TM-1517-A

Thermophysical Properties of Argon

ADDENDUM

Al Jaques

Fermi National Accelerator Laboratory
P.O. Box 500, Batavia, Illinois 60510

May 1988

Operated by Universities Research Association Inc. under contract with the United States Department of Energy

DATA SOURCE INFORMATION

The data presented in these tables was gathered with the use of the fortran program FLUIDS which was provided by the National Bureau of Standards. Fluid properties at transitional boundaries and points are those obtained with the best fit equation or formula for that particular fluid. Consequently, at such divergent points as the triple and critical points, the accuracy of the properties given by FLUIDS can be off up to 10% in some cases. In listing the critical and triple point conditions within, values were taken from the National Bureau of Standards' publication "Thermodynamic Properties of Argon", not from FLUIDS. Outside of these two points, however, the error in FLUIDS is minimal, thus all other data in these tables were obtained through FLUIDS. The Temperature-Entropy Chart for Argon is also taken from NBS' "Thermodynamic Properties of Argon".

A. Jaques
