

This bibliography on health and safety aspects of exporting nuclear reactors is divided into three major categories: articles in journals and magazines, newspaper articles, and congressional references. The entries were derived from a search of various sources including: the Guide to Legal Periodicals, the Congressional Research Services data bases, The New York Times and The Washington Post. Numerous articles were also referred to me by the Natural Resources Defense Council and the Council on Environmental Quality. The Social Science Index and the Readers Guide to Periodicals were also checked but produced no relevant items.

### Journal and Magazine Articles

- Appelbaum, George. Controlling the hazards of international development. In Ecology law quarterly, vol. 5, 1976. p. 321.
- Bank's assistance in equipment export requires impact statement, NRDC says. In Environmental reporter, May 13, 1977, p. 47.
