Hourly ICES Profiles

Decisions regarding the Trenton ICES plant design and proposed patterns of operation have been based on the analysis of hourly simulations of the Demonstration Community and the plant. In all, about thirty variations have been run. Printouts of three of these runs which represent those factors having the greatest and most current impact on the final preliminary design are included here.

The first two sets are the Hourly Log of Plant Simulation with and without storage. These permit the evaluation of the effect of storage as well as providing a complete picture of Community and ICES system interaction.

These profiles show the following information for each hour of the reference year.

Thermal gain - the heating or cooling load on the total Community resulting from climatological impact and internal loads.

Steam component - the demand of the Community for thermal energy in the form of steam. This factor is necessary in determining the effectiveness of thermal storage since the storage system under consideration utilizes water at temperatures not to exceed 199° F. Thermal energy from this type of storage cannot be used to satisfy a demand for steam.

Total demand - the demand for thermal energy placed on the ICES plant resulting from the thermal gain and other thermal loads such as process steam and domestic hot water. The demand also reflects the performance characteristics of the terminal equipment such as converters and absorption chillers.

Electric generation - the electricity produced by the ICES plant as a result of the steam required to satisfy the Community demand.

Turbine oil - the total fuel consumption of the turbines in that hour.

Units on line - the number of turbine/heat recovery modules operating during that hour.

Boiler oil - the fuel requirements of the auxiliary boilers.

Outdoor temperature ..

The third set of profiles show the Community thermal gain, the steam component and the total demand on the ICES plant for three stages of development.

1979 - the existing Demonstration Community

1980 - the Demonstration Community with the addition of the Justice Complex and Capital Place commercial.

1982 - the total Demonstration Community

These profiles permit the analysis of the impact of major components of the Demonstration Community on the operation of the ICES system.

TABLE OF CONTENTS

HOURLY LOG OF PLANT SIMULATION

Simulation based on:

1982 ICES Community.
With thermal storage facilities
On-peak and off-peak electric generation
80% maximum kW trip-off.

HOURLY LOG OF PLANT SIMULATION

Simulation based on:

1982 ICES Community
Without thermal storage facilities
On-peak and off-peak electric generation
80% maximum kW trip-off.

HOURLY LOAD AND DEMAND PROFILES

1979 ICES Community
1980 ICES Community
1982 ICES Community

The ICES Communities are based on the revised demonstration community as defined in the Preliminary Phase II Report except that Kingsbury II is considered as 1982 load.

HOURLY LOG OF PLANT SIMULATION

Simulation based on:

1982 ICES Community
Without thermal storage facilities
On-peak and off-peak electric generation
80% maximum kW trip-off.

TRENTON ICES DEMONSTRATION COMMUNITY
HOURLY LOG OF PLANT SIMULATION
WITHOUT STORAGE

HOURLY LOG OF PLANT SIMULATION

Simulation Based on:

1982 ICES Community.
With thermal storage facilities
On-peak and off-peak electric generation
80% maximum kW trip-off.

TRENTON ICES DEMONSTRATION COMMUNITY
HOURLY LOG OF PLANT SIMULATION
WITH STORAGE

HOURLY LOAD AND DEMAND PROFILES

1979 ICES Community
1980 ICES Community
1982 ICES Community

The ICES Communities are based on the revised demonstration community as defined in the Preliminary Phase II Report except that Kingsbury II is considered as 1982 load.
