1.0 INTRODUCTION

Detailed results of the HEDR iodine-131 release reconstruction are presented in this volume. Included are daily data on B, D, and F Plant, reactor operations from the P-Department Daily Reports (General Electric Company 1947). Tables of B and T Plant material processed from the three principal sources on separations plant operations: The Jaech report (Jaech undated), the 200 Area Report (Acken and Bird 1945; Bird and Donihee 1945), and the Metal History Reports (General Electric Company 1946).

A transcription of the Jaech report is also provided because it is computer-generated and is not readily readable in its original format. The iodine-131 release data are from the STRM model. Cut-by-cut release estimates are provided, along with daily, monthly, and yearly summations. These summations are based on the hourly release estimates. The hourly data are contained in a 28 megabyte electronic file. Interested individuals may request a copy.

2.0 REACTOR OPERATING HISTORIES

These data were taken from General Electric Company (1947).

Table 2.1 is B Reactor data, Table 2.2 is D Reactor data, Table 2.3 is F Reactor data. The data in each of these three tables is defined below:

Column 1: Reactor definition column BOPS - B Reactor, DOPS - D Reactor, FOPS - F Reactor

Column 2: Date

Column 3: MWd. The thermal energy generated during the 24-hour period. In general, this is: $\text{Pile Power (MW)} \times (\text{Hours Operated})/24$

Column 4: Hours operated.

Column 5: DISCHG. This is the number of uranium slugs discharged on that day. Some of these may be short-length 4-inch slugs as opposed to the normal 8-inch slug.

Column 6: PUSH MWd. This is the energy generated in the discharged slugs.

3.0 REACTOR DISCHARGE SUMMARY

The three tables in this section present the results of processing the P-Department Records (General Electric Company 1947) to obtain the discharges (pushes). Table 3.1 presents the B Reactor pushes. Tables 3.2 and 3.3 apply to D and F Reactors, respectively. The tables contain all of the pushes through the end of 1947 even though not all of these were processed.

Column 1: The sequential push number for the reactor.

Column 2: The date of shutdown of the reactor for the push.

Column 3: The total number of slugs pushed.

Column 4: The tons of uranium in the push calculated by multiplying the number of slugs by: $7.85 \text{ lb/slug} \times 1/2000 \text{ ton/lb} = 0.00393 \text{ ton/slug}$.

TABLE 3.1. B Reactor Discharges (Pushes)

4.0 REACTOR DISCHARGES DISSOLVED THROUGH MAY 1946

This table presents the assignment of the reactor pushes to T and B Plants in the period December 1944 through May 1946. Because the 200 Area reports (Acken and Bird 1945; Bird and Donihee 1945) did not list the push being dissolved, it was necessary to decide what push was being dissolved. This was done by assuming that the oldest fuel would be dissolved first and using the oldest fuel from the P-Department Reports (General Electric Company 1947) queue of available discharges. The Jaech report (undated) gave monthly summaries of push and tons dissolved at each of the two plants. The Jaech report (undated) pushes are compared the P-Department Report (General Electric Company 1947) in this table and the allocations to B and T Plants used in the HEDR reconstruction.

For B Plant:

Column 1: Push. Date of shutdown for push. These were not always the same because the records would list the day the slugs were discharged. Discrepancies were eliminated by using the day shutdown from full power occurred from the P-Department records (General Electric Company 1947).

Column 2: No heading. Reactor of push origin.

Column 3: Dis. Tons. Tons dissolved from Jaech (undated).

Column 4: Same Date Sum. If two or more dates were shown in the Jaech (undated) record, they are added together in this column.

Column 5: HEDR Dis. Tons. Tons dissolved in the HEDR reconstruction.

Column 6: P Dept. Total Tons. If all of the push was dissolved at B Plant, an entry is made in this column.

For T Plant:

Column 7: Push. Date of shutdown for push. These were not always the same because the records would list the day the slugs were discharged. Discrepancies were eliminated by using the day shutdown from full power occurred from the P-Department records (General Electric Company 1947).

Column 8: No heading. Reactor of push origin.

Column 9: Dis. Tons. Tons dissolved from Jaech (undated).

Column 10: Same Date Sum. If two or more dates were shown in the Jaech (undated) record, they are added together in this column.

Column 12: HEDR Dis. Tons. Tons dissolved in the HEDR reconstruction.

Column 13: P Dept. Total Tons. If all of the push was dissolved at T Plant, an entry is made in this column.

Split Batch Totals:

Column 14: Jaech Total Tons. Sum of the push processed at both plants according to Jaech (undated).

Column 15: HEDR Total Tons. Sum of the push processed at both plants according to HEDR reconstruction.

Column 16: P-Department Total Tons. Sum of the push processed at both plants according to General Electric Company (1947).

The totals at B Plant are listed as 694 tons from Jaech (undated), 697 tons for HEDR. The P-Department (General Electric Company 1947) sum of 530 tons is not comparable because it does not include the split pushes the are entered in the last column.

The totals at T Plant are 631 tons from Jaech (undated) and 547 tons for HEDR which do not agree. The tons from Jaech were calculated by dividing push burnup (MWd) by the push exposure (MWd/ton). Several batches of high-exposure pushes were processed at T Plant. Some of the pushes were discharged at 400 MWd/ton instead of the normal goal of 200 MWd/ton. The Jaech reference (undated) does not have the right exposure for these pushes which are clearly given in the P-Department Reports (General Electric Company 1947) plus in several other supporting sources. This causes the push tons to be too large because they are calculated by dividing by the exposure. The HEDR reconstruction was based entirely on the P-Department Records (General Electric Company 1947).

Finally the totals for HEDR versus P-Department are both 1244 tons as shown in the final check table. B refers to the B Plant sum, T to the T Plant sum and S refers to the split batch sum for the P-Department tons.

TABLE 4.1. (contd)

5.0 TRANSCRIPTION OF JAECH REPORT (JAECH.WK3)

This presents an enhanced transcription of this basic supplemental reference used in guiding the HEDR reconstruction of dissolver operation, Jaech (undated). It was used as the only source of information on what reactor push, or part of a push, was dissolved at which separations plant. The first page is a verbatim transcription of the original. It gives the month end date, the date of the reactor push, the reactor of origin, MWd dissolved and the **burnup** of the push. The dates are in the HAPO calendar (day 1 was the September 1944 startup date of B Reactor).

The following pages are an enhanced translation of the HAPO calendar dates into normal dates, and include a column of short tons dissolved which is obtained by dividing the MWd of the push by the **burnup** MWd/ton. The MWd of the push in the original was not included, but can be recalculated by multiplying the **burnup** figure by the tons. The columns in the enhanced translation are:

Column 1: Month end date.

Column 2: Date of reactor push.

Column 2: Reactor of push origin.

Column 3: Cut-off Run #. This is identification of the last run dissolved in the month.

Column 4: ST Dissolved. Short tons dissolved. Ratio of MWd and **burnup** MWd/ton. This is the only column not in the original.

Column 5: MWd/ST. The **burnup** of the push dissolved.

This set of five columns is provided for both T and B Plants.

6.0 HEDR RECONSTRUCTION OF T AND B PLANT DISSOLVER OPERATIONS

6.1 T PLANT DISSOLVER OPERATIONS

Table 6.1 gives the charge make up of each cut dissolved at T Plant in the 1944-through-1947 time period. It is the result of applying the information contained in the references cited in the Volume 1 of this report. The dissolving start and stop times come from the H.I. Department Logbook (Lindvig 1945). These are observations by Health Instruments monitors which contain incidental notations of dissolving times.

Column 1: Cut Id. The name of the cut given by 200 Area operations.

Column 2: Dissolve date.

Column 3: Tons charged of push 1 material. If there is material from one reactor push, then only push 1 or push 2 columns will contain a non-zero entry.

Column 4: Tons of push 2 material, if any.

Column 5: Push 1 date and reactor.

Column 6: Push 2 date and reactor.

Column 7: The number of cuts taken from the charge.

Column 8: Dissolving start time from H.I. records (Lindvig 1945).

Column 9: Dissolving stop time from H.I. records (Lindvig 1945).

6.2 B PLANT DISSOLVER OPERATIONS

Table 6.2 gives the charge make up of each cut dissolved at B Plant in the 1944-through-1947 time period. It is the result of applying the information contained in the reference source cited in the text of this document. The dissolving start and stop times come from the H.I. Department Logbook (Lindvig 1945). These are observations by Health Instruments monitors which contain incidental notations of dissolving times.

Column 1: Cut Id. The name of the cut given by 200 Area operations.

Column 2: Dissolve date.

Column 3: Tons charged of push 1 material. If there is material from one reactor push, then only push 1 or push 2 columns will contain a non-zero entry.

Column 4: Tons of push 2 material, if any.

Column 5: Push 1 date and reactor.

Column 6: Push 2 date and reactor.

Column 7: The number of cuts taken from the charge.

Column 8: Dissolving start time.

Column 9: Dissolving stop time.

TABLE 6.2. HEDR Reconstruction of B Plant Dissolving Operations 1944-1947

7.0 IODINE-131 RELEASES

The SIRM iodine-131 releases are presented in this section. The results are presented in two formats. Tables 7.1 and 7.2 give the iodine-131 contents and releases from the dissolver to the stack for T and B Plants, respectively.

Column 1: Cut number. The sequential number assigned for the HEDR reconstruction.

Column 2: Cut ID. This is the name of the cut from the 200 Area Weekly Reports (Acken and Bird 1945; Bird and Donihee 1945) or the Metal History records (General Electric Company 1946).

Columns 3, 4, 5: Contents. Curies of iodine contained in the dissolver.

Columns 6, 7, 8: Released. Curies released out the stack from the dissolver.

"Mean" is the average of the quantity taken over the 100 Monte Carlo realizations. "Std. Dev." is the standard deviation of the mean taken over the 100 realizations. "C of V," the coefficient of variation is the ratio of the standard deviation to the mean.

Table 7.3 gives the daily number of curies released at T and B Plants. The "Released I-131 Ci" column is the mean of the sum of 24 hourly releases during the day for 100 realizations. In addition to the releases from the dissolver, these results contain the post-dissolving step releases which can occur over a 4-day period after the dissolving step is completed. They would be emitted out the stack by the canyon ventilation system.

TABLE 7.1. T Plant Dissolver Cut Iodine-131 Contents and Releases from STRM

Cut	Cut ID	-----Contents-----			-----Released-----		
		Mean	Std. Dev.	C of V	Mean	Std. Dev.	C of V
