 day. 5 to 15 days, and between 35 and 60 days after irradiation. After 800 r, rabbits lost weight for two days. After 400 and 800 r, blood forming tissues showed the most severe damage. Epithelial tissues were less sensitive than hematopoietic tissues. (from authors' summary).

3414

THE PHYSIOLOGICAL EFFECTS OF RADIANT ENERGY. Henry Laurens. New York, Chemical Catalog Co., Inc. 1933 610p. (American Chemical Society Monograph. Ser.)

Author presents an extensive review of literature on effect of all types and combinations of types of radiant energy on all forms of organisms, plant, and animal. Bibliography of 2000 titles given BA 8-13123

3415

EFFECT OF LARGE QUANTA ON THE BIOLOGICAL EFFECT OF VARIOUS DOSES OF RÖNTGEN RADIATION. R. Braun and H. Holthausen. *Strahlentherapie* 34(4), 707-34(1929). (In German).

Authors present a critical review of literature on effect of the energy of absorbed quanta on death rate of various biological objects. Review includes description of experiments with *Ascaris* eggs at various stages. No difference in form of death curves was observed for various qualities of radiation used. (10 kv, Lindemann window, x rays of 0.045, 0.055, and 1.05 mm Cu half value layer.) BA 8-13136

3416

RÖNTGEN THERAPY OF SKIN DISEASES IN DOGS AND CATS. I. THE EVOLUTION OF RÖNTGEN THERAPY IN VETERINARY MEDICINE. Alois Pommer. Wien. *Tierarztl. Monatsschr.* 20, 817-26(1933). (In German).

Author presents a review of experimental work since 1895. BA 8-13138

3417

RELATION OF THE ROENTGEN WAVE LENGTH TO THE BIOLOGICAL EFFECT. J. A. Saralegui and Friedrich Vierheiler. *Am. J. Surg.* 11(1), 97-104(1931).

This is a review, including an attempt to explain some discordant results found in the literature. Difficulties may arise from secondary radiation, inaccurate measurement of radiation intensities, variation in biological material and difficulty of expressing irradiation effects quantitatively. BA 8-13139

3418

RECENT ADVANCES IN RADIUM. W. Roy Ward and A. J. Durden Smith. London, J. and A. Churchill. 1933. 324p. BA 8-13141

3419

THE COMBINED EFFECTS OF COLLOIDAL SILVER AND HIGHLY FILTERED ROENTGEN RADIATION UPON THE HEMATOPOIETIC SYSTEM IN DOGS. Samuel A. Shouse and Stafford L. Warren. *J. Exptl. Med.* 53(3), 437-45(1931).

Hemolysis, anemia, leukocytosis and weight loss, follow injections of collargol. Sudden leukopenia and marrow hypoplasia followed irradiation (deep therapy dose of 350-1050 ma min). Combined effects are cumulative and more toxic than reaction to either procedure alone. BA 8-13633.

3420

FAT NECROSIS SIMULATING THROMBOSIS AFTER INJECTION OF RADIOACTIVE SOLUTIONS INTO THE VEINS. M. Askanazy and A. Jentzer. Wien. *Med. Wochschr.* 79(1), 3-8(1929). (In German).

Intravenous use of radioactive solutions in treating malignant tumors has led occasionally to signs of venous

thrombosis. Actual lesions was found to be perivascular fat necrosis, not thrombosis. Similar lesions may be produced experimentally in rabbits by direct application of Ra water on perirenal fat pads. Dose ranges from 3-12 mc, 5-10 min. BA 8-13637

3421

CICATRIZATION OF NEOPLASTIC SKIN ULCERS FOLLOWING LOCAL ADMINISTRATION OF INSULIN. F. S. Gomes da Costa. *Z. Krebsforsch.* 39(1), 5-11(1933). (In German).

Local application of insulin has marked beneficial effect on tumors perhaps due to enhancement of tissue's sensitivity to x irradiation. BA 8-13706

3422

STUDIES ON PHYSIOLOGICAL AND PATHOLOGICAL CHEMISTRY OF THE SKIN. VI. RESIDUAL NITROGEN AND NITROGEN FRACTIONS OF THE SKIN IN THE NORMAL STATE, IN KIDNEY DISEASE AND UNDER EXPERIMENTAL CONDITIONS. Erich Urbach and Grete Sicher. *Z. ges. exptl. Med.* 76(3/4), 483-507(1931). (In German).

X ray exposures which caused vomiting produced an increase in residual N of blood serum and skin, mainly due to increase in urea. Exposures not causing vomiting caused increased N of skin; not of blood. BA 8-13748

3423

SALTATION INDUCED BY X-RAYS IN SEVEN SPECIES OF CHAETOMIUM. Hugh Dickson. *Ann. Botany* 47, 735-54(1933).

Mycelia of 7 species of *Chaetomium* were irradiated and relative numbers of saltants determined. Species fell into 2 groups: (1) 4 species saltated relatively infrequently; (2) 3 species produced saltants readily. BA 8-14983

3424

ON THE GENETIC NATURE OF INDUCED MUTATIONS IN PLANTS. L. J. Stadler. *Proc. Intern. Congr. Genet.* 6th Congr., Ithaca, N. Y. 1, 274-94(1932). BA 8-14996.

3425

ARTIFICALLY INDUCED CROSSING-OVER IN MALES OF *DROSOPHILA MELANOGASTER*. Heinrich Friesen. *Science* 78, 513-14(1933).

X rays (4000 r) applied to pupal stage gave 2-4% crossing-over in males in central regions of 2nd and 3rd chromosomes. Since it is in this same region that crossing-over is increased in females by x rays, mechanism seems to be same for both sexes. BA 8-15008

3426

RADIATION GENETICS. Frank Blair Hanson. *Physiol. Rev.* 13(4), 466-96(1933).
A review. BA 8-15009

3427

X-RAY STERILITY IN THE MALE HOUSE MOUSE. George D. Snell. *J. Exptl. Zool.* 65(3), 421-41(1933).

Treatment with 800 r x ray dose had no effect on survival of spermatozoa in epididymis of male house mice. Litters sired by x rayed males before onset of sterility were markedly smaller, with logarithmic relation between x ray dose and litter size. BA 8-15023

3428

STIMULATION AND DAMAGE BY X-RAYS. Edmondo Ingber. *Atti 1st. botan. "Giovanni Brioni" e lab. crittogam. univ. Pavia* 2, 111-6(1930-1). (In Italian)

Author outlines precautions to be taken in avoiding errors in technique and interpretations of results of biological action of x rays. BA 8-15199

3429

THE INFLUENCE OF X-RADIATION ON *ATRIPLEX HORTENSIS* L. Edna L. Johnson. *New Phytologist* 32(4), 297-307(1933).

Irradiated white plants gave highest percentage of anomalies with stem lesions and dichotomous branching, green variety exhibited most leaf abnormalities, altered phyllotaxy and flattened stems, lateral branching was most frequent in red variety. Greatest decrease in catalase activity occurred in treated red and white varieties. There was only slight difference in catalase content of treated and control green plants. BA 8-15200

3430

ON THE RADIOSENSITIVITY OF THE NON-DIVIDING CELL. J. C. Mottram. Brit. J. Radiol. 6, 615-21(1933).

Author attempted to verify reported high x ray and Ra sensitivity of cells during the 80 min period before mitosis. Bean roots were γ -irradiated during each hr of day. Since in A. M. more cells are in postmitotic, and in P. M. in the premitotic state, difference, if present, should be detected. No evidence of such an effect was observed. BA 8-15202

3431

COMBINED EFFECT OF DYES AND X-RAYS ON YEAST. A. A. Imshenetski. Bull. acad. sci. URSS. Classe sci. math. nat. 1932(2), 225-40(1932). (Russian with German Summary). BA 8-15231

3432

TREATISE ON NORMAL AND PATHOLOGICAL PHYSIOLOGY. I. GENERAL PHYSIOLOGY. G. H. Roger and Leon Binet. Paris, Masson et Cie. 1933. 1136p.

Contains chapter by A. Lacassagne on action of radiations on cells. BA 8-15237

3433

STUDIES ON THE EFFECT OF RÖNTGEN RAYS ON THE GROWTH CURVE OF RATS AND MICE. H. Druckrey A. Low-Beer, and M. Reiss. Z. ges. exptl. Med. 83(1/2), 115-27(1932). (In German).

Mice and rats were x rayed (5-1500 r) and weighed to study effect produced by irradiation during 1st 6 mo of age. Dose of: 5 r produced no difference between weight of treated and control animals, 500 r gave delayed effect of lower wt; 650 r gave early wt increase over normal; 1000 r produced early weight loss, was lethal for new-born. Doses over 650 r produced diarrhea, shagginess of hair, hair loss, and nervous symptoms of ataxia and tremor. BA 8-15240

3434

THE RELATIVE BIOLOGICAL EFFECTIVENESS OF X-RAYS AND GAMMA RAYS. G. Failla and P. S. Henshaw. Radiology 17(1), 1-43(1931).

The γ ray emission of 1 gm of Ra at 1 cm distance was found to be 36 r/min. Comparative effectiveness of 200 kv x rays and γ rays on production of erythema in human skin, retardation of linear growth of embryonic parts in wheat seedlings and mortality in *Drosophila* eggs was studied. Results show that γ rays are 3-4 times as effective on wheat seedlings and *Drosophila* eggs as on human skin. BA 8-15241

3435

THE TIME-INTENSITY FACTOR IN IRRADIATION. George T. Pack and Edith H. Qumby. Am. J. Roentgenol. Radium Therapy 28(5), 650-67(1932).

Authors conclude that if all times used in an experiment are short compared to duration of experimental cell's life cycle, no difference in effect will be seen with different intensities of radiation given in different times to deliver given dose. If duration of exposure to low intensity radiation is comparable to life span of cell, smaller effect may be expected than from higher intensity acting for shorter time. BA 8-15244

3436

STUDIES OF THE EFFECT OF ROENTGEN RAYS ON THE LIVER. HISTOLOGICAL CHANGES IN THE LIVER OF RATS FOLLOWING EXPOSURE TO SINGLE GRADED

DOSES OF FILTERED ROENTGEN RAYS. Ernst A. Pohle and C. H. Bunting. Acta Radiol. 13(2), 117-24(1932).

Histological changes in liver following exposure to 0.18 and 0.34 Å x rays in graded doses of 600-2,500 r included swelling of liver cells, chiefly due to imbibition of serum and fat, followed later by atrophy and eventual recovery. BA 8-15245

3437

A CASE OF FILARIAL INFECTION OF THE HAND TREATED BY DEEP X-RAYS. Subodh Mitra. Proc. Indian Sci. Congr. 17, 360(1930). BA 8-15871

3438

A CONTRIBUTION ON RÖNTGEN RADIATION OF DIPHTHERIA CARRIERS. Ul'sula Kratschell. Arch. Kinderheilk. 99(1), 42-9(1933).

A total of 8-30% S. E. D. x rays was given in 1-3 sessions at 8-14 day intervals to naso-pharynx of 71 diphtheric infants and children. Of these, 38 became negative, 6 of which could not be definitely attributed to irradiation. Concluded that x rays are not superior to chemical disinfection. No x ray injury was observed. BA 8-16012

3439

ON THE AFTER EFFECTS OF VARIOUS TEMPERATURES AND X RAYS ON CROSSING-OVER IN THE THIRD CHROMOSOME IN *DROSOPHILA MELANOGASTER*. PRELIMINARY REPORT. B. A. Kirssanow. Biol. Zentr. 51(10), 529-33(1931). (In German).

Effect of x raying and high (31°) or low (13°) temps. on crossing-over value in chromosome III was studied and compared with results in untreated controls. These agents increase crossing-over in middle (st-p) region to about twice control value. By various combinations, up to 6 times control value may be obtained. BA 8-15011

3440

HAPLOID FORMATION BY X-RAYS IN *TRITICUM MONOCOCCUM*. Yoshiwo Katayama. Cytologia 5(2), 235-7(1934).

Haploids were derived from seeds of spikes x rayed in meiosis. Many more were obtained when ripe pollen was irradiated and applied to normal pistils. No haploids resulted from pollination of irradiated pistils with normal pollen. It is concluded that male nuclei from irradiated pollen or PMC sometimes degenerated after entering the ovule, without fusing with egg, but their presence stimulated egg development by parthenogenesis. BA 8-17120

3441

THE MUTATION EFFECT OF X RAYS AND THE PROBLEM OF GENETIC EVOLUTION. W. P. Efromson. Biol. Zentr. 51(9), 491-506(1931). (In German).

Mutation experiments with *D. melanogaster* treated with soft (10.5 kv. no filter) and hard (150 kv, filter 0.24 mm Cu, 0.5 mm Al) x rays at 1125-9000 r showed direct proportionality of mutation rate and intensity. Mutation rate/unit of intensity applied was higher for hard x rays (ascribed to better penetration). Natural radiation are believed much less than sufficient to account for mutation rate in this organism. BA 8-17202

3442

EFFECTS OF X-RAYS ON THE RATE OF CHANGE IN THE UNSTABLE MINIATURE-3 GENE OF *DROSOPHILA VIRILIS*. M. Demerec. Proc. Natl. Acad. Sci. U. S. 20(1), 28-31(1934).

Rate of reversions of this gene was not significantly increased by x ray treatment of 600-1800 r. BA 8-17198

3443

THE ACTION OF RADIUM ON CANCER CELLS. II. SOME FACTORS DETERMINING THE SUSCEPTIBILITY OF CANCER CELLS TO RADIUM. H. G. Crabtree and

W. Cramer. Proc. Roy. Soc. (London) B113, 226, 238-50 (1933).

Anaerobiosis diminishes, while HCN and cold increases susceptibility of cancer cells to Ra. Variation in susceptibility to radium results when respiratory mechanism of cell is affected. BA 8-17590

3444
HYDROGEN EVOLUTION FROM X-IRRADIATED TISSUE. (PRELIMINARY REPORT). V. Everett Kinsey. Proto-plasma 18(3), 473-4(1933). BA 8-17592

3445
EFFECTS OF X-RAYS ON THE NEUROFIBRILLAR RETICULUM OF NERVE CELLS OF NEW-BORN MAMMALS. Gastone Lambertini. Boll. soc. ital. biol. sper. 4(4), 542-7(1929). (In Italian).

Experiments on 5 puppies indicate that neurofibrillar reticulum of new-born mammal nerve cells, unlike that of adults, is very radiosensitive. Changes include lysis and complete disappearance of neurorete, without stage of conglutination intervening. Age is considered to be responsible for difference of response. BA 8-17593

3446
THE INFLUENCE OF THE TIME FACTOR IN THE IRRADIATION OF *DROSOPHILA* EGGS. Hugo Roesler and P. S. Henshaw. Am. J. Cancer 16(3), 631-9(1932).

Authors conclude that on basis of ionization measurements, low intensity radiation is relatively less effective in killing eggs of *D. melanogaster*. Although higher intensity may be more effective in producing destructive action in tissues, the greater differential effects may be obtained with prolonged irradiation. BA 8-17594

3447
RADIUM RADIATION EFFECTS ON REGENERATION IN *EURATELLA CHAMBERLINI*. Raymond G. Stone. Carnegie Inst. Wash. Publ. 435, 159-66(1934).

Posterior regeneration is progressively reduced in this polychaete by increasing lengths of exposure to β and γ rays of radium. Regeneration rate, but not amount is retarded by γ rays. Failure of regeneration appears to be due to β radiation effect. BA 8-17595

3448
CHANGES IN REDOX POTENTIALS IN SERUM DUE TO RÖNTGEN RAYS. N. Waterman. Z. Krebsforsch. 38(3), 301-11(1933). (In German).

After x irradiation, electrical potential of oxidation-reduction processes in serum of cancerous individuals has higher value than in serum of normal persons and is more variable. Results were obtained with tarred rabbits. BA 8-17597

3449
THE INDUCTION OF SELF-FERTILITY IN THREE FRUITS. D. Lewis and L. K. Crowe. J. Hort. Sci. 29, 220-225(1954).

The authors explain the x-irradiation method of inducing S mutations of the pollen which result in compatibility in hitherto incompatible self and cross matings. PBA 25-479

3450
ON THE EFFECT OF RÖNTGEN RAYS ON THE FINE STRUCTURE OF THE LIVER CELLS OF THE FROG. N. Tschassownikow. Virchow's Arch. pathol. Anat. u. Physiol. 269(1), 166-77(1928). (In German).

After 48-72 hr of x ray exposure, mitochondria of frog liver cells break down into granules which may swell and become globular. Vacuoles which become basophilic appear in cytoplasm; changes in Golgi net occur only after considerable cell degeneration. Basophilic constituents of nuclei increase at expense of acidophilic constituents. BA 8-18052.

3451
CYTOLOGY OF A TRANSLOCATION OF THE 1 · 2 CHROMOSOME IN *DATURA*. A. Dorothy Bergner and A. F. Blakeslee. Bull. Torrey Botan. Club 61(4), 197-209(1934).

As result of radiation treatment a gamete was produced in which 1 · 2 chromosome broke in mid-region; 0 · 2 half translocated to 0 11 end of 11 · 12 chromosome, forming a chromosome with 3 possible points of attachment for other chromosomes. The 0 · 1 half remains free. BA 9-21

3452
THE EFFECT OF X-RADIATION UPON SOMATIC CHROMOSOMES. K. Mather and L. H. A. Stone. J. Genetics 28(1), 1-24(1933).

Rooted corms of *Crocus olivieri*, *C. balansae* and *C. biflorus*, and *Tulipa gesneriana* bulbs were irradiated (64 kv, 5 ma, 30 cm target dist., for 15-30 min, unscreened). Abnormal metaphases were seen in fixed root tips in 2-3 days. It is concluded that chromosomes split during resting stage; attachment constriction remaining unaffected by radiation. BA 9-40

3453
THE INHERITANCE OF FOCAL MELANOSIS IN *DROSOPHILA*. John W. Gowen. Arch. Pathol. 17(5), 638-47(1934).

Focal melanosis of femur-tibia articulation in *D. melanogaster* was induced through action of gene located in middle portion of the sex chromosome, 29 units, mutated twice by x rays; once by 8,920 esu from Cu target tube and again by 26,620 esu from Cr target. BA 9-116

3454
CRYSTALLINE PEPSIN. VI. INACTIVATION BY BETA AND GAMMA RAYS FROM RADIUM AND BY ULTRA-VIOLET LIGHT. John H. Northrop. J. Gen. Physiol. 17(3), 359-63(1934).

Loss of activity of crystalline pepsin solutions exposed to β and γ rays of Ra and to ultraviolet were accompanied by corresponding decrease in pepsin protein. Rate of inactivation by ultraviolet depends on pH; maximum at pH 2.0. BA 9-417

3455
STUDIES ON SENSITIZATION TO GRENZ RAYS. C. Carrie. Strahlentherapie 46(4), 697-704(1933). (In German).

Hematoporphyrin and uroporphyrin (but not tryptaflavin or eosin) injections just before exposure sensitized mice to Grenz rays; not to x rays. BA 9-423

3456
CHANGES IN SUSCEPTIBILITY OF *DROSOPHILA* EGGS TO X-RAYS. I. A CORRELATION OF CHANGES IN RADIOSENSITIVITY WITH STAGES IN DEVELOPMENT. P. S. Henshaw and C. T. Henshaw. Radiology 21(3), 239-51(1933).

D. melanogaster eggs of different ages, exposed to varying dosages of 200 kv x rays, became more sensitive during cleavage and blastulation, comparatively much more resistant at gastrulation and more sensitive again after gastrulation. BA 9-425

3457
THE EFFECT OF RÖNTGEN RADIATION ON BLOOD CHOLESTEROL LEVEL AND ITS ADJUSTMENT BY ORAL ADMINISTRATION OF LIPOID. Magda Kiesel. Strahlentherapie 46(2), 311-42(1933). (In German).

In 11 of 15 rabbits, blood cholesterol (b. c.) fell and x ray sickness supervened after exposure; in 4 of 7 given Colsil (cholesterollécithin) before x irradiation b. c. rose in 2½ hr, was elevated in all after 24 hr, and there was no x ray sickness. In 13 of 20 patients b. c.

fell and x ray sickness occurred. Given Colsil before and hourly postirradiation, 11 of 20 showed increase b. c., usually no x ray sickness. BA 9-427

3458
ON THE RELATIONSHIP BETWEEN β AND γ RADIATION IN THE TREATMENT OF TUMORS. J. C. Mottram. Brit. J. Radiol. 5, 768-74(1932).

Repeated sublethal exposures to either β or γ radiation increased resistance of Jensen's rat sarcoma to the respective radiation. Increased resistance to one of these radiations by such conditioning was not accompanied by increased resistance to the other. BA 9-429.

3459
THE EFFECT OF RÖNTGEN RADIATION ON NERVE ACTION CURRENT. W. Schmitz and H. Schaefer. Strahlentherapie 46(3), 564-7(1933). (In German).

Action current of sciatic nerve of *Rana temporaria* measured by cathode ray oscillograph before and during irradiation was unaffected by doses to 1000 r in 15 min; by doses to 10,000 r intensified by Pb sheet behind nerve and applied until nerve died, or by 8 mgm RaBr for several hr at 1 mm distance. BA 9-431

3460
THE EFFECT OF SPACED RADIATION ON TISSUE CULTURES IN VITRO. F. G. Spear. Proc. Roy. Soc. (London) B110, 224-34(1932).

Tissue cultures from choroid and sclera of fowl embryos were exposed to Ra emanation for various periods separated by various intervals. Fractionation of dose into two parts decreased the effect on mitosis (inhibition), two exposures separated by 80 min. having a greater inhibitory effect than similar exposures separated by 160 min. Twenty four exposures to 300 mg Ra at 0.5 cm, $2\frac{1}{2}$ min. each, separated by 80 min. intervals produced a delayed lethal effect equivalent to continuous irradiation of $4\frac{1}{2}$ hours. BA 9-432

3461
ON THE ACTION OF RADIUM D, E, AND F WITH COLLOIDAL BISMUTH UPON GROWING TUMORS. A. G. C. Taylor. Brit. J. Radiol. 5, 446-56(1932).

Radioactive solution of radium D, E and F dissolved out of old radon tubes had a marked inactivating effect on emulsion of Jensen's rat sarcoma; only slight effect when injected around young growing tumors; little or no effect when injected into flank opposite that in which tumor was growing. BA 9-433

3462
BIOLOGICAL PROBLEMS IN X-RAY THERAPY. Friedrich Voltz. Strahlentherapie 47(1), 137-43(1933).

A review. BA 9-434.

3463
THE QUESTION OF LEUKOCYTE DEPRESSION AFTER IRRADIATION WITH VERY SOFT RÖNTGEN RAYS. E. Wilhelmy and Ning Yu. Strahlentherapie 47(3), 531-9 (1933). (In German).

No differences in leucocyte count, which could not be attributed to spontaneous fluctuation, were observed among 17 patients given 300 r of x rays on 6 x 6 cm field and 17 healthy controls receiving no irradiation. BA 9-435

3464
THE EFFECT OF X-RAYS ON THE ELECTRIC POTENTIALS AND THE RATE OF OXIDATION OF FROG'S SKIN. Marvin M. D. Williams and Charles Sheard. Protoplasma 15(3), 396-414(1932).

Curves for (1) potential difference and (2) O_2 consumption were similar in form, but changes in (2) generally preceded changes in (1). Results indicate cyclic type of relation between physiologic effects of x rays and time after irradiation. Doses of 9,000 and 160,000 r were applied in this study. BA 9-436

3465
SERUM COLSIL LEVELS, AND ROENTGEN SICKNESS AS REFLECTED BY SERUM CHOLESTEROL. Elisabeth Willms. Strahlentherapie 42(1), 171-80(1931). (In German).

Most patients with malignant tumors have higher than normal serum cholesterol. No relationship was found between incidence of radiation sickness and postirradiation change in serum cholesterol. Attempts to control radiation sickness with cholesterol preparation, Colsil, failed. BA 9-437

3466
CHOLINE CONTENT OF BLOOD UNDER SEVERAL EXPERIMENTAL CONDITIONS. Ada Bolaffi. Arch. ital. sci. farmacol. 2(2), 126-40(1933). (In Italian).

Irradiation with ultraviolet and Ra tends to increase choline content of rabbits' blood. BA 9-533

3467
A NOTE ON THE EFFECT OF RADIATION ON BLOOD. G. White Phillips. Lancet 225, 745-7(1933).

Blood counts at 2-day intervals in 6 untreated controls and in 9 malignant cases undergoing Ra therapy (5 also x rayed) showed no characteristic changes in blood picture 15-27 days after large x ray doses, no anemia or leucopenia resulted. Low lymphocyte count in malignant cases and gradual lymphocyte decrease in 2 cases were believed not to have been related to radiations. BA 9-560

3468
EFFECT OF X-RAY STERILIZATION ON OESTRUS IN THE FERRET. A. S. Parkes, I. W. Rowlands, and F. W. Rogers Brambell. Proc. Roy. Soc. (London) B109, 425-34(1932).

Complete obliteration of the ovarian follicular system followed whole-body x ray exposure for 5-80 min periods. Results indicate sterilized ovary of ferret produces enough estrin to cause uterine changes, but not enough for vulval swelling during breeding season. BA 9-694

3469
THE ROENTGEN-RAY TREATMENT OF EXPERIMENTAL TUBERCULOSIS. John W. Spies. Am. J. Roentgenol. Radium Therapy 26(5), 716-25(1931).

Guinea pigs and rabbits irradiated weekly for 8 wk: (1) before inoculation with virulent strain of tubercle bacillus, (2) after inoculation, (3) partly before and partly after inoculation. No retardation in the development of the disease was observed. BA 9-919

3470
ENHANCED LETHAL EFFECTS OF X-RAYS ON *BACILLUS COLI* IN THE PRESENCE OF INORGANIC SALTS. Walter D. Claus. J. Exptl. med. 57(2), 335-47(1933).

B. coli was irradiated by heterogeneous x rays in a series of solutions of M/10 KBr and nitrates of Sr, Ba, and Pb. Synergistic effect of salt solutions plus irradiation was found to increase with harder radiation. Enhanced lethal effect is believed to be a function of absorption coefficient of the salt and of wave length of x rays. BA 9-1167

3471
INHIBITION OF REGENERATION IN THE ADULT NEWT (*TRITURUS VIRIDESCENS*) BY X-RADIATION. Pressley L. Crummy. Anat. Record 57(4, Suppl.), 61(1933). (Abstract). BA 9-1623

3472
THE ACTION OF γ RAYS OF RADIUM ON THE NEURORETE OF DONAGGIO OF THE SPINAL NERVOUS ELEMENTS OF MAMMALS. Gastone Lambertini. Monit. zool. ital. 41 (Suppl.), 244-7(1931). (In Italian).

Abstract of paper. BA 9-1624

3473

HISTOLOGICAL CHANGES IN NON-REGENERATING LIMBS OF X-RAYED AMBLYSTOMA LARVAE. E. G. Butler. Anat. Record 55(4, Suppl.), 9(1933).

Abstract of paper. BA 9-1724

3474

AN EXPERIMENTAL STUDY IN THE DETERMINATION OF THE MORPHOLOGY OF HYDROCEPHALUS, PRODUCED IN THE ALBINO RAT WHEN IRRADIATED IN UTERO. T. T. Job and L. T. Palumbo. Anat. Record 55(4, Suppl.), 61(1933).

Abstract of paper. BA 9-1724

3475

AN EMBRYOLOGICAL STUDY OF A SPECIAL STRAIN OF DEFORMED X-RAYED MICE, WITH SPECIAL REFERENCE TO THE ETIOLOGY AND MORPHOGENESIS OF THE ABNORMALITIES. George M. Plagens. J. Morphol. 55(1), 151-83(1933).

Normal development of x rayed strain during first 13 days after insemination was followed by development of pathological structures (blebs, hematomas, thrombi) which crowd developing tissues and result in body deformation. BA 9-1744

3476

THE EFFECT OF X-RAYS ON ANTERIOR REGENERATION IN LUMBRICULUS INCONSTANS. Clarence D. Turner. Anat. Record 57(4, Suppl.), 65(1933). BA 9-1745.

3477

CROSSING OVER INDUCED BY X-RAYS IN DROSOPHILA MALES. J. T. Patterson and Meta L. Suche. Genetics 19(4), 223-36(1934).

Males heterozygous for 8 mutant genes in III-chromosome were x rayed, and F₁ males backcrossed to females with same series of genes. F₂ gave 77 variants (of 8,371) ascribable to x raying. Tests show that majority of variants were due to exchange of segments between homologues of III-chromosome. It is concluded that x rays induce crossing-over in males when immature germ cells containing diploid number are irradiated. BA 9-2325.

3478

A STUDY IN DROSOPHILA MELANOGASTER ON THE RELATIONSHIP BETWEEN DOSE AND MANNER OF IRRADIATION ON THE INDUCED MUTATION RATE. N. W. Timofeeff-Ressovsky. Strahlentherapie 49(3), 463-78 (1934). (In German).

For 8 doses between 750 and 6000 r-units, the frequency of sex-linked mutations induced in mature sperm is in simple and direct proportion to intensity of x radiation. Changing irradiation method did not alter dose-mutation frequency relationship. Direction and kind of mutation process is dependent upon structure of genes and chromosomes. BA 9-2338

3479

SOME EFFECTS OF X-RADIATION ON THE AMPHIBIAN, TRITURUS VIRIDESCENS. Pressley L. Crummy. Proc. Penn. Acad. Sci. 6, 167-71(1932).

Pigment changes following x raying showed red to be most susceptible; black gave little response. Histological studies of skin, intestine, and liver showed destruction of epidermal, epithelial, and cortex-like cells, respectively. BA 9-2575.

3480

THE EFFECT OF X-RAYS ON THE GRANULOPLAXIC ACTIVITY OF THE R.-E. SYSTEM. G. Dellepiane. Arch. intern. pharmacodynamie 39(3), 294-304(1930). (In Italian). BA 9-2576

3481

CELL CHANGES IN THE OVARY OF THE ROENTGEN IRRADIATED SEXUALLY MATURE WHITE MOUSE.

F. Chr. Geller. Arch. Gynakol. 141(1), 61-75(1930). (In German).

After 200-500 r x ray dose to ovaries of sexually mature mice, all visible ova, larger follicles and, later, corpora lutea disappeared. BA 9-2577

3482

METABOLISM OF TISSUES GROWING IN CULTURE. V. EFFECT OF RADIUM ON THE METABOLISM OF CULTURES OF EMBRYONIC KIDNEY TISSUE. Barbara Elizabeth Holmes. Biochem. J. (London) 27(2), 391-6 (1933).

Cell movement appeared to take place at expense of protein breakdown in the absence of suitable carbohydrate. An exposure of 14 hrs at 0.5 cm to γ rays of 300 mgm Ra produced 40-50% inhibition of carbohydrate breakdown, did not affect protein breakdown. BA 9-2578

3483

THE QUANTITATIVE BIOLOGICAL EFFECT OF X-RAYS OF DIFFERENT EFFECTIVE WAVE LENGTHS. Vasil Obreshkove. Physiol. Zool. 7(3), 330-9(1934).

Simocephalus vetulus young were subjected to beams of x rays of different qualities. Degree of injury was measured in terms of decrease in O₂ consumption. Between 0.317 and 0.450 Å, degree of injury was dependent on total amount of energy absorbed rather than on the qualities of x rays employed. BA 9-2579.

3484

THE DIFFERENTIAL ACTION OF GAMMA RAYS. S. Russ and G. M. Scott. Brit. J. Radiol. 5(59), 814-23(1932).

Rabbit ovaries were exposed to 45, 500, 1500, or 1700 mgm el. hrs, and animals were killed 6 wks later; ovaries examined macro- and microscopically. Rat livers were treated with radon seeds of 0.6, 0.3, and 0.1 mm platinum filtration; doses equalled 10, 32, and 45 mc for 2 hr. Livers were examined 48 hr after exposure. With the same ionization, there was proportionately greater biological effect from radiation of longer wave length. BA 9-2580

3485

ON THE ALTERATION OF CELL MEMBRANE PERMEABILITY BY A COMBINATION OF X-RAYS AND PHOTOCHEMICAL CATALYSTS. Lydie Tsebrikow. Arch. intern. med. exptl. 5(4), 641-8(1930). (In French).

Studies showed that photochemical catalyzers such as colloidal Fe, Ag, and Au intensify x ray action by increasing the permeability of the cell membrane. Trypan blue and trypanflavin, photochemical catalyzers for light and ultraviolet rays have no effect on x ray action. BA 9-2581.

3486

ON THE EFFECT OF ROENTGEN IRRADIATION ON THE LEVEL OF UREA AND AMMONIA IN THE BLOOD. Hans Wantoch. Deut. Z. Chir. 226(1/2), 160-3(1930). (In German).

Blood ammonia and urea in rabbits increased rapidly after x irradiation. Both apparently arise from proteins of rapidly disintegrating cells. BA 9-2582

3487

EXPERIMENTAL STUDIES ON THE CAUSE OF THROMBOSIS. A CONTRIBUTION ON THE ROLE OF BLOOD PLATELETS. Willy König. Arch. klin. Chir. 171(3), 447-502(1932). (In German).

Post-operatively, intermediate nuclear decomposition products cause circulatory changes in spleen, resulting in stimulation of the spleen which then destroys more platelets. After irradiation, platelets in peripheral blood first decrease then increase; clotting is reported as accelerated. BA 9-2652

3488

STUDIES ON THE SURVIVAL LENGTH OF LEUCOCYTES IN VITRO, TESTED BY THEIR AMOEBOID MOVEMENTS.

III. THE INFLUENCE OF VARIOUS RADIANT ENERGIES THEREON. Junkichi Ono. Trans. Japan Pathol. Soc. 19, 172-9(1929).

Post-irradiation survival of leucocytes was compared to normal mean survival of 21.4 hr, in vitro. Exposure to sun lamp, Kromayer's mercury-quartz lamp and solar radiation was most injurious, x rays, Ra were less effective, light of electric lamps relatively innocuous. BA 9-2664

3489

STUDIES IN THE PHYSIOLOGY OF THE PROSTATE GLAND. Robert Lee Johnston. Endocrinology 18(1), 123-41(1934).

Radon doses of 0.2, 2-4, 6-10 mc and x radiation of 800-2000 r and 250-1000 r were applied to testes and prostates of rats and dogs. Effects on exposed organs on hormone production and on fertility are described. Beneficial effects of anterior pituitary gonadotropic hormone on the irradiated testes was observed. BA 9-2840

3490

ROENTGEN RAY INTOXICATION DISTURBANCES IN METABOLISM PRODUCED BY DEEP MASSIVE DOSES OF THE HARD ROENTGEN RAYS. C. C. Hall and G. H. Whipple. Am. J. Med. Sci. 157, 453-81(1919).

Dogs were given a lethal dose of hard roentgen rays from the Coolidge tube. After a latent period of 24 hrs, vomiting and diarrhea began. Autopsy findings: decreased spleen size, congestion of intestinal mucous membrane and liver damage.

3491

RADIATION THERAPY OF MONGOLISM AND ITS INFLUENCE ON SERUM CHOLESTEROL LEVELS. Ernst Bingenheimer. Z. ges. exptl. Med. 87(5/6), 592-612(1933) (In German).

Roentgen irradiation of either skull or trunk causes increased serum cholesterol in Mongolian idiots (who characteristically have low serum cholesterol). Curve of cholesterol change after radiation suggests special influence of hypophysis and adjacent midbrain on cholesterol level. No effect on clinical picture. BA 9-3105

3492

AN EXPERIMENTAL STUDY ON THE EFFECT OF X-RAYS ON TUBERCULOUS TESTIS. K. Matsuoka. Sei-i-kwai Med. J. 50(3), 1-32; (4), 68-100(1931). (In Jap. with Eng. Summary).

Author inoculated bovine tubercle bacillus into both testes of rabbits, then x rayed one side. Inflammatory reaction and tuberculous change were milder, and bacilli were less numerous in exposed organ as compared with control. Necrobiosis and atrophy of parenchyma were distinct in x rayed testis. Beneficial effects of x ray treatment were not histologically demonstrable. BA 9-3276.

3493

ACTION OF X-RAYS ON HISTOGENESIS IN THE THYMUS. Ch. Gregoire. Compt. rend. assoc. Anat. 27, 328-36 (1932). (In French).

Study of the thymus of 100 guinea pig embryos from x rayed mothers is believed to confirm theory that small thymic cells evolve from thymoblasts or epithelial cells of endodermal origin. Beginning of radiosensitivity of embryo's thymocytes coincides with terminal stages of mitosis giving rise to them. BA 9-3859

3494

THE ACTION OF X-RAYS ON EUPLOTES TAYLORI AND ASSOCIATED BACTERIA. Morden G. Brown, J. Murray Luck, Grace Sheets, and C. V. Taylor. J. Gen. Physiol. 16(3), 397-406(1933).

Minimum lethal x ray dose for E. taylori (2110 r per sec for 220 sec) far exceeds that for associated bacteria, allowing relatively simple sterilization of

protozoa. Irradiation of Euplotes for 100-220 sec caused temporary cessation of ciliary activity in many organisms. Effect of x rays on bacteria were direct, not via media. BA 9-3889.

3495

EXPERIMENTAL CONTRIBUTION TO THE INVESTIGATION OF THE EFFECT OF IRRADIATION ON PLANT TUMORS. M. Ponzio. Vestnik Rentgenol. i Radiol. 10, 123-8(1932). (In German).

Tumors produced by B. tumefaciens in P. zonale and R. communis were more sensitive to soft x rays, especially K series, and secondary rays of metals with high atomic weight than to short wave-length x rays. BA 9-4577

3496

PLANT DISEASES CAUSED BY PSEUDOMONAS TUMEFACIENS. III. C. Stapp and H. Bortels. Zentr. Bakteriell., Parasitenk. Abt. II. 88(13/16), 313-9 (1933). (In German).

Neither x raying nor Lakhovsky's copper-wire ringing method have any effect on P. tumefaciens tumors in P. zonale, S. lycopersicum, or D. stramonium.

BA 9-4584.

3497

HISTOGENETICAL STUDY OF ROENTGEN TUMOURS. III. ON THE INFILTRATION OF THE GROUP OF SPECIAL CELLS, AND ITS RELATION TO THE OCCURRENCE OF TISSUE-ABNORMALITY. Hideo Komuro. Trans. Japan. Pathol. Soc. 21, 704-7(1931). (In Japanese).

Histological studies of x ray induced tumors in beans and peas are described. Nucleus of special cells induced by x ray (cells which gave rise to tumor) underwent amitotic division. BA 9-4637

3498

ELEVATION AND DEPRESSION OF TERMOGENESIS IN THE PHYTOPATHOGENIC EUMYCETES IRRADIATED WITH X-RAYS. L. Pasinetti. Riv. patol. vegetale 24(5/6), 217-59(1934). (In Italian).

In general, x rays reportedly stimulated energy metabolism of pathogenic fungi studied: Thielavia basicola, Aspergillus niger, Corticium rolfsii, Nigrospora oryzae, and Sclerotium delphinii. BA 9-4641

3499

THE EFFECT OF SOFT X-RAYS ON THE GERMINATION OF WHEAT SEEDS. Harris M. Benedict and H. Kersten. Plant Physiol. 9(1), 173-8(1934).

Wheat seeds irradiated with characteristic K lines of Cu for 5 sec. yielded seedlings with increased diastatic activity and reducing sugar content. Those exposed longer gave plants with progressive decreases in diastatic activity, reducing sugar content, respiratory rate, and percentage of water in seedlings. BA 9-4686.

3500

INFLUENCE OF DEATH CRITERIA ON THE X-RAY SURVIVAL CURVES OF THE FUNGUS, NEUROSPORA. Fred M. Uber and David Goddard. J. Gen. Physiol. 17(4), 577-90(1934).

Ascospores of N. tetrasperma were irradiated with 11 kv x rays. Cultures of these yielded a wide variety of mutant forms. Analysis of survival curves and modes of death indicate that ascospore death results not from a single well defined reaction but from several deleterious processes initiated by radiation. BA 9-4691

3501

EFFECT OF X-RAYS ON FERN PROTHALLI. Lewis Knudson. Am. J. Botany 20(10), 680(1933). BA 9-4737.

3502

THE INFLUENCE OF ROENTGEN RAYS ON THE ACID-BASE EQUILIBRIUM. Douglas H. Sprunt. J. Biol. Chem. 92(3), 605-13(1931).

Determinations of bicarbonate, chloride, protein phosphorus, total base and non-protein N concentration of serum and cell volume were made on the blood of 5 dogs and 2 monkeys before and after x irradiation. Consistent decrease (sometimes preceded by increase) in concentration of total base and undetermined acids was found in both species postirradiation. BA 9-4822

3503

ON THE EFFECT OF THORIUM ON METABOLISM.

J Zapatero Dominguez. Biochem. Z. 251(1/3), 141-7 (1932). (In German).

Small doses of ThCl₄ (0.1 to 0.2 gm per kgm) administered to rabbits have an inconstant effect; larger doses (0.2 to 0.6 gm per kgm) increase oxygen consumption. BA 9-4840.

3504

VISUAL SENSATION PRODUCED BY ROENTGEN AND RADIUM RAYS. S. R. Gifford and E. E. Barth. Arch. Ophthalmol. (Chicago) 11(1), 81-91(1934).

In studies with normal persons and those with various ocular diseases, results indicated that x rays directly stimulate visual cells photochemically and that visual sensation is due to this effect. BA 9-4907

3505

EFFECT OF RADIUM EMANATION ON BACTERIA, PERIPNEUMONIA VIRUS AND BACTERIOPHAGE. B. P. Ebert and L. G. Peretz. Vestnik Rentgenol. i Radiol. 10, 569-84(1932). (Russian with Fr. and Germ. sum.).

Vegetative forms of bacteria, spore-bearing bacteria, peripneumonia virus, and bacteriophage exposed to radium emanation showed increasing resistance in that order. BA 9-5374.

3506

THE SENSITIVITY, IN VITRO, OF BACTERIA TO THE BETA AND GAMMA RAYS OF RADIUM. R. R. Spencer. U. S. Public Health Repts. 49(6), 183-92(1934).

Broth cultures of actively multiplying bacteria exposed to Ra, β, and γ rays show initial growth retardation followed by stimulated growth, pleomorphism, and tendency to stain more deeply. Results are believed to indicate lethal effect due to β rays. BA 9-5409

3507

VARIABILITY OF DANYSZ BACILLUS AND OF BACTERIOPHAGE UNDER THE INFLUENCE OF RADIUM EMANATION. A. Ia. Zholkevich. Vestnik Rentgenol. i Radiol. 11(5/6), 443-8(1932). (Russian, Ger. sum.).

Emulsions of Danyisz bacilli were subjected to action of 10 mc. of Ra emanation for 12 hr. New strains resulted with stable, transmissible characters. Dissociation went from S to R; virulence was sharply lowered. Bacteriophage underwent marked changes. BA 9-5416

3508

COLLOIDAL THORIUM DIOXIDE (THOROTRAST) INJECTIONS IN RABBITS. G. R. Mather Cordiner, and N. Hamilton Fairley. Trans. Roy. Soc. Trop. Med. Hyg. 26(4), 318-19(1933). BA 9-1055.

3509

EFFECT OF PLANTING DENSITY ON THE DEVELOPMENT OF *P. NITENS* IRRADIATED WITH ULTRA-VIOLET AND X-RAYS. G. S. Filippov. Vestnik Rentgenol. i Radiol. 12(1/2), 3-25(1933). (Russian, with German Sum.).

Exceedingly high population density of *P. nitens* cultures accelerated development 2-10 times and resulted in underdeveloped, dwarf forms. X and ultraviolet irradiation of cultures caused increase in size of morphologic elements and higher productivity; increase did not surpass control. Sexual process was unfavorably affected. Ultraviolet was more effective than x rays. BA 9-6665.

3510

THE EFFECT OF X-RAY STERILIZATION AND CRYPTORCHISM ON THE HYPOPHYSEAL FUNCTIONS.

Emil Witschi and W. T. Levine. Anat. Record 55(4, Suppl.) 41(1933). BA 9-7003.

3511

ACUTE AND CHRONIC FATAL RADIATION INJURY IN HUMAN BEINGS. H. von Hamperl. Arch. pathol. Anat. u. physiol. Virchow's. 298, 376-93(1936).

Two cases discussed: a 26 year old girl's death due to self administered thorium X, and a 35 year old roentgenologist's death from x ray irradiation.

3512

THE HISTOLOGY OF THE ACTION OF X RAYS ON DONAGGIO'S NEURORETE IN THE SPINAL NERVE CELLS OF NEWBORN MAMMALS, AND OF RA RAYS ON THE SAME ELEMENTS IN ADULT MAMMALS.

G. Lambertini. Riv. neurol. 6(1), 124(1933). (In Italian). BA 9-7202.

3513

SPECIAL LOCALIZATION INTO FOCI, OF LESIONS OF THE NEURORETE IN SPINAL NERVE ELEMENTS OF THE ADULT RABBIT BY THE COMBINED ACTION OF RA AND COLD. L. Pilati. Riv. neurol. 6(1), 126(1933).

BA 9-7202.

3514

MELANOTIC NEOPLASMS OF THE SKIN. S. William Becker. Am. J. Cancer 22(1), 17-40(1934).

Pigmentation of skin was studied in 8 cases. Pigment activity due to irradiation by ultraviolet or α rays and changes related to continued stimulation are described. BA 9-7256.

3515

EFFECTS OF IRRADIATION BY X-RAYS ON THE EXHALATION OF CARBON DIOXIDE BY THE MOUSE. G. Hevesy, and A. Forssberg. Nature 168, 692(1951).

Glucose was injected subcutaneously into mice after irradiation. Non-fasting irradiated mice exhale only 80% of the amount of CO₂ exhaled by control mice. It is suggested that catabolism of glucose and fatty acids and not that of glucose may be responsible for the reduced exhalation of CO₂.

3516

THE EFFECT OF X-RADIATION ON THE REGENERATION OF THE FORE LIMB OF AMBLYSTOMA LARVAE. Elmer G. Butler. J. Exptl. Zool. 65(3), 271-315(1933).

X irradiation with an adequate dosage prevents regeneration of the fore limb of *Amblystoma* larvae regardless of age of the larva or stage of limb development at time of amputation. Histological changes are described. BA 9-8159.

3517

THE EFFECTS OF X RAYS ON THE ADULT AND PUPAE DURING METAMORPHOSIS. Mme. Hufnagel and Marcel Joly. Compt. rend. 196(13), 962-4(1933). (In French).

Larvae of *Calliphora erythrocephala* and (2) *Hyponomeuta padella* ready to pupate were irradiated in petri dishes on paraffin blocs or moist earth. Normal development of (1) was prevented by 20,000 r while 80,000 r did not affect (2). Irradiation did not affect cells already differentiated but embryonic and resting cells were strongly affected. BA 9-8187

3518

RADIATION GENETICS. C. P. Oliver. Quart. Rev. Biol. 9(4), 381-408(1934).

Author reviews principal results obtained in experiments on genic and chromosomal effects of supersonic, electrical,

electrostatic, electromagnetic, ultra-violet, Grenz, x-ray, and radium radiations, and of uses of such research. 306 papers cited. BA 9-8728

3519

CHROMOSOMAL ALTERATIONS INDUCED IN PLANTS BY X-RADIATION. T. H. Goodspeed. Am. Naturalist 67(718), 466(1934).

Abstract of paper. BA 9-8729

3520

THE PRODUCTION OF TRANSLOCATIONS AND MUTATIONS IN MICE BY MEANS OF X-RAYS. George D. Snell. Am. Naturalist 67(715), 178(1934).

Abstract of paper. BA 9-8729

3521

THE EFFECTS OF ALPHA RADIATION FROM POLONIUM IN PRODUCING SOMATIC MODIFICATIONS IN DROSOPHILA. Frank Blair Hanson and Florence Heys. Am. Naturalist 67(715), 165-6(1934).

Abstract of paper. BA 9-8729

3522

TYPES OF MUTATIONS AFFECTING POLLEN GRAINS WHICH HAVE BEEN INDUCED BY X-RAYING AND AGING SEEDS OF DATURA. J. L. Cartledge and A. F. Blakeslee. Am. Naturalist 67(715), 163(1934).

Abstract of paper. BA 9-8729

3523

GENETIC CHANGES IN MICE INDUCED BY X-RAYS. G. D. Snell. Am. Naturalist 67(708), 81(1933).

Abstract of paper. BA 9-8729

3524

THE EFFECTS OF X-RAYS ON THE CHROMOSOMES OF CIRCOTETIX VERRUCULATUS (ORTHOPTERA). Edwin R. Helwig. Am. Naturalist 67(708), 62(1933).

Abstract of paper. BA 9-8729

3525

THE EFFECTS OF X-RAYS ON GROWTH AND RESPIRATION OF WHEAT SEEDLINGS. Dorothy S. Francis. Bull. Torrey Botan. Club 61(3), 119-53(1934).

Linear growth of 4 organs (1), increase in fresh and dry wts of growing portions of organisms (2) and CO₂ production by given number of seedlings (3) were determined postirradiation. Doses from 1130 to 13,560 r retarded all three; after 565 r transitory stimulation was seen in (3) followed by a depression. Effects are greater after larger doses and at later intervals of measurement. BA 9-9029

3526

THE ACTION OF ULTRA-VIOLET RAYS AND X-RAYS ON YEAST CELLS. G. Nadson and C. Stern. Doklady Akad. Nauk SSSR. 1931A(2), 39-44(1931).

Changes in Saccharomyces cerevisiae after irradiation with ultraviolet from Hg arc and x rays included; change in contour of vacuoles, coagulation of metachromic granules and death. Comparative time intervals for effects with each type of irradiation are given. Young cells are more sensitive than older ones. BA 9-9039

3527

ON THE COMBINED EFFECTS OF METALS AND X-RAYS ON YEASTS. G. Nadson and C. Stern. Doklady Akad. Nauk SSSR. 1931A(3), 80-6(1931). (In French).

Oligodynamic action of metals on yeast may either retard growth or kill the cell. When exposed to these metals alone or with x rays for $\frac{1}{2}$ or 24 hr, order of decreasing action is: Cu, Pb, Ag, Pt, Al. When irradiated in presence of metal for $\frac{1}{2}$ hr, order is Pb, Pt, Cu, Ag, Al. BA 9-9040.

3528

THE EFFECT OF X-RAYS ON THE VITAMIN B CONTENT OF WHEAT SEEDLINGS. Kanematsu Sugiura. Radiology 21(5), 438-48(1933).

Vitamin B in dry wheat seeds is partially inactivated by heavy doses of unfiltered x rays (120,000 r) and almost completely destroyed in wet germinated seedlings given half this dose. Such destruction of vitamin does not prevent growth. BA 9-9046.

3529

X-RAY DOSAGE IN RELATION TO GERMINATION OF PECAN NUTS. H. P. Traub and H. J. Muller. Botan. Gaz. 95(4), 702-6(1934).

With nuts of Hicoria pecan, the maximum dosage permitting reasonable percentage of germination (20%) probably lies between 40 and 80 min exposure (Victory Company Coolidge Tube, tungsten target, Snook transformer, 50 kv, 10 ma, 1 mm Al, 14 cm target distance.) BA 9-9048

3530

CONCENTRATION OF RADIUM BY PLANTS V. L. Vernadskii. Doklady Akad. Nauk S. S. S. R. 1930A(20), 539-42(1930). (In Russian)

Author gives quantity of Ra atoms contained in individual plants, Lemna minor, 1.02×10^5 atoms, L. gibba, 5.83×10^5 , L. triscula, 8.91×10^5 . BA 9-9049

3531

INVESTIGATION ON THE EFFECT OF RONTGEN RAYS ON LIMB REGENERATION IN TRITON. I. OBSERVATIONS ON LIMB REGENERATION IN TRITON AFTER VARIOUS RÖNTGEN RAY DOSES. V. V. Brunst and E. A. Scheremetjewa. Z. wiss. Biol. Abt. D. Wilhelm Roux' Arch. Entwickl. mech. Organ 128(1), 181-215(1933). (In German).

Regenerating or intact hind limbs of Triton cristatus were exposed to x rays, then amputated through middle of stylopodium. Doses of 15,000 and 3750 r inhibited or greatly slowed regeneration, 1500 and 750 r also slowed rate, 300 r or less was followed by slightly slowed or normal regeneration. There was no evidence of initial stimulus of x rays. BA 9-9077

3532

SOME EFFECTS OF X-RADIATION ON REGENERATION IN THE NEWT, TRITURUS VIRIDESCENS VIRIDESCENS (RAF.). Pressley Lee Crummy. Univ. Pittsburgh Bull 31(1), 54-60(1934).

Dose of 1800 r inhibited regeneration in the adult newt for 1 yr, 450 r inhibited process for 60 days and was followed by abnormal development of regenerating part. Greatest inhibitory effect was observed when exposure occurred during differentiation. Melanophores were strongly affected by both 1800 and 450 r. BA 9-9079

3533

ON THE EFFECT OF RONTGEN RAYS ON BLOOD CATALASE. Ladislaus Deutsch. Strahlentherapie 48(1), 114-17(1933). (In German).

Blood catalase increase after x irradiation in 10 cancerous patients was proportional to erythrocyte count, depended on dosage, site and size of field. Author concluded that x rays increase oxidation and hence resistance. BA 9-9080.

3534

POISONING FROM DRINKING RADIUM WATER. Alexander O. Getter and Charles Norris. J. Am. Med. Assoc. 100(6), 400-2(1933).

Authors report first case on record of fatal poisoning from consumption of water containing traces of Ra salts in which presence of Ra in bones and tissues was definitely proved by scientific procedures. Death was due to pathologic lesions caused by deposited Ra. BA 9-9082

3535

THE PHYSICAL BASIS OF THE BIOLOGICAL EFFECT OF RADIATION. R. Glocker. Strahlentherapie 48(1), 1-14(1933). (In German).

A review. BA 9-9083

3536

EFFECT OF ROENTGEN IRRADIATION ON THE HEALING OF WOUNDS. Gorton Ritchie. Arch. Pathol. 16(6), 839-51 (1933).

In 66 rats in which a 6 cm wound was made on skin of back, $\frac{1}{2}$ of each wound was irradiated, in 1 group immediately, in a 2nd group 24 hrs, after incision, and in a 3rd group, 48 hrs afterward. Chief irradiation effects were sluggishness of fibroblastic growth, presence of anomalous giant fibroblasts and persistence for varying period of fibrin network. BA 9-9089

3537

THE DETECTION AND ESTIMATION OF RADIUM IN LIVING PERSONS. IV THE RETENTION OF SOLUBLE RADIUM SALTS ADMINISTERED INTRAVENOUSLY. Herman Schlundt, John T. Nerancy, and John Paul Morris. Am. J. Roentgenol. Radium Therapy 30(4), 515-22(1933).

Twelve patients with mental disease were given intravenous RaCl_2 every few days for 2-6 mo, total of 2190 μg administered to the 12 patients. Radioactivity of patients was measured at various times after injection. Such therapy showed no superiority over other therapeutic procedures in psychiatric patients. BA 9-9090

3538

WHOLE ANIMAL EXPOSURES TO HIGHLY FILTERED GAMMA RAYS. W. G. Whitman. Radiology 21(3), 265-73 (1933).

Rats (67) were exposed to emanation of 6 g Ra filtered by 16 mm Pb, 1 mm Pt, 1 mm brass, 5 mm celluloid, for intervals of 0.5 min to 17 hrs. Lethal exposure at 62 mm, distance was 4 hrs. Minimum exposure detectable by blood counts was equivalent to 1/20 to 1/80 lethal dose and weight changes on a growth curve were nearly equal in sensitivity. Another group (16) was exposed to 2.5 g Ra filtered by 1 mm Pt 1 mm brass. Progeny of rats exposed to a dose greater than 1/10 L. D. showed an increased number of abnormal offspring. BA 9-9092

3539

VITAL STAINING OF THE CELLS OF SERTOLI AND THE SPERMATOGENIC CELLS IN TESTICLES EXPOSED TO X-RAYS. Giovanni Tramontano-Guerritore. Atti. accad. fisiocrit. Siena 4(9/10), 829-31(1929-30).

Irradiation of rat testicles before, during, and after vital staining made no appreciable difference in results obtained. (Trypan blue and carmalum). BA 9-10218

3540

THE KURLOFF-FOA-CARBONE'S BODIES AFTER CASTRATION BY ROENTGEN-RAYS. E. Fiorini. Pathologica 24, 573-6(1932).

Castration in the guinea-pig by Roentgen rays caused a reduction in size and number of Kurloff bodies in leukocytes without causing their complete disappearance. Treatment with whole extract of guinea-pig's testis produced no change in the number of these formations. BA 8-9556

3541

X-RAY MUTATIONS IN THE TOMATO. John W. MacArthur. J. Heredity 25(2), 75-8(1934).

X rayed dormant tomato seeds produced new mutants in 12.4% of F_2 progenies. All were recessive and monofactorial, mainly lethal or injurious, and involved chlorophyll and anthocyanin colors, leaf form, stature, habit, growth rate, and structure of the growing tip. BA 8-19358,

3542

MUTATIONS PRODUCED BY ROENTGEN RADIATION AND THE "DIVISION HYPOTHESIS." Willem Eduard de Mol. Cellule 42(2), 151-62(1933). (In German).

X raying of either Hyacinthus or Tulipa bulbs during flower formation may induce somatic variations in blossom, leaf, or pollen formation. Effects of 100, 200, and 300 r

doses are described. Aberrations in meiosis may give rise to mutations through changes in chromosome complex. Hereditary changes may arise from variation in number of genes as well as from change in karyotype. BA 8-19359

3543

THE EFFECT OF RADIUM ON GLUTATHIONE AND ITS BIOLOGICAL SIGNIFICANCE. Frederick S. Hammett. Protoplasma 15(3), 422-6(1932).

Cell proliferation-retarding action of Ra in weak non-destructive amounts is concluded to be due largely to destruction of sulfhydryl. Probably this effect is enhanced by production, through action of Ra on the -S-S-linkage, of sub-oxidized sulfur derivatives which retard cell multiplication. BA 8-19698

3544

HOMOGENEOUS X RADIATION AND LIVING TISSUES. W. Moppett, Sydney, Australasian Medical Publishing Co., Ltd. 1932. 133p.

Effects of homogeneous x radiation upon allantoic membrane of chick and several other tissue are described. BA 8-19699.

3545

FERTILITY AND OFFSPRING OF FORMER X-RAY ASSISTANTS. H. Naujoks. Strahlentherapie 32, 613-39 (1929). (In German). BA 8-19701

3546

THE INFLUENCE OF PARTIAL IRRADIATION OF THE BONES ON THE STROMA OF BONE MARROW AND ON THE REST OF THE HEMOLYMPHATIC APPARATUS. G. Santori. Atti accad. nazl. Lincei, Rend. Classe sci. fis. mat. e nat. 7(8), 676-80(1928). (In Italian).

Single tibia of rabbit was x irradiated. Changes produced in hemolymphatic system are described. Effects were also perceptible in other bone marrow and organs of rabbit. BA 8-19703

3547

CHANGES IN ELECTRIC POTENTIALS AND RATES OF OXIDATION OF THE SKIN SUBSEQUENT TO ROENTGEN IRRADIATION. Marvin M. D. Williams and Charles Sheard. Radiology 22(1), 41-8(1934).

(1) Electrical differences of potential and (2) rate of oxygen consumption were determined in frog skin following 900 and 160,000 r doses of unfiltered x rays. After 9000 r both (1) and (2) were increased for 16-18 days; after 160,000 r (lethal dose) increase lasted only 1-3 days. BA 8-19704

3548

THE BEHAVIOR OF REDUCED GLUTATHIONE IN THE BLOOD AND TISSUES UNDER X-IRRADIATION OF THE ADRENAL REGION. M. Bacigalupi. Ateneo parmense 5(3), 247-58(1933). (In Italian).

Preliminary paper. BA 8-19808

3549

THE EFFECT OF ROENTGEN RAYS ON THE BLOOD CHOLESTEROL LEVEL IN CARCINOMA PATIENTS. V. Jura. Z. Krebsforsch. 39(4), 374-81(1933). (In German).

X irradiation of cancer tissue leads to a nearly immediate increase of blood cholesterol, provided patient is not cachectic. Since similar reaction occurs, through rarely, in non-cancer patients, it cannot be used as a diagnostic measure. Rise is often of short duration. BA 8-20185.

3550

LOCAL IMMUNITY AND THE INTESTINAL MUCOUS MEMBRANE. A. M. Bonanno. Boll. sez. ital. soc. intern. microbiol. 4(11), 498-501(1932). (In French).

Typhoid vaccine administered orally at same time as x irradiation of abdomen of experimental animals

induced considerable enhancement of immunity to subsequent typhoid inoculation. BA 8-20265

3551

ON THE EFFECT OF RADIUM RAYS ON TUBERCLE BACILLUS CULTURES. A. Dimtza and O. Schurch. Beitr. Klin. Tuberk. 80(2), 225-8(1932). (In German).

Tubercle bacilli are only slightly sensitive to γ rays, but very sensitive to β rays. Experiments were made on organisms growing on solid egg media (Lubenau). BA 8-20518.

3552

EXPERIMENTAL CONTRIBUTION TO THE STUDY OF THE MAMMALIAN THYMUS. COMPARISON OF X-RAY EFFECT ON THE THYMUS DURING HISTOGENESIS AND IN THE ADULT, FROM THE POINT OF VIEW OF THE RADIOSENSITIVITY OF SMALL THYMIC CELLS, THE PHAGOCYTIC PROCESS AND THE MECHANISM OF REGENERATION. Ch. Gregoire. Arch. intern. med. exptl. 7(3), 513-629(1932). (In French).

X-ray sensitivity of guinea pig embryo thymocytes is described. Small thymic cells became radiosensitive when formation of new thymic cells from thymoblasts stops. Small thymic cells are destroyed by x rays as fast as they are formed. BA 8-20941.

3553

THE CYTOGENETICS OF FOURTEEN TYPES DERIVED FROM A SINGLE X-RAYED SEX CELL OF NICOTIANA TABACUM. T. H. Goodspeed and P. Avery. J. Genetics 29(3), 327-53(1934).

Progeny of a single x rayed female gamete gave 7 pure-breeding derivative types and 7 others not yet established in pure-breeding condition. Variations were in habit, form of flower, leaf and capsule, and color of leaf and flower. BA 9-10750

3554

THE RADON PROBLEM IN DEEP LEVEL MINING. D. A. Holaday. A. M. A. Arch. Ind. Health 12, 163-6(1955).

High concentration of radioactive dust and gas exist in a high proportion of uranium mines. Adequate data are not available for interpreting these concentrations in terms of effects on human health. It has been demonstrated that minor amounts of ventilation will reduce radon concentrations.

3555

SKIN ERYTHEMA DOSE IN TERMS OF ROENTGENS IN SUPERFICIAL THERAPY. George C. Andrews and C. B. Braestrup. Am. J. Roentgenol. Radium Therapy 29(5), 663-6(1933).

Dose of 400 r measured in air found to be equivalent to an erythema dose of unfiltered rays or of radiation filtered with 3 mm Al in study using fields 7.5 cm diameter on healthy skin of thigh of 24 subjects. No erythema occurred with 350 r: intense erythema with 450, 500, and 550 r. Practically no individual variation in skins was observed. BA 9-11230

3556

SENSITIVITY OF DIVIDING AND NON-DIVIDING CELLS TO RADIATION. F. G. Spear, A. Glucksman, A. F. W. Hughes, and C. W. Wilson. Nature 134, 460-1(1934). BA 9-11223.

3557

DEMONSTRATION OF SUBSTANCES INCREASING CAPILLARY PERMEABILITY IN THE BLOOD AFTER ROENTGEN IRRADIATION. A. Beutel and O. Klein. Z. klin. Med. 123(1/2) 104-10(1933). (In German).

Intravenously injected dye was used to test for the presence of a circulating substance increasing vascular permeability in 5 x-irradiated persons. Dye color appeared in wheals from irradiated serum, was less marked in wheals from unirradiated serum. Neither

organ irradiated nor dose affected permeability to an appreciable extent. No consistent time curve was observed for the effect. BA 9-11231

3558

CELLULAR REACTIONS IN ASEPTIC WOUNDS OF LIVER IRRADIATED WITH X-RAYS. Egidio Cappelli. Sperimentale 87(5/6), 477-500(1933).

Healing of lesions produced in the liver of rabbits by electric coagulation was studied for period of 14 hr-1 mo. Mild radiation increased initial hyperemia and exudation and decreased proliferation of Kupffer cells. Delayed healing after radiation is attributed to decreased number of phagocytes. BA 9-11232

3559

THE ACTION OF RADIUM ON CANCER CELLS. III. FACTORS DETERMINING THE SUSCEPTIBILITY OF CANCER CELLS TO GAMMA RADIATION. H. G. Crabtree and W. Cramer. Sci. Rept. Invest. Imperial Cancer Res. Fund. 11, 103-17(1934).

Pure γ rays have the same biological effect on cancer cells as mixture of β and γ rays. In both cases, functional condition of respiratory system determines biological response of cell, and glycolytic mechanism is not primarily concerned. BA 9-11233

3560

INCREASE OF RESISTANCE OF PROTOZOA TO X-RADIATION BY LECITHIN IN COLLOIDAL SOLUTION. B. -S. Levin and C. Piffault. Compt. rend 198(23), 2024-6(1934). (In French). BA 9-11237

3561

THE EFFECTS OF CROWDING ON HEAD FREQUENCY AND LENGTH OF LIFE OF PLANARIA DOROTOCEPHALA THAT HAVE BEEN EXPOSED TO VARIOUS DOSES OF ROENTGEN RAYS. F. G. Meserve and Mary J. Kenney. Am. J. Roentgenol. Radium Therapy 32(4), 552-4(1934).

Four hundred animals were exposed to 4, 8 and 12 skin units of x rays. First apparent effects appear to be on non-specific protoplasmic factors upon which head development depends. Range of distribution of types increases as crowding increases. Regeneration occurred at all doses. One of the most frequently observed effects was shortening of head. BA 9-11238.

3562

THE SIGNIFICANCE OF RESULTS OBTAINED BY EXPOSING THE ALLANTOIC MEMBRANE OF THE CHICK TO HOMOGENEOUS X RADIATION. Warnford Moppett. J. Cancer Research Comm. Univ. Sydney 5(4), 197-202(1934).

Author proposes that homogeneous x rays act on cells with maximal efficiency when frequency is such that integral number of quanta are required. BA 9-11240

3563

STUDIES ON THE EFFECT OF ROENTGEN RAYS ON THE HEALING OF WOUNDS. II. HISTOLOGICAL CHANGES IN SKIN WOUNDS IN RATS FOLLOWING POST-OPERATIVE IRRADIATION. Ernst A. Pohle and Gorton Ritchie. Radiology 20(2), 102-8(1933).
