Cost and Quality of Electric Utility Plant Fuels - Annual

The **Cost and Quality of Fuels for Electric Utility Plants - Annual** is prepared by the Division of Electric Power Statistics, Office of Coal and Electric Power Statistics, Energy Information Administration, Department of Energy.

The monthly version of this publication is available on an annual subscription basis from the Superintendent of Documents, U.S. Government Printing Office. The subscription includes twelve monthly issues and the annual edition. Single copies of this annual publication are also available. An order form is enclosed for your convenience. Send order form and payment to:

Superintendent of Documents
U.S. Government Printing Office
Washington, D.C. 20402

Order Desk: (202) 783-3238

Annual Subscription — Domestic — \$30.00/year
Foreign — \$37.50/year

Single Copy — Domestic — \$ 4.50/copy
(Annual) Foreign — \$ 5.65/copy

Executive Summary

In 1980, the production of electric energy rose 1.7 percent, reaching a new record of 2,286 billion kilowatthours. The largest increase in electric generation occurred in coal plants which produced 1,162 billion kilowatthours, or 50.8 percent of the total. Coal generation increased 8.0 percent from the 1979 level. The second largest increase in electric generation came from gas units, increasing to a level of 346 billion kilowatthours, an increase of 4.8 percent from 1979. Coal and gas generation made up for the 1.9 percent decrease in oil generation and the 0.2 percent decrease in nuclear generation during the year. Oil generation decreased 1.9 percent from last year, mainly due to the high cost of residual oil.

Coal consumption increased 8.2 percent to reach a level of 570 million tons. Gas consumption decreased 1.9 percent to a level of 3,423 million Mcf; oil consumption fell 19.7 percent as compared to 1979.

Total electric power generation and fossil fuel consumption by electric utilities for the period 1977-1980 are shown, respectively, in Tables 1 and 2.

Unit cost of fossil fuels increased an average of 16.0 percent in 1980, as shown in Table 3 and Figures 2 - 4. Consequently, the total cost of all fossil fuels consumed by electric utilities reached a record 36.2 billion dollars, 20.3 percent above the 1979 cost. The estimated cost of fossil fuels consumed by electric utilities is shown in Table 4.

In 1980, utilities reporting on Form 423 purchased 594.0 million tons of coal, 408.5 million barrels of oil, and 3,568.7 billion cubic feet (Bcf) of gas. The combined energy content of these purchases totaled 18.9 quadrillion Btu's, a 1.6 percent increase from similar purchases made last year. On a tonnage basis, utility coal purchases rose 37.4 million tons, a 6.7 percent increase above the 1979 purchases. Furthermore, on a total Btu basis, coal receipts increased 6.4 percent. Oil receipts to electric utilities decreased in 1980 by 107.9 million barrels, a 20.9 percent decrease. Total heat content decreased 20.5 percent from the previous year. Gas purchases increased for the fourth year in a row. Table 5 shows the quantities and total energy content of the fossil fuel receipts to utilities in 1979 and 1980.

The total cost of fossil fuel receipts to electric utilities reporting on Form 423 reached \$36.3 billion in 1980, an increase of more than \$5.8 billion, or 19.2 percent over last year's cost. The total cost of fossil fuel receipts to electric utilities in 1979 and 1980 is shown in Table 6.

Table 1. Production of Electric Energy by Electric Utilities, 1977-1980 (Billion Kilowatthours)

1. Introduction

This summary report, covering the calendar year 1980, is the seventh annual report in a series based on the data filed with the Department of Energy, Energy Information Administration, on FPC Form 423, "Monthly Report of Cost and Quality of Fuels for Electric Plants". Before January 1978, Form 423 was filed with the Federal Energy Regulatory Commission (formerly the Federal Power Commission). The Commission issued the first four annual reports. The first summary report covered 1973 and 1974 and was issued as a single volume in June 1975. The second report, containing the data for the calendar year 1975, was issued in May of 1976. The third report, for the calendar year 1976, was issued in May of 1977. The fourth report, published by the Federal Energy Regulatory Commission, covered the calendar year 1977 and was issued in September 1978. The fifth report published by the Energy Information Administration covered the calendar year 1978 and was issued in October 1979.

Starting with calendar year 1978, the data on Form 423 are collected by the Energy Information Administration on a monthly basis. In addition to the annual summary reports, the Energy Information Administration publishes monthly summaries in **The Electric Power Monthly**(4) and the **Cost and Quality of Fuels for Electric Utility Plants - Monthly**(3).

This series of summary reports contains annual information on the cost and quality of fossil fuel receipts to electric utility plants in the United States (the 50 states and District of Columbia) with a combined capacity of 25 megawatts or greater. These publications, beginning with the 1976 annual summary report, include plant-by-plant data grouped on a State and regional basis to enable the reader to compare cost of similar fuel receipts to other plants in the same State and region.

Glossary

A glossary of terms used in this report has been included to assist non-technical as well as technical users in understanding and relating the statistical data in this publication. The use of these terms is described in Section 2.6 of the "Technical Notes."

Explanatory Notes

For descriptions of the data coverages of FPC Form 423 and formulas used to calculate the aggregates, refer to Sections 2 and 2.4 of the "Technical Notes."

Technical Notes

The "Technical Notes" contains a detailed description of each data collection system used in preparing this publication.

The notes provide explanations of data quality, adjustments to collected data, conversion formulas and critical differences in the data. Also included are rules for rounding the data, the 20 largest companies summaries, and a map of the Census Regions. Copies of the data are available to the public. See Section 2.3 of the "Technical Notes" for further information.

References

The "References" are a description of related publications. Reference numbers appear within the text in parentheses. References are located after the "Technical Notes."

2. Discussion of Form 423 Data

Cost and Quality of Fossil Fuels for Electric Power Generation

Coal

In 1980, coal receipts to electric utilities totaled 594.0 million tons. The receipts increased 37.4 million tons, or 6.7 percent above 1979 shipments. The 20 largest recipients of coal accounted for 49.2 percent of all coal receipts to utilities in 1980. See Section 2.8 of the "Technical Notes."

Coal purchased on term contracts accounted for 88.5 percent of receipts to electric utility plants. The remaining 11.5 percent were purchased in the spot market. As shown in Table 7, the proportion of total coal purchased in the contract market increased from the previous year.

The quantities of coal produced from surface mines increased to 71.1 percent of the total coal receipts to electric utilities.

Table 7. Contract and Spot Coal Receipts, 1978-1980

Coal	1978		1979		1980	
	Quantity (million tons)	Percent of Total	Quantity (million tons)	Percent of Total	Quantity (million tons)	Percent of Total
Contract	375.2	78.8	485.1	87.2	525.6	88.5
Spot	101.0	21.2	71.5	12.8	68.4	11.5
Total	476.2	100.0	556.6	100.0	594.0	100.0

Table 8. Surface and Underground-Mined Coal Receipts, 1974-1980

Year	Surface-Mined		Deep-Mined	
	Quantity (thousand tons)	Percent of Total	Quantity (thousand tons)	Percent of Total
1974	252,661	65.7	132,173	34.3
1975	286,315	66.4	144,737	33.6
1976	307,389	67.6	147,408	32.4
1977	342,969	69.9	147,445	30.1
1978	351,129	73.7	125,039	26.3
1979	393,677	70.7	162,881	29.3
1980	422,300	71.1	171,696	28.9

In 1980, the weighted average cost of all coal received increased \$2.61 to reach a record high of \$28.76 per ton. Contract coal cost averaged \$28.31 per ton, an increase of \$2.54 per ton over the 1979 level, while spot coal cost averaged \$32.21 per ton, a \$3.49 per ton increase over the average spot coal cost of 1979. Table 9 show contract and spot coal cost for the period 1975-1980. Figure 6 shows contract and spot cost for 1979-1980.

Cost of coal bought under contract ranged from an average \$13.96 per ton in the Western Region to a high of \$36.52 per ton in the South Eastern States. Regional spot cost did not vary as much as contract coal cost, as evident from Table 10.

In 1980, the sulfur content averaged 1.6 percent by weight, as compared to 1.7 percent in 1979. The heating value of utility coal shipments averaged 10,647 Btu per pound this year, compared to last year's average of 10,685 Btu per pound. The coal receipts to electric utilities by grade during the five-year period 1976-1980 are shown in Table 11.

Table 9. Contract and Spot Coal Cost, 1975-1980 (Dollars per Ton)

Coal	1975	1976	1977	1978	1979	1980

Oil

From January to December 1980, the average cost of domestic and imported crude oil increased 46.7 percent and 15.9 percent, respectively. ¹ Consequently, the national retail cost of residual oil increased from \$26.21 per barrel in January 1980, to \$32.32 per barrel in December of the same year, i.e. an increase of 23.3 percent. ²

In 1980, all oil shipments to electric utilities decreased 20.9 percent below last year to a total of 408.5 million barrels. Utilities received 393.7 million barrels for steam-electric use, with the remaining 14.8 million barrels going to peaking units. Residual oil (FO6) shipments totaled 380.6 million barrels and comprised 96.7 percent of the oil receipts to steam-electric plants. Distillate oil (FO2) shipments totaled 22.6 million barrels in 1980, including 12.7 million barrels to peaking units. In 1980, distillate oil comprised 85.8 percent of peaking oil purchases, as shown in Table 12.

As shown in Table 13, the receipts of oil to electric utilities decreased in all regions except New England which increased only 1.1 percent.

In 1980, a total of 185 utilities reported oil purchases on Form 423; the 20 largest oil purchasing utilities received 72.7 percent of the oil. These 20 utilities also accounted for 72.9 percent of the total oil expenditures reported by all utilities. Section 2.8 of the "Technical Notes" lists the 20 largest oil purchasing utilities.

West South Central.....	44,481.0	26,238.4	-41.0	12,841.1	-51.1
Mountain.....	8,812.3	9,934.4	21.4	5,323.4	-46.4
Pacific.....	88,028.1	104,408.2	18.6	74,784.7	-28.4
Total.....	605,927.8	516,462.2	-14.8	408,583.4	-20.9

The average cost of oil to steam-electric plants was 431.8 cents per million Btu, an increase of 42.3 percent from the 1979 cost level (see Table 14). The equivalent per barrel cost was \$27.81 in 1980, as compared to \$18.79 a barrel that utilities paid for oil in 1979. The cost paid by steam-electric plants for distillate oil (FO2) averaged 569.9 cents per million Btu, up 41.8 percent from the previous year's level of 402.0 cents per million Btu.

The average sulfur content of oil products received at steam-electric plants increased 10 percent from last year and, as shown in the tabulation below, the average heating value rose 0.4 percent in 1980.

	1979	1980	Percent Change
Heating value (Btu per gallon).....	147,396	147,917	0.4
Sulfur (Percent by weight)	1.0	1.1	10.0

Table 14. Average Cost of Fuel Oil Receipts to Steam-Electric Plants, 1978-1980 (Cents per Million Btu)

	1978	1979	1980	Percent Change From 1979
Distillate (FO2)	271.9	402.0	569.9	41.8
FO4, FO5	220.9	327.2	496.5	51.7
Residual (FO6)	212.0	299.4	427.6	42.8
Crude, Topped Crude	258.1	313.5	633.5	102.1
Average All Receipts	215.6	303.5	431.8	42.3

As might be expected because of air pollution control standards, a premium is placed on low sulfur oil purchased by electric utilities. Accordingly, in 1980 the average cost of heavy oil (FO4, FO5, FO6, Crude and Topped Crude) receipts to utilities was substantially higher in the lower sulfur categories, shown in Table 15.

Table 15. Cost of Heavy Oil by Sulfur Category, 1980

Sulfur Content (Percent by weight)	Quantity Receipts (Million Barrels)	Receipts Average Cost (Cents per Million Btu)
0.00 to 1.00.....	253.2	464.5
1.01 to 2.00.....	56.5	378.7
2.01 or more	74.1	344.6

Gas

During 1980, utilities received 3,568.8 billion cubic feet (Bcf) of natural gas and other gas products. This was an increase of 5 percent over the 1979 level, as shown in Table 16. The bulk of the gas (95.5 percent in 1980) was purchased for use under utility steam boilers.

Only generating plants with a capacity of 25 megawatts or more are required to submit information on Form 423; however, FPC Form 4, "Monthly Power Plant Report", covers all electric utility generating plants. In 1980, electric utilities reported on Form 4, gas consumption totaling 3,681.6 Bcf. During the same period, electric utilities reported on Form 423 gas receipts of 3,568.8 Bcf. Assuming all gas received in 1980 was consumed during the year, Form 423 covered 96.9 percent of gas consumption. Because of the reporting limitations of Form 423, the coverage was much greater for steam-electric units (99.5 percent) and considerably less (62.4 percent) for peaking units. The quantities for each category, as reported on Form 4 and Form 423 were:

	Quantity (Bcf)		Form 423 as a Percent of Form 4
	Form 4	Form 423	
Steam-Electric	3,422.8	3,407.2	99.5
Peaking	258.8	161.5	62.4
Total	3,681.6	3,568.7	96.9

In 1980, the gas purchases in the West South Central Region (WSC) increased from 1979. California and the remaining states increased 13.2 and 2.6 percent, respectively, from last year due to the availability of natural gas coming from the WSC producing states, as shown in Table 17. During 1980, gas receipts to plants in the WSC Region were 63.6 percent of the receipts to steam-electric plants in the country, while the rest of the country accounted for 36.4 percent of the total in 1980 as compared to 35.8 percent of the total in 1979.

In 1980, the cost of gas to steam-electric plants averaged 221.4 cents per million Btu, an increase of 46.0 cents per million Btu over the average cost of similar gas receipts of last year. Table 18 shows average cost of steam-electric gas from 1974-1980. The national average of firm and interruptible gas cost rose to 182.3 and 286.7 cents per million Btu, respectively.

In 1980, a total of 186 utilities reported natural gas purchases on FPC Form 423, the 20 largest gas consuming utilities received 74.5 percent of the natural gas. These same 20 utilities also accounted for 71.6 percent of the total gas expenditures reported by all utilities. Section 2.8 of the "Technical Notes" lists the 20 largest gas consuming utilities.

Origin-Destination of Coal for Electric Utilities

Total 1980 receipts of coal to steam-electric plants increased to 594 million tons, a 6.7 percent increase from last year's level. As seen in Table 19, most geographic regions experienced increases in coal receipts. On the whole, however, States west of the Mississippi River received 18.0 percent more coal in 1980 than in 1979.

Historically, Eastern mines have dominated the electric utility market with large producing states like Kentucky, Illinois, West Virginia, Pennsylvania, and Ohio supplying most of the demand.

During the past seven years, the majority of incremental utility coal requirements has been met by coal produced in mines west of the Mississippi River. Using 1974 as a base year, Table 21 shows the continued growth of Western coal both quantitatively and as a percent of total coal receipts to electric utilities in each of the past six years. During this period, receipts from the Northern Great Plains increased, while shipments from the Mountain Province have increased at a lower rate. Also, receipts of Texas lignite, while limited to utilities in Texas, have increased during the period.

The 1980 coal receipts from the five largest Western coal producing States and a comparison of the 1974 receipts are given in Table 22.

Note: This table excludes Anthracite and Imported coal receipts.

Table 22. Coal Receipts to Electric Utilities from the Five Largest Western Coal-Producing States, 1973 and 1980 (Million Tons)

Origin	1973 Quantity	1980 Quantity	Quantitative Difference	Average Annual Growth Rate Percent
Wyoming	13.1	89.7	76.6	31.8
Montana	10.6	27.9	7.3	17.6
Texas	4.7	27.0	22.3	31.9
New Mexico	8.3	16.5	8.2	8.3
North Dakota	5.3	15.4	10.1	15.5
Total	42.0	176.5	132.5	23.3

Of the 223.2 million tons of coal produced from Western mines for electric utility consumption, about 75.6 percent, or 189.3 million tons, remained in the West, while a record high of 33.9 million tons was delivered to Eastern utilities. Most of the coal shipped to Eastern utilities originated in Wyoming and Montana and was delivered to utilities in the East North Central Region, as shown in Table 23.

Detailed qualitative and quantitative information on the origin and destination of coal receipts to electric utilities in 1980 is presented in Chapters 4 and 5 of this report. Table 24 summarizes the quantities of steam-electric coal moved between producing and consuming States in 1980.

Imported Coal Receipts by Electric Utilities

Electric utilities imported less than 1.0 million tons of coal from abroad in 1980, which amounted to less than one quarter of one percent of the total electric utility coal demand. The coal averaged less than one percent sulfur and was received at an average cost of \$43.55 per ton.

As shown in Table 25, there were two utilities (identified by *) which received coal from abroad in 1980.

¹ Utilities which received coal from abroad in 1980.

Comparison of 1980 Sulfur Regulations with the Sulfur Content of Coal Receipts to Electric Utilities

In 1980, coal receipts to all units reporting coal purchases on Form 423 totaled 594.0 million tons. A plant-by-plant comparison of the sulfur content of each coal shipment with the State Implementation Plan (SIP) and New Source Performance Standard (NSPS) regulations for sulfur dioxide (SO₂) emissions effective January 1980¹, shows that 413.5 million tons, or 69.6 percent of all the coal, complied with the 1980 SO₂ emission regulations as delivered. If, however, plants receiving both complying and noncomplying coal blended these shipments, an additional 28.1 million tons could have been brought into compliance, increasing the quantity of complying coal to 441.6 million tons, or 74.3 percent of the total. Still remaining out of compliance would be 152.4 million tons, or 25.7 percent of all 1980 coal shipments to electric utilities. The detailed plant-by-plant information is presented in Chapter 6 and is summarized by State in Table 26.

¹ The sulfur regulations used in this analysis were provided by the Environmental Protection Agency (EPA) and reflect SIP revisions as of January 1980.

The vast majority of the coal not complying with sulfur regulations was produced from Eastern mines for delivery to Eastern power plants. Of the 152.4 million tons of noncomplying coal purchased by utilities in 1980, nearly 77.6 percent, or about 118.2 million tons, was received by plants sited in geographic regions east of the Mississippi River. Moreover, most of these noncomplying shipments went to plants in Ohio, Indiana, Illinois, Kentucky, Tennessee, Pennsylvania, Michigan, Alabama and West Virginia, states in which coal is the predominant boiler fuel. As shown in Table 27, the bulk of the coal purchased by Western powerplants complied with sulfur regulations, with much of the non-complying coal in those states going to plants in Texas (21.7 million tons) and Nevada (4.5 million tons).

Between 1979 and 1980 total coal shipments to electric utilities increased by 37.4 million tons, while the quantities of coal complying with SO₂ emission regulations as received increased by 40.7 million tons, reflecting increased compliance with environmental regulations.

The calculations of conforming and nonconforming coal (after blending) are based on an annual averaging of the entire quantity of coal received by each plant during the year. The sulfur variability in coal from shipment-to-shipment, even in coal from the same mine, may be considerable, and many power plants which appear to be complying with SIP and NSPS regulations exceed the 3-hour regulations more than once a year.

Table 28 identifies electric utilities using Flue Gas Desulfurization (FGD) systems for compliance with SO₂ emission regulations.

The number of installed FGD units increased from 57 in 1979 to 79 in 1980. During 1980, the capacity of FGD systems increased 33.3 percent from 20,949 to 27,919 megawatts.

3. Cost and Quality Data by Census Region and State, 1980

The cost as reported on Form 423 is in cents per million Btu. The annual averages for the three fossil fuels, by state and census region appear in Tables 41 through 52. However, also included are average cost in dollars per ton of coal in Tables 44 and 51; dollars per barrel of oil in Tables 45, 46, 47, and 52; and dollars per Mcf of gas in Tables 48, 49, and 50. These costs were computed for each state and region.

Variations in the average cost per million Btu in relation to the average cost in dollars per ton of coal and dollars per Mcf of gas occur because of the wide ranges in average Btu content of some of the fuel types. For instance, the heat content of bituminous coal can be above 13,000 Btu per pound while lignite rarely contains more than 7,500 Btu per pound. Also, the heat content of refinery gas can be above 1,200 Btu per cubic foot while blast furnace gas contains approximately 90 Btu per cubic foot.

Pacific Gas and Electric Company's (PG&E) Avon, Martinez, and Oleum plants have arrangements with adjacent refineries in which steam and/or electricity is exchanged for fuel (natural gas or oil). The cost accounting developed by PG&E does not reflect the true cost of the natural gas or oil used at these plants. To get more of a representative cost of fuels, a weighted average of the costs of natural gas and oil, as reported by all other PG&E plants for the month, has been assigned to the fuels involved in the exchange arrangement at the three plants.

Receipts

During 1981, coal receipts totaled 593,995.39 thousand short tons, an increase of 37,437.3 thousand short tons from 1979. Bituminous coal shipments increased 3,673.0 thousand short tons, and subbituminous coal shipments increased 29,022.9 thousand short tons compared to those for 1979.

Receipts of all oil to fossil-fueled plants totaled 408,518.3 thousand barrels, which showed a 107,943.9 thousand-barrel decrease from receipts in 1979. Heavy-oil purchases totaled 384,029.4 thousand barrels, decreasing 86,011.4 thousand barrels from purchases in 1979. Light-oil purchases decreased 21,932.5 thousand barrels to a level of 24,488.9 thousand barrels during 1979.

Gas receipts to electric units totaled 3,568,694.4 million cubic feet (MMcf) during 1980, which was an increase of 189,877.0 MMcf above 1979 receipts. Natural-gas receipts increased 194,902.0 MMcf above 1979 to a level of 3,552,443.5 MMcf.

Coal, oil, and gas receipts in 1980 in comparison to 1979 are shown in the table below.

Type of Fuel	1980	1979	Quantitative Difference	Change (Percentage) ¹
Total Coal (thousand short tons)	593,995.3	556,558.0	37,437.3	6.4
Bituminous	410,518.1	406,845.1	3,673.0	0.6
Subbituminous	139,704.8	110,681.9	29,022.9	25.9
Lignite	42,711.6	37,884.6	4,827.0	12.4
Anthracite	1,060.8	1,146.4	-85.6	-7.7
Total Oil (thousand bbls)	408,518.3	516,462.2	-107,943.9	-21.1
Heavy	384,029.4	470,040.8	-86,011.4	-18.5
Light	24,488.9	46,421.4	-21,932.5	-47.4
Total Gas² (million cu. ft.)	3,568,694.4	3,378,816.9	189,877.0	5.3
Natural	3,552,443.5	3,357,540.7	194,902.0	5.5
Other ³	16,250.9	21,276.2	-5,025.3	-23.8

¹Percent change is based on daily averages.

²Includes small quantities of off-peak gas.

³Includes small quantities of coke-oven gas, refinery and blast-furnace gas.

Note: Totals may not equal sum of components because of independent rounding.

Cost

The average cost of all coal receipts to electric utilities in the United States was \$28.76 per ton, which was a \$2.61 per ton increase from 1979. Contract coal purchases increased \$2.54 per ton to a level of \$28.31 per ton, while spot coal costs increased \$3.49 from 1979 and averaged \$32.21 per ton.

The average cost of heavy oil increased \$8.04 per barrel to a level of \$26.64 per barrel as compared to costs in 1979. The average cost of light oil increased \$10.01 per barrel to a level of \$33.25 per barrel.

The average cost of gas received by electric units during 1980 increased \$0.48 per thousand cubic feet (Mcf) to a level of \$2.29 per Mcf. Firm and interruptible gas receipts averaged \$1.88 per Mcf and \$2.94 per Mcf, respectively.

The following table compares fossil-fuel average costs in 1980 and 1979.

Cost (dollars)	1980	1979	Quantitative Difference	Change (percentage)
Total Coal (per short ton).....	28.76	26.15	2.61	10.0
Contract.....	28.31	25.77	2.54	9.9
Spot.....	32.21	28.72	3.49	12.2
Total Oil (per bbl).....	27.04	19.02	8.02	42.2
Heavy Oil.....	26.64	18.60	8.04	43.2
Light Oil.....	33.25	23.24	10.01	43.1
Total Gas¹ (per Mcf).....	2.29	1.81	0.48	26.5
Firm.....	1.88	1.57	0.31	19.7
Interruptible.....	2.94	2.22	0.72	32.4

¹Excludes off-peak gas.

Note: Totals may not equal sum of components because of independent rounding.

4. Coal, Origin-by-Destination by Bureau of Mines, Coal Producing District, and State, 1980

The percentages shown under the heading "Pct of Recpt"
Face and Spot represent the percent of total coal shipments
Surface-mined (as opposed to coal mined underground) and
the percent purchased on the spot market (as opposed to coal
purchased under contract). The sum of the two columns
should not equal 100 percent.

See page 205 of the "Technical Notes" for further
information.

Table 53. Origin and Destination of Coal Receipts to Steam-Electric Units 25 MW or Greater, 1980

Origin and Destination of Coal Receipts

THIS PAGE
WAS INTENTIONALLY
LEFT BLANK

5. Coal, Destination-by-Origin by Census Region and State, 1980

The percentages shown under the heading "Pct of Recpt"
Surface and Spot represent the percent of total coal shipments
surface-mined (as opposed to coal mined underground) and
the percent purchased on the spot market (as opposed to coal
purchased under contract). The sum of the two columns
should not equal 100 percent.

See page 205 of the "Technical Notes" for further
information.

6. Quantity of Coal Complying With 1980 Air Pollution Control Regulations for Sulfur

Methodology

The data presented in chapter 6 are based on a comparison of the sulfur content of coal (on shipment-by-shipment basis) received by all power units reporting coal receipts on FPC Form 423 in 1980 with the respective plant sulfur regulations contained in the state implementation plans (SIP). The sulfur regulations used in this analysis were provided by the Environmental Protection Agency (EPA) and reflect SIP revisions recorded by EPA as of January 1980.

In some instances the units in which sulfur regulations are specified (e.g. pounds of sulfur per million Btu, pounds of SO₂ per million Btu) differ from those used for reporting the sulfur content of coal on Form 423 (percent sulfur by weight). In such instances the sulfur content of the coal was converted to conform to the units specified in the sulfur regulation. In addition, for particular plants the sulfur regulations were calculated from available data in the SIP and does not reflect precisely the enforceable regulation for that plant. Such calculations were necessary in the following instances:

1. The sulfur regulations for coal-fired power plants in New York, Pennsylvania, Florida, Kentucky, New Jersey, South Dakota, Texas, Tennessee, and Wisconsin are enforced on an individual boiler basis. Where required (i.e. when a plant has multiple coal-fired boilers, each with a different sulfur limitation), an average limitation was computed for the entire plant.
2. Sulfur regulations for some units in Arizona and Georgia and for all units in Colorado, Illinois, Iowa, Kansas, Minnesota, Missouri, Montana, North Carolina, North Dakota, and Ohio are enforced on an individual stack basis. Where required, an average limitation was computed for the entire plant.
3. The sulfur regulations for some units in Arkansas, Oklahoma, Missouri, Texas, Wisconsin, and Wyoming are stated in ambient air quality and actual emission is quite complex. It depends upon topography of the surrounding area, stack heights, exit temperature of the flue gas, wind and weather conditions. No violations of National Ambient Air Quality Standards (NAAQS) were detected in these areas in 1980; consequently, the sulfur dioxide emission for such units were not regulated.

The study was performed with the aid of a computer. Based on the comparison of the coal's sulfur content with the plant's sulfur regulation, the total quantity of coal received by a power plant fell into one of the following categories:

1. All coal shipments to the plant met the 1980 sulfur regulations.
2. All coal shipments to the plant exceeded the 1980 sulfur regulations.
3. Some of the coal shipments met the sulfur regulation, while other shipments to the same plant exceeded the regulation.

Blending (i.e. mixing quantities of complying and noncomplying coal to reduce the average sulfur level) would not be required if each of the plant's coal shipments complied with sulfur limitations. Consequently, the quantity of coal complying with regulations 'before blending' (column 5) remained the same 'after blending' (column 9), and the averaged sulfur content of the complying coal represented the sulfur content of all coal shipments (column 4).

Blending would serve no useful purpose if each of the plant's coal shipments exceeded sulfur limitations. Consequently, the quantity of coal not complying with regulations 'before blending' (column 7) remained the same 'after blending' (column 10) and the weighted average sulfur content of the noncomplying coal represented the sulfur content of all coal shipments (column 4).

When the comparison of each shipment with SIP regulations revealed that some coal shipments to a plant met the sulfur regulations, while other shipments to the same plant did not meet the regulation, a blending routine was initiated to compute the weighted average sulfur content of the complying and noncomplying receipts for a second comparison with the plant's sulfur regulation. If the average sulfur content did not exceed the sulfur regulation, full compliance was achieved (i.e. the quantities of coal complying or not complying to the regulation 'before blending' were summed to show all shipments complying 'after blending'), and the average sulfur content of the complying and noncomplying coal shipments represented the sulfur content of all shipments (column 4). If the average sulfur content of the complying and noncomplying coal to 'salvage' as much of the noncomplying coal as possible, using the

following equation:

$$I = ((R - C) (N - R)) \times Q$$

where:

I = the incremental tonnage of complying coal (thousand tons)

R = the plant's 1980 sulfur regulation

C = the weighted averaged sulfur content of the complying coal (same units as R)

N = the weighted average sulfur content of the noncomplying coal (same units as R)

Q = the quantity of complying coal (thousand tons)

The quantity of coal complying with the sulfur regulation 'before blending' was increased by the value of 'I' to reflect the new quantity of complying coal 'after blending.' This blending routine simply adds coal from the noncomplying tonnage (column 7) to the complying tonnage (column 5) until the blend has reached the sulfur limits of the SIP regulations; i.e., the addition of one more tons of noncomplying coal to the blend would push the sulfur content of the entire blend above the SIP standard. Thus, the sulfur content of the complying blend (column 9) equals the SIP sulfur regulations (column 2), while the sulfur content of the residual noncomplying tonnage (column 10) is the same as that shown (column 8) for the noncomplying quantity.

Compliance with SO₂ emission standards can also be achieved by SO₂ removal from stack gases by Flue Gas Desulfurization (FGD) systems. All operational FGD systems on coal-fired electric plants in 1980 are indicated by the footnote number in column 10. The footnote numbers in column 10 correspond to the numbers in parenthesis in Table 28, Chapter 1 of this report, which is a description of the operation of FGD systems.

7. Plant Fossil Fuel Quantity, Quality, and Cost Data for Calendar Year 1980

Chapter 7 is a presentation of quantity, quality, and cost data for fossil fuels received by electric generating units. The fuels received by these units are described by amount (in 1000 tons, thousands of barrels, or mcf) and cost (cents per million btu and dollars per ton, barrel or mcf). In addition coal and oil are described by their quality, referring to the average percentage of sulfur content.

When reference is made to coal, this report includes bituminous, subbituminous, lignite, anthracite coals, and small quantities of petroleum coke.

Oil refers to aggregation of data for FO2, FO4, FO5, FO6, crude, topped crude, kerosene, jet-fuel, re-refined motor oil, and liquified petroleum gas. In this chapter oil also includes oil received by generating units in Hawaii. (Tables 29 through 52 include data for the contiguous United States only.)

Data under the heading of gas includes natural gas, coke oven gas, blast furnace gas, refinery gas and gas received by units in Alaska.

Note: Due to computer rounding any quantity of fossil fuel less than 50 tons, 50 barrels, or 50 cubic feet shows up in the tables as 0.0.

Table 56. Receipts of Fossil-Fuel Quantity, Cost, and Quality
by Census Region, State, Company, and Plant, 1980

Note: Due to computer rounding any quantity less than 50 tons, 50 barrels, or 50 cubic feet will show as 0.0. --
Coal: Includes Bituminous, Subbituminous, Lignite, Anthracite and small quantities of Petroleum Coke.
Oil: Includes FO2, FO4, FO6, Crude, Jet-Fuel, Kerosene, Re-refined Motor Oil, Liquefied Petroleum Gas (LPG),
and oil delivered to plants in Hawaii (Tables 1 thru 28 include data for contiguous United States only).
Gas: Includes Natural Gas, Coke Oven Gas, Blast Furnace Gas, Refinery Gas and gas delivered to plants in Alaska.
Source: •Federal Power Commission Form 423.

8. Profile of Fuel Receipts to Electric Utilities, 1977-1980

Included in this chapter are utilities which at one time filed Form 423 data but ceased reporting as a result of either requirement or derating of units below the minimum capacity requirement of 25 megawatts. The following is a list of such utilities:

1. Blackstone Valley Elec.
2. Central Vermont Public Service Corp.
3. Green Mountain Power Corp.
4. Marshall Utilities
5. N. W. Electric Power Coop.
6. Frankfort Lt. Pwr Dept.

This chapter also includes utilities which initially filed Form 423 reports under one name, but because of changes in either the owner or operator, currently file under a different name. The following is a list of those companies:

1. Consumers Public Pwr. Dist. - now filed by - Nebraska Pub. Pwr. Sys.
2. New Jersey Pwr. & Lt. Co. - now filed by - Jersey Central Pwr. & Lt.
3. Southern Elec. Gen. Co. - now filed by - Alabama Power Co.
4. Hawaiian Electric - now filed by - Hawaii Electric Lt.co.
5. Monroe, city of - now filed by - Louisiana Pwr & Lt

Some utilities continue to file Form 423 but show no fossil fuel purchases for one or more years. When no activity is reported during a full year, the computer program makes no entry for that year.

Note: explanation of column headings and the various commodities which were included in these headings are presented at the end of Table 57.

Table 57. Utility Profile of Fossil Fuel Data Including Quantity, Quality, and Cost Information

Table 57. Utility Profile of Fossil Fuel Data Including Quantity, Quality, and Cost Information —Cont.

Year	Total Quantity Received							Total Received Fuel Cost						
	in billion Btu				% of Total Btu			in \$1000				% of Fuel Cost		
	Coal	Oil	Gas	Total	Coal	Oil	Gas	Coal	Oil	Gas	Total	Coal	Oil	Gas
1978	0	473	6	480	0.0	98.7	1.3	0	967	10	977	0.0	99.0	1.0
1979	0	429	40	469	0.0	91.4	8.6	0	1054	76	1130	0.0	93.2	6.8
1980	0	416	2	419	0.0	99.5	0.5	0	1782	5	1787	0.0	99.7	0.3

Coal : includes all types of coal, imported coal, and relatively small quantities of petroleum coke.

Residual Oil 6: includes FO4, FO5, FO6, crude, and topped crude.

Fuel Oil 2 : Includes FO2, kerosene, jet-fuel, re-refined motor oil, and lpg.

Natural Gas : Includes natural gas, small quantities of blast furnace gas, coke oven gas, and refinery gas.

Note:

Abbreviations :

Contr - Contract purchase

Sulf wt% - Percent sulfur by weight

% of Total 2+6 - Light Oil deliveries as percent of total

Cont - Content

Irpt - Interruptible gas

% of Fuel Cost - Share of each fuel as a percentage of the total cost of all fossil fuels

Glossary

Barrel

liquid measure. For purposes of this publication, it is defined as 42 gallons.

Bcf

One billion cubic feet.

Btu (British Thermal Unit)

A standard unit for measuring the quantity of heat energy; equal to the quantity of heat required to raise the temperature of one pound of water by one degree Fahrenheit.

Btu Content of Fuel (Average)

The average heat value per unit quantity of fuel expressed in Btu as determined from tests of fuel samples or defined by contract specifications. (Example: Btu per pound of coal, Btu per gallon of oil, and Btu per cubic foot of gas.)

Capability (Electric)

The maximum load which a generating unit, generating station, or other electrical apparatus can carry under specified conditions for a given period of time, without exceeding approved limits of temperature and stress.

Available but not Needed: Net capability of main generating units that are system-owned or operated, operable but not considered necessary to carry load, and cannot be connected to load within a 30-minute time period.

Full-Forced Outage: Net capability of main generating units that are system-owned or operated, but unavailable for load due to emergency reasons.

Net: The capability of a generating station as demonstrated by test or as determined by actual operating experience less power generated and used for station uses. Capability may vary with the character of the load, time of year (due to circulating water temperatures in thermal stations or availability of water in hydro stations), and other characteristic causes.

Other Unavailable: For purposes of this publication, other unavailable capability means net capability of main generating units that are system-owned or operated, but unavailable for load for reasons other than full-forced outage or scheduled maintenance (i.e., partial outages, legal restrictions).

Running and Quick Start: Net capability of main generating units that are system-owned or operated, carrying load or having quick start capability. In general, quick start capability refers to generating units that can be available for load within a 30-minute period.

Scheduled Maintenance: Net capability of main generating units that are system-owned or operated, but unavailable for load due to inspection or maintenance, in accordance with an advance schedule.

Capacity

The load for which a generator, turbine, transformer, transmission circuit, station, or system is rated.

Baseload: The capacity of the generating equipment normally operated to serve loads on a round-the-clock basis.

Installed: The capacity as shown by the nameplates of electrical apparatus, such as generating units, turbines, or other equipment in a station or system. Installed station capacity does not include auxiliary or house units. The nameplate capacity is the full-load continuous rating of a generator, prime mover, or other electrical equipment under specified conditions as designated by the manufacturer. It is usually indicated on a nameplate attached mechanically to the equipment.

Peaking: Generating equipment normally operated during the hours of highest daily, weekly, or seasonal loads. Some generating equipment maybe operated at certain times as peaking capacity and at other times to serve loads on a round-the-clock basis.

Census Regions

The nine geographic divisions of the United States established by the United States Bureau of the Census as an effective basis for statistical analysis. The boundaries of the Census Regions are logical geographic regions congruent with State boundaries.

Coal

A black or brownish black solid combustible substance formed by the partial decomposition of vegetable matter without free access of air and under the influence of moisture and often increased pressure and temperature. The rank of coal (anthracite, bituminous, subbituminous, and lignite) is determined by its heating value.

Anthracite: Hard and jet black with a high luster, it is the highest rank of coal and is mined in Northeast Pennsylvania.

Bituminous: The most common coal, soft, dense, black with well-defined bands of bright and dull material. Bituminous is ranked between anthracite and subbituminous and is mined chiefly in Kentucky, Pennsylvania, and West Virginia.

Lignite: A brownish black coal of the lowest rank, it is mined in North Dakota, Montana and Texas.

Coal - Continued

Subbituminous: A dull black coal ranking between lignite and bituminous, it is mined chiefly in Montana and Wyoming.

Coke

In general, coke is made from bituminous coal from which the volatile constituents have been driven off by heat, so that fixed carbon and ash are fused together. Coke is hard and porous.

Consumption (Fuel)

Amount of fuel used. For purposes of this publication, included is fuel consumed for gross generation, fuel used for providing standby service, and oil or gas used for start-up and/or flame stabilization of steam-electric plants.

Costs

Price of fuel.

Cents per Million Btu: Fuel is purchased on the basis of its heat content; therefore, cost is measured by computing cents per million Btu of the fuel consumed. It is the total cost of fuel consumed divided by its Btu content, and the quotient multiplied by one million.

Coal Dollars per Ton: Cost in dollars per short ton averaged over a specified time period.

Contract: Price of fuels marketed on a contract basis covering a period of one or more years. Contract prices reflect market conditions at the time the contract was negotiated and therefore remain constant throughout the life of the contract or would be adjusted through escalation clauses. Generally, the movement of contract prices are not given to any wide degree of fluctuation.

Firm Gas: Price of gas to customers on a continuous, uninterrupted and generally long-term contract. Firm gas prices exceed interruptible gas prices by widely varying margins, because users often pay a premium for firm purchases.

Gas Dollars per Mcf: Cost in dollars per thousand cubic feet averaged over a specified time period.

Interruptible Gas: Price of gas sold to customers with a provision that permits curtailment or cessation of service at the discretion of the distributing company under certain circumstances as specified in the service contract. For this reason, interruptible gas prices are lower than firm gas prices.

Oil Dollars Per Bbl: Cost in dollars per barrel averaged over a specified time period.

Spot: A single shipment of fuel or volumes of fuel to be delivered within one year. Spot purchases are often made by a user to fulfill a certain portion of energy requirements or to meet unanticipated energy requirements.

Demand

The rate at which electric energy is delivered to or by a system, part of a system, or piece of equipment, at a given instant or averaged over any designated period of time. (Also see **Interval**)

Coincident: The sum of two or more demands that occur in the same demand interval.

Instantaneous Peak: Maximum demand at the instant of greatest load.

Integrated: The demand averaged over a specified period, usually determined by an integrating demand meter or by the integration of a load curve.

Interval: The period of time during which the electric energy flow is averaged in determining demand, such as 60-minute, 30-minute, 15-minute, or instantaneous.

Maximum: The greatest of all demands of the load under consideration occurring within a specified period of time.

Noncoincident: The sum of two or more demands on individual systems that do not occur in the same demand interval.

Electric Utility

An enterprise engaged in the production, transmission or distribution of electricity for use by the public, including investor-owned, cooperatively-owned and government-owned (municipal systems, Federal agencies, State projects, and public power districts).

Energy

The capability of doing work. Electric energy is measured in watt-hours (WH) and heat energy is generally measured in British thermal units (Btu). One form of energy may be changed to another, such as burning coal to produce steam to drive a turbine which produces electricity.

Deliveries (Electric): Energy generated by one system and delivered to another system through one or more transmission lines.

Net Energy for Load: Net generation of main generating units that are system-owned or operated plus energy receipts minus energy deliveries.

Receipts (Electric): Energy generated by one system and received by another system through one or more transmission lines.

Fuel

Any substance that can be burned to produce heat; it sometimes includes materials that can be fissioned in a chain reaction to produce heat.

Fossil: Any naturally occurring fuel of an organic nature, such as coal, crude oil, and natural gas.

Nuclear: Fuel containing fissionable materials of such composition and enrichment that when placed in a nuclear reactor will support a self-sustaining fission chain reaction and produce heat in a controlled manner for process use.

Gas (Natural)

A mixture of hydrocarbon gases, principally methane, occurring in porous geologic formations beneath the earth's surface, often found in association with petroleum.

Gas (Other)

Other or manufactured gas includes coke oven gas, blast furnace gas, and refinery gas. Manufactured gas is obtained by distillation of coal, by the thermal decomposition of oil, or by the reaction of steam passing through a bed of heated coal or coke.

Generation (Electric)

The act or process of producing electric energy from other forms of energy; also, the amount of electric energy so produced, expressed in watthours (wH).

Gross: The total amount of electric energy produced by the generating units in a generating station or stations, measured at the generator terminals.

Net: Gross generation less the electric energy consumed at the generating station for station use. (Energy required for pumping at pumped storage plants is regarded as plant use and must be deducted from the gross generation).

Gigawatt (gW)

One billion watts.

Gigawatthour (gWh)

One billion watthours.

Kilowatt (kW)

One thousand watts.

Kilowatthour (kWh)

One thousand watthours.

Load (Electric)

The amount of electric power delivered or required at any specific point or points on a system.

Baseload: The minimum load over a given period of time.

Coincident Peak: The sum of two or more peak loads which occur in the same time interval.

Noncoincident Peak: The sum of two or more peak loads on individual systems that do not occur in the same time interval. Meaningful only when considering loads within a limited period of time, such as a day, week, month, a heating or cooling season and usually for not more than one year.

Peak: The maximum load during a specified period of time.

Mcf

One thousand cubic feet.

MMcf

One million cubic feet.

Megawatt (MW)

One million watts.

Megawatthour (MWh)

One million watthours.

National Electric Reliability Council (NERC)

In 1968, the electric industry created the NERC to augment the reliability and adequacy of bulk power supply in the electric utility systems of North America. NERC consists of nine Regional Reliability Councils and encompasses essentially all the power systems of the contiguous U.S. and the Canadian systems in Ontario, British Columbia, Manitoba, and New Brunswick.

Oil

A mixture of hydrocarbons existing in the liquid state in natural underground reservoirs. Oil is often found in association with gas.

Heavy: The fuel oils remaining after the lighter oils have been distilled off during the refining process. For purposes of this publication, included are products known as American Society for Testing and Materials (ASTM) Grade Nos. 4, 5 and 6 and residual fuel oils. Except for start-up and flame stabilization, virtually all oil used in steam plants is heavy oil.

Oil - Continued

Light: The lighter fuel oils distilled off during the refining process. For purposes of this publication, included are products known as American Society for Testing and Materials (ASTM) Grade No. 2 heating oil, kerosene and jet fuel. Virtually all oil used in internal combustion and gas turbine engines is light oil.

Petroleum Coke

A solid hydrocarbon residue of oil distillation, high in carbon content and low in hydrogen.

Plant (Electric)

A station at which are located prime movers, electric generators, and auxiliary equipment for converting mechanical, chemical, and/or nuclear energy into electric energy.

Baseload: A plant usually housing high-efficiency, steam-electric units which operates continuously to provide the baseload of a system.

Fossil Fuel: A plant using coal, oil, or gas as its source of energy.

Gas Turbine: A plant in which the prime mover is a gas turbine engine. A gas turbine consists typically of an axial-flow air compressor, one or more combustion chambers where liquid or gaseous fuel is burned in excess air, and a turbine, where the hot gases are expanded to drive the compressor and generator.

Geothermal: A plant in which the prime mover is a steam turbine. The turbine is driven either by steam produced from hot water or by natural steam, both trapped below the surface of the earth's crust.

Hydroelectric: A plant in which the prime mover is a waterwheel driven by falling water.

Internal Combustion: A plant in which the prime mover is an internal combustion engine. An internal combustion engine has one or more cylinders in which the process of combustion takes place, converting energy released from the rapid burning of a fuel-air mixture into mechanical energy. Diesel engines are the principal types used in electric plants.

Nuclear Power: A plant in which the prime mover is a steam turbine. The steam used to drive the turbine is produced in a reactor by heat from the fissioning of nuclear fuel.

Peak Load: A plant usually housing old, low efficiency steam units, gas turbines, diesels, or pumped storage hydroelectric equipment normally used during the peak load periods.

Pumped Storage: A hydroelectric plant which usually generates electric energy during peak load periods by usually using water previously pumped into a storage reservoir during off-peak periods.

Steam-Electric (Conventional): A plant in which the prime mover is a steam turbine. The steam used to drive the turbine is produced in a boiler by heat from burning fossil fuels.

Plant Use (Electric): The electric energy used in the operation of a plant. Included in this definition is the energy required for pumping at pumped storage plants.

Price

Retail cost of electricity.

Retail Electricity in Selected Cities (Residential): Price of electricity supplied to residential customers for lighting, refrigeration, cooling, water heating, and other domestic uses.

Retail Electricity in Selected Cities (Commercial): Price of electricity supplied to commercial or business establishments such as stores, offices, restaurants, and garages for lighting and other power purposes.

Retail Electricity in Selected Cities (Industrial): Price of electricity supplied to industrial establishments such as automotive and steel producing industries.

Prime Mover

The engine, turbine, water wheel or similar machine which drives an electric generator.

Production (Electric):

See Generation.

Receipts

Purchasing of fuel

Contract: Purchases on a contract basis generally covering a period of one or more years.

Firm Gas: Purchases of gas by customers on a continuous, uninterrupted and generally long-term contract.

Interruptible Gas: Purchases of gas by customers with the provision that service may be interrupted at the discretion of the distributing company or under certain circumstances as specified in the service contract.

Off Peak Gas: Spot purchases of gas. (See Purchases, Spot.)

Spot: A single shipment of fuel or volumes of fuel to be delivered within one year. Spot purchases may be made to supplement contract purchases of fuel or to meet unanticipated energy requirements.

Short Ton

A unit of weight equal to 2,000 pounds.

Station (Electric)

See Plant.

Stock (Fuel)

A supply of fuel accumulated for future use. For purposes of this publication, this definition includes coal and fuel oil stocks at the plant site, in coal cars or barges at the plant site, and stocks held in central storage yards.

System (Electric)

Physically connected generation, transmission, and distribution facilities operated as an integrated unit under one central management, or operating supervision.

Unit Per Day

The quantity for each day for the period of time during which the quantity is averaged.

Watt

The electrical unit of power or rate of doing work. A watt is the rate of energy transfer equivalent to one ampere flowing under pressure of one volt at unity power factor. It is analogous to horsepower or foot-pound per minute of mechanical power. One horsepower is equivalent to approximately 746 watts.

Watthour

Equal to one watt of power supplied to, or taken from, an electric circuit steadily for one hour.

Technical Notes

1. Detailed Source of Data

The Office of Energy Data (OED) is responsible for routine improvement and quality assurance activities. All operations of OED are done in accordance with formal standards established by EIA. These standards are the measuring rod necessary for quality statistics. Data improvement efforts include verification of data-keyed input by automatic computerized methods, editing by subject matter specialists, and follow-up on non-respondents. Completed forms received by the Office of Energy Data are sorted, screened for completeness of reported information, and keyed onto computer tapes for storage and transfer to data bases on random access storage devices for computer processing. The information coded on the computer tapes is spot checked against the forms by hand to certify accuracy of the tapes. To insure the quality standards established by EIA, we have designed and implemented algorithms using the past history of data values in the data base to automatically check data input for errors. This automatically reduces the possibility of error entries in the data bases over time as the algorithm learns. Data values rejected by the algorithm are checked with respondents by telephone to correct the problems. Respondent computerized data files are checked to identify those who fail to respond to the survey. By law, non-respondents may be fined or otherwise penalized for not filing an EIA data form as prescribed in the instructions. Before invoking the law, the EIA tries to obtain the required information by encouraging cooperation of non-respondents.

The Office of Energy Information Validation (OEIV) supports the quality assurance efforts of the OED data collectors by providing advisory reviews of the structure of information requirements, and of proposed designs for new and revised data collection forms and systems. OEIV also validates the actual performance of working data collection systems, once fielded. OEIV provides EIA a necessary internal check and balance; by checking assumptions and system performance against the operational reality, it also provides OED and the project offices with useful feedback.

A brief summary of the history of the form and data collected and published in the **Cost and Quality of Fuels for Electric Utility Plants - Annual** is presented below.

1.1. FPC Form 423 - Monthly Report of Cost and Quality of Fuels for Electric Plants

Summary Statement of the FPC Form 423 Primary Purpose

The Federal Power Commission (FPC) Form 423 is a monthly record of each fuel purchase delivered to electric power generation plants with a fossil fuel combined capacity of 25 megawatts or greater.

Instrument and Design History

On July 7, 1972, the FPC issued Order Number 453 enacting the New Code of Federal Regulations, Section 141.61, and legally creating the Form 423. Originally, the form included only steam plants, but was amended in 1974 to include internal combustion and combustion turbines.

The FPC Form 423, Monthly Report of Cost and Quality of Fuels for Electric Plants, is submitted by approximately 281 electric utilities for each fossil-fueled plant having a total generating capacity of 25 megawatts or more. A six-month supply of forms is mailed to respondents semi-annually. Completed forms are due on or before the 45th day following the end of the reporting month.

Data Processing

Forms are mailed to respondents using a computerized mailing address file. Completed forms are manually logged in and edited before the data is keypunched for automatic data processing. The electric utility companies are telephoned to obtain data in cases of missing reports and to verify data when questions arise during editing. All respondents' reports are received each month before the final automatic edit of the submitted data. New plants are added to the FPC Form 423 System when respondents indicate the addition of a new plant.

Presentation

An edit program checks the data for errors not found during manual editing. Following verification of the data, computer printouts of aggregated data are produced for inclusion in the publication. After the monthly publication the **Electric Power Monthly** is cleared by EIA, the data become available for public use in either custom computer runs, data tapes, or the publications themselves on a cost-recovery basis.

Data from the Form 423 are summarized in the publications, **Cost and Quality of Fuels for Electric Utility Plants - Monthly**(4), **Cost and Quality of Electric Utility Plant Fuels - Annual**(3), and the **Monthly Energy Review**(6).

Information Collected

The data items supplied each month by all electric utilities for each plant are:

Plant type: steam turbine, combustion turbine, or internal combustion.

Purchase type (spot purchase): purchases for which the cost is negotiated for one delivery.

Purchase type (contract purchase): purchases for which the cost of deliveries is negotiated in advance for a term of more than one delivery.

Fuel type (Coal): anthracite, bituminous, subbituminous, lignite, and petroleum coke.

Fuel type (Oil): FO2, FO4, FO5, FO6, crude, topped crude, kerosene, jet fuel, and liquefied petroleum gas (LPG).

Fuel type (Gas): natural gas, synthetic natural gas, liquefied natural gas, refinery gas, blast furnace gas, and coke oven gas.

Fuel type (Other fuels): methanol, or specified by footnote.

Coal mines (Type): surface mined or underground mined.

Coal mines (District): State and Bureau of Mines (BOM) coal producing district.

Source (Coal): name of mine and county from which coal originated.

Source (Oil): supplier and refinery or port of entry.

Source (Gas): pipeline (supplier) or distributor, producing area by State, or port of entry.

Quantity (Heat Content): average Btu content.

Quantity (Sulfur Content): sulfur content (percentage by weight).

Quantity (Ash Content): ash content (percentage by weight).

Quantity (Cost): cents per million Btu.

2. Quality of Data

The edit systems are automated to edit data from the form surveys on a monthly basis. The edit includes both deterministic checks, in which records are checked for the presence of required fields and their validity, and statistical checks, in which estimation techniques are used to validate data according to its behavior in the past and in comparison to other current fields. When all data have passed the edit process, the system builds monthly master files. These master files are used as input to this report.

2.1. Estimation Procedures

Missing data values are estimated by using the previous month's data. This approach is used to minimize the time in producing the report, and until further analysis of the data in our data bases is performed.

When all data in a table are estimates, the table title includes the word "estimated." To indicate that an individual cell of a table contains estimated data a capital "E" (to the left of the number) and an accompanying footnote is used. Subtotals and totals do not indicate "E" if the table clearly shows that any or all the components are estimates. Similarly, any values (such as in daily average or percent change columns) which clearly are calculated from estimated data are not footnoted.

Office of Coal and Electric Power Statistics Data Revision and Correction Policy

The Office of Coal and Electric Power Statistics has adopted the following policy with respect to the revision and correction of data published in Energy Data Reports and made available in a machine format:

1. All data collected by this office (excluding secondary source data) will be published as preliminary data when first appearing in an energy data report.
2. The next publication of the data will be in final form when the data base are closed.
3. Revisions or corrections will only be made in the event a substantial (greater than one percent) reporting change is received or a substantial (greater than one percent) error is discovered.
4. Revisions or corrections to published secondary source data will be made if and when the organization from whom the data was received revises or corrects the data.
5. No revisions will be made without the approval of the Director, Office of Coal and Electric Power Statistics.

2.2. Confidentiality of the Data

The data collected on the forms used for input to this report are not confidential.

2.3. Obtaining Copies of Data

Upon EIA approval of the **Electric Power Monthly**, the data become available for public use in either custom computer runs, data tapes, or the publications themselves on a cost-recovery basis. A request is made by writing a letter to:

**U.S. Department of Energy
Energy Information Administration
Division of Electric Power Statistics, EI-452
Forrestal Building
Washington, D. C. 20585**

Copies of these data are free to all U.S. Government agencies. However, for a tape copy the agency must submit a tape with the request.

Custom computer runs are obtained by submitting a check of \$25.00 made out to the U.S. Treasury with the written request for the hard copy.

Tape copies are obtained by submitting a check of \$50.00 made out to the U.S. Treasury and a tape with the written request.

2.4. Explanatory Notes

Percent Change

Percent Change = $((\text{CMY} - \text{CMPY}) / \text{CMPY}) \times 100$, where CMY is the current month-year and CMPY is the current month-previous year.

FPC Form 423

The symbol F is coal, oil, heavy oil, light oil, and gas. In the case of coal, to obtain the other aggregates replace contract with strip and auger, spot with underground. Gas aggregates are obtained by replacing contract with interruptible and spot with firm.

Total Btu

Total Btu = $\text{SUM}(\text{Quantity} \times \text{Average Btu Content} \times U)$, where SUM is an operator meaning summation, $U = 2000 \text{ lb/ton}$ for coal, $U = 42 \text{ gal/bbl}$ for oil, and $U = 1000 \text{ cf/Mcf}$ for gas.

Cents per Million Btu

Cents per Million Btu = $\text{SUM}(\text{Quantity} \times \text{Average Btu Content} \times \text{Cost in cents per Million Btu}) / \text{SUM}(\text{Quantity} \times \text{Btu Content})$, where SUM is an operator meaning summation.

Dollars per Unit

Dollars per Unit = $\text{SUM}(\text{Quantity} \times \text{Average Btu Content} \times U \times \text{Cents per Million Btu}) / (\text{SUM}(\text{Quantity}) \times 100)$, where SUM is an operator meaning summation, $U = 2000 \text{ lb/ton}$ for coal, $U = 42 \text{ gal/bbl}$ for oil, and $U = 1000 \text{ cf/Mcf}$ for gas.

Receipts

U.S. Aggregates

Total Receipts(T) = $\text{SUM}(\text{Receipts}(T))$, where T is bituminous, subbituminous, anthracite, and lignite for coal; light and heavy for oil; natural and other for gas and SUM is an operator meaning summation.

NERC Aggregates

NERC Receipts(RT) = $\text{SUM}(\text{Receipts}(RT))$, where R is a NERC region; T is bituminous, subbituminous, anthracite, and lignite for coal; light and heavy for oil; natural and other for gas and SUM is an operator meaning summation.

Census Region Aggregates

Census Receipts(CT) = $\text{SUM}(\text{Receipts}(CT))$, where C is a census region; T is bituminous, subbituminous, anthracite, and lignite for coal; light and heavy for oil; natural and other for gas and SUM is an operator meaning summation.

State Aggregates

State Receipts(ST) = $\text{SUM}(\text{Receipts}(ST))$, where S is a State; T is bituminous, subbituminous, anthracite, and lignite for coal; light and heavy for oil; natural and other for gas and SUM is an operator meaning summation.

Cost

U.S. Aggregates

Total Average Cost of (F) = Cents per Million Btu, for the cents per million Btu calculation applied to the contiguous U.S.

Total Average Cost of (F) = Dollars per Unit, for the dollars per unit calculation applied to the contiguous U.S.

Total Average Contract Cost of (F) = Cents per Million Btu, for the cents per million Btu calculation applied to the contiguous U.S.

Total Average Spot Cost of (F) = Cents per Million Btu, for the cents per million Btu calculation applied to the contiguous U.S.

Total Average Contract Cost of (F) = Dollars per Unit, for the dollars per unit calculation applied to the contiguous U.S.

Total Average Spot Cost of (F) = Dollars per Unit, for the dollars per unit calculation applied to the contiguous U.S.

Census Region Aggregates

Census Region Average Cost of (F) = Cents per Million Btu, for the cents per million Btu calculation applied to the census region.

Census Region Average Cost of (F) = Dollars per Unit, for the dollars per unit calculation applied to the census region.

Census Region Average Contract Cost of (F) = Cents per Million Btu, for the cents per million Btu calculation applied to the census region.

Census Region Average Spot Cost of (F) = Cents per Million Btu, for the cents per million Btu calculation applied to the census region.

Census Region Average Contract Cost of (F) = Dollars per Unit, for the dollars per unit calculation applied to the census region.

Census Region Average Spot Cost of (F) = Dollars per Unit, for the dollars per unit calculation applied to the census region.

State Aggregates

State Average Cost of (F) = Cents per Million Btu, for the cents per million Btu calculation applied to the State.

State Average Cost of (F) = Dollars per Unit, for the dollars per unit calculation applied to the State.

State Average Contract Cost of (F) = Cents per Million Btu, for the cents per million Btu calculation applied to the State.

State Average Spot Cost of (F) = Cents per Million Btu, for the cents per million Btu calculation applied to the State.

State Average Contract Cost of (F) = Dollars per Unit, for the dollars per unit calculation applied to the State.

State Average Spot Cost of (F) = Dollars per Unit, for the dollars per unit calculation applied to the State.

2.5. Rounding Rules for Data

An n digit number with r digits to the left of the decimal point and d+t digits in the fraction part is rounded to (r+d) digits adding 5 to the (r+d+1)th digit when the number is positive. When the number is negative, 5 is subtracted from the (r+d+1)th digit. The t digits are truncated or chopped at the (r+d+1)th digit. The symbol for a rounded number truncated to zero is (r).

2.6. Use of the Glossary

The terms in the glossary have been defined for general use. Restrictions on the definitions as used in this data collection system are included in each definition when necessary to refine the terms as they are used in this report.

2.7. Conversion Factors

Average Btu

Average Btu = $\text{SUM}(\text{Quantity} \times \text{Average Btu Content}) / \text{SUM}(\text{Quantity})$, where SUM is an operator meaning summation. This Average Btu is a United States average when SUM is applied to the United States.

2.8. List of Twenty Largest Companies Ranked by Total Btu, Fuel Bill, Coal, Oil, and Gas Receipts

List of 20 Largest Companies Ranked by Total Btu Receipts in 1980

Company Name	Total btu's Billions	Total Cost Thousand Dollars
1. Tennessee Valley Authority	824,366	1,264,761
2. Houston Lighting and Power.....	588,962	1,206,372
3. Georgia Power (Southern Co)	497,205	754,455
4. Texas Pwr and Lt (Texas Utils)	488,488	507,850
5. Southern California Edison	478,417	1,727,456
6. Commonwealth Edison.....	416,733	1,118,219
7. Duke Power	382,490	610,077
8. Pennsylvania Electric (GPS).....	374,045	453,550
9. Pacific Gas and Electric	364,364	1,556,605
10. The Detroit Edison Co.....	348,483	580,613

DEFINITION OF BITUMINOUS COAL AND LIGNITE PRODUCING DISTRICTS

DISTRICT 1.—EASTERN PENNSYLVANIA

Pennsylvania

Armstrong County (part).—All mines east of the Allegheny River, and those mines served by the Pittsburgh & Shawmut Railroad located on the west bank of the river.

Fayette County (part).—All mines located on and east of the line of Indian Creek Valley branch of the Baltimore & Ohio Railroad.

Indiana County (part).—All mines not served by the Saltsburg branch of the Consolidated Rail Corporation.

Westmoreland County (part).—All mines served by the Consolidated Rail Corporation from Torrence, east.

All mines in the following counties:

Bedford	Centre	Forest	McKean
Blair	Clarion	Fulton	Mifflin
Bradford	Clearfield	Huntingdon	Potter
Cambria	Clinton	Jefferson	Somerset
Cameron	Elk	Lycoming	Tioga

Maryland.—All mines in the State.

West Virginia.—All mines in the following counties:

Grant	Mineral	Tucker
-------	---------	--------

DISTRICT 2.—WESTERN PENNSYLVANIA

Pennsylvania

Armstrong County (part).—All mines west of the Allegheny River except those mines served by the Pittsburgh & Shawmut Railroad.

Fayette County (part).—All mines except those on and east of the line of Indian Creek Valley branch of the Baltimore & Ohio Railroad.

Indiana County (part).—All mines served by the Saltsburg branch of the Consolidated Rail Corporation.

Westmoreland County (part).—All mines except those served by the Consolidated Rail Corporation from Torrence, east.

All mines in the following counties:

Allegheny	Butler	Lawrence	Venango
Beaver	Greene	Mercer	Washington

DISTRICT 3.—NORTHERN WEST VIRGINIA

West Virginia

Nicholas County (part).—All mines served by or north of the Baltimore & Ohio Railroad.

All mines in the following counties:

Barbour	Jackson	Randolph	Webster
Braxton	Lewis	Richie	Wetzel
Calhoun	Marion	Roane	Wirt
Doddridge	Monongalia	Taylor	Wood
Gilmer	Pleasants	Tyler	
Harrison	Preston	Upshur	

DISTRICT 4.—OHIO.—All mines in the State.

DISTRICT 5.—MICHIGAN.—All mines in the State.

DISTRICT 6.—PANHANDLE

West Virginia

All mines in the following counties:

Brooke	Hancock	Marshall	Ohio
--------	---------	----------	------

DISTRICT 7.—SOUTHERN NO. 1

West Virginia

Fayette County (part).—All mines east of Gauley River and all mines served by the Gauley River branch of the Chesapeake & Ohio Railroad and mines served by the Virginian Railway.

McDowell County (part).—All mines in that portion of the county served by the Dry Fork Branch of the Norfolk & Western Railroad and east thereof.

Italeigh County (part).—All mines except those on the Coal River branch of the Chesapeake & Ohio Railroad and north thereof.

Wyoming County (part).—All mines in that portion served by the Gilbert branch of the Virginian Railway lying east of the mouth of Skin Fork of Guyandot River and in that portion served by the main line and the Glen Rogers branch of the Virginian Railway.

All mines in the following counties:

Greenbrier	Mercer	Monroe	Pocahontas	Summers
------------	--------	--------	------------	---------

Virginia

Buchanan County (part).—All mines in that portion of the county served by the Richlands-Jewell Ridge branch of the Norfolk & Western Railroad and in that portion on the headwaters of Dismal Creek east of Lynn Camp Creek (a tributary of Dismal Creek).

Tazewell County (part).—All mines in those portions of the county served by the Dry Fork branch to Cedar Bluff and from Bluestone Junction to Boissevain branch of the Norfolk & Western Railroad and Richlands-Jewell Ridge branch of the Norfolk & Western Railroad.

All mines in the following counties:

Montgomery	Pulaski	Wythe	Chiles	Craig
------------	---------	-------	--------	-------

DISTRICT 8.—SOUTHERN NO. 2

West Virginia

Fayette County (part).—All mines west of the Gauley River except mines served by the Gauley River branch of the Chesapeake & Ohio Railroad.

McDowell County (part).—All mines west of and not served by the Dry Fork branch of the Norfolk & Western Railroad.

Nicholas County (part).—All mines in that part of the county south of and not served by the Baltimore & Ohio Railroad.

Italeigh County (part).—All mines on the Coal River branch of the Chesapeake & Ohio Railroad and north thereof.

DISTRICT 8.—SOUTHERN NO. 2—Continued

West Virginia—Continued

Wyoming County (part).—All mines in that portion served by the Gilbert branch of the Virginian Railway and lying west of the mouth of Skin Fork of Guyandot River.

All mines in the following counties:

Boone	Kanawha	Mason	Wayne
Cabell	Lincoln	Mingo	
Clay	Logan	Putnam	

Virginia

Buchanan County (part).—All mines in the county, except in that portion on the headwaters of Dismal Creek, east of Lynn Camp Creek (a tributary of Dismal Creek) and in that portion served by the Richlands-Jewell Ridge branch of the Norfolk & Western Railroad.

Tazewell County (part).—All mines in the county except in those portions served by the Dry Fork branch of the Norfolk & Western Railroad and branch from Bluestone Junction to Boissevain of Norfolk & Western Railroad and Richlands-Jewell Ridge branch of the Norfolk & Western Railroad.

All mines in the following counties:

Dickinson	Lee	Russell	Scott	Wise
-----------	-----	---------	-------	------

Kentucky.—All mines in the the following counties in eastern Kentucky:

Bell	Greenup	Lawrence	Morgan
Boyd	Harlan	Lee	Owsley
Breathitt	Jackson	Leslie	Perry
Carter	Johnson	Letcher	Pike
Clay	Knott	McCreary	Rockcastle
Elliott	Knox	Magoffin	Wayne
Floyd	Laurel	Martin	Whitley

Tennessee.—All mines in the following counties:

Anderson	Cumberland	Overton
Campbell	Fentress	Roane
Claiborne	Morgan	Scott

North Carolina.—All mines in the State.

DISTRICT 9.—WEST KENTUCKY

Kentucky.—All mines in the following counties in western Kentucky:

Butler	Hancock	McLean	Todd
Christian	Henderson	Muhlenberg	Union
Crittenden	Hopkins	Ohio	Warren
Davless	Logan	Simpson	Webster

DISTRICT 10.—ILLINOIS.—All mines in the State.

DISTRICT 11.—INDIANA.—All mines in the State.

DISTRICT 12.—IOWA.—All mines in the State.

DISTRICT 13.—SOUTHEASTERN

Alabama.—All mines in the State.

Georgia.—All mines in the following counties:

Dade	Walker
------	--------

Tennessee.—All mines in the following counties:

Bledsoe	Marion	Sequatchie	Warren
Grundy	McMinn	Van Buren	White
Hamilton	Rhea		

DISTRICT 14.—ARKANSAS-OKLAHOMA

Arkansas.—All mines in the State.

Oklahoma.—All mines in the following counties:

Haskell	Le Flore	Sequoyah
---------	----------	----------

DISTRICT 15.—SOUTHWESTERN

Kansas.—All mines in the State.

Texas.—All mines in the State.

Missouri.—All mines in the State.

Oklahoma.—All mines in the following counties:

Coal	Latimer	Oklmulgee	Rogers	Wagoner
Craig	Muskogee	Pittsburg	Tulsa	

DISTRICT 16.—NORTHERN COLORADO

All mines in the following counties in the State:

Adams	Douglas	Jackson	Larimer
Arapahoe	Elbert	Jefferson	Weld
Boulder	El Paso		

DISTRICT 17.—SOUTHERN COLORADO

Colorado.—All mines except those included in District 16.

New Mexico.—All mines except those included in District 18.

DISTRICT 18.—NEW MEXICO

New Mexico.—All mines in the following counties:

Grant	McKinley	Sandoval	San Miguel	Socorro
Lincoln	Rio Arriba	San Juan	Santa Fe	

Arizona.—All mines in the State.

California.—All mines in the State.

DISTRICT 19.—WYOMING

Wyoming.—All mines in the State.

Idaho.—All mines in the State.

DISTRICT 20.—UTAH.—All mines in the State.

DISTRICT 21.—NORTH DAKOTA-SOUTH DAKOTA.—All mines in North Dakota and South Dakota.

DISTRICT 22.—MONTANA.—All mines in the State.

DISTRICT 23.—WASHINGTON

Washington.—All mines in the State.

Oregon.—All mines in the State.

Alaska.—All mines in the Territory.

Energy Information Administration
Publications Directory
A User's Guide

Now on Subscription at GPO!

\$14.00 a Year

\$4.75 Cumulative Volume

\$3.25 Supplements

A complete annual listing, including comprehensive descriptions of all current DOE/EIA publications. Over 350 special-purpose and one-time reports, analysis and technical reports, maps, and periodicals are published by the EIA, some of which date to predecessor organizations (Bureau of Mines, Federal Energy Administration and Federal Power Commission). The Directory provides a subject index, ordering information, and order forms.
