K WEST BASIN CANISTER SURVEY

SUMMARY

A survey was conducted of the K West Basin to determine the distribution of canister types that contain the irradiated N Reactor fuel. An underwater camera was used to conduct the survey during June 1998, and the results were recorded on videotape. A full row-by-row survey of the entire basin was performed, with the distinction between aluminum and stainless steel Mark I canisters made by the presence or absence of steel rings on the canister trunions (aluminum canisters have the steel rings).

The results of the survey are presented in the following tables and figures. Grid maps of the three bays show the canister lid ID number and the canister type in each location that contained fuel. The following abbreviations are used in the grid maps for canister type designation: IA = Mark I aluminum, IS = Mark I stainless steel, and II = Mark II stainless steel.

An overall summary of the canister distribution survey is presented in Table 1. The total number of canisters found to contain fuel was 3842, with 20% being Mark I AI, 25% being Mark I SS, and 55% being Mark II SS. The aluminum canisters were predominantly located in the East and West bays of the basin.

Table 1. Survey Results Summary

Canister	East Bay	Center Bay	West Bay	Total
Mark I AI	315 (8%)	22 (1%)	443 (11%)	780 (20%)
Mark I SS	181 (5%)	777 (20%)	0 (0%)	958 (25%)
Mark II SS	1032 (27%)	919 (24%)	153 (4%)	2104 (55%)
Total	1528 (40%)	1718 (45%)	596 (15%)	3842 (100%)
