FOREWORD

This extensive bibliography of high- T_c superconducting films was prepared by John Talvacchio of the Westinghouse R&D Center in Pittsburgh, Pennsylvania. It comprises about 1/7 of the entire Westinghouse high- T_c bibliographical database. We at Lawrence Berkeley Laboratory (LBL) are pleased to be able to distribute this document under the auspices of the Superconductivity Research Center for Thin-Film Applications, Center for Advanced Materials, Materials and Chemical Sciences Division. The LBL work is supported by the Director, Office of Energy Research, Office of Basic Energy Sciences, Division of Materials Sciences of the U.S. Department of Energy, under contract No. DE-AC03-76SF00098.

Paul Berdahl, Manager

TABLE OF CONTENTS

1. INTRODUCTION	2
2. LIST OF KEYWORDS	3
3. INDEX BASED ON DEPOSITION TECHNIQUE	
Chemical Vapor Deposition	5
Evaporation	5
Ion-Beam Deposition	6
Laser Ablation	6
Deposition from Metallo-Organic Precursors	7
Other Techniques (LPE, ICB, etc.)	7
Plasma Spray Deposition	7
Sputtering	7
Solution Deposition	10
4. GENERAL INDEX	11
5. CHEMICAL ELEMENT INDEX	27
6. REFERENCE LIST	31

1. INTRODUCTION

This document represents an effort to make bibliographic information on high- T_c superconductor films available to those who cannot access the on-line database at the Westinghouse R&D Center. The database contains a growing list of references – approaching 5000 – each of which is identified by a set of two-letter keywords. The database is used the same way as INSPEC's but its fixed set of standard keywords enables the user to obtain a complete list of references on keyworded topics. Since a single keyword (or search term) such as "sputtering" creates a bibliography that is too long for practical use, the database is used most effectively by combining a series of keywords using Boolean algebra to identify a handful of relevant references.

The structure of this document is intended to present the subset of papers concerning high- T_c films (725 papers) in a compact format as a substitute for on-line searches. Rather than listing separate bibliographies for each of the 185 keywords, a single list of all the references is contained in Section 6, and indices based on the keywords are contained in Sections 3-5. The general index contains some keywords for which there are zero references indicating that all experimental work on that topic has been performed with bulk samples (for example, heat capacity measurements). Keywords which relate solely to theoretical papers have been removed from the index. The first keyword assigned to each reference indicates the month in which it was logged in (e.g. .85. for May, 1988). Although this date does not necessarily correspond to either the submission or publication date, it provides some guidance in selecting the most recent papers.

The subset of the reference database concerning films is complete in the sense that no references were excluded for being out-of-date, repetitive, or – in some cases – identical to earlier papers. However, the bibliographies for topics that are not inherently related to films – for example, SQUIDs or surface resistance measurements – necessarily exclude those references containing work based solely on bulk superconductors. A complete bibliography of high- T_c superconductivity in the same format as this one has been compiled but is not generally available outside of Westinghouse due to the cost of printing and distribution.

I wish to acknowledge the efforts of Mrs. Marilyn B. Cross who has maintained the file cabinet of papers and the reference list.

2. LIST OF KEYWORDS

Film Index

FC - Films, CVD
FE - Films, evaporated
FI - Films, ion-beam deposition
FL - Films, laser ablation
FM - Films, metallo-organic
FO - Films, other techniques
FP - Films, plasma sprayed
FS - Films, sputtered
Fs - Films, solution-deposited

General Index

AC - ac losses
Af - Antiferromagnetism
AF - Alternative fabrication
AM - Acoustic measurements
An - Anisotropic properties
Ap - Applications of high T_c
AS - Auger spectroscopy
BK - Ba-K-Bi-O
BP - Ba-Pb-Bi-O
BR - Ba-Rare earth-Cu-O
BS - Bi-Sr compounds
BT - Ba-Thallium compounds
BY - Ba-Y-Cu-O
BO - Ba peroxide in synthesis
Bs - Band structure
Bu - Buffer layers
Ch - Chemistry, thermodynamics
CP - Coprecipitation
Cv - Heat capacity measurements
Di - Dimensionality: 2-D vs 3-D
Ec - Economic analysis
El - Ellipsometry
EL - EELS
ER - Electron spin resonance
fa - as-depos. orth. films
fl - layered film depos.
fp - post-annealed films
fs - superlattice film growth
ft - as-depos. tetr. films
Fc - Flux creep
Fm - Field-ion microscopy
Fp - Flux pinning
GB - Grain boundary analysis
Gr - Granularity effects
Hc - Critical magnetic fields
HM - Hall measurements
HP - Hot pressing
H2 - Water exposure

ID - Identification of phases
IN - Interface reactions
IR - Infrared measurements
Is - Isotope effects
IS - Infrared sensing
Jc - Critical current density
JJ - Josephson effects
LB - La-Ba-Cu-O
LC - La-Cu-O
LM - La-M-Cu-O, M = Ca, Sr, Ba
LS - La-Sr-Cu-O
Ld - Lambda, penetration depth
LE - LEED data
Ln - Most or all lanthanides
Lu - Luminescence
Lv - Levitation
Ma - Magnetization measurements
MA - Measurement apparatus
Me - Mechanical Properties
MP - Microscopic super. parameters
Mr - Magnetoresistance
Ms - Microstructure
MS - Mossbauer spectroscopy
MW - Microwave properties
mR - Muon spin resonance
ND - Neutron diffraction
NM - Noise measurements
NR - Nuclear magnetic resonance
NS - Non-supercond. phases
OD - Oxygen Deficiency
PA - Positron annihilation
PD - Phase diagram
Ph - Phonon structure
PL - Patterning, Lithogr., etching
Ps - Pressure studies
QR - Quadrupole resonance; PAC
Ra - Raman spectroscopy
RA - Rapid thermal annealing
RB - RBS
RD - Radiation Damage
RH - RHEED
Rc - Resistance - contact
Rn - Resistance - normal-state
Rs - Resistance - surface
RS - Rapid solidification
Rv - Review articles
sA - Al_2O_3 substrates
sF - Fluoride substrates
sM - MgO substrates
sO - Other substrates
sQ - Quartz substrates
sS - $SrTiO_3$ substrates

ss - Si, ox. Si substrates
sY - Y-based compound substrates
sZ - cubic ZrO_2 substrates
SE - Solid electrolyte cell
SF - Sup. fluctuations
SG - Sol-Gel preparation
SM - SIMS
SQ - High-T SQUIDS
SS - Surface Segregation
St - Stress effects
ST - Scanning tunneling microscopy
Sx - Single crystal growth
SX - Single crystal meas.
td - tangent delta meas.
t1 - composite target
t2 - two targets
t3 - three targets
TB - Twin boundaries
Tc - T of new materials
TC - Thermal conductivity
TE - Thermal expansion
Th - Theory
TJ - Tunnel Jct. geometry
TM - Trans. electron microscopy
Tp - Tape processing
TP - Thermoelectric power
Tr - Transmission lines
TT - 3-terminal devices
Tu - Tunneling
Tx - Texture in bulk proc.
UF - Ultrathin films
WA - Westinghouse author
Wi - Wire processing
XA - X-ray Absorption
XP - XPS data
XS - Crystal structure
>1 - Indications of $T_c > 130$ K
>2 - Indications of $T_c > 200$ K
48 - 2:4:8 structure
11 - 1:2:1:2 structure
12 - 1:2:2:3 structure
13 - 1:2:3:4 structure
20 - 2:2:0:1 structure
21 - 2:2:1:2 structure
22 - 2:2:2:3 structure
23 - 2:2:3:4 structure
mn - Most or all polytypes

Chemical Element Index

e.g. Ag, F-, Gd, Nb
