Introduction

This document contains summary information on all commands and keywords in the DOE-2 Building Description Language (BDL). It also contains supplementary tables and maps. The fundamentals of BDL are discussed in Chapter II of the *Reference Manual (2.1A)*; detailed descriptions of the commands and keywords summarized here can be found in the *Reference Manual (2.1A)* and in the *Supplement (2.1E)*.

You are also referred to the *Alphabetical List of Commands and Keywords Found in DOE-2* (Appendix F of the *Supplement (2.1E)*). This list includes all commands and keywords in the current version of DOE-2 and where they are found in the documentation. The list is updated yearly and printed in the summer issue of the *DOE-2 User News*. Copies of the list may be obtained by writing to the Simulation Research Group, Bldg. 90—Room 3147, Lawrence Berkeley Laboratory, Berkeley, CA 94720 (or FAX us at 510-486-4089).

■ ALT–HOLIDAYS(1)(A–H) [allows user to input non-US holidays]
month day month day month day month day . . . ..

Only one command is allowed per loads input. It does not allow a u-name. It has no keywords; instead, it takes month day like the RUN–PERIOD command. Up to 40 month-day pairs may be input. Use of ALT–HOLIDAYS replaces all the standard holidays hardwired into DOE-2. Month is JAN, FEB, MAR, APR, MAY, JUN, JUL, AUG, SEP, OCT, NOV, or DEC (a code-word) and day is an integer (1-31). The holidays may be entered in any order.

= **DAY-SCHEDULE**(D-SCH,300)

(see example below)

Note: All 24 hours must be accounted for

In its simplest form, the input for DAY-SCHEDULE takes the form:

U-NAME = **DAY-SCHEDULE** (hours covered) (values for each hour) ..

For example, for weekdays:

LTG-1 = DAY-SCHEDULE (1,24) (0,0,0,0,0,0,0,0,.3,.6,.8,1,1,1,1,1,1,1,0,0,0,0,0,0) ..

Optionally, this can be shortened by writing:

LTG-1 = DAY-SCHEDULE (1,8)(0) (9,11) (.3,.6,.8) (12,18) (1) (19,24) (0) ..

For week-ends and holidays:

LTG-2 = DAY-SCHEDULE (1,24)(0) ..

= **WEEK–SCHEDULE**(W–SCH,200)
(see example below)

Note: Code-word for days of week and holidays is first three letters of name.
ALL=Monday thru Sunday + Holidays; WEH=weekends + Holidays; and WD=weekdays
Note: Must preserve order of Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday, Holiday
Note: All days of week + Holiday must be accounted for

In its simplest form, the input for WEEK–SCHEDULE takes the form:

U–NAME = WEEK–SCHEDULE (†) (**U–NAME** of **DAY–SCHEDULE** referenced) ..

† days of week covered

Using the previously defined DAY–SCHEDULEs LTG–1 and LTG–2, the example can be carried forward with:

```
NORMAL = WEEK–SCHEDULE      (MON,FRI) LTG–1
                            (SAT,HOL) LTG–2 ..

VACATION = WEEK–SCHEDULE    (ALL) LTG–2 ..
```

Optionally, NORMAL can be shortened to:

NORMAL = WEEK–SCHEDULE (WD) LTG–1 (WEH) LTG–2 ..

where (WD) stands for week-days and (WEH) for week-ends and holidays.
If Saturday is considered part of the normal week, you must write (MON,SAT) LTG–1 (SUN,HOL) LTG–2.

= **SCHEDULE**(SCH,100) Note: **LIKE** keyword not allowed
(see example below)

Note: Every day of run period must be accounted for
Note: Code-word for month is first three letters of month name
Note: A maximum of 52 THRU's per command

In its simplest form, the input for SCHEDULE takes the form:

U–NAME =SCHEDULE(THRU †)(**U–NAME** of **WEEK–SCHEDULE** referenced) ..

† calendar period covered

To finalize the example:

```
LIGHTS = SCHEDULE   THRU JUN 10 NORMAL
                    THRU SEP 5 VACATION
                    THRU DEC 31 NORMAL ..
```

Alternatively, explicit use of DAY–SCHEDULE and WEEK–SCHEDULE can be bypassed by writing:

```
LIGHTS = SCHEDULE   THRU JUN 10 (WD)(1,8)(0)(9,11)(.3,.6,.8)(12,18)(1)(19,24)(0)(WEH)(1,24)(0)
                    THRU SEP 5 (ALL)(1,24)(0)
                    THRU DEC 31 (WD) (1,8)(0)(9,11)(.3,.6,.8)(12,18)(1)(19,24)(0)(WEH)(1,24)(0) ..
```

Applicability of Commands and Keywords to System Types

The following applicability tables for each HVAC system type have been updated for DOE-2.1E. Because there have been additions to the tables and many changes to the "Default Value or Consequence" column, we caution you **NOT** to use the same material found in the *Reference Manual (2.1A)*.

The tables on the following pages indicate those commands and keywords in SYSTEMS that apply to the various system types. Keywords that are not used by a particular system type are not shown. The last column in each table shows one of two things:

1) for the SYSTEM–TYPE being described, either the default value that will be provided by the program if you choose not to enter the keyword, or

2) the consequence for the simulation of not entering the keyword.

Note: The program and the weather files use a 365 day year even for leap years. Therefore, in leap years, the calendar and the program get one day out of step with regard to days of the week after February 29. When using the perpetual calendar for leap years, shift back one day of the week for dates after February 29.
