OF

NATURAL GAS ANNUAL 1992

VOLUME 2

EIA
Energy Information
Administration

DOE/EIA-0131(92)/2

This publication and other Energy Information Administration (EIA) publications may be purchased from the Superintendent of Documents, U.S. Government Printing Office.

All telephone orders should be directed to:

U.S. Government Printing Office
McPherson Square Bookstore
1510 H Street, N.W.
Washington, DC 20005
(202)653-2050
FAX (202)376-5055
9 a.m. to 4:30 p.m., eastern time, M-F

Superintendent of Documents
U.S. Government Printing Office
Washington, DC 20402
(202)783-3238
FAX (202)512-2233
8 a.m. to 4 p.m., eastern time, M-F

All mail orders should be directed to:

U.S. Government Printing Office
P.O. Box 371954
Pittsburgh, PA 15250-7954

Complimentary subscriptions and single issues are available to certain groups of subscribers, such as public and academic libraries, Federal, State, local and foreign governments, EIA survey respondents, and the media. For further information and for answers to questions on energy statistics, please contact EIA's National Energy Information Center. Address, telephone numbers, and hours are as follows:

National Energy Information Center, EI-231
Energy Information Administration
Forrestal Building, Room 1F-048
Washington, DC 20585
(202)586-8800
TTY: For people who are deaf or hard
of hearing: (202)586-1181
9 a.m. to 5 p.m., eastern time, M-F

Cover Art: *This is the "blue flame"--popular symbol of the natural gas industry from its inception.*

Released for Printing: November 22, 1993

Printed with soy ink on recycled paper

Natural Gas Annual 1992 Volume 2

November 1993

**Energy Information Administration
Office of Oil and Gas
U.S. Department of Energy
Washington, D.C. 20585**

DISTRIBUTION OF THIS DOCUMENT IS UNLIMITED

This report was prepared by the Energy Information Administration, the independent statistical and analytical agency within the Department of Energy. The information contained herein should not be construed as advocating or reflecting any policy position of the Department of Energy or any other organization.

MASTER

Contacts

The *Natural Gas Annual* is prepared by the Energy Information Administration, Office of Oil and Gas, Reserves and Natural Gas Division under the direction of Diane W. Lique.

General information for this document may be obtained from Kendrick E. Brown, Jr. (202/ 586-6077), Chief of the Data Operations Branch. Questions and

comments concerning the contents of the *Natural Gas Annual* may be directed to Ann M. Ducca (202/ 586-6137) and Margo Natof (202/ 586-6303). Specific inquiries should be referred to the following subject specialists: Supply -- Donna Dunston (202/ 586-6135), Transmission -- Dolly Tolson (202/ 586-6664), Demand -- Sylvia Norris (202/ 586-6106), and Data diskettes -- Sheila Darnell (202/ 586-6165).

Preface

The *Natural Gas Annual* provides information on the supply and disposition of natural gas to a wide audience including industry, consumers, Federal and State agencies, and educational institutions. This report, *Volume 2*, presents historical data for the Nation from 1930 to 1992, and by State from 1967 to 1992. The *Supplement* of this report presents profiles of selected companies.

The data in this publication are taken from surveys conducted by the Energy Information Administration (EIA), U.S. Department of Energy (DOE), to fulfill its responsibilities for gathering and reporting energy data. Some of the data are collected under the authority of the Federal Energy Regulatory Commission (FERC), an independent commission within the Department of Energy (DOE) which has jurisdiction primarily in the regulation of electric utilities and the interstate natural gas industry. The United States Geological Survey (USGS) and the United States Minerals Management Service (MMS) of the Department of the Interior, and the Interstate Oil and Gas Compact Commission (IOGCC) were sources of supplemental information on production, the number of producing gas and gas condensate wells, and wellhead values.

Two EIA surveys--the mandatory Form EIA-176, "Annual Report of Natural and Supplemental Gas Supply and Disposition," and the voluntary Form EIA-627, "Annual Quantity and Value of Natural Gas Report"--are the primary sources of data in this report. Form EIA-176 was submitted by all respondents out of an identified universe of operators of fields, wells, or natural gas processing plants who distribute gas to

end users or transport gas to or across a State border, operators of synthetic natural gas plants, natural gas distributors, natural gas pipeline companies, and companies that operate underground natural gas storage facilities. Form EIA-627 was submitted by the appropriate agencies of the 33 natural gas producing States.

Other EIA surveys that provided information for this report are Forms EIA-816, "Monthly Natural Gas Liquids Report," and EIA-64A, "Annual Report of the Origin of Natural Gas Liquids Production," for gas processed, plant fuel, and extraction loss data; Form EIA-857, "Monthly Report of Natural Gas Purchases and Deliveries to Consumers," for data on the city gate prices; and Forms EIA-759, "Monthly Power Plant Report" and FERC-423, "Monthly Report of Cost and Quality of Fuels for Electric Plants," for data on the quantity and price of natural gas consumed by electric utilities.

See Appendix A of *Volume 1* of this report for a description of the data collection surveys, the report methodology, and survey response rates.

All volumes of natural gas in this publication are reported at 14.73 pounds per square inch absolute and 60 degrees Fahrenheit, except where noted. A glossary of terms is provided to assist users in understanding the data presented.

The tables of data that appear in this report are available for purchase on personal computer diskettes. See the inside cover for ordering information.

Historical Data

Dry production of natural gas continues to be a large contributor to the Nation's domestic energy supply. In 1973, the drop in oil imports due to the oil embargo by OPEC nations resulted in natural gas production reaching an all-time high of 21.7 trillion cubic feet. During 1992, dry production was 17.8 trillion cubic feet, 1 percent above the 1991 level (Table 1).

The early 1970's brought record levels in the total U.S. consumption with a peak level of 22.1 trillion cubic feet in 1972. Deliveries of natural gas to the residential and electric utility sectors set record levels that same year, and deliveries to industrials peaked in 1973. Between 1982 and 1991 total U.S. consumption of natural gas remained in the range of 16 to 19 trillion cubic feet (Table 3). It rose to 19.5 trillion cubic feet in 1992.

Industrial users are the leading consumers of natural gas. Industrial consumption reached 7.5 trillion cubic feet in 1992, up 4 percent from the 1991 level and the highest level since 1974. Much of the increase can be attributed to natural gas consumption by nonutility generators (NUG's). NUG's generate electricity for

their own use and for sale to electric utilities, which in turn distribute it to consumers.

Natural gas consumption in the residential sector, the second leading consuming sector, responds largely to weather-related home-heating requirements. Although the last 3 years were warmer than normal, residential consumption in 1992 was 3 percent higher than in 1991 and 7 percent higher than in 1990. Severe weather conditions in December 1989 resulted in great demand for natural gas by residential customers. During 1989, residential consumption was 4.8 trillion cubic feet, the highest level since 1979. Residential consumption in 1992 was 2 percent less than the 1989 level.

Commercial consumption, which also responds to variations in the weather, reached a record 2.8 trillion cubic feet in 1992, surpassing the previous record set in 1979. Historically, the electric utility sector has had the third largest amount of consumption. However, in 1992 and in 1988 it was surpassed by the commercial sector. Consumption in the electric utility sector decreased 1 percent from 1991 to 1992.

An early natural gas utility work crew poses for a picture in the pre-hard-hat era.

Revisions to Historical Data

Since the publication of the *Natural Gas Annual 1991*, some revisions have been made to 1991 data. These data were revised due to an ongoing program of quality assurance conducted by the Reserves and Natural Gas Division for the monthly Form EIA-857, "Monthly Report of Natural Gas Purchases and Deliveries to Consumers," and the annual Form EIA-176 data collection programs. This effort resulted in the refile of Form EIA-176 for 1991 for several respondents.

The 1991 Form EIA-627, "Annual Quantity and Value of Natural Gas Report" began collecting data on volumes of natural gas used on leases as a separate item. This item was revised for three States for their 1991 filings. In some instances, gross withdrawals and/or marketed production were revised.

Revisions were also made in the consumption sector. The 1990 and 1991 commercial consumption volumes and prices of natural gas previously included natural gas delivered for use as vehicle fuel. These vehicle fuel volumes and prices, beginning with 1990 data, now appear as a separate sector under U.S. consumption. The commercial sector has been revised where appropriate.

Changes to Data Collection Programs

The Bureau of Mines, U.S. Department of the Interior, conducted surveys of the natural gas industry until 1977, when this function was transferred to the newly formed U.S. Department of Energy (DOE). Since that time the Energy Information Administration (EIA) within the DOE has collected information on natural gas production, transmission, consumption, and prices. Some of the data are collected on behalf of the Federal Energy Regulatory Commission (FERC), an independent commission within the DOE, which has jurisdiction primarily in the regulation of electric utilities and the interstate natural gas industry.

The EIA made many changes to data collection forms and procedures that became effective for the collection of 1980 data. These changes provided more complete natural gas information with minimal changes in respondent burden. In some instances voluntary data collection efforts were changed to mandatory surveys. The Form EIA-176 combined and expanded two voluntary predecessor forms from the Bureau of Mines (BOM-1340-A and BOM-1341-A) into a new mandatory form.

Also in 1980, the Form EIA-627, "Annual Quantity and Value of Natural Gas Report," was introduced to collect data, previously collected on an informal basis, from the appropriate agencies of the producing States. In addition to volumes of gas produced from gas and oil wells, the form requested data on the quantities of nonhydrocarbon gases removed in treating or processing operations, quantities of gas used for repressuring as well as gas vented and flared, and marketed production. In 1991, the Form EIA-627 was revised to also collect quantities of fuel used on the lease.

The United States Geological Survey provided supplemental production data, including production data for the Outer Continental Shelf, until 1982, when this function was transferred to the United States Minerals Management Service.

In 1982, the Form EIA-176 was revised and expanded into the version that was used for data collection through 1986. The Form EIA-176 was reapproved in 1988 for the collection of 1987 through 1989 data. The form was changed to include collection of data on the transportation of gas to commercial consumers for the account of others and to add a short form of the EIA-176 to be filed by small companies with limited activities. In 1991, the Form EIA-176 was reapproved for the collection of 1990 through 1992 data. The major changes to the form were: deliveries of gas to be used as vehicle fuel are reported and the data reported on the form are no longer considered confidential. See Appendix A for further information about the history of data collection.

Table 1. Quantity and Average Price of Natural Gas Production in the United States, 1930-1992
(Volumes in Million Cubic Feet, Prices in Dollars per Thousand Cubic Feet)

NA = Not available

R = Revised Data.

Note: Prior to 1980 dry production and consumption volumes did not include supplemental gas supplies, and storage volumes did not include liquefied natural gas (LNG). Beginning with 1976 data, total supply and disposition do not balance on equivalent data in Table 1 due to the exclusion of intransit receipts and deliveries. Beginning with 1985 data, all volumes are shown on a pressure base of 14.73 psia at 60 degrees Fahrenheit. For prior years, the pressure base is 14.65 psia at 60 degrees Fahrenheit.

NA =Not available

Note: Beginning in 1987, prices for deliveries to consumers are calculated using only onsystem sales data. Due to large amounts of missing data for values of lease and plant fuel in 1987 through 1992, prices are not estimated. In previous years, imputations were made for missing data and a price was calculated using reported and imputed data to derive a total value for gas consumed. Since total consumption value estimates were not made for 1987 through 1992, no lease and plant fuel value estimate was made.

Sources: Electric Utilities: 1967-1977: Federal Power Commission (FPC). 1978-1992: Energy Information Administration (EIA), Form EIA-759, "Monthly Power Plant Report" (formerly Form FPC-4); Form FERC-423, "Cost and Quality of Fuels for Electric Utility Plants" (formerly Form FPC-423); and Form EIA-176, "Annual Report of Natural and Supplemental Gas Supply and Disposition." - ^a Includes Arizona, Florida, Missouri, and Tennessee.
- ^b Included with Alabama.
- ^c Included in gross withdrawals from gas wells. Breakdown not provided by State agency.
- ^d Included in gross withdrawals from oil wells. Breakdown not provided by State agency.
- ^e Quantity of nonhydrocarbon gases removed at gas processing plants was estimated by the Kansas Corporation Commission to be less than 0.5 percent of total gross withdrawals.
- ^f Excludes most quantities of nonhydrocarbon gases removed on leases.
- ^g Nonhydrocarbon gases removed have been excluded from reported gross withdrawals.
- ^h Excludes gas used for fuel on leases, and nonhydrocarbon gases removed on leases.
- ⁱ Includes 36,282 million cubic feet produced from coal seam methane drainage projects.
- ^j Includes 25,427 million cubic feet produced from coal bed methane seams.
- ^k Includes 52 million cubic feet produced from coal bed methane seams.
- ^l Includes gas used for fuel on leases estimated at 18,415 million cubic feet based on filings of the EIA-176 and excludes nonhydrocarbon gases removed on leases.
- ^m Includes 131,043 million cubic feet produced from coal bed methane seams.
- ⁿ Includes gas used for fuel on leases estimated at 72,318 million cubic feet based on filings of the EIA-176 and excludes nonhydrocarbon gases removed on leases, gas used for repressuring, and quantities vented or flared.
- ^E = Estimated data.
- ^{*} Less than 500,000 cubic feet.
- ^{NA} = Not available.
- ^R = Revised Data.

^a Quantity and value data are for the period beginning June 1, 1980, and ending May 31, 1981.

^b Quantity and value data obtained from Energy Information Administration (EIA), U.S. Department of Energy, Form EIA-176, "Annual Report of Natural and Supplemental Gas Supply and Disposition."

^c Quantity and value data obtained from published annual reports from Pacific Gas and Electric Company and Pacific Lighting Corporation.

^d Weighted average price obtained from separate State and Outer Continental Shelf average price calculations.

^e Most of Nevada's marketed production was consumed as lease fuel.

— Not applicable.

^E = Estimated data.

^R = Revised Data.

^a Data for the District of Columbia are included with data for Maryland.

^b Data for New Hampshire and Vermont are included with data for Maine.

* Less than 500,000 cubic feet.

^R = Revised Data.

Note: Number of vehicle fuel consumers generally refers to the number of fueling stations.

^a Data for the District of Columbia are included with data for Maryland.

^b Data for New Hampshire and Vermont are included with data for Maine.

NA = Not available

Note: Beginning in 1987, prices for gas delivered to consumers are calculated using only onsystem sales data. In previous years, prices were calculated using reported values and values imputed for gas delivered for the account of others.

^a Data for the District of Columbia are included with data for Maryland.

^b Data for New Hampshire and Vermont are included with data for Maine

^R = Revised Data.

— = Not applicable.

Note: Beginning in 1987, prices for gas delivered to consumers are calculated using only onsystem sales data. In previous years, prices were calculated using reported values and values imputed for gas delivered for the account of others.

U.S. Average	97	547	652	3,092	30,248

* Data for the District of Columbia are included with data for Maryland.

* Data for New Hampshire and Vermont are included with data for Maine.

Note: Beginning in 1987, industrial costs per consumer are not calculated since values associated with gas delivered for the account of others are not available. Each year since 1982, these values have represented an increasingly large portion of the total industrial value. By 1987, a meaningful average cost per consumer could no longer be calculated without them.

Sources: Bureau of Mines(BOM), Forms BOM-6-1340-A and BOM-6-1341-A, "Supply and Disposition of Natural Gas" Energy Information Administration (EIA), Form EIA-176, "Annual Report of Natural and Supplemental Gas Supply and Disposition."

^R = Revised Data.

Note: Beginning in 1987, industrial costs per consumer are not calculated since values associated with gas delivered for the account of others are not available. Each year since 1982, these values have represented an increasingly large portion of the total industrial value. By 1987, a meaningful average cost per consumer could no longer be calculated without them.

Selected Recurring Natural Gas and Related Reports

Selected Recurring Natural Gas and Related Reports

Recurring Natural Gas Reports

- *Natural Gas Monthly*, DOE/EIA-0130. Published monthly.

Other Reports Covering Natural Gas, Natural Gas Liquids, and Other Energy Sources

- *U.S. Crude Oil, Natural Gas, and Natural Gas Liquids Reserves - 1992 Annual Report*, DOE/EIA-0216(91), September 1993.
- *Monthly Energy Review*, DOE/EIA-0035. Published monthly. Provides national aggregate data for natural gas, natural gas liquids, and other energy sources.
- *Annual Report to Congress 1992*, DOE/EIA-0173(92), March 1993. Published annually.
- *Annual Energy Outlook 1993*, DOE/EIA-0383(93), January 1993. Published annually.
- *Annual Energy Review 1992*, DOE/EIA-0384(92), June 1993. Published annually.
- *Short-Term Energy Outlook*, DOE/EIA-0202. Published quarterly. Provides forecasts for next six quarters for natural gas and other energy sources.
- *Statistics of Interstate Natural Gas Pipeline Companies 1991*, DOE/EIA-0145(91), December 1992.
- *Gas Supplies of Interstate Natural Gas Pipeline Companies 1991*, DOE/EIA-0167(91), December 1992.
- *Annual Outlook for Oil and Gas: 1991*, DOE/EIA-0517(91), June 1991.
- *State Energy Data Report, Consumption Estimates, 1960-1991*, DOE/EIA-0214(91), May 1993.
- *State Energy Price and Expenditure Report 1990*, DOE/EIA-0376(90), September 1992.

One-Time Reports

- *U.S. Production of Natural Gas from Tight Reservoirs* DOE/EIA-TR-0574, October 1993.
- *Natural Gas 1992: Issues and Trends* DOE/EIA-0560(20), March 1993.
- *Natural Gas Productive Capacity for the Lower 48 States 1982 through 1993*, DOE/EIA-0542(93), March 1993.
- *Geologic Distributions of U.S. Oil and Gas*, DOE/EIA-0557, July 1992.
- *Capacity and Service on the Interstate Natural Gas Pipeline System 1990*, DOE/EIA-0556, June 1992.
- *Effects of Interruptible Natural Gas Service: Winter 1989-1990*, SR/OG-91-01, June 1991.
- *The Outlook for Natural Gas Imports: Supporting Analysis for the National Energy Strategy*, SR/NES/90-06, January 1991.
- *The Domestic Oil and Gas Recoverable Resource Base: Supporting Analysis for the National Energy Strategy*, SR/NES/90-05, December 1990.

Reference Reports

- *Directory of Energy Data Collection Forms*, DOE/EIA-0249(92), January 1993.
- *Oil and Gas Field Code Master List, 1992*, EIA-0370(92), December 1992.

Glossary

Balancing Item: Represents differences between the sum of the components of natural gas supply and the sum of the components of natural gas disposition. These differences may be due to quantities lost or to the effects of data reporting problems. Reporting problems include differences due to the net result of conversions of flow data metered at varying temperature and pressure bases and converted to a standard temperature and pressure base; the effect of variations in company accounting and billing practices; differences between billing cycle and calendar period time frames; and imbalances resulting from the merger of data reporting systems that vary in scope, format, definitions, and type of respondents.

Biomass Gas: A medium Btu gas containing methane and carbon dioxide, resulting from the action of microorganisms on organic materials such as a landfill.

British Thermal Unit (Btu): The quantity of heat required to raise the temperature of one pound of water by one degree Fahrenheit at or near 39.2 degrees Fahrenheit.

City Gate: A point or measuring station at which a gas distribution company receives gas from a pipeline company or transmission system.

Coke Oven Gas: The gaseous portion of volatile substances driven off in the coking process after other coal chemicals are removed.

Commercial Consumption: Gas used by nonmanufacturing establishments or agencies primarily engaged in the sale of goods or services. Included are such establishments as hotels, restaurants, wholesale and retail stores and other service enterprises; gas used by establishments engaged in agriculture, forestry, and fisheries; and gas used by local, State, and Federal agencies engaged in nonmanufacturing activities.

Delivered: The physical transfer of natural, synthetic, and/or supplemental gas from facilities operated by the responding company to facilities operated by others or to consumers.

Dry Natural Gas Production: Marketed production less extraction loss.

Electric Utilities: Establishments primarily engaged in the generation, transmission, and/or distribution of electricity for sale or resale.

Electric Utility Consumption: Gas used as fuel in electric utility plants.

Exports: Natural gas deliveries out of the continental United States and Alaska to foreign countries.

Extraction Loss: The reduction in volume of natural gas due to the removal of natural gas liquid constituents such as ethane, propane, and butane at natural gas processing plants.

Flared: Natural gas burned in flares at the base site or at gas-processing plants.

Gas Condensate Well: A gas well which produces from a reservoir containing considerable quantities of liquid hydrocarbons in the butane and heavier range generally described as condensate.

Gas Well: A well completed for the production of natural gas from one or more gas zones or reservoirs.

Gross Withdrawals: Full well-stream volume including all natural gas plant liquids and all nonhydrocarbon gases, but excluding lease condensate.

Heating Value: The average number of British thermal units per cubic foot of natural gas as determined from tests of fuel samples.

Imports: Gas receipts into the United States from a foreign country.

Industrial Consumers: Establishments engaged in a process which creates or changes raw or unfinished materials into another form or product. Generation of electricity, other than by electric utilities is included.

Industrial Consumption: Natural gas used by manufacturing and mining establishments for heat, power, and chemical feedstock.

Intransit Deliveries: Redeliveries to a foreign country of foreign gas received for transportation across U.S. territory and deliveries of U.S. gas to a foreign country for transportation across its territory and redelivery to the United States.

Intransit Receipts: Receipts of foreign gas for transportation across U.S. territory and redelivery to a foreign country and redeliveries to the United States of U.S. gas transported across foreign territory.

Lease and Plant Fuel: Natural gas used in well, field, and lease operations, (such as gas used in drilling operations, heaters, dehydrators, and field compressors), and as fuel in natural gas processing plants.

Liquefied Natural Gas (LNG): Natural gas (primarily methane) which has been liquefied by reducing its temperature to minus 260 degrees Fahrenheit at atmospheric pressure.

Manufactured Gas: A gas obtained by destructive distillation of coal, or by the thermal decomposition of oil, or by the reaction of steam passing through a bed of heated coal or coke. Examples are coal gases, coke oven gases, producer gas, blast furnace gas, blue (water) gas, carbureted water gas. Btu content varies widely.

Marketed Production: Gross withdrawals less gas used for repressuring, quantities vented and flared, and nonhydrocarbon gases removed in treating or processing operations.

Natural Gas: A mixture of hydrocarbon compounds and small quantities of various nonhydrocarbons existing in the gaseous phase or in solution with crude oil in natural underground reservoirs at reservoir conditions.

Natural Gas, Wet After Lease Separation: The volume of natural gas remaining after removal of lease condensate in lease and/or field separation facilities, if any, and after exclusion of nonhydrocarbon gases where they occur in sufficient quantity to render the gas unmarketable. Natural gas liquids may be recovered from volumes of natural gas, wet after lease separation, at natural gas processing plants.

Nonhydrocarbon Gases: Typical nonhydrocarbon gases which may be present in reservoir natural gas, such as carbon dioxide, helium, hydrogen sulfide, and nitrogen.

Offshore Reserves and Production: Unless otherwise indicated, reserves and production which are in either State or Federal domains, located seaward of the coastline.

Oil Well (Casinghead) Gas: Associated and dissolved gas produced along with crude oil from oil completions.

Outer Continental Shelf: Offshore Federal domain.

Pipeline: A continuous pipe conduit, complete with such equipment as valves, compressor stations, communications systems, and meters, for transporting natural and/or supplemental gas from one point to another, usually from a point in or beyond the producing field or processing plant to another pipeline or to points of use. Also refers to a company operating such facilities.

Pipeline Fuel: Gas consumed in the operation of pipelines, primarily in compressors.

Production, Wet After Lease Separation: Gross withdrawals less gas used for repressuring and nonhydrocarbon gases removed in treating or processing operations.

Propane-air: A mixture of propane and air resulting in a gaseous fuel suitable for pipeline distribution.

Proved Reserves: The estimated quantities that analysis of geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known oil and gas reservoirs under existing economic and operating conditions.

Receipts: Gas physically transferred into the responding company's transportation, storage, and/or distribution facilities.

Refinery Gas: Noncondensate gas collected in petroleum refineries.

Repressuring: The injection of gas into oil or gas reservoir formations to effect greater ultimate recovery.

Residential Consumption: Gas used in private dwellings, including apartments, for heating, air conditioning, cooking, water heating, and other household uses.

Storage Additions: Volumes of gas injected or otherwise added to underground natural gas reservoirs or liquefied natural gas storage.

Storage Withdrawals: Volumes of gas withdrawn from underground storage or liquefied natural gas storage.

Supplemental Gaseous Fuels Supplies: Synthetic natural gas, propane-air, coke oven gas, refinery gas, biomass gas, air injected for Btu stabilization, and

manufactured gas commingled and distributed with natural gas.

Synthetic Natural Gas (SNG): A manufactured product chemically similar in most respects to natural gas, resulting from the conversion or reforming of petroleum hydrocarbons or from coal gasification. It may easily be substituted for or interchanged with pipeline quality natural gas.

Therm: One hundred thousand British thermal units.

Underground Storage: The storage of natural gas in underground reservoirs at a different location from which it was produced.

Underground Storage Injections: Gas from extraneous sources put into underground storage reservoirs.

Underground Storage Withdrawals: Gas removed from underground storage reservoirs.

Unit Value, Consumption: Total price per specified unit, including all taxes, at the point of consumption.

Unit Value, Wellhead: The wellhead sales price, including charges for natural gas plant liquids subsequently removed from the gas, gathering and compression charges, and State production, severance, and/or similar charges.

Vented: Gas released into the air on the base site or at processing plants.
