SUMMARY OF RADIOACTIVE SOLID WASTE
RECEIVED IN THE 200 AREAS DURING
CALENDAR YEAR 1997

D. L. Hagel

ABSTRACT

Waste Management Federal Services of Hanford Inc. manages and operates the Hanford Site 200 Area radioactive solid waste storage and disposal facilities for the U.S. Department of Energy, Richland Operations Office under contract DE-AC06-87RL10930. These facilities include storage areas and disposal sites for radioactive solid waste. This document summarizes the amount of radioactive materials that have been buried and stored in the 200 Area radioactive solid waste storage and disposal facilities from startup in 1944 through calendar year 1997. This report does not include backlog waste, solid radioactive wastes in storage or disposed of in other areas, or facilities such as the underground tank farms. Unless packaged within the scope of WHC-EP-0063, Hanford Site Solid Waste Acceptance Criteria, liquid waste data are not included in this document.

This page intentionally left blank.

SUMMARY OF RADIOACTIVE SOLID WASTE
RECEIVED IN THE 200 AREAS DURING
CALENDAR YEAR 1997

1.0 INTRODUCTION

This document summarizes the amount of radioactive materials buried or stored in the 200 Area solid waste facilities during calendar year (CY) 1997, and lists only those radionuclides identified by the generator. In addition to the data for CY 1997, the report presents cumulative and decayed activity data (see Table 1). It should be noted that storage locations listed in this report are current only on the run date identified at the top of the data sheets; these locations are subject to frequent change.

The sum of individually listed radionuclides does not equal the total curie amount. The difference is the amount of other mixed fission products present in the waste that are not noted in this report.

Table 1. Summary of Document Data.

Pages	Data
3-48	Amount of radioactive materials buried and stored within the 200 Area plateau since startup
49-78	Listing of the decayed activities in the various burial ground facilities from startup through calendar year 1997
79-80	Estimate of the radioactive materials in the unsegregated burial sites
81-86	Decay status of unsegregated waste from startup to present
87-142	Amount of radioactive material in the nontransuranic disposal or storage facilities
143-180	Decay status of nontransuranic waste from 1970 to present
181-200	Amount of radioactive material in the transuranic segregated storage sites
201-209	Decay status of transuranic segregated waste from 1970 to present
210-229	Summary of waste received for disposal or storage for calendar year 1997
230-305	Amount of waste received for each burial ground and storage facility for calendar 1997

Since 1991 this document has been prepared using the Solid Waste Information and Tracking System (SWITS) database. The use of a centralized data source has resulted in more accurate and up-to-date data than in previous years. As a result, some of the data are different from previous editions. Examples include the following:

- Some numbers for total decayed curies in the 1992 report (WHC 1992) show an increase in value from the 1991 report (WHC 1991). This is because daughter products produced in the decay process had been excluded from the total, making the values low by this amount.
- Facility names were changed to reflect Hanford Site standard naming conventions.
- In 1993, land use data were removed from the main report and placed in tables in Appendix B for ease of use.
- To improve the quality of the data, the decay schemes were upgraded in 1994 to more accurately reflect contributions by daughter products.

The computer-generated data in the tables are presented using exponential notation. An example of this form is as follows:

$$2.41 \text{ E}+06 = 2.41 \times 10^{+6} = 2,410,000$$

$$2.41 \text{ E}-06 = 2.41 \times 10^{-6} = 0.00000241.$$

The 100 Area waste data are shown in 'offset' or indented columns. Those data, except for ¹³⁷Cs, are not included in the report totals. Because ¹³⁷Cs is an isotope of interest, its values are included in the report totals. The 100 Areas data are presented separately from other data to identify them as "calculated," not reported, quantities. When older waste documentation did not identify specific isotopes, the data were extrapolated from a matrix of nuclides known to be present in 100 Area waste during the period that N Reactor was operating. The following is an example of how the 100 Area waste data are presented.

OTHER RADIOACTIVITY (CURIES)

	5.660E+02	(OTHER TOTAL)
C-14	1.234E+01	(OTHER)
CO-60	5.537E+02	(OTHER)
CS137	2.356E+03	(105N)
