Environmental Regulatory Update

This report contains a bi-monthly update of environmental regulatory activity that is of interest to the Department of Energy. It is provided to DOE operations and contractor staff to assist and support environmental management programs by tracking regulatory developments. Any proposed regulation that raises significant issues for any DOE operation should be reported to the Office of Environmental Guidance (EH-23) as soon as possible so that the Department can make its concerns known to the appropriate regulatory agency. Items of particular interest to EH-23 are indicated by a shading of the RU#.

Any questions or comments about any aspects of the Update Table should be directed to Lois Thompson, Air, Water, and Radiation Protection Division, Office of Environmental Guidance, U.S. Department of Energy (EH-23), 202-586-9581.

ABSTRACT

The Environmental Regulatory Update Table provides information on regulatory initiatives of interest to DOE operations and contractor staff with environmental management responsibilities. The table is updated bi-monthly with information from the Federal Register and other sources, including direct contact with regulatory agencies. Each table entry provides a chronological record of the rulemaking process for that initiative with an abstract and a projection of further action.

*RU numbers are identifiers that are assigned to each regulatory initiative for tracking purposes. The first three digits are coded to the statute, and the last three digits are specific to individual initiatives. The update table is first organized by statutes as shown above and then by RU numbers arranged sequentially. An index is provided at the end of the table to relate CFR citations to RU numbers.

Regulatory Highlights - November/December, 1993

1. Environmental Radiation Protection Standards for the Management and Disposal of Spent Nuclear Fuel, High-Level and Transuranic Radioactive Wastes - Final Rule

EPA issues a final rule (NPRM: 2-10-93) promulgating amendments to the environmental standards for the disposal of spent nuclear fuel and high-level and transuranic radioactive wastes in 40 CFR 191, Subpart B. The original standards, in addition to standards on management and storage of these wastes (Subpart A), were promulgated in 1985, but subsequently remanded to EPA in 1987 for further consideration following a court ruling. In 1992 the Waste Isolation Pilot Plant Land Withdrawal Act (WIPP LWA) was enacted, and it reinstated all of 40 CFR 191 except for portions of Subpart B dealing with human and groundwater protection requirements. The WIPP LWA, however, directed EPA to expedite issuance of final standards for the still remanded sections of Subpart B. The rule responds to this directive by establishing a new Subpart B, containing individual protection requirements, and adding a new Subpart C, containing groundwater protection requirements. The individual protection requirements found at 40 CFR 191.15 state that, "Disposal systems for waste and any associated radioactive material shall be designed to provide a reasonable expectation that, for 10,000 years after disposal, undisturbed performance of the disposal system shall not cause the annual committed effective dose, received through all potential pathways from the disposal system, to any member of the public in the accessible environment, to exceed 15 millirems (150 microsieverts)." To provide for a "reasonable expectation," a compliance assessment of a proposed disposal site will have to be performed involving an analysis of the transport of radionuclides through the selected geologic medium. The groundwater protection regulations in Subpart C require that a prospective disposal system be able to comply for 10,000 years with the Safe Drinking Water Act maximum contaminant levels (MCLs) for radionuclides as currently codified at 40 CFR 141.15 and 141.16 (i.e., the disposal system will not cause the level of radionuclides in an underground source of drinking water to exceed the MCLs). Finally, it is important to note that, under the WIPP LWA, Subparts B and C of 40 CFR 191 will not apply to any disposal site required to be characterized under section 113(a) of the Nuclear Waste Policy Act of 1982. At this time, the only site meeting that requirement is DOE's proposed high-level waste repository at Yucca Mountain, NV. The rule became effective on January 19, 1994. (12-20-93, 58 FR 66398, RU# 100-129.00)

2. Protection of Stratospheric Ozone - Final Rule

EPA issues a final rule (NPRM: 3-18-93) amending the schedule in section 604 of the Clean Air Act, as amended, for the phaseout of ozone-depleting chemicals. This action is allowed by section 606 of the CAA and is in response to several petitions and comments submitted by environmental organizations and industry groups seeking an accelerated phaseout of ozone-depleting substances. Section 606 justifies such an action if EPA determines a faster schedule is environmentally desirable and technically and economically

feasible. The new schedule is also in response to decisions recently adopted by the Parties to the Montreal Protocol on Substances that Deplete the Ozone Layer. (This organization is made up of over 125 member nations including the United States.) The rule accelerates the phaseout of the production and consumption (defined as "production plus imports minus exports of a controlled substance") of Class I and Class II controlled ozone-depleting substances. Class I controlled substances are chlorofluorocarbons (CFCs), halons, carbon tetrachloride, and methyl chloroform; Class II controlled substances are hydrochlorofluorocarbons (HCFCs). EPA is also adding methyl bromide and hydrobromofluorocarbons (HBFCs) to the list of Class I substances. The rule requires a complete phaseout of the production and consumption of halons by January 1, 1994, and of all Class I substances by January 1, 1996. The final schedule allows production and consumption of CFCs, carbon tetrachloride, and methyl chloroform in 1994 and 1995 at specified percentages based on a company's production and/or consumption in an earlier year (i.e., a baseline year). For certain CFCs the baseline year is 1986, while for the remaining CFCs, carbon tetrachloride, and methyl chloroform the baseline is 1989. The rule places a freeze on the production and consumption of methyl bromide and HBFCs at 1991 baseline levels beginning January 1, 1994. Further, the rule requires a complete phaseout for HBFCs beginning January 1, 1996, and for methyl bromide beginning January 1, 2001. As established by the rule, the phaseout of production and consumption of Class II substances will begin in the year 2003 with an earlier phaseout schedule for those HCFCs with a higher ozone-depleting potential. The rule became effective January 1, 1994.

3. Determining Conformity of General Federal Actions to State or Federal Implementation Plans - Final Rule

The Clean Air Act (CAA) requires EPA to promulgate rules to ensure that federal actions conform to the appropriate state implementation plan (SIP). Conformity to a SIP is defined in the CAA, as amended in 1990, as meaning conformity to a SIP's purpose of eliminating or reducing the severity and number of violations of the national ambient air quality standards (NAAQS) and achieving expeditious attainment of those standards. The federal agency responsible for the action is required to determine if its actions conform to the applicable SIP. EPA has issued a final rule establishing the criteria and procedures governing the determination of conformity for all federal actions, except federal highway and transit actions. Transportation conformity requirements have been established in a separate rulemaking action (11-24-93, 58 FR 62188). Notice of draft and final conformity determinations must be provided directly to air quality regulatory agencies and to the public by publication in a local newspaper. The final rule will become effective January 31, 1994.

4. Health and Environmental Standards for Uranium and Thorium Mill Tailings - Final Rule

EPA has amended its general environmental regulations in 40 CFR 192 pertaining to uranium mill tailings disposal sites under the Uranium Mill Tailings Radiation Control Act (UMTRCA) of 1978. Uranium mill tailings are sand-like wastes that result from the processing of uranium ore. Tailings are stored in large surface impoundments, called piles, that emit radon gas, a decay product of the waste material processed at the uranium mills. The purpose of this action is to provide additional regulatory means to ensure expeditious and permanent control of radon emissions from uranium mill tailings piles after active milling operations have ceased. The amendments clarify the current rule by ensuring timely emplacement of a permanent radon barrier and by requiring appropriate monitoring for non-operational uranium mill tailings disposal sites that are licensed by the Nuclear Regulatory Commission (NRC) or one of its Agreement States. The Agreement States affected are Colorado, Washington, and Texas, which are the only states that license sites to manage uranium byproduct materials under the Atomic Energy Act. This final rule is related to another action by EPA to rescind its National Emissions Standard for Hazardous Air Pollutants (NESHAPs) for radon emissions from the disposal of uranium mill tailings at non-operational sites, promulgated on December 15, 1989, as it applies to sites licensed by the NRC or an affected Agreement State. The effective date for this final rule is January 14, 1994.

IRIS DATABASE UPDATE

A DOE EH-231 Memorandum entitled *Integrated Risk Information System (IRIS) and Availability of Chemical Risk Assessment Guidance* was distributed in June 1991 to DOE Program Offices and Field Organizations. Attachment 1 to the memorandum, an ORNL-FSD report discussing access to and utilization of the *IRIS* online database, included "Table 1. *IRIS* Chemicals With Reference Doses and Carcinogen Assessments." The *IRIS* database has been updated extensively since that table was generated. The following table is the bimonthly updated version of Table 1 including all the chemicals listed in Table 1 along with additions/changes to the database planned through December 31, 1993. Additions/changes are those listed in the online *IRIS* database as accessed by our personnel through the National Library of Medicine. Changes in our table are shaded for ease of identification. Future issues of the *Environmental Regulatory Update Table* will include updates to the *IRIS* database during the previous two months. *Use only the most current version of the table.*

(Any questions or comments about how the chemical information for this *IRIS* Table is selected, downloaded and compiled should be addressed to Ms. Kim Slusher, Oak Ridge National Laboratory, (615) 576-1746).
