Environmental Regulatory Update

This report contains a bi-monthly update of environmental regulatory activity that is of interest to the Department of Energy. It is provided to DOE operations and contractor staff to assist and support environmental management programs by tracking regulatory developments. Any proposed regulation that raises significant issues for any DOE operation should be reported to the Office of Environmental Guidance (EH-23) as soon as possible so that the Department can make its concerns known to the appropriate regulatory agency. Items of particular interest to EH-23 are indicated by a shading of the RU#.

Any questions or comments about any aspects of the Update Table should be directed to Lois Thompson, Air, Water, and Radiation Protection Division, Office of Environmental Guidance, U.S. Department of Energy (EH-23), 202-586-9581.

ABSTRACT

The Environmental Regulatory Update Table provides information on regulatory initiatives of interest to DOE operations and contractor staff with environmental management responsibilities. The table is updated bi-monthly with information from the Federal Register and other sources, including direct contact with regulatory agencies. Each table entry provides a chronological record of the rulemaking process for that initiative with an abstract and a projection of further action.

*RU numbers are identifiers that are assigned to each regulatory initiative for tracking purposes. The first three digits are coded to the statute, and the last three digits are specific to individual initiatives. The update table is first organized by statutes as shown above and then by RU numbers arranged sequentially. An index is provided at the end of the table to relate CFR

1. Protection of Historic Properties - Notice of Proposed Rule

The Advisory Council on Historic Preservation (Council) issues a proposed rule to amend 36 CFR 800, Protection of Historic and Cultural Properties, in order to implement the 1992 Amendments to the National Historic Preservation Act and to improve the process mandated by Section 106 of the National Historic Preservation Act of 1966 (NHPA), under which federal agencies must consider the effects of their undertakings on historic properties. Proposed additions and revisions to subpart A of the Historic Preservation Regulations would revise and clarify the roles and responsibilities of the various participants in the Section 106 process, particularly those of agency officials. Revised definitions in this part include "undertaking" and "area of potential effects." Additionally, subpart A addresses the timing of the review, requiring the Section 106 process to be completed before any federal expenditures are approved for the undertaking or before any permits or licenses are issued. This requirement does not, however, preclude pre-review, non-destructive project planning. Proposed additions to subpart B include new provisions designed to guide and assist agencies in developing preservation programs and to insure that compliance procedures for Section 106 are consistent with those of the Council.

Changes in subpart C would largely remove the Council from routine Section 106 review processes and provide more autonomy for agency and State Historic Preservation Officer (SHPO) decisionmaking. A new provision would allow Council review of agency decisions made during the identification and evaluation stages. A companion to this section is included as a non-binding appendix, intended to supplement and clarify the identification process and the determination of the area of potential effects. A new provision would allow the issuance of notices of violation. Under this part the Council would be empowered to issue either a notice of violation to an agency that has already violated the requirements of the NHPA or a preliminary notice of violation to an agency that is about to violate those requirements. However, the preamble to this proposed rule concedes that both such notices are entirely advisory and carry no enforcement penalties.

New provisions of subpart D address options for complying with the requirements of the Section 106 process other than those provided for in subpart C and are intended to assist agencies in integrating their internal planning and review processes with the Section 106 process. Additionally, revised emergency regulations are proposed, which are intended to facilitate the consideration of historic properties during agency responses to emergencies or disasters. Finally, proposed subpart E revisions include detailed guidance intended to help agencies integrate and coordinate their section 106 review with other applicable and relevant statutes where desirable. Comments on the proposed rule will be accepted by the Council until December 2, 1994.

2. Revision to the NCP - Final Rule

This final rule (NPRM: 10-22-93) amends the National Contingency Plan (NCP) to augment preparedness and planning activities and to provide more efficient, coordinated, and effective responses to discharges of oil and releases into the environment of hazardous substances that present substantial danger to the public health and welfare. The rule, required by section 311(d) of the Clean Water Act, as amended by the Oil and Pollution Act of 1990, is largely devoted to the enactment and refinement of an organizational scheme designed to implement a strongly coordinated, multi-level national response strategy.

Subpart B establishes a myriad of new entities as participants in the NCP and describes the detailed organizational and preparedness responsibilities of each of them. These entities include the National Response Team (NRT), responsible for national responses and preparedness planning, for coordinating regional planning, and for providing policy guidance and support to the Regional Response Teams (RRTs); RRTs, responsible for regional planning and preparedness activities before response actions and for providing advice and support to the On Site Coordinator (OSC) and the Regional Project Manager (RPM); the OSC and RPM, responsible for directing response efforts and coordinating all other efforts at the scene of a discharge or release; and Area Committees, responsible for developing, under the direction of the OSC, Area Contingency Plans (ACPs) for each area designated by the President. Both the rule and the preamble stress that while the organizational structure created brings together the functions of the federal government, the state government, and the responsible party to achieve efficient, effective, and, where possible, consensual response to discharges, the OSC maintains the ultimate authority and the power to take all actions that he or she deems appropriate under the circumstances.

The Department of Energy's responsibilities are set forth in section 300.175, Federal agencies: Additional responsibilities and assistance. DOE must generally designate OSCs/RPMs that are responsible for taking all response actions with respect to releases where either (1) the release is on, or (2) the sole source of the release is from, any facility or vessel under DOE's jurisdiction, custody, or control. Additionally, under the Federal Radiological Emergency Response Plan (FRERP), DOE must provide advice and assistance to other OSCs/RPMs for emergency actions essential for the control of immediate radiological hazards.

Subpart D, Operational Response Phases for Oil Removal, has been significantly revised to include detailed, step-by-step criteria and procedures for responding to discharges that result in substantial threats to public health and welfare. EPA issues these requirements in an effort to clarify the roles and responsibilities of the OSCs, other federal and state governmental personnel, and the various parties and entities responsible for ensuring that responses to discharges are sufficient to protect public health, welfare, and the environment. Additionally, requirements addressing Spills of National Significance; procedures and standards for preventing, mitigating, and removing Worst Case Discharges; and means of prioritizing national responses are set forth in this subpart. A "Worst Case Discharge" means, in the case of a vessel, a discharge in adverse weather conditions of its

entire cargo and, in the case of an offshore or onshore facility, the largest foreseeable discharge in adverse weather conditions. This rule became effective on October 17, 1994. (9-15-94, 59 FR 47384, RU# 145-003.00)

3. Land Disposal Restrictions Phase II - Universal Treatment Standards and Treatment Standards for Organic Toxicity Characteristic Wastes and Newly Listed Wastes - Final Rule

EPA issues a final rule (NPRM: 9-14-93) as part of the Agency's Phase II Land Disposal Restrictions (LDR) program under the Resource Conservation and Recovery Act. This rule promulgates new Universal Treatment Standards (UTS) to replace almost all numerical LDR treatment standards, restricts land disposal methods for and imposes treatment standards on organic toxicity characteristic wastes, imposes disposal restrictions and treatment standards on newly listed wastes, and restricts the disposal by deep well injection of toxic pesticide wastes and ignitable wastes with high total organic carbon.

Technology based UTS, one set for wastewater and one for non-wastewater, will now apply to organic, metal, and cyanide constituents and will supplant virtually all other prohibited hazardous waste numerical treatment levels. UTS will also replace the current F039 treatment standard for ignitable and corrosive wastes and for F039 multisource leachate, although treatment methods will continue to apply where specified as the only standard of treatment. Approximately two-fifths of the existing treatment standards are being altered by this rule. One-hundred and six wastewater and 219 non-wastewater standards will be more restrictive, while 155 wastewater and 200 non-wastewater standards will be less restrictive. UTS for non-wastewater metals will generally be more stringent, while UTS for wastewater metals will be less stringent. These new universal standards are compiled in a single table of treatment standards appearing in part 268 of the rule. EPA believes that these standards will greatly simplify enforcement of and compliance with the LDRs, while still maintaining adequate protection of human health and the environment. Specifically, the rule replaces the scores of constituent concentration levels in the LDR treatment standards for most hazardous wastes with a uniform set of constituent levels, such that the treatment standard level for a constituent in one waste will be identical to the same treatment standard level for that same constituent in another waste.

Hazardous soils are also addressed by this rule. Hazardous soil is generally subject to the same LDR treatment standards, including the UTS established by this new Phase II rule, that apply to the constituents with which the soil is contaminated. However, EPA recognizes in the preamble that treatment standards for as-generated wastes are often inappropriate or untenable for hazardous contaminated soils. While this matter is to be addressed by next year's proposed Hazardous Waste Identification Rule (HWIR)(RU# 840-310.02), EPA acknowledges that in the meantime this problem will be handled through the use of liberal treatability variances.

Phase II also restricts the land disposal of toxicity characteristic (TC) wastes (i.e., wastes coded D018-D043). The rule establishes treatment standards for each of these

constituents managed in systems other than those regulated under the Clean Water Act (CWA), those complying with CWA equivalent treatment prior to land disposal, and those comprised of Class I deep injection wells regulated under the Safe Drinking Water Act (SDWA). Additionally, as TC wastes often contain treatable levels of other hazardous constituents, Phase II establishes treatment standards for "underlying hazardous constituents," defined as any constituent, except zinc, listed in section 268.48 of the UTS Table. Consequently, TC wastes must be tested at their source for the existence of underlying hazardous constituents, and those underlying hazardous constituents must be treated to meet UTS requirements before land disposal takes place. As was previously the case, dilution is not an available treatment option to meet these standards.

Additionally, this rule restricts the Class I deep well injection of two types of characteristic wastes. EPA now requires that hazardous constituents in high total organic carbon (TOC) ignitable liquids (D001) and halogenated pesticide TC wastes (D012-D017) be fully treated prior to disposal, unless the injection well used for disposal has received a no-migration variance. EPA believes this restriction to be especially necessary due to the special toxicity of these two types of wastes. This portion of the rule will become effective September 19, 1995.

Finally, this rule imposes new regulations on those hazardous wastes listed since the enactment of the Hazardous and Solid Waste Amendments (HSWA) in 1984. This section identifies treatment technologies considered to be the Best Demonstrated Available Technology (BDAT) for various newly listed wastes and sets treatment standards accordingly. Wastes covered by this rule include coke by-product production wastes (K141-K145 and K147-K148) and chlorotoluene wastes (K149-K151). Unless otherwise stated above, the rule becomes effective on December 19, 1994.

IRIS DATABASE UPDATE

A DOE EH-231 Memorandum entitled *Integrated Risk Information System (IRIS) and Availability of Chemical Risk Assessment Guidance* was distributed in June 1991 to DOE Program Offices and Field Organizations. Attachment 1 to the memorandum, an ORNL-ESD report discussing access to and utilization of the *IRIS* online database, included "Table 1.

IRIS Chemicals With Reference Doses and Carcinogen Assessments." The *IRIS* database has been updated extensively since that table was generated. The following table is the bimonthly updated version of Table 1 including all the chemicals listed in Table 1 along with additions/changes to the database planned through October 31, 1994. Additions/changes are those listed in the online *IRIS* database as accessed by our personnel through the National Library of Medicine. Changes in our table are shaded for ease of identification. Future issues of the *Environmental Regulatory Update Table* will include updates to the *IRIS* database during the previous two months. *Use only the most current version of the table.*

(Any questions or comments about how the chemical information for this *IRIS* Table is selected, downloaded and compiled should be addressed to Ms. Kim Slusher, Oak Ridge National Laboratory, (615) 576-1746).
