REVIEW BY
S. A. M.

Dear Mr. Hagelston:

FORECAST OF URANIUM METAL REQUIREMENTS FOR DEVELOPMENT
COVERING JULY, AUGUST, AND SEPTEMBER, 1955

The following paragraphs are concerned with the forecast of uranium quantities required for the AED technical development program during the third and fourth quarters of calendar 1955. The third quarter is broken down to show the quantity requirements for each month of the quarter. The fourth quarter is an estimate based on the best information available at the present time.

The quantities are shown in short tons as ingot or dingot

Third Quarter 1955:		
	Ingots	Dingots
July	8	-
August	17	10
September	8	1-1/2
Total	33	11-1/2
Fourth Quarter 1955:		
Oct. through Dec.	60	8

DISTRIBUTION OF THIS DOCUMENT IS UNLIMITED

The quantities shown for the third quarter are somewhat in excess of the estimated requirements given in our previous forecast, DFW-193. The additional quantities are due to an increase in the tubular extrusion program metal requirements. This forecast does not include natural uranium ingot or dingot metal now in process.

DPW-55-294

Specific requests will be made for certain portions of these forecast requirements. We are issuing a purchase order AX-2262 to cover any additional costs that might be incurred in obtaining metal to meet these specific requests. This purchase order will pertain only to metal included in the July-through-September forecast. In subsequent forecasts a new purchase order will be issued. For each specific request involving additional costs, we would like to obtain an estimate preceding fulfillment of the request followed by the actual cost upon completion of the work involved.

A new forecast will be issued prior to October 1, 1955. In the event that any modifications, now unforeseen, should be necessary, you will be so informed at that time.

Yours very truly,

ATOMIC ENERGY DIVISION

R. E. Fisher
