NYIT Energy Information Center

THESAURUS OF DESCRIPTORS

for the

VERTICAL FILE SYSTEM*

The NYIT Energy Information Center is a comprehensive information service covering every aspect of energy conservation and related technology, including conservation programs and practices, alternative energy systems, energy legislation, and public policy development in the United States and abroad.

Materials in the Center can be located through a Card Catalog System and a Vertical File System. The Card Catalog System has entries which organize books and other printed materials according to authors/titles and according to the subject headings developed by the Library of Congress. The Vertical System contains pamphlets, newsclips, reprints, studies, announcements, product specifications and other ephemeral literature, and is organized according to subject headings based on the emerging vocabulary of the energy literature.

The key to vertical file resources is the Thesaurus of Descriptors which follows. The Thesaurus includes all subject headings found in the Vertical File as well as other cross referenced terms likely to come to mind when seeking information on a specific energy area.
