BIBLIOGRAPHY	1
AUTHOR INDEX	12

This bibliography covers the literature on radiation chemistry of carbohydrates in aqueous solution to the present. The references were obtained by a search of the files of the Radiation Chemistry Data Center. Notification of the omission of pertinent references would be gratefully received.

The references are listed by year and alphabetically by first author within each year. At the end of each reference the Radiation Chemistry Data Center serial number is given. Abstract references are included for most foreign language articles and technical reports.
