

Federal Register

1-16-09

Vol. 74 No. 11

Friday

Jan. 16, 2009

Pages 2757-3394

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.federalregister.gov.

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the Federal Register shall be judicially noticed.

The Federal Register is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the Federal Register www.gpoaccess.gov/nara, available through GPO Access, is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the Federal Register is published and includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

For more information about GPO Access, contact the GPO Access User Support Team, call toll free 1-888-293-6498; DC area 202-512-1530; fax at 202-512-1262; or via e-mail at gpoaccess@gpo.gov. The Support Team is available between 7:00 a.m. and 9:00 p.m. Eastern Time, Monday–Friday, except official holidays.

The annual subscription price for the Federal Register paper edition is \$749 plus postage, or \$808, plus postage, for a combined Federal Register, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the Federal Register including the Federal Register Index and LSA is \$165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily Federal Register, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Printing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the Federal Register.

How To Cite This Publication: Use the volume number and the page number. Example: 74 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Printing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: Sponsored by the Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

WHEN: Tuesday, January 27, 2009
9:00 a.m.–12:30 p.m.

WHERE: Office of the Federal Register
Conference Room, Suite 700
800 North Capitol Street, NW.
Washington, DC 20002

RESERVATIONS: (202) 741-6008

Federal Register

1-16-09

Vol. 74 No. 11

Friday

Jan. 16, 2009

Pages 2757-3394

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.federalregister.gov.

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the Federal Register shall be judicially noticed.

The Federal Register is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the Federal Register www.gpoaccess.gov/nara, available through GPO Access, is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the Federal Register is published and includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

For more information about GPO Access, contact the GPO Access User Support Team, call toll free 1-888-293-6498; DC area 202-512-1530; fax at 202-512-1262; or via e-mail at gpoaccess@gpo.gov. The Support Team is available between 7:00 a.m. and 9:00 p.m. Eastern Time, Monday–Friday, except official holidays.

The annual subscription price for the Federal Register paper edition is \$749 plus postage, or \$808, plus postage, for a combined Federal Register, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the Federal Register including the Federal Register Index and LSA is \$165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily Federal Register, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Printing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the Federal Register.

How To Cite This Publication: Use the volume number and the page number. Example: 74 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Printing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: Sponsored by the Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

WHEN: Tuesday, January 27, 2009
9:00 a.m.–12:30 p.m.

WHERE: Office of the Federal Register
Conference Room, Suite 700
800 North Capitol Street, NW.
Washington, DC 20002

RESERVATIONS: (202) 741-6008

Rules and Regulations

Federal Register

Vol. 74, No. 11

Friday, January 16, 2009

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF DEFENSE

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 9901

RIN 3206-AL75

National Security Personnel System

AGENCY: Department of Defense; Office of Personnel Management.

ACTION: Final rule.

SUMMARY: The Department of Defense (DoD) and the Office of Personnel Management (OPM) are issuing the final regulations adding subpart E, Staffing and Employment, to the National Security Personnel System (NSPS) regulations published in the **Federal Register** on September 26, 2008. NSPS is a human resources management system for DoD, authorized by the National Defense Authorization Act for Fiscal Year 2004, amended by the National Defense Authorization Act for Fiscal Year 2008 and the Duncan Hunter National Defense Authorization Act for Fiscal Year 2009. These final regulations govern staffing and employment under NSPS.

DATES: This rule is effective March 17, 2009.

FOR FURTHER INFORMATION CONTACT: For DoD, Bradley B. Bunn, (703) 696-5604; for OPM, Charles D. Grimes III, (202) 606-8079.

SUPPLEMENTARY INFORMATION: On December 3, 2008, the Department of Defense (DoD or "the Department") and the Office of Personnel Management (OPM) published in the **Federal Register** at 73 FR 73606 a proposal to add staffing and employment provisions to the National Security Personnel System (NSPS or "the System"), a human resources (HR) management system for DoD under 5 U.S.C. 9902, as enacted by section 1101 of the National

Defense Authorization Act for Fiscal Year 2004 (Pub. L. 108-136, November 24, 2003), and amended by section 1106 of the National Defense Authorization Act for Fiscal Year 2008 (Pub. L. 110-181, January 28, 2008), and by section 1106 of the Duncan Hunter National Defense Authorization Act for Fiscal Year 2009 (Pub. L. 110-417, October 14, 2008).

I. Staffing and Employment—5 CFR 9901 Subpart E

This subpart provides DoD with authority, pursuant to 5 U.S.C. 9902(i), to waive or modify certain provisions of title 5 U.S.C. and CFR pertaining to methods for recruitment for, and appointments to, NSPS positions and the methods for the assignment, reassignment, detail, transfer, and promotion of employees into and within NSPS. This subpart revises the subpart E found in the NSPS regulations published November 1, 2005 at 70 FR 66116. The revisions reflect changes in NSPS authorized by amendments to 5 U.S.C. 9902 by the National Defense Authorization Act for Fiscal Year 2008 (Pub. L. 110-181) as further amended by the Duncan Hunter National Defense Authorization Act for Fiscal Year 2009 (Pub. L. 110-417); provide specificity to the regulations based on existing implementation; reflect changes in subparts A through D of the regulations published on September 26, 2008; and make technical changes and improvements.

In order to meet its critical mission requirements worldwide and respond to a dynamic national security environment, the Department needs flexibility to attract, recruit, assign and retain a high quality workforce. The current Federal hiring system does not have the flexibility needed by DOD to meet all of its mission requirements. Subpart E of the final regulations preserves merit principles and veterans' preference requirements, while streamlining hiring and placement processes and providing DoD with flexible hiring tools to respond effectively to continuing mission changes and priorities and evolving labor markets. The public comment period ended on January 2, 2009. The following is a discussion of the comments received.

II. Response to Public Comments

A. Summary

The proposed rule was published in the **Federal Register** on December 3, 2008. In response to the proposed rule, the Department received 42 submissions during the 30-day public comment period. General comments fell into one of the following categories: collective bargaining and labor relations; publication date; fairness and equity; and whether the subpart implements too many or too few changes to staffing and employment procedures. Comments specific to staffing and employment fell into one of the following categories: Coverage of regulations; appointing authorities; probationary periods; competitive examining procedures; and internal placement. The 42 submissions included a total of 94 comments; 60 of those comments pertain to this subpart and are addressed below. We do not address the remaining comments because they concern other NSPS subparts published in 73 FR 56344, or do not relate to staffing and employment.

B. General Comments

1. Collective Bargaining and Labor Relations

Labor organizations contended that various matters should be subject to collective bargaining under 5 U.S.C. chapter 71. As noted in the publication of the final regulations for subparts A through D of this part, published on September 26, 2008, collective bargaining obligations are governed by Federal statute. DoD is committed to fulfilling its obligation to bargain in good faith consistent with governmentwide labor relations law under 5 U.S.C. chapter 71 and the requirements of 5 U.S.C. 9902, as well as section 1106(b) of Public Law 110-181 and section 1106 of Public Law 110-417. However, the Department seeks uniformity and consistency in its NSPS employment practices through issuance of regulations.

2. Publication Date

One commenter questioned the timing of our proposed regulations, stating that we should allow the new Administration to review NSPS before implementing this rule. A labor organization expressed concern that these regulations were published on

December 3rd, requiring anyone interested in commenting to use time during the holidays to do so. The proposed regulations, which add subpart E to subparts A through D of the final enabling regulations published on September 26, 2008, are authorized by both the National Defense Authorization Act (NDAA) for Fiscal Year 2008 and the Duncan Hunter National Defense Authorization Act for Fiscal Year 2009, which clarified the staffing and employment authorities originally granted under 5 U.S.C. 9902 by Public Law 108-136. When Congress enacted NDAA 2008 in January 2008, OPM and DoD began developing these regulations, which was eleven months prior to their December 3, 2008 publication. However, Congress did not enact NDAA 2009 until October 14, 2008. The Department and OPM issued the proposed subpart E regulations less than two months after the NDAA 2009 became law. They were issued at that time to provide a complete regulatory structure for NSPS that reflects the most recent changes in law.

3. Fairness and Equity

Many commenters expressed concerns about the fairness and equity of the staffing and employment features of NSPS. These concerns were characterized by terms such as “favoritism” and “cronyism” implying that the greater flexibility in decision-making under NSPS would result in hiring or placement decisions on a basis other than merit.

A number of the fairness comments centered around the NSPS competitive examining flexibilities. For example, some commenters expressed concern regarding management’s ability to limit the area of consideration, when sufficient qualified applicants are available, to applicants in the local commuting area and other targeted recruitment sources, stating that these restrictions limit advancement opportunities for qualified candidates and prevent applicants who are willing to relocate from being considered for NSPS positions. They feared that management would use this flexibility to narrow the field of applicants to their favorites in order to select their “employee of choice.” Two commenters pointed out that it will now be easier than ever for military leaders to hire and promote retiring military members who would otherwise face unemployment at the expense of faithful, loyal, honest, and deserving civilians. Another commenter stated that limiting the pool of qualified applicants does not make sense if the department intends to hire the most qualified candidate for the

position. In response, we note that NSPS competitive examining procedures require acceptance of applications from all U.S. citizens, including current Federal employees. However, if there is a sufficient number of qualified applicants, initial consideration may be limited to candidates in the local commuting area and other targeted recruitment sources. In instances where the ease of filing an application or supply and demand forces generate a sufficient number of candidates, the ability to narrow the pool of applicants to be considered is necessary to streamline hiring processes. Streamlining hiring practices enables management to quickly fill positions and help ensure that the highest quality candidates are not lost to other employers due to length of time between the close of a job announcement and the job offer. This flexibility neither favors nor disfavors military members since all qualified applicants, whether civilian or military, in the local commuting area must be considered. Likewise, both civilian and military outside the local commuting area would equally be excluded from consideration. While organizations may limit the initial area of consideration, there is no requirement to do so. Apparent in many of the comments is the belief that the ability to narrow the area of consideration to the local commuting area would enable management to target “favorite” employees or friends or “cronies.” However, the regulations provide a safeguard against misuse of the smaller area of initial consideration. Specifically, the regulations require that, if sufficient qualified applications are not received from the local commuting area and other targeted recruitment sources, the area of consideration must be expanded to include all applicants for the vacancy. DoD will continue to comply with merit system principles and veterans’ preference when filling NSPS positions through NSPS competitive examining procedures.

A number of fairness-related comments revolved around the alternative promotion procedures, an NSPS internal placement flexibility. Commenters stated that these procedures will narrow promotion and career advancement opportunities for NSPS employees and that their use will result in a supervisor’s favorite employee or crony being selected, ensuring that the Federal Government will turn into a “who you know club” that does not consider diversity or qualifications in the selection process.

One commenter observed that absent a formal vacancy announcement, management would not be able to ensure that all employees are made aware of the opportunity for consideration. In other words, nothing would prevent management from singling out one or two favorite employees for consideration. With respect to consideration of qualifications in the selection process, under the alternative promotion procedures, the regulations require that employees selected meet qualification standards and either fall into the category of highly qualified or have received the highest level of performance rating for NSPS. While the regulations do not require formal advertisement (*e.g.*, posting a job on USAJOBS), § 9901.516(c)(8) does require that employees be notified prior to use of alternative promotion procedures. Some methods that may be used include newsletters, bulletin boards, e-mail, and other forms of employee notification. Also, using alternative promotion procedures may not require employees to apply for positions. For example, the exceptional performance promotion procedure requires that all employees in the area of consideration be considered when their Level 5 rating of record is based on performance in the same occupational series and similar function as the vacancy being filled. Assessment boards may entail soliciting job experience information from employees in an organization or may simply be held in conjunction with or after the conclusion of the performance appraisal period.

Another commenter expressed the belief that the alternative promotion procedures are not competitive and/or do not comply with merit system principles. They are consistent with merit system principles and with the merit promotion requirements of 5 CFR part 335. In fact, procedures similar to the alternative promotion procedures are currently used by some DoD Components to fill non-NSPS positions. We have included each of these procedures in the regulations because not all of these flexibilities are currently authorized for use within each DoD Component. Including them under the NSPS Merit Promotion Program provides NSPS managers uniform and consistent access to these flexibilities. In addition to notifying all employees that these forms of competition may be used, each of these procedures requires analysis of the job to be filled to identify the knowledge, skills, abilities, and/or competencies necessary to successfully perform the duties of the position;

clearance of applicable programs for displaced or surplus employees, such as the DoD Priority Placement Program and the Reemployment Priority List; determination that selectees meet applicable OPM or DoD qualification standards for the positions being filled; and, selection of candidates determined to be best qualified for the positions. The identification, qualification, evaluation, and selection of candidates must be made without regard to political, religious, or labor organization affiliation or nonaffiliation, marital status, race, color, sex, national origin, nonqualifying physical handicap, or age, and must be based solely on job-related criteria. These alternative promotion procedures streamline the standard vacancy announcement process. Streamlining the process permits management to fill positions quickly by identifying and selecting highly qualified candidates in a timely manner.

Some commenters raised concerns about the exceptional performance promotion procedure which permits management to promote an employee whose most recent rating of record is Level 5 to a vacant position in the same occupational series (or related interdisciplinary/interoccupational series) and similar function as the position the employee held at the time he or she received the Level 5 rating. Commenters who objected to this procedure indicated they consider the NSPS pay pool process to be faulty. Commenters stated that the NSPS performance system is "far too subjective" and employees who perform at the Level 4 or Level 5 will never be considered for the exceptional performance promotion because ratings are forced down in a quota-like manner to Level 3. Another commenter suggested that using a severely flawed performance system's appraisals as a tool for selection undermines EEO and merit system principles.

As described in 5 CFR part 9901, subparts C and D, the pay pool process employs a number of checks and balances to ensure that employees who perform similar categories of work are measured consistently and that multiple levels of review occur. In addition, should a written justification not support a recommended rating of record, the Pay Pool Panel must afford the rating official an opportunity to provide further justification for the recommendation prior to adjusting the rating. This mechanism reinforces equity across and within pay pools and is a necessary safeguard when rewarding performance from a shared pay pool. Because supervisors may

interpret performance criteria differently, pay pools reconcile ratings to ensure the criteria are applied consistently throughout a pay pool in order to provide equity and fairness of ratings. Further, NSPS regulations strictly prohibit a forced distribution of ratings. NSPS performance criteria also make clearer distinctions in levels of performance, assess employee performance more rigorously, and set a higher bar for higher-level performance, ensuring that only the most highly performing employees achieve a Level 5 rating of record. Consequently, the NSPS performance management criteria often result in a different rating distribution than found under other performance management systems. It is precisely because of the rigor of the NSPS performance rating process and criteria that there is equity in NSPS performance ratings and distinctions in levels of performance. This rigor and these thoughtfully crafted performance criteria result in a small, distinguished group of high performers rated at the Level 5 NSPS rating level. As a result, a selectee from this pool of candidates has a record of proven performance, as demonstrated by award of the highest rating possible. Such an employee has demonstrated, through day-to-day performance that he or she possesses the applicable knowledge, skills, abilities and/or competencies to perform the duties of the vacant position in an exemplary manner.

In addition to the reconciliation process that takes place within the pay pool, NSPS has implemented numerous rules to guard against arbitrary performance rating decisions, enabling employees to challenge or seek review of key decisions and setting up accountability mechanisms to ensure that employees are treated fairly.

Use of the exceptional performance promotion procedure is not required; however, should management choose to utilize this procedure, the mechanisms and safeguards built into the NSPS performance appraisal and evaluation process ensure that only the highest performing employees receive a Level 5 rating.

Another commenter suggested that promoting employees based on only "one good rating regardless of experience" is not responsible and that promotions should award those with a "proven track record of exceptional performance." While only those with an exceptional performance rating can be considered through this procedure, selections are made based on factors in addition to the rating, such as experience, education, training, knowledge, skills, abilities,

competencies and other appropriate information consistent with merit system principles.

4. Sufficient/Insufficient Change

Some commenters objected to waiving and/or modifying the various provisions of title 5, stating that current hiring flexibilities were sufficient. They also stated that the Department has not demonstrated why changes are needed in the staffing and employment areas or how these proposals would result in a less cumbersome or fairer hiring process. Another commenter suggested that our proposals do not provide enough hiring flexibilities. Yet another commenter applauded the streamlining of the direct hire authority approval process. The enabling legislation (5 U.S.C. 9902(i)) permits the Department to waive or modify specified sections of title 5 U.S.C. and CFR, essential to the development and implementation of a flexible system for hiring and assigning employees. NSPS staffing and employment flexibilities were designed and developed through a formal and rigorous process in coordination with OPM. The flexibilities strike a balance between enhancing the Department's ability to accomplish its many missions and preserving compliance with essential important civil service protections such as merit system principles and veterans' preference requirements. When a position is filled through the competitive examining process, we have provided the ability to limit the area of consideration to candidates in the local commuting area and other targeted recruitment sources in cases where sufficient qualified candidates are available. The regulations also provide the capability to convert non-permanent employees to permanent appointments in the competitive service provided certain requirements are met; provide flexibility for longer periods of temporary, term, and time-limited appointments; and provide alternative promotion procedures for internal placement actions. We are cognizant of the requirement to fully inform and train supervisors, managers, and human resources personnel regarding the various NSPS flexibilities so that they will be understood and used to the fullest advantage. We believe the identified flexibilities are sufficient at this time. However, if after a period of operation and evaluation of the benefits provided by the new flexibilities, we determine that other enhancements would be beneficial, we will explore additional regulatory authorities for hiring and assigning employees to meet critical national security missions.

C. Specific Comments

1. Coverage

A commenter noted that the proposed rule indicates that the regulations will apply to all DoD employees determined by the Secretary to be covered under § 9901.102(b). However, the commenter points out that the section speaks specifically to coverage determinations for subparts B through D of the NSPS regulations issued in 73 FR 56344 and recommends that § 9901.503 be amended to specifically address subpart E. We agree with this recommendation and have modified the regulations to reflect this change.

2. Appointing Authorities

Competitive and excepted appointing authorities. Section 9901.511 authorizes the Secretary to continue using excepted and competitive appointing authorities under 5 U.S.C. chapter 33, Governmentwide regulations, Executive orders, and other statutes. Individuals hired under these authorities will be designated as career, career conditional, term, temporary, or time-limited employees, as appropriate.

A commenter asked if the provision for Schedule A hiring of the disabled is still in place. Yes; under NSPS, activities may continue to use the Schedule A hiring authority to appoint persons with disabilities to NSPS positions.

Several commenters requested clarification on the inclusion of career conditional appointments in NSPS. Previously, Public Law 108–136 permitted NSPS to establish its own workforce shaping rules. These rules did not make distinctions in tenure between permanent employees for the purpose of employee retention. Consequently, there was no need for a career conditional tenure at that time. However, Public Law 110–181 requires NSPS reductions in force (RIF) to comply with the Governmentwide regulations appearing at 5 CFR part 351. Under those regulations, the assignment of a specific tenure group is directly related to an employee's retention standing and it is necessary to have appointment types (career conditional and career) that align with the Governmentwide tenure group definitions to apply RIF procedures.

A commenter disagreed with the definition of *career employee*. Specifically, the commenter stated that the rule appears to take an employee who is currently “a career employee” after completing a 1-year probationary period and increase the requirement to 3 years. Under the current NSPS rules, an employee who receives a permanent

appointment is immediately considered a career employee and does not serve any “conditional” period. The initial probationary period requirement is a separate requirement. Under this final rule, a “career employee” is defined as “an individual appointed without time limit to a competitive service position in NSPS who has served 3 years of substantially continuous service as described in 5 CFR 315.201(b).” This definition requires that an employee's initial permanent appointment to an NSPS position in the competitive service be a conditional appointment and upon completion of the 3-year conditional period he or she be designated as career, unless the employee has previously completed a 3-year conditional service period in accordance with 5 CFR 315.201(b). Any NSPS employee on a career appointment in the competitive service who has not completed 3 years of substantially continuous service at the time these regulations become effective must be converted to a conditional appointment until the 3-year requirement is met. Time already served under an NSPS career appointment counts toward completion of the conditional period. No change was made to the regulations based on this comment.

Another commenter asked if NSPS employees who are career employees will be grandfathered in and remain career employees. It depends. On the effective date of the final regulations, NSPS employees on career appointments in the competitive service who do not meet the § 9901.504 or 5 CFR part 315 definition of career employee will be converted to a career conditional appointment. Time already served as a career employee under NSPS, as well as creditable time under 5 CFR 315.201, will count toward completion of the 3-year career conditional period. NSPS employees who meet the above-mentioned definitions will remain career employees.

Several commenters stated that it is unclear whether or not both career and career conditional appointments in NSPS have the same stature as those types of appointments in non-NSPS positions throughout the Federal Government, i.e., whether a former NSPS appointee would have reinstatement eligibility under 5 CFR 315.401. Yes, both career and career conditional employees within NSPS have the same “stature” as non-NSPS career or career conditional employees and a former NSPS appointee would have reinstatement eligibility under 5 CFR 315.401. Another commenter

questioned whether NSPS service is creditable toward career tenure in a non-NSPS position under 5 CFR 315.201(b)(1)(i) through (ix). Yes, service under career and career conditional appointments in NSPS competitive service positions is creditable in the same manner and to the same extent as service under the same type of appointments in non-NSPS positions. To minimize confusion regarding the creditability of NSPS service under career and career conditional appointments, additional guidance will be provided in implementing issuances.

A labor organization representative suggested that OPM should review the regulations in light of a recent court decision concerning veterans' preference. We have not revised the regulations in response to this comment. After further review of the regulatory text, we conclude that these regulations fully comply with applicable veterans' preference requirements.

Severe shortage/critical need hiring authority (direct hire authority). This section authorizes the Secretary to determine when a severe shortage or critical hiring need exists. A labor organization representative expressed concern that the Secretary, rather than OPM, has the authority to authorize direct hire authority for positions determined to have a severe shortage of qualified applicants or where there is a critical need. The representative stated that OPM should not abandon its role as a monitor of agency actions to ensure that merit principles are not violated and that no prohibited personnel practices take place, asserting that letting DoD develop its own appointing authorities runs the risk of creating opportunities for inequities, discrimination, and abuse and threatens the credibility of the system for employees. By design, and in keeping with the statutory objective of establishing a flexible system, these regulations give DoD considerable authority within the regulatory framework to design staffing and employment features. When the Secretary determines a severe shortage or critical hiring need exists, it is done using the same criteria that OPM uses under 5 CFR part 337. Also, OPM continues to have a role in overseeing the civil service system and in advising the President on civil service matters, including matters covered by these regulations. We believe the coordination and approval roles as defined in § 9901.105 allow OPM sufficient opportunity to fulfill its responsibilities. Requiring OPM approval for every action would undermine the intent to

create a flexible system, especially when the action is in response to a time-sensitive national security matter or critical need, which DoD is in the best position to assess. As a result, we have not revised the language in this section in response to these comments.

Non-permanent appointing authorities. This section authorizes the Secretary to make temporary and term appointments to NSPS positions in the competitive service and temporary and time-limited appointments to NSPS positions in the excepted service. It prescribes extended timeframes for such appointments and provides a mechanism for the noncompetitive conversion of certain nonpermanent employees to career conditional or career appointments in the competitive service, provided specific requirements are met. A labor organization representative objected to the extended timeframe for term appointments in the competitive service and asserted that some of the situations the regulations state as reasons for term appointments more appropriately justify a permanent appointment. The commenter stated that there is no good justification for extending the timeframe of term appointments for a longer period than Governmentwide regulations allow and that the primary justification for doing so seems to be to bring these employees on board through term appointment procedures and then convert them to competitive non-term appointments. We have not revised the regulations in response to these comments. Extended timeframes for term appointments provide a valuable tool to the Department for accomplishing its many mission requirements of a time-limited nature. Extended time limits for such appointments are essential in an organization driven by knowledge-based and other skills requirements that are difficult to attract and retain on a temporary basis. We also recognize that situations and/or work that are initially time-limited in nature may, in fact, evolve into permanent work. The ability to convert term employees to permanent appointments minimizes disruption while permitting the Department to retain a valued employee who has, in fact, gone through a competitive process and met additional requirements prior to conversion to a permanent position. For example, the first condition for conversion to a permanent appointment is that the employee be selected for the non-permanent appointment under NSPS competitive examining procedures from a vacancy announcement that includes information to all applicants about the

possibility of noncompetitive conversion. Further, the employee must have completed at least 2 years of continuous service at Level 3 (Valued Performer) or better and be converted to a career conditional or career position in the same pay schedule and band for which initially hired.

3. Probationary Periods

Section 9901.512 describes requirements for serving and successfully completing probationary periods upon appointment to an NSPS position in the competitive or excepted service or upon initial appointment to a supervisory position.

A labor organization representative expressed concern that the regulations could be read as requiring no less than 1 year. Section 9901.512(a)(3) clearly identifies the length of the probationary periods and does not intend the time period of 1 year to be interpreted as a minimum time period as feared by the commenter. Another commenter expressed concern that removing the ability of a supervisor to appeal being removed while on probation "assures that all supervisors will learn to be yes-men." This assertion has no basis. The NDAA for 2008 brought NSPS under certain Governmentwide rules, including the right of employees to appeal an adverse action such as removal from Federal employment. Additionally, § 9901.512(b)(2)(i) retains the same protection afforded under General Schedule that an employee who does not satisfactorily complete a probationary period is entitled to be assigned to a position at a grade or pay band and pay no lower than that held before assignment to the supervisory position. This protection coupled with the ability to remove the employee from the supervisory position balances the organization's need to ensure the capability of supervisory personnel while providing safeguards to the employee who fails his or her supervisory position. No change has been made to the regulations based on these comments.

A commenter questioned the provisions at §§ 9901.512(a)(4) and 9901.512(b)(1)(iii), which require that time spent in a non-pay status in excess of one workday during the probationary period (both initial and supervisory) extend the probationary period by an equal amount of time. These provisions are intended to allow management the full period to observe an employee's on-the-job performance and enable a manager to remove the employee without undue restriction. However, we have reviewed this provision in light of the requirements of 5 U.S.C. chapter 75

(which provides appeal rights to competitive service employees and preference eligible excepted service employees after 1 year and excepted service employees other than preference eligibles after 2 years) and have determined that this provision does not result in the intended goal. Therefore, we have revised the regulations to reflect an allowable absence in a non-pay status consistent with the provisions for non-NSPS employees covered under 5 CFR part 315, subpart H.

A labor organization representative suggested that the regulations clarify under § 9901.512(a)(4)(ii) that if an employee is successful on appeal in overturning a separation for performance or conduct, all time served in the initial probationary period must be restored and credited toward completion of the probationary period. Insofar as a separation is overturned, it ceases to exist. Therefore, the regulations provide sufficient clarity on this point. No change was made to the regulations based on this comment.

A commenter requested clarification regarding the length of the probationary period for preference eligibles with appeal rights. The commenter also suggested adding information to the regulations to address the limited appeal rights of Veterans' Recruitment Appointment appointees terminated during the initial probationary period. We agree and have modified the regulations accordingly.

A commenter questioned whether completion of a supervisory probationary period in a different Federal position would be creditable for an NSPS position. The regulations have been modified to state that the prior completion of the supervisory probationary period under these circumstances is creditable.

A commenter noted that the regulations require a supervisory probationary period and questioned whether a probationary period is required for an employee appointed to a managerial position. No change was made to the regulations based on this comment. NSPS does not require a managerial probationary period, since not all managerial positions have responsibility over subordinate positions. Consequently, a managerial position that is not titled and coded as supervisory is not subject to a probationary period.

4. Competitive Examining Procedures

Section 9901.515 provides DoD the authority to use competitive examining procedures to appoint applicants to career, career conditional, term, and

temporary appointments in the competitive service and provides that the Secretary will issue uniform policies, procedures, and guidance concerning competitive examining for NSPS positions. This section also discusses public notice requirements and the use of numerical rating and ranking procedures and alternative ranking and selection procedures (category rating). It retains OPM's authority to grant or deny a pass-over request of a preference eligible with a compensable service-connected disability of 30 percent or more as well as to make medical qualifications determinations pertaining to preference eligibles.

Under NSPS, DoD must accept applications from all U.S. citizens, including current Federal employees, for positions announced using competitive examining procedures. If sufficient qualified applicants are available, applicants from the local commuting area and other targeted recruitment sources may be considered first. A commenter recommended that we define what "sufficient" qualified candidates means and that we include a requirement for the agency to publicly disclose the total number of applications considered versus the total number of applications received. We disagree that the term needs further definition. The term is relative. Sufficiency depends on the specifics of each recruitment action, including the number of vacancies, the labor market and the type and level of position to be filled. These various factors all contribute to ensuring that there are a multiple number of quality choices from which to select. In response to the comment that we include a requirement to publicly disclose the number of applications considered versus the total number received, we note that Governmentwide rules do not require a similar disclosure, and we see no useful purpose served by this request. However, this information is available in the case file generated for each selection and is subject to internal review and audit as well as review by OPM.

A commenter noted that, under the numerical rating and ranking procedures (one of the methods for determining which applicants will be referred to the selecting official), the "rule of 3" should apply. We disagree. Under NSPS, DoD has waived chapter 33 of title 5 of the U.S.C., which among other things, mandates the rule of three. By waiving this statutory provision, DoD is able to broaden the pool of candidates from which to select and provide flexibility to acquire a

workforce tailored to its needs. No change was made based on this comment.

5. Internal Placement

Section 9901.516 prescribes procedures regarding the assignment, reassignment, reinstatement, detail, transfer, and promotion of individuals or employees into or within NSPS. This section addresses level of work determinations for determining when an action is competitive or noncompetitive; contains information related to detailing NSPS employees; and describes the NSPS Merit Promotion Program, including competitive actions and exceptions to competition, alternative promotion procedures, grievances, and maintaining records for each promotion to a competitive service position filled through internal competitive procedures.

A labor organization representative observed that the definitions in § 9901.103 of "reassignment" and "reduction in band" are brief and do not contain enough detail to enable managers to make level of work determinations or to determine whether an action will be competitive or noncompetitive. The definitions the representative refers to appear in the NSPS regulations published on September 26, 2008. These definitions, while brief, are quite specific. A *reassignment* is described as a move to a different position or set of duties in the same or comparable pay band, and a *reduction in band* is described as a move from one pay band to a lower pay band while continuously employed. The definitions also describe when *reassignment* and *reduction in band* are appropriate for moves from positions outside of NSPS to a NSPS position. The definitions are further supplemented by definitions for *comparable pay band* or *level of work* and *lower pay band* or *level of work*. These additional definitions clarify that *reassignment* and *reduction in band* are based on level of work determinations inherent in the NSPS classification structure. The relationship of pay bands in the NSPS classification architecture and information on level of work determinations for moves from non NSPS positions to NSPS is described in the NSPS Classification and Qualification implementing issuances. Consequently, no change was made to the regulations based on this comment.

A labor organization representative stated that the NSPS definition of "promotion" is more concrete than the definitions of "reduction in band" and "reassignment." The representative observed that, with pay bands,

promotions are less frequent than they are under the GS system, meaning that far more mobility will take place as movement within a band. The representative expressed concern that movements within a pay band, or "reassignments," may involve an increase in base pay normally reserved for promotions under the GS system and that managers will be able to decide when to give a pay increase or whether to subject a movement to competition. They were particularly concerned that employees could be reassigned with pay increases and other employees would be given no notice or opportunity to compete.

The definitions of *reassignment* and *promotion* differ among different personnel systems. NSPS is designed to be a modern, contemporary, flexible, and agile human resources management system intended to help DoD meet the national security challenges of the 21st century, while following core merit system principles and protections. The NSPS pay band recognizes a broader range of work than a General Schedule grade within a single pay band also known as one discrete level of work. Classification architectures utilizing a *grade* concept describe narrower ranges of work for a single discrete level of work. Consequently, where movements in a graded system would result in *promotion* pay, the same movement in a pay-banded system may constitute a *reassignment*. While pay progression in grade-based systems is primarily based on promotions, pay progression in the NSPS pay-banded system is primarily based on performance and secondarily on promotion movements. In appropriate situations, as documented and authorized by Component procedures, management may provide a discretionary base salary increase to provide an incentive to employees to broaden skill sets, take on more responsibilities, accept assignments that require relocation, etc. To preserve the competitive procedures for promotion, such increases are limited to an amount less than the minimum percentage increase permitted by promotion rules. Providing an increase in pay for a reassignment is not required and, where provided, may be predicated on specific case information (e.g., the employee's salary in range, what skills the employee brings to the position). At the same time, the pay band structure recognizes that employees may be promoted to a position in a higher pay band containing a higher level of work. Consistent with merit promotion rules, promotion to a position in a higher pay band, or at a higher level of work, in the

competitive service requires competition.

With respect to the comment regarding managers deciding when reassignments will require competition or not, or when a notice of the vacancy will be given, we note that, as with the GS system, many NSPS positions to which employees are reassigned are advertised; however, some are not. As under the GS system, some reassignments are done competitively to increase the applicant base. Some reassignments are also done competitively if the position to which the employee will be reassigned ultimately leads to a position in a higher full performance pay band (*i.e.*, a higher level of work under the NSPS classification architecture). Whether a position is advertised or not, employees who are reassigned must be qualified for the position, unless they are reassigned as a result of reduction in force procedures and qualification requirements are waived. No change was made to these regulations based on this comment.

A labor organization representative expressed concern that details could “go on forever” without documentation and that “a manager could pick a favorite employee for a desirable detail with no record of the action,” making it “difficult if not impossible to track movement of employees in order to ensure that there is no prohibited discrimination.” In addition, the labor organization representative asked specifically about what documentation was required for a GS employee’s detail to an NSPS position.

Consistent with Governmentwide regulations, NSPS does not impose a specific timeframe that limits flexibility in accomplishing work. A detail, however, is limited in that it involves the temporary assignment of an employee to another position or set of duties to perform work on a time-limited basis with the expectation that the employee will return to the permanent position of record upon expiration of the detail. NSPS does require documentation of some details, in that details to higher pay bands beyond 180 days are subject to competition. Management must evaluate the situation and determine the appropriate assignment of employees. In some cases, it may be better to temporarily promote an employee or fill a position on a permanent basis.

The OPM Guide to Processing Personnel Actions provides technical guidance regarding when documentation is required for a GS employee’s detail. Documentation is not dependent on whether the employee is

detailed to a different personnel system but on the duties assigned, the organization or agency to which assigned, length of the detail, and the grade of the position. Additional guidance regarding the conditions surrounding a detail requiring documentation is in chapter 14 of the Guide.

A commenter asked for clarification of the exception to competition situation described at § 9901.516(e)(7), which permits a noncompetitive promotion to a higher pay band previously held on a permanent or term basis in the competitive service. The commenter asked that we make clear that holding a position on a term basis means on a term appointment, not a temporary promotion or temporary appointment. The commenter also suggested we state when the term appointment was held and for how long, to ensure consistency. Alternatively, the commenter suggested the regulations provide discretionary authority to Components to specify the conditions under which a term appointment could be used as the basis for a noncompetitive permanent action. Finally, the commenter noted that, during base realignment and closure and transformation efforts, term appointments and temporary promotions for extended periods are common and expressed concern that this provision seems to give an advantage to term applicants over permanent employees who have held a position in a higher pay band on a temporary basis for several years. We agree that this provision may be confusing and have deleted the words “or term” from this paragraph.

A labor organization representative expressed concern that the alternative promotion procedures bypassed competitive processes and merit principles creating “secret processes” to fill vacancies. Several commenters associated a formal vacancy announcement with competition, transparency and merit selection. The NSPS regulations on internal placement explicitly align with Governmentwide regulations by adopting the merit promotion requirements under 5 CFR 335.103(b). These merit promotion requirements provide the foundation for a systemic means of selection according to merit. They include analysis of the job to be filled to identify the knowledge, skills, abilities, and/or competencies necessary to successfully perform the duties of the position; clearance of applicable programs for displaced or surplus employees, such as the DoD Priority Placement Program and the Reemployment Priority List; determination that the selectees meet

applicable OPM or DoD qualification standards for the positions being filled; and, selection of candidates determined to be best qualified for the positions. Additionally, the identification, qualification, evaluation, and selection of candidates must be made without regard to political, religious, or labor organization affiliation or nonaffiliation, marital status, race, color, sex, national origin, nonqualifying physical handicap, or age, and must be based solely on job-related criteria. Employees selected under alternative promotion procedures have been judged on the recognized merit factors of qualifications and performance. Although formal advertisement is not required for selections under these procedures, the regulations require that employees are notified in advance of the intent to use these procedures.

A labor organization representative asked how absent employees or those not physically present might receive consideration for positions through these alternative means. The absence of an employee does not preclude consideration under these procedures precisely because these procedures do not necessarily require an application from the employee. For example, all employees eligible and within the area of consideration will automatically receive consideration through the exceptional performance promotion procedure. Each Component will determine specific processes for each procedure, and should a Component request applications for any of these alternative methods, they will also explain the provision and conditions for considering those who are absent. However, we have amended § 9901.516(e)(8) to clarify that when alternative promotion procedures are used, appropriate consideration must be given to employees within the area of consideration who are absent for legitimate reasons, (*e.g.*, on detail, on leave, at training courses, in the military service, etc.).

A labor organization representative asked specific questions regarding the execution of these alternative promotion procedures, including whether employees would be informed when specific jobs became available, whether employees would be informed of their ratings, whether employees could challenge their ratings, how employees would be informed of enough information to file a grievance if desired, and whether the rating outcomes would be available for potential grievance or EEO procedures. The goal of the alternative promotion procedures is to provide an efficient procedure for filling positions

competitively. While we have provided the framework and requirements for each alternative promotion procedure, Components will establish specific guidelines for their use of each alternative promotion procedure to be consistent with their merit promotion plans. It is important to emphasize that employing alternative promotion procedures does not negate merit promotion requirements. For example, like all other competitive procedures, case files will be kept for each position filled through these alternative procedures and will be made available for grievance and EEO purposes. In addition, Components will continue to provide necessary information to employees.

A labor organization representative asked for clarification regarding who determines if the by-name request is ranked within the highest quality group. The competitive process requires measuring the candidate against the job-related criteria. If the candidate meets the rating factors required for the highest level, the candidate may be selected for the position. The human resources office determines whether a candidate is ranked within the highest quality group.

Another commenter stated that the alternative promotion procedures may be used as a means of circumventing veterans' preference, particularly the hiring of disabled veterans. The application of veterans' preference is a requirement when conducting competitive examining, not in internal placement. The NSPS alternative promotion procedures are only used to place employees internally within the Department. NSPS upholds veterans' preference in the competitive examining process. We have not revised the regulations in response to this comment.

A labor organization representative questioned why the requirement to maintain internal placement files was based solely on the time frame of the grievance process and stated that this allowed "premature destruction" of records without considering the EEO process. The language regarding how long to maintain documents mirrors the language as it exists today for General Schedule employees in 5 CFR 335.103(b)(5). Governmentwide experience to date has not indicated a need for extending the time period for retention of these records. NSPS does not change the procedures currently in place with respect to meeting EEO or veterans' preference requirements. We have not changed the regulations in regard to these comments.

III. Next Steps

The National Defense Authorization Act for Fiscal Year 2008 requires that this rule be considered a major rule for the purpose of section 801 of title 5, United States Code. Consequently, before it can take effect, the Department will submit to each House of the Congress and to the Comptroller General a report containing the rule, a general statement relating to the rule, and the proposed effective date of the rule. The rule may not be effective until the date occurring 60 days after the later of (1) Congressional receipt of the report, or (2) the date the rule is published in the **Federal Register**. This rule is subject to the procedures set forth in 5 U.S.C. 801–808.

E.O. 12866, Regulatory Review

DoD and OPM have determined that this action is a significant regulatory action within the meaning of Executive Order 12866 because there is significant public interest in the National Security Personnel System. DoD and OPM have analyzed the expected costs and benefits of the revised HR system, and that analysis was presented in the supplementary information published with the rule on September 26, 2008 (Volume 73 Number 188) on page 56389.

The primary benefit to the public of NSPS resides in the HR flexibilities that will enable DoD to attract, build, and retain a high-performing workforce focused on effective and efficient mission accomplishment. Staffing and employment regulations that streamline hiring processes provide additional hiring flexibilities which will result in a more qualified and proficient workforce and will generate a greater return on investment in terms of productivity and effectiveness. Taken as a whole, the changes included in these regulations will improve upon the original NSPS regulations and result in a contemporary, merit-based HR system that focuses on performance, generates respect and trust, and supports the primary mission of DoD.

This rule has been reviewed by the Office of Management and Budget in accordance with E.O. 12866.

Regulatory Flexibility Act

DoD and OPM have determined that these regulations will not have a significant economic impact on a substantial number of small entities because they will apply only to Federal agencies and employees.

Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35)

This final regulatory action will not impose any additional reporting or recordkeeping requirements under the Paperwork Reduction Act.

E.O. 12988, Civil Justice Reform

These regulations are consistent with the requirements of E.O. 12988. The regulations clearly specify the effects on existing Federal law or regulation; provides clear legal standards; has no retroactive effects; specifies procedures for administrative and court actions; defines key terms; and is drafted clearly.

E.O. 13132, Federalism

DoD and OPM have determined these regulations will not have Federalism implications because they will apply only to Federal agencies and employees. The regulations will not have financial or other effects on States, the relationship between the Federal Government and the States, or the distribution of power and responsibilities among the various levels of government.

Unfunded Mandates

These regulations will not result in the expenditure by State, local, or tribal governments of more than \$100 million annually. Thus, no written assessment of unfunded mandates is required.

List of Subjects in 5 CFR Part 9901

Administrative practice and procedure, Employment, Government employees, Labor-management relations, Labor unions, Reporting and recordkeeping requirements, Wages.

Office of Personnel Management.

Michael W. Hager,

Acting Director, Office of Personnel Management.

Department of Defense.

Gordon England,

Deputy Secretary of Defense.

■ Accordingly, under the authority of section 9902 of title 5, United States Code, the Department of Defense and the Office of Personnel Management are adding subpart E, part 9901, of title 5, Code of Federal Regulations, to read as follows:

PART 9901—DEPARTMENT OF DEFENSE NATIONAL SECURITY PERSONNEL SYSTEM (NSPS)

Subpart E—Staffing and Employment

General

Sec.
9901.501 Purpose.
9901.502 Scope of authority.

- 9901.503 Coverage.
9901.504 Definitions.

External Recruitment and Internal Placement

- 9901.511 Appointing authorities.
9901.512 Probationary periods.
9901.513 [Reserved]
9901.514 Non-citizen hiring.
9901.515 Competitive examining procedures.
9901.516 Internal placement.

Authority: 5 U.S.C. 9902.

Subpart E—Staffing and Employment

General

§ 9901.501 Purpose.

(a) This subpart sets forth policies and procedures for the recruitment for, and appointment to, positions; and assignment, reassignment, detail, transfer, or promotion of employees, consistent with 5 U.S.C. 9902(a) and (i).

(b) The Secretary will comply with merit principles set forth in 5 U.S.C. 2301 and with 5 U.S.C. 2302 (dealing with prohibited personnel practices).

(c) The Secretary will adhere to veterans' preference principles set forth in 5 U.S.C. 2302(b)(11), consistent with 5 U.S.C. 9902(i).

§ 9901.502 Scope of authority.

When a specified category of employees, applicants, and positions is covered by the system established under this subpart, the provisions of 5 U.S.C. 3301, 3302, 3304, 3317(a), 3318 and 3319 (except with respect to veterans' preference), 3321 (except 3321(a)(2)), 3324, 3325, 3327, 3330, and 3341 are modified or waived and replaced with respect to that category except as otherwise specified in this subpart. In accordance with § 9901.101, the Secretary may prescribe implementing issuances to carry out the provisions of this subpart.

§ 9901.503 Coverage.

(a) At his or her sole and exclusive discretion, the Secretary may decide to apply this subpart to a specific category or categories of eligible civilian employees in organizations and functional units of the Department at any time in accordance with the provisions of 5 U.S.C. 9902. However, no category of employee may be covered by this subpart unless that category is also covered by subpart D of this part.

(b) The following employees and positions in DoD organizational and functional units are eligible for coverage under this subpart:

(1) Employees and positions who would otherwise be covered by 5 U.S.C. chapter 33 (excluding members of the Senior Executive Service); and

(2) Such others designated by the Secretary as authorized under 5 U.S.C. 9902.

§ 9901.504 Definitions.

In this subpart—

Career conditional employee means an individual appointed without time limit to a competitive service position in NSPS who does not meet the definition of a career employee.

Career employee means an individual appointed without time limit to a competitive service position in NSPS who has served 3 years of substantially continuous service as described in 5 CFR 315.201(b).

Competencies has the meaning given that term in § 9901.103.

Detail means the temporary assignment, other than temporary reassignment or temporary promotion, of an employee to another position or set of duties with the expectation that the employee will return to the permanent position of record upon expiration of the assignment. For pay and benefits purposes and for the purpose of part 351 of this title, an employee continues to encumber the position from which the employee was detailed.

Initial probationary period means the initial period of service immediately following an employee's appointment to the competitive or excepted service, as specified in § 9901.512, during which an authorized management official determines whether the employee fulfills the requirements of the position to which assigned.

Local commuting area is the geographic area that usually constitutes one area for employment purposes. It includes any population center (or two or more neighboring ones) and the surrounding localities in which people live and can reasonably be expected to travel back and forth daily to their usual place of employment.

Promotion has the meaning given that term in § 9901.103.

Reassignment has the meaning given that term in § 9901.103. For the purpose of part 351 of this title, an official position does not include a position to which an employee is reassigned on a temporary or time-limited basis.

Reduction in band has the meaning given that term in § 9901.103.

Supervisory probationary period means the first year of service immediately following an employee's initial appointment or placement in a supervisory position, as provided in 5 U.S.C. 3321(a)(2), during which an authorized management official determines whether the employee

fulfills the requirements of the position to which assigned.

Temporary employee means an individual in the competitive or excepted service who is employed for a limited period of time not to exceed 1 year. The individual's appointment may be extended, up to a maximum established under § 9901.511(d), to perform the work of a position that does not require an additional permanent employee.

Term employee means an individual in the competitive service who is employed for a period of more than 1 year up to a maximum established under § 9901.511(d).

Time-limited employee means an individual in the excepted service who is employed for a period of more than 1 year up to a maximum established under § 9901.511(d).

External Recruitment and Internal Placement

§ 9901.511 Appointing authorities.

(a) *Competitive and excepted appointing authorities.* The Secretary may continue to use excepted and competitive appointing authorities under chapter 33 of title 5, U.S. Code, Governmentwide regulations, or Executive orders, as well as other statutes, and those individuals appointed under these authorities will be given career, career conditional, term or temporary appointments in the competitive service or permanent, time-limited, or temporary appointments in the excepted service, as appropriate. The competitive appointing authorities under this paragraph are subject to the procedures in part 330 of this title, except for 5 CFR 330.208 and 330.501.

(b) *Additional appointing authorities.* (1) The Secretary and the Director may enter into written agreements providing for new excepted and competitive appointing authorities for positions covered by the National Security Personnel System, including noncompetitive appointments, and excepted appointments that may lead to a subsequent noncompetitive appointment to the competitive service.

(2) DoD and OPM will jointly publish a notice, and request comments, in the **Federal Register** when establishing a new competitive appointing authority or a new excepted appointing authority that may lead to a subsequent noncompetitive appointment to a competitive service position.

(3) The Secretary will prescribe appropriate implementing issuances to administer a new appointing authority established under paragraph (b) of this section.

(4) At least annually, a consolidated list of all appointing authorities established under this section and currently in effect will be published in the **Federal Register**.

(c) *Severe shortage/critical need hiring authority.* (1) The Secretary will determine when a severe shortage of candidates or a critical hiring need exists, as defined in 5 CFR part 337, subpart B, for particular occupations, pay bands, career groups, and/or geographic locations. The Secretary may decide that such a shortage or critical need exists, or may make this decision in response to a written request from the head of a DoD Component. These authorities may be used without regard to competitive examination requirements described in § 9901.515. Public notice will be provided in accordance with 5 U.S.C. 3304(a)(3)(A).

(2) For each specific authority, the Secretary will document the basis for the severe shortage or critical hiring need, consistent with 5 CFR 337.204(b) or 337.205(b), as applicable.

(3) The Secretary may extend a direct hire authority if the Secretary determines there is or will continue to be a severe shortage of candidates or a critical hiring need for a particular position(s) as of the date the authority is due to expire.

(4) The Secretary will terminate or modify a specific authority to make appointments under this section when it is determined that the severe shortage or critical need upon which the authority was based no longer exists.

(5) The Secretary will notify OPM of determinations made under this paragraph.

(d) *Non-permanent appointing authorities.* (1) The Secretary may authorize appointments with time limits in the competitive or excepted service, as appropriate, when the need for an employee's services is not permanent. These appointments will be either temporary, term, or time-limited as defined below:

(i) *Temporary appointments.* Temporary appointments are for a specified period not to exceed 1 year and may be made in either the competitive or the excepted service. A temporary appointment may be extended for 2 additional years, in increments not to exceed 1 year, to a maximum of 3 years. Temporary appointments may be made and extended to positions involving intermittent or seasonal work without regard to the maximum time limits. The circumstances under which a temporary appointment is appropriate include, but are not limited to: Filling a position to address a temporary workload peak or

to complete a temporary project; meeting a temporary staffing need that is anticipated not to exceed a 1-year timeframe for reasons such as abolishment, reorganization, or contracting out of a function; anticipated reduction in funding; filling positions temporarily because the positions are expected to be needed for placement of permanent employees who would otherwise be displaced; or when the incumbent will be out of the position for a temporary period of time, but is expected to return. A temporary employee may be reassigned to another temporary position provided the total combined service under the temporary appointment does not exceed the maximum 3-year time limitation, the employee meets the qualification requirements of the position, and the conditions specific to the employee's appointing authority are met. Temporary appointments are made as follows:

(A) *Competitive service.* Temporary appointments to positions in the competitive service may be made using competitive procedures under § 9901.515, using the severe shortage/critical need hiring authorities described in § 9901.511(c), or by using direct hire authority procedures under 5 CFR part 337, as appropriate. Temporary appointments to positions in the competitive service also may be made noncompetitively, consistent with 5 CFR part 316, or by any noncompetitive appointing authorities granted to or by the Secretary.

(B) *Excepted service.* Temporary appointments to positions in the excepted service are made under the procedures prescribed in 5 CFR part 302.

(ii) *Term appointments in the competitive service.* (A) Term appointments are in the competitive service and will be for a period of more than 1 year, but not to exceed 5 years. The term appointment may be extended by an authorized management official for 1 additional year to a maximum of 6 years. The circumstances under which a term appointment is appropriate include, but are not limited to, project work, extraordinary workload, uncertainty of future funding, scheduled contracting out or abolishment of a function, the need to maintain permanent positions for placement of potential surplus employees, or when the incumbent will be out of the position for a significant period of time, but is expected to return. A term employee may be promoted, reassigned or reduced in band to another term position provided the total combined service under the term appointment

does not exceed the maximum 6-year time limitation and the employee meets the qualification requirements of the position.

(B) Term appointments may be made using competitive procedures under § 9901.515, using the severe shortage/critical need hiring authorities described in § 9901.511(c), or by using direct hire authority procedures under 5 CFR part 337, as appropriate. Term appointments also may be made noncompetitively consistent with 5 CFR part 316 or by any noncompetitive appointing authorities granted to or by the Secretary.

(iii) *Time-limited appointments in the excepted service.* Time-limited appointments are in the excepted service and will be for a period of more than 1 year. Time-limited appointments to positions in the excepted service are made under the procedures prescribed in 5 CFR part 302. A time-limited employee may be reassigned to another time-limited position in the excepted service provided the employee meets the qualification requirements of the position and the conditions specific to the appointing authority applicable to the employee.

(2) *Conversion to career conditional or career appointment.* A non-permanent employee serving in a competitive service position may be converted without further competition to a permanent position (*i.e.*, career or career conditional) if—

(i) The vacancy announcement met the requirements of § 9901.515(a) and included the possibility of noncompetitive conversion to a permanent position (*i.e.*, career or career conditional) at a later date;

(ii) The individual was appointed using the competitive examining procedures set forth in § 9901.515(b) and (c);

(iii) The employee completed at least 2 years of continuous service at Level 3 (Valued Performer) or better; and

(iv) The employee is converted to a career conditional or career position in the same pay schedule and band for which hired.

(e) *Tenure group.* For reduction in force purposes, NSPS employees appointed to the competitive service are placed in one of the tenure groups defined in 5 CFR 351.501(b) or, if appointed to the excepted service, one of the tenure groups defined in 5 CFR 351.502(b).

§ 9901.512 Probationary periods.

(a) *Initial probationary period.* (1) An employee who is given a career, career conditional, or term appointment in the competitive service or a permanent or

time-limited appointment in the excepted service under this part is required to complete a probationary period when the employee:

(i) Is appointed from a competitive list of eligibles established under § 9901.515, using the severe shortage/critical need hiring authorities described in § 9901.511(c), or by using direct hire authority procedures under 5 CFR part 337; or

(ii) Is appointed to the competitive service either by special authority or by conversion under subpart F or G of 5 CFR part 315, unless specifically exempt from probation by the authority itself; or

(iii) Is reinstated, unless, during any period of service which affords a current basis for reinstatement, the employee completed an initial probationary period; or

(iv) Is appointed to a position in the excepted service under the procedures prescribed in part 302 of this title.

(2) An employee serving an initial probationary period at the time his or her permanent position is converted into NSPS, or at the time he or she is assigned from a non NSPS position to an NSPS position, or at the time he or she is reappointed through the DoD Priority Placement Program or Reemployment Priority List established under part 330 of this title after being involuntarily separated through no fault of the employee, will continue the probationary period; *i.e.*, the probationary period does not start over.

(3) The probationary period required by § 9901.512(a) is as follows:

(i) Competitive service—1 year

(ii) Excepted service—

(A) 2 years for non-preference eligibles;

(B) 1 year for preference eligibles.

(4) *Crediting Service.* (i) Absence in an approved nonpay status while on the rolls (other than for compensable injury or military duty) is creditable up to a total of 22 workdays.

(ii) Service during an initial probationary period from which an employee is separated for performance or conduct does not count toward completion of probation required under a subsequent NSPS appointment.

(iii) The probationary period for part-time employees is computed on the basis of calendar time, in the same manner as for full-time employees. For intermittent employees, *i.e.*, those who do not have regularly scheduled tours of duty, each day or part of a day in pay status counts as 1 day of credit toward the 260 days (actual “work days” in a year, excluding weekends) needed to complete the 1-year probationary period. The probationary period may

not be completed in less than 1 year calendar time.

(iv) Absence (whether on or off the rolls) due to compensable injury or military duty is creditable in full upon restoration to Federal service under part 353 of this title. An employee serving a probationary period who leaves Federal service to become a volunteer with the Peace Corps or the Corporation for National and Community Services serves the remainder of the probationary period upon reinstatement, provided the employee is reinstated within 90 days of termination of service as a volunteer or training for such service.

(5) *Termination of probationers for unsatisfactory performance and/or conduct.*

When an authorized management official proposes to terminate a competitive service employee during his or her initial probationary period because his or her performance and/or conduct during this period fails to demonstrate his or her fitness or qualifications for continued employment, the official will follow procedures at 5 CFR 315.804.

(6) *Termination of probationers for conditions arising before appointment.* When an authorized management official proposes to terminate a competitive service employee during his or her initial probationary or trial period for reasons based in whole or in part on conditions arising before the employee's appointment, the official will follow procedures at 5 CFR 315.805.

(7) *Appeals.* Under NSPS, a competitive service employee, who is terminated during the initial probationary period, will have limited appeal rights to the Merit Systems Protection Board (MSPB) under 5 CFR 315.806. In addition, any individual serving under a Veterans Recruitment Appointment, whose employment under the appointment is terminated within 1 year after the date of such appointment, will have the same right to appeal that termination as a career or career conditional employee has during the first year of employment in accordance with 5 CFR 315.806.

(b) *Supervisory probationary period.* Under NSPS, an employee is required to serve a probationary period upon initial appointment to a supervisory position. The supervisory probationary period is 1 year. An employee serving a supervisory probationary period at the time his or her permanent position is converted into NSPS will continue the probationary period in the new position; *i.e.*, the supervisory probationary period does not start over.

(1) *Crediting service toward completion of the supervisory*

probationary period. (i) An employee who is reassigned, transferred, promoted or reduced in band from one supervisory position to another while serving a supervisory probationary period is subject to the probationary period prescribed for the new position. Service in the former position is credited toward completion of the probationary period in the new position.

(ii) Temporary service in a supervisory position prior to the supervisory probation when there is no break in service is creditable toward completion of a supervisory probationary period. This includes service on temporary promotion or reassignment to another supervisory position while serving a supervisory probation. Service in a nonsupervisory position is not creditable.

(iii) Absence in an approved nonpay status while on the rolls (other than for compensable injury or military duty) is creditable up to a total of 22 workdays.

(iv) Service during a supervisory probationary period from which an employee was separated or demoted for performance and/or conduct does not count toward completion of a supervisory probationary period required under a subsequent appointment.

(v) Absence (whether on or off the rolls) due to compensable injury or military duty is creditable in full toward completion of a supervisory probationary period upon restoration to Federal service under part 353 of this title.

(vi) An employee who has completed a supervisory probationary period prior to movement into an NSPS position is not required to complete another supervisory probationary period.

(2) *Failure to complete the supervisory probationary period.* (i) Except as described in paragraph (b)(2)(ii) of this section, an employee who, for reasons of supervisory performance, does not satisfactorily complete the probationary period is entitled to be assigned to a position at a grade or pay band and pay no lower than that held before assignment to the supervisory position.

(ii) A nonsupervisory employee who is reduced in band into a position that requires a supervisory probationary period and who, for reasons of supervisory performance, does not satisfactorily complete the probationary period is entitled to be reassigned to a grade or pay band no lower than that held when serving the supervisory probation. The employee is eligible for repromotion in accordance with NSPS promotion rules under § 9901.516.

(iii) The agency must notify the employee in writing that he or she is being assigned for failure to complete the supervisory probationary period.

(iv) *Appeals.* (A) A competitive service employee, who, in accordance with the provisions of this section, is assigned to a nonsupervisory position, has no appeal right, except as provided in paragraph (b)(2)(iv)(B) of this section.

(B) A competitive service employee who alleges that a Component action under this section was based on partisan political affiliation or marital status may appeal to the MSPB under 5 CFR 315.908(b).

(v) *Relationship to other actions.* (A) If an employee is required to concurrently serve both a supervisory and an initial probationary period, the latter takes precedence.

(B) An action that demotes an employee to a pay band lower than the one the employee left to accept the supervisory position, for reasons other than supervisory performance, is governed by part 752 of this title.

§ 9901.513 [Reserved]

§ 9901.514 Non-citizen hiring.

The Secretary may establish procedures for appointing non-citizens to permanent, temporary, or time-limited positions in the excepted service, provided there is a demonstrated absence of qualified U.S. citizens and applicable immigration and security requirements are met. Non-citizens may not be promoted, reassigned, or reduced in band, except in situations where a qualified U.S. citizen is once again unavailable.

§ 9901.515 Competitive examining procedures.

(a)(1) Under NSPS, applicants are appointed to career, career conditional, term, and temporary appointments in the competitive service using competitive examining procedures consistent with part 300, subpart A of this title. In recruiting applicants from outside the civil service for competitive appointments to competitive service positions in NSPS, Components with examining authority may use either numerical rating and ranking or alternative ranking and selection procedures (*i.e.*, category rating). Components must decide which procedures to use prior to issuing a vacancy announcement and include this information in the vacancy announcement.

(2) The Secretary will issue uniform policies, procedures, and guidance concerning competitive examining for NSPS within the Department and may delegate in writing authority for

competitive examining for NSPS positions. All actions taken under competitive examining procedures will be made without regard to race, color, religion, age, gender, national origin, political affiliation, disability, sexual orientation, marital or family status, or other prohibited criteria, and will be based solely on job-related factors. These policies, procedures, and guidance will be consistent with the "Uniform Guidelines on Employee Selection Procedures" (1978) 43 FR 38290 (August 25, 1978) and part 332, subparts A and C of this title.

(b) *Public notice.* (1) Components will accept applications from all U.S. citizens, to include current Federal employees, and at a minimum, will consider applicants from the local commuting area. Components may concurrently consider applicants from other targeted recruitment sources, as specified in the vacancy announcement. A targeted recruitment source is a category or grouping of potentially qualified individuals, such as all students at a particular university in a particular field of study. Targeted recruitment sources will be selected with equal protection considerations in mind, such as whether the sources will reach a diverse applicant pool. If there are insufficient qualified candidates in both the local commuting area and targeted recruitment sources, Components may consider applicants from outside that area.

(2) When limiting consideration, the vacancy announcement will clearly state that consideration will be limited if sufficient qualified candidates are received from the local commuting area and other targeted recruitment sources. If sufficient candidates are not received from the local commuting area and other targeted recruitment sources, consideration will be expanded to all applicants; *i.e.*, the area of consideration will not be expanded incrementally.

(3) No minimum announcement opening period is required. The open period will be based on the type of position being filled and the availability of qualified candidates in the labor market.

(c) *Numerical rating and ranking procedures.* When filling positions using numerical rating and ranking, the procedures issued by the Secretary will be followed. All qualified applicants may be referred and selection may be made from among any referred applicant except that a preference eligible will not be passed over to select a non-preference eligible, unless procedures under 5 U.S.C. 3318 for passing over a preference eligible are followed.

(d) *Alternative ranking and selection procedures (category rating).* When filling positions using category rating, procedures issued by the Secretary will be followed in lieu of the procedures in part 337, subpart C, except for § 337.304, of this title.

(e) *Passing over preference eligibles.* OPM retains the authority to grant or deny a pass over request of a preference eligible with a compensable service-connected disability of 30 percent or more and to make medical qualifications determinations pertaining to preference eligibles. The Secretary has the authority to grant or deny a pass over request of a preference eligible with a compensable service-connected disability of less than 30 percent.

§ 9901.516 Internal placement.

(a) *Determining levels of work and movement within and across career groups.* The determination of when an action is a promotion, reassignment, or reduction in band for competitive or noncompetitive movement and related pay administration purposes, either between NSPS positions or to an NSPS position from a non NSPS position, must be made by applying the definitions of those terms at § 9901.103.

(b) *Eligibility for promotion to full performance band.* An employee with a rating of record of Level 1 or Level 2 is not eligible for promotion to the full performance band of the position until such time as the employee attains a rating of record of Level 3 or above. An employee who does not have an NSPS rating of record may be promoted to the full performance band of the position if an authorized management official conducts a performance assessment and determines that the employee is performing at the equivalent of Level 3 or above.

(c) *Time after competitive appointment restriction.* Restrictions on the movement of an employee immediately after the employee's initial appointment to Federal service as described in 5 CFR part 330, subpart E, are not applicable to NSPS positions.

(d) *Details.* There is no time limit on details or any requirement to extend them incrementally. An official personnel action is not required to document a detail unless the detail exceeds one year, crosses Component and/or Agency lines or assigns an employee from NSPS to another pay system within the Component (*e.g.*, NSPS to General Schedule), or documents developmental rotational assignments or deployment.

(e) *NSPS Merit Promotion Program.* In accordance with the Secretary's authority to prescribe regulations for the

assignment, reassignment, reinstatement, detail, transfer, and promotion of individuals or employees into or within NSPS, the procedures below, in conjunction with the merit promotion requirements in 5 CFR 335.103(b) constitute the NSPS Merit Promotion Program. Internal placement actions may be made on a permanent or temporary basis using competitive and noncompetitive procedures.

(1) All actions taken under the NSPS Merit Promotion Program, whether involving the identification, qualification, evaluation, or selection of candidates, will be made without regard to race, color, religion, age, gender, national origin, political affiliation, disability, sexual orientation, marital or family status or other prohibited criteria and will be based solely on job-related factors.

(2) Vacancy announcements will identify areas of consideration that are sufficiently broad to ensure the availability of high quality candidates, taking into account the nature and level of the positions covered. Employees within the area of consideration who are absent for legitimate reason (e.g., on detail, on leave, at training courses, in the military service, or serving in public international organizations or on Intergovernmental Personnel Act assignments) must receive appropriate consideration, if they apply for a vacant position; i.e., they cannot be excluded from consideration because they are absent. Employees who are unable to apply for vacant positions while they are away may also make other appropriate arrangements for consideration.

(3) To be eligible for promotion or placement, candidates must meet the minimum qualification standards prescribed by either OPM or the Department, as appropriate. Prior to the recruitment process, authorized management officials will identify through job analysis the job-related criteria that will be used to evaluate and determine the best qualified candidates for referral. The job analysis will identify the basic duties and responsibilities of the position being filled; the knowledge, skills, abilities, and/or competencies required to perform the duties and responsibilities; and the factors that are important in evaluating candidates. The job analysis may cover a single position or group of positions, or an occupation or group of occupations, having common characteristics. Candidate evaluation will give due weight to performance appraisals and incentive awards. When evaluating a candidate's performance appraisals, consideration may be given

to the differences in performance appraisal systems. Job analysis requirements will conform to the Uniform Guidelines on Employee Selection Procedures in 29 CFR part 1607, and 5 CFR part 300, subpart A.

(4) Management has the right to select or not select from among a group of highly qualified candidates and to select from appropriate sources of candidates.

(5) Components will maintain a temporary record of each promotion to a competitive service position filled through internal competitive procedures to allow reconstruction of the placement action, including documentation on how candidates were rated, ranked, and referred. These records may be destroyed after 2 years or after the program has been formally evaluated by OPM (whichever occurs first) if the time limit for grievance has lapsed and destruction would otherwise be consistent with the Department's Priority Placement Program requirements.

(6) *Competitive actions.* (i) Except as provided in paragraph (e)(7) of this section, competitive procedures apply to promotion of an employee to a higher pay band (i.e., a higher level of work) and to the following actions:

(A) Temporary promotion or detail to a higher pay band for more than 180 days. Prior service during the preceding 12 months under noncompetitive temporary promotions or details to higher pay-banded positions counts toward the 180-day total. A temporary promotion may be made permanent without further competition, provided the temporary promotion was originally made under competitive procedures and the fact that the temporary promotion might lead to a permanent promotion was made known to all potential candidates;

(B) Reassignment or reduction in band to a position with more promotion potential than a position previously held on a permanent basis in the competitive service (except as permitted by reduction in force regulations at 5 CFR part 351);

(C) Transfer to a position at a higher pay band or with more promotion potential than a position previously held on a permanent basis in the competitive service; and

(D) Reinstatement to a permanent, term, or temporary position at a higher pay band or with more promotion potential than a position previously held on a permanent basis in the competitive service.

(ii) When determining whether the promotion potential of a General Schedule position is lower than that of the promotion potential of the NSPS

position to which an employee moves, the definitions of higher, lower, and comparable levels of work under § 9901.103 will be applied.

(7) *Exceptions to competition.* (i) Competitive procedures do not apply to:

(A) Promotion resulting from the upgrading of a position to a higher pay band level without significant change in the duties and responsibilities due to the issuance of a new NSPS classification standard or the correction of an initial classification error;

(B) Promotion resulting from an employee's position being classified at a higher pay band level because of additional duties and responsibilities;

(C) Promotion resulting from previous competitive selection for a position with documented potential to a higher pay band;

(D) Temporary promotion or detail to a higher pay band or a position with known promotion potential for 180 days or less;

(E) Promotion to a higher pay band previously held on a permanent basis in the competitive service from which an employee was separated or demoted for other than performance or conduct reasons;

(F) Promotion, reassignment, reduction in band, transfer, or reinstatement to a position having promotion potential no greater than the potential of a position an employee currently holds or previously held on a permanent basis in the competitive service (or in another merit system with which OPM has an approved interchange agreement) and did not lose because of performance or conduct reasons;

(G) Consideration of a candidate not given proper consideration in a competitive promotion action;

(H) Placement resulting from reduction in force procedures under 5 CFR part 351; and

(I) The appointment of career SES appointees with competitive service reinstatement eligibility to any position for which they qualify in the competitive service at any salary level, consistent with 5 CFR part 317, subpart G.

(ii) When determining whether the promotion potential of a General Schedule position is lower than that of the promotion potential of the NSPS position to which an employee moves, the definitions of higher, lower, and comparable levels of work under § 9901.103 will be applied.

(8) *Alternative promotion procedures.* The Secretary may authorize the use of the following alternative procedures to fill NSPS positions. Use of these alternative procedures does not require

the posting of vacancy announcements; however, employees must be made aware that these processes may be utilized via newsletters, bulletin boards, websites, or other common methods of employee communication. Use of these alternative procedures is subject to the requirements of the DoD Priority Placement Program and the Reemployment Priority List. Employees within the area of consideration who are absent for legitimate reason (e.g., on detail, on leave, at training courses, in the military service, or serving in public international organizations or on Intergovernmental Personnel Act assignments) must receive appropriate consideration, i.e., they cannot be excluded from consideration because they are absent.

(i) *Assessment boards.* (A) Boards may convene to assess internal candidates for current and future advancement opportunities based on pre-established criteria. Pre-established criteria may include experience, training, awards, education, performance evaluation scores (ratings of record) or other appropriate information consistent with merit system principles and the "Uniformed Guidelines on Employee Selection Procedures."

(B) Boards will categorize employees into specific levels of candidates to generate referral lists of ranked candidates for occupational groups. These referral lists are valid for one year from the date generated. Selection from the referral list should be further justified based on specific job-related factors unique to the actual vacancy.

(C) Boards, which should be comprised of senior level managers (subject matter experts for each particular occupational group), may be convened on an ad hoc basis or may be held annually in conjunction with the performance evaluation process.

(ii) *Alternate certification.* A selecting official may make a by-name request for an individual from any appropriate source of Department or Component employees. The employee may be selected if ranked within the highest quality group as determined by rating factors established for the position.

(iii) *Exceptional performance promotion.* (A) An employee whose most recent rating of record is a Level 5 performance rating may be promoted to a vacant position in a higher pay band when the vacant position has the same occupational series (or related interdisciplinary/interoccupational series) and similar function as the position the employee held at the time he or she received the Level 5 rating.

(B) Selecting officials must determine and document the area of consideration, and must consider all employees in the area of consideration whose current Level 5 rating was based on performance in the same occupational series and similar function as the vacancy being filled.

(9) *Grievances.* Employees have the right to file a complaint relating to a promotion action. Such complaints will be resolved under appropriate grievance procedures. The standards for adjudicating complaints are set forth in 5 CFR part 300, subpart A. There is no right of appeal to OPM, but OPM may conduct investigations of substantial violations of OPM requirements.

BILLING CODE 5001-06-P

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

7 CFR Parts 305 and 318

[Docket No. APHIS-2007-0052]

RIN 0579-AC70

Revision of the Hawaiian and Territorial Fruits and Vegetables Regulations

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Final rule.

SUMMARY: We are revising and reorganizing the regulations pertaining to the interstate movement of fruits and vegetables from Hawaii and the territories to consolidate requirements of general applicability and eliminate redundant requirements, update terms and remove outdated requirements and references, and make various editorial and nonsubstantive changes to the regulations to make them easier to use. We are also making substantive changes to the regulations including establishing criteria within the regulations that, if met, will allow us to approve certain new fruits and vegetables for interstate movement in the United States and to acknowledge pest-free areas in Hawaii and U.S. territories expeditiously, and removing the listing in the regulations of some specific commodities as regulated articles. These changes are intended to simplify and expedite our processes for approving certain regulated articles for interstate movement and acknowledging pest-free areas while continuing to allow for public participation in the processes. This final rule does not allow for the

interstate movement of any specific new fruits or vegetables, nor does it alter the conditions for interstate movement of currently approved fruits or vegetables. These changes will make our domestic interstate movement regulations more consistent with our fruits and vegetables import regulations. The changes in this final rule will not alter the manner in which the risk associated with a regulated article interstate movement request is evaluated, nor will they alter the manner in which those risks are ultimately mitigated.

DATES: *Effective Date:* February 17, 2009.

FOR FURTHER INFORMATION CONTACT: Mr. David Lamb, Import Specialist, Commodity Import Analysis and Operations, PPQ, APHIS, 4700 River Road, Unit 133, Riverdale, MD 20737-1231; (301) 734-8758.

SUPPLEMENTARY INFORMATION:

Background

Under the regulations in 7 CFR part 318, "Hawaiian and Territorial Quarantine Notices" (referred to below as the regulations), the Animal and Plant Health Inspection Service (APHIS) of the U.S. Department of Agriculture (USDA or the Department) prohibits or restricts the interstate movement of fruits, vegetables, and other products from Hawaii, Puerto Rico, the U.S. Virgin Islands, and Guam to the continental United States to prevent the spread of plant pests and noxious weeds that occur in Hawaii and the territories.

On June 17, 2008, we published in the **Federal Register** (73 FR 34202-34224, Docket No. APHIS-2007-0052) a proposal¹ to amend the regulations by revising and reorganizing those portions of the regulations pertaining to the interstate movement of fruits and vegetables to consolidate requirements of general applicability and eliminate redundant requirements, updating terms and remove outdated requirements and references, and making various editorial and nonsubstantive changes to the regulations to make them easier to use. We also proposed to make substantive changes to the regulations including: Establishing criteria within the regulations that, if met, would allow us to approve certain new fruits and vegetables for interstate movement in the United States and to acknowledge pest-free areas in Hawaii and U.S. territories expeditiously; and removing the listing in the regulations of some specific commodities as regulated

¹ To view the proposed rule and the comments we received, go to <http://www.regulations.gov/fdmspublic/component/main?main=DocketDetail&d=APHIS-2007-0052>.

articles. These changes were intended to simplify and expedite our processes for approving certain regulated articles for interstate movement and pest-free areas while continuing to allow for public participation in the processes.

We solicited comments concerning our proposal for 60 days ending August 18, 2008. We received three comments by that date. They were from private citizens. They are discussed below.

One commenter raised concerns about actions taken at Guam ports of entry with regard to plants moved interstate from Hawaii. The commenter stated that inspectors in Guam are requiring treatment or destruction of plants due to the presence on the plants of a black fungus that is already present in Guam. The commenter stated that the fungus occurs on plants after they have been treated to ensure that the coqui frog is not introduced into Guam. The commenter also stated that the fungus is present in Guam and can be easily controlled by wiping it off the plant.

The issues raised by the commenter did not relate to any specific requirements for treatments that are included in the regulations or that were addressed by the proposal. We will ensure that inspectors in Guam use the least restrictive measure necessary to prevent the introduction of plant pests into Guam.

One commenter opposed the use of irradiation as a phytosanitary treatment.

Irradiation has been proven to be an effective phytosanitary treatment for certain plant pests. Therefore, it is appropriate to provide for its use as an option in mitigating the risk associated with those plant pests. We did not propose to change the pests for which irradiation is an approved treatment or to allow the interstate movement of any new fruits or vegetables with irradiation treatment.

One commenter recommended the use of Hazard Analysis and Critical Control Point plans in phytosanitary systems to prevent risks to health and the environment.

We perform a pest risk analysis when determining whether to authorize the interstate movement of a fruit or vegetable from Hawaii or the territories. Our pest risk analysis process takes such risks into account.

We are making no changes in response to these comments. However, we are making minor changes to the proposal in this final rule.

We proposed to establish a performance-based process for approving the interstate movement of commodities that, based on the findings of a pest risk analysis, can be safely moved interstate subject to one or more

of certain designated phytosanitary measures. One of the designated measures we proposed to use in this process was inspection in the first State of arrival. This proposed designated measure was similar to a designated measure used in the performance-based process for approving the importation of fruits and vegetables in § 319.56–4. That designated measure is inspection upon arrival in the United States.

However, while imported fruits and vegetables are first subject to U.S. Government inspectors upon arrival in the United States, fruits and vegetables moved interstate are always subject to State or Federal inspection, whether inspected in the State of origin or in the State of arrival. Indeed, the primary inspection for fruits and vegetables moved interstate is often performed in the State of origin. Therefore, we are changing the designated measure we proposed to establish in § 318.13–4(b)(1) by referring to inspection either in the State of origin or in the State of first arrival. We are making a similar change to proposed paragraph (c)(2)(i)(B)(1) of § 318.13–4, which referred to this designated measure.

We proposed to amend § 305.17 to indicate that quick freezing treatment is approved for fruits and vegetables moved interstate from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands (CNMI), or the U.S. Virgin Islands, except for the fruits and vegetables listed in paragraph (b) of § 305.17. However, we neglected to propose to amend paragraph (b) to indicate that quick freezing is not an authorized treatment for mango with seeds from Hawaii, although mango with seeds is listed in the Hawaii fruits and vegetables manual as a fruit for which quick freezing treatment is not authorized. In this final rule, we are amending paragraph (b) of § 305.17 to indicate that quick freezing treatment is not authorized for mango with seeds from Hawaii.

We are also making some nonsubstantive editorial changes:

- The part heading for 7 CFR part 318 has read “Hawaiian and Territorial Quarantine Notices.” We are changing this part heading to read “State of Hawaii and Territories Quarantine Notices.”

- In paragraph (b) of proposed § 318.13–1, “Notice of quarantine,” we indicated that the movement of (among other things) plants and portions of plants from Hawaii and the territories would be prohibited except as provided in the proposed subpart “Regulated Articles From Hawaii and the Territories.” However, the movement of cotton plants and plant parts under

certain conditions is authorized under “Subpart—Territorial Cotton, Cottonseed, and Cottonseed Products” (§§ 318.47 through 318.47–4), and we did not propose to change that subpart or those requirements. Accordingly, in this final rule, paragraph (b) of § 318.13–1 refers to the movement of plants and portions of plants being authorized under “Subpart—Territorial Cotton, Cottonseed, and Cottonseed Products” as well as under “Subpart—Regulated Articles From Hawaii and the Territories.”

- In the proposed regulatory text, we made several references to the term “consignment” and to the Plant Protection and Quarantine (PPQ) program, but did not define those terms. In this final rule, we are adding definitions of those terms. The definition of “consignment” is identical to the definition of that term in our imported fruits and vegetables regulations (in § 319.56–2) except that it refers to certificates and limited permits rather than to phytosanitary certificates.

- We proposed to amend the definition of “cut flowers” to indicate that such flowers are customarily used in the florist trade and not planting. In this final rule, we are changing the proposed definition by adding the word “for” before “planting,” to further clarify the intended use of cut flowers.

- We proposed to retain the definitions of “State” and “United States” that have been set out in § 318.13–1. However, these definitions are not consistent with the definitions of those terms in the Plant Protection Act (7 U.S.C. 7701 *et seq.*). In this final rule, we are adding definitions of these terms that are based on the Plant Protection Act definitions. The new definitions are substantively identical to the previous ones.

- The regulations in §§ 318.13–17 and 318.58–12 have provided certain general conditions for transit of fruits and vegetables into or through the continental United States from Hawaii and from Puerto Rico and the U.S. Virgin Islands, respectively. We proposed to consolidate these provisions in § 318.13–6. In the context of labeling requirements, proposed § 318.13–6 referred both to “English common names” and “English names.” In this final rule, § 318.13–6 refers only to “English common names” for consistency and clarity.

- The regulations in §§ 318.13–8 and 318.54–8 have stated that persons, means of conveyance (including ships, other ocean-going craft, and aircraft), baggage, cargo, and any other articles that are destined for movement, are moving, or have been moved interstate

from Hawaii and Puerto Rico, respectively, are subject to agricultural inspection at various points during movement. We proposed to consolidate these requirements in § 318.13–8 but otherwise did not propose to change them. In this final rule, we are adding the words “In addition to the inspection requirements in §§ 318.13–9 and 318.13–10” to the beginning of § 318.13–8, to ensure that the reader is aware of all the provisions related to inspection.

- We proposed to add restrictions on the interstate movement of processed fruits, vegetables, and other products in a new § 318.13–14. In our proposed regulatory text, we referred the reader to the fruits and vegetables manuals to find which processed products are approved for interstate movement. In the final rule, we are adding to the new § 318.13–14 the Web addresses where those manuals can be found.

Therefore, for the reasons given in the proposed rule and in this document, we are adopting the proposed rule as a final rule, with the changes discussed in this document.

Executive Order 12866 and Regulatory Flexibility Act

This final rule has been reviewed under Executive Order 12866. The rule has been determined to be not significant for the purposes of Executive Order 12866 and, therefore, has not been reviewed by the Office of Management and Budget.

In accordance with the Regulatory Flexibility Act, we have analyzed the potential economic effects of this action on small entities.

This rule revises and reorganizes the regulations pertaining to the interstate movement of fruits and vegetables to consolidate requirements of general applicability and eliminates redundant requirements, updates terms and removes outdated requirements and references, makes various editorial and nonsubstantive changes to regulations to make them easier to use, and expand their applicability to include CNMI and all other territories and possessions of the United States.

APHIS is also making substantive changes to the regulations. This rule establishes criteria within the regulations that, if met, allow APHIS to approve certain fruits and vegetables for interstate movement and to acknowledge pest-free areas in Hawaii and U.S. territories without undertaking rulemaking. Currently, these commodities may only be brought into the continental United States after completion of a pest risk analysis, risk management document, and

rulemaking, if the commodities are not currently included on the list of regulated articles.² A similar type of notice-based process has been implemented by APHIS for approving imports. Implementing this rule ensures equitable treatment for domestic producers. This rule also does away with the process of listing in the regulations specific commodities as regulated articles. These changes simplify and expedite the APHIS processes for approving certain regulated articles for interstate movement and pest-free areas while continuing to allow for public participation in the process.

Description and Estimate of the Number of Small Entities Affected by the Rule

Those entities most likely to be economically affected by the rule are wholesalers and producers of fruits and vegetables. The Small Business Administration (SBA) has established guidelines for determining which establishments are to be considered small. A firm primarily engaged in wholesaling fresh fruits and vegetables is considered small if it employs not more than 100 persons. In 2002, about 95 percent (4,044 of 4,244) of fresh fruit and vegetable wholesalers in the United States were small by SBA standards.³ All types of fruit and vegetable farms are considered small if they have annual receipts of \$0.75 million or less. With some exceptions, vegetable and melon farms are largely individually owned and relatively small, with two-thirds harvesting fewer than 25 acres. In 2002, between 80 and 84 percent of U.S. vegetable and melon farms were considered small. Similarly, although numbers have declined, fruit and tree nut production is still dominated by small, family, or individually run farm operations. In 2002, between 92 and 95 percent of all fruit and tree nut farms were considered small.⁴

Expected Effects of the Rule

The fruit and tree nut and the vegetable and melon sectors are vibrant in the United States, for both consumers and producers. The United States is one of the world's leading producers and

consumers of vegetables and melons. The annual sale of vegetables and melons earned farmers \$17.3 billion on average during 2001–03, more than 8 percent of all farm cash receipts (crops and livestock) and 17 percent of crop receipts. Similarly, the U.S. fruit and tree nuts industry is an important component of the U.S. farm sector. It generated over \$12 billion in U.S. farm cash receipts annually in the early 2000s, averaging 6 percent of all farm cash receipts and 12 percent of all crop receipts.

The typical American annually consumes over 280 pounds of fruit and tree nuts (fresh and processed products) each year, ranking third in per capita consumption of major food groups, next to dairy and vegetables. Annual per capita consumption of all vegetables and melons rose 4 percent from 1991–93 to 2001–03, reaching 440 pounds as fresh consumption increased and processed fell. Consumer expenditures for fruit and vegetables are growing faster than for any food group other than meats. Increased domestic and world supplies, rising disposable incomes, and a growing and more culturally diverse population will continue to expand consumer demand for fruits and vegetables in the United States over the next decade. Another important stimulus is continued emphasis on health and nutrition. The fruit and vegetable industries have been very active in promoting the health benefits of fruit and vegetable consumption.

Hawaii and the U.S. territories are important sources of fresh fruits and vegetables for the rest of the United States. In 2002, 666 Hawaiian farms produced more than \$55 million in vegetables, melons, potatoes, and sweet potatoes, equal to about 10 percent of total Hawaiian agricultural sales, and 2,582 Hawaiian farms produced more than \$179 million in fruits, tree nuts, and berries, accounting for more than 33 percent of total Hawaiian agricultural sales. In 2002, Hawaii ranked seventh among the States in the production of fruits, tree nuts, and berries, and 28th in the production of vegetables, melons, potatoes, and sweet potatoes. Hawaii's growers of tropical specialty fruit produced and sold an estimated 1.5 million pounds of fresh fruit in 2005, according to the National Agricultural Statistics Service Hawaii Field Office. This amount was half again as large as the revised 2004 output of 1 million pounds and the highest on record for fresh tropical specialty fruit since records began to be published for this group.

² Regulated articles are fruits and vegetables that APHIS has determined to not involve the risk of spreading plant pests as ordinarily packaged or after treatment.

³ 2002 Economic Census. Department of Commerce. U.S. Bureau of the Census. North American Industry Classification System (NAICS) Category—424480: Fresh fruit and vegetable merchant wholesalers.

⁴ 2002 Census of Agriculture. U.S. Department of Agriculture. National Agricultural Statistics Service. NAICS Categories—1112: Vegetable and melon farming; 1113: Fruit and tree nut farming.

Notice-Based Process

Currently, the regulations prohibit the interstate movement of fruits, vegetables, and other products from Hawaii, Puerto Rico, the U.S. Virgin Islands, and Guam into the continental United States or any other territory or possession of the United States unless the regulations specifically allow the interstate movement of the particular fruit, vegetable, or regulated article. As a condition of interstate movement under the regulations, all approved fruits, vegetables, and other products are subject to some type of restriction to ensure that the regulated article does not act as a pathway for the introduction or dissemination of plant pests or noxious weeds into the United States.

Typically, certain products may be moved interstate if the movement is authorized by a limited permit or a valid certificate issued on the basis of inspection and verification of pest freedom, or on the basis of treatment. These requirements are considered universal requirements. Certain other fruits, vegetables, or products must meet additional requirements to be eligible for movement including distribution restrictions, packing requirements, and other measures determined to be necessary to mitigate the pest risk posed by the particular commodity. This rule establishes a new regulatory approach whereby APHIS will approve or reject certain fruits and vegetables for movement into the continental United States from Hawaii and the U.S. territories without specific prior rulemaking, but in a manner that still provides for public review and comment on the scientific documentation on which such decisions are based. This notice-based process involves a risk analysis that identifies all the pests of concern, documents how all quarantine pests will be removed from the movement pathway through inspection and/or treatment, and allows for public comment.

Currently, exceptions are made to the prohibition for specific commodities moving from Hawaii and the territories provided that the pest risk they pose is mitigated by specific phytosanitary measures. For the vast majority of commodities listed in 7 CFR part 318, inspection and/or treatment are the phytosanitary measures applied to ensure that a commodity does not convey plant pests. For other commodities, APHIS requires a more complex risk mitigation strategy (*i.e.*, a systems approach).

In considering whether to newly authorize the movement of a commodity, APHIS identifies the

phytosanitary measures necessary to address the pest risk posed by the commodity. As a matter of current APHIS policy, any decision made on whether to allow the movement of a commodity from Hawaii or the U.S. territories into the continental United States proceeds through the rulemaking process before the decision can be implemented and the movement allowed.

The notice-based process will apply only to fruits and vegetables that, based on the findings of a risk analysis, APHIS determines can be safely moved interstate subject to one or more designated risk management measures. These designated measures are: (1) Inspection in the State of origin or in the State of first arrival and compliance with all applicable provisions of 318.13-3; (2) treatment in accordance with part 305 and certification of the treatment by an inspector; (3) inspection and certification in the State of origin by an inspector or a State agricultural inspector and found free of one or more specific quarantine pests identified by risk analysis as likely to follow the pathway; (4) commercial consignments only; (5) originating from a pest-free area in the State of origin and the grower from which the commodity originated has entered into a compliance agreement with the Administrator; and (6) subject to box marking or labeling requirements. Fruits and vegetables that require additional risk management beyond one or more of the designated measures cited above will follow the current rulemaking-based process.

By eliminating the need for specific rulemaking for commodities for which the notice-based process is appropriate, considerable time savings could be reaped. The current process for approving commodities takes a notable period of time, ranging on average from 18 months to upwards of 3 years (beginning with the initial request and ending with the publication of the final rule). A significant portion of this time is devoted to the rulemaking process. This rule will reduce the time needed for approval for interstate movement of some fruits and vegetables without eliminating the opportunity for public participation in our analysis of risk.

Consumers benefit from the opportunity to purchase fruits and vegetables from a variety of sources. Consumer expenditures for fruit and vegetables are growing faster than for any food group other than meats. Many of the commodities that will be covered by this rule are likely to be niche products, such as tropical specialty fruits that are unavailable or limited in

availability in the continental United States. This rule will allow producers to more quickly meet consumer demand for those niche products. In addition, most fruit and vegetable production in the continental United States is seasonal, with the largest harvests occurring during the summer and fall. Hawaiian and territorial produce supplement the supply of fruits and vegetables in the continental United States, especially fresh products during the winter, resulting in increased choices for consumers. Hawaiian and territorial producers will also benefit from the ability to more quickly respond to the demands of consumers.

In the current process, APHIS proceeds through rulemaking once it has conducted a risk analysis and identified what phytosanitary measures are necessary to address the pest risk posed by the commodity for which permission for movement into the continental United States has been requested. This rule amends the fruits and vegetables regulations to allow the commodity to be listed as eligible for movement under specified conditions. We expect that requests under this process will lead relatively quickly to the interstate shipment of particular fruits and vegetables that would otherwise face delay under the rulemaking process. There are certain statutory, executive branch, and departmental process requirements that are typically not required under a notice-based process.

The movement requests most likely to qualify for the notice-based process will be for specialty crops having limited markets. These requests, when their risk analyses have been completed and needed phytosanitary measures have been identified, are currently often grouped together for rulemaking. We estimate that by using a notice-based approach, commodity interstate movement approvals could be accomplished 6 to 12 months sooner than when using the rulemaking approach.

This rule does not alter the manner in which the risks associated with a commodity movement request are evaluated, nor does it alter the manner in which those risks are ultimately mitigated. The change merely creates a process whereby certain fruits and vegetables from Hawaii and the territories will be able to more quickly be approved for movement into the continental United States, once it has been determined that the commodity can be safely moved subject to one or more designated risk management measures.

Approval of Pest-Free Areas

APHIS currently recognizes changes in pest-free areas via rulemaking. For example, if an area where fruit flies are known to exist is determined to be free of fruit flies, in order for a fruit or vegetable that is a fruit fly host to move out of that area into the continental United States without treatment or other mitigation for fruit flies, APHIS must list the specific area in the regulations as a fruit-fly free area. If changes in the pest-free status of such areas occur, APHIS must revise the regulations to recognize the changes. Given that such changes in the regulations can only be made via rulemaking, the regulations may not reflect the actual status of a particular area given the time it takes to propose a change to the regulations, respond to comments on the proposal, and to publish a final rule amending the regulations.

Under this rule, when provided with evidence that the pest-free status of an area has changed, APHIS will publish in the **Federal Register** a notice of the proposed change in status and take public comment for 60 days. If no comments submitted to APHIS provide evidence that its determination of pest freedom is incorrect, APHIS will announce that it considers the area to be free of the specified pest and that the area in question meets certain criteria.

This provision will have no immediate impact because there are currently no designated pest-free areas in Hawaii or the territories. However, it will allow APHIS to more quickly recognize changes in the pest-free status of such areas, if any are established in Hawaii or the U.S. territories in the future.

Listing of Specific Commodities Allowed To Move Into the Continental United States

Under this rule, currently approved commodities will no longer be listed in the regulations, nor will commodities that are approved for movement subject to one or more of the designated measures described previously be listed. Consequently, the lists of commodities will be removed from the Code of Federal Regulations, as will a number of other provisions in current commodity-specific sections in the regulations that authorize movement of specific fruits and vegetables in accordance with one or more of the designated measures.

APHIS' Hawaii/CNMI and Puerto Rico/U.S. Virgin Islands fruits and vegetable manuals will list approved commodities, and the documentation supporting their approval will be made available on the Internet at <http://>

www.aphis.usda.gov/import_export/plants/manuals/ports/downloads/hawaii.pdf or http://www.aphis.usda.gov/import_export/plants/manuals/ports/downloads/puerto_rico.pdf. These changes will not alter how or whether a commodity is approved for movement, merely how that status is presented. Therefore, these changes should therefore have little, if any, impact.

Regulated Articles Allowed Interstate Movement Subject to Specific Conditions

Currently, the regulations contain provisions for interstate movement of certain regulated articles from Hawaii, Puerto Rico, the U.S. Virgin Islands, and Guam to other locations in the United States subject to inspection and other universal requirements. Most such commodities will no longer be listed in the regulations under this rule. Those commodities that are allowed interstate movement subject to additional measures beyond the notice-based process measures will be listed. Such commodities will remain subject to the same restrictions that currently apply to their interstate movement.

In many cases, the fruits, vegetables, and other products from Hawaii, Puerto Rico, the U.S. Virgin Islands, Guam, and CNMI subject to additional measures for movement have not been specifically listed in the regulations. This rule will therefore add some commodities to the regulations. However, these measures are currently being enforced administratively. Therefore, these additions to the regulations do not represent a significant change to interstate movement policy, and should have little, if any, impact.

Reorganization of the Regulations and Consolidation of Similar Provisions

This rule will also revise and reorganize the regulations pertaining to the interstate movement of fruits and vegetables to consolidate requirements of general applicability and eliminate redundant requirements, update terms and remove outdated requirements and references, and make various editorial and nonsubstantive changes to the regulations to make them easier to use. These changes will not, however, represent a change in program operations, and should therefore have little, if any, impact.

Conclusion

In sum, APHIS expects little impact on the total supply of fruits and vegetables available in the continental United States, and little change in the movement of fruits and vegetables from

Hawaii and the territories; effects on U.S. producers, marketers and consumers are expected to be small. The main provision of this rule represents a significant structural revision of the regulations pertaining to the movement of fruits and vegetables from Hawaii, Puerto Rico, the U.S. Virgin Islands, Guam, and CNMI, and establishes a new process for approving commodities for movement into the continental United States. However, those commodity movement requests most likely to qualify for the notice-based process will be for specialty crops having limited markets. This rule will not alter the conditions that apply to currently approved fruits or vegetables.

Of particular note with respect to the approval process, the change will allow a newly approved commodity to move more quickly into commerce to the benefit of consumers and Hawaiian and territorial producers once it has been determined that the commodity can be safely moved interstate subject to one or more designated risk management measures. This rule, itself, will not allow for the interstate movement of any specific fruits or vegetables, nor will it alter the conditions for interstate movement of currently approved fruits or vegetables. These changes do not alter the manner in which the risk associated with a commodity interstate movement request is evaluated, nor do they alter the manner in which those risks are ultimately mitigated. Consumers will have quicker access to fruits and vegetables approved for movement using the notice-based process, while risks will still be evaluated and appropriate mitigations required, as they are currently.

Under these circumstances, the Administrator of the Animal and Plant Health Inspection Service has determined that this action will not have a significant economic impact on a substantial number of small entities.

Executive Order 12372

This program/activity is listed in the Catalog of Federal Domestic Assistance under No. 10.025 and is subject to Executive Order 12372, which requires intergovernmental consultation with State and local officials. (See 7 CFR part 3015, subpart V.)

Executive Order 12988

This final rule has been reviewed under Executive Order 12988, Civil Justice Reform. This rule: (1) Preempts all State and local laws and regulations that are inconsistent with this rule; (2) has no retroactive effect; and (3) does not require administrative proceedings

before parties may file suit in court challenging this rule.

National Environmental Policy Act

The majority of the regulatory changes in this document are nonsubstantive, and would therefore have no effects on the environment. However, this rule will allow APHIS to approve certain new articles for interstate movement without undertaking rulemaking. Despite the fact that the interstate movement of these fruits and vegetables will no longer be contingent on the completion of rulemaking, the requirements of the National Environmental Policy Act of 1969, as amended (42 U.S.C. 4321 *et seq.*), will still apply. As such, for each additional regulated article approved for interstate movement, APHIS will make available to the public documentation related to our analysis of the potential environmental effects of the interstate movement of new regulated articles. This documentation would likely be made available at the same time and via the same **Federal Register** notice as the risk analysis for the proposed article.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the information collection or recordkeeping requirements included in this rule have been approved by the Office of Management and Budget (OMB) under OMB control number 0579-0346.

E-Government Act Compliance

The Animal and Plant Health Inspection Service is committed to compliance with the E-Government Act to promote the use of the Internet and other information technologies, to provide increased opportunities for citizen access to Government information and services, and for other purposes. For information pertinent to E-Government Act compliance related to this rule, please contact Mrs. Celeste Sickles, APHIS' Information Collection Coordinator, at (301) 851-2908.

Lists of Subjects

7 CFR Part 305

Irradiation, Phytosanitary treatment, Plant diseases and pests, Quarantine, Reporting and recordkeeping requirements.

7 CFR Part 318

Cotton, Cottonseeds, Fruits, Guam, Hawaii, Plant diseases and pests, Puerto Rico, Quarantine, Transportation, Vegetables, Virgin Islands.

■ Accordingly, we are amending 7 CFR parts 305 and 318 as follows:

PART 305—PHYTOSANITARY TREATMENTS

■ 1. The authority citation for part 305 continues to read as follows:

Authority: 7 U.S.C. 7701-7772 and 7781-7786; 21 U.S.C. 136 and 136a; 7 CFR 2.22, 2.80, and 371.3.

■ 2. Section 305.17 is amended as follows:

■ a. By revising paragraph (a) to read as set forth below.

■ b. In paragraph (b)(3), by adding the words "from Hawaii and" after the word "seeds".

§ 305.17 Authorized treatments; exceptions.

(a) Quick freeze is an authorized treatment for all fruits and vegetables imported into the United States or moved interstate from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands, except for those fruits and vegetables listed in paragraph (b) of this section. Quick freeze for fruits and vegetables imported into the United States or moved interstate from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands must be conducted in accordance with § 319.56-12 of this subchapter for imported fruits and vegetables and § 318.13-13 of this subchapter for fruits and vegetables moved interstate.

* * * * *

§ 305.34 [Amended]

■ 3. In § 305.34, paragraph (b)(2)(iii) is amended by removing the citation "§ 318.13-4(d)" and adding the citation "§ 318.13-3(d)" in its place.

PART 318—STATE OF HAWAII AND TERRITORIES QUARANTINE NOTICES

■ 4. The authority citation for part 318 continues to read as follows:

Authority: 7 U.S.C. 7701-7772 and 7781-7786; 7 CFR 2.22, 2.80, and 371.3.

■ 5. The part heading for part 318 is revised to read as set forth above.

■ 6. Subpart—Hawaiian Fruits, Vegetables, and Flowers, consisting of §§ 318.13 through 318.13-17, is removed and a new Subpart—Regulated Articles From Hawaii and the Territories, §§ 318.13-1 through 318.13-25, is added to read as follows:

Subpart—Regulated Articles From Hawaii and the Territories
Sec.

318.13-1 Notice of quarantine.

318.13-2 Definitions.

318.13-3 General requirements for all regulated articles.

318.13-4 Approval of certain fruits and vegetables for interstate movement.

318.13-5 Pest-free areas.

318.13-6 Transit of regulated articles from Hawaii or the territories into or through the continental United States.

318.13-7 Products as ships' stores or in the possession of passengers or crew.

318.13-8 Articles and persons subject to inspection.

318.13-9 Inspection and disinfection of means of conveyance.

318.13-10 Inspection of baggage, other personal effects, and cargo.

318.13-11 Posting of warning notice and distribution of baggage declarations.

318.13-12 Movement by the U.S. Department of Agriculture.

318.13-13 Movement of frozen fruits and vegetables.

318.13-14 Movement of processed fruits, vegetables, and other products.

318.13-15 Parcel post inspection.

318.13-16 Regulated articles allowed interstate movement subject to specified conditions.

318.13-17 Regulated articles from Guam.

318.13-18 through 318.13-20 [Reserved]

318.13-21 Avocados from Hawaii to Alaska.

318.13-22 Bananas from Hawaii.

318.13-23 Cut flowers from Hawaii.

318.13-24 Sweetpotatoes from Puerto Rico.

318.13-25 Sweetpotatoes from Hawaii.

Subpart—Regulated Articles From Hawaii and the Territories

§ 318.13-1 Notice of quarantine.

(a) Under the authority of section 412 of the Plant Protection Act, the Secretary of Agriculture may prohibit or restrict the movement in interstate commerce of any plant or plant product if the Secretary determines that the prohibition or restriction is necessary to prevent the introduction into the United States or the dissemination within the United States of a plant pest or noxious weed.

(b) The Secretary has determined that it is necessary to prohibit the interstate movement of cut flowers and fruits and vegetables and plants and portions of plants from Hawaii, Puerto Rico, the U.S. Virgin Islands, Guam, and the Commonwealth of the Northern Mariana Islands except as provided in this subpart or as provided in "Subpart—Territorial Cotton, Cottonseed, and Cottonseed Products" in this part.

§ 318.13-2 Definitions.

Administrator. The Administrator of the Animal and Plant Health Inspection Service (APHIS), U.S. Department of Agriculture, or any other employee of APHIS to whom authority has been

delegated to act in the Administrator's stead.

Animal and Plant Health Inspection Service. The Animal and Plant Health Inspection Service (APHIS) of the U.S. Department of Agriculture.

Approved growing media. Agar or other translucent tissue culture media, buckwheat hulls, clean ocean sand, excelsior, exfoliated vermiculite, ground cork, ground peat, ground rubber, paper, polymer stabilized cellulose, quarry gravel, sawdust, wood shavings, cork shavings, sphagnum moss, tree fern slab (approved only for orchids), and vegetable fiber (free of pulp) including coconut and osmunda, but excluding cotton and sugarcane.

Certification (certified). A type of authorization, issued by an inspector, evidencing freedom from infestation, to allow the movement of certain regulated articles in accordance with the regulations in this subpart. "Certified" shall be construed accordingly.

Commercial consignment. A lot of fruits or vegetables that an inspector identifies as having been produced for sale or distribution in mass markets. Such identification will be based on a variety of indicators, including, but not limited to: Quantity of produce, type of packaging, identification of grower and packinghouse on the packaging, and documents consigning the fruits or vegetables to a wholesaler or retailer.

Compliance agreement. Any agreement to comply with stipulated conditions as prescribed under § 318.13-3 or § 318.13-4 or § 305.34 of this chapter, executed by any person to facilitate the interstate movement of regulated articles under this subpart.

Consignment. A quantity of plants, plant products, and/or other articles, including fruits or vegetables, being moved from one country to another and covered, when required, by a single certificate or limited permit (a consignment may be composed of one or more commodities or lots).

Continental United States. The 48 contiguous States, Alaska, and the District of Columbia.

Cut flower. Any cut blooms, fresh foliage, and dried decorative plant material customarily used in the florist trade and not for planting; and being the severed portion of a plant, including the inflorescence, and any parts of the plant attached thereto, in a fresh state.

Disinfection (disinfect and disinfected). The application to parts or all of a ship, vessel, other surface craft, or aircraft of a treatment that may be designated by the inspector as effective against such plant pests as may be present. ("Disinfect" and "disinfected" shall be construed accordingly.)

Fruits and vegetables. A commodity class for fresh parts of plants intended for consumption or processing and not planting.

Inspector. A State agricultural inspector or any individual authorized by the Administrator of APHIS or the Commissioner of Customs and Border Protection, Department of Homeland Security, to enforce the regulations in this subpart.

Interstate. From one State into or through any other State; or within the District of Columbia, Guam, the Virgin Islands of the United States, or any other territory or possession of the United States.

Limited permit. A document issued by an inspector or a person operating under a compliance agreement for the interstate movement of regulated articles to a specified destination for:

- (1) Consumption, limited utilization or processing, or treatment; or
- (2) Movement into or through the continental United States in conformity with a transit permit.

Lot. A number of units of a single commodity, identifiable by its homogeneity of composition and origin, forming all or part of a consignment.

Means of conveyance. A ship, truck, aircraft, or railcar.

Moved (move and movement). Shipped, offered for shipment to a common carrier, received for transportation or transported by a common carrier, or carried, transported, moved, or allowed to be moved, directly or indirectly, from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands into or through the continental United States or any other State or territory of the United States (or from or into or through other places as specified in this subpart). "Move" and "movement" shall be construed accordingly.

Packing materials. Any plant or plant product, soil, or other substance associated with or accompanying any commodity or consignment to serve for filling, wrapping, ties, lining, mats, moisture retention, protection, or any other auxiliary purpose. The word "packing," as used in the expression "packing materials," includes the presence of such materials within, in contact with, or accompanying a consignment.

Person. Any individual, partnership, corporation, association, joint venture, or other legal entity.

Plant debris. Detached leaves, twigs, or other portions of plants, or plant litter or rubbish as distinguished from approved parts of clean fruits and vegetables, or other commercial articles.

Plant pests. Any living stage of any of the following that can directly or indirectly injure, cause damage to, or cause disease in any plant or plant product: A protozoan, nonhuman animal, parasitic plant, bacterium, fungus, virus or viroid, infectious agent or other pathogen, or any article similar to or allied with any of those articles.

Plant Protection and Quarantine (PPQ). The Plant Protection and Quarantine program of APHIS.

Regulated articles. Fruits or vegetables in the raw or unprocessed state; cut flowers; seeds; and plants or plant products for nonpropagative or propagative use.

Sealed (sealable) container. A completely enclosed container designed for the storage and/or transportation of commercial air, sea, rail, or truck cargo, and constructed of metal or fiberglass, or other similarly sturdy and impenetrable material, providing an enclosure accessed through doors that are closed and secured with a lock or seal. Sealed (sealable) containers used for sea consignments are distinct and separable from the means of conveyance carrying them when arriving in and in transit through the continental United States. Sealed (sealable) containers used for air consignments are distinct and separable from the means of conveyance carrying them before any transloading in the continental United States. Sealed (sealable) containers used for overland consignments in the continental United States may either be distinct and separable from the means of conveyance carrying them, or be the means of conveyance itself.

Soil. The loose surface material of the earth in which plants grow, in most cases consisting of disintegrated rock with an admixture of organic material and soluble salts.

State. Any of the several States of the United States, the Commonwealth of the Northern Mariana Islands, the Commonwealth of Puerto Rico, the District of Columbia, Guam, the Virgin Islands of the United States, or any other territory or possession of the United States.

Transit permit. A written authorization issued by the Administrator for the movement of fruits and vegetables en route to a foreign destination that are otherwise prohibited movement by this subpart into the continental United States. Transit permits authorize one or more consignments over a designated period of time.

Transloading. The transfer of cargo from one sealable container to another,

from one means of conveyance to another, or from a sealable container directly into a means of conveyance.

United States. All of the States.

§ 318.13–3 General requirements for all regulated articles.

All regulated articles that are allowed movement under this subpart must be moved in accordance with the following requirements, except as specifically provided otherwise in this subpart.

(a) *Freedom from plant debris.* All regulated articles moved under this subpart must be free from plant debris.

(b) *Certification.* Certification may be issued for the movement of regulated articles under the following conditions:

(1) *Certification on basis of inspection or nature of lot involved.* Regulated articles may be certified when they have been inspected by an inspector and found apparently free from infestation and infection, or without such inspection when the inspector determines that the lot for consignment is of such a nature that no danger of infestation or infection is involved.

(i) Persons intending to move any articles that may be certified must contact the local Plant Protection and Quarantine office as far as possible in advance of the contemplated date of shipment in order to request an inspection.

(ii) Persons intending to move any articles that may be certified must prepare, handle, and safeguard such articles from infestation or reinfestation, and assemble them at such points as the inspector may designate, placing them so that inspection may be readily made.

(2) *Certification on basis of treatment.* (i) Regulated articles for which treatments are approved in part 305 of this chapter may be certified if such treatments have been applied in accordance with part 305 of this chapter and if the articles were handled after such treatment in accordance with a compliance agreement executed by the applicant for certification or under the supervision of an inspector.

(ii) Regulated articles certified after treatment in accordance with part 305 of this chapter that are taken aboard any ship, vessel, other surface craft, or aircraft must be segregated and protected in a manner as required by the inspector.

(c) *Limited permits.* (1) Limited permits¹ may be issued by an inspector for the movement of certain noncertified regulated articles to restricted destinations.

(2) Limited permits may be issued by an inspector for the movement of regulated articles that would otherwise be prohibited movement under this subpart, if the articles are to be moved in accordance with § 318.13–6.

(3) Except when the regulations specify that an inspector must issue the limited permit, limited permits may be issued by a person operating under a compliance agreement.

(d) *Compliance agreements.* As a condition for the movement of regulated articles for which a compliance agreement is required, the person entering the compliance agreement must agree to the following:

(1) That he or she will use any permit or certification issued to him or her in accordance with the provisions in the permit, the requirements in this subpart, and the compliance agreement;

(2) That he or she will maintain at his or her establishment such safeguards against the establishment and spread of infestation and infection and comply with such conditions as to the maintenance of identity, handling (including post-treatment handling), and interstate movement of regulated articles and the cleaning and treatment of means of conveyance and containers used in such movement of the articles, as may be required by the inspector in each specific case to prevent the spread of infestation or infection; and

(3) That he or she will allow inspectors to inspect the establishment and its operations.

(e) *Attachment of limited permit or verification of certification.* Except as otherwise provided for certain air cargo and containerized cargo on ships moved in accordance with § 318.13–10, each box, bale, crate, or other container of regulated articles moved under certification or limited permit shall have the limited permit attached to the outside of the container or bear a U.S. Department of Agriculture stamp or inspection sticker verifying that the consignment has been certified in accordance with paragraph (b) of this section: *Provided*, That if a limited permit or certification is issued for a consignment of more than one container or for bulk products, certification shall be stamped on or the limited permit shall be attached to the accompanying waybill, manifest, or bill of lading.

(f) *Withdrawal of certification, transit permits, limited permits, or compliance agreements.* Any certification, transit permit, limited permit, or compliance agreement which has been issued or authorized may be withdrawn by an inspector orally or in writing, if such inspector determines that the holder thereof has not complied with all

conditions under the regulations for the use of such document. If the cancellation is oral, the decision and the reasons for the withdrawal shall be confirmed in writing as promptly as circumstances allow. Any person whose certification, transit permit, limited permit, or compliance agreement has been withdrawn may appeal the decision in writing to the Administrator within 10 days after receiving the written notification of the withdrawal. The appeal shall state all of the facts and reasons upon which the person relies to show that the certification, transit permit, limited permit, or compliance agreement was wrongfully withdrawn. The Administrator shall grant or deny the appeal, in writing, stating the reasons for such decision, as promptly as circumstances allow. If there is a conflict as to any material fact, a hearing shall be held to resolve such conflict. Rules of practice concerning such a hearing will be adopted by the Administrator.

(g) *Container marking and identity.* Except as provided in § 318.13–6(c), consignments of regulated articles moved in accordance with this subpart must have the following information clearly marked on each container or on the waybill, manifest, or bill of lading accompanying the articles: Nature and quantity of contents; name and address of shipper, owner, or person shipping or forwarding the articles; name and address of consignee; shipper's identifying mark and number; and the certification stamp or number of the limited permit authorizing movement, if one was issued.

(h) *Refusal of movement.* An inspector may refuse to allow the interstate movement of a regulated article if the inspector finds that the regulated article is prohibited, is not accompanied by required documentation, is so infested with a plant pest or noxious weed that, in the judgment of the inspector, it cannot be cleaned or treated, or contains soil or other prohibited contaminants.

(i) *Costs and charges.* Services of the inspector during regularly assigned hours of duty at the usual places of duty shall be furnished without cost to the one requesting such services. APHIS will not assume responsibility for any costs or charges, other than those indicated in this section, in connection with the inspection, treatment, conditioning, storage, forwarding, or any other operation of any character incidental to the physical movement of regulated articles or plant pests.

(j) *APHIS not responsible for damage.* APHIS assumes no responsibility for any damage to regulated articles that

¹Limited permits can be obtained from each State or territory's local Plant Protection and Quarantine office.

results from the application of treatment or other measures required under this subpart (or under part 305 of this chapter) to protect against the dissemination of plant pests within the United States.

(Approved by the Office of Management and Budget under control number 0579-0346)

§ 318.13-4 Approval of certain fruits and vegetables for interstate movement.

(a) *Determination by the Administrator.* The Administrator has determined that the application of one or more of the designated phytosanitary measures cited in paragraph (b) of this section to certain fruits and vegetables mitigates the risk posed by those commodities, and that such articles may be moved interstate subject to one or more of those measures, as provided in paragraphs (c) and (d) of this section. The name and origin of all fruits and vegetables authorized movement under this section, as well as the applicable requirements for their movement, may be found on the Internet at http://www.aphis.usda.gov/import_export/plants/manuals/ports/downloads/hawaii.pdf or http://www.aphis.usda.gov/import_export/plants/manuals/ports/downloads/puerto_rico.pdf. Fruits or vegetables that require phytosanitary measures other than one or more of the designated phytosanitary measures cited in paragraph (b) of this section may only be moved in accordance with applicable requirements in § 318.13-3 and regulated article-specific requirements contained elsewhere in this subpart.

(b) *Designated phytosanitary measures.* (1) The fruits and vegetables are inspected in the State of origin or in the first State of arrival.

(2) The fruits and vegetables originated from a pest-free area in the State of origin and the grower from which the fruit or vegetable originated has entered into a compliance agreement with the Administrator.

(3) The fruits and vegetables are treated in accordance with part 305 of this chapter and the treatment is certified by an inspector.

(4) The fruits and vegetables articles are inspected and certified in the State of origin by an inspector and have been found free of one or more specific quarantine pests identified by risk analysis as likely to follow the pathway.

(5) The fruits and vegetables are moved as commercial consignments only.

(6) The fruits and vegetables may be distributed only within a defined area and the boxes or containers in which the fruit or vegetables are distributed

must be marked to indicate the applicable distribution restrictions.

(c) *Fruits and vegetables authorized for interstate movement under this section.*

(1) *Previously approved fruits and vegetables.* Fruits and vegetables that were authorized movement under this subpart either administratively or by specific regulation as of February 17, 2009 and that were subject only to one or more of the designated phytosanitary measures cited in paragraph (b) of this section and the general requirements of § 318.13-3 may continue to be moved interstate under the same requirements that applied before February 17, 2009, except as provided in paragraph (d) of this section. The interstate movement conditions for those fruits and vegetables that were authorized movement under this subpart subject to additional measures beyond the designated measures in paragraph (b) of this section can be found in § 318.13-16 or one of the commodity-specific sections in this subpart.

(2) *Other fruits and vegetables.* Fruits and vegetables that do not meet the criteria in paragraph (c)(1) of this section may be authorized movement under this section as follows:

(i) *Pest risk analysis.* The risk posed by the particular article from a specified State has been evaluated and publicly communicated as follows:

(A) *Availability of pest risk analysis.* APHIS published in the **Federal Register**, for a public comment period of 60 days, a notice announcing the availability of a pest risk analysis that evaluated the risks associated with the movement of the particular fruit or vegetable.

(B) *Determination of risk; factors considered.* The Administrator determined, and announced in the notice referred to in the previous paragraph, that, based on the information available, the application of one or more of the designated phytosanitary measures described in paragraph (b) of this section is sufficient to mitigate the risk that plant pests or noxious weeds could be introduced into or disseminated elsewhere within the United States by the fruit or vegetable. In order for the Administrator to make the determination described in this paragraph, he or she must conclude based on the information presented in the risk analysis for the fruit or vegetable that the risk posed by each quarantine pest associated with the fruit or vegetable in the State of origin is mitigated by one or more of the following factors:

(1) *Inspection.* A quarantine pest is associated with the fruit or vegetable in

the State of origin, but the pest can be easily detected via inspection in the State of origin or in the State of first arrival;

(2) *Pest freedom.* No quarantine pests are known to be associated with the fruit or vegetable in the State of origin, or a quarantine pest is associated with the fruit or vegetable in the State of origin but the fruit or vegetable originates from an area that meets the requirements of § 318.13-5 for pest freedom;

(3) *Effectiveness of treatment.* A quarantine pest is associated with the fruit or vegetable in the State of origin, but the risk posed by the pest can be reduced by applying an approved post-harvest treatment to the fruit or vegetable;

(4) *Predeparture inspection.* A quarantine pest is associated with the fruit or vegetable in the State of origin, but the fruit or vegetable is subject to predeparture inspection;

(5) *Commercial consignments.* A quarantine pest is associated with the fruit or vegetable in the State of origin, but the risk posed by the pest can be reduced by commercial practices.

(6) *Limited distribution.* A quarantine pest is associated with the fruit or vegetable in the State of origin, but the risk posed by the pest can be reduced by limiting distribution of the fruit or vegetable and labeling boxes containing the fruit or vegetable with those distribution instructions.

(ii) *Administrator's decision.* The Administrator will announce his or her decision in a subsequent **Federal Register** notice. If appropriate, APHIS would begin allowing the interstate movement of the fruits or vegetables subject to requirements specified in the notice because:

(A) No comments were received on the pest risk analysis;

(B) The comments on the pest risk analysis revealed that no changes to the pest risk analysis were necessary; or

(C) Changes to the pest risk analysis were made in response to public comments, but the changes did not affect the overall conclusions of the analysis and the Administrator's determination of risk.

(d) *Amendment of interstate movement requirements.* If, after February 17, 2009, the Administrator determines that one or more of the designated phytosanitary measures is not sufficient to mitigate the risk posed by any fruit or vegetable authorized interstate movement under this section, APHIS will prohibit or further restrict the interstate movement of the fruit or vegetable pending resolution of the situation. If APHIS concludes that a

permanent change to the interstate movement requirements of a particular fruit or vegetable is necessary, APHIS will also publish a notice in the **Federal Register** advising the public of its finding. The notice will specify the amended interstate movement requirements, provide an effective date for the change, and invite public comment on the subject.

(Approved by the Office of Management and Budget under control number 0579-0346)

§ 318.13-5 Pest-free areas.

Certain fruits or vegetables may be moved interstate provided that the fruits or vegetables originate from an area that is free of a specific pest or pests. In some cases, fruits or vegetables may only be moved interstate if the area of origin is free of all plant pests that attack the fruits or vegetables. In other cases, fruits or vegetables may be moved interstate if the area of origin is free of one or more plant pests that attack the fruit or vegetable and the risk posed by the remaining plant pests that attack the fruit or vegetable is mitigated by other specific phytosanitary measures contained in the regulations in this subpart.

(a) *Application of standards for pest-free areas.* APHIS will make a determination of an area's pest-free status based on information provided by the State. The information used to make this determination will include trapping and surveillance data, survey protocols, and protocols for actions to be performed upon detection of a pest.

(b) *Survey protocols.* APHIS must approve the survey protocol used to determine and maintain pest-free status, as well as protocols for actions to be performed upon detection of a pest. Pest-free areas are subject to audit by APHIS to verify their status.

(c) *Determination of pest freedom.* (1) For an area to be considered free of a specified pest for the purposes of this subpart, the Administrator must determine, and announce in a notice published in the **Federal Register** for a public comment period of 60 days, that the area meets the criteria of paragraphs (a) and (b) of this section.

(2) The Administrator will announce his or her decision in a subsequent **Federal Register** notice. If appropriate, APHIS will allow movement of the regulated article from a pest-free area because:

(i) No comments were received on the notice or

(ii) The comments on the notice did not affect the overall conclusions of the notice and the Administrator's determination of risk.

(d) *Decertification of pest-free areas; reinstatement.* If a pest is detected in an area that is designated as free of that pest, APHIS will publish in the **Federal Register** a notice announcing that the pest-free status of the area in question has been withdrawn and that interstate movement of host crops for the pest in question is subject to application of an approved treatment for the pest. If a treatment for the pest is not available, interstate movement of the host crops would be prohibited. In order for a decertified pest-free area to be reinstated, it would have to meet the criteria of paragraphs (a) through (c) of this section.

(e) *General requirements for the interstate movement of regulated articles from pest-free areas.*

(1) *Labeling.* Each box of fruits or vegetables that is moved interstate from a pest-free area under this subpart must be clearly labeled with:

- (i) The name of the orchard or grove of origin, or the name of the grower; and
- (ii) The name of the municipality and State or territory in which the fruits or vegetables were produced; and
- (iii) The type and amount of fruits or vegetables the box contains.

(2) *Compliance agreement.* Persons wishing to move fruits or vegetables from a pest-free area in Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands must enter into a compliance agreement with APHIS in accordance with § 318.13-3(d).

(3) *Safeguarding.* If fruits or vegetables are moved from a pest-free area into or through an area that is not free of that pest, the fruits or vegetables must be safeguarded during the time they are present in a non-pest-free area by being covered with insect-proof mesh screens or plastic tarpaulins, including while in transit to the packinghouse and while awaiting packaging. If fruits or vegetables are moved through an area that is not free of that pest during transit to a port, they must be packed in insect-proof cartons or containers or be covered by insect-proof mesh or plastic tarpaulins during transit to the port and subsequent movement into or through the United States. These safeguards described in this section must remain intact until the fruits or vegetables reach their final destination.

(Approved by the Office of Management and Budget under control number 0579-0346)

§ 318.13-6 Transit of fruits and vegetables from Hawaii or the territories into or through the continental United States.

Fruits and vegetables from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the

U.S. Virgin Islands that are otherwise prohibited interstate movement into the continental United States by this subpart may transit the continental United States en route to a foreign destination when moved in accordance with this section.

(a) *Transit permit.* (1) A transit permit is required for the arrival, unloading, and movement through the continental United States of fruits and vegetables otherwise prohibited by this subpart from being moved through the continental United States from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands. Application for a transit permit may be made in writing or with PPQ Form 586.² The transit permit application must include the following information:

(i) The specific types of fruits and vegetables to be shipped (only scientific or English common names are acceptable);

(ii) The means of conveyance to be used to transport the fruit or vegetable through the continental United States;

(iii) The port of arrival in the continental United States, and the location of any subsequent stop;

(iv) The location of, and the time needed for, any storage in the continental United States;

(v) Any location in the continental United States where the fruits or vegetables are to be transloaded;

(vi) The means of conveyance to be used for transporting the fruits or vegetables from the port of arrival in the continental United States to the port of export;

(vii) The estimated time necessary to accomplish exportation, from arrival at the port of arrival in the continental United States to exit at the port of export;

(viii) The port of export; and

(ix) The name and address of the applicant and, if the applicant's address is not within the territorial limits of the continental United States, the name and address in the continental United States of an agent whom the applicant names for acceptance of service of process.

(2) A transit permit will be issued only if the following conditions are met:

(i) APHIS inspectors are available at the port of arrival, port of export, and any locations at which transloading of cargo will take place and, in the case of

² PPQ Form 586 can be obtained from PPQ Permit Services or at http://www.aphis.usda.gov/plant_health/permits/transit.shtml. Applications for transit permits should be submitted to USDA, APHIS, PPQ Permit Services, 4700 River Road Unit 136, Riverdale, MD 20737 or through e-permits http://www.aphis.usda.gov/permits/learn_epermits.shtml.

air consignments, at any interim stop in the continental United States, as indicated on the application for the transit permit;

(ii) The application indicates that the proposed movement would comply with the provisions in this section applicable to the transit permit; and

(iii) During the 12 months prior to receipt of the application by APHIS, the applicant has not had a transit permit withdrawn under § 318.13-3(f), unless the transit permit has been reinstated upon appeal.

(b) *Limited permit.* Fruits or vegetables shipped from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands through the continental United States under this section must be accompanied by a limited permit, a copy of which must be presented to an inspector at the port of arrival and the port of export in the continental United States, and at any other location in the continental United States where an air consignment is authorized to stop or where overland consignments change means of conveyance. An inspector will issue a limited permit if the following conditions are met:

(1) The inspector determines that the specific type and quantity of the fruits or vegetables being shipped are accurately described by accompanying documentation, such as the accompanying manifest, waybill, and bill of lading. (Only scientific or English common names are acceptable.) The fruits or vegetables shall be assembled at whatever point and in whatever manner the inspector designates as necessary to comply with the requirements of this section; and

(2) The inspector establishes that the consignment of fruits or vegetables has been prepared in compliance with the provisions of this section.

(c) *Marking requirements.* Each of the smallest units, including each of the smallest bags, crates, or cartons, containing regulated articles for transit through the continental United States under this section must be conspicuously marked, prior to the locking and sealing of the container in the State of origin, with a printed label that includes a description of the specific type and quantity of the fruits or vegetables (only scientific or English common names are acceptable), the transit permit number under which the regulated articles are to be shipped, and, in English, the State in which they were grown and the statement "Distribution in the United States is Prohibited."

(d) *Handling of fruits and vegetables.* Fruits or vegetables shipped through the United States from Hawaii, Puerto Rico,

Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands in accordance with this section may not be commingled in the same sealed container with fruits or vegetables that are intended for entry and distribution in the United States. The fruits or vegetables must be kept in sealed containers from the time the limited permit required by paragraph (b) of this section is issued, until the fruits or vegetables exit the United States, except as otherwise provided in the regulations in this section. Transloading must be carried out in accordance with the requirements of paragraphs (a), (h), and (i) of this section.

(e) *Area of movement.* The port of arrival, the port of export, ports for air stops, and overland movement within the continental United States of fruits or vegetables shipped under this section is limited to a corridor that includes all States of the continental United States except Alabama, Arizona, California, Florida, Georgia, Kentucky, Louisiana, Mississippi, Nevada, New Mexico, North Carolina, South Carolina, Tennessee, Texas, and Virginia, except that movement is allowed through Dallas/Fort Worth, TX, as an authorized stop for air cargo, or as a transloading location for consignments that arrive by air but that are subsequently transloaded into trucks for overland movement from Dallas/Fort Worth, TX, into the designated corridor by the shortest route. Movement through the United States must begin and end at locations staffed by APHIS inspectors.

(f) *Movement of regulated articles.* Transportation through the continental United States shall be by the most direct route to the final destination of the consignment in the country to which it is exported, as determined by APHIS based on commercial shipping routes and timetables and set forth in the transit permit. No change in the quantity of the original consignment from that described in the limited permit is allowed. No remarking is allowed. No diversion or delay of the consignment from the itinerary described in the transit permit and limited permit is allowed unless authorized by an APHIS inspector upon determination by the inspector that the change will not significantly increase the risk of plant pests or diseases in the United States, and unless each port to which the consignment is diverted is staffed by APHIS inspectors.

(g) *Notification in case of emergency.* In the case of an emergency such as an accident, a mechanical breakdown of the means of conveyance, or an unavoidable deviation from the prescribed route, the person in charge of

the means of conveyance must, as soon as practicable, notify the APHIS office at the port where the cargo arrived in the United States.

(h) *Consignments by sea.* Except as authorized by this paragraph, consignments arriving in the United States by sea from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands may be transloaded once from a ship to another ship or, alternatively, once to a truck or railcar at the port of arrival and once from a truck or railcar to a ship at the port of export, and must remain in the original sealed container, except under extenuating circumstances and when authorized by an inspector upon determination by the inspector that the transloading would not significantly increase the risk of the introduction of plant pests or diseases into the United States, and provided that APHIS inspectors are available to provide supervision. No other transloading of the consignment is allowed, except under extenuating circumstances (e.g., equipment breakdown) and when authorized by an inspector upon determination by the inspector that the transloading would not significantly increase the risk of the introduction of plant pests or diseases into the continental United States, and provided that APHIS inspectors are available to provide supervision.

(i) *Consignments by air.* (1) Consignments arriving in the United States by air from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands may be transloaded only once in the United States. Transloading of air consignments must be carried out in the presence of an APHIS inspector. Consignments arriving by air that are transloaded may be transloaded either into another aircraft or into a truck trailer for export by the most direct route to the final destination of the consignment through the designated corridor set forth in paragraph (e) of this section. This may be done at either the port of arrival in the United States or at the second air stop within the designated corridor, as authorized in the transit permit and as provided in paragraph (i)(2) of this section. No other transloading of the consignment is allowed, except under extenuating circumstances (e.g., equipment breakdown) and when authorized by an APHIS inspector upon determination by the inspector that the transloading would not significantly increase the risk of the introduction of plant pests or diseases into the United States, and provided that APHIS inspectors are

available to provide supervision. Transloading of air consignments will be authorized only if the following conditions are met:

(i) The transloading is done into sealable containers;

(ii) The transloading is carried out within the secure area of the airport (*i.e.*, that area of the airport that is open only to personnel authorized by the airport security authorities);

(iii) The area used for any storage is within the secure area of the airport; and

(iv) APHIS inspectors are available to provide the supervision required by paragraph (i)(1) of this section.

(2) Except as authorized by paragraph (f) of this section, consignments that continue by air from the port of arrival in the continental United States may be authorized by APHIS for only one additional stop in the continental United States, provided the second stop is within the designated corridor set forth in paragraph (e) of this section and is staffed by APHIS inspectors. As an alternative to transloading a consignment arriving in the United States into another aircraft, consignments that arrive by air may be transloaded into a truck trailer for export by the most direct route to the final destination of the consignment through the designated corridor set forth in paragraph (e) of this section. This may be done at either the port of arrival in the United States or at the second authorized air stop within the designated corridor. No other transloading of the consignment is allowed, except under extenuating circumstances (*e.g.*, equipment breakdown) and when authorized by an APHIS inspector upon determination by the inspector that the transloading would not significantly increase the risk of the introduction of plant pests or diseases into the United States, and provided that APHIS inspectors are available to provide supervision.

(j) *Duration and location of storage.* Any storage in the United States of fruits or vegetables shipped under this section must be for a duration and in a location authorized in the transit permit required by paragraph (a) of this section. Areas where such fruits or vegetables are stored must be either locked or guarded at all times the fruits and vegetables are present. Cargo shipped under this section must be kept in a sealed container while stored in the continental United States.

(k) *Temperature requirement.* Except for time spent on aircraft and except during storage and transloading of air consignments, the temperature in the sealed containers containing fruits and

vegetables moved under this section must be 60 °F or lower from the time the regulated articles leave Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, the U.S. Virgin Islands, or any other territory or possession of the United States until they exit the United States.

(l) *Prohibited materials.* (1) The person in charge of or in possession of a sealed container used for movement into or through the United States under this section must ensure that the sealed container is carrying only those fruits or vegetables authorized by the transit permit required under paragraph (a) of this section; and

(2) The person in charge of or in possession of any means of conveyance or container returned to the United States without being reloaded after being used to export fruits or vegetables from the United States under this section must ensure that the means of conveyance or container is free of materials prohibited importation into the United States under this chapter.

(m) Authorization by APHIS of the movement of fruits or vegetables through the United States under this section does not imply that such fruits or vegetables are enterable into the destination country. Consignments returned to the United States from the destination country shall be subject to all applicable regulations, including "Subpart—Fruits and Vegetables" of part 319 and "Plant Quarantine Safeguard Regulations" of part 352 of this chapter.

(n) Any restrictions and requirements with respect to the arrival, temporary stay, unloading, transloading, transiting, exportation, or other movement or possession in the United States of any fruits or vegetables under this section shall apply to any person who brings into, maintains, unloads, transloads, transports, exports, or otherwise moves or possesses in the United States such fruits or vegetables, whether or not that person is the one who was required to have a transit permit or limited permit for the fruits or vegetables or is a subsequent custodian of the fruits or vegetables. Failure to comply with all applicable restrictions and requirements under this section by such a person shall be deemed to be a violation of this section.

(Approved by the Office of Management and Budget under control number 0579-0346)

§ 318.13-7 Products as ships' stores or in the possession of passengers or crew.

(a) *In the possession of passengers or crew members.* Small quantities of fruits, vegetables, or cut flowers subject to the quarantine and regulations in this

subpart, when loose and free of packing materials, may be taken aboard any ship, vessel, or other surface craft by passengers or members of the crew without inspection and certification in the State of origin. However, if such articles are not eligible for certification under § 318.13-3, they must be entirely consumed or disposed of before arrival within the territorial waters of the continental United States, Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands.

(b) *As ships' stores or decorations.* Fruits, vegetables, or cut flowers subject to the quarantine and regulations in this subpart may be taken aboard a ship, vessel, or other surface craft in Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands without inspection or certification. Fruits, vegetables, and cut flowers that are so taken aboard such a carrier must be either:

(1) Entirely consumed or removed from the ship, vessel, or other surface craft before arrival within the territorial waters of the continental United States, Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, the U.S. Virgin Islands, or any other territory or possession of the United States; or

(2) In the case of a surface carrier, retained aboard such carrier under seal or otherwise disposed of subject to safeguards equivalent to those imposed on other prohibited or restricted products by paragraphs (b) and (c) of § 352.10 of this chapter.

§ 318.13-8 Articles and persons subject to inspection.

In addition to the inspection requirements in §§ 318.13-9 and 318.13-10, persons, means of conveyance (including ships, other oceangoing craft, and aircraft), baggage, cargo, and any other articles, that are destined for movement, are moving, or have been moved from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands to a destination elsewhere in the United States are subject to agricultural inspection at the port of departure, the port of arrival, or any other authorized port. If an inspector finds any article prohibited movement by the quarantine and regulations of this subpart, he or she, taking the least drastic action, shall order the return of the article to the place of origin, or the exportation of the article, under safeguards satisfactory to him or her, or otherwise dispose of it, in whole or part, to comply with the

quarantine and regulations of this subpart.

§ 318.13–9 Inspection and disinfection of means of conveyance.

(a) *Inspection of aircraft prior to departure.* No person shall move any aircraft from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands to any other State unless the person moving the aircraft has contacted an inspector and offered the inspector the opportunity to inspect the aircraft prior to departure and the inspector has informed the person proposing to move the aircraft that the aircraft may depart.

(b) *Inspection of aircraft moving to Guam.* Any person who has moved an aircraft from Hawaii, Puerto Rico, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands to Guam shall contact an inspector and offer the inspector the opportunity to inspect the aircraft upon the aircraft's arrival in Guam.

(c) *Inspection of ships upon arrival.* Any person who has moved a ship or other oceangoing craft from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands to any other State shall contact an inspector and offer the inspector the opportunity to inspect the ship or other oceangoing craft upon its arrival.

(d) *Disinfection of means of conveyance.* If an inspector finds that a means of conveyance is infested with or contains plant pests, and the inspector orders disinfection of the means of conveyance, then the person in charge or in possession of the means of conveyance shall disinfect the means of conveyance and its cargo in accordance with an approved method contained in part 305 of this chapter under the supervision of an inspector and in a manner prescribed by the inspector, prior to any movement of the means of conveyance or its cargo.

§ 318.13–10 Inspection of baggage, other personal effects, and cargo.

(a) *Offer for inspection by aircraft passengers.* Passengers destined for movement by aircraft from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands to any other State shall offer their carry-on baggage and other personal effects for inspection at the place marked for agricultural inspections, which will be located at the airport security checkpoint or the aircraft boarding gate, at the time they pass through the checkpoint or the gate. Passengers shall offer their check-in

baggage for inspection at agricultural inspection stations prior to submitting their baggage to the check-in baggage facility. When an inspector has inspected and passed such baggage or personal effects, he or she shall apply a U.S. Department of Agriculture stamp, inspection sticker, or other identification to such baggage or personal effects to indicate that such baggage or personal effects have been inspected and passed as required. Passengers shall disclose any fruits, vegetables, plants, plant products, or other articles that are requested to be disclosed by the inspector. When an inspection of a passenger's baggage or personal effects discloses an article in violation of the regulations in this part, the inspector shall seize the article. The passenger shall state his or her name and address to the inspector, and provide the inspector with corroborative identification. The inspector shall record the name and address of the passenger, the nature of the identification presented for corroboration, the nature of the violation, the types of articles involved, and the date, time, and place of the violation.

(b) *Offer for inspection by aircraft crew.* Aircraft crew members destined for movement by aircraft from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands to any other State, shall offer their baggage and personal effects for inspection at the inspection station designated for the employing airline not less than 20 minutes prior to the scheduled departure time of the aircraft or the rescheduled departure time as posted in the public areas of the airport. When an inspector has inspected and passed such baggage or personal effects, he or she shall apply a U.S. Department of Agriculture stamp, inspection sticker, or other identification to the baggage or personal effects to indicate that such baggage or personal effects have been inspected and passed as required. Aircraft crew members shall disclose any fruits, vegetables, plants, plant products, or other articles that are requested to be disclosed by the inspector. When an inspection of a crew member's baggage or personal effects discloses an article in violation of the regulations in this part, the inspector shall seize the article. The crew member shall state his or her name and address to the inspector, and provide the inspector with corroborative identification. The inspector shall record the name and address of the crew member, the nature of the identification presented for corroboration, the nature

of the violation, the types of articles involved, and the date, time, and place of the violation.

(c) *Baggage inspection for persons traveling to Guam on aircraft.* No person who has moved from Hawaii, Puerto Rico, or the U.S. Virgin Islands to Guam on an aircraft shall remove or attempt to remove any baggage or other personal effects from the area secured for customs inspections before the person has offered to an inspector, and has had passed by the inspector, his or her baggage and other personal effects. Persons shall disclose any fruits, vegetables, plants, plant products, or other articles that are requested to be disclosed by the inspector. When an inspection of a person's baggage or personal effects discloses an article in violation of the regulations in this part, the inspector shall seize the article. The person shall state his or her name and address to the inspector, and provide the inspector with corroborative identification. The inspector shall record the name and address of the person, the nature of the identification presented for corroboration, the nature of the violation, the types of articles involved, and the date, time, and place of the violation.

(d) *Baggage acceptance and loading on aircraft.* No person shall accept or load any check-in aircraft baggage destined for movement from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands to any other State unless the baggage bears a U.S. Department of Agriculture stamp, inspection sticker, or other indication applied by an inspector representing that the baggage has been inspected and certified.

(e) *Offer for inspection by persons moving by ship.* No person who has moved on any ship or other oceangoing craft from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands to any other territory, State, or District of the United States, shall remove or attempt to remove any baggage or other personal effects from the designated inspection area as provided in paragraph (h) of this section on or off the ship or other oceangoing craft unless the person has offered to an inspector for inspection, and has had passed by the inspector, the baggage and other personal effects. Persons shall disclose any fruits, vegetables, plants, plant products, or other articles that are requested to be disclosed by the inspector. When an inspection of a person's baggage or personal effects discloses an article in violation of the regulations in this part, the inspector

shall seize the article. The person shall state his or her name and address to the inspector, and provide the inspector with corroborative identification. The inspector shall record the name and address of the person, the nature of the identification presented for corroboration, the nature of the violation, the types of articles involved, and the date, time, and place of the violation.

(f) *Loading of certain cargoes.* (1) Except as otherwise provided in paragraph (f)(2) of this section, no person shall present to any common carrier or contract carrier for movement, and no common carrier or contract carrier shall load, any cargo containing fruits, vegetables, or other articles regulated under this subpart that are destined for movement from Hawaii, Puerto Rico, Guam, or the U.S. Virgin Islands to any other State unless the cargo has been offered for inspection, passed by an inspector, and bears a U.S. Department of Agriculture stamp or inspection sticker, or unless a limited permit is attached to the cargo as specified in § 318.13–3(e).

(2) Cargo designated may be loaded without a U.S. Department of Agriculture stamp or inspection sticker attached to the cargo or a limited permit attached to the cargo if the cargo is moved:

(i) As containerized cargo on ships or other oceangoing craft or as air cargo;

(ii) The carrier has on file documentary evidence that a valid limited permit was issued for the movement or that the cargo was certified; and

(iii) A notation of the existence of these documents is made by the carrier on the waybill, manifest, or bill of lading that accompanies the consignment.

(3) Cargo moved in accordance with § 318.13–6(b) that does not have a limited permit attached to the cargo must have a limited permit attached to the waybill, manifest, or bill of lading accompanying the consignment.

(g) *Removal of certain cargoes in Guam.* No person shall remove or attempt to remove from a designated inspection area as provided in paragraph (h) of this section, on or off the means of conveyance, any cargo moved from Hawaii, Puerto Rico, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands to Guam containing fruits, vegetables, or other articles regulated under this subpart, unless the cargo has been inspected and passed by an inspector in Guam.

(h) *Space and facilities for baggage and cargo inspection.* Baggage and cargo

inspection will not be performed until the person in charge or possession of the ship, other oceangoing craft, or aircraft provides space and facilities on the means of conveyance, pier, or airport that are adequate, in the inspector's judgment, for the performance of inspection.

§ 318.13–11 Posting of warning notice and distribution of baggage declarations.

(a) Before any aircraft or any ship, vessel, or other surface craft moving to Guam, the Commonwealth of Northern Mariana Islands, or American Samoa from Hawaii or any other territory or possession of the United States arrives in Guam, the Commonwealth of Northern Mariana Islands, or American Samoa, a baggage declaration, to be furnished by the U.S. Department of Agriculture, calling attention to the provisions of the Plant Protection Act and the quarantine and regulations in this subpart, must be distributed to each adult passenger. These baggage declarations shall be executed and signed by the passengers and shall be collected and delivered by the master or other responsible officer of the aircraft, ship, vessel, or other surface craft to the inspector on arrival at the quarantine or inspection area.

(b) Every person owning or controlling any dock, harbor, or landing field in Hawaii, Puerto Rico, Guam, the Commonwealth of Northern Mariana Islands, or the U.S. Virgin Islands from which ships, vessels, other surface craft, or aircraft leave for ports in any other State shall post, and keep posted at all times, in one or more conspicuous places in passenger waiting rooms on or in said dock, harbor, or landing field a warning notice directing attention to the quarantine and regulations in this subpart. Every master, or other responsible officer of any ship, vessel, other surface craft, or aircraft leaving Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands destined to a port in any other State, shall similarly post, and keep posted at all times, such a warning notice in the ship, vessel, other surface craft, or aircraft under his charge.

§ 318.13–12 Movement by the U.S. Department of Agriculture.

Notwithstanding any other restrictions of this subpart, regulated articles may be moved if they are moved by the U.S. Department of Agriculture for experimental or scientific purposes and are moved under conditions found by the Administrator to be adequate to prevent the spread of plant pests and diseases.

§ 318.13–13 Movement of frozen fruits and vegetables.

Frozen fruits and vegetables may be certified for movement from Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands, into or through any other territory, State, or District of the United States in accordance with § 318.13–3. Such fruits and vegetables must be held at a temperature not higher than 20 °F during shipping and upon arrival in the continental United States, and in accordance with the requirements for the interstate movement of frozen fruits and vegetables in part 305 of this chapter. Paragraph (b) of § 305.17 lists frozen fruits and vegetables for which quick freezing is not an authorized treatment.

§ 318.13–14 Movement of processed fruits, vegetables, and other products.

(a) Fruits, vegetables, and other products that are processed sufficiently as to preclude the survival of any live pests can be moved interstate from Hawaii, Puerto Rico, the U.S. Virgin Islands, Guam, and the Commonwealth of the Northern Mariana Islands. Those processed products which are approved for interstate movement from those States can be found in the fruits and vegetables manuals for those States. These manuals are available on the Internet at http://www.aphis.usda.gov/import_export/plants/manuals/ports/downloads/hawaii.pdf and http://www.aphis.usda.gov/import_export/plants/manuals/ports/downloads/puerto_rico.pdf.

(b) Consignments of processed fruits, vegetables, or other products that have not been processed sufficiently as to be incapable of harboring fruit flies are subject to the interstate movement requirements which apply to the fruit, vegetable, or other product in its unprocessed state.

§ 318.13–15 Parcel post inspection.

Inspectors are authorized to inspect, with the cooperation of the U.S. Postal Service, parcel post packages placed in the mails in Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands, or the U.S. Virgin Islands to determine whether such packages contain products whose movement is not authorized under this subpart, to examine any such products that are found for insect infestation, and to notify the postmaster in writing of any violations of this subpart that are found as a result of an inspection.

§ 318.13–16 Regulated articles allowed interstate movement subject to specified conditions.

(a) The following regulated articles may be moved interstate in accordance

with § 318.13–3 and any additional requirements specified in paragraph (b) of this section.

State, territory, or district of origin	Common name	Botanical name	Plant part(s)	Additional requirements
Hawaii	Bananas ¹	<i>Musa</i> spp	Fruit	(b)(1)(i), (b)(2)(ii)
	Pot marigold, johnny-jump-ups, pansies, and violets.	<i>Calendula</i> spp	Flower	(b)(2)(iii)
	Pineapple ²	<i>Ananas comosus</i>	Fruit	(b)(2)(i)
Puerto Rico	Cactus	<i>Cactaceae</i>	Whole plant	(b)(2)(iv), (b)(3)(ii)
	Okra	<i>Abelmoschus esculentus</i>	Fruit	(b)(3)(i)
	Pot marigold, johnny-jump-ups, pansies, and violets.	<i>Calendula</i> spp	Flower	(b)(2)(iii)
U.S. Virgin Islands	Cactus	<i>Cactaceae</i>	Whole plant	(b)(2)(iv), (b)(3)(ii)
	Okra	<i>Abelmoschus esculentus</i>	Fruit	(b)(3)(i)
	Pot marigold, johnny-jump-ups, pansies, and violets.	<i>Calendula</i> spp	Flower	(b)(2)(iii)

¹ Fruit may also be moved interstate in accordance with § 318.13–17.

² Fruit may also be moved interstate with treatment in accordance with part 305 of this chapter.

(b) Additional restrictions for applicable regulated articles as specified in paragraph (a) of this section.

(1) *Restricted movement and distribution.*

(i) Allowed movement into Alaska.

Cartons must be labeled, “For distribution in Alaska only.”

(ii) [Reserved]

(2) *Plant types.*

(i) Smooth cayenne variety and hybrids with 50 percent or more smooth cayenne parentage only.

(ii) Green bananas of the cultivars “Williams,” “Valery,” “Grand Nain,” and standard and dwarf “Brazilian” only.

(iii) Inflorescences only with no stems or leaves attached.

(iv) Bare-rooted plants or plants rooted in approved growing media only.

(3) *Other conditions.*

(i) If destined to States other than Alabama, Arizona, Arkansas, California, Florida, Georgia, Illinois, Kentucky, Louisiana, Mississippi, Missouri, Nevada, New Mexico, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, or Virginia, the consignment must be treated in accordance with part 305 of this chapter unless the consignment is for immediate consumption or processing.

(ii) Must be treated in accordance with part 305 of this chapter.

§ 318.13–17 Regulated articles from Guam.

(a)(1) Regulated articles, other than soil, may be moved from Guam into or through any other State only if they meet the strictest plant quarantine requirements under part 319 of this chapter for similar articles offered for entry into such States from the countries

of East and Southeast Asia, including Cambodia, India, Japan, Korea, Laos, the northeastern provinces of Manchuria, the Philippines, Taiwan, and Vietnam, or the islands of the Central and South Pacific, including Micronesia, Melanesia, and Polynesia, as well as Australia, New Zealand, and the Malay Archipelago, except requirements for permits, phytosanitary certificates, notices of arrival, and notices of consignment from port of arrival. Soil must meet the requirements of § 330.300 of this chapter.

(2) Regulated articles that do not meet the requirements of paragraph (a)(1) of this section are prohibited movement from Guam into or through any other State.

(b)(1) Regulated articles moved from Guam into or through any other State shall be subject to inspection at the port of first arrival in another part of the United States to determine whether they are free of plant pests and otherwise meet the requirements applicable to them under this subpart, and shall be subject to release, in accordance with § 330.105(a) of this chapter as if they were foreign arrivals. Such articles shall be released only if they meet all applicable requirements under this subpart.

(2) A release shall be issued in writing unless the inspection involves small quantities of regulated articles, in which case a release may be issued orally by the inspector.

§§ 318.13–18 through 318.13–20 [Reserved]

§ 318.13–21 Avocados from Hawaii to Alaska.

Avocados may be moved interstate from Hawaii to Alaska without treatment only under the following conditions:

(a) *Distribution and marking requirements.* The avocados may be moved interstate for distribution in Alaska only, the boxes of avocados must be clearly marked with the statement “Distribution limited to the State of Alaska” and the consignment must be identified in accordance with the requirements of § 318.13–3.

(b) *Commercial consignments.* The avocados may be moved in commercial consignments only.

(c) *Packing requirements.* The avocados must have been sealed in the packinghouse in Hawaii in boxes with a seal that will break if the box is opened.

(d) *Ports.* The avocados may enter the continental United States only at the following ports: Portland, OR; Seattle, WA; or any port in Alaska.

(e) *Shipping requirements.* The avocados must be moved either by air or ship and in a sealed container. The avocados may not be commingled in the same sealed container with articles that are intended for entry and distribution in any State other than Alaska. If the avocados arrive at either Portland, OR, or Seattle, WA, they may be transloaded only under the following conditions:

(1) *Consignments by sea.* The avocados may be transloaded from one ship to another ship at the port of arrival, provided they remain in the

original sealed container and that APHIS inspectors supervise the transloading. If the avocados are stored before reloading, they must be kept in the original sealed container and must be in an area that is either locked or guarded at all times the avocados are present.

(2) *Consignments by air.* The avocados may be transloaded from one aircraft to another aircraft at the port of arrival, provided the following conditions are met:

(i) The transloading is done into sealable containers;

(ii) The transloading is carried out within the secure area of the airport (*i.e.*, that area of the airport that is open only to personnel authorized by the airport security authorities);

(iii) The area used for any storage of the consignment is within the secure area of the airport, and is either locked or guarded at all times the avocados are present. The avocados must be kept in a sealed container while stored in the continental United States en route to Alaska; and

(iv) APHIS inspectors supervise the transloading.

(3) *Exceptions.* No transloading other than that described in paragraphs (e)(1) and (e)(2) of this section is allowed except under extenuating circumstances (such as equipment breakdown) and when authorized and supervised by an APHIS inspector.

(f) *Limited permit.* Consignments of avocados must be accompanied by a limited permit issued by an APHIS inspector in accordance with § 318.13–3(c). The limited permit will be issued only if the inspector examines the consignment and determines that the consignment has been prepared in compliance with the provisions of this section.

§ 318.13–22 Bananas from Hawaii.

(a) Green bananas (*Musa* spp.) of the cultivars “Williams,” “Valery,” “Grand Nain,” and standard and dwarf “Brazilian” may be moved interstate from Hawaii with certification in accordance with § 318.13–3 if the bananas meet the following conditions:³

(1) The bananas must be picked while green and packed for shipment within 24 hours after harvest. If the green bananas will be stored overnight during that 24-hour period, they must be stored in a facility that prevents access by fruit flies;

(2) No bananas from bunches containing prematurely ripe fingers (*i.e.*, individual yellow bananas in a cluster

of otherwise green bananas) may be harvested or packed for shipment;

(3) The bananas must be inspected by an inspector and found free of plant pests as well as any of the following defects: Prematurely ripe fingers, fused fingers, or exposed flesh (not including fresh cuts made during the packing process); and

(4) To safeguard from fruit fly infestation, the bananas must be covered with insect-proof packaging, such as insect-proof mesh screens or plastic tarpaulins, from the time that they are packaged for shipment until they reach the port of arrival on the mainland United States.

(b) Bananas of any cultivar or ripeness that do not meet the conditions of paragraph (a) of this section may also be moved interstate from Hawaii in accordance with the following conditions:

(1) The bananas are irradiated at the minimum dose listed in § 305.31(a) of this chapter and in accordance with the other requirements in § 305.34 of this chapter for the Mediterranean fruit fly (*Ceratitis capitata*), the melon fruit fly (*Bactrocera curcurbitae*), the Oriental fruit fly (*Bactrocera dorsalis*), and the green scale (*Coccus viridis*) and are inspected, after removal from the stalk, in Hawaii and found to be free of the banana moth (*Opogona sacchari* (Bojen)) by an inspector before or after undergoing irradiation treatment; or

(2) The bananas are irradiated at the minimum dose listed in § 305.31(a) of this chapter and in accordance with the other requirements in § 305.34 of this chapter for the Mediterranean fruit fly (*Ceratitis capitata*), the melon fruit fly (*Bactrocera curcurbitae*), and the Oriental fruit fly (*Bactrocera dorsalis*) and are inspected, after removal from the stalk, in Hawaii and found to be free of the green scale (*Coccus viridis*) and the banana moth (*Opogona sacchari* (Bojen)) before or after undergoing irradiation treatment.

(3) Untreated bananas from Hawaii may be moved interstate for treatment on the mainland United States under a limited permit issued by an inspector. To be eligible for a limited permit under this paragraph, bananas from Hawaii must be inspected prior to interstate movement from Hawaii and found free of banana moth if they are to be treated in accordance with the requirements of paragraph (b)(1) of this section or inspected and found free of banana moth and green scale if they are to be treated in accordance with the requirements of paragraph (b)(2) of this section.

§ 318.13–23 Cut flowers from Hawaii.

(a) Except for cut blooms and leis of mauna loa and jade vine and except for cut blooms of gardenia not grown in accordance with paragraph (b) of this section, cut flowers may be moved interstate from Hawaii under limited permit, to a destination specified in the permit, directly from an establishment operated in accordance with the terms of a compliance agreement executed by the operator of the establishment, if the articles have not been exposed to infestation and they are not accompanied by any articles prohibited interstate movement under this subpart.

(b) Cut blooms of gardenia may be moved interstate from Hawaii if grown and inspected in accordance with the provisions of this section.⁴

(1) The grower's production area must be inspected annually by an inspector and found free of green scale. If green scale is found during an inspection, a 2-month ban will be placed on the interstate movement of cut blooms of gardenia from that production area. Near the end of the 2 months, an inspector will reinspect the grower's production area to determine whether green scale is present. If reinspection determines that the production area is free of green scale, shipping may resume. If reinspection determines that green scale is still present in the production area, another 2-month ban on shipping will be placed on the interstate movement of gardenia from that production area. Each ban will be followed by reinspection in the manner specified, and the production area must be found free of green scale prior to interstate movement.

(2) The grower must establish a buffer area surrounding gardenia production areas. The buffer area must extend 20 feet from the edge of the production area. Within the buffer area, the growing of gardenias and the following green scale host plants is prohibited: Ixora, ginger (*Alpinia purpurata*), plumeria, coffee, rambutan, litchi, guava, citrus, anthurium, avocado, banana, cocoa, macadamia, celery, *Pluchea indica*, mango, orchids, and annona.

(3) An inspector must visually inspect the cut blooms of gardenias in each consignment prior to interstate movement from Hawaii to the mainland United States. If the inspector does not detect green scale in the consignment, the inspector will certify the consignment in accordance with § 318.13–3(b). If the inspector finds green scale in a consignment, that

³ Bananas from Hawaii may also be moved to Alaska under § 318.13–16.

⁴ Cut blooms of gardenia are also eligible for interstate movement with treatment in accordance with part 305 of this chapter.

consignment will be ineligible for interstate movement from Hawaii.

(Approved by the Office of Management and Budget under control number 0579-0198)

§ 318.13-24 Sweet potatoes from Puerto Rico.

Sweet potatoes from Puerto Rico may be moved interstate to Atlantic Coast ports north of and including Baltimore, MD, under limited permit if treated in accordance with part 305 of this chapter or if the following conditions are met:

(a) The sweet potatoes must be certified by an inspector of Puerto Rico as having been grown under the following conditions:

(1) Fields in which the sweet potatoes have been grown must have been given a preplanting treatment with an APHIS-approved soil insecticide.

(2) Before planting in such treated fields, the sweet potato draws and vine cuttings must have been dipped in an APHIS-approved insecticidal solution.

(3) During the growing season an approved insecticide must have been applied to the vines at prescribed intervals.

(b) An inspector of Puerto Rico must certify that the sweet potatoes have been washed.

(c) The sweet potatoes must be graded by inspectors of Puerto Rico in accordance with Puerto Rican standards which do not provide a tolerance for insect infestation or evidence of insect injury and found by such inspectors to comply with such standards prior to movement from Puerto Rico.

(d) The sweet potatoes must be inspected by an inspector and found to be free of the sweet potato scarabee (*Euscepes postfasciatus* Fairm.).

§ 318.13-25 Sweet potatoes from Hawaii.

(a) Sweet potatoes may be moved interstate from Hawaii in accordance with this section only if the following conditions are met:⁵

(1) The sweet potatoes must be treated in accordance with the vapor heat treatment schedule specified in § 305.24.

(2) The sweet potatoes must be sampled, cut, and inspected and found to be free of the ginger weevil (*Elytrotreinus subtruncatus*). Sampling, cutting, and inspection must be performed under conditions that will prevent any pests that may emerge from the sampled sweet potatoes from infesting any other sweet potatoes

intended for interstate movement in accordance with this section.

(3) The sweet potatoes must be inspected and found to be free of the gray pineapple mealybug (*Dysmicoccus neobrevipes*) and the Kona coffee-root knot nematode (*Meloidogyne konaensis*).

(4)(i) Sweet potatoes that are treated in Hawaii must be packaged in the following manner:

(A) The cartons must have no openings that will allow the entry of fruit flies and must be sealed with seals that will visually indicate if the cartons have been opened. They may be constructed of any material that prevents the entry of fruit flies and prevents oviposition by fruit flies into the fruit in the carton.⁶

(B) The pallet-load of cartons must be wrapped before it leaves the treatment facility in one of the following ways:

(1) With polyethylene sheet wrap;

(2) With net wrapping; or

(3) With strapping so that each carton on an outside row of the pallet load is constrained by a metal or plastic strap.

(C) Packaging must be labeled with treatment lot numbers, packing and treatment facility identification and location, and dates of packing and treatment.

(ii) Cartons of untreated sweet potatoes that are moving to the mainland United States for treatment must be shipped in shipping containers sealed prior to interstate movement with seals that will visually indicate if the shipping containers have been opened.

(5)(i) *Certification on basis of treatment.* Certification shall be issued by an inspector for the movement of sweet potatoes from Hawaii that have been treated in accordance with part 305 of this chapter and handled in Hawaii in accordance with this section.

(ii) *Limited permit.* A limited permit shall be issued by an inspector for the interstate movement of untreated sweetpotato from Hawaii for treatment on the mainland United States in accordance with this section.

(b) [Reserved]

(Approved by the Office of Management and Budget under control number 0579-0281)

Subpart—Fruits and Vegetables From Puerto Rico or Virgin Islands [Removed]

■ 7. Subpart—Fruits and Vegetables From Puerto Rico or Virgin Islands,

consisting of §§ 318.58 through 318.58-16, is removed.

Subpart—Guam [Removed]

■ 8. Subpart—Guam, consisting of §§ 318.82 through 318.82-3, is removed.

Done in Washington, DC, this 9th day of January 2009.

Kevin Shea,

Acting Administrator, Animal and Plant Health Inspection Service.

BILLING CODE 3410-34-P

DEPARTMENT OF AGRICULTURE

Natural Resources Conservation Service

7 CFR Part 636

RIN 0578-AA49

Wildlife Habitat Incentive Program

AGENCY: Natural Resources Conservation Service, United States Department of Agriculture.

ACTION: Interim final rule with request for comment.

SUMMARY: Section 2602 of the Food, Conservation, and Energy Act of 2008 (2008 Act) amended the Wildlife Habitat Incentive Program (WHIP) by: Narrowing the program's applicability to private agricultural lands, nonindustrial private forestland, and Indian land; identifying habitat on pivot corners and irregular areas as "other types of wildlife habitat" eligible for cost-share; increasing, from 15 to 25, the percentage of funds that may be used for agreements that have a term of at least 15 years; providing the Secretary of the United States Department of Agriculture (USDA) authority to give priority to projects that would address issues raised by State, regional, and national conservation initiatives; and instituting an annual \$50,000 in direct or indirect aggregate payment limitations per person or legal entity. The Natural Resources Conservation Service (NRCS), an agency of USDA, issues this interim final rule with request for comment to incorporate statutory changes resulting from the 2008 Act authorization. The Agency is also using this rule to simplify the regulation and make administrative changes to improve program efficiency. Cost-share agreements entered into on or following January 16, 2009 will be administered according to this interim final rule.

DATES: *Effective date:* The rule is effective January 16, 2009. *Comment date:* Submit comments on or before March 17, 2009.

⁵ Sweet potatoes may also be moved interstate from Hawaii with irradiation in accordance with § 305.34 of this chapter or after fumigation with methyl bromide according to treatment schedule T-101-b-3-1, as provided for in § 305.6(a) of this chapter.

⁶ If there is a question as to the adequacy of a carton, send a request for approval of the carton, together with a sample carton, to the Animal and Plant Health Inspection Service, Plant Protection and Quarantine, Center for Plant Health Science and Technology, 1730 Varsity Drive, Suite 400, Raleigh, NC 27606.

ADDRESSES: You may send comments, which will be published in their entirety, using any of the following methods:

Government-wide rulemaking Web site: Go to <http://www.regulations.gov> and follow the instructions for sending comments electronically.

Mail: Financial Assistance Programs Division, Natural Resources Conservation Service, Wildlife Habitat Incentive Program Comments, P.O. Box 2890, Room 5237-S, Washington, DC 20013.

Fax: 1-202-720-4265.

Hand Delivery: Room 5237-S of the USDA South Agriculture Building, 1400 Independence Avenue, SW., Washington, DC 20250, between 9 a.m. and 4 p.m., Monday through Friday, except Federal holidays. Please ask the guard at the entrance to the South Agriculture Building to call 202-720-4527 in order to be escorted into the building.

FOR FURTHER INFORMATION CONTACT:

Director, Financial Assistance Programs Division, Natural Resources Conservation Service, P.O. Box 2890, Washington, DC 20013-2890. Phone: 202-720-1844. Fax: 202-720-4265. Persons with disabilities who require alternative means for communicating (Braille, large print, audiotape, etc.) should contact the USDA Target Center at 202-720-2600 (voice and TDD).

SUPPLEMENTARY INFORMATION:

Regulatory Certifications

Executive Order 12866

Pursuant to Executive Order 12866, this interim final rule with request for comment is a significant regulatory action. The administrative record is available for public inspection in Room 5831 South Building, USDA, 14th and Independence Avenue, SW., Washington, DC. NRCS conducted an economic analysis of the potential impacts associated with this program. A summary of the economic analysis can be found at the end of this preamble and a copy of the analysis is available upon request from the Director, Financial Assistance Programs Division, Natural Resources Conservation Service, Room 5237S, Washington, DC 20250-2890.

Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA)

Section 2904(c) of the Food, Conservation, and Energy Act of 2008 requires that the Secretary use the authority in section 808(2) of title 5, United States Code, which allows an agency to forego SBREFA's usual 60-day Congressional Review delay of the effective date of a major regulation if the

agency finds that there is a good cause to do so. NRCS hereby determines that it has good cause to do so in order to meet the Congressional intent to have the conservation programs, authorized or amended by Title II, in effect as soon as possible. Accordingly, this rule is effective upon filing for public inspection by the Office of the Federal Register.

Executive Order 13175

Executive Order 13175 requires agencies to consult and collaborate with tribes, if policies or actions have substantial direct effects on tribes. NRCS has determined that this regulation does not have a substantial direct effect on tribes, since these regulatory provisions are required by statute, and these provisions do not impose unreimbursed compliance costs or preempt Tribal law. As a result, consultation is not required.

Executive Order 13084

Executive Order 13084 requires agencies to consult with Indian Tribal governments, if the policies uniquely impact tribes. NRCS has determined that the policies set forth in this regulation are required by statute and do not uniquely impact tribes and Tribal governments; therefore, consultation is not required.

Regulatory Flexibility Act

NRCS has determined that the Regulatory Flexibility Act is not applicable to this final rule because the Natural Resources Conservation Service is not required by 5 U.S.C. 553, or any other provision of law, to publish a notice of proposed rulemaking with respect to the subject matter of this rule.

Environmental Analysis

Availability of the Environmental Assessment (EA) and Finding of No Significant Impact (FONSI). A programmatic environmental assessment has been prepared in association with this rulemaking. The analysis has determined that there will not be a significant impact to the human environment and as a result an Environmental Impact Statement is not required to be prepared (40 CFR 1508.13). The EA and FONSI are available for review and comment for 60 days from the date of publication of this interim final rule in the **Federal Register**. A copy of the EA and FONSI may be obtained from the following Web site: http://www.nrcs.usda.gov/programs/Env_Assess/. A hard copy may also be requested from the following address and contact: National Environmental Coordinator, Natural

Resources Conservation Service, Ecological Sciences Division, 1400 Independence Ave., SW., Washington DC 20250. Comments from the public should be specific and reference that comments provided are on the EA and FONSI. Public comment may be submitted by any of the following means: (1) e-mail comments to NEPA2008@wdc.usda.gov, (2) e-mail to www.regulations.gov Web site, or (3) written comments to: National Environmental Coordinator, Natural Resources Conservation Service, Ecological Sciences Division, 1400 Independence Ave., SW., Washington DC 20250.

Civil Rights Impact Analysis

NRCS has determined through a Civil Rights Impact Analysis that the interim final rule discloses no disproportionately adverse impacts for minorities, women, or persons with disabilities. An increased cost-share payment rate for historically underserved producers, as defined in § 636.3, is expected to increase participation among these groups. The data presented indicates producers who are members of the historically underserved groups have participated in NRCS conservation programs at parity with other producers. Extrapolating from historical participation data, it is reasonable to conclude that NRCS programs, including WHIP, will continue to be administered in a non-discriminatory manner. Outreach and communication strategies are in place to ensure all producers will be provided the same information to allow them to make informed compliance decisions regarding the use of their lands that will affect their participation in USDA programs. WHIP applies to all persons equally regardless of their race, color, national origin, gender, sex, or disability status. Therefore, the WHIP rule portends no adverse civil rights implications for women, minorities and persons with disabilities.

Paperwork Reduction Act

Section 2904 of the 2008 Act requires that implementation of programs under Title II of the Act be made without regard to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). Therefore, NRCS is not reporting recordkeeping or estimated paperwork burden associated with this interim final rule.

Government Paperwork Elimination Act

NRCS is committed to compliance with the Government Paperwork Elimination Act, which requires Government agencies, in general, to

provide the public the option of submitting information or transacting business electronically to the maximum extent possible. To better accommodate public access, NRCS has developed an online application and information system for public use.

Executive Order 12988

This interim final rule has been reviewed in accordance with Executive Order 12988. The provisions of this interim final rule are not retroactive. Furthermore, the provisions of this interim final rule preempt State and local laws to the extent such laws are inconsistent with this interim final rule. Before an action may be brought in a Federal court of competent jurisdiction, the administrative appeal rights afforded persons at 7 CFR Part 614 must be exhausted.

Unfunded Mandates Reform Act of 1995

NRCS assessed the affects of this rulemaking action on State, local, and Tribal governments, and the public. This action does not compel the expenditure of \$100 million or more by any State, local, or Tribal governments, or anyone in the private sector, and therefore, a statement under section 202 of the Unfunded Mandates Reform Act of 1995 is not required.

Economic Analysis—Executive Summary

The Wildlife Habitat Incentives Program (WHIP) provides direct technical and financial assistance to improve fish and wildlife habitat on eligible agricultural and nonindustrial private forest lands. The focus of the program is on national, regional, and State-directed fish and wildlife priorities, including rare and declining species. These priorities are established with input from the regional, State, and local stakeholders. Because these efforts involve both on-site and off-site-specific impacts and these impacts affect a host of non-market valued attributes ecosystem services, performing a traditional benefit-cost analysis (BCA) is challenging. Even with these limitations, a BCA offers a means to identify the main costs and benefits and explore policy and program alternatives.

The primary costs associated with WHIP include the cost-share outlays by NRCS and the matching funds of the producer to fully pay for the restoration and improvements in fish and wildlife habitat within the agricultural or forestry operation. These primary costs must then be compared with the benefits of the habitat improvement realized through these efforts, mainly the improvements of the flow of

ecological goods and services (EGS) and provision of non-market valued amenities, such as more scenic views, as well as providing fish and wildlife habitat.

The results of this BCA suggest that the WHIP assistance to participants will result in positive net benefits, especially in areas where fish and wildlife habitat is deteriorating or being lost. The changes to WHIP made by the 2008 Act do not change this conclusion. Copies of the Economic Analysis may be obtained from the Director, Financial Assistance Programs Division, Natural Resources Conservation Service, P.O. Box 2890, Washington, DC 20013–2890.

Section 2904 of the Food, Conservation, and Energy Act of 2008

The Commodity Credit Corporation (CCC) is not required by 5 U.S.C. 553 or by any other provision of law, to publish a notice of proposed rulemaking with respect to the subject matter of this rule. Section 2904 of the 2008 Act requires regulations to be published within 90 days after the date of enactment and authorizes the CCC to promulgate an interim final rule effective upon publication with an opportunity for notice and comment. CCC has determined that an interim final rule is necessary to expedite the effective date of rulemaking in order to meet the intent of Section 2904.

Discussion of Program

The Wildlife Habitat Incentive Program (WHIP) is a voluntary program administered by NRCS, using the funds and authorities of the Commodity Credit Corporation (CCC). WHIP is available in all 50 states, Puerto Rico, Guam, the Virgin Islands of the United States, American Samoa, and the Commonwealth of the Northern Mariana Islands. Through WHIP, NRCS provides technical and financial assistance to participants to develop upland, wetland and aquatic wildlife habitat, as well as fish and wildlife habitat on other areas, and to develop habitat for threatened and endangered species. NRCS first allocated funds for WHIP in 1997. Over the life of the program, NRCS has entered into over 25,600 cost-share agreements that cover over 4 million acres.

WHIP was originally authorized under section 387 of the Federal Agriculture Improvement and Reform Act of 1996 (the 1996 Act), Public Law 104–127. In 1997, NRCS published regulations to implement WHIP at 7 CFR 636. Section 2502 of the Farm Security and Rural Investment Act of 2002 (the 2002 Act), Public Law 107–171, repealed the original WHIP statute

and established a new WHIP under Section 1240N of the Food Security Act of 1985, as amended (the 1985 Act). Section 2602 of the Food, Conservation, and Energy Act of 2008 (2008 Act) made further changes to WHIP.

In 1997, NRCS published regulations to implement WHIP at 7 CFR Part 636. The 2002 Act authorized WHIP agreements with a duration of at least 15 years, and NRCS amended the 1997 regulation, by incorporating this change in a final rule published on July 24, 2002. NRCS publishes this interim final rule to incorporate the changes in the 2008 Act. In addition, NRCS is using this rulemaking opportunity to implement program improvements based upon NRCS's experience in administering WHIP and other conservation programs, as well as input from program participants and stakeholders.

In addition, the United States Department of Agriculture (USDA) held Farm Bill forums throughout the country in 2005 to solicit input from producers and other stakeholders about future farm policy. USDA received more than 4,000 comments through this process, including recommendations related to WHIP. In summary, NRCS makes changes to the WHIP regulation through this interim final rule, described more fully below, to reflect changes made by the 2008 Act, consideration of public input from the Farm Bill forums, and opportunities identified by NRCS to improve program administration.

Summary of Statutory Changes

Section 2602(a)—Program Focus

The original WHIP legislation, published in 1996, contained broad language to promote implementation of wildlife habitat development practices by providing participants cost-share assistance for developing a wildlife management plan and implementing eligible activities under the plan. Prior to the 2008 Act, WHIP was available to develop habitat on private and public lands, and available to landowners and operators, provided that operators gave NRCS evidence they had control of the land for the duration of the WHIP agreement.

NRCS focused the majority of WHIP funds on private lands. However, the NRCS State Conservationist, in consultation with the State Technical Committee, could allow exceptions to the private land focus when significant wildlife habitat gains could only be achieved by installing practices on non-Federal public land. In addition, Indian land, formerly known as Tribal lands,

regardless of their status in terms of Federal trust lands, and Federal lands were eligible in those very limited circumstances where the benefit is primarily on the private lands, but must include some Federal land to meet the WHIP objective.

Section 2602(a) of the 2008 Act amends Section 1240N(a) of the 1985 Act to restrict eligible land to private agricultural land, nonindustrial private forest land, and Indian land. This restriction requires NRCS to make changes to the applicability, definitions, and program requirement sections of the WHIP regulation. In particular, this rulemaking adds definitions for “agricultural lands,” “Indian land,” and “nonindustrial private forest land.” These terms are defined in § 636.3 of this regulation.

NRCS also amends § 636.1(a) to reflect the changes made to land eligibility by the 2008 Act. In § 636.4, NRCS redesignates the existing § 636.4(b) as § 636.4(c), and adds a new § 636.4(b) to identify eligible land as private agricultural land, nonindustrial private forest land, and Indian land.

Section 2602(b) of the 2008 Act—Other Types of Wildlife Habitat

Section 2602(b) of the 2008 Act amends Section 1240N(b) of the 1985 Act to clarify “other types of habitat” includes habitat developed on pivot corners and irregular areas. The current regulation encompasses these types of habitats, and therefore, NRCS determined that it did not need to amend the WHIP rule to reflect this statutory clarification. NRCS will ensure that its policy guidance identifies such habitat as eligible for enrollment.

2008 Act Section 2602(c)—Cost-Share Rates

The original WHIP legislation, published in 1996, did not specify either a cost-share rate or an agreement length for WHIP cost-share agreements. However, NRCS, in its 1997 final rule, specified that NRCS would not pay more than 75 percent of the cost of establishing wildlife habitat development practices, except in the case of long-term agreements. Further, NRCS reduced the cost-share payment to a participant proportionately below 75 percent to the extent that direct Federal financial assistance was provided to the participant from other sources. The 1997 WHIP rule also specified that WHIP cost-share agreements would be for a period of 5 to 10 years, unless a shorter period was recommended to address situations where wildlife was threatened as a result of a disaster.

The 2002 Act authorized the Secretary to use up to 15 percent of program funds to provide additional cost-share payments to participants to protect and restore essential plant and animal habitat under long-term agreements with durations of at least 15 years. The 2002 final rule reflected the new authority for entering into long-term agreements while the percentage of funds to be made available for such agreements was addressed in Agency policy. Section 2602(c) of the 2008 Act increases the proportion of annual funds available for long-term agreements to not more than 25 percent but makes no other changes to long-term agreements. In response to Section 2602(c), NRCS adds the provision to allow up to 25 percent of WHIP funds to be used to carry out cost-share agreements that extend 15 years or more.

Section 2602(d) of the 2008 Act—Priority Initiatives

Section 2602(d) provides the Secretary discretionary authority to give priority to projects that would address issues raised by State, regional, and national conservation initiatives. These State, regional, and national initiatives include, for example: the North American Waterfowl Management Plan, the National Fish Habitat Action Plan, the Greater Sage Grouse Conservation Society, the State Comprehensive Wildlife Conservation Strategies (also referred to as the State Wildlife Action Plans), the Northern Bobwhite Conservation Initiative, the Gulf of Hypoxia Action Plan 2008 (and associated annual operating plans), and State forest resource strategies. This change clarifies discretionary authority provided in the program’s original statutory language. Section 636.5(c)(1) of the 1997 WHIP rule identified criteria that NRCS used to evaluate applications and make enrollment decisions, including “Contribution to resolving an identified habitat problem of national, regional, or state importance.” Section 636.5 is redesignated as § 636.6 and in response to the 2008 Act, NRCS revises § 636.6(c)(1) to read as follows: “Contribution to resolving an identified habitat concern of national, regional, or state importance.” In particular, NRCS replaces the word “problem” with the word “concern” to reflect a broader spectrum of wildlife issues. Further, in § 636.6(a), NRCS replaces the term “national and regional needs” with “national, regional, and State wildlife habitat concerns.” Finally, in § 636.8(a)(2), NRCS states that “wildlife habitat concerns identified in State, regional, and national conservation initiatives” are one of the possible items

required to be addressed in the WHIP plan of operations (WPO).

Section 2602(e) of the 2008 Act—Payment Limitations

Section 2602(e) of the 2008 Act establishes the following payment limitation: “Payments made to a person or legal entity, directly or indirectly, under [WHIP] may not exceed, in the aggregate, \$50,000 per year.” NRCS incorporates this change in § 636.7(f).

Summary of Changes to the Regulation

In addition to the amendments being made to address 2008 Act changes, NRCS amends the WHIP regulations at 7 CFR Part 636 through this interim final rule to incorporate administrative changes to simplify the regulatory language, align WHIP policies with other NRCS conservation programs, and improve the efficiency of program administration. NRCS describes these changes below in the section-by-section analysis.

Section 636.1, Applicability

NRCS amends § 636.1(a) by making several changes. In particular, NRCS replaces the phrase “for upland wildlife, wetland wildlife, threatened and endangered species, fish, and other types of wildlife” with the phrase “develop fish and wildlife habitat on private agricultural land, nonindustrial private forest land, and Indian land.” NRCS determined that the simplified language provides the appropriate broad interpretation for the types of habitat to be developed on eligible lands, including a new statutory requirement to encourage the development of habitat for native and managed pollinators.

Section 636.2, Administration

NRCS makes several adjustments to § 636.2 to help clarify program administration. In particular, NRCS adds the following statement to § 636.2(a) to clarify the relationship between NRCS and the Commodity Credit Corporation (CCC): “The funds, facilities, and authorities of the Commodity Credit Corporation (CCC) are available to NRCS to carry out WHIP. Accordingly, where NRCS is mentioned in this part, it also refers to CCC’s funds, facilities, and authorities, where applicable.” NRCS has had legal authority to use CCC funds to implement WHIP since the 2002 Act. By adding this language to the WHIP rule, NRCS identifies that it may use CCC funds to deliver WHIP.

NRCS makes several changes to § 636.2(c) to align WHIP terminology with the terms used by other NRCS financial assistance programs. In

particular, NRCS replaces the term “cooperative agreements” with the term “agreements” to reflect the full scope of funding arrangements into which NRCS may enter. The change does not alter the authority or opportunities for entering into agreements.

NRCS also adds “Indian tribes,” “private organizations,” and “individuals” to the list of entities with which NRCS may enter into agreements. NRCS merges § 636.2(d) with § 636.2(c) to simplify and clarify the WHIP regulation, eliminating redundant language. Therefore, NRCS redesignates §§ 636.2(e) and (f) as §§ 636.2(d) and (e), respectively. NRCS removes the subjective term “reasonable” in the redesignated § 636.2(d), and revises redesignated paragraph § 636.2(e) to clarify that the Chief can override decisions made by his delegates if necessary to uphold WHIP purposes.

Section 636.3, Definitions

NRCS changes many of the definitions in the WHIP rule to be consistent with other NRCS conservation programs and to avoid confusion among NRCS field personnel and customers. Specifically, NRCS revises the following existing definitions for “Chief,” “Conservation district,” “Cost share agreement,” “Participant,” “Person,” “State Conservationist,” and “Wildlife.”

NRCS adds the following terms and definitions to the WHIP regulation to be consistent with related NRCS conservation programs. In particular, NRCS adds definitions for “Agricultural lands,” “Applicant,” “At-risk species,” “Beginning farmer or rancher,” “Conservation practice,” “Designated conservationist,” “Field office technical guide (FOTG),” “Historically underserved producer,” “Indian tribe,” “Indian land,” “Joint operation,” “Legal entity,” “Lifespan,” “Limited resource farmer or rancher,” “Liquidated damages,” “Livestock,” “Natural Resources Conservation Service (NRCS),” “Nonindustrial private forestland,” “Operation and maintenance,” “Operation and maintenance (O&M) agreement,” “Producer,” “Resource concern,” “Secretary,” “Socially disadvantaged farmer or rancher,” “Technical assistance,” and “Technical service provider (TSP).” Specifically, NRCS requests public comment on how to tailor the current definition of “at-risk species” to assist species in greatest need. As currently defined, “at risk species means any plant or animal species as determined by the State Conservationist, with advice from the State Technical Committee, to need direct intervention to halt its population

decline.” NRCS removes the terms “Conservation Plan” and “Recurring Practice” since these terms are not used in the WHIP regulation.

NRCS revises several existing terms to clarify WHIP program purposes. In particular, NRCS revises the definition of “Cost-share payment” to be more comprehensive by including the language “other goals consistent with the program.” NRCS revises the definition of “Habitat development” to clarify that “conservation practices” are undertaken to establish, improve, protect, enhance, or restore land to improve conditions for wildlife. NRCS replaces the term “Practice” with “Conservation practice” and defines the term consistent with the definition used in related NRCS conservation programs. NRCS adds the definitions of “Historically underserved producer” to reference applicants who may be eligible for additional cost-share assistance as described in § 636.7(a)(2) as a beginning farmer or rancher, a limited resource farmer or rancher, or a socially disadvantaged farmer or rancher. Correspondingly, definitions are added for “Beginning farmer or rancher,” “Limited resource farmer or rancher,” and “Socially disadvantaged farmer or rancher.” The gross farm sales criterion in the “Limited resource farmer or rancher” definition is updated to reflect the adjustment for inflation. These definitions for are consistent with the changes to definitions in other NRCS conservation programs.

Finally, NRCS replaces the term “Wildlife habitat development plan” with the term “WHIP plan of operations (WPO)” in § 636.7, and consequently adds “WPO” to § 636.3. This change further aligns § 636.3 with the definitions in related NRCS conservation programs that identify a plan of operations rather than a development plan. NRCS replaces the terms “wildlife habitat development plan” and “WHDP” to “WHIP plan of operations” and “WPO,” respectively throughout the entire regulation.

Section 636.4, Program Requirements

NRCS amends § 636.4 to clarify some of the existing program requirements that have not been identified in the WHIP regulation because they apply through other statutory requirements. However, NRCS finds that reference to these requirements in the WHIP regulation is important so that prospective participants are aware of them. In particular, NRCS revises § 636.4(a) to clarify that WHIP participants are subject to the highly erodible and wetland conservation provisions found at 7 CFR Part 12.

Additionally, NRCS includes reference to the Adjusted Gross Income (AGI) limitations, 7 CFR Part 1400, that apply to WHIP participants since WHIP has become a Title XII conservation program. In order to comply with AGI requirements, legal entities must provide to NRCS a list of members, including members in embedded entities, along with their social security numbers and percent interest in the legal entity.

NRCS adds new program requirements through this interim final rule to improve program administration and to ensure that WHIP program goals are met. In particular, NRCS adds paragraph (a)(2) to require WHIP participants to be in compliance with terms of all other USDA-administered conservation program contracts to which they are a party. In this manner, NRCS ensures that a participant who receives NRCS conservation benefits is meeting their existing responsibilities prior to receiving additional assistance.

NRCS also adds paragraph (a)(3) related to the implementation of the WHIP plan of operations and the associated operations and management (O & M) agreement to ensure consistency between § 636.4 and changes made to § 636.3 and § 636.8.

NRCS also adds several provisions related to payment matters. In particular, one paragraph (a)(9) clarifies that payments made to Tribal groups may exceed the payment limitation if the Bureau of Indian Affairs or a Tribal official certifies that no one individual will receive more than the established payment limitation.

Additionally, NRCS adds paragraph (a)(10) to clarify that participants must supply NRCS with information needed to determine program eligibility, including information required to determine an applicant’s status as a limited resource or beginning farmer or rancher. Finally, NRCS adds paragraph (a)(11) that requires participants that use an alternative identifier, rather than a tax identification number, to continue to use that same identifier in all WHIP cost-share agreements.

NRCS makes several adjustments to § 636.4(b) to incorporate the 2008 Act changes to land eligibility and to conform the language to the new definitions described in § 636.3. In particular, NRCS identifies in § 636.4(b) that eligible lands include agricultural land, nonindustrial private forest land, and Indian land, as defined in § 636.3.

NRCS also revises § 636.4(c) to incorporate changes to clarify land ineligibility. In particular, NRCS deletes the phrase “through other forms of assistance or without assistance,” since

the manner in which an applicant achieved habitat objectives is immaterial to the determination that such lands are ineligible for participation in the program. NRCS also deletes reference to the attainability of wildlife habitat on offered lands since that consideration is more appropriately addressed in ranking criteria. In accordance with Section 1240N(a) of the 1985 Act, as amended by Section 2602 of the 2008 Act, public land is ineligible for WHIP assistance.

Section 636.5, National Priorities

NRCS inserts a new § 636.5, and redesignates the subsequent sections accordingly. The new § 636.5 provides that NRCS will establish National Priorities to guide funding to the State offices, selection of WHIP cost-share agreements, and implementation priority for WHIP conservation practices. This new section also states that the national priorities will be reviewed annually by NRCS to ensure that the program is addressing priority wildlife habitat concerns. This addition makes WHIP consistent with other NRCS conservation programs.

Section 636.6, Establishing Priority for Enrollment in WHIP

NRCS amends § 636.6(a) by replacing “needs” with “wildlife habitat concerns.” NRCS also amends § 636.6(a) by adding the following sentence, “NRCS, in consultation with Federal and state agencies and conservation partners, may identify priorities for enrollment in WHIP that will complement the goals and objectives of relevant fish and wildlife conservation initiatives at the State, regional, and national levels.” These changes clarify that NRCS may focus program implementation in any given year to respond to national, regional, state wildlife habitat concerns, identified by NRCS in partnership with other Federal and State agencies. Local wildlife habitat concerns issues may be elevated to the appropriate State Conservationist in an effort to address specific habitat development needs.

NRCS amends § 636.6(b) by striking the term “species,” consistent with the program purpose of development of wildlife habitat. While the intent of such development is to benefit wildlife species, the program focus is on the land and water resources covered by cost-share agreements entered into under the program.

NRCS adds a new ranking criteria to § 636.6(c) to allow NRCS to consider a participants’ willingness to complete habitat development within two years of the cost-share agreement. This criterion

is intended to encourage quicker implementation of wildlife habitat improvements and reduce the number of modifications and cancellations. NRCS deletes § 636.6(d) since the function of denying applications is better addressed in the application ranking process.

Section 636.7, Cost-Share Payments

NRCS replaces the term “WHDP” with “WPO,” to correspond with the changes NRCS makes to §§ 636.3 and 636.8. Like the WHDP, WPO is the document that identifies the location and timing of conservation practices that the participant agrees to implement on eligible land in order to address the priority resource concerns. NRCS has chosen to change this terminology to make it consistent with other financial assistance programs administered by NRCS.

NRCS revises § 636.7(a)(1) to reflect that “NRCS shall offer to pay no more than 75 percent of the costs of establishing conservation practices,” consistent with changes made in § 636.3. NRCS also adds a new provision under § 636.7(a) to allow NRCS to provide additional cost-share incentives to “historically underserved producers” and Indian tribes. “Historically underserved producers” include limited resource, beginning farmers or ranchers, and socially disadvantaged farmers or ranchers. This addition is consistent with the authority provided under Section 1244 of the 1985 Act, as amended by Section 2708 of the 2008 Act, to provide additional incentives for certain farmers, ranchers, and Indian tribes, which reads as follows:

(a) Incentives for Certain Farms and Ranchers and Indian tribes:

(1) Incentives Authorized. In carry out any conservation program administered by the Secretary, the Secretary may provide to a person or entity specified in paragraph (2) incentives to participate in the conservation program—

(i) To foster new farming and ranching opportunities; and

(ii) To enhance long-term environmental goals.

(2) Covered Persons. Incentives authorized by paragraph (1) may be provided to the following:

(i) Beginning farmers or ranchers;

(ii) Socially disadvantaged farmers or ranchers;

(iii) Limited resource farmers or ranchers; and

(iv) Indian tribes.

Under this authority, which applies to all conservation programs implemented by the Secretary, NRCS proposes in this rulemaking to increase WHIP cost-share rates to the participants identified under

Section 1244(a)(2) of the 1985 Act, as amended. Since WHIP’s legislative authority does not establish a definitive payment rate, NRCS is adopting in § 636.7 the Environmental Quality Incentives Program’s cost-share rate policies for historically underserved producers. The payment rate for historically underserved producers is the applicable payment rate and an additional payment rate that is no less than 25 percent above the applicable payment rate, provided this increase does not exceed 90 percent of the estimated incurred costs associated with the conservation practice. This proposal not only enables those who are less capable of matching Federal assistance to receive additional program support, but also supports the NRCS effort to streamline program policies where possible.

NRCS revises § 636.7(b) by relocating to § 636.8(e) the requirement that the participant or designee is responsible for the implementation of the WPO. The reference to the source of implementation is more appropriately in the section related to the WPO.

NRCS also adds new paragraphs (c) and (d) to § 636.7, and redesignates the former § 636.7(c) as (e). NRCS clarifies in the new § 636.7(c) that conservation practices implemented prior to an applicant submitting an application to the program are ineligible for payments. Additionally, NRCS clarifies in § 636.7(c) that conservation practices implemented or initiated prior to the approval of a cost-share agreement are ineligible for payment, unless NRCS grants a waiver in advance. Section 636.7(d) clarifies existing policy that NRCS will identify and provide public notification of the conservation practices eligible for cost-share payments under the program.

NRCS also adds new paragraphs (f) through (j) to § 636.7 to be consistent with related NRCS conservation programs. More particularly, § 636.7(f) incorporates the payment limitation as established by the 2008 Act. Section 636.7(g) states that adjusted gross income (AGI) eligibility will be determined prior to cost-share agreement approval. Section 636.7(h) allows for current year cost-adjustment for conservation practices, subject to the availability of funds. NRCS clarifies in § 636.7(i) that NRCS will not make a payment for a conservation practices under WHIP if the participant has already received a payment for the same practice on the same land under another USDA conservation program. Section 636.7(j) requires that the participant and NRCS, or an approved TSP, certify that the conservation practices have been

carried out in accordance with the cost-share agreement and agency standards prior to issuing final cost-share payments.

Lastly, NRCS adds paragraph (k) in accordance with Section 1240N(b)(2)(B) that specifies the NRCS may use up to 25 percent of WHIP funds to carry out cost-share agreements that extend 15 years or more. Prior to the 2008, NRCS had the legislative authority to use up to 15 percent of WHIP funds to carry out these longer term agreements.

Section 636.8, WHIP Plan of Operations (WPO)

NRCS changes the caption, "Wildlife Habitat Development Plan," to "WHIP plan of operations (WPO)," consistent with how related NRCS conservation programs identify the document that contains the information related to practices and activities to be implemented under the program.

NRCS makes several revisions to § 636.8(a) to reduce the administrative burden upon participants. In particular, NRCS removes the language "and the WHDP is approved by participant, NRCS, and the local conservation district" as a result of the need to protect personally identifiable information in accordance with Section 1619 of the 2008 Act. This change also was recommended by comments received by USDA through the Farm Bill forums.

NRCS revises § 636.8(b) to clarify the NRCS expectation that the program participant will maintain WHIP-funded conservation practices as specified in the O&M agreement that is consistent with other NRCS conservation programs. NRCS also removes the requirement that a program participant has to sign both the cost-share agreement and the WPO by adding the following language: "the WPO * * * shall be attached and included as part of the cost-share agreement."

NRCS revises § 636.8(d) to clarify that all conservation practices planned in the WPO are in accordance with the NRCS field office technical guide (FOTG), consistent with related NRCS conservation programs.

Finally, as indicated above, NRCS incorporates into § 636.8(e) the requirement contained previously in § 636.7(b) that a participant is responsible for the implementation of the WPO.

Section 636.9, Cost-Share Agreements

NRCS amends § 636.9(a) to update the locations available for submitting an application to participate in WHIP. This change serves to notify the public of all

the avenues available for submitting applications.

Under § 636.9(b)(2), NRCS revises the duration of the cost-share agreement from the former 5- to 10-year duration to a minimum duration of one year and a maximum of 10 years, with the exception of long-term agreements as established under § 636.9(c). This new language provides the flexibility needed for establishing agreement lengths based on wildlife habitat needs and other factors.

NRCS removes § 636.9(b)(4) because the operation and maintenance requirements are included in the O&M agreement. Correspondingly, paragraphs (b)(5) and (6) of this section are redesignated as (b)(4) and (5), respectively. NRCS adds a new § 636.9(b)(6) to clarify that payment limits will be specified in the cost-share agreement, consistent with related NRCS conservation programs. NRCS also adds a new § 636.9(b)(7) that states that the O&M agreement expresses the NRCS expectation that participants will operate and maintain conservation practices installed with program assistance for the lifespan of the installed practices. NRCS has developed this O&M agreement for two reasons: (1) To increase the transparency of a participant's contract responsibilities; and (2) to ensure these conservation practices are maintained for the length of time for which they were designed and created. The previous § 636.9(b)(7) has been redesignated as § 636.9(b)(8).

NRCS removes § 636.9(c) pursuant to modifications in the cost-share agreement terms made in § 636.8(b)(2). NRCS redesignates § 636.9(d) as § 636.9(c), and revises § 636.9(c)(3), to establish a maximum cost-share rate of 90 percent for conservation practices installed under long-term cost-share agreements where the duration of the agreement is for 15 years or longer.

Section 636.10, Modifications

NRCS simplifies the language in § 636.10(a) to reduce the number of steps required to modify a cost-share agreement and protect personally identifiable information. This change also ensures that the WPO and O&M agreement are also modified along with the cost-share agreement. NRCS deletes § 636.10(b) as redundant to § 636.10(a), and redesignates existing § 636.10(c) as § 636.10(b). Section 636.10(c) is added to ensure that in the event a conservation practice fails through no fault of the participant, the State Conservationist may issue payments to re-establish the conservation practice, in accordance with established payment rates and limitations.

Section 636.11, Transfer of Interest in a Cost-Share Agreement

NRCS makes several formatting changes in this section to improve its structure. In particular, §§ 636.11(a)(2), (b)(1), and (b)(2) have been redesignated as §§ 636.11(c), (d), and (e), respectively. NRCS makes these changes to simplify the original formatting.

NRCS revises § 636.11(a) to simplify and clarify that participants must notify NRCS if they anticipate loss of control over the land covered by a cost-share agreement, consistent with related NRCS conservation programs. NRCS adds a new § 636.11(b) to address the transfer of responsibilities under WHIP cost-share agreements, consistent with other NRCS conservation programs.

Section 636.12, Termination of Cost-Share Agreements

NRCS revises § 636.12(a) to clarify that NRCS may unilaterally terminate a cost-share agreement under certain circumstances. NRCS deletes § 636.12(a)(2) because the circumstances identified in that provision are already addressed by § 636.12(a)(1). Accordingly, NRCS redesignates § 636.12(a)(3) as § 636.12(a)(2) and adds a new § 636.12(a)(3) that specifies that a participant's failure to correct a violation within the allowed time period also is cause for termination.

NRCS revises § 636.12(b) related to cost-share agreement termination to clarify that participants also may forfeit rights to future payments, be assessed liquidated damages, or be determined ineligible for further conservation program funding. NRCS also adds § 636.12(c) to specify that NRCS may reduce costs recovered after a termination decision based on a participant's good faith effort. These revisions align WHIP administration with other NRCS conservation program administration policies concerning cost-share agreement termination and the resulting financial consequences and requirements.

Section 636.13, Violations and Remedies

NRCS reformats some of the provisions in this section to improve the overall structure. Additionally, NRCS deletes the original § 636.13(b), which is identified in the existing regulation as "reserved."

In § 636.13(a), NRCS removes the word "reasonable" in reference to participant violation notification. The term "reasonable" is unnecessary since a 60-day time frame is already provided in which a participant has the opportunity to initiate actions needed to

correct a violation. Section 636.13(a) now provides that "NRCS shall give the parties to the cost-share agreement notice of the violation and a minimum of 60 days to correct the violation and comply with the terms of the cost-share agreement and attachments thereto."

NRCS revises § 636.13(b) to include, consistent with other NRCS conservation programs, the assessment of liquidated damages as a possible consequence to a violation of a cost-share agreement. Liquidated damages are not a penalty, but a recognition that some of the damages incurred upon the breach of a party's agreement may not be easily calculated, but are known to occur, such as expenses incurred by NRCS to service the cost-share agreement

Section 636.14, Misrepresentation and Scheme or Device

NRCS amends § 636.14 to be in accordance with the other financial assistance programs administered by NRCS. Specifically, NRCS inserts language concerning the collection of liquidated damages and possible cancellation of all other NRCS contracts if a person is a participant and knowingly misrepresented any fact that affected program determination of their WHIP cost-share agreement.

Section 636.15, Offsets and Assignments

No changes have been made in this section.

Section 636.16, Appeals

No changes have been made in this section.

Section 636.17, Compliance With Regulatory Measures

NRCS adds § 636.17 to identify clearly a participant's responsibilities associated with other regulatory measures. This change reflects standard NRCS language applicable to multiple programs.

Section 636.18, Technical Services Provided by Qualified, Non-USDA Personnel

NRCS adds § 636.18 to incorporate the Technical Service Provider provisions in place since 2002, but not included in the regulation. This section is consistent with related NRCS conservation programs.

Section 636.19, Access to Operating Unit

NRCS adds § 636.19 to be consistent with related NRCS conservation programs. This section provides NRCS personnel authorized physical access to projects undertaken by participants in

order to review project progress and give further assistance to participants where it is needed.

Section 636.20, Equitable Relief

NRCS adds § 636.20 to be consistent with other NRCS conservation programs. This section clarifies that WHIP participants who acted in good faith based on erroneous information provided by NRCS or its representatives are entitled to equitable relief if such action resulted in a violation of the cost-share agreement.

Section 636.21, Environmental Services Credits for Conservation Improvements

NRCS adds § 636.21, which states that NRCS recognizes that environmental benefits will be achieved by implementing conservation practices funded through WHIP, and that environmental credits may be gained as a result of implementing these activities. NRCS asserts no direct or indirect interest in these credits. However, NRCS retains the authority to ensure that the requirements for WHIP-funded improvements are met and maintained consistent with the terms of the cost-share agreement. Where activities may affect the land covered by a WHIP cost-share agreement, participants are highly encouraged to request a compatibility assessment from NRCS prior to entering into any environmental credit agreements. This section is consistent with the policy that is being adopted in multiple NRCS programs.

Section 2708, "Compliance and Performance," of the 2008 Act added a paragraph to Section 1244(g) of the 1985 Act entitled, "Administrative Requirements for Conservation Programs," which states the following:

"(g) Compliance and performance.—For each conservation program under Subtitle D, the Secretary shall develop procedures—

- (1) To monitor compliance with program requirements;
- (2) To measure program performance;
- (3) To demonstrate whether long-term conservation benefits of the program are being achieved;
- (4) To track participation by crop and livestock type; and
- (5) To coordinate activities described in this subsection with the national conservation program authorized under section 5 of the Soil and Water Resources Conservation Act of 1977 (16 U.S.C. 2004)."

This new provision presents in one place the accountability requirements placed on the Agency as it implements conservation programs and reports on program results. The requirements apply to all programs under Subtitle D, including the Wetlands Reserve program, the Conservation Security Program, the Conservation Stewardship

Program, The Farm and Ranch Lands Protection Program, the Grassland Reserve Program, the Environmental Quality Incentives Program (including the Agricultural Water Enhancement Program), the Wildlife Habitat Incentive Program, and the Chesapeake Bay Watershed initiative. These requirements are not directly incorporated into these regulations, which set out requirements for program participants. However, certain provisions within these regulations relate to elements of Section 1244(g) of the 1985 Act and the Agency's accountability responsibilities regarding program performance. NRCS is taking this opportunity to describe existing procedures that relate to meeting the requirements of Section 1244(g) of the 1985 Act, and Agency expectations for improving its ability to report on each program's performance and achievement of long-term conservation benefits. Also included is reference to the sections of these regulations that apply to program participants and that relate to the Agency accountability requirements as outlined in Section 1244(g) of the 1985 Act.

Monitor compliance with program requirements. NRCS has established application procedures to ensure that participants meet eligibility requirements, and follow-up procedures to ensure that participants are complying with the terms and conditions of their contractual arrangement with the government and that the installed conservation measures are operating as intended. These and related program compliance evaluation policies are set forth in Agency guidance (M 440 512 and M 440 517 (<http://directives.sc.egov.usda.gov/>)).

The program requirements applicable to participants that relate to compliance are set forth in these regulations in § 636.4, "Program Requirements," § 636.8, "WHIP Plan of Operations," and § 636.9, "Cost-share agreements." These sections make clear the general program eligibility requirements, participant obligations for implementing a WHIP plan of operations, participant cost-share agreement obligations, and requirements for operating and maintaining WHIP-funded conservation improvements.

Measure program performance. Pursuant to the requirements of the Government Performance and Results Act of 1993 (Pub. L. 103-62, Sec. 1116) and guidance provided by OMB Circular A-11, NRCS has established performance measures for its conservation programs. Program-funded conservation activity is captured through automated field-level business

tools and the information is made publicly available at: <http://ias.sc.egov.usda.gov/PRSHOME/>. Program performance also is reported annually to Congress and the public through the annual performance budget, annual accomplishments report and the USDA Performance Accountability Report. Related performance measurement and reporting policies are set forth in Agency guidance (GM_340_401 and GM_340_403 (<http://directives.sc.egov.usda.gov/>)).

The conservation actions undertaken by participants are the basis for measuring program performance—specific actions are tracked and reported annually, while the effects of those actions relate to whether the long-term benefits of the program are being achieved. The program requirements applicable to participants that relate to undertaking conservation actions are set forth in these regulations in § 636.8, “WHIP Plan of Operations” and § 636.9, “Cost-share agreements.” These sections make clear participant obligations for implementing, operating, and maintaining WHIP-funded conservation improvements, which in aggregate result in the program performance that is reflected in Agency performance reports.

Demonstrate whether long-term conservation benefits of the program are being achieved. Demonstrating the long-term natural resource benefits achieved through conservation programs is subject to the availability of needed data, the capacity and capability of modeling approaches, and the external influences that affect actual natural resource condition. While NRCS captures many measures of “output” data, such as acres of conservation practices, it is still in the process of developing methods to quantify the contribution of those outputs to environmental outcomes.

NRCS currently uses a mix of approaches to evaluate whether long-term conservation benefits are being achieved through its programs. Since 1982, NRCS has reported on certain natural resource status and trends through the National Resources Inventory (NRI), which provides statistically reliable, nationally consistent land cover/use and related natural resource data. However, lacking has been a connection between these data and specific conservation programs.¹ In the future, the interagency Conservation Effects Assessment Project (CEAP), which has been underway since

2003, will provide nationally consistent estimates of environmental effects resulting from conservation practices and systems applied. CEAP results will be used in conjunction with performance data gathered through Agency field-level business tools to help produce estimates of environmental effects accomplished through Agency programs, such as WHIP. In 2006 a Blue Ribbon panel evaluation of CEAP² strongly endorsed the project’s purpose, but concluded “CEAP must change direction” to achieve its purposes. In response, CEAP has focused on priorities identified by the Panel and clarified that its purpose is to quantify the effects of conservation practices applied on the landscape. Information regarding CEAP, including reviews and current status is available at (<http://www.nrcs.usda.gov/technical/NRI/ceap/>). Since 2004 and the initial establishment of long-term performance measures by program, NRCS has been estimating and reporting progress toward long-term program goals. Natural resource inventory and assessment, and performance measurement and reporting policies set forth in Agency guidance (GM_290_400; GM_340_401; GM_340_403) (<http://directives.sc.egov.usda.gov/>)).

Demonstrating the long-term conservation benefits of conservation programs is an Agency responsibility. Through CEAP, NRCS is in the process of evaluating how these long-term benefits can be achieved through the conservation practices and systems applied by participants under the program. The program requirements applicable to participants that relate to producing long-term conservation benefits are described previously under “measuring program performance,” *i.e.*, § 636.8, “The WHIP Plan of Operations” and § 636.9, “Cost-share agreements.” These and related program management procedures supporting program implementation are set forth in Agency guidance (M_440_512 and M_440_515).

Coordinate these actions with the national conservation program authorized under the Soil and Water Resources Conservation Act (RCA). The 2008 Act reauthorized and expanded on a number of elements of the RCA related to evaluating program performance and conservation benefits. Specifically, the 2008 Farm Bill added a provision stating,

² Soil and Water Conservation Society. 2006. Final Report from the Blue Ribbon Panel Conducting an External Review of the U.S. Department of Agriculture Conservation Effects Assessment Project. Ankeny, IA: Soil and Water Conservation Society. This review is available at (<http://www.nrcs.usda.gov/technical/NRI/ceap/>).

“Appraisal and inventory of resources, assessment and inventory of conservation needs, evaluation of the effects of conservation practices, and analyses of alternative approaches to existing conservation programs are basic to effective soil, water, and related natural resources conservation.”

The program, performance, and natural resource and effects data described previously will serve as a foundation for the next RCA, which will also identify and fill, to the extent possible, data and information gaps. Policy and procedures related to the RCA are set forth in Agency guidance (GM_290_400; M_440_525; GM_130_402) (<http://directives.sc.egov.usda.gov/>).

The coordination of the previously described components with the RCA is an Agency responsibility and is not reflected in these regulations. However, it is likely that results from the RCA process will result in modifications to the program and performance data collected, to the systems used to acquire data and information, and potentially to the program itself. Thus, as the Secretary proceeds to implement the RCA in accordance with the statute, the approaches and processes developed will improve existing program performance measurement and outcome reporting capability and provide the foundation for improved implementation of the program performance requirements of Section 1244(g) of the 1985 Act.

NRCS is amending this rule, 7 CFR part 636, WHIP, republishing it in its entirety and accepting comments until March 17, 2009, on the aforementioned subjects.

List of Subjects in 7 CFR Part 636

Administrative practice and procedure, Agriculture, Conservation, Endangered and threatened species, Natural resources, Soil conservation, Wildlife.

■ For reasons set out in the preamble, NRCS is revising 7 CFR part 636 to read as follows:

PART 636—WILDLIFE HABITAT INCENTIVES PROGRAM

- Sec.
- 636.1 Applicability.
 - 636.2 Administration.
 - 636.3 Definitions.
 - 636.4 Program requirements.
 - 636.5 National priorities.
 - 636.6 Establishing priority for enrollment in WHIP.
 - 636.7 Cost-share payments.
 - 636.8 The WHIP Plan of Operation (WPO).
 - 636.9 Cost-share agreements.
 - 636.10 Modifications.

¹ The exception to this is the Conservation Reserve Program; since 1987 the NRI has reported acreage enrolled in CRP.

- 636.11 Transfer of interest in a cost-share agreement.
- 636.12 Termination of cost-share agreements.
- 636.13 Violations and remedies.
- 636.14 Misrepresentation and scheme or device.
- 636.15 Offsets and assignments.
- 636.16 Appeals.
- 636.17 Compliance with regulatory measures.
- 636.18 Technical services provided by qualified, non-USDA personnel.
- 636.19 Access to operating unit.
- 636.20 Equitable relief.
- 636.21 Environmental Services Credits for Conservation Improvements.

Authority: 16 U.S.C. 3839bb-1.

§ 636.1 Applicability.

(a) The purpose of the Wildlife Habitat Incentives Program (WHIP) is to help participants develop fish and wildlife habitat on private agricultural land, nonindustrial private forest land, and Indian land.

(b) The regulations in this Part set forth the requirements for the WHIP.

(c) The Chief, Natural Resources Conservation Service (NRCS) may implement WHIP in any of the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, Guam, the Virgin Islands of the United States, American Samoa, and the Commonwealth of the Northern Mariana Islands.

§ 636.2 Administration.

(a) The regulations in this Part will be administered under the general supervision and direction of the Chief, NRCS. The funds, facilities, and authorities of the Commodity Credit Corporation (CCC) are available to NRCS to carry out WHIP. Accordingly, where NRCS is mentioned in this Part, it also refers to the CCC's funds, facilities, and authorities, where applicable.

(b) The State Conservationist will consult with the State Technical Committee in the implementation of the program and in establishing program direction for WHIP in the applicable State. The State Conservationist has the authority to accept or reject the State Technical Committee recommendation; however, the State Conservationist will give strong consideration to the State Technical Committee's recommendation.

(c) NRCS may enter into agreements with Federal and State agencies, Indian tribes, conservation districts, local units of government, public and private organizations, and individuals to assist with program implementation, including the provision of technical assistance. NRCS may make payments pursuant to said agreements for program

implementation and for other goals consistent with the program provided for in this Part.

(d) NRCS will provide the public with notice of opportunities to apply for participation in the program.

(e) No delegation in this Part to lower organizational levels shall preclude the Chief of NRCS, or a designee, from determining any issues arising under this Part or from reversing or modifying any determination made under this Part.

§ 636.3 Definitions.

The following definitions will apply to this part and all documents issued in accordance with this part, unless specified otherwise:

Agricultural lands means cropland, grassland, rangeland, pasture, and other land determined by NRCS to be suitable for fish and wildlife habitat development, on which agricultural and forest-related products or livestock are produced. Agricultural lands may include cropped woodland, marshes, incidental areas included in the agricultural operation, and other types of land used for production of livestock.

Applicant means a person, legal entity or joint operation that has an interest in an agricultural operation, as defined in 7 CFR part 1400, who has requested in writing to participate in WHIP.

At-risk species means any plant or animal species as determined by the State Conservationist, with advice from the State Technical Committee, to need direct intervention to halt its population decline.

Beginning Farmer or Rancher means an individual or entity who:

(1) Has not operated a farm or ranch, or who has operated a farm or ranch for not more than 10 consecutive years. This requirement applies to all members of an entity, and will materially and substantially participate in the operation of the farm or ranch.

(2) In the case of a cost-share agreement with an individual, individually or with the immediate family, material and substantial participation requires that the individual provide substantial day-to-day labor and management of the farm or ranch, consistent with the practices in the county or State where the farm is located.

(3) In the case of a cost-share agreement with an entity or joint operation, all members must materially and substantially participate in the operation of the farm or ranch. Material and substantial participation requires that each of the members provide some amount of the management, or labor and management necessary for day-to-day activities, such that if each of the

members did not provide these inputs, operation of the farm or ranch would be seriously impaired.

Chief means the Chief of NRCS, United States Department of Agriculture (USDA), or a designee.

Conservation district means any district or unit of State, Tribal, or local government formed under State, Tribal, or territorial law for the express purpose of developing and carrying out a local soil and water conservation program. Such district or unit of government may be referred to as a "conservation district," "soil conservation district," "soil and water conservation district," "resource conservation district," "natural resource district," "land conservation committee," or similar name.

Conservation practice means one or more conservation improvements and activities, including structural practices, land management practices, vegetative practices, forest management, and other improvements that benefit the eligible land and achieve program purposes.

Cost-share agreement means a legal document that specifies the rights and obligations of any participant accepted into the program. A WHIP cost-share agreement is a binding agreement for the transfer of assistance from USDA to the participant to share in the costs of applying conservation.

Cost-share payment means the payments under the WHIP cost-share agreement to develop fish and wildlife habitat or accomplish other goals consistent with the program provided for in this Part.

Designated conservationist means an NRCS employee whom the State Conservationist has designated as responsible for WHIP administration in a specific area.

Field office technical guide (FOTG) means the official local NRCS source of resource information and interpretations of guidelines, criteria, and requirements for planning and applying conservation practices and conservation management systems. It contains detailed information on the conservation of soil, water, air, plant, and animal resources applicable to the local area for which it is prepared.

Habitat development means the conservation practices implemented to establish, improve, protect, enhance, or restore the conditions of the land for the specific purpose of improving conditions for fish and wildlife.

Historically Underserved Producer means an eligible person, joint operation, or legal entity that is a beginning farmer or rancher, socially disadvantaged farmer or rancher, or limited resource farmer or rancher.

Indian land means:

(1) Land held in trust by the United States for individual Indians or Indian tribes, or

(2) Land, the title to which is held by individual Indians or Indian tribes subject to Federal restrictions against alienation or encumbrance, or

(3) Land which is subject to rights of use, occupancy and/or benefit of certain Indian tribes, or

(4) Land held in fee title by an Indian, Indian family or Indian tribe.

Indian tribe means any Indian tribe, band, nation, or other organized group or community, including any Alaska Native village or regional or village corporation as defined in or established pursuant to the Alaska Native Claims Settlement Act (43 U.S.C. 1601 *et seq.*) that is eligible for the special programs and services provided by the United States to Indians because of their status as Indians.

Joint operation means, as defined in 7 CFR part 1400, a general partnership, joint venture, or other similar business organization in which the members are jointly or severally liable for the obligations of the organization.

Legal entity means, as defined in 7 CFR 1400, an entity created under Federal or State law that:

(1) Owns land or an agricultural commodity, product, or livestock; or

(2) Produces an agricultural commodity, product, or livestock.

Lifespan means the period of time during which a conservation practice is to be operated and maintained for the intended purpose.

Limited Resource Farmer or Rancher means:

(1) A person with direct or indirect gross farm sales not more than \$155,200 in each of the previous two years (adjusted for inflation using Prices Paid by Farmer Index as compiled by National Agricultural Statistical Service), and

(2) Has a total household income at or below the national poverty level for a family of four, or less than 50 percent of county median household income in each of the previous two years (to be determined annually using Commerce Department Data).

Liquidated damages means a sum of money stipulated in the WHIP cost-share agreement that the participant agrees to pay NRCS if the participant fails to adequately complete the terms of the cost-share agreement. The sum represents an estimate of the technical assistance expenses incurred to service the agreement, and reflects the difficulties of proof of loss and the inconvenience or non-feasibility of

otherwise obtaining an adequate remedy.

Livestock means all animals produced on farms and ranches, as determined by the Chief.

Natural Resources Conservation Service (NRCS) is an agency of the USDA, which has the responsibility for administering WHIP using the funds, facilities, and authorities of the CCC.

Nonindustrial private forestland means rural land, as determined by the Secretary, that has existing tree cover or is suitable for growing trees; and is owned by any nonindustrial private individual, group, association, corporation, Indian tribe, or other private legal entity that has definitive decision-making authority over the land.

Operation and maintenance means work performed by the participant to keep the applied conservation practice functioning for the intended purpose during the conservation practice lifespan. Operation includes the administration, management, and performance of non-maintenance actions needed to keep the completed practice functioning as intended. Maintenance includes work to prevent deterioration of the practice, repairing damage, or replacement of the practice to its original condition if one or more components fail.

Operation and maintenance (O&M) agreement means the document that, in conjunction with the WHIP plan of operations, specifies the operation and maintenance responsibilities of the participants for conservation practices installed with WHIP assistance.

Participant means a person, legal entity, or joint operation, or tribe that is receiving payment or is responsible for implementing the terms and conditions of a WHIP cost-share agreement.

Person means, as defined in 7 CFR part 1400, an individual, natural person and does not include a legal entity.

Producer means, as defined in 7 CFR part 1400, a person, legal entity, or joint operation who has an interest in the agricultural operation or who is engaged in agricultural production or forestry management.

Resource concern means a specific natural resource problem that represents a significant concern in a State or region and is likely to be addressed successfully through the implementation of the conservation practices by producers.

Secretary means the Secretary of the USDA.

Socially disadvantaged farmer or rancher means a farmer or rancher who has been subjected to racial or ethnic prejudices because of their identity as a

member of a group without regard to their individual qualities.

State Conservationist means the NRCS employee authorized to implement WHIP and direct and supervise NRCS activities in a State, the Caribbean Area, or the Pacific Islands Area.

State Technical Committee means a committee established by the Secretary of the United States Department of Agriculture in a State pursuant to 16 U.S.C. 3861.

Technical assistance means technical expertise, information, and tools necessary for the conservation of natural resources on land active in agricultural, forestry, or related uses. The term includes the following:

(1) Technical services provided directly to farmers, ranchers, and other eligible entities, such as conservation planning, technical consultation, and assistance with design and implementation of conservation practices; and

(2) Technical infrastructure, including activities, processes, tools, and agency functions needed to support delivery of technical services, such as technical standards, resource inventories, training, data, technology, monitoring, and effects analyses.

Technical Service Provider (TSP) means an individual, private-sector entity, or public agency certified by NRCS to provide technical services to program participants in lieu of or on behalf of NRCS.

WHIP plan of operations (WPO) means the document that identifies the location and timing of conservation practices that the participant agrees to implement on eligible land in order to develop fish and wildlife habitat and provide environmental benefits. The WPO is a part of the WHIP cost-share agreement.

Wildlife means non-domesticated birds, fishes, reptiles, amphibians, invertebrates, and mammals.

Wildlife habitat means the aquatic and terrestrial environments required for fish and wildlife to complete their life cycles, providing air, food, cover, water, and spatial requirements.

§ 636.4 Program requirements.

(a) To participate in WHIP, an applicant must:

(1) Be in compliance with the highly erodible and wetland conservation provisions found in 7 CFR part 12;

(2) Be in compliance with the terms of all other USDA-administered conservation program contracts to which the participant is a party;

(3) Develop and agree to comply with a WPO and O&M agreement, as described in § 636.8;

(4) Enter into a cost-share agreement for the development of fish and wildlife habitat as described in § 636.9;

(5) Provide NRCS with written evidence of ownership or legal control for the term of the proposed cost-share agreement, including the O&M agreement. An exception may be made by the Chief in the case of land allotted by the Bureau of Indian Affairs or Indian land where there is sufficient assurance of control.

(6) Agree to provide all information to NRCS determined to be necessary to assess the merits of a proposed project and to monitor cost-share agreement compliance;

(7) Agree to grant to NRCS or its representatives access to the land for purposes related to application, assessment, monitoring, enforcement, verification of certifications, or other actions required to implement this Part;

(8) Provide a list of all members of the legal entity and embedded entities along with members' tax identification numbers and percentage interest in the entity. Where applicable, American Indians, Alaska Natives, and Pacific Islanders may use another unique identification number for each individual eligible for payment;

(9) With regard to cost-share agreements with individual Indians or Indians represented by BIA, payments exceeding the payment limitation may be made to the Tribal participant if a BIA or Tribal official certifies in writing that no one individual, directly or indirectly, will receive more than the payment limitation. The Tribal entity must also provide, annually, a listing of individuals and payments made, by tax identification number or other unique identification number, during the previous year for calculation of overall payment limitations. The Tribal entity must also produce, at the request of NRCS, proof of payments made to the person or legal entity that incurred costs or sacrificed income related to conservation practice implementation.

(10) Supply information, as required by NRCS, to determine eligibility for the program, including but not limited to, information to verify the applicant's status as a limited resource farmer or rancher or beginning farmer or rancher and payment eligibility as established by 7 CFR part 1400, Adjusted Gross Income; and

(11) With regard to any participant that utilizes a unique identification number as an alternative to a tax identification number, the participant will utilize only that identifier for any and all other WHIP cost-share agreements to which the participant is a party. Violators will be considered to

have provided fraudulent representation and be subject to full penalties of § 636.13 of this part.

(b) Eligible land includes:

- (1) Private agricultural land;
- (2) Nonindustrial private forest land; and

(3) Indian land.

(c) Ineligible land. NRCS shall not provide cost-share assistance with respect to conservation practices on land:

(1) Enrolled in a program where fish and wildlife habitat objectives have been sufficiently achieved, as determined by NRCS;

(2) With on-site or off-site conditions which NRCS determines would undermine the benefits of the habitat development or otherwise reduce its value;

(3) On which habitat for threatened or endangered species, as defined in Section 3 of the Endangered Species Act (ESA), 16 U.S.C. 1532, would be adversely affected;

(4) That is public land.

§ 636.5 National priorities.

(a) The following national priorities will be used in WHIP implementation:

(1) Promote the restoration of declining or important native fish and wildlife habitats;

(2) Protect, restore, develop, or enhance fish and wildlife habitat to benefit at-risk species;

(3) Reduce the impacts of invasive species on fish and wildlife habitats; and

(4) Protect, restore, develop, or enhance declining or important aquatic wildlife species' habitats.

(b) NRCS, with advice of other Federal agencies, will undertake periodic reviews of the national priorities and the effects of program delivery at the State and local level to adapt the program to address emerging resource issues. NRCS will:

(1) Use the national priorities to guide the allocation of WHIP funds to the State NRCS offices.

(2) Use the national priorities in conjunction with State and local priorities to assist with prioritization and selection of WHIP applications, and

(3) Periodically review and update the national priorities utilizing input from the public and affected stakeholders to ensure that the program continues to address priority resource concerns.

§ 636.6 Establishing priority for enrollment in WHIP.

(a) NRCS, in consultation with Federal and state agencies and conservation partners, may identify priorities for enrollment in WHIP that

will complement the goals and objectives of relevant fish and wildlife conservation initiatives at the state, regional, and national levels. In response to national, regional, and state fish and wildlife habitat concerns, the Chief may limit program implementation in any given year to specific geographic areas or to address specific habitat development needs.

(b) The State Conservationist, in consultation with the State Technical Committee, may give priority to WHIP projects that will address unique habitats, or special geographic areas identified in the State. Subsequent cost-share agreement offers that would complement previous cost-share agreements due to geographic proximity of the lands involved or other relationships may receive priority consideration for participation.

(c) NRCS will evaluate the applications and make enrollment decisions based on the fish and wildlife habitat need using some or all of the following criteria:

(1) Contribution to resolving an identified habitat concern of national, regional, or state importance;

(2) Relationship to any established wildlife or conservation priority areas;

(3) Duration of benefits to be obtained from the habitat development practices;

(4) Self-sustaining nature of the habitat development practices;

(5) Availability of other partnership matching funds or reduced funding request by the person applying for participation;

(6) Estimated costs of fish and wildlife habitat development activities;

(7) Other factors determined appropriate by NRCS to meet the objectives of the program; and

(8) Willingness of the applicant to complete all conservation improvements during the first two years of the WHIP cost-share agreement.

§ 636.7 Cost-share payments.

(a) NRCS may share the cost with a participant for implementing the conservation practices as provided in the WPO that is a component of the WHIP cost-share agreement:

(1) Except as provided in paragraph (a)(2) of this section and § 636.9(c), NRCS shall offer to pay no more than 75 percent of the costs of establishing conservation practices to develop fish and wildlife habitat. The cost-share payment to a participant shall be reduced proportionately below 75 percent to the extent that direct Federal financial assistance is provided to the participant from sources other than NRCS, except for certain cases that merit additional cost-share assistance to

achieve the intended goals of the program, as determined by the State Conservationist.

(2) Historically underserved producers, as defined in § 636.3, and Indian tribes may receive the applicable payment rate and an additional rate that is not less than 25 percent above the applicable rate, provided that this increase does not exceed 90 percent of the estimated incurred costs associated with the conservation practice.

(b) Cost-share payments may be made only upon a determination by the NRCS that a conservation practice or an identifiable component of a conservation practice has been established in compliance with appropriate standards and specifications.

(c) Payments will not be made for a conservation practice that was:

(1) Applied prior to application for the program, or

(2) Initiated or implemented prior to cost-share agreement approval, unless a waiver was granted by the State Conservationist or designated conservationist prior to practice implementation.

(d) NRCS will identify and provide public notice of the conservation practices eligible for payment under the program.

(e) Cost-share payments may be made for the establishment and installation of additional eligible conservation practices, or the maintenance or replacement of an eligible conservation practice, but only if NRCS determines the conservation practice is needed to meet the objectives of the program, or that the failure of the original project was due to reasons beyond the control of the participant.

(f) Payments made or attributed to a participant, directly or indirectly, may not exceed, in the aggregate, \$50,000 per year.

(g) Eligibility for payment in accordance with 7 CFR part 1400, subpart G, average adjusted gross income limitation, will be determined prior to cost-share agreement approval.

(h) Subject to fund availability, the payment rates for conservation practices scheduled after the year of contract obligation may be adjusted to reflect increased costs.

(i) A participant will not be eligible for payments for conservation practices on eligible land if the participant receives payments or other benefits for the same practice on the same land under any other conservation program administered by USDA.

(j) Before NRCS will approve and issue final payment, the participant must certify that the conservation

practice has been completed in accordance with the cost-share agreement, and NRCS or an approved TSP must certify that the practice has been carried out in accordance with the applicable NRCS field office technical guide.

(k) NRCS, for a fiscal year, may use up to 25 percent of WHIP funds to carry out cost-share agreements described in § 636.9(c).

§ 636.8 The WHIP plan of operations (WPO).

(a) The participant develops a WPO with the assistance of NRCS or other public or private natural resource professionals, who are approved by NRCS. A WPO encompasses the parcel of land where habitat will be established, improved, protected, enhanced, or restored. The WPO shall be approved by NRCS and address at least one of the following:

(1) Fish and wildlife habitat conditions that are of concern to the participant;

(2) Fish and wildlife habitat concerns identified in State, regional, and national conservation initiatives; or

(3) Fish and wildlife habitat concerns identified in an approved area-wide plan that addresses the wildlife resource habitat concern.

(b) The WPO forms the basis for the WHIP cost-share agreement and shall be attached and included as part of the cost-share agreement, along with the O&M agreement. The WPO includes a schedule for installation and maintenance of the conservation practices, as determined by NRCS.

(c) The WPO may be modified in accordance with § 636.10.

(d) All conservation practices in the WPO must be approved by NRCS and developed and carried out in accordance with the applicable NRCS FOTG.

(e) The participant is responsible for the implementation of the WPO.

§ 636.9 Cost-share agreements.

(a) To apply for WHIP cost-share assistance, a person or legal entity must submit an application for participation at a USDA service center to an NRCS representative.

(b) A WHIP cost-share agreement shall:

(1) Incorporate the WPO;

(2) Be for a time period agreed to by the participant and NRCS, with a minimum duration of one year after the completion of conservation practices identified in the WPO and a maximum of 10 years, except for agreements entered into under paragraph (c) of this section;

(3) Include all provisions as required by law or statute;

(4) Include any participant reporting and recordkeeping requirements to determine compliance with the cost-share agreement and program;

(5) Be signed by the participant;

(6) Specify payment limits described in § 636.7(f) including any additional payment limitation associated with determinations made under § 636.7(g);

(7) Include an O&M agreement that describes operation and maintenance for each conservation practice and the Agency expectation that WHIP-funded conservation practices will be operated and maintained for their expected lifespan; and

(8) Include any other provision determined necessary or appropriate by the NRCS representative.

(c) Notwithstanding any limitation of this part, NRCS may enter into a long-term cost-share agreement that:

(1) Is for a term of at least 15 years;

(2) Protects and restores critical plant or animal habitat, as determined by NRCS; and

(3) Provides cost-share payments of no more than 90 percent of the cost of establishing conservation practices to develop fish and wildlife habitat.

§ 636.10 Modifications.

(a) The participant and NRCS may modify a cost-share agreement if both parties agree to the modification, the WPO is revised in accordance with NRCS requirements, and the agreement is approved by the designated conservationist.

(b) Any modifications made under this section must meet WHIP program objectives and must be in compliance with this Part.

(c) In the event a conservation practice fails through no fault of the participant, the State Conservationist may issue payments to re-establish the practice, at the rates established in accordance with § 636.7, provided such payments do not exceed the payment limitation requirements as set forth in § 636.7.

§ 636.11 Transfer of interest in a cost-share agreement.

(a) A participant is responsible for notifying NRCS when he/she anticipates the voluntary or involuntary loss of control of the land covered by a WHIP cost-share agreement.

(b) The participant and NRCS may agree to transfer a cost-share agreement to another producer. The transferee must be determined by NRCS to be eligible to participate in WHIP and must assume full responsibility under the cost-share agreement.

(c) With respect to any and all payments owed to participants who wish to transfer ownership or control of land subject to a cost-share agreement, the division of payment shall be determined by the original party and that party's successor. In the event of a dispute or claim on the distribution of cost-share payments, NRCS may withhold payments without the accrual of interest pending a settlement or adjudication on the rights to the funds.

(d) If such new participants are not willing or not eligible to assume the responsibilities of an existing WHIP cost-share agreement including the O&M agreement, NRCS shall terminate the cost-share agreement and may require that all cost-share payments may be forfeited, refunded, or both.

(e) The participants to the cost-share agreement shall be jointly and severally responsible for refunding the cost-share payments with applicable interest pursuant to paragraph (d) of this section.

§ 636.12 Termination of cost-share agreements.

(a) The State Conservationist may, independently or by mutual agreement with the parties to the cost-share agreement, terminate the cost-share agreement where:

(1) The parties to the cost-share agreement are unable to comply with the terms of the cost-share agreement as the result of conditions beyond their control;

(2) Termination of the cost-share agreement would, as determined by the State Conservationist, be in the public interest; or

(3) A participant fails to correct a violation of a cost-share agreement within the period provided by NRCS in accordance with § 636.13.

(b) If NRCS terminates a cost-share agreement, the participant will forfeit all rights to future payments under the agreement, shall pay liquidated damages, in an amount determined by the State Conservationist in accordance with the terms of the agreement, and shall refund all or part of the payments received, plus interest. Participants violating WHIP cost-share agreements may be determined ineligible for future NRCS-administered conservation program funding.

(1) NRCS may require a participant to provide only a partial refund of the payments received if a previously installed conservation practice can function independently, and is not adversely affected by the violation or the absence of other conservation practices that would have been installed under the cost-share agreement.

(2) The State Conservationist will have the option to waive all or part of the liquidated damages assessed, depending upon the circumstances of the case.

(c) When making termination decisions, the NRCS may reduce the amount of money owed by the participant by a proportion that reflects:

(1) The good faith effort of the participant to comply with the cost-share agreement, or

(2) The existence of hardships beyond the participant's control that have prevented compliance. If a participant claims hardship, that claim must be documented and cannot have existed when the applicant applied for participation in the program.

§ 636.13 Violations and remedies.

(a) If NRCS determines that a participant is in violation of a cost-share agreement, NRCS shall give the parties to the cost-share agreement notice of the violation and a minimum of 60 days to correct the violation and comply with the terms of the cost-share agreement and attachments thereto.

(b) If the participant fails to correct the violation of a cost-share agreement within the period provided by NRCS under paragraph (a) of this section, NRCS may terminate the agreement and require the participant to refund all or part of any of the funds issued under that cost-share agreement, plus interest, and assess liquidated damages, as well as require the participant to forfeit all rights to any future payment under the agreement.

§ 636.14 Misrepresentation and scheme or device.

(a) A participant who is determined to have erroneously represented any fact affecting a program determination made in accordance with this Part shall not be entitled to cost-share agreement payments and must refund to NRCS all payments and pay liquidated damages, plus interest as determined by NRCS.

(b) A participant shall refund to NRCS all payments, plus interest as determined by NRCS, with respect to all NRCS cost-share agreements to which they are a party if they are determined to have knowingly:

(1) Adopted any scheme or device that tends to defeat the purpose of the program;

(2) Made any fraudulent representation; or

(3) Misrepresented any fact affecting a program determination.

(c) Other NRCS cost-share agreements, where this person is a participant, may be terminated.

§ 636.15 Offsets and assignments.

(a) Except as provided in paragraph (b) of this section, any payment or portion thereof to any person or legal entity shall be made without regard to questions of title under State law and without regard to any claim or lien against the land, or proceeds thereof, in favor of the owner or any other creditor except agencies of the U.S. Government. The regulations governing offsets and withholdings found at 7 CFR part 1403 of this title shall be applicable to cost-share agreement payments.

(b) WHIP participants may assign any payments in accordance with 7 CFR part 1404.

§ 636.16 Appeals.

(a) Any participant may obtain reconsideration and review of determinations affecting participation in this program in accordance with 7 CFR parts 11 and 614, except as provided in paragraph (b) of this section.

(b) In accordance with the provisions of the Department of Agriculture Reorganization Act of 1994, Public Law 103-354 (7 U.S.C. 6901), the following decisions are not appealable:

(1) Payment rates, payment limits, and cost-share percentages;

(2) The designation of approved fish and wildlife priority areas, habitats, or practices;

(3) NRCS program funding decisions;

(4) Eligible conservation practices; and

(5) Other matters of general applicability.

(c) Before a participant may seek judicial review of any action taken under this part, the participant must exhaust all administrative appeal procedures set forth in paragraph (a) of this section.

§ 636.17 Compliance with regulatory measures.

(a) Participants who carry out conservation practices shall be responsible for obtaining the authorities, rights, easements, permits, or other approvals necessary for the implementation, operation, and maintenance of the conservation practices in keeping with applicable laws and regulations.

(b) Participants shall be responsible for compliance with all laws and for all effects or actions resulting from the participant's performance under the cost-share agreement.

§ 636.18 Technical services provided by qualified personnel not affiliated with USDA.

(a) NRCS may use the services of qualified TSPs in performing its responsibilities for technical assistance.

(b) Participants may use technical services from qualified personnel of other Federal, State, and local agencies, Indian tribes, or individuals who are certified as TSPs by NRCS.

(c) Technical services provided by qualified personnel not affiliated with USDA may include, but is not limited to: Conservation planning; conservation practice survey, layout, design, installation, and certification; and information; education; and training for producers.

(d) NRCS retains approval authority over certification of work done by non-NRCS personnel for the purpose of approving WHIP payments.

§ 636.19 Access to operating unit.

As a condition of program participation, any authorized NRCS representative shall have the right to enter an agricultural operation or tract for the purposes of determining eligibility and for ascertaining the accuracy of any representations related to cost-share agreements, and performance. Access shall include the right to provide technical assistance; determine eligibility; inspect any work undertaken under the cost-share agreements, including the WPO and O&M agreement; and collect information necessary to evaluate the conservation practice performance specified in the cost-share agreements. The NRCS representative shall make a reasonable effort to contact the participant prior to the exercising of this provision.

§ 636.20 Equitable relief.

(a) If a participant relied upon the advice or action of any authorized NRCS representative and did not know, or have reason to know, that the advice or action was improper or erroneous, NRCS may accept the advice or action as meeting program requirements and grant relief because of the good-faith reliance on the part of the participant. The financial or technical liability for any action by a participant that was taken based on the advice of a NRCS certified non-USDA TSP is the responsibility of the certified TSP and will not be assumed by NRCS when NRCS authorizes payment. Where a participant believes that detrimental reliance on the advice or action of a NRCS representative resulted in an ineligibility or program violation, the participant may request equitable relief under 7 CFR 635.3.

(b) If, during the term of a WHIP cost-share agreement, a participant has been found in violation of a provision of the cost-share agreement, the O&M agreement, or any document

incorporated by reference through failure to fully comply with that provision, the participant may be eligible for equitable relief under 7 CFR 635.4.

§ 636.21 Environmental services credits for conservation improvements.

USDA recognizes that environmental benefits will be achieved by implementing conservation practices funded through WHIP, and that environmental credits may be gained as a result of implementing activities compatible with the purposes of a WHIP cost-share agreement. NRCS asserts no direct or indirect interest on any such credits. However, NRCS retains the authority to ensure that the requirements for WHIP funded improvements are met and maintained consistent with §§ 636.8 and 636.9. Where activities required under an environmental credit agreement may affect land covered under a WHIP cost-share agreement, participants are highly encouraged to request a compatibility assessment from NRCS prior to entering into such agreements.

Signed in Washington, DC, on January 9, 2009.

Arlen Lancaster,

Vice President, Commodity Credit Corporation and Chief, Natural Resources Conservation Service.

BILLING CODE 3410-16-P

DEPARTMENT OF AGRICULTURE

Natural Resources Conservation Service

7 CFR Part 652

RIN 0578-AA48

Technical Service Provider Assistance

AGENCY: Natural Resources Conservation Service, United States Department of Agriculture.

ACTION: Interim final rule with request for comment.

SUMMARY: The Natural Resources Conservation Service (NRCS), an agency of the U.S. Department of Agriculture (USDA) is issuing an interim final rule for technical service provider (TSP) assistance as authorized under the Food Security Act of 1985, as amended by the Food, Conservation, and Energy Act of 2008. This interim final rule amends the Technical Service Provider (TSP) regulations to address changes made by the Food, Conservation, and Energy Act of 2008. The Secretary of Agriculture has delegated to NRCS the

responsibility for administering the authority for technical service provider assistance.

DATES: *Effective Date:* This rule is effective January 16, 2009.

Comment Date: Submit comments on or before March 17, 2009.

ADDRESSES: You may send comments (identified by Docket Number NRCS-IFR-08011) using any of the following methods:

- *Government-wide rulemaking Web site:* Go to <http://www.regulations.gov> and follow the instructions for sending comments electronically.
- *Mail:* Technical Service Provider Team, Natural Resources Conservation Service, Technical Service Provider Assistance Comments, P.O. 2890, Room 5234-S, Washington, DC 20013.
- *Fax:* 1-202-720-5334.
- *Hand Delivery:* Room 5234-S of the USDA South Office Building, 1400 Independence Avenue, SW., Washington, DC 20250, between 9 a.m. and 4 p.m., Monday through Friday, except Federal holidays. Please ask the guard at the entrance to the South Office Building to call 202-720-4630 in order to be escorted into the building.
- This interim final rule may be accessed via Internet. Users can access the NRCS homepage at <http://www.nrcs.usda.gov/>; select the Farm Bill link from the menu; select the *Interim final* link from beneath the *Final and Interim Final Rules Index* title. Persons with disabilities who require alternative means for communication (Braille, large print, audio tape, etc.) should contact the USDA TARGET Center at: (202) 720-2600 (voice and TDD).

FOR FURTHER INFORMATION CONTACT:

Team Leader, Technical Service Provider Team, NRCS, P.O. Box 2890, Washington, DC 20013-2890; phone: (202) 720-6731; fax: (202) 720-5334; or e-mail: TSP2008@wdc.usda.gov.

SUPPLEMENTARY INFORMATION:

Regulatory Certifications

Executive Order 12866

Pursuant to Executive Order 12866, this interim final rule with request for comment has been determined to be a significant regulatory action. The administrative record is available for public inspection in Room 5831 South Building, USDA, 14th and Independence Avenue, SW., Washington, DC. As required by Executive Order 12866, NRCS conducted an economic analysis of the potential impacts associated with this program. A summary of the economic analysis can be found at the end of this

preamble and a copy of the analysis is available upon request from the Team Leader, Technical Service Provider Team, Natural Resources Conservation Service, Room 5234-S, Washington, DC 20250-2890.

Regulatory Flexibility Act

NRCS has determined that the Regulatory Flexibility Act is not applicable to this interim final rule because the NRCS is not required by 5 U.S.C. 553, or any other provision of law, to publish a notice of proposed rulemaking with respect to the subject matter of this rule.

Environmental Analysis

The regulations promulgated by this interim final rule establish a process of using technical service providers to provide technical assistance to participants in NRCS conservation programs. The regulations do not take or authorize any actions that will have any effect on the human environment. Accordingly, a separate analysis for this rulemaking under the National Environmental Policy Act is not required.

Civil Rights Impact Analysis

A Civil Rights Impact Analysis has been completed regarding this interim final rule. The review reveals no factors indicating any disproportionate adverse civil rights impacts for participants in NRCS programs and services who are minorities, women, or persons with disabilities. A copy of this analysis is available upon request from the Team Leader, Technical Service Provider Team, Natural Resources Conservation Service, P.O. Box 2890, Washington, DC 20013-2890.

Paperwork Reduction Act

Section 2904 of the 2008 Act provides that the promulgation of regulations and the administration of Title II of this Act shall be made without regard to chapter 35 of Title 44 of the United States Code, also known as the Paperwork Reduction Act. Therefore, NRCS is not reporting recordkeeping or estimated paperwork burden associated with this interim final rule.

Government Paperwork Elimination Act

NRCS is committed to compliance with the Government Paperwork Elimination Act (GPEA) and the Freedom to E-File Act, which require Government agencies in general to provide the public the option of submitting information or transacting business electronically to the maximum extent possible. To better accommodate public access, NRCS has developed an

online application and information system, TechReg, for use by the public and technical service providers.

Executive Order 12988

This interim final rule has been reviewed in accordance with Executive Order 12988, Civil Justice Reform. The provisions of this interim final rule are not retroactive. This interim final rule preempts State and local laws to the extent such laws are inconsistent with this interim final rule. Before an action may be brought in a Federal court of competent jurisdiction, the administrative appeal rights afforded persons at 7 CFR part 614 must be exhausted.

Federal Crop Insurance Reform and Department of Agriculture Reorganization Act of 1994

Pursuant to section 304 of the Department of Agriculture Reorganization Act of 1994, Public Law 104-354, USDA classified this interim final rule as not major.

Unfunded Mandates Reform Act of 1995

Pursuant to Title II of the Unfunded Mandates Reform Act of 1995, Public Law 104-4, NRCS assessed the effects of this rulemaking action on State, local, and Tribal governments, and the public. This action does not compel the expenditure of \$100 million or more by any State, local, or Tribal governments, or anyone in the private sector; therefore, a statement under section 202 of the Unfunded Mandates Reform Act of 1995 is not required.

Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA)

Section 2904(c) of the Food, Conservation, and Energy Act of 2008 requires that the Secretary use the authority in section 808(2) of title 5, United States Code, which allows an agency to forgo SBREFA's usual Congressional Review delay of the effective date of a regulation if the agency finds that there is a good cause to do so. NRCS hereby determines that it has good cause to do so in order to meet the Congressional intent to have the conservation programs authorized or amended by Title II in effect as soon as possible. Accordingly, this rule is effective upon filing for public inspection by the Office of the Federal Register.

Economic Analysis—Executive Summary

Pursuant to Executive Order 12866, Regulatory Planning and Review, the Natural Resources Conservation Service (NRCS) has conducted a benefit-cost

analysis of the Technical Service Provider Initiative (TSP) as formulated for the interim final rule. This requirement provides decision makers with the opportunity to develop and implement a program that is beneficial, cost effective and that minimizes negative impacts to health, human safety, and the environment.

TSP provides another avenue for eligible participants to obtain the assistance they need to achieve the conservation objectives on their land—that is, through technical service providers. Eligible participants may choose to receive technical assistance directly from NRCS, by selecting a certified TSP from an approved list, or through an agreement NRCS has entered into with a TSP to provide the necessary assistance. TSPs are certified professionals, qualified to provide NRCS program participants with the technical services necessary to implement their conservation projects. Technical services include conservation planning, technical consultations, assistance with design and implementation of conservation practices, and related services.

The rule changes outlined in this interim rule do not address whether TSP could provide technical services at low cost or extend service in areas experiencing heavy workloads or in instances where NRCS personnel lack special skills or training in certain professional areas. Rather, the rule changes incorporate the changes made by the 2008 Act. Serious and thorough analysis of the actual cost and benefits of extending NRCS services has been addressed in its 2004 Cost Benefit Assessment (Use of Technical Service Providers to deliver technical assistance to conservation programs in the United States). This analysis found that TSP provides positive net benefits given potential future increased workloads on NRCS with little growth in the NRCS workforce. TSPs could enable NRCS program participants to begin their projects sooner than would otherwise be the case. This effect could increase environmental benefits for programs utilizing TSPs. In addition, the use of TSPs could potentially increase the amount of contracts that actually are completed rather than cancelled because of time delays. Neither the 2004 nor the 2008 TSP Cost Benefit Analysis provides a cost comparison of TSPs costs with internal NRCS costs.

The current analysis does not address any of the core principles associated with TSP, but addressed several discretionary policy items which were qualitatively assessed. None of these policy items were expected to produce

significant adverse effects to implementation of conservation practices and the overall operation of NRCS.

Discussion of Program

Background

NRCS is issuing an interim final rule for the implementation of TSP assistance, as authorized by section 1242 of the Food Security Act of 1985, as amended. In this preamble, NRCS provides background information about the TSP assistance provisions, the amendments made by the Food, Conservation, and Energy Act of 2008 (2008 Act), Public Law 110–246, 122 Stat. 1651, and the changes made to the TSP regulations to implement those statutory changes.

NRCS utilizes its technical expertise to provide information to eligible participants (producers, land owners, or entities) who apply to or are eligible to participate in conservation programs to help them make land management decisions and to implement conservation practices and systems. Through its conservation planning process, NRCS helps the participant develop a conservation plan and, subject to the availability of funds, the Department provides financial assistance to the eligible participant to implement conservation practices or systems.

The Farm Security and Rural Investment Act of 2002 (2002 Act), Public Law 107–171, expanded the authority for providing technical assistance for the implementation of conservation programs. Specifically, the 2002 Act amended section 1242 of the Food Security Act of 1985 to require USDA to provide technical assistance under the Food Security Act conservation programs to a producer eligible for that assistance “directly * * * or at the option of the producer, through a payment * * * to the producer for an approved third party, if available.” The Secretary of Agriculture delegated authority to implement section 1242 to NRCS.

NRCS published an interim final rule on November 21, 2002 (67 FR 70119) to enact the technical service provider assistance provisions of the 2002 Act. Through the interim final rule, NRCS: (1) Established a certification process under which NRCS would evaluate and approve individuals, entities, and public agencies as eligible to provide conservation technical assistance for certain conservation programs; (2) established criteria by which NRCS would evaluate all potential providers of technical assistance; (3) set forth

conditions and procedures by which NRCS would determine if a TSP has failed to provide adequate technical services and should not remain certified as a provider; and (4) requested comments on proposed methods for determining payment rates for reimbursing participants for technical services obtained from TSPs. On March 24, 2003, NRCS published an amendment to the interim final rule (68 FR 14131), establishing the process for determining payment levels. A second amendment was published on July 9, 2003 (68 FR 40751) that established a limited exception to certification and payment requirements when USDA was partnering with a State, local, or Tribal government to carry out its duty to provide technical services. On November 29, 2004, NRCS published the final rule (69 FR 69450) on technical service provider assistance, limiting certification requirements to technical service providers hired directly by program participants, specifying qualification requirements for technical service provider services acquired by the Department, incorporating public comment, and making organizational improvements.

The 2008 Act

Section 2706 of the 2008 Act amended section 1242 of the Food Security Act of 1985 to “increase the availability and range of technical expertise available to eligible participants to plan and implement conservation measures.” Specifically, section 2706 of the 2008 Act amends section 1242 of the Food Security Act of 1985 to:

- Define eligible participants as producers, landowners, and entities that are eligible to participate in Title II programs or under the Agricultural Management Assistance (AMA) program authorized by Section 524 of the Federal Crop Insurance Act (7 U.S.C. 1524). The inclusion of eligible participants under AMA is an expansion of the TSP applicability.

- Require the Secretary to provide national criteria for the certification of third party providers and to approve any unique certification requirements that are proposed by the Agency at the State level.

- Provide specific authority for the Secretary to provide technical assistance for conservation programs authorized under Title XII of the 1985 Act and the Agricultural Management Assistance program under section 524 of the Federal Crop Insurance Act, 7 U.S.C. 1524, through an agreement with a third party.

- Establish that an agreement between the Secretary and a third party provider shall be for 1 year at a minimum and not to exceed 3 years, and provide for renewal of agreements.

- Require the Secretary to review the certification requirements for third party providers within one year of enactment of the 2008 Act and make any adjustments considered necessary by the Secretary to improve participation.

- Prohibit activities or services that are customarily provided at no cost by a third party provider from being eligible for TSP payment.

- Require the Secretary to establish fair and reasonable payment rates for technical services provided by third party providers.

- Authorize as eligible for payment technical services provided directly to eligible participants (such as conservation planning, education and outreach, and assistance with design and implementation of conservation practices) or related technical services that accelerate conservation program delivery.

Overview of Technical Service Provider Assistance

In 2003, NRCS launched its website TechReg, an internet application, through which individuals, businesses, and public agencies may apply to become certified TSPs. TechReg also serves as a registry through which program participants may obtain certified TSPs. Additionally, payment rates for particular technical service activities are available on TechReg. As of August 2008, nearly 1,700 entities (individuals or businesses) were certified in the TechReg registry. From October 2003 through September 2008, NRCS expended approximately \$217 million for technical service provider assistance.

Description of Changes to the Regulation

Covered Programs

Section 2706 adds the Agricultural Management Assistance (AMA) Program, 7 U.S.C. 1524(b), to the list of programs through which technical service provider assistance may be provided to eligible participants. Consequently, this rulemaking adds reference to AMA at § 652.1(a) and § 652.2. Since the TSP rule only provides assistance for certain conservation activities, eligible activities under the AMA will be limited to those related to conservation.

Technical Service Contracts.

Section 2706 adds section 1242(g)(2), Technical Service Contracts, to the Food

Security Act of 1985 (the 1985 Act). This section provides that even in situations in which financial assistance is not provided under a Title XII program or AMA, the Secretary may enter into technical service contracts with eligible participants for the purpose of providing assistance in the planning, design, or installation of an eligible conservation practice.

The Managers' Report to the 2008 Act identifies increasing the availability of technical assistance as a priority. This authority to enter into technical service contracts will assist landowners in meeting the conservation needs on their lands. The interim final rule establishes that technical service contracts are available only to eligible participants who do not receive financial assistance through programs included in Title XII of the Food Security Act of 1985 and the AMA. In addition, technical service contracts will only be available for technical assistance from TSPs for the planning, design, or installation of conservation practices. NRCS adds a new § 652.5(e) to incorporate the availability of technical service contracts and redesignates the subsequent paragraphs accordingly.

NRCS Training of TSPs

The interim final rule clarifies the role of NRCS in training and sets forth conditions and procedures by which NRCS may provide training to third party providers to assist them in meeting the certification requirements in technical service categories that are established by policy. NRCS adds language to § 652.3(c)(4) that specifies that NRCS may provide limited training to ensure that persons meet the certification criteria for certain technical expertise when there is a lack of training resources or market outside the agency for such technical expertise. However, training to be provided by NRCS will be limited to training about NRCS regulations, policies, procedures, processes, and business and technical tools unique to NRCS.

Related Technical Services

Section 2706 of the 2008 Act amends the 1985 Act to add section 1242(f)(4), Eligible Activities, which authorize payment to TSPs for "related technical assistance services that accelerate conservation program delivery." Related services are in addition to technical services provided directly to an eligible participant and have the purpose of accelerating conservation program delivery. NRCS has identified "related technical assistance services" in this rulemaking to include conservation planning documentation, payment

scheduling and documentation, market survey information related to the establishment of easement compensation rates, and similar activities which result in more timely implementation of conservation programs. NRCS adds a new § 636.6(b) to incorporate the ability to make payment for related technical services, and redesignates the subsequent paragraphs accordingly.

TSP Payment Rates

Section 2706 of the 2008 Act added section 1242(f)(5), Payment Amounts. This section provides that the Secretary shall establish fair and reasonable amounts of payments for technical services provided by third party providers.

Currently, NRCS rates are based on the cost to the agency to perform the technical service and are established by the NRCS National Office. The rates include costs associated with planning, design, installation, checkout of conservation practices, and overhead costs.

This rulemaking changes the existing policy by establishing that the NRCS State offices will determine fair and reasonable payment rates for TSP assistance using guidelines established by the National Office and local NRCS cost, market, and procurement data that are available. NRCS will emphasize using market rate data where available to determine TSP payment rates. The National Office will publish the State payment rates for each practice on the TechReg Web site. NRCS revises § 652.5 by removing reference to "not-to-exceed" rates and specifying that NRCS will use NRCS cost data, procurement data, and market data to establish the payment rates for TSP assistance.

NRCS will establish the following process to ensure rates are fair and reasonable:

1. At the National level, NRCS will establish guidelines for State Conservationists to develop the payment rates to maintain consistency and quality control. Common guidelines will assist in ensuring consistency in factors and processes among States, while leaving flexibility for variation among States.

2. The State Conservationists will determine fair and reasonable rates for the conservation practices in their respective States. The State Conservationists will establish applicable TSP payment rates based on local cost data, market data, and procurement data as appropriate for the practice.

3. The NRCS National Office will review and approve State payment rates

to ensure regional consistency and fairness, and provide a mechanism for review and quality control for the guidelines established in process Step 1. The review and quality control mechanism will include regular and systematic State submittal of payment data to the National office, contract sampling, and a risk assessment of complex, high-volume, and cost-intensive technical services.

NRCS considered establishing national-level TSP payment rates using NRCS cost data, procurement data, and market data as determined by the NRCS National Office. These rates could be adjusted at the State level based on geographical differences. This option was rejected because it would create a duplicative workload at the national and state level by requiring national reasonable TSP rates be developed for all practices and plan types, while still requiring the State level to evaluate individually if the costs needed to be adjusted at the State level. Additionally, rates established at the national level may not be perceived as reasonable by third party providers in States.

NRCS also considered retaining the current methodology where the National Office uses agency cost data to calculate TSP payment rates to participants for eligible practices under conservation programs. However, NRCS experience administering TSP authority over the past 5 years is that such rates based solely upon NRCS costs do not incorporate necessary profit margins to make such rates approximate the rate that the TSPs in the private sector actually charge for their services. NRCS believes utilizing procurement and market data will provide this additional cost consideration that will be considered more fair and reasonable by NRCS conservation program participants, which may increase their participation in the TSP program. Therefore, NRCS is using this rulemaking to change the rate setting methodology from one based solely on NRCS costs to provide such services to one that also includes an emphasis on local market rates.

Certification Requirements

Section 2706 of the 2008 Act made a change to TSP certification requiring the Secretary to provide national criteria for the certification of third party providers and to approve any unique certification requirements that are proposed at the State level. Currently, the TSP rule provides national criteria including that a TSP must meet State, Tribal, and professional business licensing requirements. No additional criteria will be added at the national level. In

addition, experience has shown that unique state level requirements beyond licensing and state law may be a hindrance to effective implementation of the TSP provision. Consequently, NRCS is taking the opportunity to clarify its policy that licensing and state law requirements will be the only state-level certification criteria allowed. No change to the regulation is necessary since state law and licensure requirements are already addressed at section 652.21(a)(2).

Section 2706 of the 2008 Act also requires the Department to review TSP certification requirements within one year of enactment of the 2008 Act to determine if adjustments are needed to improve participation. In accordance with the new statutory requirement, NRCS will review the TSP certification requirements based upon the criteria that NRCS employees must meet to be authorized to provide technical assistance related to particular conservation practices or activities. Changes to the certification requirements for each TSP category will reflect any changes in the NRCS Field Office Technical Guide, such as conservation practices added or discontinued. Additionally, any changes made for a TSP requirement will be reflected in the Field Office Technical Guide, where applicable. The review also will consider the needs of specialty crop, organic farming, and precision agriculture technologies with respect to the completeness and appropriateness of the conservation practice standards and the associated TSP certification requirements. These reviews, though intended to improve participation among TSPs, are administrative matters that do not require changes to this interim final rule.

Summary of Changes by Section

The TSP regulation at 7 CFR part 652 is divided into three subparts. Subpart A sets forth the general provisions related to the delivery of technical services. Subpart B sets forth the certification criteria and process NRCS utilizes to evaluate a technical service provider to determine whether such provider is eligible to provide technical assistance. Subpart C sets forth the process and causes under which a technical service provider may become decertified and, therefore, ineligible to provide technical services. All of the changes to the TSP regulations through this interim final rule are to provisions in Subpart A.

Subpart A describes how program participants choose technical service providers, and how program participants may receive payment from

the Department for those services. Subpart A also describes how the Department will expand its delivery of technical services to program participants. The Department must follow existing procurement and financial assistance laws when it enters into transactions to expand the availability of technical services.

Section 652.1 Applicability

In § 652.1(a), NRCS adds the conservation activities in the Agricultural Management Assistance Program to the programs covered by technical service provider assistance provisions. NRCS also incorporates in this section the 2008 Act clarification that there are three methods by which NRCS may deliver technical services to an eligible participant, including:

1. Directly;
2. Through an agreement between NRCS and a third party provider, as provided in § 652.6 of this part; or
3. Through a payment to an eligible participant for an approved third-party provider.

In § 652.1(b), NRCS adds the term “conservation planning” to reflect the authority under the 2008 Act for NRCS to enter into a technical service contract with an eligible participant for the development of a conservation plan. NRCS revises the definition of “Technical service” to correspond to language included in the definition of “Technical assistance” the 2008 Act, which includes technical services and technical infrastructure. Because the scope of this regulation is constrained to “technical services” provided by Technical Service Providers, only that portion of the 2008 Act definition is reflected in these regulations. The term “Indian lands” is added after “private land” to clarify that technical service providers may assist program participants on Indian lands. This change makes the regulation consistent with land eligibility as established for the programs for which technical services are provided under this part.

Section 652.2 Definitions

NRCS replaces the term “participant” with the term “eligible participant” and revises the definition to correspond to the definition in the 2008 Act. NRCS also includes reference to the Agricultural Management Assistance Program in the definitions for “program contract” and “technical service contract.” NRCS adds the definition of “Indian land” to clarify lands eligible to receive technical service from technical service providers as established under § 652.1(b).

Section 652.3 Administration

NRCS re-designates § 636.3(c)(4) as § 636.3(c)(5) and adds a new § 636.3(c)(4) to incorporate the limited circumstances under which NRCS will provide training to potential technical service providers. NRCS may provide training to technical service providers about its regulations, policies, procedures, processes, and business and technical tools that are unique to NRCS. In this manner, NRCS intends to meet its responsibility under the 2008 Act to encourage the participation of qualified individuals and entities in providing technical services to NRCS program participants.

Section 652.5 Eligible Participant Acquisition of Technical Services

NRCS adds new language to this section providing for technical service contracts if an eligible participant wishes to receive technical assistance but is not receiving financial assistance for implementation of the conservation practices under one of the Title XII conservation programs or AMA.

NRCS also incorporates changes needed to implement the 2008 Act’s requirement that NRCS establish fair and reasonable payment rates. NRCS will establish national guidelines for the establishment of payment rates by NRCS State offices. NRCS State Conservationists will use these guidelines and local cost, procurement, and market data to determine payment rates for each technical service activity provided in their respective States. The payment rates established at the State level will be reviewed, approved, and published at the national level through the TechReg Web site.

Section 652.6 Department Delivery of Technical Services

NRCS adds language to § 652.6 to expand the ability to make payments under TSP provisions for “related technical assistance services.” Related technical assistance services include activities or services that accelerate conservation program delivery, including such activities as development, processing, or implementation of a program contract, such as recording conservation planning decisions and specifications.

NRCS incorporates language in this section to clarify that NRCS may enter into cooperative agreements or contracts with another agency or with a non-Federal entity to provide technical assistance to eligible program participants, in accordance with revisions made to section 1242(c)(2) of the 1985 Act. While NRCS previously

identified such cooperative agreements and contracts in the TSP rule, the parties with whom NRCS would enter such agreements were not previously identified specifically. NRCS also incorporates the requirement that these agreements are for a minimum of one year, not to exceed three years in duration, and are renewable.

List of Subjects in 7 CFR Part 652

Natural resources, Soil conservation, Technical assistance, Water resources.

■ For the reasons stated in this preamble, the Natural Resources Conservation Service amends Part 652 of Title 7 of the Code of Federal Regulations as follows:

PART 652—TECHNICAL SERVICE PROVIDER ASSISTANCE

■ 1. The authority citation for Part 652 continues to read as follows:

Authority: 16 U.S.C. 3842.

■ 2. Section 652.1 is amended by revising the second sentence of paragraph (a) and revising paragraph (b), to read as follows:

§ 652.1 Applicability.

(a) * * * The Food Security Act of 1985, as amended, requires the Secretary to deliver technical assistance to eligible participants for implementation of its Title XII Programs and the conservation activities in the Agricultural Management Assistance Program, 7 U.S.C. 1524, directly, through an agreement with a third party provider, or, at the option of the producer, through payment to the producer for an approved third party provider. * * *

(b) Technical service providers may provide technical services to eligible participants in conservation planning and in the planning, design, installation, and check-out of conservation practices applied on private land, Indian land, or where allowed by conservation program rules on public land where there is a direct private land benefit.

* * * * *

■ 3. Section 652.2 is amended by revising the definitions for “program contract” and “technical service”, adding definitions for “eligible participant”, “Indian land” and “technical service contract”, and removing the definition for “participant”.

The revisions and additions read as follows:

§ 652.2 Definitions.

* * * * *

Eligible Participant means a producer, landowner, or entity who is

participating in, or seeking to participate in, a conservation program covered by this rule in which the producer, landowner, or entity is otherwise eligible to participate.

* * * * *

Indian land means all lands held in trust by the United States for individual Indians or Tribes, or all lands, titles to which are held by individual Indians or Tribes, subject to Federal restrictions against alienation or encumbrance, or all lands which are subject to the rights of use, occupancy and/or benefit of certain Tribes. The term Indian land also includes land for which the title is held in fee status by Indian tribes, and the U.S. Government-owned land under the Bureau of Indian Affairs jurisdiction.

* * * * *

Program Contract means the document that specifies the rights and obligations of any individual or entity that has been accepted for participation in a program authorized under Title XII of the Food Security Act of 1985, as amended, or the Agricultural Management Assistance Program, authorized under 7 U.S.C. 1524.

* * * * *

Technical Service Contract means a document that specifies the rights and obligations of an eligible participant to obtain technical services from a technical service provider where the eligible participant will not receive financial assistance for the implementation of the practice paid for in the technical service contract through participation in a Title XII conservation program or the Agricultural Management Assistance Program, 7 U.S.C. 1524.

Technical service means the assistance provided by technical service providers, including conservation planning; conservation practice design, layout, and installation; and certification that the conservation practice meets NRCS standards and specifications.

* * * * *

■ 4. Section 652.3 is amended by removing the word “and” from the end of paragraph (c)(3), redesignating paragraph (c)(4) as (c)(5), and adding a new paragraph (c)(4) to read as follows:

§ 652.3 Administration.

* * * * *

(c) * * *

(4) Provide training to ensure that persons meet the certification criteria for certain technical expertise when there is a lack of training resources or market outside the agency for such technical expertise. However, any

training provided by the Department will be limited to training about Department regulations, policies, procedures, processes, and business and technical tools unique to NRCS; and

* * * * *

■ 5. Section 652.5 is amended by revising paragraph (e), redesignating paragraph (j) as paragraph (k), redesignating paragraphs (f) through (i) as paragraphs (g) through (j), and adding new paragraphs (f), (l), (m) to read as follows:

§ 652.5 Eligible participant acquisition of technical services.

* * * * *

(e) The technical assistance indicated in paragraph (d) may include the development of conservation plans or activity plans suitable for subsequent incorporation into a program contract.

(f) The Department may make payment to eligible participants who have a technical service contract and utilize it for technical assistance from a technical service provider.

* * * * *

(l) The Department shall not make payment for activities or services that are customarily provided at no cost by a technical service provider to a participant as determined by the State Conservationist.

(m) Payment rates for technical services acquired by participants.

(1) NRCS will calculate TSP payment rates for technical services using national, regional, and locally determined price data.

(2) Establishing TSP payment rates.

(i) NRCS will establish guidelines to analyze the local pricing information using a standardized method.

(ii) The State Conservationist will establish TSP payment rates in each State for the various categories of technical services. The State Conservationist will determine the rates according to local NRCS cost data, procurement data, and market data.

(iii) NRCS at the National Office will review and approve State payment rates to ensure consistency where similar resource conditions and agricultural operations exist. Payment rates may vary to some degree between or within States due to differences in State laws, the cost of doing business, competition, and other variables.

(iv) NRCS at the State and National levels will review payment rates annually, or more frequently as needed, and adjust the rates based upon data from existing procurement contracts, Federal cost rates, and other appropriate sources.

(v) NRCS may adjust payment rates, as needed, on a case-by-case basis, in

response to unusual conditions or unforeseen circumstances in delivering technical services such as highly complex technical situations, emergency conditions, serious threats to human health or the environment, or major resource limitations. In these cases, NRCS will set a case-specific TSP payment rate based on the Department's determination of the scope, magnitude, and timeliness of the technical services needed.

■ 6. Section 652.6 is amended by redesignating paragraphs (b) through (e) as paragraphs (d) through (g), adding new paragraphs (b) and (c), and amending redesignated paragraph (e) by adding a second sentence to read as follows:

§ 652.6 Department delivery of technical services.

* * * * *

(b) The Department may also enter into a procurement contract, contribution agreement, cooperative agreement, or other appropriate instrument with technical service providers to provide related technical assistance services that accelerate conservation program delivery. Related technical assistance services may include activities or services that facilitate the development, processing, or implementation of a program contract, such as recording conservation planning decisions and specifications.

(c) NRCS may enter into agreements with other agencies or with a non-Federal entity to provide technical services to eligible participants.

* * * * *

(e) * * * Any contract, contribution agreement, cooperative agreement, or other appropriate instrument entered into under this section shall be for a minimum of one year, shall not exceed three years in duration, and may be renewed upon mutual agreement of the parties.

* * * * *

Signed this 9th day of January 2009, in Washington, DC.

Arlen L. Lancaster,

Chief, Natural Resources Conservation Service.

BILLING CODE 3410-16-P

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Parts 944, 980, and 999

[Docket No. AMS-FV-07-0110; FV07-944/980/999-1 FR]

Fruit, Vegetable, and Specialty Crops—Import Regulations; Proposed Revision to Reporting Requirements

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: This rule revises the reporting requirements for imports of commodities regulated under section 608(e) (hereinafter referred to as “8e”) of the Agricultural Marketing Agreement Act of 1937. These changes require that the inspection certificates generated for each lot of such commodities include the entry number from the U.S. Customs and Border Protection (CBP or Customs) documentation that accompanies that lot. The changes also require that importers of raisins, dates, and dried prunes report products exempt from 8e import regulations on AMS Form FV-6—“Importers’ Exempt Commodity Form,” which is the same form that is currently used by importers of all other commodities exempt from 8e import regulations. These changes are intended to streamline the tracking of imported products and provide uniformity in electronic reporting systems used by the industries and the Department of Agriculture (USDA).

DATES: *Effective Date:* February 17, 2009.

FOR FURTHER INFORMATION CONTACT: Rick Lower or Jared Burnett, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, 1400 Independence Avenue, SW., Stop 0237, Washington, DC 20250-0237; Telephone: (202) 720-2491, Fax: (202) 720-8938, or E-mail:

Richard.Lower@usda.gov or JaredK.Burnett@usda.gov.

Small businesses may request information on complying with this regulation by contacting Jay Guerber, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, 1400 Independence Avenue, SW., STOP 0237, Washington, DC 20250-0237; Telephone: (202) 720-2491, Fax: (202) 720-8938, or E-mail: *Jay.Guerber@usda.gov.*

SUPPLEMENTARY INFORMATION: This final rule is issued under section 8e of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601-674), hereinafter referred to as the “Act.”

Section 8e provides that whenever certain commodities are regulated under Federal marketing orders, imports of those commodities into the United States are prohibited unless they meet the same or comparable grade, size, quality, or maturity requirements as those in effect for the domestically produced commodities. To ensure that these requirements are met, the Act also authorizes USDA to perform inspections and issue inspection certificates for such imported commodities.

Parts 944, 980, and 999 of title 7 of the Code of Federal Regulations (CFR) specify the information that should be included on each inspection certificate issued for regulated imports of fruits, vegetables, and specialty crops, respectively. Part 999 further specifies which forms importers should use to report to USDA and CBP imports of raisins, dates, and dried prunes that may be exempt from other 8e requirements. Exempt commodities are those which may be imported for purposes such as processing, donation to charitable organizations, or animal feed.

USDA is issuing this rule in conformance with Executive Order 12866.

There are no administrative procedures which must be exhausted prior to any judicial challenge to the provisions of import regulations issued under section 8e of the Act.

Customs Entry Number

Under the import regulations contained in parts 944, 980, and 999, inspection certificates issued for imports of certain fruits, vegetables, and specialty crops, respectively, must include specific information about the lot being inspected. In addition to stating whether the lot meets the import requirements, such information as the date and place of inspection; the name of the applicant; and the variety, quantity, and identifying marks of the lot inspected are required.

Previously, many inspectors have noted the customs entry number pertaining to the lot being inspected, which is taken from the Customs documentation accompanying that lot, in the “Remarks” section or elsewhere on the inspection certificate. The unique entry number is generated for each lot by CBP, and may be found on any one of the various forms used to report imported lots of fruit, vegetable, and specialty crop commodities. USDA has found that the entry number provides an efficient way to identify individual lots of commodities and to cross-reference all the documents pertaining to each lot. If, for instance, a certain lot fails to meet

import regulations when first presented, it may be reworked and presented for inspection a second time. The entry number is used to tie both the original and any succeeding inspections to that lot. Additionally, if a lot that fails to meet import requirements is diverted to another market or destroyed, USDA and the importer can use the entry number to track that lot through the process.

This final rule makes the inclusion of the Customs entry number on all pertinent inspection certificates mandatory. Including the entry number on inspection certificates is intended to allow importers to more easily demonstrate that the requirements have been met for each lot of regulated commodity imported into the United States. This action should also allow USDA to more easily track imported lots.

Form FV-6

Under the import regulations contained in parts 944, 980, and 999, individual lots of some imported commodities may be exempt from 8e regulations if they are to be used in the processing of other products or consumed through some other exempted use, such as by charitable organizations or as animal feed. However, importers and receivers are still required to declare their intent to import those commodities into the United States to CBP and USDA. Most commodities are reported using the generic Form FV-6—"Importer's Exempt Commodity Form."

Exempt imports of two commodities—raisins and dates—were previously reported on forms unique to those commodities. Exempt imports of raisins were reported on Raisin Form No. 1—"Raisins—Section 8e Entry Declaration" and Raisin Form No. 2—"Raisins—Section 8e Certification of Processor of Reseller." Exempt imports of dates were reported on Date Form No. 1—"Dates—Section 8e Entry Declaration" and Date Form No. 2—"Dates—Section 8e Certification of Processor of Reseller."

The 8e regulations for dried prunes were indefinitely suspended on May 27, 2005. The suspended language in § 999.200 specified that exempt imports of dried prunes be reported on Prune Form No. 1—"Prunes—Section 8e Entry Declaration" and Prune Form No. 2—"Prunes—Section 8e Certification of Processor of Reseller."

This rule changes the reporting requirements for imported lots of raisins, dates, and dried prunes that are exempt from other 8e regulations by replacing the commodity-specific import declaration forms described

above with the generic Form FV-6. The information collected on Raisin, Date, and Prune Forms 1 and 2 is the same as that collected for other commodities reported on Form FV-6. In its conversion to the use of electronic reporting systems, USDA is adopting the use of an electronic Form FV-6 to monitor imports of regulated commodities that are exempt from the import requirements. Replacing the existing raisin, date, and dried prune Forms 1 and 2 with the generic Form FV-6 will enable USDA to streamline its operations by collecting information electronically and eliminating unnecessary forms.

Final Regulatory Flexibility Analysis

Pursuant to the requirements set forth in the Regulatory Flexibility Act (RFA), AMS has considered the economic impact of this rule on small entities. Accordingly, AMS has prepared this final regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Import regulations issued under the Act are based on those established under Federal marketing orders.

Small agricultural business firms, which include importers and receivers of these commodities, have been defined by the Small Business Administration (13 CFR 121.601) as those having annual receipts of less than \$6,500,000. It is likely that the majority of these importers and receivers may be classified as small entities.

This rule revises the reporting requirements for imports of commodities regulated under section 8e by requiring that the entry number from the CBP documentation that accompanies each shipment is included on all inspection certificates pertaining to that lot. Specifically, regulations under part 944 pertaining to imports of avocados, grapefruit, table grapes, kiwifruit, oranges, fresh prunes (plums), and olives; part 980 pertaining to Irish potatoes, onions, and tomatoes; and part 999 pertaining to dates, walnuts, dried prunes, raisins, and filberts (hazelnuts) are revised.

Requiring that the Customs entry number be included on the inspection certificates should have very little impact on importers or receivers. The Customs documentation containing the entry number assigned to each shipment

normally accompanies the shipment and should be available at the time of inspection. The inspector will note the entry number on the inspection certificate. This is already being done by many inspectors. The inspection certificate is completed by Federal or Federal-State employees. Therefore, there is no regulatory burden on small entities.

This action further modifies part 999 by requiring that importers and receivers of raisins, dates, and dried prunes report products exempt from 8e import regulations on Form FV-6—"Importer's Exempt Commodity Form," instead of the commodity-specific forms previously prescribed for those shipments. Form FV-6 is the same form that is currently used by importers and receivers to report exempted shipments of all other section 8e commodities. There are an estimated 329 importers and receivers of all exempt commodities. These changes are intended to streamline the tracking of imported products and provide uniformity in electronic reporting systems used by the industries and USDA.

It is estimated that 5 importers and 5 receivers of imported raisins for processing, and 5 importers and 10 receivers of imported dates for processing, will be required to replace Raisin and Date Forms No. 1 and 2 with Form FV-6 as a result of this rule. As mentioned above, the domestic order regulations for dried prunes have been suspended. Therefore, the section 8e regulations for imported dried prunes are also suspended. It is unknown how many dried prune importers and receivers would be affected by this rule if the suspension is lifted.

Replacing Raisin, Date, and Prune Forms 1 & 2 with the generic Form FV-6 will eliminate the need to stock various commodity-specific forms. Use of an electronic Form FV-6 should further improve business efficiency for those required to file the reports as well as for USDA.

Raisin, Date, and Prune Forms No. 1 and 2 were previously approved by the Office of Management and Budget (OMB) under OMB No. 0581-0178, "Vegetable and Specialty Crop Marketing Orders" for 48.5 burden hours. Form FV-6 is currently approved by OMB under OMB No. 0581-0167, "Specified Commodities Imported into the United States Exempt from Import Requirements." This rule removes 48.5 burden hours from OMB No. 0581-0178, and transfers burden to OMB No. 0581-0167. This information collection has been submitted to OMB for approval.

AMS is committed to complying with the E-Government Act, to promote the use of the Internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes. Further, AMS is committed to compliance with the Government Paperwork Elimination Act, which requires government agencies in general to provide the public with the option of submitting information or transacting business electronically to the maximum extent possible.

USDA has not identified any relevant Federal rules that duplicate, overlap or conflict with this rule. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by the industry and public sector agencies.

A proposed rule concerning this action was published in the Federal Register on May 30, 2008 (73 FR 31036). The proposal was made available through the Internet by USDA and the Office of the Federal Register. A 60-day comment period ending July, 29, 2008, was provided for interested persons to submit comments on this proposed rule, including the regulatory and informational impacts of this action on small businesses. No comments were received.

A conforming change to the introductory text of § 999.1(e) was inadvertently omitted from the Federal Register publication of the proposed rule. In that text, the reference to Date Form No. 1 should have been changed to refer to Form FV-6. Accordingly, that modification to the proposed rule is made in this final rule. Additional miscellaneous changes are also made for clarity.

A small business guide on complying with fruit, vegetable, and specialty crop marketing agreements and orders may be viewed at: <http://www.ams.usda.gov/fv/moab.html>. Any questions about the compliance guide should be sent to Jay Guerber at the previously mentioned address in the FOR FURTHER INFORMATION CONTACT section.

After consideration of all relevant matters presented, it is hereby found that this rule, as hereinafter set forth, will tend to effectuate the declared policy of the Act.

List of Subjects

7 CFR Part 944

Avocados, Food grades and standards, Grapefruit, Grapes, Imports, Kiwifruit, Limes, Olives, Oranges.

7 CFR Part 980

Food grades and standards, Imports, Marketing agreements, Onions, Potatoes, Tomatoes.

7 CFR Part 999

Dates, Filberts, Food grades and standards, Imports, Nuts, Prunes, Raisins, Reporting and recordkeeping requirements, Walnuts.

For the reasons set forth above, 7 CFR parts 944, 980, and 999 are amended as follows:

1. The authority citation for 7 CFR parts 944, 980, and 999 continue to read as follows:

Authority: 7 U.S.C. 601-674.

PART 944—FRUITS; IMPORT REGULATIONS

2. In § 944.400, amend paragraph (d) by redesignating paragraphs (d)(3) through (d)(7) as paragraphs (d)(4) through (d)(8) and adding a new paragraph (d)(3) to read as follows:

§ 944.400 Designated inspection services and procedure for obtaining inspection and certification of imported avocados, grapefruit, kiwifruit, oranges, prune variety plums (fresh prunes), and table grapes regulated under section 8e of the Agricultural Marketing Agreement Act of 1937, as amended.

(d) * * *

(3) The Customs entry number pertaining to the lot or shipment covered by the certificate;

* * * * *

3. In § 944.401, amend paragraph (i), by redesignating paragraphs (i)(3) through (i)(8) as paragraphs (i)(4) through (i)(9) and adding a new paragraph (i)(3) to read as follows:

§ 944.401 Olive Regulation 1.

(i) * * *

(3) The Customs entry number pertaining to the lot or shipment covered by the certificate;

* * * * *

PART 980—VEGETABLES; IMPORT REGULATIONS

4. In § 980.1, amend paragraph (g)(4), by redesignating paragraphs (g)(4)(iii) through (g)(4)(vii) as paragraphs (g)(4)(iv) through (g)(4)(viii) and adding a new paragraph (g)(4)(iii) to read as follows:

§ 980.1 Import regulations; Irish potatoes.

(g) * * *

(4) * * *

(iii) The Customs entry number pertaining to the lot or shipment covered by the certificate;

* * * * *

5. In § 980.117, amend paragraph (f)(5), by redesignating paragraphs (f)(5)(iii) through (f)(5)(vii) as paragraphs (f)(5)(iv) through (f)(5)(viii) and adding a new paragraph (f)(5)(iii) to read as follows:

§ 980.117 Import regulations; onions.

(f) * * *

(5) * * *

(iii) The Customs entry number pertaining to the lot or shipment covered by the certificate;

* * * * *

6. In § 980.212, amend paragraph (f)(5), by redesignating paragraphs (f)(5)(iii) through (f)(5)(vii) as paragraphs (f)(5)(iv) through (f)(5)(viii) and adding a new paragraph (f)(5)(iii) to read as follows:

§ 980.212 Import regulations; tomatoes.

(f) * * *

(5) * * *

(iii) The Customs entry number pertaining to the lot or shipment covered by the certificate;

PART 999—SPECIALTY CROPS; IMPORT REGULATIONS

§ 999.1 [Amended]

7. Amend § 999.1 by:

A. Redesignating paragraphs (c)(2)(iii) through (c)(2)(v) as paragraphs (c)(2)(iv) through (c)(2)(vi) and adding a new paragraph (c)(2)(iii).

B. Revising the introductory text of paragraph (e).

C. Removing the phrase “(c)(2)(iv)” in paragraph (e)(1) and adding the phrase “(c)(2)(v)” in its place.

D. Revising paragraph (e)(2).

E. Revising paragraph (e)(3).

F. Removing the phrase “Date Form No. 2” in paragraph (e)(4) and adding the phrase “Form FV-6” in its place.

G. Removing the phrase “Date Form No. 2 ‘Dates for Processing—Section 8e Certification of Processor or Reseller’” in paragraph (f) and adding the phrase “Form FV-6—‘Importer’s Exempt Commodity Form’” in its place.

H. Removing the phrase “Date Form No. 1 ‘Dates—Section 8e Entry Declaration’”, in the first sentence in paragraph (g), and adding the phrase “Form FV-6—‘Importer’s Exempt Commodity Form’” in its place.

I. Removing the phrase “Date Form No. 1”, from the second sentence in paragraph (g), and adding the phrase “Form FV-6” in its place.

■ The additions and revisions read as follows:

§ 999.1 Regulation governing the importation of dates.

* * * * *

- (c) * * *
(2) * * *

(iii) The Customs entry number pertaining to the lot or shipment covered by the certificate;

* * *

(e) *Importation.* No person may import dates into the United States unless he or she first files with the Collector of Customs at the port at which the Customs entry is filed, as a condition of each such importation, either an inspection certificate or an executed Form FV-6—'Importer's Exempt Commodity Form.'

- (1) * * *

(2) *Dates for processing and dates prepared or preserved—importation.*

Any person may import dates for processing and dates prepared or preserved exempt from the grade, inspection, and certification requirements of this section if the importer first files as a condition of such importation an executed Form FV-6—'Importer's Exempt Commodity Form.' The importer shall promptly transmit a copy of the executed Form FV-6 to the Fruit and Vegetable Division.

(3) *Dates for processing—Sale by importer.* No importer or other person may import, sell, or use any dates for processing other than for use as set forth in paragraph (a)(4) of this section or as otherwise permitted by this section. Each importer of dates for processing shall obtain from each purchaser, no later than the time of delivery to such purchaser, and file with the Fruit and Vegetable Division not later than the fifth day of the month following the month in which the dates were delivered, an executed Form FV-6.

* * * * *

■ 8. In § 999.100, amend paragraph (c)(2), by redesignating paragraphs (c)(2)(iv) and (c)(2)(v) as paragraphs (c)(2)(v) and (c)(2)(vi), respectively, and adding a new paragraph (c)(2)(iv) to read as follows:

§ 999.100 Regulations governing imports of walnuts.

* * * * *

- (c) * * *
(2) * * *

(iv) The Customs entry number pertaining to the lot or shipment covered by the certificate;

* * * * *

§ 999.200 [Amended]

■ 9. In § 999.200, lift the suspension of May 27, 2005, and amend the section as follows:

■ A. Remove the phrase "Prune Form No. 1 'Prunes—Section 8e Entry Declaration'" in paragraph (b)(5), and add in its place the phrase "Form FV-6—'Importer's Exempt Commodity Form.'"

■ B. Redesignate paragraphs (c)(2)(iii) through (c)(2)(v) as paragraphs (c)(2)(iv) through (c)(2)(vi) and add a new paragraph (c)(2)(iii).

■ C. Remove the phrase "Prunes—Section 8e Entry Declaration," prescribed in paragraph (e)(2) of this section as Prune Form No. 1" in the second sentence of paragraph (e)(1), and add the phrase "Form FV-6—'Importer's Exempt Commodity Form;'" in its place;

■ D. Remove the phrase "Prunes—Section 8e Certification of Processor or Reseller," prescribed in paragraph (e)(3) of this section as Prune Form No. 2" in the fifth sentence of paragraph (e)(1), and add the phrase "Form FV-6—'Importer's Exempt Commodity Form'" in its place.

■ E. Remove paragraphs (e)(2) and (e)(3).

■ F. Redesignate paragraph (e)(4) as paragraph (e)(2).

■ G. Revise newly designated paragraph (e)(2).

■ The additions and revisions read as follows:

§ 999.200 Regulation governing the importation of prunes.

* * * * *

- (c) * * *
(2) * * *

(iii) The Customs entry number pertaining to the lot or shipment covered by the certificate;

* * * * *

- (e) * * *

(2) *Manufacturing Grade Substandard Prune—sale by other than importer.* Each wholesaler or other reseller of manufacturing grade substandard prunes should, for his or her protection, obtain from each purchaser and hold in his or her files an executed Form FV-6—'Importer's Exempt Commodity Form' covering each sale during the calendar year.

* * * * *

§ 999.200 [Suspended]

■ 10. Suspend § 999.200 indefinitely.

§ 999.300 [Amended]

■ 11. Amend § 999.300 as follows:

■ A. Redesignate paragraph (c)(2)(iv) through (c)(2)(vi) as paragraphs (c)(2)(v) through (c)(2)(vii) and add a new paragraph (c)(2)(iv).

■ B. Remove the phrase "Raisins—Section 8e Entry Declaration" prescribed in paragraph (e)(2)(i) of this section as 'Raisin Form No. 1'" in the second sentence of paragraph (e)(2), and add the phrase "Form FV-6—Importer's Exempt Commodity Form" in its place.

■ C. Remove the phrase "Raisins—Section 8e Certification of Processor or Reseller," prescribed in paragraph (e)(2)(ii) of this section as 'Raisin Form No. 2'" in the fifth sentence of paragraph (e)(2), and add the phrase "Form FV-6" in its place.

■ D. Remove the phrase "Raisin Form No. 2" in the seventh sentence of paragraph (e)(2), and add the phrase "Form FV-6" in its place.

■ E. Remove paragraphs (e)(2)(i) and (e)(2)(ii).

■ The addition reads as follows:

§ 999.300 Regulation governing importation of raisins.

* * * * *

- (c) * * *
(2) * * *

(iv) The Customs entry number pertaining to the lot or shipment covered by the certificate;

* * * * *

■ 12. In § 999.400, amend paragraph (c)(3) by redesignating paragraphs (c)(3)(iv) through (c)(3)(vi) as paragraphs (c)(3)(v) through (c)(3)(vii) and adding a new paragraph (c)(3)(iv) to read as follows:

§ 999.400 Regulation governing the importation of filberts.

* * * * *

- (c) * * *
(3) * * *

(iv) The Customs entry number pertaining to the lot or shipment covered by the certificate;

* * * * *

Dated: January 13, 2009.

James E. Link,
Administrator, Agricultural Marketing Service.

BILLING CODE 3410-02-P

DEPARTMENT OF AGRICULTURE

Commodity Credit Corporation

7 CFR Part 1491

RIN 0578-AA46

Farm and Ranch Lands Protection Program

AGENCY: Natural Resources Conservation Service (NRCS) and the Commodity Credit Corporation (CCC),

United States Department of Agriculture (USDA).

ACTION: Interim final rule with request for comments.

SUMMARY: The Food, Conservation, and Energy Act of 2008 (the 2008 Act) amended the Farmland Protection Program (FPP), established by the Federal Agriculture Improvement and Reform Act of 1996, and reauthorized by the Farm Security and Rural Investment Act of 2002. In the implementing rulemaking, the program was named the Farm and Ranch Lands Protection Program (FRPP) to describe best the types of land the program seeks to protect. Under the FRPP, the Secretary of Agriculture, acting through the Natural Resources Conservation Service (NRCS), an agency of the U.S. Department of Agriculture (USDA), is authorized, on behalf of the Commodity Credit Corporation (CCC) and under its authorities, to facilitate and provide funding for the purchase of conservation easements or other interests in land for the purpose of protecting the agricultural use and related conservation values by limiting nonagricultural uses of the land. This rulemaking implements changes to FRPP made by the 2008 Act and makes administrative improvement to the program.

DATES: *Effective Date:* The rule is effective January 16, 2009.

Comment Date: Submit comments on or before March 17, 2009. Comments will be made available to the public or posted publicly in their entirety.

ADDRESSES: You may send comments (identified by Docket Number NRCS-IFR-08006) using any of the following methods:

- *Government-wide rulemaking Web site:* Go to <http://www.regulations.gov> and follow the instructions for sending comments electronically.

- *Mail:* Easements Programs Division, Natural Resources Conservation Service, Farm and Ranch Lands Program Comments, P.O. 2890, Room 6819-S, Washington, DC 20013.

- *E-mail:* frpp2008@wdc.usda.gov.
- *Fax:* 1-202-720-9689
- *Hand Delivery:* Room 6819-S of the USDA South Office Building, 1400 Independence Avenue, SW., Washington, DC 20250, between 9 a.m. and 4 p.m., Monday through Friday, except Federal Holidays. Please ask the guard at the entrance to the South Office Building to call 202-720-4527 in order to be escorted into the building.

- This interim final rule may be accessed via Internet. Users can access the NRCS homepage at <http://www.nrcs.usda.gov/>;

select the *Farm Bill* link from the menu; select the *Interim final* link from beneath the *Final and Interim Final Rules Index* title under the heading "2008 NRCS Farm Bill Conservation Program Rules". Select *Farm and Ranch Lands Protection Program*. Persons with disabilities who require alternative means for communication (Braille, large print, audio tape, etc.) should contact the USDA TARGET Center at: (202) 720-2600 (voice and TDD).

FOR FURTHER INFORMATION CONTACT: Director, Easement Programs Division, U.S. Department of Agriculture, Natural Resources Conservation Service, Room 6819, P.O. Box 2890, Washington, DC 20013-2890; fax (202) 720-9689; or e-mail: FRPP2008@wdc.usda.gov. Persons with disabilities who require alternative means for communication (Braille, large print, audiotape, etc.) should contact the USDA Target Center at (202) 720-2600 (voice and TDD).

SUPPLEMENTARY INFORMATION:

Regulatory Certifications

Executive Order 12866

Pursuant to Executive Order 12866, this interim final rule with request for comment has been determined to be a significant regulatory action. The administrative record is available for public inspection in Room 5831 South Building, USDA, 14th and Independence Avenue, SW., Washington, DC. In accordance with Executive Order 12866, NRCS conducted an economic analysis of the potential impacts associated with this program. A summary of the economic analysis can be found at the end of this preamble and a copy of the analysis is available upon request from the Director, Easement Programs Division, Natural Resources Conservation Service, Room 6819, Washington, DC 20250-2890.

Regulatory Flexibility Act

The Regulatory Flexibility Act is not applicable to this interim final rule because the CCC is not required by 5 U.S.C. 553, or by any other provision of law, to publish a notice of proposed rulemaking with respect to the subject matter of this rule.

Availability of the Environmental Assessment and Finding of No Significant Impact

A programmatic Environmental Assessment (EA) has been prepared in association with this rulemaking. The analysis has determined there will not be a significant impact to the human environment and as a result an

Environmental Impact Statement (EIS) is not required to be prepared (40 CFR part 1508.13) The EA and FONSI are available for review and comment for 60 days from the date of publication of this interim final rule in the **Federal Register**. Copies of the EA and FONSI may be obtained from the National Environmental Coordinator, Natural Resources Conservation Service, Ecological Sciences Division, 1400 Independence Ave., SW., Washington, DC 20250. The FRPP EA and FONSI will also be available at the following Internet address: http://www.nrcs.usda.gov/programs/Env_Assess. Written comments on the EA and FONSI should be specific and reference that comments are regarding the EA or FONSI. Public comment may be submitted by any of the following means: (1) E-mail comments to NEPA2008@wdc.usda.gov, (2) e-mail to e-gov Web site <http://www.regulations.gov>, or (3) mail written comments to National Environmental Coordinator, Natural Resources Conservation Service, Ecological Sciences Division, 1400 Independence Ave., SW., Washington, DC 20205.

Civil Rights Impact Analysis

USDA has determined through a Civil Rights Impact Analysis that the issuance of this rule discloses no disproportionately adverse impacts for minorities, women, or persons with disabilities. Copies of the Civil Rights Impact Analysis are available, and may be obtained from the Director, Easement Programs Division, Natural Resources Conservation Service, P.O. Box 2890, Washington, DC 20013-2890, or electronically at <http://www.nrcs.usda.gov/programs/FRPP>.

Paperwork Reduction Act

Section 2904 of the Food, Conservation and Energy Act of 2008 requires that the implementation of this provision be carried out without regard to the Paperwork Reduction Act, Chapter 35 of title 44, United States Code. Therefore, USDA is not reporting recordkeeping or estimated paperwork burden associated with this interim final rule.

Government Paperwork Elimination Act

NRCS is committed to compliance with the Government Paperwork Elimination Act and the Freedom to E-File Act, which require government agencies in general and NRCS in particular, to provide the public the option of submitting information or transacting business electronically to the maximum extent possible.

Executive Order 12988

This interim final rule has been reviewed in accordance with Executive Order 12988, Civil Justice Reform. The rule is not retroactive and preempts State and local laws to the extent that such laws are inconsistent with this rule. Before an action may be brought in a Federal court of competent jurisdiction, the administrative appeal rights afforded persons at 7 CFR parts 11 and 614 must be exhausted.

Federal Crop Insurance Reform and Department of Agriculture Reorganization Act of 1994

Pursuant to section 304 of the Federal Crop Insurance Reform Act of 1994 (Pub. L. 103-354), USDA classified this rule as non-major. Therefore, a risk analysis was not conducted.

Unfunded Mandates Reform Act of 1995

Pursuant to Title II of the Unfunded Mandates Reform Act of 1995, Public Law 104-4, USDA assessed the effects of this interim final rule on State, local, and Tribal governments, and the public. This rule does not compel the expenditure of \$100 million or more by any State, local, or Tribal governments or anyone in the private sector; therefore, a statement under section 202 of the Unfunded Mandates Reform Act is not required.

Executive Order 13132

This interim final rule has been reviewed in accordance with the requirements of Executive Order 13132, Federalism. USDA has determined that this interim final rule conforms with the Federalism principles set forth in the Executive Order; would not impose any compliance costs on the States; and would not have substantial direct effects on the States, on the relationship between the Federal Government and the States, or on the distribution of power and responsibilities on the various levels of government. Therefore, USDA concludes that this interim final rule does not have Federalism implications.

Executive Order 13175

This interim final rule has been reviewed in accordance with the requirements of Executive Order 13175, Consultation and Coordination with Indian Tribal Governments. USDA has assessed the impact of this interim final rule on Indian Tribal Governments and has concluded that this proposed rule will not negatively affect communities of Indian Tribal governments. The rule will neither impose substantial direct

compliance costs on tribal governments, nor preempt tribal law.

Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA)

Section 2904(c) of the Food, Conservation, and Energy Act of 2008 requires that the Secretary use the authority in section 808(2) of title 5, United States Code, which allows an agency to forgo SBREFA's usual Congressional Review delay of the effective date of a regulation if the agency finds that there is a good cause to do so. NRCS hereby determines that it has good cause to do so in order to meet the Congressional intent to have the conservation programs authorized or amended by Title II in effect as soon as possible. Accordingly, this rule is effective upon filing for public inspection by the Office of the **Federal Register**.

Background

FRPP is a voluntary program to help farmers and ranchers preserve their agricultural land. The program provides matching funds to State, Tribal, and local governments, and nongovernmental organizations with farmland protection programs to purchase conservation easements. The Federal Agriculture Improvement and Reform Act of 1996 (1996 Farm Bill), Public Law 104-387, established the Farmland Protection Program (FPP). The Farm Security and Rural Investment Act of 2002 (2002 Farm Bill), Public Law 107-171, repealed the FPP and created a new farmland protection program. USDA promulgated a proposed rule on October 29, 2002 (67 FR 65907), and a final rule on May 16, 2003 (68 FR 26474) implementing the FPP statutory authority and naming the program the Farm and Ranch Lands Protection Program (FRPP). On July 27, 2006, NRCS amended the final rule by promulgating an interim final rule. The interim final rule was prepared to clarify the following policies and legal requirements: Fair market value definition; the eligibility of forest lands; the nature of the United States' real property rights and how the United States will exercise those rights; compliance with Department of Justice (DOJ) Title Standards; the implementation of Federal appraisal requirements required by the Uniform Relocation Assistance and Real Property Acquisitions Policies Act of 1970; impervious surface limitations on the easement area; and indemnification requirements. NRCS viewed these issues to be matters of public interest and thus sought public comment on associated agency policy. Section 2401 of the Food,

Conservation, and Energy Act of 2008 (2008 Act), Public Law 110-246, reauthorized FRPP and made several amendments.

The Farm and Ranch Lands Protection Program has enrolled 533,068 acres on 2,764 farms and ranches since 1996. That area has included 386,444 acres of prime, unique, and important farmland soil or about 72 percent of the total acreage enrolled. The program has also enrolled 50,007 acres of upland forest, 13,287 acres of forested wetlands, and 29,174 acres of non-forested wetlands. The Federal contribution to those enrolled parcels was \$536 million, the eligible entity contribution was \$857 million, the landowner donation was \$215 million, and the total estimated value of those easements was \$1.6 billion. The average Federal contribution was 33 percent of the total estimated value, the eligible entity contribution was 53 percent, and the landowner donation was 13 percent.

Summary of 2008 Act Changes

The 2008 Act revised the Farm and Ranch Lands Protection Program to:

- Expand the program purpose to protecting agricultural lands by limiting nonagricultural uses.
- Shift the program focus from purchasing conservation easements to facilitating the purchase of conservation easements by eligible entities.
- Require the Secretary to enter into agreements with eligible entities to stipulate the terms and conditions under which the entity is authorized to use FRPP funds to acquire easements.
- Authorize an eligible entity to use its own conservation easement deed terms and conditions, as approved by the Secretary, so long as such terms and conditions are consistent with the purposes of the program, permit effective enforcement of the conservation easement deed or other interest and include, among other terms, a limit on the impervious surfaces to be allowed that is consistent with the agricultural activities to be conducted.
- Require the establishment of a certification process by which the Secretary will directly qualify certain eligible entities as certified entities.
- Require that to be certified, an eligible entity must have a plan for administering easements consistent with FRPP purposes, the capacity and resources to monitor and enforce conservation easements, policies and procedures to ensure long-term integrity of conservation easements, timely completion of acquisitions, and timely reporting of use of funds.
- Require that the fair market value of the conservation easement or other

interest in eligible land is determined on the basis of an appraisal using an industry-approved method, selected by the eligible entity and approved by the Secretary.

- Require that entities provide a share of the cost of purchasing a conservation easement or other interest in eligible land in an amount that is not less than 25 percent of the acquisition purchase price.
- Require that the Secretary hold a right of enforcement in FRPP funded conservation easements.
- Amend the definition of eligible land to allow for the inclusion of forest land as an eligible land use.
- Allow for the inclusion of forest land that contributes to the economic viability of an agricultural operation or serves as a buffer to protect an agricultural operation.

Description of Changes to the Regulation

Subpart A—General Provisions

Section 1491.1 Applicability

Section 1491.1(a) is revised to update the effective date by removing the reference to “May 16, 2003” and inserting that cooperative agreements shall be administered under the regulations in effect at the time the cooperative agreement is signed. This change is necessary for administrative clarity because NRCS is administering active cooperative agreements that were entered into before passage of the 2008 Act. In addition, the word “easements” is removed from paragraph (a). The term “easements” is removed for administrative clarity because the terms and conditions in effect when the cooperative agreements were signed will determine the terms and conditions for a given easement.

Further, § 1491.1(a) is revised to change “will” to “shall”. The change from “will” to “shall” is made throughout this regulation for consistency and to strengthen the understanding of the requirement, this change will not be referenced again in this preamble.

Section 1491.2 Administration

Section 1491.2, in paragraph (b)(4) is revised to clarify that a landowner’s eligibility must be determined as well as the land eligibility and the eligibility of the entity that receives cost-share through FRPP to purchase the easement. Other non-substantive changes are included to improve readability

Section 1491.3 Definitions

The purpose of the definition section set forth at § 1491.3 is to ensure

consistent interpretation by the public and NRCS personnel of the terms used throughout the regulation. Through this rulemaking, NRCS is amending portions of the definition section to implement 2008 Act changes as well as to provide consistency with other conservation programs when practicable.

The definition of “Agriculture uses” is amended to use more current and correct terminology, and to broaden the definition to reflect the new statutory program purposes. The definition in the 2003 rule linked to the state’s purchase of development rights (PDR) program. The revised definition uses a more universal term, “farm or ranch land protection program or equivalent.” The definition is also revised to change the program purpose from protecting topsoil, the purpose of the 2002 Act, to “protect agricultural use and related conservation uses” as provided for in the 2008 Act. Additional non-substantive changes were made to improve readability.

The term “Certified entities” is added to conform to the new statutory requirement providing for an eligible entity certification process. Certification of “eligible entities” is discussed in the description of changes to § 1491.4.

The definition for “contingent right” is removed because the regulation no longer refers to the term.

The term “Cooperative agreement” is added to define the document that specifies the obligations and rights of NRCS and the eligible entities.

The term “Dedicated fund” is added and describes an account that can only be used for the purposes of management, monitoring, and enforcement of conservation easements. This requirement applies to non-governmental organizations wishing to become “certified entities” and serves as evidence of their capacity to ensure the long term protection of easements.

The definition of “Eligible entities” is revised to reflect the statutory change in the program’s purpose and to remove language that is irrelevant to the new definition. The 2008 Act amended the definition of an eligible entity to add organizations that are described in paragraph (1) of section 509(a) of the Internal Revenue Code of 1986.

The definition of “Eligible land” is removed because the term is fully explained in § 1491.4(f).

The definition of “Fair market value” is amended to reflect the change in the statute regarding easement valuation methodology. NRCS will approve the use of either the Uniform Standards for Professional Appraisal Practice (USPAP) or the Uniform Appraisal Standards for Federal Land Acquisition (UASFLA)

procedures by the eligible entity for determining “fair market value.” This decision is discussed further in this preamble where the agency addresses changes to § 1491.4(g).

The definition of “Farm and ranchland of statewide importance” is added to provide greater specificity to the existing umbrella term “other productive soils.” This new definition is more descriptive and technically correct than the current definition of this land type, which is subsumed in general term “other productive soils.”

The definition of “Farm and ranchland of local importance” is added for the same reason discussed above under “Farm and ranchland of statewide importance.”

The definition of “Farm or ranch succession plan” is changed to correct typographical errors in capitalization and lower case. The phrase “Farm or Ranch Succession Plan is * * *” is changed to “Farm or Ranch Succession Plan means * * *” for consistency purposes.

The definition of “Field Office Technical Guide (FOTG)” is revised to provide consistency with the way the term is defined in other NRCS program regulations.

The definition of “Forest land” is amended to delete the minimum acreage requirement for forest land. The 2008 Act provides that forest land is eligible providing it contributes to the economic viability of an agricultural operation or serves as a buffer to protect an agricultural operation from development. No minimum acreage enrollment levels were established in statute.

The term “Forest management plan” is added to define a newly established documentation requirement needed to demonstrate forest land eligibility, when the “forest land” is being enrolled under the “contributes to the economic viability of the agricultural operation” land eligibility category. NRCS is using the “forest management plan” as documentation of eligibility rather than requiring submission of receipts or tax returns, which may be viewed as intrusive. The definition is consistent with the way the term is defined in other NRCS program regulations.

The definition of Historical and archaeological resources is amended to include resources listed in the State Historic Preservation Officer or Tribal Historic Preservation Officer inventory with written justification as to why the resource meets National Register of Historic Places criteria. This change is made to more fully recognize preservation efforts of State, Tribal, and local preservation offices.

The definition of "Imminent harm" is amended to incorporate the change in statutory purpose of the program from protection of topsoil to protection of agricultural use and related conservation values. Other non-substantive changes are made to improve sentence structure and clarity.

The definition of "Indian Tribe" is updated to give the term the meaning provided in section 4(e) of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 450(b)(e)). This definition is consistent with the way the term is defined for other NRCS easement programs.

The definition of "landowner" is amended to clarify that a landowner may be a "person, legal entity, or Indian Tribe." The definition clarifies that State and local governments, and non-governmental organizations are not considered eligible landowners. This clarification was previously included in policy, but it was not included in the regulation.

The term "Natural Resources Conservation Service" is amended to more appropriately refer to the "United States" rather than "U. S." and to denote "NRCS" as the defined acronym.

The definition of "Non-governmental organization" is amended in accordance with the 2008 Act to incorporate reference to organizations that are described in section 509(a)(1) of the Internal Revenue Code.

The definition of "Other interests in land" is amended to clarify that other interests are interests other than easements.

The definition of "Other productive soils" is amended to identify that the term is restricted to farm and ranch land soils that are considered "unique farmland," and "farm and ranch land of statewide and local importance." The terms "unique farmland", "farm and ranch land of statewide importance" and "farm and ranch land of local importance" are now defined separately rather than within the definition of "other productive soils." The change was made to provide specific definitions for these types of land.

The definition of "Prime and unique farmland" is deleted and replaced with separate definitions for "Prime farmland" and "Unique farmland." The change is made to improve the clarity and technical correctness of the definitions for these types of land.

The definition of "Purchase price" is added to provide for consistent use of the term in the regulation. "Purchase price" is the appraised fair market value of the easement minus the landowner donation. The definition of "purchase price" is essential to determining the

entity's minimum contribution as provided for in the 2008 Act.

The term "Right of enforcement" is added to clarify that a right of enforcement is an interest in the land which the United States may exercise under specific circumstances to enforce the terms of the conservation easement. The exercise of this right is provided in the description of changes to § 1491.22.

The definition of "Secretary" is amended to more appropriately refer to the "United States" rather than the "U. S."

The definition of "State Technical Committee" is changed to remove "of the U.S. Department of Agriculture" following the term "Secretary" to simplify the definition. The definition for the term "Secretary" already includes these words.

The definition of "State Conservationist" is updated to use the current terminology for the "Pacific Island Area" rather than "Pacific Basin Area."

As noted above, the term "Unique farmland" is added to improve clarity and provide a more technically accurate definition of this type of land than is described in the existing regulation under "Prime and unique farmland."

The term "United States' rights" is removed because the 2008 Act limited the Secretary's interest in FRPP funded easements to a right of enforcement which runs with the land. The term "right of enforcement" is defined in this section.

Section 1491.4 Program Requirements

Section 1491.4(a) is amended to incorporate the statutory requirement that NRCS provide funding for conservation easements or other interests in land versus acquiring a Federal interest in land; change the reference from the "Secretary" to "Chief"; and to add the "right of enforcement". The "right of enforcement" is discussed further under the description of changes to § 1491.22. The 2008 Act changed the role of the Secretary to "facilitate and provide funding for the purchase of conservation easements or other interests in eligible land" rather than to directly purchase easements. Related changes are made to remove the requirement that the United States is named as a grantee on the deed and instead require that the United States' right of enforcement is noted in the opening paragraph of the deed that acknowledges the parties. The purpose for requiring this acknowledgement is to put the public on notice of the Federal right and to guard against condemnation of FRPP-funded deeds. Minor non-

substantive changes are also made to improve readability.

Section 1491.4(b) is amended to add that in states that limit the term of the easement, the term of the easement must be the maximum allowed by State law.

Section 1491.4(c) is amended to make non-substantive changes to improve readability.

A new § 1491.4(d) is added, and subsequent paragraphs are re-designated, to address the requirements that an entity must meet to become a "certified entity." The certification process was added by the 2008 Act as an option for entities. To meet the certification requirements established under the 2008 Act, NRCS is requiring that an entity demonstrate long-term and substantial experience directly with the FRPP program. This section also includes a requirement for the existence of a dedicated fund for non-governmental organizations, as described in the changes to § 1491.3. Section 1491.4(d)(1) includes the requirement that an entity have a demonstrated ability to complete timely acquisition of easements through compliance with the terms under previously executed FRPP cooperative agreements.

A new § 1491.4(e) is added to describe the provisions for review and revocation of certification included in the 2008 Act.

Section 1491.4(f), previously § 1491.4(d), is restructured to increase clarity and readability. Section 1491.4(f) is amended in paragraph (1) to combine the provisions of the former § 1491.4(d)(2) and certain provisions found in the "eligible land" definition in § 1491.3. Section 1491.4(f)(1) is also amended to add the new statutory eligibility land category identified as "to further a State or local policy consistent with the purposes of the program." Section 1491.4(f)(2) is added to describe the type of agriculture land categories that are eligible for enrollment. This language was previously found in the definition of "eligible land" in § 1491.3, except that, the text in paragraph (f)(2) contains restrictions on forest land provided in the 2008 Act. Section § 1491.4(f)(3) is added to include language on incidental lands formerly found in the definition of "eligible land". Section 1491.4(f)(4), previously § 1491.4(d)(1), is revised to clarify that whole or part of a farm or ranch may be offered for enrollment. In § 1491.4(f)(5), NRCS is establishing a threshold for requiring the development of forest management plans. The threshold will be the greater of 10 acres of forest or 10 percent of the easement area in forest. Based on historical program

participation, NRCS estimates that this policy would have resulted in forest management plans on about 40 percent of the parcels enrolled in the program currently. Farms that are less than 100 acres in size with less than 10 acres of forest are not required to have a plan to be eligible. A forest management plan will help ensure that the Federal investment in an easement encompassing significant forest acreage will have long-term viability for food, fiber, and environmental benefits. The requirement also helps to ensure that these forest lands contribute to the viability of the agricultural operation as required by the 2008 Act.

Section 1491.4(f)(6), previously § 1491.4(d)(5), is revised to clarify that lands currently under ownership by an entity whose purpose is to protect agricultural uses and related conservation values are not eligible for the program. Lands owned by these entities are already protected. Exclusion of these lands will allow program investments to protect additional acreage. This provision is already included in the FRPP policy, and is now being incorporated into the regulation by this rulemaking.

Section 1491.4(f)(7), previously § 1491.4(d)(6), is amended to add the current regulatory Adjusted Gross Income (AGI) eligibility reference, non-substantive changes are made to improve clarity, and paragraphs are re-numbered as appropriate.

Section 1491.4(f)(8) is added to describe the on-site and off-site conditions that are not compatible with the program's purposes.

Section 1491.4(f)(9) is added to clarify that a landowner may submit an application on land on which the mineral estate is owned by someone other than the landowner (also referred to as a split estate), but that USDA reserves the right to determine the impacts of third party rights upon a potential easement and to deny funding where the purposes of the program cannot be achieved.

Section 1491.4(g), previously § 1491.4(e), is amended to define the industry-approved appraisal methods specified in the 2008 Act as the Uniform Standards of Professional Appraisal Practices (USPAP) or the Uniform Appraisal Standards for Federal Land Acquisition (UASFLA). USPAP and UASFLA are the guidelines that professional appraisers use for appraising properties. The entity may choose which of these methods they prefer to use. The 2008 Act specified that an appraisal would be used; therefore, administrative valuation processes which are used by some farm

and rangeland protection programs will not be acceptable because they are not appraisal methodologies.

Section 1491.4(h), previously § 1491.4(f), is amended to clarify that a standard deed form may be required and is updated to reflect the passage of the 2008 Act by indicating that any standard form must meet the purposes of this part.

Section 1491.4(i), previously § 1491.4(g), was not otherwise amended. Section 1491.4(i) contains the requirement that a landowner must meet the payment eligibility requirements of 7 CFR part 12.

Section 1491.5 Application Procedures

The text of the existing section is deleted in its entirety and replaced with a new application process. Section 1491.5(a) establishes that an entity must submit an application to the State Conservationist in the State where the parcels are located. Section 1491.5(b) provides that the Chief will determine whether an eligible entity qualifies as a certified entity based on the criteria in § 1491.4(d) and in the NRCS national FRPP database.

Section 1491.5(c) indicates that the State Conservationist will notify the entity about whether or not the entity has been determined to be eligible or certified.

Section 1491.5(d) clarifies that an entity with an established cooperative agreement will not need to submit an annual application in response to an RFP, but that the entity may re-apply when their cooperative agreement expires. NRCS determined, based on experience administering other easement programs, that FRPP can be implemented using a continuous sign-up process. This process provides better service to agency clients because applications can be submitted in accordance with their own schedule. Clients do not have to wait for a **Federal Register** publication. It also reduces administrative burden for the agency.

Section 1491.5(e) identifies that the new application process will allow continuous sign-up, which is consistent with other conservation programs. The State Conservationist will announce periodic ranking dates no less than 60 days before the date of the ranking. The process will allow certified and non-certified eligible entities to compete under the same application and ranking process. NRCS has decided to have certified and non-certified entities participate similarly in the program to simplify the application process and allow parcels to compete on equal resource-based terms, regardless of the status of the entity.

To eliminate confusion and miscommunication on the status of non-selected parcels at the end of each fiscal year, § 1491.5(f) provides that NRCS will purge the unfunded parcels from the application list on September 30 of each year unless the entity requests that the parcels be considered for funding in the next fiscal year. If an entity fails to request that their parcels be retained on the list, a new list of parcels must be submitted for consideration each year. This process will allow NRCS State Offices to purge their lists of parcels that may have dropped their applications or were funded with other sources, and eliminate confusion for entities regarding the status of their existing applications.

Section 1491.6 Ranking Considerations and Proposal Selection

The existing section is deleted and replaced by a new ranking process. Section 1491.6(a) establishes that prior to scoring and ranking parcels for funding, NRCS must evaluate the eligibility of both the landowner and the land. Section 1491.6(b) of this section establishes that such parcels will be ranked according to both National and State criteria. Within the State ranking criteria, the National criteria must comprise at least half of the available ranking points. Section 1491.6(c) identifies that State Conservationists will establish and announce a date for ranking the applications that were accepted and scored in the continuous sign-up. Section 1491.6(d) states that applications from certified entities and non-certified entities will be ranked together and not separately so that the parcels submitted compete equally.

Section 1491.6(e) provides that parcels selected for funding will be included in the cooperative agreements signed by both NRCS and the entity; that funds for each fiscal year will be obligated through an amendment signed by both parties to the existing cooperative agreement; and that the amendment will identify the closing and payment reimbursement deadline applicable to each funding year's parcels.

Paragraph (f) sets forth the national ranking criteria. The national ranking criteria are changed to reflect site (parcel)-specific criteria rather than entity performance criteria and language has been added to clarify that the national requirements are mandatory for inclusion in the state ranking. The national criteria set forth in the 2003 Rule included information in the State FRPP plans, and criteria on eligible entities regarding their histories of protecting farms and ranches. These

criteria did not include parcel specific criteria; however, it is the individual parcels that are being rated and ranked. Therefore, these changes are made because the use of the new factors provides a more quantifiable resource-based ranking of individual parcels.

In addition, in order to clarify and streamline their use, funding priorities set forth in the existing § 1491.7 are being incorporated into the new national and the state funding criteria established by this rulemaking in § 1491.6(f) and (g). In the “other protected land” criteria set forth at § 1491.6(f)(7), this rulemaking adds a reference to military installations to emphasize the USDA partnership with the Department of Defense under its buffer program.

Section 1491.6(g) identifies the type of criteria that a State Conservationist, with advice of the State Technical Committee, may include. The State ranking criteria may address the viability of the parcel for agriculture into the future, the landowner’s willingness to grant public access for recreational purposes, and the performance of the entity. Because the leveraging factors may skew the ranking of individual parcels and the other factors set forth in the existing regulation are not relevant to individual parcels, the State ranking criteria is being changed by this rulemaking to eliminate criteria related to the type of farm, the maximum amount of Federal funding required per acre, the percent leveraging, and an entity’s history of assisting beginning farmers and ranchers. Funding priorities from the former § 1491.7, however, were incorporated as possible State factors.

Section 1491.6(h), previously § 1491.6(b), provides that the State ranking criteria will be developed on a State-by-State basis. However, it removes the language in § 1491.6(b) that recommends interested entities request ranking criteria from the State Conservationist. This language is replaced with a provision that requires NRCS State Conservationists to make available the full listing of National and State ranking criteria. Section 1491.6(i) is removed because the purpose of (i) is addressed with the changes in § 1491.4 (g).

Section 1491.7 Funding Priorities

Section 1491.7 is deleted and its elements incorporated in § 1491.6 as noted above to improve the structure of the regulation.

Subpart B—Cooperative Agreements and Conservation Easement Deeds

Section 1491.20 Cooperative Agreements

Section 1491.20(a) is amended to reflect changes to the contents of cooperative agreements that are necessitated by the 2008 Act, including the change that FRPP funds are used to assist eligible entities with the purchase of rights in land rather than to purchase these rights directly by the United States. To implement 2008 Act statutory changes, the following additions have been made to this section: requirements of the easement deed, management and enforcement requirements, the responsibilities of NRCS, the responsibilities of the eligible entity, the ability to substitute parcels by mutual agreement, and other requirements deemed necessary by NRCS. These issues have been addressed in the cooperative agreements since 1996, but their presence in the cooperative agreements has never been required by regulation. These issues are included in this regulation to inform the eligible entities what their responsibilities are in the agreement and list the responsibilities of NRCS. Other non-substantive changes were made to paragraph (a) to improve its readability.

A new § 1491.20(b) is added which sets forth the new statutory requirement that the terms of agreements be a minimum of five years for certified entities and three years for other eligible entities.

The existing § 1491.20(b) is being redesignated as § 1491.20(c) and is amended to require that the list of parcels funded under a cooperative agreement include the acreage, the estimated fair market value of the parcel, and the FRPP contribution amount. The requirement for a location map is being removed from the existing regulation, but such information may be still required as a matter of policy under the category of “other relevant information”.

Section 1491.21 Funding

Section 1491.21(a) is amended to reflect that NRCS may share the cost of an interest in land, and not just the cost of a conservation easement. Section 1491.21(b) incorporates the 2008 Act change that the minimum entity cost-share to be an amount that is not less than 25 percent of the acquisition purchase price. As discussed above in the changes to the definitions section, “purchase price” is defined as the fair market value of the easement less the landowner’s contribution. Section 1491.21(c) authorizes landowner

donations without restrictions. The previous rule limited landowner donations to 25 percent. Section 1491.21(d) includes the requirement that the entity must provide a minimum of 25 percent of the purchase price of the conservation easement. Section 1491.21(e) remains unchanged. Section 1491.21(f) emphasizes that a State Conservationist shall not assign a higher priority to any easement solely based on its lesser cost to FRPP.

Section 1491.21(g) is added to affirm that NRCS asserts no direct or indirect interests to environmental credits associated with an easement purchased in part with FRPP funds.

Section 1491.22 Conservation Easement Deeds

Section 1491.22(b) is amended to clarify that easements in States where State law prohibits permanent easements shall be of the maximum duration allowed by state law. The 2008 Act requires that entities may use their own terms and conditions of conservation easement deeds, provided that such terms and conditions meet the minimum requirements set forth in the statute and are approved by the Secretary. Consequently, this rulemaking amends § 1491.22(c) to provide that eligible entities may use their own easement deeds when the deed form to be used for its land transactions under the cooperative agreement has been submitted to and approved by NRCS in advance.

In accordance with the 2008 Act change made to the property interest acquired by the United States in FRPP funded easements, this rulemaking deletes the language of the existing § 1491.22(d), which requires the United States to be named a grantee on FRPP funded easements.

New language is set forth in § 1491.22(d) incorporating the 2008 Act requirement that the Secretary shall require the inclusion of a “contingent right of enforcement” for the Secretary in the terms of the conservation easement deed. Because this right is new in the 2008 Act and is not a standard real property term, NRCS has carefully considered its meaning while promulgating this rule. Specifically, NRCS interpreted the plain meaning of the statutory language, considered the legislative history, and consulted with the Office of the General Counsel for the Department.

The purpose of the right is to ensure that the easement is enforced and that the Federal investment is protected. The FRPP statute requires that the easement deed include a contingent right of enforcement. Given the requirement for

inclusion of a contingent right of enforcement in the terms of the deed, the Agency has determined that it is Congress' intent that such a right run with the land for the duration of the easement.

The only legislative history discussing the nature of the contingent right of enforcement is found in the Manager's Report for FRPP. Here the Managers indicated that Congress did not want the contingent right of enforcement considered an acquisition of real property. The House version of FRPP included specific statutory language stating that the contingent right of enforcement was not a real property acquisition. However, Congress adopted the Senate version (with amendment), which did not include this language.

NRCS has concluded that it cannot accomplish the intent of the Managers as reflected in the legislative history regarding the effect of "contingent right of enforcement" and give meaning to the plain statutory language of FRPP. This is because when an interest is to run with the land, it constitutes a real property right. The agency has considered other theories, including contractual and constitutional authority under the Spending Clause, but none provide a sufficient legal justification for the Secretary to enforce the terms of the easement for its duration against subsequent landowners. Consequently, the Agency has concluded that the contingent right of enforcement as used in FRPP means a vested real property right, which provides the Secretary, on behalf of the United States, the right to enforce the terms of the easement for the duration of the easement. In addition, because the United States has a vested real property right in FRPP easements, i.e., its right of enforcement, the easement cannot be condemned by state or local government, thereby providing further protection of the easement and the federal investment.

Finally, the Agency is interpreting the term "contingent" in "contingent right of enforcement" to mean that the Secretary exercises that right under certain circumstances, not that the right itself is contingent. Consequently, to prevent confusion over the scope of right, the Agency is referring to its enforcement right as a "right of enforcement." The definition clarifies that this right is only exercised under certain circumstances. Section 1491.22(d) is changed to provide information about the United State's right of enforcement. Specifically, the paragraph provides that the conveyance document must include the right of enforcement as set forth in the FRPP cooperative agreement, it identifies

when the United States may exercise this right and it explains that the right is a vested interest in real property and cannot be condemned by State or local governments. Section 1491.22(e) is amended to remove the requirement for conservation districts to approve the conservation plan, as this is not always consistent with local practice. The change still gives NRCS the ability to work through local conservation districts in the development of conservation plans. The requirement that NRCS sign the deed accepting its terms is incorporated at § 1491.22(g) for administrative clarity.

Section 1491.22(i) retains the impervious surface limit of 2%, but is amended to increase the impervious surface waiver to up to 10% from the existing policy of 6%. This change is possible because the statute was amended to eliminate the protection of topsoil as the primary purpose of the program. This impervious surface limit should be adequate to allow for various types of agricultural needs in different regions, while providing an adequate protection against destruction of agricultural soil resources and other conservation values associated with agricultural land such as open space.

The indemnification language previously located in § 1491.30(d) is moved to § 1491.22(j) because this language describes a deed requirement and is appropriately placed in this section.

Section 1491.22(k) is added to require that any conservation easement deed include a clause which addresses amendments to its terms. In particular, § 1491.22(k) requires that any amendment be consistent with the purposes of the conservation easement and with FRPP. This paragraph replaces the provisions previously found in § 1491.23.

Section 1491.23 is removed since the United States is no longer a grantee under the terms of the conservation easements acquired with FRPP funds. Therefore, modifications to the terms of the conservation easement will be handled through an amendment clause required under § 1491.22(k).

Subpart C—General Administration

Section 1491.30 Violations and Remedies

Section 1491.30(b) and (f) are revised to incorporate the changes to the nature of the Federal right. The former section 1491.30(e) is moved to § 1491.22 as described above. Subsequent sections are re-numbered. Section 1491.30(d) clarifies that any cost recoveries levied by NRCS will be directed to the

cooperating entity, not the specific landowner.

Section 1491.31 Appeals

Section 1491.31(a) is changed by replacing the term "cooperating entity" with the term "eligible entity" to refer to potential FRPP participants. The term "cooperating entity" is no longer used. Section 1491.31(b) is changed to add the term "of eligible entity" after the term "person" to ensure the public understands that all participants have the same rights. Paragraph (b) is further changed to refer to "administrative action" rather than "any action taken under this part". Only administrative actions are appealable. Last, paragraph (b) is changed to provide that no decision shall be a final Agency action except a decision of the Chief of NRCS. The words "Chief of NRCS" replace the words "U.S. Department of Agriculture". Paragraph (c) is added to further clarify that once an easement is recorded, enforcement actions taken by NRCS are not subject to review under administrative appeal regulations. This language is consistent with the appeal regulations at 7 CFR part 614, 7 CFR part 11, and Federal real property law.

Section 1491.32 Scheme and Device

The text of Section 1491.32 is revised by replacing "Secretary" with "NRCS".

Section 2708, "Compliance and Performance", of the 2008 Act added a paragraph to section 1244(g) of the 1985 Act entitled, "Administrative Requirements for Conservation Programs," which states the following:

"(g) Compliance and performance.— For each conservation program under Subtitle D, the Secretary shall develop procedures—

- (1) To monitor compliance with program requirements;
- (2) To measure program performance;
- (3) To demonstrate whether long-term conservation benefits of the program are being achieved;
- (4) To track participation by crop and livestock type; and
- (5) To coordinate activities described in this subsection with the national conservation program authorized under section 5 of the Soil and Water Resources Conservation Act of 1977 (16 U.S.C. 2004)."

This new provision presents in one place the accountability requirements placed on the Agency as it implements conservation programs and reports on program results. The requirements apply to all programs under Subtitle D, including the Wetlands Reserve program, the Conservation Security Program, the Conservation Stewardship Program, the Farm and Ranch Lands

Protection Program, the Grassland Reserve Program, the Environmental Quality Incentives Program (including the Agricultural Water Enhancement Program), the Wildlife Habitat Incentive Program, and the Chesapeake Bay Watershed initiative. These requirements are not directly incorporated into these regulations, which set out requirements for program participants. However, certain provisions within these regulations relate to elements of section 1244(g) of the 1985 Act and the Agency's accountability responsibilities regarding program performance. NRCS is taking this opportunity to describe existing procedures that relate to meeting the requirements of section 1244(g) of the 1985 Act, and Agency expectations for improving its ability to report on each program's performance and achievement of long-term conservation benefits. Also included is reference to the sections of these regulations that apply to program participants and that relate to the Agency accountability requirements as outlined in section 1244(g) of the 1985 Act.

Monitor compliance with program requirements. NRCS has established application procedures to ensure that participants meet eligibility requirements, and follow-up procedures to ensure that participants are complying with the terms and conditions of their contractual arrangement with the government and that the installed conservation measures are operating as intended. These and related program compliance evaluation policies are set forth in Agency guidance (440 CPM 519) (<http://directives.sc.egov.usda.gov/>).

The program requirements applicable to participants that relate to compliance are set forth in these regulations in § 1491.4, "Program Requirements", § 1491.22, "Conservation Easement Deeds", and § 1491.30, "Violations and remedies". These sections make clear the general program participant and entity obligations, the terms and conditions of the conservation easement, and the ramifications of noncompliance. Pursuant to the requirements of the Government Performance and Results Act of 1993 (Pub. L. 103-62, Sec. 1116) and guidance provided by OMB Circular A-11, NRCS has established performance measures for its conservation programs. Program-funded conservation activity is captured through automated field-level business tools and the information is made publicly available at: <http://ias.sc.egov.usda.gov/PRSHOME/>. Program performance also is reported annually to Congress and the public

through the annual performance budget, annual accomplishments report and the USDA Performance Accountability Report. Related performance measurement and reporting policies are set forth in Agency guidance (GM 340_401 and GM 340_403) (<http://directives.sc.egov.usda.gov/>).

The actions undertaken by eligible entities and participants are the basis for measuring program performance—specific actions are tracked and reported annually, while the effects of those actions relate to whether the long-term benefits of the program are being achieved. The program requirements applicable to participants and eligible entities that relate to undertaking conservation actions are set forth in these regulations in § 1491.4, "Program Requirements," § 1491.20, "Cooperative Agreements," and § 1491.22 "Conservation Easement Deeds".

Demonstrate whether long-term conservation benefits of the program are being achieved. Demonstrating the long-term natural resource benefits achieved through conservation programs is subject to the availability of needed data, the capacity and capability of modeling approaches, and the external influences that affect actual natural resource condition. While NRCS captures many measures of "output" data, such as acres of conservation practices, it is still in the process of developing methods to quantify the contribution of those outputs to environmental outcomes NRCS currently uses a mix of approaches to evaluate whether long-term conservation benefits are being achieved through its programs. Since 1982, NRCS has reported on certain natural resource status and trends through the National Resources Inventory (NRI), which provides statistically reliable, nationally consistent land cover/use and related natural resource data. However, lacking has been a connection between these data and specific conservation programs. In the future, the interagency Conservation Effects Assessment Project (CEAP), which has been underway since 2003, will provide nationally consistent estimates of environmental effects resulting from conservation practices and systems applied. CEAP results will be used in conjunction with performance data gathered through Agency field-level business tools to help produce estimates of environmental effects accomplished through Agency programs, such as WRP. In 2006 a Blue Ribbon panel evaluation of CEAP strongly endorsed the project's purpose, but concluded "CEAP must change direction" to achieve its purposes. In response, CEAP has focused on

priorities identified by the Panel and clarified that its purpose is to quantify the effects of conservation practices applied on the landscape. Information regarding CEAP, including reviews and current status is available at (<http://www.nrcs.usda.gov/technical/NRI/ceap/>). Since 2004 and the initial establishment of long-term performance measures by program, NRCS has been estimating and reporting progress toward long-term program goals. Natural resource inventory and assessment, and performance measurement and reporting policies set forth in Agency guidance (GM 290_400; GM 340_401; GM 340_403) (<http://directives.sc.egov.usda.gov/>).

Demonstrating the long-term conservation benefits of conservation programs is an Agency responsibility. Through CEAP, NRCS is in the process of evaluating how these long-term benefits can be achieved through the conservation practices and systems applied by participants under the program. The program requirements applicable to participants that relate to producing long-term conservation benefits are described previously under "measuring program performance."

Track participation by crop and livestock type. NRCS' automated field-level business tools capture participant, land, and operation information. This information is aggregated in the National Conservation Planning database and is used in a variety of program reports. Additional reports will be developed to provide more detailed information on program participation to meet congressional needs. These and related program management procedures supporting program implementation are set forth in Agency guidance (440 CPM 519).

The program requirements applicable to participants that relate to tracking participation by crop and livestock type are put forth in these regulations in § 1491.4, "Program Requirements," which makes clear program eligibility requirements, including the requirement to provide NRCS the information necessary to implement WRP.

Coordinate these actions with the national conservation program authorized under the Soil and Water Resources Conservation Act (RCA). The 2008 Act reauthorized and expanded on a number of elements of the RCA related to evaluating program performance and conservation benefits. Specifically, the 2008 Farm Bill added a provision stating, "Appraisal and inventory of resources, assessment and inventory of conservation needs, evaluation of the effects of conservation practices, and analyses of alternative approaches to

existing conservation programs are basic to effective soil, water, and related natural resources conservation.”

The program, performance, and natural resource and effects data described previously will serve as a foundation for the next RCA, which will also identify and fill, to the extent possible, data and information gaps. Policy and procedures related to the RCA are set forth in Agency guidance (GM 290 400; M 440 525; GM 130 402)(<http://directives.sc.gov.usda.gov/>).

The coordination of the previously described components with the RCA is an Agency responsibility and is not reflected in these regulations. However, it is likely that results from the RCA process will result in modifications to the program and performance data collected, to the systems used to acquire data and information, and potentially to the program itself. Thus, as the Secretary proceeds to implement the RCA in accordance with the statute, the approaches and processes developed will improve existing program performance measurement and outcome reporting capability and provide the foundation for improved implementation of the program performance requirements of section 1244(g) of the 1985 Act.

List of Subjects in 7 CFR 1491

Administrative practice and procedure, Agriculture, Soil conservation.

■ For the reasons stated in the preamble, the Commodity Credit Corporation revises 7 CFR part 1491 to read as follows:

PART 1491—FARM AND RANCH LANDS PROTECTION PROGRAM

Subpart A—General Provisions

Sec.

- 1491.1 Applicability.
- 1491.2 Administration.
- 1491.3 Definitions.
- 1491.4 Program requirements.
- 1491.5 Application procedures.
- 1491.6 Ranking considerations and proposal selection.

Subpart B—Cooperative Agreements and Conservation Easement Deeds

- 1491.20 Cooperative agreements.
- 1491.21 Funding.
- 1491.22 Conservation easement deeds.

Subpart C—General Administration

- 1491.30 Violations and remedies.
- 1491.31 Appeals.
- 1491.32 Scheme or device.

Authority: 16 U.S.C. 3838h–3838i.

Subpart A—General Provisions

§ 1491.1 Applicability.

(a) The regulations in this part set forth requirements, policies, and procedures, for implementation of the Farm and Ranch Lands Protection Program (FRPP) as administered by the Natural Resources Conservation Service (NRCS). FRPP cooperative agreements shall be administered under the regulations in effect at the time the cooperative agreement is signed.

(b) The NRCS Chief may implement FRPP in any of the 50 States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, the Virgin Islands of the United States, American Samoa, and the Commonwealth of the Northern Mariana Islands.

§ 1491.2 Administration.

(a) The regulations in this part shall be administered under the general supervision and direction of the NRCS Chief.

(b) NRCS shall—

(1) Provide overall program management and implementation leadership for FRPP;

(2) Develop, maintain, and ensure that policies, guidelines, and procedures are carried out to meet program goals and objectives;

(3) Ensure that the FRPP share of the cost of an easement or other deed restrictions in eligible land shall not exceed 50 percent of the appraised fair market value of the conservation easement;

(4) Determine eligibility of the land, the landowner, and the entity;

(5) Ensure a conservation plan is developed in accordance with 7 CFR part 12;

(6) Make funding decisions and determine allocations of program funds;

(7) Coordinate with the Office of the General Counsel (OGC) to ensure the legal sufficiency of the cooperative agreement and the easement deed or other legal instrument;

(8) Sign and monitor cooperative agreements for the CCC with the selected entity;

(9) Monitor and ensure conservation plan compliance with highly erodible land and wetland provisions in accordance with 7 CFR part 12; and

(10) Provide leadership for establishing, implementing, and overseeing administrative processes for easements, easement payments, and administrative and financial performance reporting.

(c) NRCS shall enter into cooperative agreements with eligible entities to assist NRCS with implementation of this part.

§ 1491.3 Definitions.

The following definitions will apply to this part and all documents issued in accordance with this part, unless specified otherwise:

Agricultural uses are defined by the State's farm or ranch land protection program or equivalent, or where no program exists, agricultural uses should be defined by the State agricultural use tax assessment program. (If NRCS finds that a State definition of agriculture is so broad that an included use could lead to the degradation of soils and agriculture productivity, NRCS reserves the right to impose greater deed restrictions on the property than allowable under that State definition of agriculture in order to protect agricultural use and related conservation values.)

Certified entity means an eligible entity that NRCS has determined to meet the requirements of § 1491.4(d) of this part.

Chief means the Chief of NRCS, USDA.

Commodity Credit Corporation (CCC) is a Government-owned and operated entity that was created to stabilize, support, and protect farm income and prices. CCC is managed by a Board of Directors, subject to the general supervision and direction of the Secretary of Agriculture, who is an ex-officio director and chairperson of the Board. CCC provides the funding for FRPP, and NRCS administers FRPP on its behalf.

Conservation Easement means a voluntary, legally recorded restriction, in the form of a deed, on the use of property, in order to protect resources such as agricultural lands, historic structures, open space, and wildlife habitat.

Conservation Plan is the document that—

(1) Applies to highly erodible cropland;

(2) Describes the conservation system applicable to the highly erodible cropland and describes the decisions of the person with respect to location, land use, tillage systems, and conservation treatment measures and schedules;

(3) Is approved by the local soil conservation district in consultation with the local committees established under Section 8(b)(5) of the Soil Conservation and Domestic Allotment Act (16 U.S.C. 5909h(b)(5)) and the Secretary, or by the Secretary.

Cooperative agreement means the document that specifies the obligations and rights of NRCS and eligible entities participating in the program.

Dedicated fund means an account held by an eligible entity sufficiently

capitalized for the purpose of covering expenses associated with the management, monitoring, and enforcement of conservation easements and where such account cannot be used for other purposes.

Eligible entity means federally recognized Indian Tribes, State, unit of local government, or a non-governmental organization, which has a farmland protection program that purchases agricultural conservation easements for the purpose of protecting agriculture use and related conservation values by limiting conversion to non-agricultural uses of the land.

Fair market value means the value of a conservation easement as ascertained through standard real property appraisal methods, as established in § 1491.4(g).

Farm and ranch land of statewide importance means, in addition to prime and unique farmland, land that is of statewide importance for the production of food, feed, fiber, forage, bio-fuels, and oil seed crops. Criteria for defining and delineating this land are to be determined by the appropriate State agency or agencies. Generally, additional farmlands of statewide importance include those that are nearly prime farmland and that economically produce high yields of crops when treated and managed according to acceptable farming methods. Some may produce as high a yield as prime farmlands if conditions are favorable. In some States, additional farmlands of statewide importance may include tracts of land that have been designated for agriculture by State law in accordance with 7 CFR part 657.

Farm and ranch land of local importance means farm or ranch land used to produce food, feed, fiber, forage, bio-fuels, and oilseed crops, that are not identified as having national or statewide importance. Where appropriate, these lands are to be identified by the local agency or agencies concerned. Farmlands of local importance may include tracts of land that have been designated for agriculture by local ordinance.

Farm or Ranch Succession Plan means a general plan to address the continuation of some type of agricultural business on the conserved land; the farm or ranch succession plan may include specific intra-family succession agreements or strategies to address business asset transfer planning to create opportunities for beginning farmers and ranchers.

Field Office Technical Guide (FOTG) means the official local NRCS source of resource information and interpretations of guidelines, criteria, and requirements for planning and applying conservation

practices and conservation management systems. The FOTG contains detailed information on the conservation of soil, water, air, plant, and animal resources applicable to the local area for which it is prepared.

Forest land means a land cover or use category that is at least 10 percent stocked by single-stemmed woody species of any size that will be at least 13 feet tall at maturity. Also included is land bearing evidence of natural regeneration of tree cover (cutover forest or abandoned farmland) that is not currently developed for non-forest use. Ten percent stocked, when viewed from a vertical direction, equates to an aerial canopy cover of leaves and branches of 25 percent or greater.

Forest management plan means a site-specific plan that is prepared by a professional resource manager, in consultation with the participant, and is approved by the State Conservationist. Forest management plans may include a forest stewardship plan, as specified in section 5 of the Cooperative Forestry Assistance Act of 1978 (16 U.S.C. 2103a); another practice plan approved by the State Forester; or another plan determined appropriate by the State Conservationist. The plan complies with applicable Federal, State, Tribal, and local laws, regulations and permit requirements.

Historical and archaeological resources mean resources that are:

(1) Listed in the National Register of Historic Places (established under the National Historic Preservation Act (NHPA), 16 U.S.C. 470, *et seq.*),

(2) Formally determined eligible for listing in the National Register of Historic Places (by the State Historic Preservation Officer (SHPO) or Tribal Historic Preservation Officer (THPO) and the Keeper of the National Register in accordance with section 106 of the NHPA),

(3) Formally listed in the State or Tribal Register of Historic Places of the SHPO (designated under section 101(b)(1)(B) of the NHPA) or the THPO (designated under section 101(d)(1)(C) of the NHPA), or

(4) Included in the SHPO or THPO inventory with written justification as to why it meets National Register of Historic Places criteria.

Imminent harm means easement violations or threatened violations that, as determined by the Chief, would likely cause immediate and significant degradation to the conservation values; for example, those violations that would adversely impact agriculture use, productivity, and related conservation values or result in the erosion of topsoil

beyond acceptable levels as established by NRCS.

Indian Tribe means any Indian tribe, band, nation, or other organized group or community, including any Alaska Native village or regional or village corporation as defined in or established pursuant to the Alaska Native Claims Settlement Act, 43 U.S.C. 1601 *et seq.*, which is recognized as eligible for the special programs and services provided by the United States to Indians because of their status as Indians (25 U.S.C. 450(b)(e)).

Land Evaluation and Site Assessment System (LESA) means the land evaluation system approved by the NRCS State Conservationist used to rank land for farm and ranch land protection purposes, based on soil potential for agriculture, as well as social and economic factors, such as location, access to markets, and adjacent land use. (For additional information see the Farmland Protection Policy Act rule at 7 CFR part 658.)

Landowner means a person, legal entity, or Indian Tribe having legal ownership of land, and those who may be buying eligible land under a purchase agreement. The term "landowner" may include all forms of collective ownership including joint tenants, tenants-in-common, and life tenants. State governments, local governments, and non-governmental organizations that qualify as eligible entities are not eligible as landowners.

Natural Resources Conservation Service (NRCS) means an agency of the United States Department of Agriculture.

Non-governmental organization means any organization that:

(1) Is organized for, and at all times since the formation of the organization, has been operated principally for one or more of the conservation purposes specified in clause (i), (ii), (iii), or (iv) of section 170(h)(4)(A) of the Internal Revenue Code of 1986;

(2) Is an organization described in section 501(c)(3) of that Code that is exempt from taxation under 501(a) of that Code; and

(3) Is described—

(i) In section 509(a)(1) and (2) of that Code; or

(ii) Is described in section 509(a)(3) of that Code and is controlled by an organization described in section 509(a)(2) of that Code.

Other interests in land include any right in real property other than easements that are recognized by State law. FRPP funds shall only be used to purchase other interests in land with prior approval from the Chief.

Other productive soils means farm and ranch land soils, in addition to prime farmland soils that include unique farmland and farm and ranch land of statewide and local importance.

Pending offer means a written bid, contract, or option extended to a landowner by an eligible entity to acquire a conservation easement before the legal title to these rights has been conveyed for the purpose of limiting non-agricultural uses of the land.

Prime farmland means land that has the best combination of physical and chemical characteristics for producing food, feed, fiber, forage, oilseed, and other agricultural crops with minimum inputs of fuel, fertilizer, pesticides, and labor, without intolerable soil erosion, as determined by the Secretary.

Purchase price means the appraised fair market value of the easement minus the landowner donation.

Right of enforcement means an interest in real property set forth in the conservation easement deed, equal in scope to the right of inspection and enforcement granted to the grantee, that the United States Government may exercise under specific circumstances in order to enforce the terms of the conservation easement.

Secretary means the Secretary of the United States Department of Agriculture.

State Technical Committee means a committee established by the Secretary in a State pursuant to 16 U.S.C. 3861 and 7 CFR part 610, subpart C.

State Conservationist means the NRCS employee authorized to direct and supervise NRCS activities in a State, the Caribbean Area (Puerto Rico and the Virgin Islands), or the Pacific Island Area (Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands).

Unique farmland means land other than prime farmland that is used for the production of specific high-value food and fiber crops, as determined by the Secretary. It has the special combination of soil quality, location, growing season, and moisture supply needed to economically produce sustained high quality or high yields of specific crops when treated and managed according to acceptable farming methods. Examples of such crops include citrus, tree nuts, olives, cranberries, fruits, and vegetables. Additional information on the definition of prime, unique, or other productive soil can be found in 7 CFR part 657 and 7 CFR part 658.

§ 1491.4 Program requirements.

(a) Under FRPP, the Chief, on behalf of CCC, shall provide funding for the purchase of conservation easements or

other interests in eligible land that is subject to a pending offer from an eligible entity for the purpose of protecting the agricultural use and related conservation values of the land by limiting nonagricultural uses of the land. Eligible entities submit applications to NRCS State Offices to partner with NRCS to acquire conservation easements on farm and ranch land. NRCS enters into cooperative agreements with selected entities and provides funds for up to 50 percent of the fair market value of the easement. In return, the entity agrees to acquire, hold, manage, and enforce the easement. A Federal right of enforcement must also be included in each FRPP funded easement deed for the protection of the Federal investment.

(b) The term of all easements shall be in perpetuity unless prohibited by State law. In states that limit the term of the easement, the term of the easement must be the maximum allowed by State law.

(c) To be eligible to receive FRPP funding, an entity must meet the definition of "eligible entity" as listed in § 1491.3. In addition, eligible entities interested in receiving FRPP funds must demonstrate:

(1) A commitment to long-term conservation of agricultural lands;

(2) A capability to acquire, manage, and enforce easements;

(3) Sufficient number of staff dedicated to monitoring and easement stewardship; and

(4) The availability of funds.

(d) To be eligible as a "certified entity," an entity must be qualified to be an "eligible entity" and have demonstrated, as determined by the Chief:

(1) The ability to complete acquisition of easements in a timely fashion;

(2) The ability to monitor easements on a regular basis;

(3) The ability to enforce the provisions of easement deeds;

(4) Experience enrolling parcels in the Farm and Ranch Lands Protection Program (FRPP) or the Farmland Protection Program (FPP);

(5) For non-governmental organizations, the existence of a dedicated fund for the purposes of easement management, monitoring, and enforcement where such fund is sufficiently capitalized in accordance with NRCS standards. The dedicated fund must be dedicated to the purposes of managing, monitoring, and enforcing each easement held by the eligible entity; and

(6) Other certification criteria, including having a plan for

administering easements enrolled under this part, as determined by the Chief.

(e) Review and Revocation of Certification.

(1) The Chief shall conduct a review of certified entities every three years to ensure that the certified entities are meeting the certification criteria established in § 1491.4(d).

(2) If the Chief finds that the certified entity no longer meets the criteria in § 1491.4(d), the Chief may:

(i) Allow the certified entity a specified period of time, at a minimum 180 days, in which to take such actions as may be necessary to meet the criteria; and

(ii) Revoke the certification of the entity, if after the specified period of time, the certified entity does not meet the criteria established in § 1491.4(d).

(f) Eligible land:

(1) Must be privately owned land on a farm or ranch and contain at least 50 percent prime, unique, Statewide, or locally important farmland, unless otherwise determined by the State Conservationist; contain historical or archaeological resources; or furthers a State or local policy consistent with the purposes of the program; and is subject to a pending offer by an eligible entity;

(2) Must be cropland, rangeland, grassland, pasture land, or forest land that contributes to the economic viability of an agricultural operation or serves as a buffer to protect an agricultural operation from development;

(3) May include land that is incidental to the cropland, rangeland, grassland, pasture land, or forest land if the incidental land is determined by the Secretary to be necessary for the efficient administration of a conservation easement;

(4) May include parts of or entire farms or ranches;

(5) Must not include forest land of greater than two-thirds of the easement area. Forest land that exceeds the greater of 10 acres or 10 percent of the easement area shall have a forest management plan before closing;

(6) NRCS shall not enroll land in FRPP that is owned in fee title by an agency of the United States, a State or local government, or by an entity whose purpose is to protect agricultural use and related conservation values, including those listed in the statute under eligible land, or land that is already subject to an easement or deed restriction that limits the conversion of the land to nonagricultural use, unless otherwise determined by the Chief;

(7) Must be owned by landowners who certify that they do not exceed the adjusted gross income limitation

eligibility requirements set forth in part 1400 of this title;

(8) Must possess suitable on-site and off-site conditions which will allow the easement to be effective in achieving the purposes of the program. Suitability conditions may include, but are not limited to, hazardous substances on or in the vicinity of the parcel, land use surrounding the parcel that is not compatible with agriculture, and highway or utility corridors that are planned to pass through or immediately adjacent to the parcel; and

(9) May be land on which gas, oil, earth, or other mineral rights exploration has been leased or is owned by someone other than the applicant may be offered for participation in the program. However, if an applicant submits an offer for an easement project, USDA will assess the potential impact that the third party rights may have upon achieving the program purposes. USDA reserves the right to deny funding for any application where there are exceptions to clear title on any property.

(g) Prior to FRPP fund disbursement, the value of the conservation easement must be appraised. Appraisals must be completed and signed by a State-certified general appraiser and must contain a disclosure statement by the appraiser. The appraisal must conform to the Uniform Standards of Professional Appraisal Practices or the Uniform Appraisal Standards for Federal Land Acquisitions, as selected by the entity. State Conservationists will provide the guidelines through which NRCS will review appraisals for quality control purposes.

(h) The landowner shall be responsible for complying with the Highly Erodible Land and Wetland Conservation provisions of the Food Security Act of 1985, as amended, and 7 CFR part 12.

§ 1491.5 Application procedures.

(a) An entity shall submit an application to the State Conservationist in the State where parcels are located in order to determine if the entity is eligible to participate in FRPP.

(b) The Chief shall determine whether an eligible entity is a certified entity based on the criteria set forth in § 1491.4(d); information provided by the entity's application; and data in the national FRPP database.

(c) The State Conservationist shall notify each entity if it has been determined eligible, certified, or ineligible.

(d) Entities with cooperative agreements entered into after the effective date of this part will not have to resubmit an annual application for

the duration of the cooperative agreement. Entities may reapply for eligibility when their cooperative agreements expire.

(e) Throughout the fiscal year, eligible entities may submit to the appropriate NRCS State Conservationist applications for parcels, in that State, with supporting information to be scored, ranked, and considered for funding.

(f) At the end of each fiscal year, the lists of pending, unfunded parcels shall be cancelled unless the entity requests that specific parcels be considered for funding in the next fiscal year. Entities must submit a new list of parcels each fiscal year in order to be considered for funding unless they request that parcels from the previous fiscal year be considered.

§ 1491.6 Ranking considerations and proposal selection.

(a) Before the State Conservationist can score and rank the parcels for funding, the eligibility of the landowner and the land must be assessed.

(b) The State Conservationist shall use National and State criteria to score and rank parcels. The national ranking criteria will be established by the Chief and the State criteria will be determined by the State Conservationist, with advice from the State Technical Committee. The national criteria shall comprise at least half of the ranking system score.

(c) When funds are available, the State Conservationist shall announce the date on which ranking of parcels shall occur. A State Conservationist may announce more than one date of ranking in a fiscal year.

(d) All parcels submitted throughout the fiscal year shall be scored. All parcels will be ranked together in accordance with the national and state ranking criteria before parcels are selected for funding.

(e) The parcels selected for funding shall be listed on the agreements of the entities that submitted the parcels and the agreements shall be signed by the State Conservationist and the eligible entity. Funds for each fiscal year's parcels shall be obligated with a new signature each year on an amendment to the agreement. Parcels funded on each fiscal year's amendment shall have a separate deadline for closing and requesting reimbursement.

(f) The national ranking criteria are:

(1) Percent of prime, unique, and important farmland in the parcel to be protected;

(2) Percent of cropland, pastureland, grassland, and rangeland in the parcel to be protected;

(3) Ratio of the total acres of land in the parcel to be protected to average farm size in the county according to the most recent USDA Census of Agriculture;

(4) Decrease in the percentage of acreage of farm and ranch land in the county in which the parcel is located between the last two USDA Censuses of Agriculture;

(5) Percent population growth in the county as documented by the United States Census;

(6) Population density (population per square mile) as documented by the most recent United States Census;

(7) Proximity of the parcel to other protected land, such as military installations land owned in fee title by the United States or a State or local government, or by an entity whose purpose is to protect agricultural use and related conservation values, or land that is already subject to an easement or deed restriction that limits the conversion of the land to nonagricultural use;

(8) Proximity of the parcel to other agricultural operations and infrastructure; and

(9) Other additional criteria as determined by the Chief.

(g) State or local criteria, as determined by the State Conservationist, with advice of the State Technical Committee, may include:

(1) The location of a parcel in an area zoned for agricultural use;

(2) The performance of an entity experience in managing and enforcing easements. Performance must be measured by the closing efficiency or percentage of monitoring that is reported. Years of an entity's existence shall not be used as a ranking factor;

(3) Multifunctional benefits of farm and ranch land protection including social, economic, historical and archaeological, and environmental benefits;

(4) Geographic regions where the enrollment of particular lands may help achieve National, State, and regional conservation goals and objectives, or enhance existing government or private conservation projects;

(5) Diversity of natural resources to be protected;

(6) Score in the Land Evaluation and Site Assessment (LESA) system. This score serves as a measure of agricultural viability (access to markets and infrastructure);

(7) Existence of a farm or ranch succession plan or similar plan established to encourage farm viability for future generations; and

(8) Landowner willingness to allow public access for recreational purposes.

(h) State ranking criteria will be developed on a State-by-State basis. The State Conservationist will make available a full listing of applicable National and State ranking criteria.

Subpart B—Cooperative Agreements and Conservation Easement Deeds

§ 1491.20 Cooperative agreements.

(a) NRCS, on behalf of CCC, shall enter into a cooperative agreement with those entities selected for funding. Once a proposal is selected by the State Conservationist, the entity must work with the State Conservationist to finalize and sign the cooperative agreement, incorporating all necessary FRPP requirements. The cooperative agreement must address:

(1) The interests in land to be acquired, including the United States' right of enforcement as well as the form and other terms and conditions of the easement deed;

(2) The management and enforcement of the rights on lands acquired with FRPP funds;

(3) The responsibilities of NRCS;

(4) The responsibilities of the eligible entity on lands acquired with FRPP funds;

(5) The allowance of parcel substitution upon mutual agreement of the parties; and

(6) Other requirements deemed necessary by NRCS to meet the purposes of this part or protect the interests of the United States.

(b) The term of cooperative agreements shall be a minimum of five years for certified entities and three years for other eligible entities.

(c) The cooperative agreement shall also include an attachment listing the parcels accepted by the State Conservationist. This list shall include landowners' names and addresses, acreage, the estimated fair market value, the estimated Federal contribution, and other relevant information. An example of a cooperative agreement shall be made available by the State Conservationist.

§ 1491.21 Funding.

(a) Subject to the statutory limits, the State Conservationist, in coordination with the cooperating entity, shall determine the NRCS share of the cost of purchasing a conservation easement or other interest in the land.

(b) NRCS may provide up to 50 percent of the appraised fair market value of the conservation easement, as determined in § 1491.4(g). An entity shall share in the cost of purchasing a conservation easement in accordance with the limitations of this part.

(c) A landowner may make donations toward the acquisition of the conservation easement.

(d) The entity must provide a minimum of 25 percent of the purchase price of the conservation easement.

(e) FRPP funds may not be used for expenditures such as appraisals, surveys, title insurance, legal fees, costs of easement monitoring, and other related administrative and transaction costs incurred by the entity.

(f) If the State Conservationist determines that the purchase of two or more conservation easements are comparable in achieving FRPP goals, the State Conservationist shall not assign a higher priority to any one of these conservation easements solely on the basis of lesser cost to FRPP.

(g) Environmental Services Credits.

(1) NRCS asserts no direct or indirect interest in environmental credits that may result from or be associated with an FRPP easement.

(2) NRCS retains the authority to ensure that the requirements for FRPP-funded easements are met and maintained consistent with this part.

(3) If activities required under an environmental credit agreement may affect land covered under a FRPP easement, landowners are encouraged to request a compatibility assessment from the eligible entity prior to entering into such agreements.

§ 1491.22 Conservation easement deeds.

(a) Under FRPP, a landowner grants an easement to an eligible entity with which NRCS has entered into an FRPP cooperative agreement. The easement shall require that the easement area be maintained in accordance with FRPP goals and objectives for the term of the easement.

(b) Pending offers by an eligible entity must be for acquiring an easement in perpetuity, except where State law prohibits a permanent easement. In such cases where State law limits the term of a conservation easement, the easement term shall be for the maximum allowed under state law.

(c) The entity may use its own terms and conditions in the conservation easement deed, but a conservation easement deed template used by the eligible entity shall be submitted to the NRCS National Headquarters within 30 days of the signing of the cooperative agreement. The conservation easement deed templates must be reviewed and approved by the NRCS National Headquarters in advance of use. NRCS reserves the right to require additional specific language or to remove language in the conservation easement deed to

protect the interests of the United States.

(d) The conveyance document must include a "right of enforcement" clause for the United States. NRCS shall specify the terms for the "right of enforcement" clause to read as set forth in the FRPP cooperative agreement. The right of enforcement provides that the NRCS has the right to inspect and enforce the easement, if the eligible entity fails to uphold the easement, as determined by NRCS. This right is a vested interest in real property and cannot be condemned by State or local government.

(e) As a condition for participation, a conservation plan shall be developed by NRCS in consultation with the landowner and implemented according to the NRCS Field Office Technical Guide. NRCS may work through the local conservation district in the development of the conservation plan. The conservation plan will be developed and managed in accordance with the Food Security Act of 1985, as amended, 7 CFR part 12 or subsequent regulations, and other requirements as determined by the State Conservationist. To ensure compliance with this conservation plan, the easement shall grant to the United States, through NRCS, its successors or assigns, a right of access to the easement area.

(f) The cooperating entity shall acquire, hold, manage and enforce the easement. The cooperating entity may have the option to enter into an agreement with governmental or private organizations to carry out easement stewardship responsibilities.

(g) Prior to easement closing, NRCS must sign an acceptance of the conservation easement, concurring with the terms of the conservation easement and accepting its interest in the conservation easement deed.

(h) All conservation easement deeds acquired with FRPP funds must be recorded. Proof of recordation shall be provided to NRCS by the cooperating entity.

(i) Impervious surfaces shall not exceed two percent of the FRPP easement area, excluding NRCS-approved conservation practices. The NRCS State Conservationist may waive the two percent impervious surface limitation on a parcel by parcel basis, provided that no more than ten percent of the easement area is covered by impervious surfaces. Before waiving the two percent limitation, the State Conservationist must consider, at a minimum: population density; the ratio of open prime other important farmland versus impervious surfaces on the easement area; the impact to water

quality concerns in the area; the type of agricultural operation; and parcel size. All FRPP easements must include language limiting the amount of impervious surfaces within the easement area.

(j) The conservation easement deed must include an indemnification clause requiring the landowner (grantor) to indemnify and hold harmless the United States from any liability arising from or related to the property enrolled in FRPP.

(k) The conservation easement deed must include an amendment clause requiring that any changes to the easement deed after its recordation must be consistent with the purposes of the conservation easement and this part.

Subpart C—General Administration

§ 1491.30 Violations and remedies.

(a) In the event of a violation of the terms of the easement, the eligible entity shall notify the landowner. The landowner may be given reasonable notice and, where appropriate, an opportunity to voluntarily correct the violation in accordance with the terms of the conservation easement.

(b) In the event that the entity fails to enforce any of the terms of the conservation easement, as determined in the sole discretion of the Chief, the Chief and his or her successors or assigns may exercise the United States' rights to enforce the terms of the conservation easement through any and all authorities available under Federal or State law.

(c) Notwithstanding paragraph (a) of this section, NRCS, upon notification to the landowner, reserves the right to enter upon the easement area at any time to monitor conservation plan implementation or remedy deficiencies or easement violations, as it relates to the conservation plan. The entry may be made at the discretion of NRCS when the actions are deemed necessary to protect highly erodible soils and wetland resources. The landowner will be liable for any costs incurred by the NRCS as a result of the landowner's negligence or failure to comply with the easement requirements as it relates to conservation plan violations.

(d) The United States shall be entitled to recover any and all administrative and legal costs from the participating entity, including attorney's fees or expenses, associated with any enforcement or remedial action as it relates to the enforcement of the FRPP easement.

(e) In instances where an easement is terminated or extinguished, NRCS shall collect CCC's share of the conservation

easement based on the appraised fair market value of the conservation easement at the time the easement is extinguished or terminated. CCC's share shall be in proportion to its percentage of original investment.

(f) In the event NRCS determines it must exercise the United States' right to enforce the terms of, or taking a property interest in, the conservation easement, NRCS shall provide written notice by certified mail to the grantee at the grantee's last known address. The notice will set forth the nature of the noncompliance by the grantee and a 60-day period to cure. If the grantee fails to cure within the 60-day period, the United States shall take the action specified under the notice. The United States reserves the right to decline to provide a period to cure if NRCS determines that imminent harm may result to the conservation easement deed or the conservation values it seeks to protect.

§ 1491.31 Appeals.

(a) A person or eligible entity which has submitted an FRPP proposal and is therefore participating in FRPP may obtain a review of any administrative determination concerning eligibility for participation utilizing the administrative appeal regulations provided in 7 CFR part 614.

(b) Before a person or eligible entity may seek judicial review of any administrative action taken under this part, the person or eligible entity must exhaust all administrative appeal procedures set forth in paragraph (a) of this section, and for the purposes of judicial review, no decision shall be a final Agency action except a decision of the Chief of the NRCS under these provisions.

(c) Enforcement action undertaken by the NRCS in furtherance of its vested property rights are under the jurisdiction of the Federal District Court and not subject to review under administrative appeal regulations.

§ 1491.32 Scheme or device.

(a) If it is determined by the NRCS that a cooperating entity has employed a scheme or device to defeat the purposes of this part, any part of any program payment otherwise due or paid such a cooperating entity during the applicable period may be withheld or be required to be refunded with interest thereon, as determined appropriate by NRCS on behalf of CCC.

(b) A scheme or device includes, but is not limited to, coercion, fraud, misrepresentation, depriving any other person or entity of payments for easements for the purpose of obtaining

a payment to which a person would otherwise not be entitled.

Signed this 9th day of 2009 in Washington, DC.

Arlen L. Lancaster,

Vice President, Commodity Credit Corporation and Chief, Natural Resources Conservation Service.

Rural Development Guaranteed Loans

AGENCIES: Rural Business—Cooperative Service, Rural Housing Service, Rural Utilities Service, USDA.

ACTION: Interim rule; delay of the effective date.

SUMMARY: Rural Development is delaying the effective date of the interim rule for Rural Development Guaranteed Loans, which was published on December 17, 2008. The interim rule establishes a unified guaranteed loan platform for the enhanced delivery of four existing Rural Development guaranteed loan programs—Community Facility; Water and Waste Disposal; Business and Industry; and Renewable Energy Systems and Energy Efficiency Improvement Projects.

DATES: This effective date of the interim rule, published on December 17, 2008 [73 FR 76698], is delayed from January 16, 2009, until February 17, 2009.

FOR FURTHER INFORMATION CONTACT: Mr. Michael Foore, Rural Development, Business and Cooperative Programs, U.S. Department of Agriculture, 1400 Independence Avenue, SW., Stop 3201,

Washington, DC 20250-3201; e-mail: Michael.Foore@wdc.usda.gov; telephone (202) 690-4730.

SUPPLEMENTARY INFORMATION: Rural Development has identified a technical error associated with the publication of the interim rule, in which 7 CFR Parts 1779 and 3575 were mistakenly repealed. These two parts, which are the regulations for the Community Facilities and Water and Waste Disposal guaranteed loan programs, should not have been repealed at this time because, in part, there are other Community Facilities and Water and Waste Disposal regulations that cross-reference these two parts. Rural Development considered publishing a technical correction notice to reinstate these two regulations. Due to time constraints for publication in the **Federal Register** prior to the effective date of January 16, 2009, there was insufficient time for full consideration of these technical corrections. Therefore, Rural Development determined that the best course of action was to delay the effective date of the interim rule by 30 days.

Dated: January 9, 2009.

Doug Faulkner,

Acting Under Secretary for Rural Development.

RIN 1615-AB19

Establishment of a Genealogy Program; Correcting Amendment

AGENCY: U.S. Citizenship and Immigration Services, DHS.

ACTION: Correcting amendment.

SUMMARY: With this amendment, the Department of Homeland Security (DHS) corrects an inadvertent error in the amendatory language from the Establishment of a Genealogy Program Final Rule published in the **Federal Register** on May 15, 2008.

DATES: This correction is effective January 16, 2009.

FOR FURTHER INFORMATION CONTACT: Lynda Spencer, Genealogy Program, U.S. Citizenship and Immigration Services, Department of Homeland Security, 1200 First Street, NE., 2nd Floor, Washington, DC 20529-2206, telephone (202) 272-8282.

SUPPLEMENTARY INFORMATION:

Need for Correction

On May 15, 2008, the Department of Homeland Security (DHS) published a final rule in the **Federal Register** at 73 FR 28026 establishing a fee-for-service Genealogy Program within U.S. Citizenship and Immigration Services (USCIS) to streamline and improve the process for acquiring historical records of deceased individuals. There was an inadvertent error in that document. In the amendatory language for amendment 2b at 73 FR 28030, DHS inadvertently revised the fifth sentence to 8 CFR 103.7(c)(1) instead of the sixth sentence. As a result the fifth sentence in 8 CFR 103.7(c)(1) is incorrect. This document corrects the error.

List of Subjects

8 CFR Part 103

Administrative practice and procedure, Authority delegations (Government agencies), Freedom of Information, Privacy, Reporting and recordkeeping requirements, Surety bonds.

8 CFR Part 299

Immigration, Reporting and recordkeeping requirements.

■ Accordingly, chapter I of title 8 of the Code of Federal Regulations is amended as follows:

PART 103—POWERS AND DUTIES; AVAILABILITY OF RECORDS

■ 1. The authority citation for part 103 continues to read as follows:

Authority: 5 U.S.C. 301, 552, 552a; 8 U.S.C. 1101, 1103, 1304, 1356; 31 U.S.C. 9701; Public Law 107-296, 116 Stat. 2135 (6 U.S.C. 1 *et seq.*), E.O. 12356, 47 FR 14874, 15557, 3 CFR, 1982 Comp., p. 166; 8 CFR part 2.

■ 2. Section 103.7(c)(1) is amended by revising the fifth and sixth sentences to read as follows:

§ 103.7 Fees.

* * * * *

(c) * * *

* * * The payment of the additional sum prescribed by section 245(i) of the Act when applying for adjustment of status under section 245 of the Act may not be waived. The fees for Form I-907, Request for Premium Processing Services, and for Forms G-1041 and G-1041A, Genealogy Program request forms, may not be waived.

RIN 1651-AA77

Establishing U.S. Ports of Entry in the Commonwealth of the Northern Mariana Islands (CNMI) and Implementing the Guam-CNMI Visa Waiver Program

AGENCY: Customs and Border Protection, DHS.

ACTION: Interim final rule; solicitation of comments.

SUMMARY: Section 702 of the Consolidated Natural Resources Act of 2008 (CNRA) extends the immigration laws of the United States to the Commonwealth of the Northern Mariana Islands (CNMI) and provides for a visa waiver program for travel to Guam and the CNMI. This rule implements section 702 of the CNRA by amending U.S. Customs and Border Protection (CBP) regulations to replace the current Guam Visa Waiver Program with a new Guam-CNMI Visa Waiver Program.

Accordingly, this interim final rule sets forth the requirements for nonimmigrant visitors who seek admission for business or pleasure and solely for entry into and stay on Guam or the CNMI without a visa for a period of authorized stay of no longer than forty-five days. In addition, this rule establishes six ports of entry in the CNMI in order to administer and enforce the Guam-CNMI Visa Waiver Program and to allow for immigration inspections in the CNMI, including arrival and departure controls, under the Immigration and Nationality Act (INA).

DATES: Effective Date: This interim final rule is effective January 16, 2009.

Implementation Date: Beginning June 1, 2009, Customs and Border Protection (CBP) will begin operation of this program and required compliance with this interim final rule will begin. The existing Guam Visa Waiver Program

remains in effect for travel to Guam until the start of the transition period.

Comment Date: Comments must be received by March 17, 2009.

ADDRESSES: Please submit comments, identified by docket number, by one of the following methods:

- **Federal eRulemaking Portal:** <http://www.regulations.gov>. Follow the instructions for submitting comments via docket number USCBP-2009-0001.

- **Mail:** Border Security Regulations Branch, Office of International Trade, Customs and Border Protection, Mint Annex, 799 9th Street, NW., Washington, DC 20001.

- **Instructions:** All submissions received must include the agency name and docket number for this rulemaking. All comments received will be posted without change to <http://www.regulations.gov>, including any personal information provided.

- **Docket:** For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>. Comments submitted will be available for public inspection in accordance with the Freedom of Information Act (5 U.S.C. 552) and 19 CFR 103.11(b) on normal business days between the hours of 9 a.m. and 4:30 p.m. at the Border Security Regulations Branch, Office of International Trade, Customs and Border Protection, 799 9th Street, NW., 5th Floor, Washington, DC. Arrangements to inspect submitted comments should be made in advance by calling Mr. Joseph Clark at (202) 325-0118.

FOR FURTHER INFORMATION CONTACT: Cheryl C. Peters, Office of Field Operations, at (202) 344-1438.

I. Public Comments

Interested persons are invited to submit written comments on all aspects of this interim final rule. Customs and Border Protection (CBP) also invites comments on the economic, environmental or federalism effects of this rule. We urge commenters to reference a specific portion of the rule, explain the reason for any recommended change, and include data, information, or authorities that support such recommended change.

II. Background and Purpose

This interim final rule establishes the Guam-Commonwealth of the Northern Mariana Islands (CNMI) Visa Waiver Program as authorized under section 702(b) of the Consolidated Natural Resources Act of 2008 (CNRA), Public Law 110-229, 122 Stat. 754, 860. As explained in more detail below, this rule replaces the current Guam Visa Waiver Program with a new Guam-CNMI Visa Waiver Program. Under this rule, CBP also is establishing six ports of entry in the CNMI to enable DHS to administer and enforce the Guam-CNMI Visa Waiver Program, and to allow for the application of U.S. immigration laws in the CNMI as directed under section 702 of the CNRA.

A. Current Requirements for the Guam Visa Waiver Program

Pursuant to section 212(l) of the Immigration and Nationality Act (INA) and DHS regulations, aliens who are citizens of eligible countries or geographic areas (hereinafter countries) may apply for admission to Guam at a Guam port of entry as nonimmigrant visitors for a period of fifteen days or less, for business or pleasure, without first obtaining a nonimmigrant visa, provided that they are otherwise eligible for admission under applicable statutory

and regulatory requirements.¹ See 8 U.S.C. 1182(l) and 8 CFR 212.1(e). The alien must be a citizen of a country that: (i) Has a visa refusal rate of 16.9% or less, or is a country whose visa refusal rate exceeds 16.9% and has an established preinspection or preclearance program, pursuant to a bilateral agreement with the United States; (ii) is within geographical proximity to Guam unless the country has a substantial volume of nonimmigrant admissions to Guam as determined by the Commissioner of CBP and extends reciprocal privileges to citizens of the United States; (iii) is not designated by the Department of State as being of special humanitarian concern; and (iv) poses no threat to the welfare, safety or security of the United States, its territories or commonwealths. 8 CFR 212.1(e)(2). The existing regulations also provide that any potential threats to the welfare, safety, or security of the United States, its territories, or commonwealths will be dealt with on a country by country basis, and a determination by the Secretary that a threat exists will result in the immediate deletion of the country from the listing of eligible countries.

Currently, the determination as to which countries may participate in the Guam Visa Waiver Program is based on the countries' geographical proximity to Guam on the premise that they maintain a traditional interchange with Guam. Countries that are not in geographic proximity to Guam may be included if they have a substantial volume of nonimmigrant admissions to Guam and extend reciprocal privileges to citizens of the United States. The following countries meet these eligibility requirements and are currently members of the Guam Visa Waiver Program: Australia, Brunei, Indonesia, Japan, Malaysia, Nauru, New Zealand, Papua New Guinea, Republic of Korea, Singapore, Solomon Islands, Taiwan (residents who begin travel in Taiwan and fly to Guam without an intermediate layover or stop en route), the United Kingdom (including citizens of Hong Kong), Vanuatu, and Western Samoa. See 8 CFR 212.1(e)(3)(i).

An alien from one of these eligible countries currently may be admitted into Guam under the Guam Visa Waiver

¹ Establishment of the Guam Visa Waiver Program was predicated upon the Attorney General, in consultation with the Secretary of State and the Secretary of the Interior, and after consultation with the Governor of Guam, making a joint determination that: (i) An adequate arrival and departure control system has been developed on Guam, and (ii) such a waiver does not represent a threat to the welfare, safety, or security of the United States or its territories and commonwealths. See section 212(l) of the INA, 8 U.S.C. 1182(l).

Program if the alien: (i) Is classifiable as a visitor for business or pleasure; (ii) is solely entering and staying on Guam for a period not to exceed fifteen days; (iii) is in possession of a round-trip nonrefundable and nontransferable transportation ticket bearing a confirmed departure date not exceeding fifteen days from the date of admission to Guam; (iv) is in possession of a completed and signed Guam Visa Waiver Information Form (CBP Form I-736); (v) waives any right to review or appeal under the INA of an immigration officer's determination as to the admissibility of the alien at the port of entry into Guam; and (vi) waives any right to contest other than on the basis of an application for asylum, any action for deportation of the alien. *See* 8 CFR 212.1(e)(1).

B. The Consolidated Natural Resources Act of 2008

On May 8, 2008, the President signed into law the Consolidated Natural Resources Act of 2008 (CNRA), Public Law 110-229, 122 Stat. 754. Section 702(a) of the CNRA extends U.S. immigration laws to the CNMI and authorizes DHS to create a Guam-CNMI Visa Waiver Program. *See* sections 212 and 214 of the INA, 8 U.S.C. 1182 and 1184.

This interim final rule establishes the Guam-CNMI Visa Waiver Program and sets forth the requirements for nonimmigrant visitors seeking admission into Guam or the CNMI under the Guam-CNMI Visa Waiver Program. These amendments ensure that the regulations conform to current border security needs and facilitate CBP's dual core missions of protecting our nation's borders and fostering legitimate international travel.

Section 702(b) of the CNRA requires the Secretary of Homeland Security to consult with the Secretary of State and the Secretary of the Interior, the Governor of Guam and the Governor of the CNMI in the development of these regulations. Accordingly, representatives of DHS, including CBP, during a July 10-16, 2008 visit to Guam and the CNMI, met with officials of the Guam Government, the CNMI Government and representatives of the Marianas Visitors Authority, the Guam Visitors Bureau, the Hotel Association of the Northern Mariana Islands, and the Saipan Chamber of Commerce. At the request of the Governor of Guam, DHS officials met with Governor Camacho, his staff, and members of the Guam Visitor's Bureau on September 15, 2008, in Washington, DC. Representatives of DHS also met on November 21, 2008 with Delegate-elect Gregorio "Kilili"

Sablan, the first Delegate from the CNMI to the U.S. House of Representatives, as well as with members of the Hotel Association of the Northern Mariana Islands (HANMI) on December 5, 2008. Additionally, interagency meetings were held on September 9, October 21, 2008 and December 5, 2008, between DHS, the Department of State, and the Department of the Interior, among others, in order to come to an agreement over the implementation of the Guam-CNMI Visa Waiver Program.

III. Establishing the Guam-CNMI Visa Waiver Program

The following are the eligibility criteria for countries and aliens.

A. Program Countries

1. General Eligibility Criteria

The country eligibility requirements established in this rulemaking under the Guam-CNMI Visa Waiver Program differ from those under the Guam Visa Waiver Program. The new requirements take into account the provisions and purposes of the CNRA and ensure that the regulations conform to current border security needs. In determining the criteria for making country eligibility determinations for the Guam-CNMI Visa Waiver Program, DHS considered a variety of factors to ensure that the new Guam-CNMI Visa Waiver Program reflected Congress's stated purposes of the CRNA to, among others: (1) Ensure effective border control procedures; (2) properly address national security and homeland security concerns in extending U.S. immigration law to the CNMI; and (3) maximize the CNMI's potential for future economic and business growth. *See* section 701(a)(1).

Section 702 of the CRNA provides that "[i]n determining whether to grant or continue providing the waiver under this subsection to nationals of any country, the Secretary of Homeland Security, in consultation with the Secretary of the Interior and the Secretary of State, shall consider all factors that the Secretary deems relevant, including electronic travel authorizations, procedures for reporting lost and stolen passports, repatriation of aliens, rates of refusal for nonimmigrant visitor visas, overstays, exit systems, and information exchange." In determining country eligibility for participation in the Guam-CNMI Visa Waiver Program under this rule, the Secretary of Homeland Security found relevant, and thus considered, each of these enumerated factors.

This rulemaking also provides for these new eligibility conditions to

ensure the safety, security, and welfare of the United States. Under these new requirements a country's nationals may not participate in the Guam-CNMI Visa Waiver Program if: (1) The country poses a threat to the welfare, safety or security of the United States, its territories or commonwealths; (2) the country is designated by the Department of State as being of special humanitarian concern; or (3) if the country does not accept for repatriation any citizen, former citizen, or national admitted into Guam or the CNMI under the Guam-CNMI Visa Waiver Program within three weeks after issuance of a final order of removal.

2. "Significant Economic Benefit" Criteria

Section 702(b) of the CNRA requires the Secretary to include in the list of participating countries, a list of those countries from which the CNMI has received a "significant economic benefit" from the number of visitors for pleasure within the one-year period preceding the date of enactment of the CNRA. However, if the Secretary determines that such a country's inclusion represents a threat to the welfare, safety, or security of the United States, or determines that such country is not eligible based on other factors the Secretary deems relevant, then that country will not qualify as an eligible country.

DHS has determined that, during the relevant timeframe, visitors for pleasure from the People's Republic of China (PRC) and the Russian Federation (Russia) provided a significant economic benefit to the CNMI. This determination is based on the economic analysis below and takes into account the total on-island spending of these visitors on a per country basis, calculated by the Marianas Visitors Authority. During the period of May 2007 through April 2008, DHS calculated visitor arrivals to the CNMI by country of residence. PRC nationals represented ten percent of visitor arrivals and Russian nationals represented one percent of visitor arrivals. The total on-island spending by PRC nationals was \$38 million and for Russian nationals was \$20 million. Per person on-island spending was equal to \$967 for PRC nationals and \$4,323 for Russian nationals.

At this time, however, due to political, security, and law enforcement concerns, including high nonimmigrant visa refusal rates and concerns with cooperation regarding the repatriation of citizens, subjects, nationals and residents of the country subject to a final order of removal, nationals of the

PRC and Russia are not eligible to participate in the Guam-CNMI Visa Waiver Program when the program is implemented.

After additional layered security measures, which may include, but are not limited to, electronic travel authorization to screen and approve potential visitors prior to arrival in Guam and the CNMI, and other border security infrastructure, DHS will make a determination as to whether nationals of the PRC and Russia can participate in the Guam-CNMI Visa Waiver Program. In making such a determination, DHS will consider the welfare, safety, and security of the United States and its territories, as well as other considerations deemed relevant by the Secretary.

If DHS determines that nationals from the PRC and/or Russia may participate in the Guam-CNMI Visa Program, DHS will amend the regulations as necessary.

3. Determination of Country Eligibility

This rulemaking includes a listing of all countries that have been determined to be eligible to participate in the Guam-CNMI Visa Waiver Program, and whose nationals may apply for admission into Guam or the CNMI under the Guam-CNMI Visa Waiver Program. The new Guam-CNMI Visa Waiver Program list includes all of the countries that were included in the Guam Visa Waiver Program, except for Indonesia, the Solomon Islands, Vanuatu, and Western Samoa. The Solomon Islands are not included on the list of eligible countries for the Guam-CNMI Visa Waiver Program in consideration of ongoing civil and political instability. Indonesia, Vanuatu, and Western Samoa are not included on the list of eligible countries due to very high rates of refusal for nonimmigrant visitor visas. In addition, these four countries do not provide a "significant economic benefit" to the CNMI. Therefore, DHS does not find their removal from the program country list, based on such factors as ongoing civil and political instability, or high nonimmigrant visa refusal rates, to outweigh any existing economic benefits from their past inclusion under the Guam Visa Waiver Program. The following countries are designated for participation in the Guam-CNMI Visa Waiver Program: Australia, Brunei, Hong Kong (Hong Kong Special Administrative Region (SAR) passport and Hong Kong identification card is required), Japan, Malaysia, Nauru, New Zealand, Papua New Guinea, Republic of Korea, Singapore, Taiwan, and the United Kingdom.

4. Suspension of Program Countries

This rule also incorporates the provisions in the CNRA regarding the suspension of countries from the Guam-CNMI Visa Waiver Program. Section 702(b) of the CNRA requires the Secretary to monitor the admission of nonimmigrant visitors to Guam and the CNMI, and to suspend the admission of nationals from a country if the Secretary determines that admissions from that country have resulted in an unacceptable number of overstays, unlawful entry into other parts of the United States, or visitors seeking withholding of removal or seeking asylum.

The CNRA also requires the Secretary to suspend admissions from a country if the Secretary determines that visitors from that country pose a risk to the law enforcement or security interests of Guam, the CNMI, or the United States, including the interest in the enforcement of U.S. immigration laws. Any designated country that fails to meet the country eligibility criteria under new § 212.1(q) shall be removed for good cause. In determining whether to continue to grant the waiver, consistent with the statutory factors listed in section 702(b) of the CNRA, designated countries must, within three weeks after the issuance of a final order of removal, accept for repatriation any citizen, former citizen or national admitted into Guam or the CNMI under this program. Failure to accept for repatriation may result in suspension of that country from the program. The CNRA also provides that the Secretary may suspend the Guam-CNMI Visa Waiver Program on a country-by-country basis for other good cause.

B. Alien Eligibility Criteria

1. Requirements for Admission

The CNRA authorizes the Secretary to allow an alien to enter Guam or the CNMI as a nonimmigrant visitor for business or pleasure for a period not to exceed forty-five days after the Secretary of Homeland Security, in consultation with the Secretaries of State and the Interior and the Governors of Guam, and the CNMI determines that: (i) Adequate arrival and departure control systems have been developed in Guam and the CNMI, and (ii) such a waiver does not represent a threat to the welfare, safety, or security of the United States or its territories and commonwealths.

In addition to the requirements that aliens currently seeking admission to Guam under the current Guam Visa Waiver program must meet, DHS is adding three new admission requirements. Under this interim final

rule, to be considered eligible for admission into Guam or the CNMI under the Guam-CNMI Visa Waiver Program, nonimmigrant aliens must also: (i) Be in possession of a valid unexpired passport that meets the standards of the International Civil Aviation Organization (ICAO) for machine readability and which is issued by a country that meets the eligibility requirements as determined by the Secretary; (ii) have not previously violated the terms of any prior admissions to the United States under the Guam-CNMI Visa Waiver Program, the prior Guam Visa Waiver Program, or the Visa Waiver Program as described in section 217(a) of the Act and admissions pursuant to any immigrant or nonimmigrant visa; and (iii) present a valid completed and signed CBP Form I-94, known as the Arrival-Departure Record Form (Form I-94).

Although not specifically required under the Guam Visa Waiver Program regulations, pursuant to operational practices, nonimmigrant visitors currently must present a valid completed and signed CBP Form I-94 to enter Guam under the Guam Visa Waiver Program. This rulemaking explicitly requires completion of an I-94 to enter Guam and the CNMI under the Guam-CNMI Visa Waiver Program.

Additionally, consistent with existing Guam Visa Waiver Program regulations, an alien will not be admitted under the Guam-CNMI Visa Waiver Program unless the alien (i) has waived any right to review or appeal under the INA of an immigration officer's determination as to the admissibility of the alien and (ii) has waived any right to contest any action for removal of the alien, other than on the basis of an application for withholding of removal under section 241(b)(3) of the INA, 8 U.S.C. 1231(b)(3), or withholding or deferral of removal under the regulations implementing Article 3 of the United Nations Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment, or an application for asylum if permitted under section 208 of the INA, 8 U.S.C. 1158.

2. Inadmissibility and Deportability

This rule provides DHS with the authority to remove aliens and to make determinations as to admissibility and deportability under 8 CFR 212.1(q)(8). CBP may remove an alien seeking admission under the Guam-CNMI Visa Waiver Program upon a determination that the alien is inadmissible to Guam or the CNMI under one or more of the grounds of inadmissibility (other than for lack of visa) listed under section 212 of the INA. See 8 U.S.C. 1182. This rule

also provides that an immigration officer may remove a Guam-CNMI Visa Waiver Program applicant who presents fraudulent or counterfeit travel documents. Likewise, DHS will have the authority to remove an alien admitted under the Guam-CNMI Visa Waiver Program who has violated his/her status under one or more grounds of deportability as listed under section 237 of the INA. *See* 8 U.S.C. 1227. Accordingly, aliens who have been determined to be inadmissible or deportable will not be referred to an immigration judge for further inquiry, examination or hearing, except that an alien admitted to Guam under the Guam-CNMI Visa Waiver Program, who applies for asylum or withholding of removal under section 241(b)(3) of the INA or withholding or deferral of removal under the regulations implementing Article 3 of the United Nations Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment must be issued a Form I-863 for a proceeding in accordance with 8 CFR 208.2(c)(1) and (2).

The CNRA provides that, during the transition period, section 208 of the INA, 8 U.S.C. 1158, which provides for asylum, does not apply to aliens physically present in the CNMI. *See* Public Law 110-229, 122 Stat. 754, section 702(a). Therefore, prior to January 1, 2015, an alien who is physically present in the CNMI under the Guam-CNMI Visa Waiver Program may not apply for asylum and an immigration judge will not have jurisdiction over asylum applications filed by an alien physically present in the CNMI under the Guam-CNMI Visa Waiver Program. Aliens physically present in the CNMI during the transition period who express a fear of persecution or torture only may establish eligibility for withholding of removal pursuant to INA 241(b)(3) or pursuant to the regulations implementing Article 3 of the United Nations Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment.

This rule amends 8 CFR 214.1, regarding ineligibility for extensions of stay to add a limitation regarding extensions of stay for any Guam-CNMI Visa Waiver Program nonimmigrants. Currently, nonimmigrants who were admitted into the United States as visitors for business or pleasure pursuant to the Visa Waiver Program (section 217 of the INA) are ineligible for an extension of stay. This amendment will provide that nonimmigrants admitted pursuant to the Guam-CNMI Visa Waiver Program are

ineligible for an extension of stay. Additional technical changes to 8 CFR 233.5 to include references to the CNMI also are made where appropriate.

3. Bond Provision

Section 702(b) of the CNRA also requires that the regulations include any bonding requirements for nationals of some or all of those countries who may present an increased risk of overstaying their period of authorized stay or other potential problems. *See* section 702(b). This rule implements this new bonding provision in new section 212.1(q), which provides that the Secretary may require a bond on behalf of an alien seeking admission under the Guam-CNMI Visa Waiver Program when the Secretary deems it appropriate.

4. Maintenance of Status

This rule includes a provision allowing an alien admitted to Guam or the CNMI under the Guam-CNMI Visa Waiver Program to seek a period of satisfactory departure. Under this rule, CBP and U.S. Citizenship and Immigration Services (USCIS) have the discretion to grant a period of satisfactory departure to an alien admitted under the Guam-CNMI Visa Waiver Program in the event of an emergency. Under new § 212.1(q)(7), this rule provides that if an alien admitted under the Guam-CNMI Visa Waiver Program is prevented from departing within the period of his or her authorized stay due to an emergency, CBP or USCIS may grant satisfactory departure to permit the alien to delay departing Guam or the CNMI for a period not to exceed fifteen days. If the alien departs within the extended time period, the alien will be regarded as having departed within the required time period and will not be considered as having overstayed his period of authorized stay.

5. Applicability of Section 212 of the INA—Passport and Visa Requirement

Another result of applying the U.S. immigration laws to the CNMI, is that, pursuant to section 212 of the INA, 8 U.S.C. 1182, nonimmigrant visitors who seek admission to the CNMI must possess a valid passport and a valid visa, unless they are applying for entry under a visa waiver program. This means that nonimmigrant visitors who are not eligible for either the Visa Waiver Program under 8 CFR part 217 (VWP) or the Guam-CNMI Visa Waiver Program must possess a valid passport and must obtain a visa from a U.S. Embassy or Consulate. They will no

longer be able to visit the CNMI using the CNMI Visitor Entry Permit.²

6. Applicability of Section 217 of the INA—Visa Waiver Program

The CNRA extends the immigration laws of the United States to the CNMI. Thus, the admission of aliens to the CNMI is governed by the provisions of the INA. As indicated above, this rule amends 8 CFR 215.1 to add the CNMI to the definition of the United States to ensure that the INA applies to the CNMI.

Section 217 of the INA, 8 U.S.C. 1187, establishes the VWP. Under the VWP, nationals of designated countries can apply for admission to the United States at ports of entry for business or pleasure for up to 90 days without first obtaining a nonimmigrant visa. The regulations implementing the VWP are at 8 CFR part 217. Under this interim final rule, both the VWP and the Guam-CNMI Visa Waiver Program will be in operation in the CNMI. Thus, nonimmigrant visitors may be able to apply for admission to the CNMI under one or both programs, depending on the eligibility status of the nonimmigrant visitors' country of nationality or citizenship. The permitted length of stay will depend on whether the nonimmigrant visitors are admitted under the VWP (up to 90 days) or under the Guam-CNMI Visa Waiver Program (up to 45 days).³

IV. Conforming Changes and Amendments

A. Changes to CBP Form I-736 "Guam Visa Waiver Information" and to CBP Form I-760 "Guam Visa Waiver Agreement"

Under the current Guam Visa Waiver Program, an alien seeking admission must present a completed CBP Form I-736 "Guam Visa Waiver Information" (I-736) in order to be admitted into Guam without a visa. The alien must also present a completed and signed CBP Form I-94/Arrival-Departure Record Form (I-94). The I-736 will be revised so that it will be entitled:

² Nonimmigrant visitors who seek admission to Guam already must possess a valid passport and a valid visa, or a valid passport (and no visa) if they are applying for entry under a visa waiver program. This will not change under this interim final rule.

³ The immigration laws of the United States already apply to Guam. Thus, nonimmigrant visitors from designated countries already can apply for admission to Guam under the VWP under section 217 of the INA or the Guam Visa Waiver Program under section 212(1) of the INA. Under this interim final rule, visitors from participating countries will be able to apply for admission to Guam or the CNMI under the VWP or the Guam-CNMI Visa Waiver Program. The permitted length of stay depends on whether they are admitted under the VWP (up to 90 days) or under the Guam-CNMI Visa Waiver Program (up to 45 days).

“Guam-CNMI Visa Waiver Information Form.” Additionally, the portion of the form allowing for a maximum stay of 15 days visit will be changed to allow for a maximum stay of 45 days. The amended forms will not be available until after the effective date of the regulation, and not required until the start of the transition period, currently June 1, 2009.

Currently, transportation lines transporting nonimmigrant visitors under the Guam Visa Waiver Program into Guam from foreign territories must enter into a contract with CBP by executing CBP Form I-760 “Guam Visa Waiver Agreement” (I-760). Form I-760 will be revised so that it will be titled “Guam-CNMI Visa Waiver Agreement” and references to the CNMI will be inserted, where appropriate.⁴ A conforming change that adds a new provision at 8 CFR 233.6 has been made to include transportation lines bringing aliens to the CNMI in addition to Guam.

B. Conforming Changes to Title 8 of the Code of Federal Regulations

Part 215 of title 8 of the CFR describes the procedures concerning aliens who depart from the United States. Section 215.1 sets forth the definitions for 8 CFR Part 215. This rule amends 8 CFR 215.1 to add the CNMI to the definition of the United States to ensure that the INA applies to the CNMI beginning June 1, 2009.

To conform the amendments to existing laws, this rule deletes both “Canal Zone” and “Trust Territory of the Pacific” from the definitions of the United States, under 8 CFR 215.1, paragraphs (e), (g), and (j).

This rule also makes a conforming change in paragraph (e) of § 212.1 by adding the phrase “Until June 1, 2009,” to the beginning of the first sentence. This change will allow the existing Guam Visa Waiver Program to continue until the Guam -CNMI Visa Waiver program takes effect on the transition date.

The deletion of “the Canal Zone” from 8 CFR 215.1 is being made to reflect that the United States no longer has control over the Canal Zone, pursuant to the Panama Canal Zone Act of 1979, Public Law 96-70. Similarly, the term “Trust Territory of the Pacific Islands” is being removed from 8 CFR

215.1 to update the regulations to reflect current law.⁵

C. Conforming Changes to Title 19 of the Code of Federal Regulations

This rule amends 19 CFR 4.7b(a) and 122.49a(a) to add the CNMI to the definition of the term “United States” for purposes of the filing of electronic passenger and crew arrival manifests prior to the arrival of vessels and aircraft in the United States.

V. Establishing Ports of Entry in the CNMI

Currently, CBP does not have a presence in the CNMI. In order to implement section 702 of the CNRA, CBP must establish operations in the CNMI to allow for immigration inspections, including arrival and departure controls, under the INA. Such operational controls are also necessary to establish the Guam-CNMI Visa Waiver Program. Therefore, the Secretary is designating six ports of entry in the CNMI for immigration purposes only. The CNMI will continue to enforce and administer its own customs and agriculture laws. This rule amends 8 CFR part 100 to establish Ports-of-Entry, as defined in 8 CFR 100.4(c), to provide air and sea ports in close proximity to the CNMI facilities on the islands of Saipan, Tinian, and Rota.⁶

VI. Effective Date

These regulations will be effective January 16, 2009. Beginning June 1, 2009, unless the start of the transition period is delayed, U.S. immigration law applies to the CNMI and the Guam-CNMI Visa Waiver Program will be implemented. The immediate effective date of this rule allows nationals from the designated participating countries to

⁵ The “Trust Territory of the Pacific Islands” (TTPI) is no longer in existence. On November 3, 1986, President Reagan announced by Proclamation that the TTPI agreement between the CNMI and the United States was terminated after the Trusteeship Council of the United Nations concluded that the United States satisfactorily discharged its obligations under the agreement. See Proclamation No. 5564, 51 FR 40399 (November 7, 1986). As announced by President Reagan’s Proclamation, the United States fully established its agreement with CNMI. This agreement is entitled “Covenant to Establish a Commonwealth of the Northern Mariana Islands in Political Union with the United States,” Public Law 99-239, 48 U.S.C. 1801. With regard to the CNMI, the CNMI then became a self-governing Commonwealth in political union with and under the sovereignty of the United States. Therefore, DHS is deleting the term “Trust Territory of the Pacific Islands” to conform the regulations to existing law.

⁶ Because the INA already applies to Guam and ports of entry have already been established in Guam to administer and enforce the INA, no amendments to 8 CFR part 100 are needed with respect to Guam. Guam will continue to administer its own customs laws.

prepare for their travel to either Guam or the CNMI under the program. In addition, CBP will have the necessary time to establish ports of entry in the CNMI and to set up the necessary infrastructure to implement the Guam-CNMI Visa Waiver Program and enforce U.S. immigration laws. Beginning June 1, 2009, DHS will begin operating ports-of-entry in the CNMI for immigration inspection of arriving aliens and establish departure control for certain flights leaving the CNMI. In addition, on that date, DHS will begin the administration and enforcement of the Guam-CNMI Visa Waiver Program.

The date of June 1, 2009, may be delayed by the Secretary of Homeland Security, in consultation with the Secretary of the Interior, the Secretary of Labor, the Secretary of State, the Attorney General, and the Governor of the Commonwealth of the CNMI, for up to 180 days if the date for application of the immigration laws to the CNMI is delayed pursuant to section 702(b) of the CNRA. Any delay in the implementation date of the Guam-CNMI Visa Waiver Program will be published in the **Federal Register**. Prior to the start of the transition period, currently June 1, 2009, the current requirements pertaining to the Guam Visa Waiver Program will apply to nonimmigrant visitors seeking admission into Guam. Additionally, section 702(b) directs that the promulgation of the regulations shall be considered a foreign affairs function for purposes of the notice and comment and 30-day delayed effective date requirements under the Administrative Procedure Act. *See* 5 U.S.C. 553(a).

VII. Statutory and Regulatory Requirements

A. Administrative Procedure Act

Section 702(b) of CNRA directs that all regulations necessary to implement the Guam-CNMI Visa Waiver Program shall be considered a foreign affairs function for purposes of section 553(a) of the Administrative Procedure Act (APA). Accordingly, this interim final rule is exempt from the notice and comment and 30-day effective date requirements of the APA. Although DHS is not required to provide prior public notice or an opportunity to comment, DHS is nevertheless providing the opportunity for public comments. In accordance with section 702(a) of the CNRA, this rule is effective January 16, 2009. Implementation and compliance with this interim final rule will begin on the date that begins the transition period, which is currently June 1, 2009.

⁴ The current provisions of the Guam Visa Waiver Program set forth in 8 CFR 212.1(e) will apply to nonimmigrant visitors seeking admission to Guam under the Guam Visa Waiver Program until the start of the transition period—currently June 1, 2009, when the new Guam-CNMI Visa Waiver Program is implemented. The current CBP Forms I-736 and I-60 are to be used for purposes of the Guam Visa Waiver Program through this date.

B. Executive Order 12866

This interim final rule is not a “significant regulatory action” under Executive Order 12866, section 3(f), Regulatory Planning and Review, due to the foreign affairs exemption described above. Accordingly, the Office of Management and Budget has not reviewed this regulation under that Executive Order.

DHS has, however prepared an economic analysis of the potential impacts of this interim final rule. A summary of the analysis is presented below. The complete details of the analysis can be found in the Economic Analysis in the public docket for this rule.

The most significant change for admission to the CNMI as a result of the rule will be for visitors from those countries who are not included in either the existing Visa Waiver Program under 8 CFR part 217 or the Guam-CNMI Visa Waiver Program established by the rule. These visitors must apply for U.S. visas, which require in-person interviews at U.S. embassies or consulates and higher fees than the CNMI currently assesses for its visitor entry permits. For admission to Guam, the primary change will be the extension of the maximum allowable period of stay from fifteen days to forty-five days for visitors of countries included in the Guam-CNMI Visa Waiver Program and the opportunity for visitors admitted under the Guam-CNMI Visa Waiver Program to travel between Guam and the CNMI without the requirement to obtain a visa or a visitor entry permit.

In this analysis, we estimate the incremental costs associated with the interim final rule. Specifically, we assess and estimate the potential impact of implementing the Guam-CNMI Visa Waiver Program on the economies of the CNMI and Guam, with particular focus on their tourism sectors. While tourism impacts are “indirect” effects of the rule (where the impacts to visitors are the “direct” effect because visitors are directly regulated), we consider these impacts because tourism represents a major component of the economies of both the CNMI and Guam.

We anticipate that the CNMI will experience most of the economic impact of this rule because the rule federalizes the entry and exit procedures for nonimmigrant visitors to the CNMI. We first estimate the changes in the travel demand of nonimmigrant visitors to the CNMI (*i.e.*, the reduction in visitors due to implementation of the Guam-CNMI Visa Waiver Program) had the Guam-CNMI Visa Waiver Program been implemented in our baseline year of

analysis (May 2007 to April 2008). We then estimate the associated changes in the total amount of visitor spending in the CNMI. Next, we estimate the associated changes in net economic output, income, and employment in the CNMI. Finally, we project these economic impacts to each year of our five-year analysis period (May 2009 through April 2014) and calculate the present value of these cost impacts.

For Guam, we do not anticipate that the interim final rule will significantly affect its economy because the Guam-CNMI Visa Waiver Program only modifies the existing Guam visa waiver program by extending the allowable duration of stay from fifteen days to forty-five days. Thus, we qualitatively assess two of the three issues that may arise as a result of implementing the Guam-CNMI Visa Waiver Program, namely: (1) The impact of extending the allowable period of stay from fifteen days to forty-five days on visitor behavior, spending, and the Guam economy in general; (2) the impact of adding the CNMI to the existing Guam Visa Waiver Program on visitor decisions to visit the CNMI instead of or in addition to Guam; and (3) the impact of excluding Indonesia, the Solomon Islands, Vanuatu, and Western Samoa in the list of program-eligible countries (these four countries currently are participating countries in the Guam Visa Waiver Program).

Because of limitations in the data, we cannot reliably predict and quantify what percentages of visitors to Guam would elect to stay in Guam longer than fifteen days, by how many additional days, and the resulting impact on Guam's economy. On-island tourist expenditures in Guam are quite substantial, and additional days of stay on the island would have a positive impact on Guam's economy. Conversely, adding the CNMI to the existing Guam Visa Waiver Program to establish the Guam-CNMI Visa Waiver Program could divert visitor travel away from Guam to the CNMI. Under the interim final rule, nationals from those countries included in the Guam-CNMI Visa Waiver Program, which includes all the countries currently included in the Guam Visa Waiver Program, may now enter the CNMI without having to apply for and obtain a CNMI visitor entry permit. Such a change may increase the potential for visitors from these countries to travel to the CNMI instead of or in addition to Guam. The Guam-CNMI Visa Waiver Program will facilitate travel between Guam and the CNMI, and packaged tours of both islands may appeal to some tourists, especially visitors that have already

visited Guam. However, we do not have sufficient data to reliably predict and quantify the extent to which visitors from countries included in the Guam-CNMI Visa Waiver Program would elect to spend part or all of a planned visit in the CNMI instead of, or in addition to, Guam and how this change would affect the Guam economy.

Finally, we present the costs CBP expects to incur to develop and administer the Guam-CNMI Visa Waiver Program.

Impacts to the CNMI

The two largest foreign markets for visitors to the CNMI in the baseline year of our analysis (May 2007 to April 2008) are Japan and the Republic of Korea. Because this rule does not change the baseline conditions for Japanese visitors and will ease requirements for Korean visitors, we do not estimate any significant changes in visitation levels for these two countries.

To estimate the impacts on tourism from other affected countries, we use an “elasticity of demand” for long-haul international leisure trips available from the published literature to compare the change in cost (both in out-of-pocket expenses as well as the value of time burden) that obtaining a visa represents to the trip cost to the CNMI. In this analysis, we estimate out-of-pocket expenses of \$187 (including the fee, photos, travel costs, and other miscellaneous expenses) plus an average time of five hours to obtain the visa (including completing the necessary Department of State forms and having an interview at a U.S. embassy). Applying a demand elasticity of -1.04 , we find that if the rule had been in effect in the baseline year of analysis (May 2007 to April 2008) the potential impact of this regulation would have been a reduction of approximately 5,017 tourist arrivals from the PRC, 194 tourist arrivals from Russia, and 618 tourist arrivals from the Philippines to the CNMI. We estimate that a strong majority of travelers from these countries would continue traveling to the CNMI even with the implementation of the rule. These visitors represent the three largest tourist markets that primarily will be affected by the rule because they are not included on the list of eligible countries for the Guam-CNMI Visa Waiver Program and, therefore, will now be required to obtain U.S. visas to visit the CNMI (previously PRC and Russia, but not the Philippines, were eligible for admission to the CNMI under its visitor entry permit program).

Based on visitor spending data provided by the Marianas Visitors

Authority, we estimate that the associated reductions in spending would have been \$4.9 million from the Chinese, \$0.8 million from the Russians, and \$0.5 million from the Filipinos. In sum, the total visitor spending in the CNMI could potentially have declined by \$6.2 million, or 2.0 percent of the \$317 million in total visitor spending. Using economic multiplier data available from the published literature, we estimate that the potential reduction

in visitor spending of \$6.2 million leads to a reduction of between \$8.3 million and \$12.5 million in economic output, \$2.1 million and \$2.4 million in income, and between 131 and 162 jobs in the CNMI.

Applying these baseline year estimates to our five-year period of analysis (2009 to 2014), assuming no growth in the number of visitors or the amounts they spend in the CNMI, results in a total present value estimate

of \$29.2 million (3 percent discount rate) and \$27.1 million (7 percent discount rate) in lost CNMI visitor spending. We estimate that the total present value losses in CNMI economic output and income are between \$36.4 million and \$59.1 million, and \$9.4 million and \$11.4 million, respectively, depending on the discount rate applied. Tables 1 and 2 summarize the results of our analysis.

TABLE 1—IMPACTS TO VISITORS, CNMI ECONOMIC ANALYSIS, \$2008

Country	Potential No. of lost visitors annually	Annual lost CNMI visitor spending (undiscounted) (\$M)	Estimated total on-island spending (\$M)	% of on-island spending lost
Japan	0	\$0.0	\$162	0.0
Korea	0	0.0	65	0.0
China	5,017	4.9	38	12.9
Russia	194	0.8	20	4.2
Philippines	618	0.5	3	18.3
Others	0	0.0	29	0.0
Total	5,829	6.2	317	2.0

TABLE 2—SUMMARY OF ECONOMIC IMPACTS, CNMI ECONOMIC ANALYSIS

	Lost CNMI visitor spending (\$M)	Estimated lost CNMI economic output (\$M)	Estimated lost CNMI income (\$M)
Total, May 2007–Apr 2008 (undiscounted)	\$6.2	\$8.3 to \$12.5	\$2.1 to \$2.4.
Total (2009–2014), 3% discount rate	29.2	39.1 to 59.1	10.1 to 11.4.
Total (2009–2014), 7% discount rate	27.1	36.4 to 54.9	9.4 to 10.6.

We have not quantified the losses associated with excluding Indonesia, the Solomon Islands, Vanuatu, and Western Samoa from the Guam-CNMI Visa Waiver Program because the Marianas Visitors Authority did not report statistics for these countries individually; they are captured in the “other” category in Table 1. Because their current number of visits is low (too low to be reported by the Marianas Visitors Authority), any potential economic losses would also be small.

Impacts to Guam

We attempted to quantify the potential economic impact of the interim final rule on Guam, although we anticipate it to be minimal. Because of limitations in the available data, we could not reliably predict and quantify how many Guam-CNMI Visa Waiver Program-eligible visitors would elect to stay in Guam longer than the current fifteen day limit and by how many days, or elect to spend part or all of their planned visit in the CNMI instead of or in addition to Guam. Additional days of stay on the island would have a positive

impact on Guam’s economy. However, visitors diverting their travel plans from Guam to the CNMI and visitors from Indonesia, the Solomon Islands, Vanuatu, and Western Samoa forgoing travel to Guam would have a negative impact. The net economic effect of these two factors is unknown.

Government Costs

Finally, CBP estimates that it will incur costs to establish and administer six new air and sea ports of entry in the CNMI. The costs consist of two primary categories: (1) Non-recurring capital costs and other initial or one-time expenses incurred in the first year or prior to implementation of the Guam-CNMI Visa Waiver Program, and (2) recurring operating, maintenance, and personnel costs expected to be incurred each year. CBP will need to build, operate, and maintain the infrastructure needed at the six ports of entry to achieve the requisite level of security (e.g., arrival and departure control) and operational efficiency commensurate with other CBP-operated ports. CBP estimates a capital cost of approximately

\$25.8 million to develop this infrastructure, and a recurring cost of \$153,100 per year for port operation and maintenance. CBP plans to staff these ports initially with experienced temporary duty assignment staff on a short-term basis, gradually replacing them with permanent staff. CBP estimates initial costs of approximately \$3.7 million for personnel relocation as well as recurring costs of approximately \$7.8 million per year for personnel salary and benefits and \$5.3 million per year for associated temporary duty costs (e.g., airfare, per diem food and housing allowances, vehicle rental). Applying these estimated costs to the applicable years of our 5-year analysis period results in total present value cost for government implementation of \$87.3 million to \$91.7 million, depending on the discount rate applied.

Sources of Uncertainty

Because the Commonwealth of the Northern Mariana Islands is small and remote, the quality and quantity of prior economic data and analyses are very limited. We have relied on the best

available data in estimating the economic impact of implementing the Guam-CNMI Visa Waiver Program. Nonetheless, we recognize that there are significant limitations and uncertainties in our analysis.

The key sources of uncertainty in our analysis are the value of time and demand elasticity for Chinese, Russian, and Filipino visitors. These data are key inputs into our estimates of the reduction in the number of these visitors to the CNMI. To estimate the value of time, we apply the wages from the highest paid industry category among all industries reported in an International Labor Organization (ILO) database; however, we recognize that these data are imperfect. First, comparing wages, and by extension opportunity costs, across countries is notoriously difficult. In addition, it is likely that only the more affluent citizens of these countries would engage in international travel to the CNMI and, therefore, we likely understate their value of time. We test the sensitivity of our wage estimates and find that the estimated loss in CNMI visitor spending could increase by about 40 percent assuming a much higher wage rate (\$20 per hour).

The demand elasticity value we use (-1.04) is also a significant source of uncertainty because it may not be representative of visitor demand to the CNMI (demand elasticities for specifically the CNMI or other Pacific Islands are not available). On the one hand, for the more affluent travelers, the additional travel (visa) costs may not currently represent a significant portion of their household budget or travel cost and thus may not be a major factor influencing their travel decisions (less elastic). There may not be very many travelers from the PRC, Russia, and the Philippines for whom the visa costs and burden are particularly meaningful—they are either wealthy enough that it does not matter, or their economic status is such that international travel is out of reach regardless of the additional travel costs. On the other hand, other alternative destinations exist that would provide these visitors with a comparable experience to that of the CNMI. As a result, some of these visitors may simply choose to forgo travel to the CNMI because of the additional burden associated with the visa requirements and instead seek other alternative destinations (more elastic).

Finally, in applying an own-price elasticity of travel demand, we have presented a binary choice for a traveler based solely on price—“go” or “do not go.” In reality, travelers are faced with complex decisions and myriad

substitutes for particular trips. There is evidence in the travel literature that price may not be a very big determinant of destination selection. Additionally, a traveler could still choose to visit the CNMI but may spend less while on the islands. This would still be a loss to the CNMI economy, but it would be less than what we have estimated in this analysis. We have chosen to estimate direct costs using demand elasticities to avoid deliberately misrepresenting these costs (we would not want to assume that travelers' decisions will be completely unaffected by the new entry requirements), knowing that we may then be overstating the simplicity of the traveler's decision-making process. In doing this, we have likely overstated indirect costs.

Another source of uncertainty is in the multipliers used to calculate lost economic output, income, and employment as a result of lost tourist spending. Although we use a range of values, the actual total economic impact could be significantly lower or higher than the results presented in this analysis.

A final source of uncertainty is our assumption that the number of visitors or the amounts they spend in the CNMI will remain constant over the five-year analysis period. The historic year-to-year trends in the number of visitors from the PRC, Russia, and the Philippines on which we could estimate a future growth rate vary widely from negative growth (-69.0 percent) to positive growth (118.7 percent). We also cannot reliably predict future growth (or loss) rates given the ever-changing global economy and political climate, airline and tourism industries, the volatility of the CNMI economy, and other factors affecting international travel.

C. Regulatory Flexibility Act

Because this rule is being issued as an interim final rule on the foreign affairs function of the United States, as set forth above, a regulatory flexibility analysis is not required under the Regulatory Flexibility Act (5 U.S.C. 601–612).

D. Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), enacted as Public Law 104–4, 109 Stat. 48, on March 22, 1995, requires each Federal agency, to the extent permitted by law, to prepare a written assessment of the effects of any Federal mandate in a proposed or final agency rule that may result in the expenditure by State, local, and tribal governments, in the aggregate,

or by the private sector, of \$100 million or more (adjusted annually for inflation) in any one year. Section 204(a) of the UMRA, 2 U.S.C. 1534(a), requires the Federal agency to develop an effective process to permit timely input by elected officers (or their designees) of State, local, and tribal governments on a proposed “significant intergovernmental mandate.” A “significant intergovernmental mandate” under the UMRA is any provision in a Federal agency regulation that will impose an enforceable duty upon State, local, and tribal governments, in the aggregate, of \$100 million (adjusted annually for inflation) in any one year. Section 203 of the UMRA, 2 U.S.C. 1533, which supplements section 204(a), provides that, before establishing any regulatory requirements that might significantly or uniquely affect small governments, the agency shall have developed a plan that, among other things, provides for notice to potentially affected small governments, if any, and for a meaningful and timely opportunity to provide input in the development of regulatory proposals.

This rule would not impose a significant cost or uniquely affect small governments. The economic impacts of this rule are presented in the Executive Order 12866 discussion of this document.

E. Executive Order 13132

This rule will not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with section 6 of Executive Order 13132, DHS has determined that this interim final rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

F. Executive Order 12988

This rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988.

G. Paperwork Reduction Act

The collections of information encompassed within this rule have been submitted to the OMB for review in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507) under OMB Control Number 1651–0109 (Guam Visa Waiver Information) for CBP Form I–736 and OMB Control Number 1651–0111 for Form I–94 (Arrival and Departure Record).

An agency may not conduct, and a person is not required to respond to, a collection of information unless the collection of information displays a valid control number assigned by OMB. The burden estimates for the two forms affected by this rule are presented below.

OMB Control Number 1651-0109 (Guam-CNMI Visa Waiver Information)
Estimated annual average reporting and/or recordkeeping burden: 30,000 hours.

Estimated annual average number of respondents: 360,000.

Estimated average burden per respondent: 5 minutes.

Estimated frequency of responses: Once per year.

OMB Control Number 1651-0111 (Arrival and Departure Record).

Estimated annual average reporting and/or recordkeeping burden: 60,000 hours.

Estimated annual average number of respondents: 360,000.

Estimated average burden per respondent: 10 minutes.

Estimated frequency of responses: Once per year.

Comments concerning the accuracy of this burden estimate and suggestions for reducing this burden should be directed to the Office of Management and Budget, Attention: Desk Officer for the Department of Homeland Security, Office of Information and Regulatory Affairs, Washington, DC 20503. A copy should also be sent to the Border Security Regulations Branch, Customs and Border Protection, Mint Annex, 799 Ninth Street, NW., Washington, DC 20001.

H. Privacy

DHS will publish a Privacy Impact Assessment (PIA) on its Web site. In addition, DHS is also preparing a separate Systems of Records Notice (SORN) in conjunction with this interim final rule.

List of Subjects

8 CFR Part 100

Organization and functions (Government agencies)

8 CFR Part 212

Administrative practice and procedure, Aliens, Immigration, Passports and visas, Reporting and recordkeeping requirements.

8 CFR Part 214

Administrative practice and procedure, Aliens, Cultural exchange programs, Employment, Foreign officials, Health professions, Reporting

and recordkeeping requirements, Students.

8 CFR Part 215

Administrative practice and procedure, Aliens, Travel restrictions.

8 CFR Part 233

Air carriers, Maritime carriers, Aliens, Government Contracts.

8 CFR Part 235

Administrative practice and procedure, Aliens, Immigration, Reporting and recordkeeping requirements.

19 CFR Part 4

Customs duties and inspection, Reporting and recordkeeping requirements, Vessels.

19 CFR Part 122

Administrative practice and procedure, Air carriers, Aircraft, Customs duties and inspection, Reporting and recordkeeping requirements.

Amendments to the Regulations

■ For the reasons stated in the preamble, DHS amends parts 100, 212, 214, 215, 233 and 235 of title 8 of the Code of Federal Regulations and parts 4 and 122 of title 19 of the Code of Federal Regulations as set forth below:

8 CFR Chapter 1—Amendments

PART 100—STATEMENT OF ORGANIZATION

■ 1. The authority citation for part 100 continues to read as follows:

Authority: 8 U.S.C. 1103; 8 CFR part 2.

■ 2. Section 100.4 is amended in paragraph (c)(2) by revising the entry for “Class A” under “District No. 17—Honolulu, Hawaii” and in paragraph (c)(3) by revising the entry under “District No. 17—Honolulu, Hawaii” to read as follows:

§ 100.4 Field Offices.

* * * * *

(c) * * *

(2) * * *

District No. 17—Honolulu, Hawaii

Class A

Agana, Guam, M.I (including the port facilities of Apra Harbor, Guam).

Honolulu, HI, Seaport (including all port facilities on the island of Oahu).

Rota, the Commonwealth of the Northern Mariana Islands.

Saipan, the Commonwealth of the Northern Mariana Islands.

Tinian, the Commonwealth of the Northern Mariana Islands.

* * * * *

(3) * * *

District No. 17—Honolulu, Hawaii

Agana, Guam, Guam International Airport Terminal.

Honolulu, HI, Honolulu International Airport.

Honolulu, HI, Hickam Air Force Base. Rota, the Commonwealth of the Northern Mariana Islands.

Saipan, the Commonwealth of the Northern Mariana Islands.

Tinian, the Commonwealth of the Northern Mariana Islands.

* * * * *

PART 212—DOCUMENTARY REQUIREMENTS: NONIMMIGRANT; WAIVERS; ADMISSION OF CERTAIN INADMISSIBLE ALIENS; PAROLE

■ 3. The general authority citation for part 212 is revised to read as follows:

Authority: 8 U.S.C. 1101 and note, 1102, 1103, 1182 and note, 1184, 1187, 1223, 1225, 1226, 1227, 1359; 8 U.S.C. 1185 note (section 7209 of Pub. L. 108-458, as amended by section 546 of Pub. L. 109-295).

Section 212.1(q) also issued under section 702, Public Law 110-229, 100 Stat. 842.

■ 4. In § 212.1, paragraph (e)(1) introductory text is revised and a new paragraph (q) is added to read as follows:

§ 212.1 Documentary Requirements for Nonimmigrants.

* * * * *

(e) *Aliens entering Guam pursuant to section 14 of Pub. L. 99-396, “Omnibus Territories Act.”* (1) Until June 1, 2009, a visa is not required of an alien who is a citizen of a country enumerated in paragraph (e)(3) of this section who:

* * * * *

(q) *Aliens admissible under the Guam-CNMI Visa Waiver Program.* (1) *Eligibility for Program.* In accordance with Public Law 110-229, beginning June 1, 2009, the Secretary, in consultation with the Secretaries of the Departments of Interior and State, may waive the visa requirement in the case of a nonimmigrant alien who seeks admission to Guam or to the Commonwealth of the Northern Mariana Islands (CNMI) under the Guam-CNMI Visa Waiver Program. To be admissible under the Guam-CNMI Visa Waiver Program, prior to embarking on a carrier for travel to Guam or the CNMI, each nonimmigrant alien must:

(i) Be a national of a country or geographic area listed in paragraph (q)(2) of this section;

(ii) Be classifiable as a visitor for business or pleasure;

(iii) Be solely entering and staying on Guam or the CNMI for a period not to exceed forty-five days;

(iv) Be in possession of a round trip ticket that is nonrefundable and nontransferable and bears a confirmed departure date not exceeding forty-five days from the date of admission to Guam or the CNMI. "Round trip ticket" includes any return trip transportation ticket issued by a participating carrier, electronic ticket record, airline employee passes indicating return passage, individual vouchers for return passage, group vouchers for return passage for charter flights, or military travel orders which include military dependents for return to duty stations outside the United States on U.S. military flights;

(v) Be in possession of a completed and signed Guam-CNMI Visa Waiver Information Form (CBP Form I-736);

(vi) Be in possession of a completed and signed I-94, Arrival-Departure Record (CBP Form I-94);

(vii) Be in possession of a valid unexpired ICAO compliant, machine readable passport issued by a country that meets the eligibility requirements of paragraph (q)(2) of this section;

(viii) Have not previously violated the terms of any prior admissions. Prior admissions include those under the Guam-CNMI Visa Waiver Program, the prior Guam Visa Waiver Program, the Visa Waiver Program as described in section 217(a) of the Act and admissions pursuant to any immigrant or nonimmigrant visa;

(ix) Waive any right to review or appeal an immigration officer's determination of admissibility at the port of entry into Guam or the CNMI;

(x) Waive any right to contest any action for deportation or removal, other than on the basis of: An application for withholding of removal under section 241(b)(3) of the INA; withholding or deferral of removal under the regulations implementing Article 3 of the United Nations Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment; or, an application for asylum if permitted under section 208 of the Act; and

(xi) If a resident of Taiwan, possess a Taiwan National Identity Card and a valid Taiwan passport with a valid re-entry permit issued by the Taiwan Ministry of Foreign Affairs.

(2) *Program Countries and Geographic Areas.* (i) *General Eligibility Criteria.*

(A) A country or geographic area may not participate in the Guam-CNMI Visa Waiver Program if the country or geographic area poses a threat to the welfare, safety or security of the United

States, its territories, or commonwealths;

(B) A country or geographic area may not participate in the Guam-CNMI Visa Waiver Program if it has been designated a Country of Particular Concern under the International Religious Freedom Act of 1998 by the Department of State, or identified by the Department of State as a source country of refugees designated of special humanitarian concern to the United States;

(C) A country or geographic area may not participate in the Guam-CNMI Visa Waiver Program if that country, not later than three weeks after the issuance of a final order of removal, does not accept for repatriation any citizen, former citizen, or national of the country against whom a final executable order of removal is issued. Nothing in this subparagraph creates any duty for the United States or any right for any alien with respect to removal or release. Nothing in this subparagraph gives rise to any cause of action or claim under this paragraph or any other law against any official of the United States or of any State to compel the release, removal or reconsideration for release or removal of any alien.

(D) DHS may make a determination regarding a country's eligibility based on other factors including, but not limited to, rate of refusal for nonimmigrant visas, rate of overstays, cooperation in information exchange with the United States, electronic travel authorizations, and any other factors deemed relevant by DHS.

(ii) *Eligible Countries and Geographic Areas.* Nationals of the following countries and geographic areas are eligible to participate in the Guam-CNMI Visa Waiver Program for purposes of admission to both Guam and the CNMI: Australia, Brunei, Hong Kong (Hong Kong Special Administrative Region (SAR) passport and Hong Kong identification card are required), Japan, Malaysia, Nauru, New Zealand, Papua New Guinea, Republic of Korea, Singapore, Taiwan (residents thereof who begin their travel in Taiwan and who travel on direct flights from Taiwan to Guam or the CNMI without an intermediate layover or stop except that the flights may stop in a territory of the United States enroute), and the United Kingdom.

(iii) *Significant Economic Benefit Criteria.* If, in addition to the considerations enumerated under paragraph (q)(2)(i) of this section, DHS determines that the CNMI has received a significant economic benefit from the number of visitors for pleasure from particular countries during the period of

May 8, 2007 through May 8, 2008, those countries are eligible to participate in the Guam-CNMI Visa Waiver Program unless the Secretary of Homeland Security determines that such country's inclusion in the Guam-CNMI Visa Waiver Program would represent a threat to the welfare, safety, or security of the United States and its territories.

(iv) *Additional Eligible Countries or Geographic Areas Based on Significant Economic Benefit.* [Reserved.]

(3) *Suspension of Program Countries or Geographic Areas.* (i) Suspension of a country or geographic area from the Guam-CNMI Visa Waiver Program may be made on a country-by-country basis for good cause including, but not limited to if: The admissions of visitors from a country have resulted in an unacceptable number of visitors from a country remaining unlawfully in Guam or the CNMI, unlawfully obtaining entry to other parts of the United States, or seeking withholding of removal or seeking asylum; or that visitors from a country pose a risk to law enforcement or security interests, including the enforcement of immigration laws of Guam, the CNMI, or the United States.

(ii) A country or geographic area may be suspended from the Guam-CNMI Visa Waiver Program if that country or geographic area is designated as a Country of Particular Concern under the International Religious Freedom Act of 1998 by the Department of State, or identified by the Department of State as a source country of refugees designated of special humanitarian concern to the United States, pending an evaluation and determination by the Secretary.

(iii) A country or geographic area may be suspended from the Guam-CNMI Visa Waiver Program by the Secretary of Homeland Security, in consultation with the Secretary of the Interior and the Secretary of State, based on the evaluation of all factors the Secretary deems relevant including, but not limited to, electronic travel authorization, procedures for reporting lost and stolen passports, repatriation of aliens, rates of refusal for nonimmigrant visitor visas, overstays, exit systems and information exchange.

(4) Admission under this section renders an alien ineligible for:

(i) Adjustment of status to that of a temporary resident or, except under the provisions of section 245(i) of the Act, to that of a lawful permanent resident;

(ii) Change of nonimmigrant status; or

(iii) Extension of stay.

(5) *Requirements for transportation lines.* A transportation line bringing any alien to Guam or the CNMI pursuant to this section must:

(i) Enter into a contract on CBP Form I-760, made by the Commissioner of Customs and Border Protection on behalf of the government;

(ii) Transport an alien who is a citizen or national and in possession of a valid unexpired ICAO compliant, machine readable passport of a country enumerated in paragraph (q)(2) of this section;

(iii) Transport an alien only if the alien is in possession of a round trip ticket as defined in paragraph (q)(1)(iv) of this section bearing a confirmed departure date not exceeding forty-five days from the date of admission to Guam or the CNMI which the carrier will unconditionally honor when presented for return passage. This ticket must be:

(A) Valid for a period of not less than one year,

(B) Nonrefundable except in the country in which issued or in the country of the alien's nationality or residence, and

(C) Issued by a carrier which has entered into an agreement described in paragraph (q)(5) of this section.

(iv) Transport an alien in possession of a completed and signed Guam-CNMI Visa Waiver Information Form (CBP Form I-736), and

(v) Transport an alien in possession of completed I-94, Arrival-Departure Record (CBP Form I-94).

(6) *Bonding.* The Secretary may require a bond on behalf of an alien seeking admission under the Guam-CNMI Visa Waiver Program, in addition to the requirements enumerated in this section, when the Secretary deems it appropriate. Such bonds may be required of an individual alien or of an identified subset of participants.

(7) *Maintenance of status.* (i) *Satisfactory departure.* If an emergency prevents an alien admitted under the Guam-CNMI Visa Waiver Program, as set forth in this paragraph (q), from departing from Guam or the CNMI within his or her period of authorized stay, an immigration officer having jurisdiction over the place of the alien's temporary stay may, in his or her discretion, grant a period of satisfactory departure not to exceed 15 days. If departure is accomplished during that period, the alien is to be regarded as having satisfactorily accomplished the visit without overstaying the allotted time.

(8) *Inadmissibility and Deportability.* (i) *Determinations of inadmissibility.* (A) An alien who applies for admission under the provisions of the Guam-CNMI Visa Waiver Program, who is determined by an immigration officer to be inadmissible to Guam or the CNMI

under one or more of the grounds of inadmissibility listed in section 212 of the Act (other than for lack of a visa), or who is in possession of and presents fraudulent or counterfeit travel documents, will be refused admission into Guam or the CNMI and removed. Such refusal and removal shall be effected without referral of the alien to an immigration judge for further inquiry, examination, or hearing, except that an alien who presents himself or herself as an applicant for admission to Guam under the Guam-CNMI Visa Waiver Program, who applies for asylum, withholding of removal under section 241(b)(3) of the INA or withholding or deferral of removal under the regulations implementing Article 3 of the United Nations Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment must be issued a Form I-863, Notice of Referral to Immigration Judge, for a proceeding in accordance with 8 CFR 208.2(c)(1) and (2). The provisions of 8 CFR subpart 208 subpart A shall not apply to an alien present or arriving in the CNMI seeking to apply for asylum prior to January 1, 2015. No application for asylum may be filed pursuant to section 208 of the Act by an alien present or arriving in the CNMI prior to January 1, 2015; however, aliens physically present in the CNMI during the transition period who express a fear of persecution or torture only may establish eligibility for withholding of removal pursuant to INA 241(b)(3) or pursuant to the regulations implementing Article 3 of the United Nations Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment.

(B) The removal of an alien under this section may be deferred if the alien is paroled into the custody of a Federal, State, or local law enforcement agency for criminal prosecution or punishment. This section in no way diminishes the discretionary authority of the Secretary enumerated in section 212(d) of the Act.

(C) Refusal of admission under this paragraph shall not constitute removal for purposes of the Act.

(ii) *Determination of deportability.* (A) An alien who has been admitted to either Guam or the CNMI under the provisions of this section who is determined by an immigration officer to be deportable from either Guam or the CNMI under one or more of the grounds of deportability listed in section 237 of the Act, shall be removed from either Guam or the CNMI to his or her country of nationality or last residence. Such removal will be determined by DHS authority that has jurisdiction over the place where the alien is found, and will

be effected without referral of the alien to an immigration judge for a determination of deportability, except that an alien admitted to Guam under the Guam-CNMI Visa Waiver Program who applies for asylum or other form of protection from persecution or torture must be issued a Form I-863 for a proceeding in accordance with 8 CFR 208.2(c)(1) and (2). The provisions of 8 CFR part 208 subpart A shall not apply to an alien present or arriving in the CNMI seeking to apply for asylum prior to January 1, 2015. No application for asylum may be filed pursuant to section 208 of the INA by an alien present or arriving in the CNMI prior to January 1, 2015; however, aliens physically present or arriving in the CNMI prior to January 1, 2015, may apply for withholding of removal under section 241(b)(3) of the Act and withholding and deferral of removal under the regulations implementing Article 3 of the United Nations Convention Against Torture, Inhuman or Degrading Treatment or Punishment.

(B) Removal by DHS under paragraph (b)(1) of this section is equivalent in all respects and has the same consequences as removal after proceedings conducted under section 240 of the Act.

(iii) *Removal of inadmissible aliens who arrived by air or sea.* Removal of an alien from Guam or the CNMI under this section may be effected using the return portion of the round trip passage presented by the alien at the time of entry to Guam and the CNMI. Such removal shall be on the first available means of transportation to the alien's point of embarkation to Guam or the CNMI. Nothing in this part absolves the carrier of the responsibility to remove any inadmissible or deportable alien at carrier expense, as provided in the carrier agreement.

PART 214—NONIMMIGRANT CLASSES

■ 5. The authority citation for part 214 is revised to read as follows:

Authority: 8 U.S.C. 1101, 1102, 1103, 1182, 1184, 1186a, 1187, 1221, 1281, 1282, 1301–1305 and 1372; sec. 643, Pub. L. 104–208, 110 Stat. 3009–708; Pub. L. 106–386, 114 Stat. 1477–1480; section 141 of the Compacts of Free Association with the Federated States of Micronesia and the Republic of the Marshall Islands, and with the Government of Palau, 48 U.S.C. 1901 note, and 1931 note, respectively; Title VII of Pub. L. 110–229; 8 CFR part 2.

■ 6. Section 214.1 is amended by adding paragraph (c)(3)(viii), to read as follows:

§ 214.1 Requirements for admission, extension, and maintenance of status.

* * * * *

(c) * * *

(3) * * *
(viii) Any nonimmigrant admitted pursuant to the Guam-CNMI Visa Waiver Program, as provided in section 212(l) of the Act.
* * * * *

PART 215—CONTROLS OF ALIENS DEPARTING FROM THE UNITED STATES

■ 7. The general authority citation for part 215 is revised to read as follows:

Authority: 8 U.S.C. 1101; 1104; 1184; 1185 (pursuant to Executive Order 13323, published January 2, 2004); 1365a note. 1379, 1731–32.

■ 8. Section 215.1 is revised by amending paragraphs (e), (g), and (j) to read as follows:

§ 215.1 Definitions.

(e) The term United States means the several States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, Swains Island, the Commonwealth of the Northern Mariana Islands (beginning June 1, 2009), and all other territory and waters, continental and insular, subject to the jurisdiction of the United States.
* * * * *

(g) The term geographical part of the United States means:

- (1) The continental United States,
(2) Alaska,
(3) Hawaii,
(4) Puerto Rico,
(5) The Virgin Islands,
(6) Guam,
(7) American Samoa,
(8) Swains Island, or
(9) The Commonwealth of the Northern Mariana Islands (beginning June 1, 2009).
* * * * *

(j) The term port of departure means a port in the continental United States, Alaska, Guam, Hawaii, Puerto Rico, the Commonwealth of the Northern Mariana Islands (beginning June 1, 2009), or the Virgin Islands, designated as a port of entry by the Secretary, or in exceptional circumstances such other place as the departure-control officer may, in his discretion, designate in an individual case, or a port in American Samoa, or Swains Island, designated as a port of entry by the chief executive officer thereof.
* * * * *

PART 233—CONTRACTS WITH TRANSPORTATION LINES

■ 9. The authority for part 233 is revised to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1182, 1221, 1228, 1229, 8 CFR part 2.

■ 10. Add § 233.6 to read as follows:

§ 233.6 Aliens entering Guam or the Commonwealth of the Northern Mariana Islands pursuant to Title VII of Public Law 110–229, “Consolidated Natural Resources Act of 2008.”

A transportation line bringing aliens to Guam or the Commonwealth of the Northern Mariana Islands under the visa waiver provisions of § 212.1(q) of this chapter must enter into an agreement on CBP Form I–760. Such agreements must be negotiated directly by Customs and Border Protection and head offices of the transportation lines.

PART 235—INSPECTION OF PERSONS APPLYING FOR ADMISSION

■ 11. The authority for Part 235 continues to read as follows:

Authority: 8 U.S.C. 1101 and note, 1103, 1183, 1185 (pursuant to E.O. 13323, published January 2, 2004), 1201, 1224, 1225, 1226, 1228, 1365a note, 1379, 1731–32; 8 U.S.C. 1185 note (section 7209 of Pub. L. 108–458).

■ 12. Section 235.5(a) is revised to read as follows:

§ 235.5 Preinspection.

(a) In United States territories and possessions. In the case of any aircraft proceeding from Guam, the Commonwealth of the Northern Mariana Islands (beginning June 1, 2009), Puerto Rico, or the United States Virgin Islands destined directly and without touching at a foreign port or place, to any other of such places, or to one of the States of the United States or the District of Columbia, the examination of the passengers and crew required by the Act may be made prior to the departure of the aircraft, and in such event, final determination of admissibility will be made immediately prior to such departure. The examination will be conducted in accordance with sections 232, 235, and 240 of the Act and 8 CFR parts 235 and 240. If it appears to the immigration officer that any person in the United States being examined under this section is prima facie removable from the United States, further action with respect to his or her examination will be deferred and further proceedings regarding removability conducted as provided in section 240 of the Act and 8 CFR part 240. When the foregoing inspection procedure is applied to any aircraft, persons examined and found admissible will be placed aboard the aircraft, or kept at the airport separate and apart from the general public until they are permitted to board the aircraft. No other person will be permitted to depart on such aircraft until and unless

he or she is found to be admissible as provided in this section.

* * * * *

19 CFR Chapter 1—Amendments

PART 4—VESSELS IN FOREIGN AND DOMESTIC TRADES

■ 13. The general authority for part 4 continues, and the specific authority citation for § 4.7b is revised to read as follows:

Authority: 5 U.S.C 301; 19 U.S.C. 66; 1431, 1433, 1434, 1624, 2071 note; 46 U.S.C. App. 3, 91.

* * * * *

Section 4.7b also issued under 8 U.S.C. 1101, 1221;

* * * * *

■ 14. In § 4.7b(a), the definition of “United States” is revised to read as follows:

§ 4.7b Electronic passenger and crew arrival manifests.

(a) * * *

United States. “United States” means the continental United States, Alaska, Hawaii, Puerto Rico, Guam, the Virgin Islands of the United States, and the Commonwealth of the Northern Mariana Islands (beginning June 1, 2009).

* * * * *

PART 122—AIR COMMERCE REGULATIONS

■ 15. The general authority for part 122 continues, and the specific authority citation for § 122.49a is revised to read as follows:

Authority: 5 U.S.C 301; 19 U.S.C. 58b, 66, 1431, 1433, 1436, 1448, 1459, 1590, 1594, 1623, 1624, 1644, 1644a, 2071 note.

* * * * *

Section 122.49a also issued under 8 U.S.C. 1101, 1221, 19 U.S.C. 1431, 49 U.S.C. 44909.

* * * * *

■ 16. In § 122.49a(a), the definition of “United States” is revised to read as follows:

§ 122.49a Electronic manifest requirement for passengers onboard commercial aircraft arriving in the United States.

(a) * * *

United States. “United States” means the continental United States, Alaska, Hawaii, Puerto Rico, Guam, the Commonwealth of the Northern Mariana Islands (beginning June 1, 2009), and the Virgin Islands of the United States.

* * * * *

Paul A. Schneider, Deputy Secretary.

DEPARTMENT OF HOMELAND SECURITY**8 CFR Parts 204, 214 and 215**

[CIS No. 2432-07; DHS Docket No. USCIS-2007-0058]

RIN 1615-AB67

Changes to Requirements Affecting H-2B Nonimmigrants and Their Employers; Correction

AGENCY: U.S. Citizenship and Immigration Services, DHS.

ACTION: Final rule; correction.

SUMMARY: With this amendment, the Department of Homeland Security (DHS) corrects an inadvertent error that was made to the Final Rule titled "Changes to Requirements Affecting H-2B Nonimmigrants and Their Employers" that was published in the *Federal Register* on December 19, 2008, at 73 FR 78104.

DATES: This rule is effective January 18, 2009.

FOR FURTHER INFORMATION CONTACT: Hiroko Witherow, Business and Trade Services Division, Service Center Operations, U.S. Citizenship and Immigration Services, Department of Homeland Security, 20 Massachusetts Avenue, NW., Second Floor, Washington, DC 20529-2140, telephone (202) 272-9135.

SUPPLEMENTARY INFORMATION:**Need for Correction**

On December 19, 2008, the Department of Homeland Security published a final rule in the *Federal Register* at 73 FR 78104 changing requirements affecting H-2B nonimmigrants and their employers. At 8 CFR 214.2, DHS inadvertently:

- Stated in amendment 5.aa that a new sentence would be added at the end of paragraph (h)(11)(i)(A) instead of saying that the last sentence of the paragraph was being revised;
- Omitted a period after the paragraph heading for paragraph (h)(6)(C); and
- Ended the sentence in paragraph (h)(11)(iii)(A)(2) with a ":" instead of a ";

Correction of Publication

■ Accordingly, the publication on December 19, 2008, at 73 FR 78104 of the interim final rule that was the subject of FR Doc. E8-30094 is corrected as follows:

PART 214—NONIMMIGRANT CLASSES**§ 214.2 [Corrected]**

- 1. On page 78127, third column, amendment 5.aa., revise the amendatory language from "Adding a new sentence to the end of paragraph (h)(11)(i)(A)" to "Revising the last sentence of paragraph (h)(11)(i)(A)".
- 2. On page 78128, second column, add a period immediately after the word "revocation" in the heading to paragraph (h)(6)(C).
- 3. On page 78130, in the second column, at the end of paragraph (h)(11)(iii)(A)(2), revise ": or" to read ";

Dated: January 13, 2009.

Michael Aytes,

Acting Deputy Director, U.S. Citizenship and Immigration Services.

RIN 1601-AA35; RIN 1600-AA00

United States Visitor and Immigrant Status Indicator Technology Program ("US-VISIT"); Enrollment of Additional Aliens in US-VISIT; Authority To Collect Biometric Data from Additional Travelers and Expansion to the 50 Most Highly Trafficked Land Border Ports of Entry

AGENCY: National Protection and Programs Directorate, DHS.

ACTION: Final rule; correction.

SUMMARY: This document contains corrections to the final rule which was published in the *Federal Register* on December 19, 2008. 73 FR 77473. The pertinent regulations relate to the collection of biometric identifiers during the inspection of aliens at United States ports of entry.

DATES: Effective on January 18, 2009.

FOR FURTHER INFORMATION, CONTACT: Helen deThomas, Senior Policy Analyst, US-VISIT, Department of Homeland Security, 1616 Fort Myer Drive, 18th Floor, Arlington, Virginia 22209, (202) 298-5200.

SUPPLEMENTARY INFORMATION: On December 19, 2008, the Department of Homeland Security (DHS) published a final rule amending 8 CFR 235.1(f)(1)(ii) to expand the population of aliens subject to US-VISIT requirements to include, among others, lawful

permanent residents. That final rule becomes effective January 18, 2009. 73 FR 77473.

As discussed in the preamble to the final rule, DHS will require additional aliens to provide fingerprints "at the time of inspection" at the United States border ports of entry, including lawful permanent residents. 73 FR at 77474-75.

As discussed in the preamble to the final rule,

LPRs are still subject to entry, documentation, and removability requirements to the United States. LPRs are aliens. See sections 101, 212, 237 of the INA (8 U.S.C. 1101, 1182, 1227) and 8 CFR 235.1(b), (f)(1)(i). Although LPRs are not technically regarded as seeking admission to the United States if they are returning from a stay of less than 180 days under section 101(a)(13)(C)(ii) of the INA (8 U.S.C. 1101(a)(13)(C)(ii)), they remain subject to the admissibility requirements of section 212 of the INA (8 U.S.C. 1182) because of their status as an alien and not a United States citizen. Accordingly, DHS must determine whether an LPR is admissible to the United States whenever the LPR arrives at a port of entry, as well as determine whether an LPR is removable from the United States based on intervening facts since the time LPR status was granted, and initial background checks conducted, which may have been many years ago.

73 FR at 77475.

Through technical drafting oversight, DHS did not amend the regulatory text of section 235.1(f)(1)(ii) in the final rule to remove references to aliens seeking admission. This correction is intended to ensure that the regulatory language mirrors the intent of the preamble—that DHS may require lawful permanent residents to provide biometrics in order to determine, among other things, that alien's identity and whether he or she has properly maintained his or her permanent resident status while in the United States.

Accordingly, in FR Doc. E8-30095, published on December 19, 2008, make the following correction. On page 77491, in the second column, revise the regulatory text under instruction 4 to read:

§ 235.1 Scope of examination.

* * * * *

(f) * * *

(1) * * *

(ii) The Secretary of Homeland Security or his designee may require any alien, other than aliens exempted under paragraph (iv) of this section or Canadian citizens under section 101(a)(15)(B) of the Act who are not otherwise required to present a visa or be issued Form I-94 or Form I-95 for admission or parole into the United

States, to provide fingerprints, photograph(s) or other specified biometric identifiers, documentation of his or her immigration status in the United States, and such other evidence as may be requested to determine the alien's identity and whether he or she has properly maintained his or her status while in the United States and/or whether he or she is admissible. The failure of an alien at the time of inspection to comply with any requirement to provide biometric identifiers may result in a determination that the alien is inadmissible under section 212(a) of the Immigration and Nationality Act or any other law.

Documents Acceptable for Employment Eligibility Verification; Correction

AGENCY: U.S. Citizenship and Immigration Services, DHS.

ACTION: Interim rule; Correction.

SUMMARY: With this amendment, the Department of Homeland Security (DHS) corrects two inadvertent errors that were made in the Employment Eligibility Verification interim rule published in the **Federal Register** on December 17, 2008, at 73 FR 76505.

DATES: *Effective Date:* Effective February 2, 2009.

FOR FURTHER INFORMATION CONTACT: Stephen McHale, Verification Division, U.S. Citizenship and Immigration Services, Department of Homeland Security, 470 L'Enfant Plaza East, SW., Suite 8001, Washington, DC 20529, telephone (888) 464-4218 or e-mail at Everify@dhs.gov.

SUPPLEMENTARY INFORMATION:

Need for Correction

On December 17, 2008, U.S. Citizenship and Immigration Services (USCIS) published an interim rule at 73 FR 76505 amending its regulations governing the types of acceptable identity and employment authorization documents and receipts that employees

may present to their employers for completion of the Form I-9, Employment Eligibility Verification.

The rule inadvertently included extraneous language in two paragraphs at 8 CFR 274a.2(b)(1)(vi)(B)(1) and (2). These paragraphs describe a type of receipt that can be presented by lawful permanent residents to their employers in lieu of the Form I-551, Permanent Resident Card, for completion of the Form I-9.

As explained in the preamble on page 76507, column 3, in the first sentence under the paragraph heading, "Adding references to Form I-94A," (*see also* the last sentence under the paragraph heading, "C. Revising References to Temporary I-551s"), the only change the rule was making to 8 CFR 274a.2(b)(1)(vi)(B) was to add references to the Form I-94A next to each reference to the Form I-94, Arrival-Departure Record. In error, the regulatory text amending 8 CFR 274a.2(b)(1)(vi)(B)(1) at 73 FR 76511 inadvertently included the extraneous language, "with an unexpired foreign passport" in the sentence, "Presents the arrival portion of Form I-94 or Form I-94A with an unexpired foreign passport containing an unexpired 'Temporary I-551' stamp and a photograph of the individual, which is designated for purposes of this section as a receipt for Form I-551;".

In addition, the regulatory text amending 8 CFR 274a.2(b)(1)(vi)(B)(2) inadvertently included the extraneous language, "or statement," in the sentence, "Presents the Form I-551 by the expiration date of the 'Temporary I-551' stamp or, if the stamp or statement has no expiration date, within one year from the issuance date of the arrival portion of the Form I-94 or Form I-94A;". Note that DHS places only Temporary I-551 "stamps" and not Temporary I-551 "statements" on Forms I-94 when issuing temporary evidence of lawful permanent resident status using Forms I-94.

This document corrects these two errors by removing the extraneous language from the regulatory text.

List of Subjects in 8 CFR Part 274a

Administrative practice and procedure, Aliens, Employment, Penalties, Reporting and recordkeeping requirements.

- For the reasons set forth in the preamble, FR Doc E8-29874, beginning on page 76505 in the **Federal Register** of Wednesday, December 17, 2008, the following corrections are made:
- 1. On page 76511, in the third column, in § 274a.2, paragraphs (b)(1)(vi)(B)(1) and (2) are corrected to read as follows:

§ 274a.2 Verification of identity and employment authorization.

* * * * *

(b) * * *

(1) * * *

(vi) * * *

(B) * * *

(1) Presents the arrival portion of Form I-94 or Form I-94A containing an unexpired "Temporary I-551" stamp and a photograph of the individual, which is designated for purposes of this section as a receipt for Form I-551; and

(2) Presents the Form I-551 by the expiration date of the "Temporary I-551" stamp or, if the stamp has no expiration date, within one year from the issuance date of the arrival portion of the Form I-94 or Form I-94A; or

Import Restrictions Imposed on Certain Archaeological Material from China

AGENCIES: U.S. Customs and Border Protection, Department of Homeland Security; Department of the Treasury.

ACTION: Final rule.

SUMMARY: This final rule amends the U.S. Customs and Border Protection (CBP) regulations to reflect the imposition of import restrictions on certain archaeological material from the People's Republic of China (China). These restrictions are being imposed pursuant to an agreement between the United States and China that has been entered into under the authority of the Convention on Cultural Property Implementation Act in accordance with the United Nations Educational, Scientific and Cultural Organization (UNESCO) Convention on the Means of Prohibiting and Preventing the Illicit Import, Export and Transfer of Ownership of Cultural Property. The final rule amends CBP regulations by adding China to the list of countries for

which a bilateral agreement has been entered into for imposing cultural property import restrictions. The final rule also contains the designated list that describes the types of archaeological articles to which the restrictions apply.

DATES: *Effective Date:* January 16, 2009.

FOR FURTHER INFORMATION CONTACT: For legal aspects, George Frederick McCray, Esq., Chief, Intellectual Property Rights and Restricted Merchandise Branch, Regulations and Rulings, Office of International Trade, (202) 325-0082. For operational aspects, Michael Craig, Chief, Interagency Requirements Branch, Trade Policy and Programs, Office of International Trade, (202) 863-6558.

SUPPLEMENTARY INFORMATION:

Background

The value of cultural property, whether archaeological or ethnological in nature, is immeasurable. Such items often constitute the very essence of a society and convey important information concerning a people's origin, history, and traditional setting. The importance and popularity of such items regrettably makes them targets of theft, encourages clandestine looting of archaeological sites, and results in their illegal export and import.

The United States shares in the international concern for the need to protect endangered cultural property. The appearance in the United States of stolen or illegally exported artifacts from other countries where there has been pillage has, on occasion, strained our foreign and cultural relations. This situation, combined with the concerns of museum, archaeological, and scholarly communities, was recognized by the President and Congress. It became apparent that it was in the national interest for the United States to join with other countries to control illegal trafficking of such articles in international commerce.

The United States joined international efforts and actively participated in deliberations resulting in the 1970 United Nations Educational, Scientific and Cultural Organization (UNESCO) Convention on the Means of Prohibiting and Preventing the Illicit Import, Export and Transfer of Ownership of Cultural Property (823 U.N.T.S. 231 (1972)). U.S. acceptance of the 1970 UNESCO Convention was codified into U.S. law as the "Convention on Cultural Property Implementation Act" (Pub. L. 97-446, 19 U.S.C. 2601 *et seq.*) (the Act). This was done to promote U.S. leadership in achieving greater international cooperation towards preserving cultural

treasures that are of importance to the nations from where they originate and contribute to greater international understanding of our common heritage.

Since the Act entered into force, import restrictions have been imposed on the archaeological and ethnological materials of a number of signatory nations. These restrictions have been imposed as a result of requests for protection received from those nations. More information on import restrictions can be found on the International Cultural Property Protection Web site (<http://culturalheritage.state.gov>).

This document announces that import restrictions are now being imposed on certain archaeological materials from China (for a definition of China, please see <http://www.state.gov/s/inr/rls/4250.htm>).

Determinations

Under 19 U.S.C. 2602(a)(1), the United States must make certain determinations before entering into an agreement to impose import restrictions under 19 U.S.C. 2602(a)(2). On May 13, 2008, the Assistant Secretary for Educational and Cultural Affairs, Department of State, made the determinations required under the statute with respect to certain archaeological materials originating in China that are described in the designated list set forth below in this document. These determinations include the following: (1) That the cultural patrimony of China is in jeopardy from the pillage of irreplaceable archaeological materials representing China's cultural heritage from the Paleolithic Period (c. 75,000 B.C.) through the end of the Tang Period (A.D. 907) and irreplaceable monumental sculpture and wall art at least 250 years old (19 U.S.C. 2602(a)(1)(A)); (2) that the Chinese government has taken measures consistent with the Convention to protect its cultural patrimony (19 U.S.C. 2602(a)(1)(B)); (3) that import restrictions imposed by the United States would be of substantial benefit in deterring a serious situation of pillage and remedies less drastic are not available (19 U.S.C. 2602(a)(1)(C)); and (4) that the application of import restrictions as set forth in this final rule is consistent with the general interests of the international community in the interchange of cultural property among nations for scientific, cultural, and educational purposes (19 U.S.C. 2602(a)(1)(D)). The Assistant Secretary also found that the materials described in the determinations meet the statutory definition of "archaeological material of the state party" (19 U.S.C. 2601(2)).

The Agreement

On January 14, 2009, the United States and China entered into a bilateral agreement pursuant to the provisions of 19 U.S.C. 2602(a)(2). The agreement enables the promulgation of import restrictions on certain archaeological materials representing China's cultural heritage from the Paleolithic Period through the end of the Tang Period (A.D. 907) and monumental sculpture and wall art at least 250 years old. For the purposes of the agreement, the restricted Paleolithic objects date from approximately c. 75,000 B.C. A list of the categories of archaeological materials subject to the import restrictions is set forth later in this document.

Restrictions and Amendment to the Regulations

In accordance with the Agreement, importation of materials designated below are subject to the restrictions of 19 U.S.C. 2606 and § 12.104g(a) of the Customs and Border Protection (CBP) Regulations (19 CFR 12.104g(a)) and will be restricted from entry into the United States unless the conditions set forth in 19 U.S.C. 2606 and § 12.104c of the regulations (19 CFR 12.104c) are met. CBP is amending § 12.104g(a) of the CBP Regulations (19 CFR 12.104g(a)) to indicate that these import restrictions have been imposed.

Material Encompassed in Import Restrictions

The bilateral agreement between the United States and China includes, but is not limited to, the categories of objects described in the designated list set forth below. These categories of objects are subject to the import restrictions set forth above, in accordance with the above explained applicable law and the regulation amended in this document (19 CFR 12.104g(a)).

Designated List of Archaeological Material of China

Simplified Chronology

Paleolithic period (c. 75,000–10,000 BC).
Neolithic period (c. 10,000–2000 BC).
Erlitou and other Early Bronze Age cultures (c. 2000–1600 BC).
Shang Dynasty and other Bronze Age Cultures (c. 1600–1100 BC).
Zhou Dynasty (c. 1100–256 BC).
Qin Dynasty (221–206 BC).
Han Dynasty (206 BC–AD 220).
Three Kingdoms (AD 220–280).
Jin Dynasty (AD 265–420).
Southern and Northern Dynasties (AD 420–589).
Sui Dynasty (AD 581–618).

Tang Dynasty (AD 618–907).

I. Ceramic

The ceramic tradition in China extends back to at least the 6th millennium B.C. and encompasses a tremendous variety of shapes, pastes, and decorations. Chinese ceramics include earthenwares, stonewares and porcelains, and these may be unglazed, glazed, underglazed, painted, carved, impressed with designs, decorated with applied designs or a combination of all of these. Only the most distinctive are listed here. Vessels are the most numerous and varied types of ceramics. Ceramic sculptures include human, animal, mythic subjects, and models of scenes of daily life. Architectural elements include decorated bricks, baked clay tiles with different glaze colors, and acroteria (ridge pole decorations).

A. Vessels

1. Neolithic Period.

Archaeological work over the past thirty years has identified numerous cultures of the Neolithic period from every part of China, all producing distinctive ceramics. Early Neolithic cultures (c. 7500–5000 BC) include such cultures as Pengtoushan (northern Hunan Province), Peiligang (Henan Province), Cishan (Hebei Province), Houli (Shandong Province), Xinglongwa (eastern Inner Mongolia and Liaoning Province), Dadiwan and Laoguantai (Gansu and Shaanxi Province), Xinle (Liaodong peninsula, Liaoning Province), among others. Examples of Middle Neolithic cultures (c. 5000–3000 BC) include Yangshao (Shaanxi, Shanxi, and Henan Provinces), Daxi (eastern Sichuan and western Hubei Provinces), Hemudu (lower Yangzi River valley, Zhejiang Province), Majiabang (Lake Tai/Taihu area to Hangzhou Bay, Zhejiang and southern Jiangsu Provinces), Hongshan (eastern Inner Mongolia, Liaoning, and northern Hebei Provinces), Dawenkou (Shandong Province), among others. Later Neolithic cultures (c. 3500–2000 BC) include Liangzhu (lower Yangzi River Valley), Longshan (Shandong and Henan Provinces), Taosi (southern Shanxi Province), Qujialing (middle Yangzi River valley in Hubei and Hunan Provinces), Baodun (Chengdu Plain, Sichuan Province), Shijiahe (western Hubei Province), and Shixia (Guangdong Province), among many others.

Neolithic vessels are sometimes inscribed with pictographs. When present, they are often single incised marks on vessels of the Neolithic period, and multiple incised marks

(sometimes around the rim) on late Neolithic vessels.

a. *Yangshao*: The “classic” form of Neolithic culture, c. 5000–3000 BC in Shanxi, Shaanxi, Gansu, Henan, and adjacent areas. Hand-made, red paste painted with black, sometimes white motifs, that are abstract and depict plants, animals, and humans. Forms include bulbous jars with lug handles, usually with a broad shoulder and narrow tapered base, bowls, open mouth vases, and flasks (usually undecorated) with two lug handles and a pointed base.

b. *Shandong Longshan*: Vessels are wheel-made, black, very thin-walled, and highly polished, sometimes with open cut-out decoration. Forms include tall stemmed cups (*dou*), tripods (*li* and *ding*), cauldrons, flasks, and containers for water or other liquids.

2. Erlitou, Shang, and Zhou Vessels.

a. Vessels are mostly utilitarian gray paste cooking tripod basins, cooking and storage jars, wide mouth containers, pan circular dishes with flat base, and broad three legged version of pan. The latter also appear in fine gray and black pastes. The forms of these include the kettle with lid (*he*), tripod liquid heating vessel with pouring spout (*jue*), tripod cooking pot (*ding*), goblet or beaker (*gu*), tripod water heater without pouring spout (*jia*).

b. *Shang and Zhou*: Vessels may be wheel-made or coiled. Vessels can be utilitarian gray paste cooking vessels, often cord-impressed, or more highly decorated types. Surfaces can be impressed and glazed yellow to brown to dark green. White porcelain-like vessels also occur. Forms include those of the Erlitou plus wide-mouth containers and variously shaped jars and serving vessels.

3. Qin through Southern and Northern Vessels.

Most vessels are wheel-made. The main developments are in glazing. Earthenwares may have a lead-based shiny green glaze. Grey stonewares with an olive color are called Yue ware.

4. Sui and Tang Vessels.

Note: Most vessels are wheel-made.

a. *Sui*: Pottery is plain or stamped.

b. *Tang*: A three-color glazing technique is introduced for earthenwares (*sancai*). Green, yellow, brown, and sometimes blue glazes are used together on the same vessel. For stoneware, the olive glaze remains typical.

B. Sculpture

1. *Neolithic*: Occasional small figurines of animals or humans. From the Hongshan culture come human

figures, some of which appear pregnant, and human faces ranging from small to life size, as well as life-size and larger fragments of human body parts (ears, belly, hands, and others).

2. *Shang through Eastern Zhou*:

Ceramic models and molds for use in the piece-mold bronze casting process. Examples include frontal animal mask (*taotie*), birds, dragons, spirals, and other decorative motifs.

3. *Eastern Zhou, Qin and Han*:

Figures are life-size or smaller. They are hand- and mold-made, and may be unpainted, painted, or glazed. Figures commonly represent warriors on foot or horseback, servants, acrobats, and others. Very large numbers date to the Han Dynasty. In some cases, the ceramic male and female figurines are anatomically accurate, nude, and lack arms (in these cases, the figures were originally clad in clothes and had wooden arms that have not been preserved). Other ceramic objects, originally combined to make scenes, take many forms including buildings, courtyards, ships, wells, and pig pens.

4. *Tang*: Figures depicting Chinese people, foreigners, and animals may be glazed or unglazed with added paint. Approximately 15 cm to 150 cm high.

C. Architectural Decoration and Molds

1. *Han*: Bricks having a molded surface with geometric or figural design. These depict scenes of daily life, mythic and historical stories, gods, or demons.

2. *Three Kingdoms through Tang*: Bricks may be stamped or painted with the same kinds of scenes as in the Han Dynasty.

3. *Han through Tang*: Roof tiles may have a corded design. Eaves tiles with antefixes have Chinese characters or geometric designs. Glazed acroteria (ridge pole decorations) in owl tail shape.

II. Stone

A. Jade

Ancient Chinese jade is, for the most part, the mineral nephrite. It should be noted, however, that many varieties of hard stone are sometimes called “jade” (*yu*) in Chinese. True nephrite jade can range in color from white to black, and from the familiar shades of green to almost any other color. Jade has been valued in China since the Neolithic period. Types commonly encountered include ornaments, amulets, jewelry, weapons, insignia, and vessels.

1. Ornaments and jewelry.

a. *Neolithic (Hongshan)*: Types are mostly hair cylinders or pendant ornamental animal forms such as turtles, fish-hawks, cicadas, and

dragons. One common variety is the so-called “pig-dragon” (*zhulong*), a circular ring form with a head having wrinkled snout (the “pig”) and long dragon-like body.

b. *Neolithic (Liangzhu)*: Types include awl-shaped pendants, three-prong attachments, openwork crown-shapes, beads, birds, fishes, frogs.

c. *Neolithic (Shandong Longshan) and Erlitou*: Ornaments for body and clothing such as stick pins and beads.

d. *Shang and Zhou*: Earrings, necklaces, pectorals, hair stickpins, ornaments, sometimes in the shape of small animals, dragons, or other forms; belt buckles, and garment hooks. During the Zhou Dynasty, there appear elaborate pectorals made of jade links, and jade inlay on bronze.

e. *Qin, Han and Three Kingdoms*: Pectoral ornaments and small-scale pendants continue to be produced. Types include pectoral slit earrings, large disks (*bi*), openwork disks (*bi*), openwork plaques showing a mythic bird (*feng*), and various types of rings. Entire burial suits of jade occur during the Han Dynasty. More frequently occurring are Han Dynasty belthooks, decorated with dragons, and garment hooks.

2. Weapons, Tools, and Insignia.

a. *Neolithic (Liangzhu)*: Types include weapons such as broad-bladed axes (*yue*), long rectangular or trapezoidal blades (*zhang*), often with holes along the back (non-sharpened) edge for hafting; tools such as hoe, adze, knife blades.

b. *Neolithic (Shandong Longshan) and Erlitou*: Broad axe (*yue*) and halberd or “dagger axe” (*ge*).

c. *Shang and Zhou*: Broad axes (*yue*) and halberd (*ge*) may be attached to turquoise inlaid bronze shafts.

d. *Neolithic (Liangzhu) to Zhou*: Tool types include hoe, adze, knife blades.

e. *Neolithic (Shandong Longshan) to Zhou*: Insignia blades based on tool shapes such as long hoe, flat adze, and knife.

3. Ceremonial paraphernalia.

Neolithic—Han: Types include flat circular disks (*bi*) with a cut-out central hole and prismatic cylindrical tubes (*cong*), usually square on the outside with a circular hole through its length, often with surface carving that segments the outer surface into three or more registers. The *cong* tubes are often decorated with a motif on each corner of each register showing abstract pairs of eyes, animal and/or human faces. *Cong* tubes, while most closely linked with the Liangzhu culture, were widely distributed among the many late Neolithic cultures of China.

4. Vessels.

a. *Shang through Han*: Types include eared cups and other tableware.

b. *Qin through Tang*: Tableware forms such as cups, saucers, bowls, vases, and inkstones.

5. Other.

Chimes from all eras may be rectangular or disk-shaped.

B. Amber

Amber is used for small ornaments from the Neolithic through Tang dynasties.

C. Other Stone

1. Tools and Weapons.

a. *Paleolithic and later eras*: Chipped lithics from the Paleolithic and later eras including axes, blades, scrapers, arrowheads, and cores.

b. *Neolithic and later eras*: Ground stone including hoes, sickles, spades, axes, adzes, pestles, and grinders.

c. *Erlitou through Zhou*: As with jade, weapon types include blades, broad axes (*yue*), and halberds (*ge*).

2. Sculpture.

Stone becomes a medium for large-scale images in the Qin and Han. It is put to many uses in tombs. It also plays a major role in representing personages associated with Buddhism, Daoism, and Confucianism.

a. Sculpture in the round.

Note: This section includes monumental sculpture at least 250 years old.

i. *Shang*: Sculpture includes humans, often kneeling with hands on knees, sometimes with highly decorated incised robes, owls, buffalo, and other animals. The Jinsha site near Chengdu, Sichuan, dating to the late Shang Dynasty, has yielded numerous examples of stone figurines in a kneeling position, with carefully depicted hair parted in the center, and with hands bound behind their back.

ii. *Han to Qing*: The sculpture for tombs includes human figures such as warriors, court attendants, and foreigners. Animals include horse, tiger, pig, bull, sheep, elephant, and fish, among many others.

iii. The sculpture associated with Buddhism is usually made of limestone, sandstone, schist and white marble. These be covered with clay, plaster, and then painted. Figures commonly represented are the Buddha and disciples in different poses and garments.

iv. The sculpture associated with Daoism is usually sandstone and limestone which may be covered and painted. Figures commonly represented are Laozi or a Daoist priest.

v. The sculpture associated with Confucianism represents Confucius and his disciples.

b. Relief Sculpture.

i. *Han*: Relief sculpture is used for all elements of tombs including sarcophagi, tomb walls, and monumental towers. Images include hunting, banqueting, historical events, processions, scenes of daily life, fantastic creatures, and animals.

ii. *Tang*: Tomb imagery now includes landscapes framed by vegetal motifs.

c. Art of cave or grotto temples.

Han—Qing: Note that this section includes monumental sculpture at least 250 years old. These temples, mostly Buddhist, combine relief sculpture, sculpture in the round, and sometimes mural painting. The sculptures in the round may be stone or composites of stone, wood, and clay and are painted with bright colors.

d. Stelae.

Han—Qing: Note that this section includes monumental sculpture at least 250 years old. Tall stone slabs set vertically, usually on a tortoise-shaped base and with a crown in the form of intertwining dragons. Stelae range in size from around 0.60m to 3m. Some include relief sculpture consisting of Buddhist imagery and inscription, and others are secular memorials with long memorial inscription on front and back faces.

3. Architectural Elements.

a. *Erlitou through Zhou*: Marble or other stone is used as a support for wooden columns and other architectural or furniture fixtures.

b. *Qing*: Note that this section includes monumental sculpture at least 250 years old. Sculpture is an integral part of Qing Dynasty architecture. Bridges, archways, columns, staircases and terraces throughout China are decorated with reliefs. Colored stones may be used, including small bright red, green, yellow and black ones. Statue bases are draped with imitations of embroidered cloths. Stone parapets are carved with small, elaborately adorned fabulous beasts.

4. Musical Instruments.

Neolithic through Han, and later: Chimestones, chipped and/or ground from limestone and other resonant rock. They may be highly polished, carved with images of animals or other motifs, and bear inscriptions in Chinese characters. They usually have a chipped or ground hole to facilitate suspension from a rack.

III. Metal

The most important metal in traditional Chinese culture is bronze (an alloy of copper, tin and lead), and it is used most frequently to cast vessels, weapons, and other military hardware. Iron artifacts are not as common,

although iron was used beginning in the middle of the Zhou Dynasty to cast agricultural tool types, vessels, weapons and measuring utensils. As with ceramics, only the most distinctive are listed here.

A. Bronze

1. Vessels.

Note: Almost any bronze vessel may have an inscription in archaic Chinese characters.

a. *Erlitou*: Types include variations on pots for cooking, serving and eating food including such vessels as the cooking pot (*ding*), liquid heating vessel with open spout (*jue*), or with tubular spout (*he*), and water heater without spout (*jia*).

b. *Shang*: Bronze vessels and implements include variations on the ceramic posts used for cooking, serving, and eating including but not limited to the tripod or quadripod cooking pot (*ding*), water container (*hu*), and goblet (*gu*). Animal-shaped vessels include the owl, mythic bird, tiger, ram, buffalo, deer, and occasionally elephant and rhinoceros. Most types are decorated with symbolic images of a frontal animal mask (*taotie*) flanked by mythical birds and dragons, or with simpler images of dragons or birds, profile cicadas, and geometric motifs, including a background “cloud and thunder” pattern of fine squared spirals.

c. *Zhou*: Types include those of previous eras. Sets begin to be made with individual vessels having similar designs. Late innovations are made to surface treatment: Relief decorations of intertwined dragons and feline appendages; inlay with precious stones and gems; inlay with other metals such as gold and silver; gilding; pictorial narratives featuring fighting, feasting and rituals; and various geometric designs.

d. *Qin and Han*: All vessel types and styles popularized of the immediately preceding era continue.

2. Sculpture.

a. *Shang and other Bronze Age Cultures through Zhou*: Wide variety of cast human and animal sculptures. Particularly distinctive are the bronze sculptures from the Sanxingdui Culture in Sichuan which include life-sized human heads (often with fantastic features and sometimes overlaid with gold leaf) and standing or kneeling figurines ranging in size from 5cm to more than 2 meters; tree-shaped assemblages; birds, dragons, and other real and fantastic animals. Bronze sculpture from Chu and related cultures include supports for drums and bell sets (often in the shape of guardian figures,

fantastic animals, or intertwined snakes).

b. *Qin and Han*: Decorative bronze types include statues of horses, lamps in the shape of female servants, screen supports in the shape of winged immortals, incense burners in the shape of mountains, mirrors, and inlaid cosmetic boxes.

c. *Buddhist*: In the Han there first appear small portable images of Sakyamuni Buddha. During the next historical eras, such images proliferate and become more varied in terms of size and imagery. Most of these are free-standing, depicting such subjects as the historical Buddha Sakyamuni, Buddhas associated with paradises, Buddha’s disciples, and scenes from the *Lotus Sutra*. Gilt bronzes are made from the Han to Tang.

3. Coins.

a. *Zhou Media of Exchange and Tool-shaped Coins*: Early media of exchange include bronze spades, bronze knives, and cowrie shells. During the 6th century BC, flat, simplified, and standardized cast bronze versions of spades appear and these constitute China’s first coins. Other coin shapes appear in bronze including knives and cowrie shells. These early coins may bear inscriptions.

b. Later, tool-shaped coins began to be replaced by disc-shaped ones which are also cast in bronze and marked with inscriptions. These coins have a central round or square hole.

c. *Qin*: In the reign of Qin Shi Huangdi (221–210 BC) the square-holed round coins become the norm. The new Qin coin is inscribed simply with its weight, expressed in two Chinese characters *ban liang*. These are written in small seal script and are placed symmetrically to the right and left of the central hole.

d. *Han through Sui*: Inscriptions become longer, and may indicate that inscribed object is a coin, its value in relation to other coins, or its size. Later, the period of issue, name of the mint, and numerals representing dates may also appear on obverse or reverse. A new script, clerical (*lishu*), comes into use in the Jin.

e. *Tang*: The clerical script becomes the norm until 959, when coins with regular script (*kaishu*) also begin to be issued.

4. Musical Instruments.

a. *Shang*: Instruments include individual clapper-less bells (*nao*), singly and in sets. Barrel drums lay horizontally, have a saddle on top, and rest on four legs.

b. *Zhou through Tang*: Bells and bell sets continue to be important. The bells vary considerably in size in shape.

Other instruments include mouth organs (*hulu sheng*), gongs, cymbals, and a variety of types of drums, including drums (*chunyu*) and large “kettledrums” from south and southwest China.

5. Tools and Weapons.

Tools and implements of all eras include needles, spoons, ladles, lifting poles, axes, and knives. Weapons and military gear include the broad axe, dagger axe, knives, spear points, arrowheads, helmets, chariot fittings, combination of spear and dagger (*ji*), cross-bow, and horse frontlets.

6. Miscellaneous.

Other bronze items include but are not limited to mirrors, furniture parts, and utensils such belt buckles, garment hooks, weights, measuring implements, incense burners, lamps, spirit trees, tallies, seals, rings, bells, and cosmetic containers.

B. Iron

Iron is used for such utilitarian objects as axes, hammers, chisels, and spades. At the end of the Zhou, steel swords with multi-faceted metal inlay are produced.

1. *Zhou through Han*: Bimetallic weapons such as iron-bladed swords and knives with a bronze hilt.

2. *Three Kingdoms through Sui*: Small scale Buddhist images are cast.

3. *Tang*: Large scale castings include Buddhist statues, bells, lions, dragons, human figures, and pagodas.

C. Gold and Silver

During the Shang and Zhou Dynasties, gold is used to produce jewelry and a limited number of vessel types, and as gilding, gold leaf, or inlay on bronze. Gold and silver become widely used in the Han Dynasty and remain so through the Tang Dynasty. Objects include vessels such as cups, ewers, jars, bowls; utensils such as lamps, containers, jewelry, liturgical wares, furniture parts; and Buddhist sculpture such as images of Buddha and reliquaries.

IV. Bone, Ivory, Horn, and Shell

Neolithic through Tang: The most important uses of these materials is for vessels, seals, small-scale sculptures, and personal ornaments. In the Neolithic period, Erlitou culture, and Shang Dynasty bone (bovine scapula and tortoise plastrons, or lower shells) is used for divination: A carefully prepared bone or shell was thinned by drilling series of holes almost through the bone, to which heat was applied to make the bone crack. In some cases from the Late Shang Dynasty, the bones carry inscriptions revealing the date and

nature of the question asked and, occasionally, the outcome of the event. The cowrie shells used as money in the Shang Dynasty and later periods show signs of use. Worked shell imitations of cowries are also known. Ivory and horn are used to craft tableware utensils such as cups and containers as early as the Shang Dynasty; these are sometimes inlaid with turquoise or other stones.

V. Silks and Textiles

Neolithic through Tang: Silk worms are domesticated in China as early as the Neolithic. Silk cloth is preserved as garments and parts thereof, as a covering for furniture, and as painted or embroidered banners. Techniques include flat weave, moiré, damask, gauze, quilting, and embroidery.

VI. Lacquer and Wood

Neolithic through Tang: Lacquer is a transparent sap collected from the lac tree. When dissolved, it may be repeatedly applied to a wood or fabric form. The resulting product is sturdy and light. Lacquer vessels first appear in the Neolithic period, and become highly sophisticated and numerous by the middle Zhou through Han Dynasties. In the Sui and Tang Dynasties the practice is invented of creating a hard, thick surface of lacquer with the application of many thin layers. The resulting object may be carved and or inlaid before it hardens completely. Common colors for lacquer are red and black. Object types include: Vessels such as bowls, dishes, and goblets; military gear such shields and armor; musical instruments such as zithers (*qin*) and drums, related supports for drums and for bell sets; and boxes and baskets with painted or carved lids.

Wooden objects from this era are mainly preserved when painted with lacquer. These include architectural elements, utensils, coffins, musical instruments, and wood sculptures.

VII. Bamboo and Paper

Zhou through Tang: Types include texts on bamboo and wooden slips, and on paper. The slips may be found singly, or in groups numbering into the thousands. Some Buddhist sutras were printed with movable wooden type.

VIII. Glass

Zhou through Tang: Glass types include mostly tablewares, such as cups, plates, saucers.

IX. Painting and Calligraphy

A. Wall Painting

Note that this section includes wall art at least 250 years old. The painted bricks of the Han through Tang tomb walls have already been mentioned. That tradition is partially concurrent with a fresco tradition that runs from the Han through Qing Dynasties. Temples including those in caves or grottos have wall paintings with Buddhist, Confucian, and Daoist themes.

B. Other Painting

Han through Tang: Paintings, dating to as early as the Southern and Northern, are on such media as banners, hand-scrolls, and fans. Subjects are drawn from Buddhism, Confucianism, and Daoism. Other subjects include landscapes and hunting scenes.

Inapplicability of Notice and Delayed Effective Date

This amendment involves a foreign affairs function of the United States and is, therefore, being made without notice or public procedure (5 U.S.C. 553(a)(1)). For the same reason, a delayed effective date is not required under 5 U.S.C. 553(d)(3).

Regulatory Flexibility Act

Because no notice of proposed rulemaking is required, the provisions

of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) do not apply.

Executive Order 12866

Because this rule involves a foreign affairs function of the United States, it is not subject to Executive Order 12866.

Signing Authority

This regulation is being issued in accordance with 19 CFR 0.1(a)(1).

List of Subjects in 19 CFR Part 12

Cultural property, Customs duties and inspection, Imports, Prohibited merchandise, Reporting and recordkeeping requirements.

Amendment to CBP Regulations

■ For the reasons set forth above, part 12 of Title 19 of the Code of Federal Regulations (19 CFR part 12), is amended as set forth below:

PART 12—SPECIAL CLASSES OF MERCHANDISE

■ 1. The general authority citation for part 12 and the specific authority citation for § 12.104g continue to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 66, 1202 (General Note 3(i), Harmonized Tariff Schedule of the United States (HTSUS)), 1624;

* * * * *

Sections 12.104 through 12.104i also issued under 19 U.S.C. 2612;

* * * * *

■ 2. In § 12.104g, paragraph (a), the table is amended by adding the People's Republic of China to the list in appropriate alphabetical order as follows:

§ 12.104g Specific items or categories designated by agreements or emergency actions.

(a) * * *

State party	Cultural property	Decision No.
* * *	* * *	* * *
People's Republic of China	Archaeological materials representing China's cultural heritage from the Paleolithic Period (c. 75,000 B.C.) through the end of the Tang Period (A.D. 907) and monumental sculpture and wall art at least 250 years old.	CBP Dec. 09-03.

Prohibitions and Conditions for Importation of Burmese and Non-Burmese Covered Articles of Jadeite, Rubies, and Articles of Jewelry Containing Jadeite or Rubies**AGENCIES:** Customs and Border Protection, Department of Homeland Security; Department of the Treasury.**ACTION:** Interim final rule; solicitation of comments.

SUMMARY: This document amends the U.S. Customs and Border Protection (CBP) regulations in title 19 of the Code of Federal Regulations (19 CFR) in order to implement the provisions of the Tom Lantos Block Burmese JADE (Junta's Anti-Democratic Efforts) Act of 2008 (Pub. L. 110-286) (the "JADE Act") and Presidential Proclamation 8294 of September 26, 2008, which includes new Additional U.S. Note 4 to Chapter 71 of the Harmonized Tariff Schedule of the United States ("HTSUS"). These amendments are made to implement certain provisions of the JADE Act and the Presidential Proclamation by prohibiting the importation of "Burmese covered articles" (jadeite, rubies, and articles of jewelry containing jadeite or rubies, mined or extracted from Burma), and by setting forth conditions for the importation of "non-Burmese covered articles" (jadeite, rubies, and articles of jewelry containing jadeite or rubies, mined or extracted from a country other than Burma).

DATES: This interim final rule is effective January 16, 2009. Comments must be received on or before March 17, 2009.

ADDRESSES: You may submit comments, identified by docket number, by one of the following methods:

• *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments via docket number USCBP-2008-0111.

• *Mail:* Trade and Commercial Regulations Branch, Regulations and Rulings, Office of International Trade, U. S. Customs and Border Protection, 799 9th Street, NW., (Mint Annex), Washington, DC 20229.

Instructions: All submissions received must include the agency name and docket number for this rulemaking. All comments received will be posted without change to <http://www.regulations.gov>, including any personal information provided. For detailed instructions on submitting comments and additional information on the rulemaking process, see the "Public Participation" heading of the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>. Submitted comments may be inspected during regular business days between the hours of 9 a.m. and 4:30 p.m. at the Trade and Commercial Regulations Branch, Regulations and Rulings, Office of International Trade, U.S. Customs and Border Protection, 799 9th Street, NW., 5th Floor, Washington, DC. Arrangements to inspect submitted comments should be made in advance by calling Mr. Joseph Clark at (202) 325-0118.

FOR FURTHER INFORMATION CONTACT: Cathy Saucedo, Director, Import Safety and Interagency Requirements Division, Office of International Trade (202) 863-6556, or Brenda Brockman Smith, Executive Director, Trade Policy and Programs, Office of International Trade (202) 863-6406.

SUPPLEMENTARY INFORMATION:**Public Participation**

Interested persons are invited to participate in this rulemaking by submitting written data, views, or arguments on all aspects of the interim final rule. CBP also invites comments that relate to the economic, environmental, or federalism effects that might result from this interim final rule. Comments that will provide the most assistance to CBP will reference a specific portion of the interim final rule, explain the reason for any recommended change, and include data, information, or authority that support such recommended change. See **ADDRESSES** above for information on how to submit comments.

Background

On July 29, 2008, the President signed into law the Tom Lantos Block Burmese JADE (Junta's Anti-Democratic Efforts) Act of 2008 (Pub. L. 110-286) (the "JADE Act"). Section 6 of the JADE Act amends the Burmese Freedom and Democracy Act of 2003 (Pub. L. 108-61) (as so amended, the "BFDA") by adding a new section 3A that prohibits the importation of jadeite and rubies mined or extracted from Burma, and articles of jewelry containing jadeite or rubies mined or extracted from Burma, and by regulating the importation of jadeite and rubies mined or extracted from a country other than Burma, and articles of jewelry containing jadeite or rubies mined or extracted from a country other than Burma. Presidential Proclamation 8294 of September 26, 2008 implements the prohibitions and conditions of the JADE Act. (See Annex of Presidential Proclamation 8294 for Additional U.S. Note 4 to Chapter 71, Harmonized Tariff Schedule of the United States ("HTSUS").)

Burmese Covered Articles

Section 3A(b)(1) of the BFDA, as implemented by Presidential Proclamation 8294, provides that "Burmese covered articles" are prohibited from importation into the United States. Burmese covered articles are defined in section 3A(a)(2) of the BFDA as jadeite or rubies mined or extracted from Burma, or articles of jewelry containing jadeite or rubies mined or extracted from Burma. Section 3A(a)(4) of the BFDA defines "jadeite" as any jadeite classifiable under heading 7103 of the HTSUS; "rubies" as rubies classifiable under heading 7103 of the HTSUS; and "articles of jewelry containing jadeite or rubies" as any article of jewelry classifiable under heading 7113 of the HTSUS that contains jadeite or rubies, or any article of jadeite or rubies classifiable under heading 7116 of the HTSUS. The prohibition on the importation of the Burmese covered articles will also be set forth in the regulations of the Office of Foreign Assets Control (OFAC) at 31 CFR Part 537.

Non-Burmese Covered Articles

Sections 3A(c)(1) and (2) of the BFDA set forth the conditions for importation into the United States of "non-Burmese covered articles," which are defined in section 3A(a)(3) of the BFDA as jadeite or rubies mined or extracted from a country other than Burma, or articles of jewelry containing jadeite or rubies mined or extracted from a country other than Burma.

Presidential Proclamation 8294 requires that as a condition for the importation into the United States of any non-Burmese covered article, the importer and exporter of such article must meet the conditions set forth in section 3A(c)(1) of the BFDA. The Proclamation also modified the HTSUS by including Additional U.S. Note 4 to Chapter 71, HTSUS.

Certifications

Additional U.S. Note 4(a), Chapter 71, HTSUS, provides that if an importer chooses to enter any good (or withdraws such good from warehouse for consumption) under heading 7103, 7113, or 7116, HTSUS, the presentation of this entry at the time of importation shall be deemed to be a certification by the importer that any jadeite or rubies contained in such good were not mined or extracted from Burma. As such, the entry of any such article under one of the three specified headings is considered to be the "importer's certification."

Under section 3A(c)(1) of the BFDA, another condition for importation is that the exporter of the non-Burmese covered article has implemented measures that have substantially the same effect and achieve the same goals as the measures described in section 3A(c)(2)(B)(i) through (iv) or their functional equivalent to prevent the trade in Burmese covered articles. To achieve this requirement, CBP is amending the regulations to require that, at the time of importation into the United States, the importer have in his possession a written certification from the exporter ("exporter's certification") certifying that the jadeite or rubies were not mined or extracted from Burma, with verifiable evidence from the exporter that tracks the jadeite or rubies as follows: With respect to exportation from the country of jadeite or rubies in rough form, from mine to exportation; with respect to exportation from the country of finished jadeite or polished rubies, from mine to the place of final finishing; and with respect to exportation from the country of articles of jewelry containing jadeite or rubies, from mine to the place of final finishing of the article of jewelry.

Exceptions

Sections 3A(d)(1) and (2) of the BFDA set forth the two instances in which the prohibitions and conditions of the JADE Act do not apply. These exceptions are as follows: (1) Jadeite, rubies, and articles of jewelry containing jadeite or rubies that are reimported into the United States after having been

States, including those that accompanied an individual outside the United States for personal use, if they are reimported into the United States by the same person who exported them, without having been advanced in value or improved in condition by any process or other means while outside the United States, and (2) jadeite or rubies mined or extracted from a country other than Burma, and articles of jewelry containing jadeite or rubies mined or extracted from a country other than Burma, that are imported by or on behalf of an individual for personal use and accompanying an individual upon entry into the United States.

Recordkeeping Requirements

Under section 3A(c)(1) of the BFDA, a specific condition for importation of non-Burmese covered articles is that the importer of non-Burmese covered articles maintain for a period of not less than 5 years from the date of entry of the non-Burmese covered article a full record of, in the form of reports or otherwise, complete information relating to any act or transaction related to the purchase, manufacture, or shipment of the non-Burmese covered article. The importer is further required to produce such information to the relevant United States authorities upon request. CBP, to comply with the statute, is requiring the importer to keep in its possession a certification from the exporter certifying that the jadeite or rubies were not mined or extracted from Burma, with verifiable evidence from the exporter that tracks the sourcing from mine to either exportation or place of final finishing. Because the importer of record must have in his possession at the time of entry a certification from the exporter ("exporter's certification") and any underlying records supporting its certified entry of articles under heading 7103, 7113 or 7116, HTSUS, that any such articles were not mined or extracted from Burma, CBP is amending its (a)(1)(A) list (found in the Appendix to 19 CFR part 163). In this rulemaking, CBP is adding this new recordkeeping requirement in Section IV of the (a)(1)(A) list in the Appendix to 19 CFR part 163.

Explanation of Amendments

These amendments implement certain provisions of the JADE Act and the Presidential Proclamation with regard to the prohibition on importations of Burmese covered articles, and incorporate into the regulations the conditions for importation of non-Burmese covered articles. CBP is adding a new § 12.151 to part 12 of title 19 of the Code of Federal Regulations (19

CFR) to reflect the new conditions as described above. CBP is also amending the Interim (a)(1)(A) list in the Appendix to part 163 of title 19 CFR to add to the list of documents that importers must retain for a period of 5 years the "exporter's certification" as well as other supporting documentation in Section IV of the Appendix.

Inapplicability of Prior Public Notice and Delayed Effective Date

This document incorporates into the regulations a provision setting forth the conditions necessary for importation of non-Burmese covered articles. This document further amends the Appendix to part 163 for the list of records required for the entry of merchandise to implement the statutory mandate contained in the JADE Act and Presidential Proclamation 8294 of September 26, 2008 and inform the public of the conditions necessary to comply with the statutory requirements. Because this regulation merely implements statutory requirements, CBP has determined, pursuant to the provisions of 5 U.S.C. 553(b)(B), that prior public notice and comment procedures on this regulation are impracticable and contrary to the public interest and that there is good cause for this rule to become effective immediately upon publication as the JADE Act is already in effect. For these reasons, pursuant to the provisions of 5 U.S.C. 553(d)(3), CBP finds that there is good cause for dispensing with a delayed effective date.

Executive Order 12866 and Regulatory Flexibility Act

This document does not meet the criteria for a "significant regulatory action" as specified in Executive Order 12866 of September 30, 1993 (58 FR 51735, October 1993). In addition, because a notice of proposed rulemaking is not required under 5 U.S.C. 553(b) for the reasons described above, CBP notes that the provisions of the Regulatory Flexibility Act, as amended (5 U.S.C. 601 *et seq.*), do not apply to this rulemaking. Accordingly, CBP also notes that this rule is not subject to the regulatory analysis requirements or other requirements of 5 U.S.C. 603 and 604.

Paperwork Reduction Act

The collections of information in this document are contained in § 12.151(d) (19 CFR 12.151(d)). This information is used by CBP to fulfill its information collection obligations under section 3A(c)(1) of the BFDA, as amended, and Additional U.S. Note 4, Chapter 71, HTSUS, which requires that when an

importer of non-Burmese covered articles certifies on the entry summary form, CBP Form 7501, that the articles entered under heading 7103, 7113 or 7116, HTSUS were not mined or extracted from Burma, the importer must have in his possession a written certification from the exporter that such articles were not mined or extracted from Burma and other documentation to support such certification at the time of entry under § 12.151(d). The likely respondents are business organizations including importers and brokers. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid control number assigned by OMB. This collection of information falls under the approved collection OMB Control No. 1651-0133.

Estimated annual reporting and/or recordkeeping burden: 74,005 hours.

Number of responses per respondent and/or recordkeeper: 20.

Estimated number of respondents and/or recordkeepers: 22,197.

Estimated annual total responses: 443,940.

Estimated time per response: 10 minutes (.1667 hours).

Comments on the collection of information should be sent to the Office of Management and Budget, *Attention:* Desk Officer for the Department of the Treasury, Office of Information and Regulatory Affairs, Washington, DC 20503. A copy should also be sent to the Trade and Commercial Regulations Branch, Regulations and Rulings, Office of International Trade, Customs and Border Protection, 799 9th Street, NW., (Mint Annex), Washington, DC 20229.

Signing Authority

This document is being issued in accordance with section 0.1(a)(1) of the CBP regulations (19 CFR 0.1(a)(1)) pertaining to the authority of the Secretary of the Treasury (or his/her delegate) to approve regulations related to certain customs revenue functions.

List of Subjects

19 CFR Part 12

Customs duties and inspection, Economic sanctions, Entry of merchandise, Foreign assets control, Imports, Licensing, Prohibited Merchandise, Reporting and recordkeeping requirements, Restricted merchandise, Sanctions.

Amendments to the Regulations

■ For the reasons set forth above, parts 12 and 163 of title 19 of the Code of Federal Regulations (19 CFR parts 12 and 163) are amended as set forth below:

PART 12—SPECIAL CLASSES OF MERCHANDISE

■ 1. The general authority citation for part 12, CBP regulations, continues to read, and a new specific authority citation for § 12.151 is added to read, as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 66, 1202 (General Note 3(i), Harmonized Tariff Schedule of the United States (HTSUS)), 1624;

* * * * *

Section 12.151 also issued under The Burmese Freedom and Democracy Act of 2003 (Pub. L. 108-61) (the "BFDA"), as amended by the Tom Lantos Block Burmese JADE (Junta's Anti-Democratic Efforts) Act of 2008 (Pub. L. 110-286) (the "JADE Act"); Presidential Proclamation 8294, signed on September 26, 2008; Additional U.S. Note 4 to Chapter 71, HTSUS.

* * * * *

■ 2. In part 12, a new § 12.151 is added to read as follows:

§ 12.151 Prohibitions and conditions on importations of jadeite, rubies, and articles of jewelry containing jadeite or rubies.

(a) *General.* The importation into the United States of jadeite, rubies, and articles of jewelry containing jadeite or rubies is prohibited or conditioned as described in this section pursuant to the Tom Lantos Block Burmese JADE Act of 2008 (Pub. L. 110-286). For purposes of this section, the following definitions apply:

(1) *Jadeite.* "Jadeite" means any jadeite classifiable under heading 7103 of the Harmonized Tariff Schedule of the United States (HTSUS);

(2) *Rubies.* "Rubies" means any rubies classifiable under heading 7103 of the HTSUS;

(3) *Articles of jewelry containing jadeite or rubies.* "Articles of jewelry containing jadeite or rubies" means any article of jewelry classifiable under heading 7113 of the HTSUS that contains jadeite or rubies, or any article of jadeite or rubies classifiable under heading 7116 of the HTSUS; and

(4) *United States.* "United States" means the 50 states, the District of Columbia, and any commonwealth, territory, or possession of the United States.

(b) *Prohibited Articles.* The following articles are prohibited from importation into the United States (*see* 31 CFR Part 537):

(1) Jadeite mined or extracted from Burma;

(2) Rubies mined or extracted from Burma; and

(3) Articles of jewelry containing jadeite or rubies mined or extracted from Burma.

(c) *Regulated Articles.* Jadeite, rubies, or articles of jewelry containing jadeite or rubies may not be imported into the United States unless the importer certifies (*see* paragraph (d) of this section) that those jadeite or rubies were mined or extracted from a country other than Burma and possesses the documents described in paragraph (e) of this section.

(d) *Certification of importer.* Pursuant to Additional U.S. Note 4(a), Chapter 71, HTSUS, if an importer enters any good (or withdraws any good from warehouse for consumption) under heading 7103, 7113, or 7116 of the HTSUS, the presentation of the entry serves as a certification by the importer that any jadeite or rubies contained in such good were not mined or extracted from Burma.

(e) *Certification of exporter.* If an importer enters (or withdraws from warehouse for consumption) jadeite, rubies, or jewelry containing jadeite or rubies:

(1) The importer must have in his possession a certification from the exporter (exporter certification) certifying that the jadeite or rubies were not mined or extracted from Burma, with verifiable evidence from the exporter that tracks the jadeite or rubies: In rough form, from mine to exportation; and for finished jadeite, polished rubies, and articles of jewelry containing jadeite or rubies, to the place of final finishing; and

(2) The importer must maintain, for a period of not less than 5 years from the date of entry of the good, a full record of, in the form of reports or otherwise, complete information relating to any act or transaction related to the purchase, manufacture, or shipment of the good.

(f) *Requirement to provide information.* An importer who enters any good (or withdraws any good from warehouse for consumption) under heading 7103, 7113, or 7116 of the HTSUS must provide all documentation to support the certifications described in paragraphs (d) and (e) of this section to CBP upon request or be subject to recordkeeping penalties under part 163 of the chapter.

(g) *Inapplicability.* This section does not apply to the following articles:

(1) Jadeite, rubies, and articles of jewelry containing jadeite or rubies that are reimported into the United States after having been previously exported

from the United States, including those that accompanied an individual outside the United States for personal use, if they are reimported into the United States by the same person who exported them, without having been advanced in value or improved in condition by any process or other means while outside the United States; and

(2) Jadeite or rubies mined or extracted from a country other than Burma, and articles of jewelry containing jadeite or rubies mined or extracted from a country other than Burma that are imported by or on behalf of an individual for personal use and accompanying an individual upon entry into the United States.

PART 163—RECORDKEEPING

■ 3. The general authority citation for Part 163, CBP regulations, continues to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 66, 1484, 1508, 1509, 1510, 1624.

■ 4. The Appendix to Part 163 is amended by adding a new listing under section IV in numerical order to read as follows:

Appendix to Part 163—Interim (a)(1)(A) List.

* * * * *
IV. * * *

§ 12.151 Documentation supporting importer's certification on jadeite, rubies, or articles of jewelry containing jadeite or rubies, including an exporter's certification.

* * * * *

Jayson P. Ahern,

Acting Commissioner, U.S. Customs and Border Protection.

Approved: January 12, 2009

Timothy E. Skud,

Deputy Assistant Secretary of the Treasury.

BILLING CODE 9111-14-P

INTERNATIONAL TRADE COMMISSION

19 CFR Part 207

Revised Procedures and Requests for Information During Adequacy Phase of Five-Year Reviews

AGENCY: United States International Trade Commission.

ACTION: Final rulemaking.

SUMMARY: The United States International Trade Commission ("the Commission") amends its Rules of Practice and Procedure to require that responses to notices of institution of

five-year reviews be filed within 30 days of publication of the notice, as opposed to the 50-day response period specified in its current rules. It also provides notice of its decision, which does not require a change in its rules, to seek additional information from interested parties at the institution of five-year reviews, and to seek information from purchasers during the adequacy phase of five-year reviews in certain circumstances.

DATES: *Effective Date:* This regulation is effective February 17, 2009.

Applicability Date: This regulation and the other changes to Commission procedures described in this notice will be applicable to five-year reviews instituted on or after March 1, 2009.

FOR FURTHER INFORMATION CONTACT:

Marc A. Bernstein, Office of General Counsel, U.S. International Trade Commission, telephone 202-205-3087, or John Ascienzo, Office of Investigations, U.S. International Trade Commission, telephone 202-205-3175. Hearing-impaired individuals can obtain information on this matter by contacting the Commission's TDD terminal at 202-205-1810. General information concerning the Commission may also be obtained by visiting its Web site at <http://www.usitc.gov>.

SUPPLEMENTARY INFORMATION: On July 17, 2008, the Commission published a notice of the proposed rulemaking (NOPR) in the *Federal Register*. 73 FR 40992 (July 17, 2008). In that notice the Commission proposed two sets of changes to the procedures it uses during the adequacy phase of five-year reviews that it conducts pursuant to 19 U.S.C. 1675(c). First, the Commission proposed modifying the information it requests interested parties furnish in their responses to the notice of institution it publishes pursuant to section 207.60(d) of the Commission's Rules of Practice and Procedure, 19 CFR 207.60(d), and proposed issuing short questionnaires to purchasers in some circumstances. This set of proposals did not require any amendment to the Commission's regulations. The second proposal sought to amend section 207.61(a) of the Commission's Rules of Practice and Procedure to require that responses to the notice of institution be filed within 30 days after its publication.

Although the Commission considers these rules to be procedural rules that are excepted from the notice and comment requirements of 5 U.S.C. 553(b)(3)(A), the Commission invited the public to comment on the proposed rule amendment and the other proposed changes to its procedures within 60 days of publication of the NOPR in the

Federal Register. The Commission received substantive comments from the following: (1) The law firm of Wiley Rein on behalf of the Steel Manufacturers Ass'n (SMA); (2) the law firm of Skadden, Arps, Slate, Meagher & Flom (Skadden); (3) the law firm of Kelley Drye & Warren (Kelley); and (4) the law firm of Stewart and Stewart (Stewart).

In adopting these changes to its rules and procedures, the Commission has fully considered the concerns expressed in the comments with respect to the potential burden on parties to reviews and the usefulness of the additional information sought by the Commission. These comments, and the Commission's responses thereto, are discussed comprehensively below. In light of the comments, the Commission intends to review its new information requests and changes to its procedures once it has had sufficient experience with them. In particular, the Commission intends to examine the changes' utility and relevance in attaining the desired objectives, as well as the rate of response by purchasers to the adequacy phase questionnaires.

As required by the Regulatory Flexibility Act, the Commission certifies that the amendment to its regulation will not have a significant impact on small business entities.

Changes in Commission Data Collection

The Commission has decided to adopt the changes in data collection proposed in the NOPR. Accordingly, each notice of institution the Commission issues will contain the additional information requests indicated in Appendix A to the NOPR, and in those reviews in which the Commission does not receive responses to the notice of institution from both domestic interested parties and respondent interested parties, the Commission will transmit brief questionnaires to purchasers, in the format indicated in Appendix B to the NOPR, shortly after it receives responses to the notice of institution. These changes will become effective for reviews instituted on or after March 1, 2009.

The commenters opposed both of the Commission's data collection proposals. With respect to the proposal to seek additional information in the notice of institution, commenters questioned the appropriateness of the Commission's stated objective of obtaining a more complete record to better enable it to decide whether to expedite a review. Skadden contended that the Commission should expedite reviews whenever responses from an interested party group are inadequate and that

Congress never intended the Commission to take considerations such as conditions of competition into account in deciding whether to expedite a review. Kelley expressed a similar view, maintaining that when parties have deliberately chosen not to participate in a review, it is a waste of resources for the Commission and other parties to undertake the costs of a full review. SMA asserted that the sole purpose of information requests in the adequacy phase is to ascertain sufficient commitment to participation in a five-year review. The Commission disagrees with the premise underlying these comments that an inadequate interested party group response should always result in an expedited determination. Neither the statute nor Commission practice dictates such a result. The statute states that “[i]f interested parties provide inadequate responses to the notice of institution * * * the Commission * * * may issue, without further investigation, a final determination based on the facts available.” 19 U.S.C. 1675(c)(3)(B) (emphasis added). The statutory language indicates that the Commission has the discretion whether to conduct an expedited review when it receives an inadequate response from an interested party group. While the Statement of Administrative Action (SAA) for the Uruguay Round Agreements Act states that the purpose of the expedited review procedure is “to eliminate needless reviews,” it does not suggest that all reviews in which an interested party group response may be inadequate are necessarily “needless.” H.R. Rep. 103-316, vol. I at 880 (1994). Indeed, in its 1998 rulemaking notice, the Commission expressly indicated that it “has the discretion to conduct a full review even when interested party responses are inadequate.” 63 FR 30599, 30604 (June 5, 1998). The circumstances the Commission identified as justifying such an exercise of discretion included mixed responses in grouped reviews (*i.e.*, adequate respondent interested party group responses for some subject countries but not others) and the existence of significant domestic like product issues. *Id.* at 30604. In recent years, the Commission has taken the position that changes in conditions of competition may also warrant conducting a full review even when a respondent interested party group response is inadequate. *E.g.*, *Certain Welded Stainless Steel Pipe from Korea and Taiwan*, Inv. Nos. 731-TA-540-541 (Second Review), USITC Pub. 3877 at 3 (Aug. 2006).

Commenters questioned whether the additional data requests would accomplish the Commission’s objective of improving the information available to it in expedited reviews. Three commenters contended that the additional information the Commission seeks will be too limited in temporal scope, because it will concern only one calendar year, to be particularly probative. They asserted that a single year’s worth of data may be misleading.

The Commission acknowledges the limitations of a data set that contains data for only one year. Nevertheless, the other data the Commission currently seeks in the notice of institution similarly encompass only a single calendar year. The Commission believes that obtaining additional data concerning capacity, financial information concerning production of the domestic like product, and prices for the domestic like product and subject merchandise in the U.S. and other world markets will improve the quality of the record in the reviews it chooses to expedite. Indeed, none of the commenters directly challenged this proposition. Although commenters expressed concern about the burden of providing the additional information the Commission proposes to collect, the Commission believes that burden will be reasonable and will certainly be less onerous than that involved in supplying data for several years.

Commenters further questioned whether any information purchasers may provide in the proposed “mini-questionnaires” will be useful to the Commission. Skadden and SMA contended that because purchasers cannot provide information pertinent to whether interested parties are willing to participate in a review and provide requested information to the Commission, the information they would supply would not be pertinent. Kelley and SMA expressed the concern that purchasers’ responses will be skewed by a desire to reduce the price of their inputs. Skadden and Stewart questioned whether the limited number of purchasers likely to receive the mini-questionnaires will be sufficiently representative to provide reliable information. Stewart also observed that the mini-questionnaires may prove burdensome to purchasers, who will be required to furnish the same information a second time should the Commission conduct a full investigation.

The commenters’ central objection to this proposal is premised on the view that the only purpose of the adequacy phase of a five-year review is to ascertain whether there are sufficient

responses to warrant conducting a full review, and if a group response is inadequate, the Commission must expedite the review. The Commission has previously disagreed with this premise and has reaffirmed the relevance of examining whether there have been significant changes in conditions of competition for the purpose of determining whether a full review is warranted, notwithstanding an inadequate group interested party response. The Commission acknowledges that the information the purchasers will provide in response to their mini-questionnaires will be limited in scope and may reflect the perspective of the submitter. Nevertheless, the Commission currently believes this limited information will provide a useful supplement to the information provided in the responses to the notices of institution as to how the current conditions of competition for the domestic like product and the subject merchandise may differ from those that the Commission examined in prior determinations. The Commission further notes that the responses to the notice of institution also reflect the perspective of the submitter. In addition, no purchaser interests submitted any comments objecting to the proposal. Nevertheless, as previously discussed, the Commission will further consider both the response rate to the mini-questionnaires and the utility of the information they provide once it has obtained experience issuing such questionnaires and analyzing responses to them.

Change in Commission Rule 207.61(a)

In the NOPR, the Commission proposed amending Commission Rule 207.61(a) to require that responses to the notice of institution be submitted within 30 days after publication of the notice, as opposed to the current 50 days. The Commission stated that this change would permit the Commission staff the additional time it would need to engage in the additional information collection and analysis that was contemplated under the proposed new data collection requests. Because the Commission has implemented the proposed new data collection requests, it has also determined to issue the proposed change to Commission Rule 207.61(a) in final form. The amended regulation will apply to all reviews instituted on or after March 1, 2009.

Each of the commenters opposed the proposed change to Commission Rule 207.61(a) on the grounds that a 30-day response period was insufficient. Skadden and Stewart contended that parties need the full 50 days currently

provided in the rule to file their substantive responses to the Commission because they will be devoting the first 30 days of that period preparing responses to the Department of Commerce. SMA stated that current requirements for adequacy comments are arduous and that increasing the amount of information that must be provided while reducing the amount of time available to prepare a submission is problematic. Kelley asserted that domestic producers will put more detailed information in a notice of review if they are aware that no respondent interested parties will participate. Notices of appearance need not be filed until 21 days after the notice of institution, and Kelley asserted that nine days would be insufficient time for a domestic producer to compile this more detailed information.

The commenters' objections proceed largely from the premise that a domestic producer will not begin to prepare its responses to either the Commerce notice of initiation or the Commission notice of institution until these notices are published in the **Federal Register**. The Commission does not agree with this premise. Interested parties are in a position to begin compiling information needed for a five-year review well before the publication of notices in the **Federal Register** beginning the reviews. The parties typically know the date that Commerce and the Commission will publish their **Federal Register** notices many months in advance. The Commission requests standardized information in interested parties' responses to notices of institution; the information requests are generally known prior to publication of the **Federal Register** notice. Similarly, the information that Commerce requires to be submitted in a notice of intent to participate in a sunset review is specified by regulation, and thus will be known well before initiation of the review. Kelley's assertion that responses to the notice of institution contain more detailed information in uncontested reviews than in contested reviews is not consistent with the Commission's experience.

List of Subjects in 9 CFR Part 207

Administrative practice and procedure, investigations.

■ For the reasons stated in the preamble, the Commission amends 19 CFR part 207 as follows:

PART 207—INVESTIGATIONS OF WHETHER INJURY TO DOMESTIC INDUSTRIES RESULTS FROM IMPORTS SOLD AT LESS THAN FAIR VALUE OR FROM SUBSIDIZED EXPORTS TO THE UNITED STATES

■ 1. The authority citation for part 207 continues to read as follows:

Authority: 19 U.S.C. 1336, 1671–1677n, 2482, 3513.

■ 2. Amend § 207.61 by revising paragraph (a) as follows:

§ 207.61 Responses to notice of institution.

(a) *When Information Must Be Filed.* Responses to the notice of institution shall be submitted to the Commission no later than 30 days after its publication in the **Federal Register**.

* * * * *

Issued: January 12, 2009.

By order of the Commission.

Marilyn R. Abbott,

Secretary to the Commission.

RIN 0910–AC23

Requirements for Submission of Bioequivalence Data; Final Rule

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending its regulations on the submission of bioequivalence data to require an abbreviated new drug application (ANDA) applicant to submit data from all bioequivalence (BE) studies the applicant conducts on a drug product formulation submitted for approval. In the past, ANDA applicants have submitted BE studies demonstrating that a generic product meets bioequivalence criteria in order for FDA to approve the ANDA, but have not typically submitted additional BE studies conducted on the same drug product formulation, such as studies that do not show that the product meets these criteria. FDA is amending the regulation because we now believe that data from additional

BE studies may be important in our determination of whether the proposed formulation is bioequivalent to the reference listed drug (RLD), and are relevant to our evaluation of ANDAs in general. In addition, such data will increase our understanding of how changes in components, composition, and methods of manufacture may affect product formulation performance. **DATES:** The rule is effective July 15, 2009.

FOR FURTHER INFORMATION CONTACT:

Aida L. Sanchez, Center for Drug Evaluation and Research (HFD–650), Food and Drug Administration, 7520 Standish Pl., Rockville, MD 20855, 240–276–8782.

SUPPLEMENTARY INFORMATION:

I. Background

In the **Federal Register** of October 29, 2003 (68 FR 61640), FDA proposed to amend its regulations in parts 314 and 320 (21 CFR parts 314 and 320) to require an ANDA applicant to submit data from all BE studies that the applicant conducts on a drug product formulation submitted for approval. Section 505(j)(2)(A)(iv) of the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 355(j)(2)(A)(iv)) requires that ANDA applicants submit, among other things, information showing that the applicant's drug is bioequivalent to a drug that has previously been approved by FDA. Under the regulations at § 314.3(b), the approved drug product identified by FDA as the drug product on which an ANDA applicant relies for approval is the RLD. The requirement that an ANDA applicant submit information that shows the proposed product is bioequivalent to the RLD is described in FDA's regulations at § 314.94(a)(7). Section 320.24 sets forth the types of evidence acceptable to establish BE. The most common BE studies are those performed on solid oral dosage forms of drugs that are absorbed into the systemic circulation. BE data provide an estimate of the rate and extent of drug absorption for a test and reference product. These data are examined, using statistical procedures, to determine whether the test product meets BE limits.

A BE study may fail to show that a test product meets BE limits because the test product has significantly higher or lower relative bioavailability (i.e., measures of rate and extent of absorption compared to the reference product). In some cases, BE will not be demonstrated because there are inadequate numbers of subjects in the study relative to the magnitude of intrasubject variability, and not because

of either significantly high or low relative bioavailability of the product. Where the relative bioavailability of a product is too low, the concern is that not enough of the active ingredient is reaching the site of action, and therefore the product may not be as therapeutically effective as the RLD. Where the relative bioavailability of a test product is too high, the concern with the product is not its therapeutic efficacy, but rather its safety relative to the RLD. When the variability of the test product is high, the concern relates to both safety and efficacy. The variability may suggest that the test product does not perform as consistently as the reference product, and the test product may be too variable to be clinically useful.

The act and FDA regulations require that an ANDA applicant submit information demonstrating BE of a proposed drug to the RLD, but do not specify whether all BE studies must be submitted. It has been the practice of ANDA applicants to submit evidence of bioequivalence consisting of studies demonstrating that the rate and extent of absorption of the test product meet BE limits. Thus, ANDA applicants that have conducted multiple studies on a final formulation, producing both passing and nonpassing results, have generally not submitted the results of the nonpassing study or studies to FDA. Similarly, ANDA applicants that have conducted multiple studies on a final formulation, producing more than one passing result, have generally not submitted the results of all of the passing studies to FDA. As a result, FDA infrequently sees data from such additional studies and is generally unaware of the existence of such studies. In rare instances, ANDA applicants have submitted additional BE studies, or the agency has learned about such studies through other means.

II. Summary of the 2003 Proposed Rule

FDA determined that the submission of all bioequivalence studies, both passing and nonpassing, is necessary for the purposes of evaluating a drug product submitted for approval under an ANDA. Accordingly, the agency proposed to amend its regulations in parts 314 and 320. Specifically, the agency proposed to amend:

- the ANDA content requirements (§ 314.94(a)(7)(i))
- the ANDA amendment requirements (§ 314.96(a)(1)), and
- the requirements for submission of in vivo bioavailability and bioequivalence data (§ 320.21(b)(1)).

The agency did not propose to amend the text of § 320.21(c). However, because

§ 320.21(c) references the requirements of § 320.21(b)(1), the proposed changes to § 320.21(b)(1) would also modify the requirements of § 320.21(c). In addition, FDA explained how it intended to interpret two of its current regulations to be consistent with the proposal. Specifically, FDA explained that it intended to interpret the regulation applicable to an ANDA submitted under an approved suitability petition (§ 314.94(a)(7)(ii)) and the postmarketing reporting regulation (§ 314.81(b)(2)(vi)) to require the submission of all BE studies, both passing and nonpassing.

The agency did not propose to amend the section heading of § 320.21 (“Requirements for submission of in vivo bioavailability and bioequivalence data”), but after reviewing the public comments, the agency believes that the section heading of § 320.21 may cause confusion. As explained in the proposed rule, FDA is requiring the submission of all bioequivalence studies conducted on a drug product formulation submitted for approval. This requirement includes both in vivo and in vitro studies that are conducted for the purpose of establishing bioequivalence. Therefore, FDA is changing the section heading of § 320.21 to omit the reference to in vivo studies, to more clearly reflect the fact that both in vivo and in vitro studies must be submitted.

III. Description of the Final Rule

We are revising our regulations to require applicants to submit data on all BE studies, including studies that do not meet passing bioequivalence criteria, which are performed on a drug product formulation submitted for approval under an ANDA, or in an amendment or supplement to an ANDA that contains BE studies. Applicants will also be required to submit data in an annual report on all postmarketing BE studies conducted or otherwise obtained on the approved drug product formulation during the annual reporting period.

The provisions of the proposed rule stated that BE studies on the “same drug product formulation” must be submitted. The proposed rule did not specifically define the term “same drug product formulation.” However, in the preamble to the proposed rule, the agency stated that “FDA intends that the terminology ‘same drug product formulation’ will include formulations that have minor differences in composition or method of manufacture from the formulation submitted for approval, but are similar enough to be relevant to the agency’s determination of bioequivalence. For example, where an applicant makes formulation or

manufacturing changes of the type that qualify as level 1 or level 2 changes in FDA’s current guidances on scale up and postapproval changes (SUPAC) listed below, the agency will consider the original and modified products to be similar enough to constitute the same drug product formulation for the purposes of the proposed rule” (68 FR 61640 at 61643). The proposed rule then listed six SUPAC guidances.

FDA received a significant number of comments indicating that using the SUPAC guidances as a way of explaining which BE studies must be submitted to the agency did not provide sufficient clarity. For example, one comment on the proposed rule asked if the rule will require the submission of pilot studies, including pilot pharmacokinetic studies in animals, or in vitro studies. Another comment asked whether it will be necessary to submit prior studies—such as a pharmacokinetic study on the metabolite only, a pharmacokinetic study in urine, a pharmacodynamic study, a clinical endpoint BE study or other clinical study, or a sensitization or irritation study for transdermal patches—that are not directly relevant to the assessment of BE by the current criteria.

The final rule continues to use the term “same drug product formulation.” However, to eliminate the confusion caused by reference to the SUPAC guidances, we have added a definition of the term “same drug product formulation.” As set forth in § 320.1(g) of this final rule, the term “same drug product formulation” means the formulation of the drug product submitted for approval and any formulations that have minor differences in composition or method of manufacture from the formulation submitted for approval, but are similar enough to be relevant to the agency’s determination of bioequivalence (§ 320.1(g)). This definition is consistent with FDA’s intended meaning for the term “same drug product formulation,” as described in the proposed rule (68 FR 61640 at 61643), and eliminates the need to refer to the SUPAC guidances as discussed further in this document.

In addition, as stated in the preamble to the proposed rule, FDA intends to make available shortly a draft guidance intended to help affected entities better understand which BE studies should be submitted, as well as the format FDA recommends for submission.

FDA is revising §§ 314.94(a)(7)(i), 314.96(a)(1), 320.1(g), 320.21 (section heading), and 320.21(b)(1), as well as modifying § 320.21(c) (which references the requirements of § 320.21(b)(1)) to

require that an applicant submitting BE studies in an ANDA, ANDA amendment, or ANDA supplement submit: (1) Full reports of BE studies upon which the applicant relies for approval and (2) either full or summary reports of all other BE studies conducted on the same drug product formulation. In addition to amending these provisions, FDA is also clarifying its interpretation of two regulations, §§ 314.94(a)(7)(ii) and 314.81(b)(2)(vi) as follows:

As currently written, § 314.94(a)(7)(ii) requires an applicant submitting an ANDA under a petition approved under § 314.93 to submit the results of any bioavailability or bioequivalence testing required by the agency to show that the active ingredients of the proposed drug product are of the same pharmacological or therapeutic class as those in the RLD, and that the proposed drug product can be expected to have the same therapeutic effect as the RLD. Consistent with the regulatory changes described above, FDA intends to interpret § 314.94(a)(7)(ii) to require the submission of results from all bioavailability and BE studies, passing and nonpassing, conducted on the same drug product formulation. An applicant submitting an ANDA under a petition approved under § 314.93 will now be required to submit complete reports of the bioavailability or BE studies upon which the applicant relies for approval, and a complete or summary report for all other bioavailability or BE studies on the same drug product formulation.

As currently written, § 314.81(b)(2)(vi) requires an ANDA applicant to submit, in an annual report, the results of “biopharmaceutical, pharmacokinetic, and clinical pharmacology studies * * * conducted by or otherwise obtained by the applicant” during the annual reporting period. FDA intends to interpret this section to require ANDA applicants with approved ANDAs to submit reports of all BE studies, both passing and nonpassing, conducted or obtained by the applicant during the annual reporting period on the approved drug product.

IV. Comments on the Proposed Rule

FDA received 11 comments on the proposed rule from manufacturers, trade associations, and law firms. On June 11, 2004, FDA held a meeting to discuss the proposed rule with the Generic Pharmaceutical Association (GPhA). The meeting minutes have been entered into the docket, and the comments provided by GPhA are included in the comments we respond to in this document. The majority of the comments supported the proposed

amendments to FDA’s regulations. Several comments requested clarification on various aspects of the rule. The final rule is described in section III of this document.

A. General Comments

(Comment 1) Several comments, including comments from manufacturers, law firms, and trade associations, commended FDA on the proposal. In particular, these comments noted the importance of requiring the submission of all bioequivalence data to assess the safety and effectiveness of ANDA products, and to enhance FDA’s knowledge concerning bioequivalence.

(Response) We appreciate the support expressed in these comments and agree that requiring the submission of these data is very important.

(Comment 2) One comment specifically commended FDA for stating in the proposed rule that the agency is not aware of any adverse public health consequences associated with products for which studies were not submitted, nor of any information on any currently marketed generic product suggesting that the product is not bioequivalent to a reference listed drug to which it has been designated as therapeutically equivalent.

(Response) FDA notes that since publication of the proposed rule, we have not become aware of any such information.

(Comment 3) In the preamble to the proposed rule we stated: “Even when additional BE studies are not critical to the agency’s bioequivalence determination for the specific product being reviewed, the data provide valuable scientific information that increases the agency’s knowledge and understanding of bioequivalence and generic drug development and promote further development of science-based bioequivalence policies” (68 FR 61640 at 61641). One comment stated that the goal of increasing FDA’s knowledge and understanding of bioequivalence should not be accomplished by imposing regulatory requirements on ANDA applicants. This comment suggested that the appropriate way to achieve this goal will be to hold joint industry-agency meetings and conferences.

(Response) We agree with the comment that if the sole purpose of this rule was to increase the agency’s understanding of BE, there would be alternative means for FDA to achieve this goal. As stated in the proposal, however, the primary purpose of the requirement to submit information from all BE studies on the same drug product formulation is that “[d]ata contained in additional passing and nonpassing BE

studies can be important to FDA’s assessment of bioequivalence for a specific product” (68 FR 61640 at 61641). Currently, ANDA applicants are only required to submit one BE study (or two, if a fed study is required). Based on one or two studies, FDA might conclude that the product is bioequivalent to its RLD. If the agency receives other BE studies conducted by the applicant, and these studies failed to show bioequivalence, the agency might make a different decision about whether to approve the ANDA than it would have if the agency had received only the passing study. In such a case, receipt of additional BE studies will be critical to FDA’s determination as to whether a generic product is equivalent to its RLD. Unless FDA receives all BE studies on the same drug product formulation, it is not possible for the agency to make an informed, scientifically based decision about bioequivalence. Thus, the rule requires that all BE studies conducted on the same drug product formulation be submitted. In other cases, FDA’s receipt of additional BE studies might not change the agency’s decision that a product is bioequivalent to its RLD. In both cases, however, review of the additional studies will serve the ancillary purpose of increasing the agency’s understanding of bioequivalence, and provide added confidence in the agency’s BE determination. In setting out the second purpose (that of increasing the agency’s knowledge of bioequivalence), we note in the preamble to the proposed rule that this ancillary purpose is served even when the additional BE studies do not prove to be critical to the agency’s bioequivalence determination for the specific product being reviewed (68 FR 61640 at 61641).

(Comment 4) One comment suggested that FDA amend § 314.127(b) of its regulations to reflect that failure to submit all required BE study reports is grounds for receiving an “unapprovable” letter.

(Response) FDA generally disagrees with the comment. Failure to submit all BE studies will be grounds for refusing to receive the ANDA under § 314.101(b)(1) of FDA’s regulations because the ANDA will not be complete. It should be noted that section 505(j)(4) of the act describes the grounds for refusing to approve an ANDA. Under certain circumstances, one or more unreported BE studies might provide the basis for refusing to approve an ANDA under section 505(j)(4)(F) of the act (“information submitted in the application is insufficient to show that the drug is bioequivalent * * *”). See also § 314.127(a)(6). For example, if,

while an ANDA is pending, FDA discovers that the ANDA omitted one or more studies that failed to demonstrate BE, FDA might conclude that the BE information in the application is insufficient.

(Comment 5) Several comments expressed concern about the burden that will be imposed on the ANDA review process and agency resources (e.g., reviewers and inspectors) when the rule is implemented. One comment expressed concern that the workload created by this rule will slow action on pending ANDAs. Another comment noted that FDA has been trying to reduce the time both for BE review and response to correspondence by the Office of Generic Drug's (OGD's) Division of Bioequivalence. This comment suggested that adequate hiring and retention should be established in the Division of Bioequivalence before implementing the rule.

(Response) FDA crafted the requirements of the rule mindful of balancing its need for additional BE information with the need to ensure that the ANDA review process is not unnecessarily burdened. It was the desire to achieve this balance that, in part, led FDA to require only the submission of BE studies conducted with the "same drug product formulation" as that submitted for approval, rather than requiring the submission of all BE studies conducted with all developmental formulations, as some comments suggested. FDA appreciates, however, that the final rule will increase the number of studies reviewed by the Division of Bioequivalence, and the agency is working on hiring additional staff to handle this increase. FDA is also developing databases that will help decrease the amount of correspondence received by OGD. We believe these steps will ensure that the ANDA review process continues to be efficient.

(Comment 6) In the preamble to the proposed rule, FDA stated that an applicant "will rarely, if ever, conduct a postmarketing BE study other than one required for an ANDA supplement" (68 FR 61640 at 61643). One comment suggested that requiring applicants to submit failing BE studies will create an additional disincentive to perform postmarketing BE studies, which may discourage applicants from considering ways to improve their manufacturing processes.

(Response) FDA believes that the concern expressed in the comment is unfounded. The major disincentives to performing postmarketing BE studies are the financial costs and resource expenditures for the applicant. That is

why such studies are rarely performed, except when required for an ANDA supplement. In any event, FDA believes that any potential disincentive created by requiring that such studies be submitted to the agency will be negligible. Moreover, FDA believes that industry will agree that because the drug will already be on the market, in the event that a postmarketing study fails to demonstrate bioequivalence, it would be particularly important for the agency and the applicant to examine the reason for the failure.

(Comment 7) One comment stated that if ANDA holders are going to be required to submit failed studies performed in accordance with the SUPAC guidances, new drug application (NDA) holders should also be required to submit such studies.

(Response) NDA applicants and NDA holders are already required to submit failed BE studies. Section 314.50(d)(3) of FDA regulations requires an NDA to contain a description of all bioavailability and pharmacokinetic studies in humans performed by or on behalf of the applicant. The requirement to submit bioavailability studies includes reports of any bioequivalence studies performed by or on behalf of the applicant.

B. Same Drug Product Formulation

(Comment 8) Several comments requested clarification of the term "same drug product formulation." One comment stated that clarification of the language was important to ensure that it was not subject to varying interpretations by ANDA applicants.

(Response) The final rule adds in § 320.1(g) a definition of the term "same drug product formulation" to mean the formulation of the drug product submitted for approval and any formulations that have minor differences in composition or method of manufacture from the formulation submitted for approval, but are similar enough to be relevant to the agency's determination of bioequivalence. FDA's draft guidance on the submission of BE data, when available, will expand on this definition by providing specific examples of formulations that FDA considers to be the same drug product formulation. For example, FDA considers two drug products that use different ingredients intended to affect the color or flavor of the drug product, or use a different technical grade and/or specification of an excipient, to be the same drug product formulation. If an applicant has questions that are not answered by the draft guidance on submission of BE data, the applicant should contact OGD for assistance in

applying the term "same drug product formulation."

(Comment 9) Two comments asked FDA to revise the concept "same drug product formulation." One comment requested that the term be limited to "studies which are statistically powered correctly and have a batch size of at least 100,000 packaged units." Another comment asked that the term be broadly interpreted to require the submission of all BE studies performed on the various formulations of a drug for which an ANDA is ultimately submitted. For example, the comment suggested that ANDA applicants should be required to submit BE studies performed on formulations that differ by SUPAC level 3 changes from the formulation submitted for approval. The comment suggested that failure to broadly interpret "same drug product formulation" will result in ANDA applicants making certain SUPAC level 3 changes (such as changing the manufacturing site) in an attempt to avoid submitting failed study results. In addition, the comment noted that the submission of all BE data on all formulations could serve the ancillary purposes of helping FDA to: (1) Refine the SUPAC levels and (2) establish chemistry, manufacturing, and controls specifications.

(Response) FDA disagrees with both of these comments. The term "same drug product formulation" is intended to balance competing concerns. To limit the definition to require only the submission of studies that are statistically powered correctly and have a particular batch size could undermine the goals of the rule. Such a limitation will result in FDA failing to receive results from pilot studies. As discussed in greater detail below, FDA appreciates that if a pilot study is underpowered, it cannot be expected to satisfy BE criteria. Nevertheless, such studies provide valuable information that is relevant to FDA's bioequivalence determination. Therefore, FDA declines to limit the scope of the term "same drug product formulation" as suggested in the comment.

FDA also declines to broadly interpret the definition to include all formulations tested during the drug's development program. Such an interpretation would: (1) Increase the burden on ANDA applicants, (2) likely result in the submission of data irrelevant to the agency's determination of bioequivalence, and (3) potentially slow the ANDA review process without enhancing FDA's ability to analyze whether the formulation submitted for approval is bioequivalent to the RLD. Moreover, FDA believes that the

comment's concern about ANDA applicants making SUPAC level 3 changes to a formulation to avoid submitting failing results is not relevant to the final rule. As discussed above, the final rule does not use the SUPAC guidances to interpret the term "same drug product formulation." Moreover, if a formulation failed to demonstrate bioequivalence, it is unlikely that manufacturing the same or very similar formulation at a different site would result in a passing BE study for submission in an ANDA. (Note that the issue of a change in manufacturing site is also discussed in the response to comment 15.) In addition, FDA believes that the intended goals of the rule are best served by focusing the agency's review on data relevant to the formulation submitted for approval. Therefore, the agency believes that the disadvantages of employing such a broad interpretation of "same drug product formulation" outweigh the theoretical benefits. Overall, FDA believes that its definition of "same drug product formulation" strikes an appropriate balance.

(Comment 10) One comment suggested that FDA's definition of "same drug product formulation" resulted in an inconsistency between how FDA treats changes pre- and postapproval. Specifically, the comment suggested that because a BE study will not be required for a SUPAC level 1 or 2 change postapproval, FDA should not require that BE data be submitted preapproval for a formulation that differs only by a SUPAC level 1 or 2 change from the formulation submitted for approval.

(Response) This comment reflects the confusion created by our proposal to rely on SUPAC guidance concepts to determine when a drug has the same formulation for purposes of this rule. The SUPAC guidances provide recommendations for when FDA will require the conduct of a BE study to support a formulation or manufacturing change submitted in an amendment or supplement. In short, they provide guidance for when new data will be required to support a change to the drug product.

In contrast, this rule does not address when data are required to support a product application or product change. It does not require that a new study be conducted under any circumstances. The rule merely addresses situations where an applicant has conducted BE studies in addition to those it seeks to rely on in its ANDA or ANDA amendment or supplement. It also indicates when the results from those additional studies must be submitted to

FDA, because they were conducted on a drug product formulation that is the same as, or similar to, that covered by the application. While SUPAC is focused on determining what product changes will trigger the need for new data to support the change, this rule focuses on when existing data must be submitted to FDA, because they are relevant to the drug product with the same formulation.

FDA had initially proposed to refer to the SUPAC guidances to determine when drug products with minor changes are considered to be the same formulation. Under SUPAC, level 1 or 2 changes to a drug product formulation do not require a manufacturer to conduct BE testing or submit BE data in order to market the drug product with those changes. Level 3 changes are fairly significant and require a manufacturer to conduct a BE test to demonstrate the equivalence between the new and old formulations before it may market the new formulation. However, under this rule, BE test data on a product that is three SUPAC levels different from the approved or marketed formulation would not need to be submitted if that formulation is not, and will not, be marketed. In the proposed rule, we suggested that BE data on products reflecting modest changes, described as SUPAC level 1 and 2 changes, are relevant to the marketed formulation and would need to be submitted. As a result, reference to the SUPAC concepts created confusion, because the instances where SUPAC recommends that manufacturers conduct and submit BE test data to support product changes were the exact situations where this rule would not require submission of existing BE data, because the data are of limited applicability to the formulation subject to the application. Accordingly, we are no longer referring to the SUPAC guidances in the final rule. Instead, we have included a definition of "same drug product formulation" in § 320.1(g) of the final rule, in order to provide assistance in determining when this rule requires submission of BE data on a similar formulation.

C. Bioequivalence Studies That Must Be Submitted

(Comment 11) Several comments requested clarification about the types of studies that will be required to be submitted under the rule. In particular, several comments questioned whether "pilot studies" or studies that were designed not to evaluate BE, but to generate BE data, will have to be submitted under the rule. Such studies could be performed to: (1) Obtain information related to the performance

of prototype drug formulations, (2) estimate the appropriate number of subjects necessary for the definitive BE study, (3) determine the appropriate plasma concentration time curves, or (4) determine whether a drug entity can be reliably measured in the media chosen. Some comments suggested that such studies should not be required to be submitted because they may not be powered to pass BE statistical criteria and, as a result, are arguably not "BE studies."

(Response) The term "all other bioequivalence studies" is used in the rule without limitation. It is intended to capture all studies generating BE data, including pilot studies. Therefore, complete or summary reports of pilot studies conducted with formulations that are the "same drug product formulation" as that submitted in the ANDA must be submitted under the rule. FDA believes that the submission of pilot studies is important because they may provide valuable BE information. For example, they may provide FDA information about the assay used in the BE study relied on for approval. FDA appreciates the concern raised in the comments about pilot studies potentially being underpowered and not designed to evaluate bioequivalence. The agency will fully consider these issues when reviewing pilot studies. If a pilot study is not properly powered, FDA will not expect it to demonstrate bioequivalence.

(Comment 12) One comment asked if the rule will require submission of pilot pharmacokinetic studies in animals or in vitro studies.

(Response) The final rule does not require the submission of animal studies. In vitro studies must be submitted when in vitro testing is conducted to demonstrate bioequivalence (§ 320.24(b)(5)). Examples include in vitro testing for nasal sprays and resin binding testing for bile acid sequestrants. When an in vivo study is submitted to show bioequivalence of a formulation, all other in vivo and in vitro bioequivalence data, both passing and nonpassing, for that formulation must be submitted as well. Similarly, when an in vitro study is submitted to show bioequivalence of a formulation, all other in vivo and in vitro bioequivalence data, both passing and nonpassing, for that formulation must be submitted. The data from in vitro dissolution studies conducted for purposes other than to show bioequivalence need not be submitted under this rule, but may be required by other regulations (for example, § 314.94(a)(9)). In the proposed rule,

FDA cited § 320.24 as the regulatory requirement which “sets forth the types of evidence acceptable to establish bioequivalence.” According to § 320.24(a), bioavailability may be demonstrated by several in vivo and in vitro methods. Section 320.24 makes it clear that bioequivalence studies may consist of either in vivo or in vitro studies.

Since reviewing the comments to the proposed rule, FDA has become aware that the language of the proposed rule may cause confusion regarding the requirement that all in vitro bioequivalence studies must be submitted. In particular, the section heading of § 320.21, “Requirements for submission of in vivo bioavailability and bioequivalence data,” may lead to this misinterpretation. Thus, in this final rule, FDA is changing the section heading of § 320.21 so that it removes the specific reference to in vivo data.

(Comment 13) One comment asked if prior studies that are not directly relevant to the assessment of BE by the current criteria must be submitted. For example, if the current BE recommendation for a particular product specifies a pharmacokinetic study on the parent drug in plasma, will the following types of studies have to be submitted: A pharmacokinetic study on the metabolite only, a pharmacokinetic study in urine, a pharmacodynamic study, a clinical endpoint BE study or other clinical study, a sensitization or irritation study for transdermal patches, etc.?

(Response) Yes, all studies on the same drug product formulation as defined in this final rule must be submitted regardless of what FDA’s current criteria for BE testing for the product are. Otherwise, the agency might not be aware of a study that is relevant to our determination of whether two products are bioequivalent. For example, if a firm conducted a pharmacodynamic study that failed to show BE, and then conducted a pharmacokinetic study that demonstrated BE, we would want to know about the pharmacodynamic study.

(Comment 14) One comment noted that the SUPAC guidance states that for narrow therapeutic index (NTI) drugs, biostudies are required for all formulation changes except level 1 changes. The comment asked whether this means that biostudies on any formulations differing by more than SUPAC level 1 for NTI drugs will not need to be submitted under the new rule.

(Response) As discussed in section III of this document, the final rule does not

use the SUPAC guidances to explain what the regulation means by “same drug product formulation.” Instead, the final rule defines “same drug product formulation” as the formulation of the drug product submitted for approval and any formulations that have minor differences in composition or method of manufacture from the formulation submitted for approval, but are similar enough to be relevant to the agency’s determination of bioequivalence. Under the final rule, all biostudies on the same drug product formulation must be submitted, regardless of the level of change under SUPAC.

(Comment 15) One comment asked if a change in manufacturing site alone (a SUPAC level 3 change) will make the products at the original and new sites not the same drug product formulation even if the formulations and manufacturing processes were otherwise identical.

(Response) No. Manufacturing site changes are not relevant to the definition of “same drug product formulation.” Studies conducted for products that are considered the “same drug product formulation” must be submitted whether the products are manufactured at the same or different manufacturing sites.

(Comment 16) One comment stated that in some cases, it may be impossible to determine whether a particular older formulation on which a biostudy had been conducted falls within the scope of a SUPAC level 2 change from the approved or submitted formulation. For example, the older formulation has only single point dissolution data, precluding an f2 comparison; or multiple dissolution conditions were used, some of which yield f2 factors greater than 50 and some less than 50. In such cases, how is an applicant to decide whether or not a biostudy on an older formulation needs to be submitted?

(Response) If a biostudy was conducted on a product that is the same drug product formulation as defined in the final rule, it must be submitted. Dissolution testing is not a criterion for submission.

(Comment 17) One comment stated that the language defining the “final formulation” may not capture all relevant bioequivalence data. For example, formulations containing an active ingredient with a particle size or morphic form that differs from the drug for which the ANDA is submitted would not be considered the “final formulation” of the drug. Thus, ANDA sponsors would not be required to submit bioequivalence data performed on these formulations, although such differences might affect the drug’s

pharmacokinetic profile, safety, and effectiveness.

(Response) FDA disagrees. The term “same drug product formulation,” as defined in § 320.1(g) of this rule, includes formulations that differ in particle size and morphic form; thus, studies on such formulations would need to be submitted to FDA.

Section 505(j)(2) of the act specifies that an ANDA must contain, among other things, information to show that the active ingredient in the generic drug product is the “same as” that of the RLD. Section 314.92(a)(1) of FDA regulations provides that the term “same as” means, among other things, “identical in active ingredient(s).” In the discussion of “sameness” of active ingredient(s) in the preamble to the final rule adopting the ANDA regulations, FDA specifically rejected a proposal that would have required an ANDA applicant to show that the active ingredient in its generic drug product and the active ingredient in the RLD “exhibit the same physical and chemical characteristics, that no additional residues or impurities can result from the different manufacture or synthesis process and that the stereochemistry characteristics and solid state forms of the drug have not been altered” (57 FR 17950 at 17958, April 28, 1992). Differences in particle size and polymorphic forms of a drug substance are not differences in chemical structure, but only in internal solid-state structure.

(Comment 18) One comment questioned whether FDA’s interpretation of § 314.81(b)(2)(vi) will require an applicant to submit studies performed by someone other than the applicant. For example, will the applicant be required to submit a study performed by a competitor (a “challenge study”)? The comment noted that a complete or summary report may not be available to the applicant. Another comment asked if it will be necessary to conduct literature searches to find BE studies conducted by third parties.

(Response) Section 314.81(b)(2)(vi) requires the submission of data from “biopharmaceutic, pharmacokinetic, and clinical pharmacology studies * * * conducted by or otherwise obtained by the applicant.” This language clearly contemplates that if an applicant obtains the results of a study conducted by a third party, the results must be submitted in the annual report. It will not be necessary to conduct literature searches to find BE studies conducted by third parties. However, if an applicant obtains a complete or summary report, that report must be submitted. If the applicant obtains study

results in a form other than a complete or summary report, those results must be submitted in the annual report.

(Comment 19) One comment asked whether the rule requires applicants to contact previous owners of the ANDA to obtain BE studies.

(Response) Section 314.72 of FDA regulations concerns change in ownership of an application. Section 314.72(a)(2)(iii) requires the new owner of an application either to submit to FDA a statement that the new owner has a complete copy of the approved application, or to request a copy of the application from FDA. In addition, FDA believes it is incumbent upon the purchaser of an ANDA to request from the owner all biostudies conducted on the drug product, even if they were not submitted to the ANDA.

D. Summary and Complete Reports

(Comment 20) One comment stated that FDA should clarify the appropriate content of complete and summary reports to ensure that FDA receives the information necessary to fully evaluate bioequivalence.

(Response) FDA believes that applicants are aware of the appropriate content of a complete BE study report, as they are currently required to submit such a report for the study relied on for ANDA approval. The draft guidance on the submission of BE data, when available, will discuss the content of summary reports in greater detail.

(Comment 21) One comment suggested that the submission of complete or summary reports of all other BE studies is unnecessary. Instead, the comment suggested, the product development report submitted as part of the ANDA may be the most appropriate place to put a small summary of the results of all bioequivalence studies performed on the product prior to ANDA submission.

(Response) FDA disagrees with this comment. While FDA agrees that the product development report provides helpful information for the ANDA review process, a small summary of all bioequivalence studies in the product development report will be insufficient to satisfy the objectives of the rule. The agency is requesting complete or summary reports of the studies in order to be able to evaluate the study design and the resulting data. A small summary in the product development report will likely provide insufficient information for the agency to adequately evaluate why certain studies failed and others passed.

(Comment 22) One comment stated that in many cases, an applicant may request only a summary report from a

contract research organization (CRO) when a test product has failed to meet standard BE criteria. Therefore, if after the applicant submits the summary report, FDA requests a complete report, the applicant will need additional time and will incur additional costs for the CRO to generate a complete report.

(Response) FDA appreciates that industry's current practice may be to request only summary reports from CROs for failing studies. As noted in the preamble to the proposed rule, FDA foresees that in the majority of cases, a summary report will be sufficient to satisfy the rule. For example, in the case of a pilot study that was not powered to demonstrate bioequivalence, the agency does not foresee the need for a complete report. However, in light of the new submission requirements, the agency encourages applicants to consider whether there is a clear reason, such as failure to properly power the study, for a study's failure to demonstrate bioequivalence. In cases where the reason the study failed is unclear, the applicant may want to consider requesting a complete report rather than a summary report from the CRO to assist the applicant in evaluating the study.

E. FDA Criteria for Evaluating Studies

In the preamble to the proposed rule, FDA listed the following four factors as examples of criteria it will use to evaluate BE studies when at least one study failed to demonstrate bioequivalence: (1) The statistical power of the studies, (2) minor differences in the formulation used in each study, (3) whether the product was administered consistently with the RLD's labeling in every study, and/or (4) various other study design issues (68 FR 61640 at 61641).

(Comment 23) While recognizing that it is impossible for FDA to prospectively identify all potential issues, two comments requested clarification about the criteria FDA plans to use to: (1) Determine when to require the submission of a complete report of a study when a summary report has been previously submitted and (2) evaluate bioequivalence when at least one of the studies submitted by the applicant failed to demonstrate bioequivalence. In particular, the comments requested clarification about: (1) What additional data will be required to demonstrate to FDA that a drug is bioequivalent to the RLD, (2) whether FDA will be primarily concerned with the conditions under which the drug was administered or the rationale for the selection of certain types of study design characteristics, and (3) whether decisions about bioequivalence will be at the sole

discretion of the reviewer. Another comment asked how conflicting results from two or more BE studies will be assessed. In particular, the comment asked if FDA will perform a meta-analysis on pooled studies. One comment expressed concern that if criteria were not provided, it could increase the costs associated with compliance with the rule.

(Response) Generally, the criteria FDA reviewers will use to evaluate BE studies submitted in response to the rule are the same as the criteria they currently use to evaluate BE studies relied on for ANDA approval. Those criteria have been discussed in detail in various FDA guidances (available on the Internet at <http://www.fda.gov/cder/guidance/index.htm> under Biopharmaceutics). When an applicant is submitting both passing and nonpassing studies, it should include its own analyses of the data and any potential explanations for nonpassing results. The decision tree used by the applicant will likely be similar to that used by FDA. While it is impossible to prospectively state which issues will be most relevant in any particular case, examples of likely questions that should be included in that decision tree are:

- Was the study correctly powered?
- Was the assay appropriate?
- Was the formulation inappropriate, and if so, how has the formulation been changed?
- Was the drug properly administered in the failing study?
- Were there technical flaws in the way the study was conducted?

The applicant's explanations for failing results will likely be a reviewer's first step in evaluating whether to request the submission of a complete report of any particular study. FDA anticipates that, in most cases, a summary report will be sufficient. The applicant's explanations will also likely be a reviewer's first step in evaluating how to weigh conflicting BE data. However, the reviewer will also undertake an independent scientific analysis of the study reports submitted. FDA will not rely on a meta-analysis of pooled studies.

As the comments recognize, it is difficult to predict what type of information FDA may request to assure the agency that the drug is bioequivalent to the RLD. For example, FDA may choose to inspect the site where a submitted study was conducted, or FDA may request additional data. As discussed in the proposed rule, the responsibility to demonstrate that the ANDA product is bioequivalent to the RLD rests with the applicant. Therefore, it will ultimately be the applicant's

responsibility to demonstrate why the nonpassing study or studies should not affect a determination that the ANDA product is bioequivalent to the RLD.

(Comment 24) One comment stated that the four examples provided by FDA in the preamble to the proposed rule regarding the criteria for evaluating BE studies submitted (i.e., statistical power, minor differences in formulations, product administration, and other study design issues) are so critical that FDA should require the submission of all BE studies conducted on all formulations of the drug, rather than only requiring the submission of studies conducted on the "same drug product formulation." As an example, the comment stated that requiring the submission of all studies conducted on all formulations will allow FDA to identify situations where an applicant used increasingly larger sample sizes in their bioequivalence studies. Similarly, the comment notes that, by listing "minor differences in formulation" as an evaluation factor, FDA has acknowledged that formulation changes are relevant to analyzing bioequivalence. The comment states that this underscores the need to require the submission of passing and nonpassing studies on all formulations.

(Response) As discussed in greater detail in response to comment 5, the decision to require the submission of BE studies conducted on the "same drug product formulation" as that submitted for approval was based on a need to balance competing concerns. Requiring the submission of all studies conducted on all formulations, regardless of their relationship to the formulation submitted for approval, will unnecessarily burden applicants and the review process without a resulting benefit. Therefore, FDA declines to adopt this suggestion.

(Comment 25) Several comments requested information about the dispute resolution procedure that will be used if both passing and nonpassing studies are submitted. In particular, the comments highlighted the need for prompt resolution when the applicant and the agency disagree about how study results should be interpreted. The comments suggested that the dispute resolution procedure should be efficient to ensure a timely review process. One comment questioned whether a new administrative procedure is going to be developed for the resolution of potential disputes.

(Response) FDA does not believe that a new procedure will be necessary to resolve any potential disputes arising from the submission of additional BE studies. If FDA has questions about an applicant's explanation as to why a

particular study failed or needs additional information to continue its review of the application, FDA will communicate with the applicant in the same manner as it does to resolve any other ANDA issue. FDA also notes there are dispute resolution procedures available to resolve differences between applicants and FDA. See 21 CFR 10.75 and 21 CFR 314.103, as well as Center for Drug Evaluation and Research/Center for Biologic Evaluation and Research guidance for industry entitled "Formal Dispute Resolution: Appeals Above the Division Level."

F. Enforcement

(Comment 26) One comment questioned how FDA intends to enforce and monitor compliance with the rule. In particular, the comment suggested that FDA should not rely on its preapproval inspection authority to monitor compliance with the rule. The comment expressed concern that investigators may not have the opportunity to look for failed studies during preapproval inspections or, at a minimum, may not be focused on looking for them. The comment also points out that Compliance Program Guidance Manual 7346.832 states that preapproval inspections are not mandated for narrow therapeutic range index drugs or the top 200 prescribed drugs. The comment suggested that rather than relying on investigators to examine studies, OGD scientists are the most appropriate personnel for determining whether study results affect FDA's bioequivalence determination.

(Response) As discussed in the response to comment 7, § 314.50(d)(3) of FDA regulations already requires NDA applicants to submit a description of all bioavailability and pharmacokinetic studies in humans performed by or on behalf of the applicant. That regulation does not contain a specific enforcement provision, and FDA believes it is not necessary to provide a specific enforcement mechanism for this final rule, which imposes similar duties on ANDA applicants. Moreover, in certain circumstances, noncompliance with this final rule could be considered a violation of 18 U.S.C. 1001, which prohibits knowingly and willfully falsifying or concealing a material fact from a branch of the Federal government.

FDA agrees that it is not appropriate to rely solely on preapproval inspections of manufacturing facilities to look for BE studies. However, the agency has a variety of different enforcement and oversight mechanisms that we use to ensure compliance with data submission requirements.

FDA agrees with the comment's suggestion that OGD's scientists are the most appropriate personnel to determine how BE study results should affect a bioequivalence determination. Any studies identified by FDA will be forwarded to OGD scientists for consideration.

FDA's initiative "Pharmaceutical cGMPs for the 21st Century" promotes a science and risk-based approach to product quality regulation. Compliance Program Guidance Manual 7346.832 was revised to reflect the approach described in the 21st Century initiative.

(Comment 27) In the preamble to the proposed rule, FDA stated that it may inspect sites where BE studies were conducted to determine whether there were technical flaws in the way they were performed (68 FR 61640 at 61641). Two comments questioned whether such inspections, particularly of sites in foreign countries, will slow down the ANDA review process. One comment focused on pilot studies performed by CROs in foreign countries and questioned whether the inspection of such sites could lead to approval delays.

(Response) FDA appreciates the concern expressed in the comments. FDA's inspection resources are limited, and the agency does not anticipate routinely inspecting every site for every BE study submitted. The agency may, however, inspect any study sites it determines appropriate in order to assess whether a generic drug is bioequivalent to its RLD.

(Comment 28) One comment stated that FDA should not rely on field investigators to discover the existence of BE studies.

(Response) FDA expects that most, if not all, applicants will comply with this final rule and submit the appropriate BE studies of which they are aware. The agency will not comment on its methods of investigation with respect to enforcement of the final rule. However, the agency agrees that field investigators should not be the only source for discovering the existence of BE studies.

G. Miscellaneous

(Comment 29) One comment asked what event determines the date the study was conducted for purposes of deciding whether a biostudy needs to be submitted.

(Response) The event that should be considered to determine whether a BE study must be submitted under this regulation is the date the first dose in the study was administered. This date should be readily identifiable by the applicant and FDA.

(Comment 30) Two comments questioned whether it was necessary for

applicants to retain samples for studies other than the BE study relied on for approval.

(Response) It is not necessary to retain such samples. Applicants are only required to retain samples for the BE study relied on for approval.

(Comment 31) Two comments asked whether FDA will apply the Freedom of Information Act (FOIA) to failed BE studies submitted to FDA under the rule. The comments expressed concern that if such studies are made available to the public, confidence in generic drugs could be undermined, and companies may use this information to disparage other companies and their products.

(Response) Information submitted on passing and nonpassing bioequivalence studies will be available for public release after approval of the application or supplemental application, consistent with FDA's disclosure regulations in 21 CFR part 20 and § 314.430, and with the FOIA. While FDA appreciates the concern expressed in the comment, the agency notes that in addition to the study results, the applicant's explanations concerning failed studies and the agency's determination and the basis for its determination of bioequivalence will also be publicly available. We believe the availability of this information should assuage the comments' concerns.

H. Economics

(Comment 32) Two comments suggested that FDA's estimate that the rule will result in a 10 percent increase in the number of BE studies submitted to the agency was too conservative. One comment stated that, based on its informal survey of generic drug companies, the number will be larger. The other comment noted that, because the number of ANDA applications and correspondence documents has risen in recent years, the 10-percent estimate is not reflective of recent trends.

(Response) FDA recognizes that the number of ANDAs and related submissions has increased in recent years. However we are not able to accurately predict the number or pattern of future submissions. Due to this uncertainty, the agency assumed, for the reasons discussed in the preamble to the proposed rule, that the number of BE studies submitted annually will increase by approximately 10 percent. This estimate is based on information suggesting that approximately 20 percent of all BE studies conducted produce results that do not meet bioequivalence limits, and that approximately 50 percent of these studies are conducted on formulations

that are not submitted for approval. The comments appear to acknowledge the uncertainty of trying to predict the exact increase in the number of studies submitted, because neither comment suggests an alternative number to FDA's estimate of 10 percent. Therefore, FDA continues to estimate that the increase in the number of studies submitted will be approximately 10 percent. The economic analysis in the proposed rule, however, relied on year 2000 data for the number of submissions received by the agency. To ensure that the economic analysis reflects current trends, FDA has revised the economic analysis (section VIII of this document) to reflect the most current data available on the number of submissions received by the agency.

(Comment 33) One comment suggested that the compliance requirements and cost analysis in the preamble to the proposed rule were flawed because they failed to consider costs in addition to staff time. The comment noted that companies often employ CROs to conduct activities related to the design, initiation, conduct, and report generation of BE studies. The comment suggested that companies may routinely request complete reports from CROs, as opposed to summary reports, in the event FDA requests a complete report. The comment also questioned FDA's estimate that summary reports will be required approximately 80 percent of the time and complete reports will be required approximately 20 percent of the time.

(Response) FDA acknowledges that it is impossible to predict precisely how often a complete report will be requested in the future. However, the agency's estimate that a complete report will be required only 20 percent of the time was based on its belief that, in most cases, the reason a study failed will be evident from the information provided in the summary report and the applicant's explanations. FDA does not believe that the use of a CRO to conduct a study affects its economic analysis. When a company contracts with a CRO, it may stipulate the reporting format for the study. FDA does not believe that stipulating a report format for BE studies in accordance with this rule will create a significant burden for any affected entity.

(Comment 34) One comment noted that FDA cited its desire to increase the agency's knowledge and understanding of bioequivalence as an objective of the rule. The comment questioned whether the costs associated with the submission of "all other bioequivalence studies," and the resolution of why various

studies failed, were justified by this objective.

(Response) As discussed in greater detail in section VIII of this document, FDA believes the costs of the rule are justified by the multiple objectives we hope to achieve through this final rule. The objective cited by the comment is a secondary objective of the rule. In addition to increasing FDA's knowledge, the submission of all BE studies is necessary because the data contained in passing and nonpassing BE studies provide information that can be important to FDA's assessment of the bioequivalence for a specific product.

V. Legal Authority

Section 701(a) of the act (21 U.S.C. 371(a)) authorizes FDA to issue regulations for the efficient enforcement of the act. Under section 505(j)(2)(A)(iv) of the act, an ANDA applicant must submit "information to show that the new drug is bioequivalent to the [reference] listed drug * * *." If this requirement is not met because information submitted in the application is insufficient to show that the drug is bioequivalent to the listed drug referred to in the application, FDA may deny approval of an ANDA (section 505(j)(4)(F) of the act; § 314.127(a)(6)(i) and (a)(6)(ii)). FDA believes that an application may not be complete if a BE study that is conducted by an applicant on the same drug product formulation is not submitted for review, because the agency is being asked to make a bioequivalence determination based on a review of only part of the available bioequivalence data. The agency's experience with additional bioequivalence data on the same drug product formulation has shown that such data can be important, and even critical, to the agency's bioequivalence determination.

Requiring the reporting of all BE studies is consistent with the act's requirement that applications must not contain untrue statements of material fact (section 505(j)(4)(K) of the act; § 314.127(a)(13)). FDA believes that failure to report all BE studies conducted on the same drug product formulation as that submitted for approval in an ANDA, amendment, or supplement may constitute selective reporting of a material fact, which can result in withdrawal of approval of an application under § 314.150(b)(6). Selective reporting refers to reports that contain certain passing results only. It may not include nonpassing results and/or the scientific justification for rejecting the nonpassing data (see FDA's notice describing selective reporting of

stability tests (60 FR 32982 at 32983, June 26, 1995)).

VI. Effective Date

Revised §§ 314.94(a)(7)(i), 314.96(a)(1), 320.1(g), 320.21 (section heading), and 320.21(b)(1), as well as § 320.21(c) (which references the requirements of § 320.21(b)(1)) and § 314.94(a)(7)(ii) (as interpreted in section III of this document), apply to ANDAs, amendments, or supplements submitted on or after the effective date. Thus, with respect to ANDAs, amendments, or supplements submitted prior to the effective date, applicants are not required to report additional BE studies that were conducted in conjunction with their applications. However, when an ANDA has been approved or submitted prior to the effective date of the final rule, and a supplement or amendment to the ANDA containing a BE study or studies is submitted on or after the effective date, the applicant is required under §§ 314.96(a)(1) and 320.21(b)(1), as well as § 320.21(c) (which refers to the requirements of § 320.21(b)(1)), to submit all BE studies, both passing and nonpassing, conducted in conjunction with the supplement or amendment. In addition, on and after the effective date, all applicants with approved ANDAs, including ANDAs that were approved or submitted for approval prior to the effective date, are required to comply with § 314.81(b)(2)(vi), as interpreted by FDA in section III of this document. As stated in response to comment 6, in the event that a postmarketing study of an approved and marketed drug fails to demonstrate bioequivalence, it would be particularly important for the agency and the applicant to examine the reason for the failure. Therefore, any annual report submitted on or after the effective date by an applicant with an approved ANDA must include reports of all BE studies on the approved drug product, both passing and nonpassing, conducted or obtained by the applicant during the annual reporting period, including those studies conducted before the effective date but within the applicant's annual reporting period.

VII. Environmental Impact

The agency has determined under 21 CFR 25.30(h) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

VIII. Analysis of Economic Impacts

FDA has examined the impacts of the final rule under Executive Order 12866 and the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Public Law 104–4). Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). The agency believes that this final rule is not a significant regulatory action under the Executive order.

The Regulatory Flexibility Act requires agencies to analyze regulatory options that would minimize any significant impact of a rule on small entities. Based on our economic analysis and review of comments submitted in response to the proposed rule, the agency certifies that the final rule will not have a significant economic impact on a substantial number of small entities.

Section 202(a) of the Unfunded Mandates Reform Act of 1995 requires that agencies prepare a written statement, which includes an assessment of anticipated costs and benefits, before proposing “any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more (adjusted annually for inflation) in any one year.” The current threshold after adjustment for inflation is \$130 million, using the most current (2007) Implicit Price Deflator for the Gross Domestic Product. FDA does not expect this final rule to result in any 1-year expenditure that would meet or exceed this amount.

A. Background

Under current regulations, ANDA applicants are required to submit information demonstrating that a generic product is bioequivalent to an RLD. In the past, firms have submitted only the results of those BE studies that demonstrate that the rate and extent of absorption of the test product meets bioequivalence limits. Firms have not typically submitted the results of any additional BE studies that were conducted on the same product formulation submitted for approval. The agency now believes that data and information from additional BE studies, both passing and nonpassing, are important for determining whether the

proposed formulation is bioequivalent to the RLD. Therefore, this final rule requires ANDA applicants to submit the results of all BE studies, passing and nonpassing, on the same drug product formulation submitted for approval under an ANDA, amendment or supplement.

As discussed in response to comment 6, the agency also believes that it is important to clarify that the responsibility to submit the results of all BE studies, passing and nonpassing, continues after approval under the annual report submission requirements. However, the agency believes that it will be highly unusual for an ANDA applicant to conduct a postmarketing BE study. In particular, the agency believes that an applicant will rarely, if ever, conduct a postmarketing BE study other than one required for an ANDA supplement.

B. Affected Entities

This final rule will affect establishments that submit ANDAs containing BE studies. FDA does not know the precise number of entities, either large or small, that will submit ANDAs in the future. In the year 2006, there were 511 BE studies submitted by 177 applicants in 622 original ANDAs, amendments, and supplements. FDA estimates that this final rule will result in a 10-percent increase in the total number of BE studies submitted annually, or 51 (511 x 0.10) additional studies. As stated in the proposed rule, this estimate is based on information suggesting that approximately 20 percent of all BE studies conducted produce results that do not meet bioequivalence limits, and that approximately 50 percent of these studies are conducted on formulations that are not submitted for approval. Because we did not receive any comments suggesting specific alternative figures that would be more appropriate, we continue to rely on these assumptions for the economic analysis of this final rule.

C. Compliance Requirements and Costs

The main cost of complying with this final rule will be staff time. The analysis in the proposed rule assumed a weighted average wage rate of \$40 per hour. The current, comparable figure for 2006 assumed in this analysis is \$47 per hour (Ref. 1). FDA estimates it will require approximately 120 hours of staff time to prepare and submit each additional complete BE study report, and approximately 60 hours of staff time for each additional BE study summary report. The agency believes that a complete report will be required

approximately 20 percent of the time, while a summary will suffice approximately 80 percent of the time.

Based on a weighted-average calculation using the information presented above, the submission of each additional BE study is expected to cost \$3,384 ($[(120 \times \$47 \times 0.2) + (60 \times \$47 \times 0.8)]$). Thus, the overall impact on the industry of reporting an additional 51 BE studies per year will be about \$173,000 ($\$3,384 \times 51 = \$172,584$). Assuming it equally likely that each of the 51 additional BE studies will be conducted by any of the 177 applicants, a binomial distribution can be used to predict how many firms will submit additional studies. Based on this distribution, 38 firms will incur costs of \$3,384 for 1 additional BE study, 6 firms will incur costs of \$6,768 ($2 \times \$3,384$) for 2 additional studies, and 1 firm will incur costs of \$10,152 ($3 \times \$3,384$) for 3 additional studies (the total number of studies in the calculation does not equal 51 because of rounding). Thus, the maximum expected annual cost burden associated with this final rule for any one firm is \$10,152. Approximately 75 percent (132 of 177, or 74.6 percent) of all firms are expected to incur no additional annual costs under the final rule.

D. Impact on Small Entities

FDA recognizes that some of the establishments required to submit additional BE study reports under this final rule will be small entities with limited resources. In the proposed rule, the agency acknowledged the uncertainty of its estimates with respect to the number of additional BE studies that will be submitted, their distribution

among large and small entities, and the number of small entities affected. We also requested detailed comments on these important issues. After revising our Initial Regulatory Flexibility Analysis in response to the public comments received, FDA has determined that this final rule will not have a significant economic impact on a substantial number of small entities.

FDA also recognizes that requiring submission of all BE study results may result in a longer total application review time if these additional BE study results suggest that a generic product is not bioequivalent to the RLD. In these situations, firms will be required to submit additional data that demonstrate bioequivalence in order to obtain marketing approval. Marketing approval may be denied if evidence from the additional BE studies fails to establish bioequivalence. The agency does not know how frequently these situations might occur.

According to standards established by the Small Business Administration, a small pharmaceutical preparation manufacturer (North American Industry Classification System (NAICS) Code 325412) employs fewer than 750 employees (Ref. 2). An FDA review of ANDA records submitted during the 3-year period from October 1996 to September 1999 found that 32 percent of the applications (322 of 1,007) were from small entities, and that 39 percent of ANDA applicants (64 of 164) were small entities. (Resource limitations prevented the agency from being able to perform a similar, labor intensive manual search of similar records for a more recent time period.) Thus, the majority of ANDAs are not submitted by

small entities. Assuming these proportions continue to hold, there will be about 69 small entities (0.39×177) submitting ANDAs annually. FDA also assumes that this group of small entities will submit 16 of the additional 51 BE studies ($0.10 \times 0.32 \times 511$) per year.

Assuming it is equally likely that each of the 16 additional BE studies will be reported by any of the 69 small entities, a binomial distribution can be used to predict how many of these firms will submit additional studies. Based on this distribution, 13 small entities will incur costs of \$3,384 for one additional BE study, and two firms will incur costs of \$6,768 ($2 \times \$3,384$) for two additional BE studies. Thus, the maximum expected burden of this final rule for any one small entity is \$6,768. Nearly 80 percent (55 of 69, or 79.5 percent) of all small entities are expected to incur no additional annual costs under the final rule.

In the proposed rule, FDA relied on information indicating that the cost of preparing and submitting an ANDA was between \$300,000 and \$1 million (68 FR 61640 at 61645). Because we were unable to identify any similar, more recent cost estimates, we have adjusted these earlier figures for inflation to estimate the economic impact of this final rule. Our inflation adjustment was made based on percent changes in the Biomedical Research and Development Price Index (BRDPI) (Ref. 3). Based on these inflation adjustments, FDA estimates that the cost to prepare and submit an ANDA is now between \$361,500 and \$1.24 million. The details of our inflation adjustment calculations are summarized in table 1 of this document.

TABLE 1.—DETAILS OF INFLATION ADJUSTMENT

ANDA Cost Estimate	Base Year	Percent Change in the BRDPI from Base Year	Inflation Adjusted ANDA Cost Estimate
\$300,000	2001	20.5%	\$361,500
\$1 million	2000	24.4%	\$1.24 million

Based on this information, the maximum expected cost burden of this final rule on any one firm will be between 0.8 percent (\$10,152 for three additional BE studies / \$1.24 million) and 2.8 percent (\$10,152 / \$361,500) of the total cost of preparing and submitting an ANDA. The maximum expected cost burden for any one small entity will be between 0.6 percent (\$6,768 for two additional BE studies / \$1.24 million) and 1.9 percent (\$6,768 / \$361,500) of the total cost of preparing and submitting an ANDA.

A year 2000 survey of 26 public generic drug companies revealed 15 firms with fewer than 750 employees (as described in the proposed rule, 68 FR 61640 at 61645). Because FDA was unable to identify a similar, more recent survey available in the public domain, we have relied on this information to estimate the impact of the final rule on small entities. The 15 small entities identified in the survey had an average of 331 employees and average annual revenues of \$115 million. The maximum expected burden of this final

rule for any one of these small entities is therefore expected to be only 0.006 percent (\$6,768 / \$115 million) of average annual revenues. The agency believes this cost could be recovered through drug sales after marketing approval.

In recognition of the potential economic impact on small entities, the agency has structured the rule to minimize the reporting burden. For example, the agency believes that summary reports of additional BE studies will suffice 80 percent of the

time, provided that complete results are available to FDA upon request. The agency believes that a summary report will require only 60 hours of staff time per BE study, or half the time and expense required to prepare and submit a complete report. This provision should prove particularly beneficial for small entities.

Furthermore, no specific educational or technical skills are required to complete and submit the additional BE study reports. Trained and qualified employees of an establishment who are involved in normal operations generally complete similar activities. Also, FDA has reviewed related Federal rules and has not identified any rules that duplicate, overlap, or conflict with the final rule.

FDA has evaluated only two regulatory options: (1) Continuing the current practice of requiring the submission of only pivotal BE study results, or (2) requiring the submission of results from all BE studies conducted by an applicant on a final drug product formulation. Under the first option, firms will incur no additional reporting costs, although some firms might experience significant costs if their product was initially approved and subsequently recalled, or had approval withdrawn because the product is found not to be bioequivalent to the RLD. The agency believes that the second option, requiring that results from all BE studies conducted on the final drug product formulation be submitted for approval, is important for assessing bioequivalence. The final rule requires reporting of all BE studies, but also permits summary reports for BE studies other than those the applicant relies on for approval, except where full reports are specifically requested by the agency. The agency believes that the final rule therefore addresses the perceived regulatory need in the least intrusive and most cost effective way.

E. Benefits of the Final Rule

The final rule will generate economic benefits both for individuals and for society as a whole, to the extent that the reporting of data from all BE studies on the same drug product formulation as that submitted for approval prevents product discontinuation and adverse health effects. Also, the data from additional BE studies may provide valuable scientific information, thereby increasing the agency's understanding of bioequivalence and generic drug

development issues, and improving the drug approval process. Therefore, this final rule will permit FDA to make more informed BE determinations in the future.

IX. Paperwork Reduction Act of 1995

This final rule contains information collection requirements that are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The title, description, and respondent description of the information collection requirements are shown below with an estimate of the annual reporting burden. Included in this estimate is the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing each collection of information.

Title: Requirements for Submission of Bioequivalence Data; Final Rule

Description: FDA is amending the requirements for certain ANDAs, ANDA amendments, and ANDA supplements submitted under §§ 314.94, 314.96, and 314.97. Specifically, FDA is amending §§ 314.94(a)(7)(i), 314.96(a)(1), and 320.21(b)(1), as well as modifying the requirements of § 320.21(c) (which refers to § 320.21(b)(1)), to require an ANDA applicant to submit information from all BE studies, both passing and nonpassing, conducted by the applicant on the same drug product formulation as that submitted for approval under an ANDA, amendment, or supplement.

In addition, FDA is announcing its intention to interpret § 314.94(a)(7)(ii) as requiring that ANDA applicants who submit ANDAs under a petition approved under § 314.93 submit information on all bioavailability or BE studies conducted on the same drug product formulation submitted for approval.

FDA is also clarifying through this rulemaking that it intends to interpret § 314.81(b)(2)(vi) as requiring the submission of postmarketing reports of all BE studies conducted or otherwise obtained by ANDA applicants in the applicant's annual report. However, FDA believes an applicant will rarely, if ever, conduct a postmarketing BE study, other than one required for an ANDA supplement.

Description of Respondents: Persons and businesses, including small businesses and manufacturers.

Burden Estimate: Table 2 of this document provides an estimate of the annual reporting burden under the rule.

The rule will affect establishments that submit ANDAs. FDA does not know the precise number of entities, either large or small, that will submit ANDAs in the future. In the year 2006, 177 applicants submitted 511 BE studies in 622 original ANDAs, amendments, and supplements. FDA estimates that this rule will result in a 10-percent increase in the number of BE studies submitted annually, or 51 (511 x 0.10) additional studies. This estimate is based on the assumptions that approximately 20 percent of all BE studies conducted produce results that do not meet bioequivalence limits, and that about half of these studies are conducted on formulations that are not submitted for approval.

FDA estimates it will require approximately 120 hours of staff time to prepare and submit each additional complete BE study report, and approximately 60 hours of staff time for each additional BE summary report. The agency believes that a complete report will be required approximately 20 percent of the time, while a summary will suffice approximately 80 percent of the time. Based on a weighted-average calculation using the information presented above, the submission of each additional BE study is expected to take 72 hours of staff time ($[120 \times 0.2] + [60 \times 0.8]$).

In table 2 of this document, FDA has estimated the reporting burden associated with each section of the rule. FDA believes that the vast majority of additional BE studies will be reported in ANDAs (submitted under § 314.94) rather than supplements (submitted under § 314.97), because it is unlikely that an ANDA holder will conduct BE studies with a drug after the drug has been approved. Moreover, drugs approved under an ANDA prior to the effective date of the final rule will only be required to report additional BE studies conducted after the effective date, which should not result in the submission of many BE study reports in supplements. With respect to the reporting of additional BE studies in amendments (submitted under § 314.96), this should also account for a small number of reports, because most BE studies will be conducted on a drug prior to the submission of the ANDA and will be reported in the ANDA itself.

TABLE 2.—ESTIMATED ANNUAL REPORTING BURDEN¹

21 CFR Section	No. of Respondents	Annual Frequency per Response	Total Annual Responses	Hours per Response	Total Hours
314.94(a)(7)	49	1	49	72	3,528
314.96(a)(1)	1	1	1	72	72
314.97	1	1	1	72	72
Total					3,672

¹ There are no capital costs or operating and maintenance costs associated with this collection of information.

The information provisions of this final rule have been submitted to the Office of Management and Budget (OMB) for review, as required by section 3507(d) of the Paperwork Reduction Act of 1995. The requirements were approved and assigned OMB control number 0910–0630. This approval expires November 30, 2011. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

X. Federalism

FDA has analyzed this final rule in accordance with the principles set forth in Executive Order 13132. FDA has determined that the rule does not contain policies that have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, the agency has concluded that the rule does not contain policies that have federalism implications as defined in the Executive order and, consequently, a federalism summary impact statement is not required.

XI. References

The following references have been placed on display in the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20857, and may be seen by interested persons between 9 a.m. and 4 p.m., Monday through Friday. (FDA has verified the Web site addresses, but FDA is not responsible for any subsequent changes to the Web sites after this document publishes in the **Federal Register**.)

List of Subjects

21 CFR Part 314

Administrative practice and procedure, Confidential business information, Drugs, Reporting and recordkeeping requirements.

21 CFR Part 320

Drugs, Reporting and recordkeeping requirements.

■ Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR parts 314 and 320 are amended as follows:

PART 314—APPLICATIONS FOR FDA APPROVAL TO MARKET A NEW DRUG

■ 1. The authority citation for 21 CFR part 314 continues to read as follows:

Authority: 21 U.S.C. 321, 331, 351, 352, 353, 355, 356, 356a, 356b, 356c, 371, 374, 379e.

■ 2. Amend § 314.94 by revising paragraph (a)(7)(i) to read as follows:

§ 314.94 Content and format of an abbreviated application.

(a) * * *

(7) *Bioequivalence*. (i) Information that shows that the drug product is bioequivalent to the reference listed drug upon which the applicant relies. A complete study report must be submitted for the bioequivalence study upon which the applicant relies for approval. For all other bioequivalence studies conducted on the same drug product formulation as defined in § 320.1(g) of this chapter, the applicant must submit either a complete or summary report. If a summary report of a bioequivalence study is submitted and

FDA determines that there may be bioequivalence issues or concerns with the product, FDA may require that the applicant submit a complete report of the bioequivalence study to FDA; or

* * * * *

■ 3. Amend § 314.96 by adding four sentences at the end of paragraph (a)(1) to read as follows:

§ 314.96 Amendments to an unapproved abbreviated application.

(a) * * *

(1) * * * Amendments containing bioequivalence studies must contain reports of all bioequivalence studies conducted by the applicant on the same drug product formulation, unless the information has previously been submitted to FDA in the abbreviated new drug application. A complete study report must be submitted for any bioequivalence study upon which the applicant relies for approval. For all other bioequivalence studies conducted on the same drug product formulation as defined in § 320.1(g) of this chapter, the applicant must submit either a complete or summary report. If a summary report of a bioequivalence study is submitted and FDA determines that there may be bioequivalence issues or concerns with the product, FDA may require that the applicant submit a complete report of the bioequivalence study to FDA.

* * * * *

PART 320—BIOAVAILABILITY AND BIOEQUIVALENCE REQUIREMENTS

■ 4. The authority citation for 21 CFR part 320 continues to read as follows:

Authority: 21 U.S.C. 321, 351, 352, 355, 371.

■ 5. Amend § 320.1 by adding paragraph (g) to read as follows:

§ 320.1 Definitions.

* * * * *

(g) *Same drug product formulation* means the formulation of the drug product submitted for approval and any formulations that have minor differences in composition or method of

manufacture from the formulation submitted for approval, but are similar enough to be relevant to the agency's determination of bioequivalence.

■ 6. Amend § 320.21 by revising the section heading and paragraph (b)(1) to read as follows:

§ 320.21 Requirements for submission of bioavailability and bioequivalence data.

* * * * *

(b) * * *

(1) Evidence demonstrating that the drug product that is the subject of the abbreviated new drug application is bioequivalent to the reference listed drug (defined in § 314.3(b) of this chapter). A complete study report must be submitted for the bioequivalence study upon which the applicant relies for approval. For all other bioequivalence studies conducted on the same drug product formulation, the applicant must submit either a complete or summary report. If a summary report of a bioequivalence study is submitted and FDA determines that there may be bioequivalence issues or concerns with the product, FDA may require that the applicant submit a complete report of the bioequivalence study to FDA; or

Dated: January 13, 2009.

Jeffrey Shuren,

Associate Commissioner for Policy and Planning.

[FR Doc. E9-884 Filed 1-15-09; 8:45 am]

BILLING CODE 4160-01-S

DEPARTMENT OF LABOR

Wage and Hour Division

29 CFR Parts 3 and 5

Protecting the Privacy of Workers: Labor Standards Provisions Applicable to Contracts Covering Federally Financed and Assisted Construction, Effectiveness of Information Collection Requirements

AGENCY: Department of Labor, Employment Standards Administration, Wage and Hour Division.

ACTION: OMB approval of information collection requirements.

SUMMARY: The Office of Management and Budget (OMB) has approved under the Paperwork Reduction Act (PRA) information collection requirements contained in recently revised final regulations published by the Department of Labor in the **Federal Register** on December 19, 2008. The PRA requires this notice to set forth the

effectiveness of information collection requirements contained in a final rule.

DATES: The amendments to §§ 3.3(b) and 5.5(a)(3)(ii)(A) and (B)(1) published in the **Federal Register** on December 19, 2008 (73 FR 77504) have been approved by OMB and are effective January 18, 2009.

ADDRESSES: Written comments regarding the burden-hour estimates or other aspects of the information collection requirements contained in 29 CFR parts 3 and 5 may be submitted to: Administrator, Wage and Hour Division, Room S3502, 200 Constitution Avenue, NW., Washington DC 20210.

FOR FURTHER INFORMATION CONTACT: Richard M. Brennan, Director, Division of Interpretations and Regulatory Analysis, Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Room S-3506, 200 Constitution Avenue, NW., Washington, DC 20210; telephone: (202) 693-0051.

Questions of interpretation and/or enforcement of regulations referenced in this notice may be directed to the nearest Wage and Hour Division (WHD) District Office. Locate the nearest office by calling the WHD toll-free help line at (866) 4US-WAGE ((866) 487-9243) between 8 a.m. and 5 p.m. in your local time zone, or log onto the WHD's Web site for a nationwide listing of WHD District and Area Offices at: <http://www.dol.gov/esa/whd/america2.htm>.

This notice is available through the printed **Federal Register** and electronically via the <http://www.gpoaccess.gov/fr/index.html> Web site.

Copies of this notice may be obtained in alternative formats (Large Print, Braille, Audio Tape or Disc), upon request, by calling (202) 693-0023. TTY/TDD callers may dial toll-free (877) 889-5627 to obtain information or request materials in alternative formats.

SUPPLEMENTARY INFORMATION: On December 30, 2008, the Office of Management and Budget (OMB) approved under the PRA the Department of Labor's information collection request for requirements in 29 CFR 5.5(a)(3)(ii)(A), and 5.5(a)(3)(ii)(B)(1), as published in the **Federal Register** on December 19, 2008. See 73 FR 77504. The current expiration date for OMB authorization for this information collection is December 31, 2011. The regulations implement Davis-Bacon and Related Acts and the Copeland Anti-Kickback Act requirements, and the regulatory changes reduce respondent burden and improve privacy protections for laborers and mechanics employed on federally

financed or assisted construction contracts by lessening the transmission of personal information regarding individuals who work on contracts subject to Davis-Bacon Act labor standards. The preamble to the new regulations stated a general effective date of January 18, 2009; however, the OMB had not yet provided a PRA-required approval for the revised information collection requirements contained in 29 CFR 3.3, 5.5(a)(3)(ii)(A), and 5.5(a)(3)(ii)(B)(1) at the time of their publication. 44 U.S.C. 3507(a)(2). An agency may not conduct an information collection unless it has a currently valid OMB approval; therefore, in accordance with the PRA, the effective date of the information collection requirements in the revised regulations was delayed until the OMB approved them under the PRA. 44 U.S.C. 3506(c)(1)(B)(iii)(V). On December 30, 2008, the OMB approved the Department's information collection request under Control Number 1215-0149; thus, giving effect to the requirements, as announced and published in the **Federal Register** on December 18, 2008, under the PRA. The current expiration date for OMB authorization for this information collection is December 31, 2011.

Dated: January 9, 2009.

Victoria A. Lipnic,

Assistant Secretary, Employment Standards Administration.

Alexander J. Passantino,

Acting Administrator, Wage and Hour Division.

[FR Doc. E9-675 Filed 1-15-09; 8:45 am]

BILLING CODE 4510-27-P

DEPARTMENT OF LABOR

Wage and Hour Division

29 CFR Part 825

The Family and Medical Leave Act of 1993, Effectiveness of Information Collection Requirements

AGENCY: Department of Labor, Employment Standards Administration, Wage and Hour Division.

ACTION: OMB approval of information collection requirements.

SUMMARY: On December 14, 2008, the Office of Management and Budget (OMB) approved under the Paperwork Reduction Act (PRA) the Department of Labor's information collection request for requirements regarding Family and Medical Leave Act regulations, as published in the **Federal Register** on November 17, 2008. The PRA requires this notice to set forth the effectiveness

of information collection requirements contained in a final rule.

DATES: The final rule published in the **Federal Register** on November 17, 2008 (73 FR 67934) has been approved by OMB and is effective January 16, 2009. The current expiration date for OMB authorization for this information collection is December 31, 2011.

ADDRESSES: Written comments regarding the burden-hour estimates or other aspects of the information collection requirements contained in 29 CFR part 825 may be submitted to: Administrator, Wage and Hour Division, Room S3502, 200 Constitution Avenue, NW., Washington DC 20210.

FOR FURTHER INFORMATION CONTACT: Richard M. Brennan, Director, Division of Interpretations and Regulatory Analysis, Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Room S-3506, 200 Constitution Avenue, NW., Washington, DC 20210; telephone: (202) 693-0051 (this is not a toll-free number).

Questions of interpretation and/or enforcement of regulations referenced in this notice may be directed to the nearest Wage and Hour Division (WHD) District Office. Locate the nearest office by calling the WHD toll-free help line at (866) 4US-WAGE ((866) 487-9243) between 8 a.m. and 5 p.m. in your local time zone, or log onto the WHD's Web site for a nationwide listing of WHD District and Area Offices at: <http://www.dol.gov/esa/whd/america2.htm>.

This notice is available through the printed **Federal Register** and electronically via the <http://www.gpoaccess.gov/fr/index.html> Web site.

Copies of this notice may be obtained in alternative formats (Large Print, Braille, Audio Tape or Disc), upon request, by calling (202) 693-0023 (not a toll-free number). TTY/TDD callers may dial toll-free (877) 889-5627 to obtain information or request materials in alternative formats.

SUPPLEMENTARY INFORMATION: The Office of Management and Budget (OMB) has approved under the PRA information collection requirements contained in recently revised final regulations under the Family and Medical Leave Act published by the Department of Labor in the **Federal Register** on November 17, 2008. See 73 FR 67934. The preamble to the new regulations stated an effective date of January 18, 2009; however, the OMB had not yet provided a PRA-required approval for the revised information collection requirements contained in the revised FMLA rules at the time of their publication. 44 U.S.C.

3507(a)(2). An agency may not conduct an information collection unless it has a currently valid OMB approval; therefore, in accordance with the PRA, the effective date of the information collection requirements in the revised regulations was delayed until the OMB approved them under the PRA. 44 U.S.C. 3506(c)(1)(B)(iii)(V). On December 14, 2008, the OMB approved the Department's information collection request under Control Number 1215-0181; thus, giving effect to the requirements, as announced and published in the **Federal Register** on November 17, 2008, under the PRA. The current expiration date for OMB authorization for this information collection is December 31, 2011.

Dated: January 9, 2009.

Victoria A. Lipnic,
Assistant Secretary, Employment Standards Administration.

BILLING CODE 4510-27-P

PENSION BENEFIT GUARANTY CORPORATION

29 CFR Part 4022

Benefits Payable in Terminated Single-Employer Plans; Interest Assumptions for Valuing and Paying Benefits

AGENCY: Pension Benefit Guaranty Corporation.

ACTION: Final rule.

SUMMARY: Pension Benefit Guaranty Corporation's regulation on Benefits Payable in Terminated Single-Employer Plans prescribes interest assumptions for valuing and paying certain benefits under terminating single-employer plans. This final rule amends the benefit payments regulation to adopt interest assumptions for plans with valuation dates in February 2009. As discussed below, this final rule does not address the interest assumptions under PBGC's regulation on Allocation of Assets in Single-Employer Plans. Interest assumptions are also published on PBGC's Web site (<http://www.pbgc.gov>).

DATES: Effective February 1, 2009.

FOR FURTHER INFORMATION CONTACT: Catherine B. Klion, Manager, Regulatory and Policy Division, Legislative and Regulatory Department, Pension Benefit Guaranty Corporation, 1200 K Street, NW., Washington, DC 20005, 202-326-4024. (TTY/TDD users may call the Federal relay service toll-free at 1-800-

877-8339 and ask to be connected to 202-326-4024.)

SUPPLEMENTARY INFORMATION: PBGC's regulations prescribe actuarial assumptions—including interest assumptions—for valuing and paying plan benefits of terminating single-employer plans covered by title IV of the Employee Retirement Income Security Act of 1974. The interest assumptions are intended to reflect current conditions in the financial and annuity markets.

These interest assumptions are found in two PBGC regulations: the regulation on Benefits Payable in Terminated Single-Employer Plans (29 CFR Part 4022) and the regulation on Allocation of Assets in Single-Employer Plans (29 CFR Part 4044). Before 2009, PBGC updated the assumptions under the two regulations each month in a single rulemaking document. In a final rule published in the **Federal Register** on December 29, 2008 (at 73 FR 79362), PBGC announced a change in its practice for determining the interest assumptions for use under the asset allocation regulation. As explained in the preamble to that final rule (73 FR 79362 at 79363), the new practice leads to assumptions that remain unchanged within a calendar quarter. Accordingly, the assumptions published December 29, 2008, remain in effect for January, February, and March 2009, and need not be updated for February 2009. Thus this final rule document updates the benefit payments regulation only. Similarly, future updates to the asset allocation regulation will be made quarterly rather than monthly; between quarterly updates of the asset allocation regulation, only the benefit payment regulation will be updated each month.

Two sets of interest assumptions are prescribed under the benefit payments regulation: (1) A set for PBGC to use to determine whether a benefit is payable as a lump sum and to determine lump-sum amounts to be paid by PBGC (found in Appendix B to Part 4022), and (2) a set for private-sector pension practitioners to refer to if they wish to use lump-sum interest rates determined using PBGC's historical methodology (found in Appendix C to Part 4022).

This amendment (1) adds to Appendix B to Part 4022 the interest assumptions for PBGC to use for its own lump-sum payments in plans with valuation dates during February 2009, and (2) adds to Appendix C to Part 4022 the interest assumptions for private-sector pension practitioners to refer to if they wish to use lump-sum interest rates determined using PBGC's historical

methodology for valuation dates during February 2009.

The interest assumptions that PBGC will use for its own lump-sum payments (set forth in Appendix B to part 4022) will be 3.00 percent for the period during which a benefit is in pay status and 4.00 percent during any years preceding the benefit's placement in pay status. These interest assumptions represent a decrease (from those in effect for January 2009) of 1.00 percent in the immediate annuity rate and are otherwise unchanged. For private-sector payments, the interest assumptions (set forth in Appendix C to part 4022) will be the same as those used by PBGC for determining and paying lump sums (set forth in Appendix B to part 4022).

PBGC has determined that notice and public comment on this amendment are impracticable and contrary to the public interest. This finding is based on the

need to determine and issue new interest assumptions promptly so that the assumptions can reflect current market conditions as accurately as possible.

Because of the need to provide immediate guidance for the valuation and payment of benefits in plans with valuation dates during February 2009, PBGC finds that good cause exists for making the assumptions set forth in this amendment effective less than 30 days after publication.

PBGC has determined that this action is not a "significant regulatory action" under the criteria set forth in Executive Order 12866.

Because no general notice of proposed rulemaking is required for this amendment, the Regulatory Flexibility Act of 1980 does not apply. See 5 U.S.C. 601(2).

List of Subjects in 29 CFR Part 4022

Employee benefit plans, Pension insurance, Pensions, Reporting and recordkeeping requirements.

■ In consideration of the foregoing, 29 CFR part 4022 is amended as follows:

PART 4022—BENEFITS PAYABLE IN TERMINATED SINGLE-EMPLOYER PLANS

■ 1. The authority citation for part 4022 continues to read as follows:

Authority: 29 U.S.C. 1302, 1322, 1322b, 1341(c)(3)(D), and 1344.

■ 2. In appendix B to part 4022, Rate Set 184, as set forth below, is added to the table.

Appendix B to Part 4022—Lump Sum Interest Rates For PBGC Payments

DEPARTMENT OF DEFENSE

Office of the Secretary

32 CFR Part 160

[DoD Instruction 5000.35]

Defense Acquisition Regulations (DAR) System

AGENCY: Department of Defense.

ACTION: Final rule.

SUMMARY: This final rule removes the DoD's rule concerning the management and operation of the Defense Acquisition Regulations (DAR) System. The part has served the purpose for which it was intended for the Code of Federal Regulations, and is no longer necessary.

DATES: *Effective Date:* January 16, 2009.

FOR FURTHER INFORMATION CONTACT: Ms. Patricia L. Toppings at 703-696-5284.

SUPPLEMENTARY INFORMATION: A copy of the current DoD Instruction may be obtained from <http://www.dtic.mil/whs/directives/corres/pdf/500035p.pdf>.

BILLING CODE 5001-06-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 125

[USCG–2006–24189]

Maritime Identification Credentials

AGENCY: Coast Guard, DHS.

ACTION: Notice of acceptable identification credentials; phased cancellation.

SUMMARY: This document informs the public that, after their Captain of the Port (COTP) has implemented access control procedures using the Transportation Worker Identification Credential (TWIC), the COTP no longer needs to enforce the previously published notice requiring name-based vetting of certain port workers.

DATES: This announcement is effective January 16, 2009.

ADDRESSES: Documents indicated in this preamble as being available in the docket are part of docket USCG–2006–24189 and are available for inspection or copying at the Docket Management Facility, U.S. Department of Transportation, West Building, Ground Floor, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590–0001 between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. They may also be viewed online at www.regulations.gov at any time.

FOR FURTHER INFORMATION CONTACT: If you have questions on this document, call James Bull, Coast Guard, telephone 202–372–1144. If you have questions on viewing material in the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION:

Background and Purpose

Under the authority of 50 U.S.C. 191 and Coast Guard regulations (33 CFR part 125), the Coast Guard has the authority to require identification credentials for access to waterfront facilities and to port and harbor areas, including vessels and harbor craft in those areas. The Commandant of the Coast Guard, pursuant to 33 CFR 125.15(a), is authorized to direct, from

time to time, the Captains of the Port “to prevent access of persons who do not possess one or more of the identification credentials listed in § 125.09 to those waterfront facilities, and port and harbor areas, including vessels and harbor craft therein, where the following shipping activities are conducted: * * * [t]hose essential to the interests of national security and defense, to prevent loss, damage or injury, or to insure the observance of rights and obligations of the United States.”

On April 28, 2006, the Coast Guard published a “Notice of acceptable identification credentials” in the **Federal Register** at 71 FR 25066 (“April 28, 2006 Notice”), which directed the COTPs to deny access to waterfront facilities regulated under 33 CFR part 105 to persons that did not have appropriate identification credentials, as defined by 33 CFR 125.09. This action was deemed necessary in the interests of national security and to protect these facilities from loss, damage, or injury. The appropriate credentials included a Merchant Mariner Document, an Armed Forces Identification Card, Federal law enforcement credentials, identification credentials issued to public safety officers, and other credentials defined in the April 28, 2006 Notice in accordance with 33 CFR 125.09(g).

The April 28, 2006 Notice set out a procedure by which the Transportation Security Administration (TSA) analyzed relevant information, submitted by the facility owner or operator either directly to TSA or via the Coast Guard, before determining whether or not an employee or longshoreman posed or was suspected of posing a security threat warranting denial of access to the port facility. This information included the employee’s or longshoreman’s legal name, date of birth, social security number (optional), and alien identification number (if applicable). TSA notified the facility and the COTP of persons that posed or were suspected of posing a security threat, and those persons were denied access to facilities regulated under 33 CFR part 105, as not having approved identification credentials under 33 CFR 125.09(f).

Facility Access Under TWIC

The April 28, 2006 Notice stated that “when regulations implementing the Transportation Worker Identification

Credential (TWIC) are issued, the Coast Guard will reevaluate this action.” (71 FR 25066). The Final Rule implementing TWIC was published in the **Federal Register** on January 25, 2007 (72 FR 3492). TWIC enrollment began in October of 2007 (72 FR 57342); there are now 149 enrollment centers open. On May 7, 2008, the Coast Guard and TSA issued a final rule extending the TWIC compliance date. (73 FR 25562). All persons required to obtain a TWIC, and all vessels and facilities required to use a TWIC as an access control measure, must comply by April 15, 2009, unless the Coast Guard issues an earlier compliance date.

On May 7, 2008, the Coast Guard began announcing earlier rolling compliance dates for facilities, as provided in 33 CFR 105.115(e). (73 FR 25757). Those compliance dates, in order of occurrence and by COTP Zone, are listed in Table 1, below.

Cancellation of Procedure Established by April 28, 2006 Notice

The procedure established in the April 28, 2006 Notice was intended to be an interim measure that would be reevaluated once the TWIC program was operational. As part of this procedure, TSA conducted a name-based security threat assessment on more than 800,000 workers. This number far exceeds the population estimates we had when the April 28, 2006 Notice was published, and has enhanced security in the nation’s maritime sector. However, the security threat assessment TSA is now able to conduct through the TWIC program is more robust. Also, the TWIC enrollment process, which includes comprehensive identification verification standards and more detailed information provided by the worker, produces more complete information on which to base a security threat assessment. Thus, the results of the TWIC threat assessments are more accurate than the name-based check run under the April 28, 2006 Notice.

As a result of the above, the Coast Guard has determined that, once TWIC has been implemented in a COTP Zone (according to the date announced in the **Federal Register** and reflected in Table 1), the personal identification requirements implemented by the April 28, 2006 Notice are no longer necessary.

TABLE 1—DATES OF TWIC COMPLIANCE AND CANCELLATION OF TSA NAME-BASED VETTING

If you are in COTP zone . . .	Then your TWIC Compliance date (and the date when you may stop using the procedure from the April 28, 2006 Notice) is . . .
Boston, Northern New England, Southeastern New England	October 15, 2008 (Notice published at 73 FR 25757).
Cape Fear River, Corpus Christi, North Carolina	November 28, 2008 (Notice published at 73 FR 40739).

TABLE 1—DATES OF TWIC COMPLIANCE AND CANCELLATION OF TSA NAME-BASED VETTING—Continued

If you are in COTP zone . . .	Then your TWIC Compliance date (and the date when you may stop using the procedure from the April 28, 2006 Notice) is . . .
Buffalo, Detroit, Duluth, Lake Michigan, Sault St. Marie	December 1, 2008 (The original Notice, published at 73 FR 39323, set a compliance date of October 31, 2008. A new Notice, published at 73 FR 64208, delayed compliance until December 1, 2008).
Charleston, Long Island Sound, Jacksonville, Savannah	December 1, 2008 (Notice published at 73 FR 44653).
Baltimore, Delaware Bay, Mobile, Lower Mississippi River, Ohio Valley, Pittsburgh, San Diego.	December 30, 2008 (Notice published at 73 FR 50721).
Hampton Roads, Morgan City, New Orleans, Upper Mississippi River, Miami, Key West, St. Petersburg.	January 13, 2009 (Notice published at 73 FR 52924).
Honolulu, Prince William Sound, Southeast Alaska, Western Alaska	February 12, 2009 (Notice published at 73 FR 56730).
Portland, Puget Sound, San Francisco Bay	February 28, 2009 (Notice published at 73 FR 60951).
New York	March 23, 2009 (Notice published at 73 FR 60951).
Guam, Houston-Galveston, Los Angeles-Long Beach, San Juan	April 14, 2009 (Notice published at 73 FR 63377).
Port Arthur	April 14, 2009 (The original Notice, published at 73 FR 40739, set a compliance date of October 31, 2008. A new Notice, published at 73 FR 64208, delayed compliance until April 14, 2009).

As of the above-listed effective date of TWIC compliance in each COTP zone, the Coast Guard is rescinding its previous direction to COTPs to prevent access to all facilities regulated under 33 CFR part 125 to persons who do not have an identification credential listed in 33 CFR 125.09, as amended by the April 28, 2006 Notice. Once they have implemented access control procedures utilizing TWIC, owners and operators of these facilities, and unions, may cease the transmission of information on employees and longshoremen (respectively) to TSA. Unless further notice appears in the **Federal Register**, by April 14, 2009, all transmissions of information under the April 28, 2006 Notice should cease.

Dated: January 12, 2009.

James A. Watson,

Rear Admiral, U.S. Coast Guard, Director of Prevention Policy.

[FR Doc. E9-847 Filed 1-15-09; 8:45 am]

BILLING CODE 4910-15-P

POSTAL SERVICE

39 CFR Part 111

New Automation Requirements for Detached Addressed Labels

AGENCY: Postal Service™.

ACTION: Final rule.

SUMMARY: To make Detached Address Labels (DALs) accompanying saturation mailings of Periodicals or Standard Mail® flats more compatible with our processing equipment, they must be automation-compatible and have a correct delivery point POSTNET(tm) barcode or Intelligent Mail® barcode with an 11-digit routing code. This requirement does not apply to DALs with simplified addresses. Also, for

consistency, we are requiring return addresses on DALs.

DATES: *Effective Date:* March 2, 2009.

FOR FURTHER INFORMATION CONTACT:

Monica Grein at 202-268-8411.

SUPPLEMENTARY INFORMATION: On August 27, 2008, we published a proposed rule in the **Federal Register** (Volume 73, Number 167, pages 50584-50585), requiring DALs to be automation-compatible and bear a delivery point barcode when used with saturation mailings of Periodicals or Standard Mail flats.

Except for DALs prepared with simplified addresses, all DALs accompanying saturation mailings of Periodicals or Standard Mail flats must be automation-compatible and have a correct delivery point POSTNET barcode or Intelligent Mail barcode with an 11-digit routing code. Automation-compatible and barcoded DALs may be processed in a manner that is more consistent with today's operating environment.

We suggest that mailers work with the local Postal Service mailpiece design analyst (MDA) to ensure that all DALs accompanying saturation mailings of Periodicals or Standard Mail flats meet the new standards. Saturation flats mailings presented with DALs that are not automation-compatible and barcoded will not qualify for saturation prices but may be entered at the basic carrier route price for Periodicals mailings or the basic Enhanced Carrier Route price for Standard Mail mailings.

We received comments from five respondents on the proposal: two from a mailer association, two from mailers that use DALs, and one from a USPS® postmaster.

Comments

One commenter suggested that to reduce costs further we should

eliminate the use of DALs altogether, or also apply the automation requirements to DALs prepared with simplified addresses. Eliminating the use of DALs or requiring saturation mailers to physically apply addresses directly on each mailpiece may cause undue hardship for some mailers. We determined that such a requirement would be difficult for small local mailers sending saturation mailings to rural or highway contract routes and perhaps cause them to stop using the mail. We concluded that these additional changes were not in the best interest of the Postal Service or our customers.

One commenter requested DALs be allowed for Periodicals and Standard Mail ECR high-density mailings. This request is outside the scope of this rule.

One commenter expressed concern about the added cost of preparing an automation-compatible DAL. We considered the implications for our customers, and note that the use of DALs is an option in most instances. We continue to encourage customers to move to on-piece addressing rather than use DALs. Incidentally, on June 7, 2007, at the request of many mailers, we revised our standards to allow advertising on the front of DALs, provided that the DALs were barcoded and automation-compatible (see *Postal Bulletin* 22208 and DMM(r) 602.4.2.5.b). This change provided mailers with the ability to offset the DAL surcharge, implemented in May 2007, with new opportunities for advertising revenue.

One commenter requested we extend the use of simplified addresses to city route deliveries. This request is outside the scope of this final rule.

One commenter expressed concerns about continuing to enter DALs at destination delivery units (DDUs) while remaining eligible for DDU prices for

flats. Although DALs are letter-size, they are allowed to be entered at DDU when they accompany either flats or parcels. This final rule does not propose to change the current standards that allow the DALs to be dropped at the DDU and does not change price eligibility for flats.

The Postal Service adopts the following changes to *Mailing Standards of the United States Postal Service, Domestic Mail Manual (DMM)*, which is incorporated by reference in the *Code of Federal Regulations*. See 39 CFR 111.1.

List of Subjects in 39 CFR Part 111

Administrative practice and procedure, Postal Service.

■ Accordingly, 39 CFR 111 is amended as follows:

PART 111—[AMENDED]

■ 1. The authority citation for 39 CFR Part 111 continues to read as follows:

Authority: 5 U.S.C. 552(a); 39 U.S.C. 101, 401, 403, 404, 414, 416, 3001–3011, 3201–3219, 3403–3406, 3621, 3622, 3626, 3632, 3633, and 5001.

2. Revise the following sections of *Mailing Standards of the United States Postal Service, Domestic Mail Manual (DMM)*, as follows:

* * * * *

600 Basic Standards for All Mailing Services

* * * * *

602 Addressing

1.0 Elements of Addressing

* * * * *

1.5 Return Addresses

* * * * *

1.5.3 Required Use of Return Addresses

The sender's domestic return address must appear legibly on:

* * * * *

[Revise text of 1.5.3 to add new item m as follows:]

m. Detached addressed labels (DALs).

* * * * *

4.0 Detached Address Labels (DALs)

4.1 DAL Use

* * * * *

4.1.2 Periodicals or Standard Mail Flats Saturation Mailings

[Revise text of 4.1.2 to require that DALs accompanying saturation mailings of Periodicals or Standard Mail flats be automation-compatible as follows:]

Saturation mailings of unaddressed Periodicals or Standard Mail flats may

be mailed with detached address labels (DALs). DALs accompanying saturation mailings of Periodicals or Standard Mail flats must be automation-compatible under 201.3.0. This standard does not apply to DALs with simplified addressing. For this standard, saturation mailing means a mailing sent to at least 75% of the total addresses on a carrier route or 90% of the residential addresses on a route, whichever is less. Deliveries are not required to every carrier route of a delivery unit. Saturation flats mailings presented with DALs that are not automation-compatible and barcoded do not qualify for saturation prices but may be entered at the basic carrier route price for Periodicals mailings or the basic Enhanced Carrier Route price for Standard Mail mailings.

* * * * *

4.2 Label Preparation

4.2.1 Label Construction

Each DAL must be made of paper or cardboard stock that is not folded, perforated, or creased, and that meets these measurements:

[Revise text of 4.2.1 to modify item c and add new item d and new item e as follows:]

* * * * *

c. At least .007 inch thick except under 4.2.1.d.

d. If more than 4¼ inches high or more than 6 inches long, must be at least 0.009 inch thick.

e. Must have an aspect ratio (length divided by height) from 1.3 to 2.5, inclusive.

4.2.2 Addressing

[Revise text of 4.2.2 by deleting the current last sentence in its entirety and adding a new last sentence to require a POSTNET or Intelligent Mail barcode with a delivery point routing code as follows:]

* * * In addition, if DALs accompany saturation mailings of Periodicals or Standard Mail flats, a correct delivery point POSTNET barcode or Intelligent Mail barcode with an 11-digit routing code must be included (see 708.4) except when using a simplified address.

* * * * *

Neva R. Watson,

Attorney, Legislative.

BILLING CODE 7710–12–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA–HQ–OPP–2008–0261; FRL–8397–9]

Emamectin; Pesticide Tolerances

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes tolerances for combined residues of emamectin and its metabolites in or on tree nuts (crop group 14) and pistachios. Syngenta Crop Protection, Inc. requested these tolerances under the Federal Food, Drug, and Cosmetic Act (FFDCA). This regulation also makes a technical correction reinstating hog tolerances that were inadvertently omitted from the previous rule.

DATES: This regulation is effective January 16, 2009. Objections and requests for hearings must be received on or before March 17, 2009, and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: EPA has established a docket for this action under docket identification (ID) number EPA–HQ–OPP–2008–0261. All documents in the docket are listed in the docket index available at <http://www.regulations.gov>. Although listed in the index, some information is not publicly available, e.g., Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available in the electronic docket at <http://www.regulations.gov>, or, if only available in hard copy, at the OPP Regulatory Public Docket in Rm. S–4400, One Potomac Yard (South Bldg.), 2777 S. Crystal Dr., Arlington, VA. The Docket Facility is open from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The Docket Facility telephone number is (703) 305–5805.

FOR FURTHER INFORMATION CONTACT: Thomas C. Harris, Registration Division (7505P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001; telephone number: (703) 308–9423; e-mail address: harris.thomas@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this Action Apply to Me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. Potentially affected entities may include, but are not limited to those engaged in the following activities:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

This listing is not intended to be exhaustive, but rather to provide a guide for readers regarding entities likely to be affected by this action. Other types of entities not listed in this unit could also be affected. The North American Industrial Classification System (NAICS) codes have been provided to assist you and others in determining whether this action might apply to certain entities. If you have any questions regarding the applicability of this action to a particular entity, consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

B. How Can I Access Electronic Copies of this Document?

In addition to accessing electronically available documents at <http://www.regulations.gov>, you may access this **Federal Register** document electronically through the EPA Internet under the "**Federal Register**" listings at <http://www.epa.gov/fedrgstr>. You may also access a frequently updated electronic version of EPA's tolerance regulations at 40 CFR part 180 through the Government Printing Office's e-CFR cite at <http://www.gpoaccess.gov/ecfr>. To access the OPPTS Harmonized Guidelines referenced in this document, go directly to the guidelines at <http://www.epa.gov/opptsfrs/home/guidelin.htm>.

C. Can I File an Objection or Hearing Request?

Under section 408(g) of FFDCA, 21 U.S.C. 346a, any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA-HQ-OPP-2008-0261 in the subject line on the first page of your submission. All requests must be in writing, and must be mailed or delivered to the Hearing Clerk

as required by 40 CFR part 178 on or before March 17, 2009.

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing that does not contain any CBI for inclusion in the public docket that is described in **ADDRESSES**. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit this copy, identified by docket ID number EPA-HQ-OPP-2008-0261, by one of the following methods:

- **Federal eRulemaking Portal:** <http://www.regulations.gov>. Follow the on-line instructions for submitting comments.
- **Mail:** Office of Pesticide Programs (OPP) Regulatory Public Docket (7502P), Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460-0001.
- **Delivery:** OPP Regulatory Public Docket (7502P), Environmental Protection Agency, Rm. S-4400, One Potomac Yard (South Bldg.), 2777 S. Crystal Dr., Arlington, VA. Deliveries are only accepted during the Docket Facility's normal hours of operation (8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays). Special arrangements should be made for deliveries of boxed information. The Docket Facility telephone number is (703) 305-5805.

II. Petition for Tolerance

In the **Federal Register** of May 16, 2008 (73 FR 28461) (FRL-8361-6), EPA issued a notice pursuant to section 408(d)(3) of FFDCA, 21 U.S.C. 346a(d)(3), announcing the filing of a pesticide petition (PP 7F7263) by Syngenta Crop Protection, Inc., PO Box 18300, Greensboro, NC 27419-8300. The petition requested that 40 CFR 180.505 be amended by establishing tolerances for combined residues of the insecticide emamectin, 4'-epi-methylamino-4'-deoxyavermectin B1 benzoate (a mixture of a minimum of 90% 4'-epi-methylamino-4'-deoxyavermectin B_{1a} and a maximum of 10% 4'-epi-methylamino-4'-deoxyavermectin B_{1b}), and its metabolites 8,9 isomer of the B_{1a} and B_{1b} component of the parent insecticide, in or on the food commodities tree nuts (crop group 14) and pistachios at 0.02 parts per million (ppm); and almond hulls at 0.25 ppm. That notice referenced a summary of the petition prepared by Syngenta Crop Protection, Inc., the registrant, which is available to the public in the docket, <http://www.regulations.gov>. There were no comments received in response to the notice of filing.

Based upon EPA review of the data supporting the petition, the petition was subsequently revised to establish permanent tolerances for the combined residues of emamectin (a mixture of a minimum of 90% 4'-epi-methylamino-4'-deoxyavermectin B_{1a} and maximum of 10% 4'-epi-methylamino-4'-deoxyavermectin B_{1b}) and its metabolites 8,9-isomer of the B_{1a} and B_{1b} component of the parent (8,9-ZMA), or 4'-deoxy-4'-epi-amino-avermectin B_{1a} and 4'-deoxy-4'-epi-amino-avermectin B_{1b}; 4'-deoxy-4'-epi-amino-avermectin B_{1a} (AB_{1a}); 4'-deoxy-4'-epi-(N-formyl-N-methyl)amino-avermectin (MFB_{1a}); and 4'-deoxy-4'-epi-(N-formyl)amino-avermectin B_{1a} (FAB_{1a}) in/on almond, hulls at 0.20 ppm; nut, tree, group 14 at 0.02 ppm; and pistachio at 0.02 ppm. The reason for these changes are explained in Unit IV.D.

In addition, with this final rule EPA is also making a technical correction to restate existing permanent tolerances on hogs (fat, liver, meat, and meat byproducts) which were inadvertently omitted in the final rule for pome fruit published on April 12, 2006 in (71 FR 18642) (FRL-7765-4). Due to the consumption of apple pomace, that final rule altered the tolerances for most livestock but not for hogs (except to delete hog, milk as noted below). While the new livestock tolerances were listed, the tolerances for hogs, fat, liver, meat, and meat byproducts were inadvertently omitted. Hog tolerances were considered in this risk analysis for tree nuts and pistachios. Permanent tolerances continue to exist as stated in the final rule published on July 9, 2003 in (68 FR 40791) (FRL-7316-6) for emamectin (MAB_{1a} + MAB_{1b}) and the 8,9-Z isomers (8,9-ZB_{1a} and 8,9-ZB_{1b}) in hog, fat at 0.003 ppm; hog, liver at 0.020 ppm; hog, meat at 0.002 ppm; and hog, meat byproducts (except liver) at 0.005 ppm. Note: As stated in the April 12, 2006 final rule, the tolerance for hog, milk was deleted along with other livestock-specific milk and replaced by a tolerance for simply "milk."

III. Aggregate Risk Assessment and Determination of Safety

Section 408(b)(2)(A)(i) of FFDCA allows EPA to establish a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is "safe." Section 408(b)(2)(A)(ii) of FFDCA defines "safe" to mean that "there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information." This includes

exposure through drinking water and in residential settings, but does not include occupational exposure. Section 408(b)(2)(C) of FFDCA requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to “ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue. . . .”

Consistent with section 408(b)(2)(D) of FFDCA, and the factors specified in section 408(b)(2)(D) of FFDCA, EPA has reviewed the available scientific data and other relevant information in support of this action. EPA has sufficient data to assess the hazards of and to make a determination on aggregate exposure for the petitioned-for tolerances for combined residues of emamectin and its metabolites in/on almond, hulls at 0.20 ppm; nut, tree, group 14 at 0.02 ppm; and pistachio at 0.02 ppm. EPA’s assessment of exposures and risks associated with establishing tolerances follows.

A. Toxicological Profile

EPA has evaluated the available toxicity data and considered its validity, completeness, and reliability as well as the relationship of the results of the studies to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children.

Emamectin has moderate acute toxicity by the oral route and low acute toxicity by the dermal and inhalation routes. It is not irritating to the skin, nor is it a dermal sensitizer, but it is a severe eye irritant. The main target tissue is the nervous system, with neuropathology detected in many studies and several species. The dose/response curve was very steep in several studies (most notably with CF-1 mice and dogs), with severe effects (morbid sacrifice and neuropathology) sometimes seen. Although no increased sensitivity was seen in developmental toxicity studies in rats and rabbits, increased qualitative and/or quantitative sensitivity of rat pups was seen in the reproductive toxicity study and in the developmental neurotoxicity study. Review of acceptable oncogenicity and mutagenicity studies provide no indication that emamectin is carcinogenic or mutagenic.

Specific information on the studies received and the nature of the adverse effects caused by emamectin as well as the no-observed-adverse-effect-level (NOAEL) and the lowest-observed-

adverse-effect-level (LOAEL) from the toxicity studies can be found at <http://www.regulations.gov> in document PP 7F7263 - Emamectin benzoate: Risk Assessment for adding new use on tree nuts and pistachios at pages 13–22 in docket ID number EPA-HQ-OPP-2008-0261.

B. Toxicological Endpoints

For hazards that have a threshold below which there is no appreciable risk, a toxicological point of departure (POD) is identified as the basis for derivation of reference values for risk assessment. The POD may be defined as the highest dose at which no adverse effects are observed (the NOAEL) in the toxicology study identified as appropriate for use in risk assessment. However, if a NOAEL cannot be determined, the lowest dose at which adverse effects of concern are identified (the LOAEL) or a Benchmark Dose (BMD) approach is sometimes used for risk assessment. Uncertainty/safety factors (UFs) are used in conjunction with the POD to take into account uncertainties inherent in the extrapolation from laboratory animal data to humans and in the variations in sensitivity among members of the human population as well as other unknowns. Safety is assessed for acute and chronic dietary risks by comparing aggregate food and water exposure to the pesticide to the acute population adjusted dose (aPAD) and chronic population adjusted dose (cPAD). The aPAD and cPAD are calculated by dividing the POD by all applicable UFs. Aggregate short-term, intermediate-term, and chronic-term risks are evaluated by comparing food, water, and residential exposure to the POD to ensure that the margin of exposure (MOE) called for by the product of all applicable UFs is not exceeded. This latter value is referred to as the Level of Concern (LOC).

For non-threshold risks, the Agency assumes that any amount of exposure will lead to some degree of risk. Thus, the Agency estimates risk in terms of the probability of an occurrence of the adverse effect greater than that expected in a lifetime. For more information on the general principles EPA uses in risk characterization and a complete description of the risk assessment process, see <http://www.epa.gov/pesticides/factsheets/riskassess.htm>.

A summary of the toxicological endpoints for emamectin used for human risk assessment can be found at <http://www.regulations.gov> in document PP 7F7263 - Emamectin benzoate: Risk Assessment for adding new use on tree nuts and pistachios at pages 19–21 in

docket ID number EPA-HQ-OPP-2008-0261.

C. Exposure Assessment

1. *Dietary exposure from food and feed uses.* In evaluating dietary exposure to emamectin, EPA considered exposure under the petitioned-for tolerances as well as all existing emamectin tolerances in (40 CFR 180.505). Note: As explained above, while hog tolerances were inadvertently omitted from the last emamectin tolerance listing, previously established hog tolerances continue to exist and were considered in this risk analysis for tree nuts and pistachios. EPA assessed dietary exposures from emamectin in food as follows:

i. *Acute exposure.* Quantitative acute dietary exposure and risk assessments are performed for a food-use pesticide, if a toxicological study has indicated the possibility of an effect of concern occurring as a result of a 1-day or single exposure.

In estimating acute dietary exposure, EPA used food consumption information from the United States Department of Agriculture (USDA) 1994–1996 and 1998 Nationwide Continuing Surveys of Food Intake by Individuals (CSFII). As to residue levels in food, EPA used tolerance levels and 100 percent crop treated (PCT) for tree nuts and pistachios. EPA relied upon anticipated residues based on field trial data and either 100 PCT or maximum surveyed PCT for all other commodities. See Unit C.1.iv. below for full listing of PCTs.

ii. *Chronic exposure.* In conducting the chronic dietary exposure assessment EPA used the food consumption data from the USDA 1994–1996 and 1998 CSFII. As to residue levels in food, EPA added tree nuts (including pistachios) to the previous pome fruit risk assessment using tolerance levels and 100 PCT for tree nuts and pistachios. EPA relied upon anticipated residues based on field trial data and either 100 PCT or averaged surveyed PCT for all other commodities. See Unit III. C.1.iv for full listing of PCTs. Additional refinements included default processing factors where appropriate and chemical-specific processing factors for apple and pear juice based on an emamectin apple processing study.

iii. *Cancer.* Based on the results of carcinogenicity studies in rats and mice, EPA classified emamectin as “not likely to be carcinogenic to humans” therefore, an exposure assessment for evaluating cancer risk is not needed for this chemical.

iv. *Anticipated residue and PCT information.* Section 408(b)(2)(E) of

FFDCA authorizes EPA to use available data and information on the anticipated residue levels of pesticide residues in food and the actual levels of pesticide residues that have been measured in food. If EPA relies on such information, EPA must require pursuant to FFDCA section 408(f)(1) that data be provided 5 years after the tolerance is established, modified, or left in effect, demonstrating that the levels in food are not above the levels anticipated. For the present action, EPA will issue such Data Call-Ins as are required by FFDCA section 408(b)(2)(E) and authorized under FFDCA section 408(f)(1). Data will be required to be submitted no later than 5 years from the date of issuance of these tolerances.

Section 408(b)(2)(F) of FFDCA states that the Agency may use data on the actual percent of food treated for assessing chronic dietary risk only if:

- Condition a: The data used are reliable and provide a valid basis to show what percentage of the food derived from such crop is likely to contain the pesticide residue.

- Condition b: The exposure estimate does not underestimate exposure for any significant subpopulation group.

- Condition c: Data are available on pesticide use and food consumption in a particular area, the exposure estimate does not understate exposure for the population in such area.

In addition, the Agency must provide for periodic evaluation of any estimates used. To provide for the periodic evaluation of the estimate of PCT as required by FFDCA section 408(b)(2)(F), EPA may require registrants to submit data on PCT.

The Agency used PCT information as follows (average and maximum, respectively): Apples 5, 5; broccoli 10, 20; cabbage 10, 20; cauliflower 10, 25; celery 15, 35; cotton <1, <2.5; lettuce 10, 15; pears <1, <2.5; peppers 5, 10; spinach 5, 5; tomatoes 10, 15. EPA assumed 100 PCT (both average and maximum) for tree nuts, pistachios, other crops not listed above, and for all livestock commodities. Maximum PCT was used for analysis of acute exposure while average PCT was used for analysis of chronic exposure.

In most cases, EPA uses available data from United States Department of Agriculture/National Agricultural Statistics Service (USDA/NASS), proprietary market surveys, and the National Pesticide Use Database for the chemical/crop combination for the most recent 6 years. EPA uses an average PCT for chronic dietary risk analysis. The average PCT figure for each existing use is derived by combining available public and private market survey data

for that use, averaging across all observations, and rounding to the nearest 5%, except for those situations in which the average PCT is less than one. In those cases, 1% is used as the average PCT and 2.5% is used as the maximum PCT. EPA uses a maximum PCT for acute dietary risk analysis. The maximum PCT figure is the highest observed maximum value reported within the recent 6 years of available public and private market survey data for the existing use and rounded up to the nearest multiple of 5%.

The Agency believes that the three conditions discussed in Unit III.C.1.iv. have been met. With respect to Condition a PCT estimates are derived from Federal and private market survey data, which are reliable and have a valid basis. The Agency is reasonably certain that the percentage of the food treated is not likely to be an underestimation. As to Conditions b and c regional consumption information and consumption information for significant subpopulations is taken into account through EPA's computer-based model for evaluating the exposure of significant subpopulations including several regional groups. Use of this consumption information in EPA's risk assessment process ensures that EPA's exposure estimate does not understate exposure for any significant subpopulation group and allows the Agency to be reasonably certain that no regional population is exposed to residue levels higher than those estimated by the Agency. Other than the data available through national food consumption surveys, EPA does not have available reliable information on the regional consumption of food to which emamectin may be applied in a particular area.

2. *Dietary exposure from drinking water.* The Agency used screening level water exposure models in the dietary exposure analysis and risk assessment for emamectin in drinking water. These simulation models take into account data on the physical, chemical, and fate/transport characteristics of emamectin. Further information regarding EPA drinking water models used in pesticide exposure assessment can be found at <http://www.epa.gov/oppefed1/models/water/index.htm>.

Based on the Pesticide Root Zone Model/Exposure Analysis Modeling System (PRZM/EXAMS) and Screening Concentration in Ground Water (SCI-GROW) models, the estimated drinking water concentrations (EDWCs) of emamectin for acute exposures are estimated to be 0.57 parts per billion (ppb) for surface water and 2.7×10^{-4} ppb for ground water. The EDWCs of

emamectin for chronic (non-cancer) exposures are estimated to be 0.22 ppb for surface water and 2.7×10^{-4} ppb for ground water.

Modeled estimates of drinking water concentrations were directly entered into the dietary exposure model. For acute dietary risk assessment, the full distribution of estimated residues in surface water generated by the PRZM-EXAMS model was used to assess the contribution to drinking water. For chronic dietary risk assessment, the water concentration of value 0.22 ppb was used to assess the contribution to drinking water.

3. *From non-dietary exposure.* The term "residential exposure" is used in this document to refer to non-occupational, non-dietary exposure (e.g., for lawn and garden pest control, indoor pest control, termiticides, and flea and tick control on pets).

Emamectin is not registered for any specific use patterns that would result in residential exposure.

4. *Cumulative effects from substances with a common mechanism of toxicity.* Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider "available information" concerning the cumulative effects of a particular pesticide's residues and "other substances that have a common mechanism of toxicity."

EPA has not found emamectin to share a common mechanism of toxicity with any other substances, and emamectin does not appear to produce a toxic metabolite produced by other substances. For the purposes of this tolerance action, therefore, EPA has assumed that emamectin does not have a common mechanism of toxicity with other substances. For information regarding EPA's efforts to determine which chemicals have a common mechanism of toxicity and to evaluate the cumulative effects of such chemicals, see EPA's website at <http://www.epa.gov/pesticides/cumulative>.

D. Safety Factor for Infants and Children

1. *In general.* Section 408(b)(2)(c) of FFDCA provides that EPA shall apply an additional tenfold (10X) margin of safety for infants and children in the case of threshold effects to account for prenatal and postnatal toxicity and the completeness of the database on toxicity and exposure unless EPA determines based on reliable data that a different margin of safety will be safe for infants and children. This additional margin of safety is commonly referred to as the FQPA safety factor (SF). In applying this

provision, EPA either retains the default value of 10X, or uses a different additional safety factor when reliable data available to EPA support the choice of a different factor.

2. Prenatal and postnatal sensitivity.

Prenatal exposure to emamectin results in increased sensitivity of offspring relative to adults (as seen in the rat reproductive toxicity study and the rat developmental neurotoxicity study). EPA has determined that the concern is low for the qualitative susceptibility seen in the two generation reproduction study because:

- i. There was a clear NOAEL for offspring toxicity.
- ii. Effects unique to offspring (decreased fertility in F₁ adults, and clinical signs (tremors and hind limb extensions during and following lactation)) were seen at the same dose that caused parental systemic toxicity (decreased body weight gain and histopathological lesions in the brain and spinal cord).
- iii. The decreased fertility seen in F₁ adults may be secondary to the neurotoxicity characterized by histopathological lesions in the brain and central nervous system (seen in both F₀ and F₁ generations), rather than due to a direct effect on the reproductive system.

EPA has determined that the concern is also low for the qualitative and quantitative susceptibility seen in the developmental-neurotoxicity study (DNT) because:

- a. Although multiple offspring effects (including decreased pup body weight, head and body tremors, hind limb extension and splay, changes in motor activity and auditory startle) were seen at the highest dose, and no maternal effects were seen at any dose, there was a clear NOAEL for offspring toxicity at the low dose.
- b. The offspring LOAEL (at the mid dose) is based on a single effect seen on only 1-day (decreased motor activity on PND 17) and no other offspring toxicity was seen at the LOAEL.

EPA has considered the differences in species sensitivity (rat NOAELs/LOAELs > dog NOAELs/LOAELs > mouse NOAELs/LOAELs) as well as the increased sensitivity of offspring relative to adults (as seen in the rat reproductive toxicity study and the rat developmental neurotoxicity study). EPA has determined that the dose selected for overall risk assessment (based on a 15-day study in adult mice) is lower than the doses that caused offspring toxicity in reproductive toxicity and developmental neurotoxicity studies in rats, the endpoint selected is the most sensitive

end point (neurotoxicity) in the most sensitive species (mice) and thus would address the concerns for any potential toxicity in the offspring. Therefore, there are no residual uncertainties for prenatal and/or postnatal toxicity from exposure to emamectin.

3. *Conclusion.* The 10X FQPA safety factor (SF) is retained for chronic assessments while a 3X FQPA SF is adequate for acute assessments. This conclusion is based on the following.

The toxicology database used to assess prenatal and postnatal exposure to emamectin is considered adequate at this time. Note: There is a new data requirement under 40 CFR part 158 following the Immunotoxicity Test Guideline (OPPTS 870.7800) which prescribes functional immunotoxicity testing and is designed to evaluate the potential of a repeated chemical exposure to produce adverse effects (i.e., suppression) on the immune system. Because the immune system is highly complex, studies assessing functional immunotoxic endpoints are helpful in fully characterizing a pesticide's potential immunotoxicity. These data will be used in combination with data from hematology, lymphoid organ weights, and histopathology in routine chronic or subchronic toxicity studies to characterize potential immunotoxic effects. The immunotoxicity study will be required as a condition of registration of the proposed emamectin tree nut use. Although there is a complete toxicity database for emamectin (other than new immunotoxicity study), exposure is estimated based on data that reasonably accounts for potential exposures, and increased sensitivity in the young is addressed by selection of a protective endpoint, EPA has retained a 10X FQPA SF for chronic/long-term and intermediate-term assessments due to the steepness of the dose-response curve, severity of effects at the LOAEL (death and neuropathology), the use of a short-term study for long-term risk assessment. The 10X FQPA SF will also provide adequate protection for the lack of the new immunotoxicity study.

The steepness of the dose-response curve and the severity of the effects at the LOAEL also are the basis for EPA retaining a 3X FQPA SF for acute assessments. A 3X FQPA factor was judged to be adequate (as opposed to a 10X) for the following reasons:

- i. A NOAEL was established in this study.
- ii. Although the effects of concern are seen after repeated dosing, the NOAEL here is used for a single exposure risk assessment
- iii. The most sensitive endpoint in the most sensitive species is selected.

This risk analysis used both PCT and anticipated residues in the exposure analysis. For the reasons described in Unit III.C.1.iv the Agency is reasonably certain that the percentage of the food treated is not likely to be an underestimation. Use of consumption information in EPA's risk assessment process ensures that EPA's exposure estimate does not understate exposure for any significant subpopulation group and allows the Agency to be reasonably certain that no regional population is exposed to residue levels higher than those estimated by the Agency.

E. Aggregate Risks and Determination of Safety

EPA determines whether acute and chronic pesticide exposures are safe by comparing aggregate exposure estimates to the aPAD and cPAD. The aPAD and cPAD represent the highest safe exposures, taking into account all appropriate SFs. EPA calculates the aPAD and cPAD by dividing the POD by all applicable UFs. For linear cancer risks, EPA calculates the probability of additional cancer cases given the estimated aggregate exposure. Short-term, intermediate-term, and chronic-term risks are evaluated by comparing the estimated aggregate food, water, and residential exposure to the POD to ensure that the MOE called for by the product of all applicable UFs is not exceeded.

1. *Acute risk.* The acute aggregate risk assessment takes into account exposure from dietary (food and water) consumption. Using the exposure assumptions discussed in this unit for acute exposure, the acute dietary exposure from food and water to emamectin will occupy 45% of the aPAD for children 1–2 years old, the population group receiving the greatest exposure.

2. *Chronic risk.* Using the exposure assumptions described in this unit for chronic exposure, EPA has concluded that chronic exposure to emamectin from food and water will utilize 44% of the cPAD for children 1–2 years old, the population group receiving the greatest exposure. There are no residential uses for emamectin.

3. *Short-term risk.* Short-term aggregate exposure takes into account short-term residential exposure plus chronic exposure to food and water (considered to be a background exposure level). Emamectin is not registered for any use patterns that would result in residential exposure. Therefore, the short-term aggregate risk is the sum of the risk from exposure to emamectin through food and water and

will not be greater than the chronic aggregate risk.

4. Intermediate-term risk.

Intermediate-term aggregate exposure takes into account intermediate-term residential exposure plus chronic exposure to food and water (considered to be a background exposure level). Emamectin is not registered for any use patterns that would result in intermediate-term residential exposure. Therefore, the intermediate-term aggregate risk is the sum of the risk from exposure to emamectin through food and water, which has already been addressed, and will not be greater than the chronic aggregate risk.

5. *Aggregate cancer risk for U.S. population.* Emamectin is classified as "not likely to be carcinogenic to humans" and is, therefore, not expected to pose a cancer risk.

6. *Determination of safety.* Based on these risk assessments, EPA concludes that there is a reasonable certainty that no harm will result to the general population, or to infants and children from aggregate exposure to emamectin residues.

IV. Other Considerations

A. Analytical Enforcement Methodology

1. *Enforcement method for plant commodities.* A high performance liquid chromatography method with fluorescence detection (HPLC/FLD Method 244-92-3) is available for the enforcement of established tolerances for residues of emamectin and its metabolites in/on plants. The method was validated by EPA and submitted to the FDA for inclusion in the Pesticide Analytical Manual (PAM), Vol. II.

The data collection method for nuts is an liquid chromatography/mass spectrometry/mass spectrometry (LC/MS/MS) method (Syngenta Method RAM 465/01, modified). Residues of emamectin (B_{1a} and B_{1b}), 8,9-Z isomer of B_{1a}, AB_{1a}, FAB_{1a} and MFB_{1a} in/on almond and pecan nutmeats and almond hulls are determined. The reported method limit of quantitation (LOQ) is 0.001 ppm for each analyte in nutmeats and almond hulls.

2. *Enforcement method for livestock commodities.* An analytical method is available for enforcement of tolerances for residues of emamectin and its metabolites in/on ruminant commodities. Method 244-95-1 is an HPLC/FLD method which determines residues of emamectin (MAB_{1a} and MAB_{1b}) and the 8,9-Z isomers in livestock commodities. The LOQs are 0.0005 ppm for each analyte (MAB_{1a} + 8,9-ZB_{1a} and MAB_{1b} + 8,9-ZB_{1b}) in whole and skim milk and 0.002 ppm for

each analyte (MAB_{1a} + 8,9-ZB_{1a} and MAB_{1a} + 8,9-ZB_{1a}) in fat, liver, kidney, and meat. The method has been validated by EPA and forwarded to FDA for publication in PAM II.

3. *Multiresidue methods testing.* Data previously submitted by the petitioner show that residues of emamectin are not likely to be recovered by FDA multiresidue methods. The petitioner submitted data pertaining to the multiresidue methods testing of emamectin (B_{1a} and B_{1b} components), AB_{1a}, FAB_{1a}, MFB_{1a} and the 8,9-Z isomer (B_{1a} component). The data have been forwarded to FDA for inclusion in PAM, Vol. I.

Based on the methods described above, EPA has concluded that adequate enforcement methodology is available to enforce the tolerance expression. As indicated, the methods in this Unit have been forwarded to the Food and Drug Administration for inclusion in PAM I. or II. Alternately, methods may be requested from: Chief, Analytical Chemistry Branch, Environmental Science Center, 701 Mapes Rd., Ft. Meade, MD 20755-5350; telephone number: (410) 305-2905; e-mail address: residuemethods@epa.gov.

B. International Residue Limits

There are no international harmonization issues associated with proposed uses on tree nuts and pistachios as there are currently no Codex, Canadian, or Mexican maximum residue limits (MRLs) or tolerances for residues of emamectin on tree nuts and pistachios.

C. Response to Comments

No comments were received to the Notice of Filing.

D. Revisions to Petitioned-For Tolerances

Modifications were made to the petition as originally submitted. The original petition proposed nut tolerances on emamectin and its metabolites 8,9 isomer of the B_{1a} and B_{1b} component of the parent insecticide. EPA had previously determined that there are additional metabolites of concern. Therefore, the complete nut tolerances expression is set on emamectin (a mixture of a minimum of 90% 4'-epi-methylamino-4'-deoxyavermectin B_{1a} and maximum of 10% 4'-epi-methylamino-4'-deoxyavermectin B_{1b}) and its metabolites 8,9-isomer of the B_{1a} and B_{1b} component of the parent (8,9-ZMA), or 4'-deoxy-4'-epi-amino-avermectin B_{1a} and 4'-deoxy-4'-epi-amino-avermectin B_{1b}; 4'-deoxy-4'-epi-amino-avermectin B_{1a} (AB_{1a}); 4'-deoxy-4'-epi-(N-formyl-N-methyl)amino-avermectin (MFB_{1a}); and 4'-deoxy-4'-epi-(N-formyl)amino-avermectin B_{1a} (FAB_{1a}).

and 4'-deoxy-4'-epi-(N-formyl)amino-avermectin B_{1a} (FAB_{1a}). In addition, while the tolerance for almond hulls was proposed at 0.25 ppm, since residues were quantifiable in/on almond hulls from all tests, the Agency's Guidelines for Setting Tolerances Based on Field Trials were utilized for determining the appropriate tolerance level for hulls. Based on the actual residue data from the 28-day pre-harvest interval samples, the calculated tolerance for almond hulls is 0.20 ppm.

V. Conclusion

Therefore, tolerances are established for combined residues of emamectin (a mixture of a minimum of 90% 4'-epi-methylamino-4'-deoxyavermectin B_{1a} and maximum of 10% 4'-epi-methylamino-4'-deoxyavermectin B_{1b}) and its metabolites 8,9-isomer of the B_{1a} and B_{1b} component of the parent (8,9-ZMA), or 4'-deoxy-4'-epi-amino-avermectin B_{1a} and 4'-deoxy-4'-epi-amino-avermectin B_{1b}; 4'-deoxy-4'-epi-amino-avermectin B_{1a} (AB_{1a}); 4'-deoxy-4'-epi-(N-formyl-N-methyl)amino-avermectin (MFB_{1a}); and 4'-deoxy-4'-epi-(N-formyl)amino-avermectin B_{1a} (FAB_{1a}) in/on almond, hulls at 0.20 ppm; nut, tree, group 14 at 0.02 ppm; and pistachio at 0.02 ppm. In addition, permanent tolerances continue to exist as stated in the final rule published on July 9, 2003 in (68 FR 40791) (FRL-7316-6) for emamectin (MAB_{1a} + MAB_{1b}) and the 8,9-Z isomers (8,9-ZB_{1a} and 8,9-ZB_{1b}) in hog, fat at 0.003 ppm; hog, liver at 0.020 ppm; hog, meat at 0.002 ppm; and hog, meat byproducts (except liver) at 0.005 ppm.

VI. Statutory and Executive Order Reviews

This final rule establishes tolerances under section 408(d) of FFDCA in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled *Regulatory Planning and Review* (58 FR 51735, October 4, 1993). Because this final rule has been exempted from review under Executive Order 12866, this final rule is not subject to Executive Order 13211, entitled *Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use* (66 FR 28355, May 22, 2001) or Executive Order 13045, entitled *Protection of Children from Environmental Health Risks and Safety Risks* (62 FR 19885, April 23, 1997). This final rule does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501 et

seq., nor does it require any special considerations under Executive Order 12898, entitled *Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations* (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under section 408(d) of FFDCA, such as the tolerance in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*) do not apply.

This final rule directly regulates growers, food processors, food handlers, and food retailers, not States or tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of section 408(n)(4) of FFDCA. As such, the Agency has determined that this action will not have a substantial direct effect on States or tribal governments, on the relationship between the national government and the States or tribal governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian tribes. Thus, the Agency has determined that Executive Order 13132, entitled *Federalism* (64 FR 43255, August 10, 1999) and Executive Order 13175, entitled *Consultation and Coordination with Indian Tribal Governments* (65 FR 67249, November 9, 2000) do not apply to this final rule. In addition, this final rule does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) (Public Law 104-4).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act of 1995 (NTTAA), Public Law 104-113, section 12(d) (15 U.S.C. 272 note).

VII. Congressional Review Act

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of this final rule in the **Federal Register**. This final rule is not

a “major rule” as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: January 6, 2009.

Lois Rossi,

Director, Registration Division, Office of Pesticide Programs.

■ Therefore, 40 CFR chapter I is amended as follows:

PART 180—[AMENDED]

■ 1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), 346a and 371.

■ 2. Section § 180.505 is amended by alphabetically adding the following commodities to the tables in paragraphs (a)(1) and (2) to read as follows:

§ 180.505 Emamectin; tolerances for residues.

(a) * * * (1) * * *

Commodity	Parts per million
Almond, hulls	0.20
* * * * *	*
Nut, tree, group 14	0.02
Pistachio	0.02
* * * * *	*

* * * * *

(2) * * *

Commodity	Parts per million
* * * * *	*
Hog, fat	0.003
Hog, liver	0.020
Hog, meat	0.002
Hog, meat byproducts (except liver)	0.005
* * * * *	*

BILLING CODE 6560-50-S

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

42 CFR Part 414

[CMS-1561-IFC]

RIN 0938-AP59

Medicare Program; Changes to the Competitive Acquisition of Certain Durable Medical Equipment, Prosthetics, Orthotics and Supplies (DMEPOS) by Certain Provisions of the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA)

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Interim final rule with comment period.

SUMMARY: This interim final rule with comment period implements certain provisions of section 154 of the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA) related to the durable medical equipment, prosthetics, orthotics, and supplies (DMEPOS) Competitive Acquisition Program. Specifically, this rule: Implements certain MIPPA provisions that delay implementation of Round 1 of the program; requires CMS to conduct a second Round 1 competition (the “Round 1 rebid”) in 2009; and mandates certain changes for both the Round 1 rebid and subsequent rounds of the program, including a process for providing feedback to suppliers regarding missing financial documentation and requiring contractors to disclose to CMS information regarding subcontracting relationships.

DATES: Effective date: These regulations are effective on February 17, 2009.

Comment date: To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on March 17, 2009.

ADDRESSES: In commenting, please refer to file code CMS-1561-IFC. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

You may submit comments in one of four ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on specific issues in this regulation to <http://www.regulations.gov>. Follow the instructions for “Comment or Submission” and enter the filecode to find the document accepting comments.

2. *By regular mail.* You may mail written comments (one original and two copies) to the following address only: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-1561-IFC, P.O. Box 8020, Baltimore, MD 21244-8020.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments (one original and two copies) to the following address only: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-1561-IFC, Mail Stop C4-26-05, 7500 Security Boulevard, Baltimore, MD 21244-1850.

4. *By hand or courier.* If you prefer, you may deliver (by hand or courier) your written comments (one original and two copies) before the close of the comment period to either of the following addresses:

a. Room 445-G, Hubert H. Humphrey Building, 200 Independence Avenue, SW., Washington, DC 20201;

(Because access to the interior of the HHH Building is not readily available to persons without Federal Government identification, commenters are encouraged to leave their comments in the CMS drop slots located in the main lobby of the building. A stamp-in clock is available for persons wishing to retain a proof of filing by stamping in and retaining an extra copy of the comments being filed.)

b. 7500 Security Boulevard, Baltimore, MD 21244-1850.

If you intend to deliver your comments to the Baltimore address, please call telephone number (410) 786-7195 in advance to schedule your arrival with one of our staff members.

Comments mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

Submission of comments on paperwork requirements. You may submit comments on this document's paperwork requirements by following the instructions at the end of the "Collection of Information Requirements" section in this document.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT: Sabrina Teferi, (410) 786-6884. Barry Brook, (410) 786-5889.

SUPPLEMENTARY INFORMATION: *Inspection of Public Comments:* All comments received before the close of the

comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following Web site as soon as possible after they have been received: <http://regulations.gov>. Follow the search instructions on that Web site to view public comments.

Comments received timely will be also available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, at the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, Maryland 21244, Monday through Friday of each week from 8:30 a.m. to 4 p.m. To schedule an appointment to view public comments, phone 1-800-743-3951.

I. Background

A. Legislative and Regulatory History of the DMEPOS Competitive Bidding Program

Medicare pays for most DMEPOS furnished after January 1, 1989 pursuant to fee schedule methodologies set forth in section 1834 of the Social Security Act (the Act), as added by section 4062 of the Omnibus Budget Reconciliation Act of 1987 (OBRA '87) (Pub. L. 100-203). Specifically, sections 1834(a)(1)(A) and (B), and 1834 (h)(1)(A) of the Act provide that Medicare payment for these items is equal to 80 percent of the lesser of the actual charge for the item or the fee schedule amount for the item. We implemented this payment methodology at 42 CFR Part 414, Subpart D of our regulations. Sections 1834(a)(2) through (a)(5) and 1834(a)(7) of the Act, and implementing regulations at § 414.200 through § 414.232 (with the exception of § 414.228), set forth separate payment categories of durable medical equipment (DME) and describe how the fee schedule for each of the following categories is established:

- Inexpensive or other routinely purchased items (section 1834(a)(2) of the Act and § 414.220 of the regulations);
- Items requiring frequent and substantial servicing (sections 1834(a)(3) of the Act and § 414.222 of the regulations);
- Customized items (section 1834(a)(4) of the Act and § 414.224 of the regulations);
- Oxygen and oxygen equipment (section 1834(a)(5) of the Act and § 414.226 of the regulations);

- Other items of DME (section 1834(a)(7) of the Act and § 414.229 of the regulations).

For a detailed discussion of payment for DMEPOS under fee schedules, see the final rule published in the April 10, 2007 **Federal Register** (72 FR 17992).

Section 1847 of the Act, as amended by section 302(b)(1) of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108-173), requires the Secretary to establish and implement a Medicare DMEPOS Competitive Bidding Program ("Competitive Bidding Program" or "program"). Under the Competitive Bidding Program, Medicare sets payment amounts for selected DMEPOS items and services furnished to beneficiaries in competitive bidding areas (CBAs) based on bids submitted by qualified suppliers and accepted by Medicare. For competitively bid items, these new payment amounts, referred to as "single payment amounts," replace the fee schedule payment methodology. Section 1847(b)(5) of the Act provides that Medicare payment for these competitively bid items and services is made on an assignment-related basis equal to 80 percent of the applicable single payment amount, less any unmet Part B deductible described in section 1833(b) of the Act. Section 1847(b)(2)(A)(iii) of the Act prohibits the awarding of contracts to any entity unless the total amounts to be paid to contractors in a CBA are expected to be less than the total amounts that would otherwise be paid under the fee schedule methodologies set forth in section 1834(a) of the Act. This requirement guarantees savings to both the Medicare program and beneficiaries under the program. The fee schedule methodologies will continue to set payment amounts for noncompetitively bid DMEPOS items and services. The program also includes provisions to ensure beneficiary access to quality DMEPOS items and services: section 1847 of the Act limits participation in the program to suppliers who have met applicable quality and financial standards and requires the Secretary to maintain beneficiary access to multiple suppliers.

When first enacted by the Congress, section 1847(a)(1)(B) of the Act required the Secretary to phase in the Competitive Bidding Program in a manner so that the competition under the program occurred in 10 of the largest metropolitan statistical areas (MSAs) in 2007. The program was to be expanded into 70 additional MSAs in 2009, and then into additional areas after 2009.

In the May 1, 2006 **Federal Register** (72 FR 25654), we issued a proposed

rule that would implement the Competitive Bidding Program for certain DMEPOS items and services and solicited public comment on our proposals. In the April 10, 2007 **Federal Register** (72 FR 17992), we issued a final rule addressing the comments on the proposed rule and establishing the regulatory framework for the Medicare DMEPOS Competitive Bidding Program in accordance with section 1847 of the Act.

Consistent with the requirements of section 1847 of the Act and the competitive bidding regulations, we began implementing the program by conducting the first round of competition in 10 of the largest MSAs in 2007. We limited competition during this first round of the program to DMEPOS items and services included in 10 selected product categories. The bidding window opened on May 15, 2007 and was extended to allow bidders adequate time to prepare and submit their bids. We then evaluated each submission and awarded contracts consistent with the requirements of section 1847(b)(2) of the Act and § 414.414. Following the bid evaluation process, we awarded over 329 contracts to qualified suppliers.

We implemented the Competitive Bidding Program on July 1, 2008. Beginning on that date, Medicare coverage for competitively bid DMEPOS items and services furnished in the first 10 competitive bidding areas (CBAs) was limited to items and services furnished by contract and grandfathered suppliers, and payment to these suppliers was based on the single payment amount, as determined under the competitive bidding regulations. This program was projected to result in a savings of approximately 26 percent annually to the Medicare program and Medicare beneficiaries. We calculated these projections by subtracting the lower single payment amount from the applicable fee schedule amount per CBA per item and then multiplying this amount by the weighted national utilization data. For further discussion of the Competitive Bidding Program and the bid evaluation process, see the final rule published in the April 10, 2007 **Federal Register** (72 FR 17992).

B. The MIPPA and the Medicare DMEPOS Competitive Bidding Program

On July 15, 2008, the Medicare Improvements for Patients and Providers Act (MIPPA) was enacted. Section 154 of the MIPPA amended section 1847 of the Act to make certain limited changes to the Medicare DMEPOS Competitive Bidding Program. Section 154(a) of the MIPPA delays

competition under the program and amends section 1847(a)(1)(D)(i) of the Act to terminate the competitive bidding contracts effective June 30, 2008 and prohibit payment based on the contracts. This action effectively reinstates as payment for competitively bid items and services the Medicare fee schedule amounts, as set forth in section 1834 of the Act and 42 CFR part 414, subpart D of our regulations. In light of the amendments, items that had been included in the first round of the Competitive Bidding Program could once again be furnished by any enrolled DMEPOS supplier in accordance with existing Medicare rules. Payments for these items would no longer be made pursuant to competitive bidding contracts at the single payment amount, but instead would be based on the applicable Medicare fee schedule (includes 9.5 percent reduction) amount(s) based on the date of service.

Section 154(a) of the MIPPA requires the Secretary to conduct a second competition to select suppliers for Round 1 in 2009 ("Round 1 rebid"). The Round 1 rebid includes the "same items and services" and is to be conducted in the "same areas" as the 2007 Round 1 competition, with certain limited exceptions. Specifically, the Round 1 rebid must exclude negative pressure wound therapy (NPWT) items and services and exclude Puerto Rico. In addition, section 154(a) of the MIPPA permanently excludes group 3 complex rehabilitative wheelchairs from the Competitive Bidding Program by amending the definition of "items and services" in section 1847(a)(2) of the Act. Suppliers, including suppliers that previously were awarded a competitive bidding contract, will need to submit bids to be considered for a contract under the Round 1 rebid.

Section 154(a) of the MIPPA also delays competition for Round 2 of the competitive bidding program from 2009 to 2011 and subsequent competition under the program from 2009 until after 2011. A competition for a national mail order competitive bidding program may occur after 2010.

The MIPPA mandates certain changes to the bidding process, starting with the Round 1 rebid. Section 154(a) of the MIPPA adds a new paragraph (F) to section 1847(a)(1) of the Act, which sets forth a process for supplier feedback on missing financial documents. Pursuant to this requirement, we will notify suppliers who submit their bids within a specific time period if their bid submission is missing any of the required financial documents. We will allow suppliers to submit missing

financial documents within 10 business days after this notice.

Section 154(b) of the MIPPA amends section 1847(b)(3) of the Act to require contract suppliers to notify us of subcontracting relationships they have entered into for the purpose of furnishing items and services under the competitive bidding program. Contract suppliers must also inform CMS whether each such subcontractor meets the accreditation requirement set forth in section 1834(a)(20)(F)(i) of the Act, if applicable to such subcontractor.

Section 154(d) of the MIPPA excludes from the competitive bidding program certain DME furnished by a hospital to the hospital's patients during an admission or on the date of discharge.

In addition to the changes outlined above that we are implementing through this interim final rule with comment period, section 154 of the MIPPA made other changes to the competitive bidding program which include:

- Exclusions of certain areas in subsequent rounds that are not already selected under Rounds 1 and 2;
- Extension of the Program Advisory and Oversight Committee;
- Exemption for Off-the-Shelf Orthotics from Competitive Bidding when provided by Certain Provided; and
- Evaluation of certain Healthcare Common Procedure Coding System (HCPCS) codes.

These provisions are not addressed in this rule, but may be addressed through future rulemaking or subregulatory guidance, as appropriate.

As the following are administrative requirements, they are not addressed in this rule and will be handled by the appropriate agencies:

- A post-award audit by the Office of Inspector General;
- Establishment of a Competitive Acquisition Ombudsman;
- A Government Accountability Office report on the results of the competitive bidding program;

As discussed below, we believe that the changes specifically mandated for the Round 1 rebid are largely self-implementing. The MIPPA delayed the Competitive Bidding Program and requires certain changes in subsequent competitions under the program, but it did not alter the fundamental requirements contained in the competitive bidding program statute and regulations, or revise the methodologies used by us in calculating payment amounts and selecting suppliers under the program. We have therefore chosen to continue to apply the same methodologies to calculate payment and select suppliers, and,

except as discussed below, the current competitive bidding regulations published on April 10, 2007 will continue to provide the framework under which we implement the program.

We will implement other changes regarding subsequent rounds of competition through future rulemaking or subregulatory guidance, as appropriate. As noted in the regulatory impact analysis of this rule, the MIPPA mandated a nationwide 9.5 percent reduction in payment for all items and services that were competitively bid during the prior round of competition regardless of any exclusion such as group 3 complex rehabilitative wheelchairs. The 9.5 percent reduction in payment was completed through the standard process for covered item updates rather than through this rule.

II. Provisions of the Interim Final Rule

In this interim final rule, we are revising current provisions at 42 CFR Part 414, Subpart F, to incorporate certain self-implementing MIPPA provisions. To the extent this interim final rule with comment period does not specifically modify regulatory language, the current regulations, as set forth in the April 10, 2007 final rule, remain unchanged and will govern the Round 1 rebid.

The interim final rule addresses the following changes made by the MIPPA:

General Changes to the DMEPOS Competitive Bidding Program

- Temporary Delay of the Medicare DMEPOS Competitive Bidding Program
- Supplier Feedback on Missing Covered Documents
- Disclosure of Subcontractors and their Accreditation Status under the Competitive Bidding Program
- Exemption from Competitive Bidding for Certain DMEPOS
- Exclusion of Group 3 Complex Rehabilitative Wheelchairs

Round 1 Changes of the Competitive Bidding Program

- Rebidding of the “same areas” as the previous Round 1, unless otherwise specified.
- Rebidding of the “same items and services” as the previous Round 1, unless otherwise specified.

A. General Changes to the DMEPOS Competitive Bidding Program

1. Temporary Delay of the Medicare DMEPOS Competitive Bidding Program

Section 154(a) of the MIPPA amends section 1847(a)(1) of the Act to delay competition under Rounds 1 and 2 of the Competitive Bidding Program from 2007 and 2009 to 2009 and 2011,

respectively. It also delays competition for a national mail order program until after 2010 and competition in additional areas, other than mail order, until after 2011.

We are amending § 414.410(a)(1) and (2) to indicate that competition under Round 1 of the competitive bidding program will occur in 2009 and competition under Round 2 of the program will occur in 2011. In addition, we are revising § 414.410(a)(3) to indicate that competition in additional MSAs will occur after 2011 (or, in the case of national mail order for items and services, after 2010).

2. Supplier Feedback on Missing Covered Documents

Section 1847(b)(2)(A) of the Act prohibits the Secretary from awarding a contract under the program to a supplier unless the supplier meets applicable financial standards specified by the Secretary, taking into account the needs of small providers. We have implemented this requirement at § 414.414(d) of the competitive bidding regulations, which requires suppliers to submit, as part of their bids, financial documents specified in the request for bids (RFB).

The RFB issued for the Round 1 rebid will require suppliers to submit the same categories of financial documents as we requested for the previous Round 1 competition. In the previous round of competition, we required suppliers to submit financial documents from the most recent three years. As stated in 42 CFR 414.414(d), the required financial documents will be specified in the RFB. Based on experience from the previous round of competition, we are modifying the required financial documents to lessen the burden on suppliers; instead of 3 years of documentation, we will require only 1 year. We believe that we can determine whether a supplier demonstrates financial soundness by reviewing one year of documentation.

Section 154(a) of the MIPPA adds a new paragraph (F) to section 1847(a)(1) of the Act, which establishes a detailed process by which we must notify suppliers of missing “covered documents”—defined by MIPPA as financial, tax or other documents required to be submitted by a bidder as part of an original bid submission in order to meet required financial standards—if such documents are submitted within a specified time period. The MIPPA details the specific steps of this process and provides a timeline for each stage of this covered document submission review. We are implementing this provision of the

MIPPA consistent with its detailed requirements.

Consistent with section 1847(a)(1)(F) of the Act, in the case of a bid in which one or more covered documents in connection with such a bid has been submitted not later than the covered document review date, we will notify suppliers of each covered document that is missing from the bidder's submission as of the covered document review date. As set out in the Act the “covered document review date” is the later of—(1) the date that is 30 days before the final date specified by the Secretary for submission of bids; or (2) the date that is 30 days after the first date specified by the Secretary for submission of bids. For example, if a bid window opens on January 1st and closes on April 30th, the “covered document review date” would be the later of: (1) March 31st (30 days before the final date specified by the Secretary); or (2) January 31st (30 days after the first date specified by the Secretary). Therefore, in this case, the “covered document review date” will be March 31st. Suppliers that submit their financial documents after the covered document review date will not receive notice of any missing financial documents.

Section 1847(a)(1)(F)(i) of the Act requires that we notify bidders of any missing covered documents within 45 days after the covered document review date for the Round 1 rebid. In subsequent rounds of competition, we have 90 days after the covered document review date to provide such notice. For all rounds of competition, bidders that are notified of the missing covered document(s) have 10 business days after the date of notice to submit the missing covered document(s). If a supplier submits the missing covered document(s) within this time period, we may not reject the supplier's bid on the basis that any covered document is missing or has not been submitted on a timely basis.

Section 1847(a)(1)(F)(iii) of the Act places certain limitations on the covered document review process. First, the covered document review process applies only to the timely submission (prior to the covered document review date) of covered documents. Second, the process does not apply to any determination as to the accuracy or completeness of the covered documents submitted or whether such documents meet applicable financial requirements. Third, the process does not prevent us from rejecting a bid for reasons other than those not described in section 1847(a)(1)(F)(i)(II) of the Act. Fourth, the covered document review process shall not be construed as permitting a bidder

to change bidding amounts or to make other changes in a bid submission.

We are revising § 414.414(d) by adding paragraphs (2)(i) through (iii) to set forth the required covered document review process. These paragraphs identify the timeframes established by the MIPPA for—

- Suppliers to submit covered documents in order to be eligible to receive notice of any missing covered documents;
- For CMS to review the submitted covered documents and notify bidders of any missing covered documents; and
- For suppliers to submit the missing covered documents.

We are also adding a definition for “covered document” and “covered document review date” to § 414.402.

3. Disclosure of Subcontractors and Their Accreditation Status Under the Competitive Bidding Program

Section 154(b)(2) of the MIPPA adds a new paragraph (C) to section 1847(b)(3) of the Act. This new paragraph requires contract suppliers to disclose information on: (1) Each subcontracting arrangement the supplier has in furnishing items and services under the contract; and (2) whether each such subcontractor meets the accreditation requirement of section 1834(a)(20)(F)(i) of the Act, if applicable to such subcontractor. The contract supplier must make this disclosure not later than 10 days after the date a supplier enters into a contract with CMS. If the contract supplier subsequently enters into a subcontracting relationship, the supplier must disclose this information to CMS no later than 10 days after entering into the subcontracting relationship. We will issue subregulatory guidance regarding the need to keep CMS current on all subcontracting relationships.

Section 154(b) of the MIPPA added section 1834(a)(20)(F)(i) to the Act, which mandates that the Secretary require suppliers furnishing items and services under a competitive bidding program on or after October 1, 2009, directly or as a subcontractor for another entity, to submit evidence of accreditation by a CMS-designated accreditation organization. Both contract suppliers and their subcontractors that furnish items and services under the competitive bidding program must do so in accordance with the applicable supplier standards found in Part 424, subpart D and other Federal regulations.

We are amending § 414.414(c), redesignating § 414.422(f) as § 414.422(g) and adding a new

§ 414.422(f) to set forth these requirements for disclosing subcontracting arrangements. We expect to further address subcontracting relationships and the method for disclosure of the subcontracting relationships in subregulatory guidance.

4. Exemption From Competitive Bidding For Certain DMEPOS

Section 414.404(b) currently exempts from competitive bidding certain DME items when furnished by a physician or treating practitioner to his or her own patients as part of his or her professional services. This exception is limited to crutches, canes, walkers, folding manual wheelchairs, blood glucose monitors, and infusion pumps that are DME. Section 154(d) of the MIPPA amended section 1847(a) of the Act to exclude from the competitive bidding program these same items when they are furnished by hospitals to the hospital's own patients during an admission or on the date of discharge. We are interpreting this exclusion to include only DMEPOS paid for under Part B of the Medicare program because section 1847 does not apply to items that are paid for under Part A. As discussed in the April 10, 2007 final rule, in accordance with § 414.404(b)(3) payment for items furnished under the exceptions in § 414.404(b) will be made in accordance with § 414.408(a).

We are amending § 414.402 to include a definition for hospitals. We have also amended § 414.404(b)(1) to incorporate the added exemption for hospitals that furnish certain types of competitively bid DME to their own patients during an admission or on the date of discharge from the competitive bidding program. In addition, we amended subparagraph (b)(1)(iii) to address the billing requirements for hospitals under this exemption.

5. Exclusion of Group 3 Complex Rehabilitative Power Wheelchairs

Section 1847(a)(2) of the Act defines the items and services subject to competitive bidding. Section 1847(a)(2)(A) of the Act includes durable medical equipment and supplies as items and services subject to competitive bidding. Section 154(a) of the MIPPA amended this definition to exempt group 3 complex rehabilitative power wheelchairs (and related accessories when furnished in connection with such wheelchairs) from competitive bidding. For Medicare coding, coverage, and payment purposes, power wheelchairs are classified under several groups based on performance and durability test results, patient weight capacity, and equipment

handling capabilities. For a description of the components, performance requirements and coding guidelines for group 3 power wheelchairs, see https://www.dmepdac.com/resources/articles/2006/08_14_06.pdf. Group 2 complex rehabilitative power wheelchairs will be included in the competitive bidding program because they were not excluded by the MIPPA and thus will continue to be included in the Round 1 competitive bidding program.

We are amending § 414.402 to revise the definition of “item” to exclude group 3 complex rehabilitative wheelchairs from the competitive bidding program.

B. Round 1 Changes of the Competitive Bidding Program

1. Rebidding of the “same areas” as the previous Round 1, unless otherwise specified.

Section 1847(a)(1)(D)(i)(II) of the Act, as amended by section 154(a) of the MIPPA, requires us to conduct a Round 1 rebid in 2009. Pursuant to section 1847(a)(1)(D)(i)(II) of the Act, we shall conduct the competition for the Round 1 rebid in a manner “so that it occurs in 2009 with respect to the same items and services and the same areas” as the first Round 1 competition, except as provided by section 1847(a)(1)(D)(i)(III) and (IV) of the Act. Under section 1847(a)(1)(D)(i)(III), as amended by the MIPPA, we must exclude Puerto Rico so that the Round 1 rebid of the competitive bidding program occurs in 9 of the largest MSAs. Therefore, the Round 1 rebid will occur in the following MSAs:

- Cincinnati—Middletown (Ohio, Kentucky and Indiana)
- Cleveland—Elyria—Mentor (Ohio)
- Charlotte—Gastonia—Concord (North Carolina and South Carolina)
- Dallas—Fort Worth—Arlington (Texas)
- Kansas City (Missouri and Kansas)
- Miami—Fort Lauderdale—Miami Beach (Florida)
- Orlando (Florida)
- Pittsburgh (Pennsylvania)
- Riverside—San Bernardino—Ontario (California)

Section 154(a) of MIPPA mandated that we conduct the round 1 “re-bid” in the “same areas”—except for Puerto Rico—as the previous competition. As stated in the final rule, we identified CBAs in the first round of competition by counties and zip codes to clearly identify the boundaries of a CBA. Therefore, we believe it is reasonable to implement the “same areas” mandate by conducting the round 1 re-bid in those same zip codes. It is possible that

certain zip codes may have changed since the first competition. We will therefore review zip code changes made since 2007 and incorporate applicable updates to these zip codes. For example, if a particular zip code has been split into two new zip codes, we will include the new zip codes in the CBA. We will not add any new zip codes that would expand the geographic area of the CBAs.

Accordingly, we are amending § 414.410(a)(1) to reflect the areas for competition set forth in section 1847(a)(1) of the Act, as amended by the MIPPA.

2. Rebidding of the “same items and services” as the previous Round 1, unless otherwise specified.

Section 1847(a)(1)(D)(i)(II) of the Act, as amended by the MIPPA, requires that we conduct the Round 1 rebid competitive bidding program with respect to the “same items and services” as were previously bid in Round 1 except as provided in section 1847(a)(1)(D)(i)(IV) of the Act, which excludes negative pressure wound therapy. The Round 1 rebid will also exclude group 3 complex rehabilitative power wheelchairs as noted previously. Therefore, the Round 1 rebid will include the following categories of items and services:

- Oxygen Supplies and Equipment
- Standard Power Wheelchairs, Scooters, and Related Accessories
- Complex Rehabilitative Power Wheelchairs and Related Accessories (Group 2)
- Mail-Order Diabetic Supplies
- Enteral Nutrients, Equipment and Supplies
- Continuous Positive Airway Pressure (CPAP), Respiratory Assist Devices (RADs), and Related Supplies and Accessories
- Hospital Beds and Related Accessories
- Walkers and Related Accessories
- Support Surfaces (Group 2 mattresses and overlays) in Miami.

In the April 10, 2007 final rule we define an item, in part, as a product included in a competitive bidding program that is identified by a HCPCS code.

Therefore, consistent with our understanding of the MIPPA and the mandate that bidding in the Round 1 rebid occur with respect to the “same items and services” as the previous round of competition, we will conduct the competition for the Round 1 rebid for essentially the same codes for which we bid in 2007. We have made certain adjustments to reflect changes in the HCPCS codes consistent with § 414.426. We have made additional exceptions for obsolete codes and codes which, in light

of the MIPPA amendments, are no longer separately payable. For example, under the MIPPA, the transfer of title provision was deleted, thus oxygen accessories are no longer separately payable because the supplier maintains ownership of the equipment. The final list of HCPCS codes will be published on the Competitive Bidding Implementation Contractor (CBIC) Web site at <http://www.dmecompetitivebid.com> prior to opening of the bid window.

III. Considerations for Future Rulemaking Under the Competitive Bidding Program

We are considering alternatives for the competition of diabetic supplies. This competition will potentially take place sometime after the Round 1 rebid, and will be the subject of a future notice and comment rulemaking. We believe it is consistent with the section 1847(a) of the Act to employ competitive bidding for diabetic supplies in both the mail order and traditional retail markets, in part due to concerns raised about the bifurcation of the method of delivery of diabetic supplies and the difficulty in defining what constitutes “mail order.” We welcome public comment on the competition of diabetic supplies.

IV. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

V. Waiver of Proposed Rulemaking

We ordinarily publish a notice of proposed rulemaking in the **Federal Register** to provide for public comment before the provisions of a rule take effect in accordance with section 553(b) of the Administrative Procedure Act (APA) and section 1871 of the Act. This process may be waived, however, if an agency finds good cause that a notice and comment procedure is impracticable, unnecessary, or contrary to the public interest. In such cases, the agency must incorporate a statement of this finding and its reasons in the rule issued, or explain that the agency is promulgating interpretive rules, general statements of policy, or rules of agency procedure or practice outside the scope of notice and comment rulemaking.

We do not believe that we need to delay publication of this rule until a

notice and comment period is completed. We are conforming the competitive bidding regulations to specific statutory requirements contained in section 154 of MIPPA and informing the public of the procedures and practices the agency will follow to ensure compliance with those statutory provisions. However, to the extent that notice and comment rulemaking would otherwise apply, we find good cause to waive such requirements.

We find it unnecessary to undertake notice and comment rulemaking in this instance in light of the statutory language. We are applying statutory language that is highly detailed and proscriptive, and we believe it is redundant to, in effect, propose a rule to incorporate the words of a provision already contained in the statute. We would not be able to revise the changes to this regulation in response to public comment because this regulation reiterates the statutory language found in MIPPA and because the statute requires implementation to occur in 2009. We are also describing a procedure to ensure compliance with the relevant provisions of the statute. This description is exempt from notice and comment rulemaking as an interpretive rule, general statement of policy, and/or rule of agency procedure or practice. Therefore, under 5 U.S.C. 553(b), we find good cause to waive notice and comment rulemaking procedures for this revision, if such procedures are required at all.

VI. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are requesting emergency approval of the information collection requirements contained in this interim final rule with comment period. Please provide comments on these information collection requirements by February 2, 2009. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

The need for the information collection and its usefulness in carrying out the proper functions of our agency.

- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

These requirements are not effective until approved by OMB. We are soliciting public comment on the

following information collection requirements (ICRs):

A. ICRs Regarding Round 1 Rebid

We previously estimated that the burden associated with Round 1 would be 1,086,164 hours. Our estimate was that on average it would take a supplier 68 hours to complete and submit a bid and that we would receive 15,973 bids. Although we expect the amount of hours to generally remain the same (68 hours) for the round 1 rebid, based on our round 1 experience we anticipate fewer bids. For the 2007 round 1 of the competitive bidding program, we received approximately 6,500 bids. Therefore, the total estimated burden associated with the round 1 rebid is approximately 442,000 hours (68 hours X 6,500).

B. ICRs Regarding Disclosure of Subcontracting Arrangements

Section 414.422(f) states that suppliers entering into a contract with CMS must disclose information on each subcontracting arrangement that the supplier has to furnish items and services under the contract and whether each subcontractor meets the accreditation requirements in § 424.57, if applicable. Section 414.422(f) also requires that the required disclosure be made no later than 10 days after the date a supplier enters into a contract with CMS or 10 days after a supplier enters into a subcontracting arrangement after entering into a contract with CMS.

The burden associated with the requirements in § 414.422(f) are the time and effort necessary to disclose the information to CMS. In the 2007 Round 1 competition, there were 329 winning suppliers. Therefore, we approximate fewer than 400 winning suppliers for the Round 1 rebid. Also, we estimate it will take each of the winning suppliers that use subcontractors on average approximately 1.5 hours to submit information on each subcontracting arrangement to furnish items and services under the contract and whether each subcontractor meets the accreditation requirements in § 424.57, if applicable. Those that do not use subcontractors will not have a reporting burden. The total estimated burden associated with these requirements is approximately 600 hours (1.5 hours X 400 winning suppliers).

If you comment on these information collection and recordkeeping requirements, please do either of the following:

1. Submit your comments electronically as specified in the **ADDRESSES** section of this proposed rule; or

2. Mail copies to the address specified in the **ADDRESSES** section of this proposed rule and to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street, NW., Room 10235, Washington, DC 20503, Attn: CMS Desk Officer, Fax (202) 395-6974, E-mail: OIRA_submission@omb.eop.gov.

VII. Regulatory Impact Statement

We have examined the impacts of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993, as further amended), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4), and Executive Order 13132.

Executive Order 12866, as amended, directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects (\$100 million or more in any 1 year). The provisions of this rule only implement limited changes to how the program will be implemented and will not result in a change in expenditures of \$100 million or more annually, and is therefore not a major rule as defined in Title 5, United States Code, section 804(2) and is not an economically significant rule under Executive Order 12866.

As stated in section I.B. of this preamble, section 154 of the MIPPA amended section 1847 of the Act to make limited changes to the Medicare DMEPOS Competitive Bidding Program. This regulation merely incorporates limited statutory changes to the Medicare DMEPOS Competitive Bidding Program and does not change the fundamental requirements of the program. In addition, a regulatory impact is unnecessary due to previous regulatory action taken when implementing the competitive bidding program, as described in the May 1, 2006 **Federal Register** (72 FR 25654) proposed rule. Specifically, this rule cites the new timeframes for competition to occur under the program. In addition, the rule implements the MIPPA provisions that mandate limited changes that affect competition under the program including a process for providing feedback to suppliers

regarding missing financial documentation, requiring contractors to disclose to CMS information regarding subcontracting relationships, and exempting from competitive bidding certain items and services.

The MIPPA also mandated a 9.5 percent reduction in payment for all items and services that were competitively bid during the round of competition in 2008 regardless of any exclusion such as group 3 complex rehabilitative wheelchairs. The 9.5 percent reduction in payment was completed through the standard process for covered item updates rather than through this rule. Because we are not implementing the 9.5 percent reduction in payment in this rule and the provisions of this rule do not change the fundamentals of this program, and 9.5 percent reduction in payment is not included in this rule, we have determined that a full regulatory impact analysis is unnecessary. Because the statute rather than the regulation is imposing a 9.5 reduction in payment, this rule is not a major rule.

The RFA requires agencies to analyze options for regulatory relief of small businesses. For purposes of section 604 of the RFA, small entities include small businesses, non-profit organizations and government agencies. Individuals and States are not included in the definition of a small entity. Based on data from the Small Business Administration (SBA), we estimate that 85 percent of suppliers of the items and services affected by this rule would be defined as small entities with total revenues of \$6.5 million or less in any 1 year. This regulation merely codifies the MIPPA provisions, so there are no options for regulatory relief for small suppliers. The RFA therefore does not require that we analyze regulatory options for small businesses.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area and has fewer than 100 beds. We have determined that this rule will not have a significant impact on a substantial number of small entities and on small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule that may result in an expenditure

in any year by State, local or tribal governments, in the aggregate, or by the private sector, of \$100 million. The \$100 million in 1995 dollars is updated annually for inflation and the current expenditure threshold is approximately \$130 million. This rule will not have an effect on the governments mentioned, and the private sector costs would be less than the \$130 million per year threshold. Hence, the Unfunded Mandates Reform Act of 1995 would not apply.

Lastly, Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. We have determined that this rule will not have a significant effect on the rights, roles and responsibilities of States.

In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

List of Subjects in 42 CFR Part 414

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medicare Reporting and recordkeeping requirements.

■ For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 1. The authority citation for part 414 continues to read as follows:

Authority: Secs. 1102, 1871, and 1881(b)(1) of the Social Security Act (42 U.S.C. 1302, 1395hh, and 1395rr(b)(1)).

Subpart F—Competitive Bidding for Certain Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS)

■ 2. Section 414.402 is amended by—

■ A. Revising the introductory text of paragraph (1) of the definition of “item.”

■ B. Adding the definitions of “covered document”, “covered document review date” and “hospital”.

§ 414.402 Definitions.

* * * * *

Covered document means a financial, tax, or other document required to be submitted by a bidder as part of an original bid submission under a

competitive acquisition program in order to meet the required financial standards.

Covered document review date means the later of—

(1) The date that is 30 days before the final date for the closing of the bid window; or

(2) The date that is 30 days after the opening of the bid window.

Hospital has the same meaning as in section 1861(e) of the Act.

Item * * *

(1) Durable medical equipment (DME) other than class III devices under the Federal Food, Drug and Cosmetic Act, as defined in § 414.202 of this part and group 3 complex rehabilitative wheelchairs and further classified into the following categories:

* * * * *

■ 3. Section 414.404 is amended by revising paragraphs (b)(1) introductory text, (b)(1)(ii), and (b)(1)(iii) to read as follows:

§ 414.404 Scope and applicability.

* * * * *

(b) * * *

(1) Physicians, treating practitioners, and hospitals may furnish certain types of competitively bid durable medical equipment without submitting a bid and being awarded a contract under this subpart, provided that all of the following conditions are satisfied:

* * * * *

(ii) The items are furnished by the physician or treating practitioner to his or her own patients as part of his or her professional service or by a hospital to its own patients during an admission or on the date of discharge.

(iii) The items are billed under a billing number assigned to the hospital, physician, the treating practitioner (if possible), or a group practice to which the physician or treating practitioner has reassigned the right to receive Medicare payment.

* * * * *

■ 4. Section 414.408 is amended by revising paragraph (e)(2)(iv) to read as follows:

§ 414.408 Payment rules.

* * * * *

(e) * * *

(2) * * *

(iv) A physician, treating practitioner, physical therapist in private practice, occupational therapist in private practice, or hospital may furnish an item in accordance with § 414.404(b) of this subpart.

* * * * *

■ 5. Section 414.410 is amended by revising paragraph (a) as follows:

§ 414.410 Phased-in implementation of competitive bidding programs.

(a) *Phase-in of competitive bidding programs.* CMS phases in competitive bidding programs so that competition under the programs occurs—

(1) In CY 2009, in Cincinnati—
Middletown (Ohio, Kentucky and Indiana), Cleveland—Elyria—Mentor (Ohio), Charlotte—Gastonia—Concord (North Carolina and South Carolina), Dallas—Fort Worth—Arlington (Texas), Kansas City (Missouri and Kansas), Miami—Fort Lauderdale—Miami Beach (Florida), Orlando (Florida), Pittsburgh (Pennsylvania), and Riverside—San Bernardino—Ontario (California).

(2) In CY 2011, the additional 70 MSAs selected by CMS as of June 1, 2008.

(3) After CY 2011, additional CBAs (or, in the case of national mail order for items and services, after CY 2010).

* * * * *

■ 6. Section 414.414 is amended by revising paragraph (c) and (d) as follows:

§ 414.414 Conditions for awarding contracts.

* * * * *

(c) Quality standards and accreditation. Each supplier furnishing items and services directly or as a subcontractor must meet applicable quality standards developed by CMS in accordance with section 1834(a)(20) of the Act and be accredited by a CMS-approved organization that meets the requirements of § 424.58 of this subchapter, unless a grace period is specified by CMS.

(d) *Financial standards.*

(1) *General rule.* Each supplier must submit along with its bid the applicable covered documents (as defined in § 414.402) specified in the request for bids.

(2) *Process for reviewing covered documents.*

(i) *Submission of covered documents for CMS review.* To receive notification of whether there are missing covered documents, the supplier must submit its applicable covered documents by the later of the following covered document review dates:

(A) The date that is 30 days before the final date for the closing of the bid window; or

(B) The date that is 30 days after the opening of the bid window.

(ii) *CMS feedback to a supplier with missing covered documents.*

(A) *For Round 1 bids.* CMS has up to 45 days after the covered document review date to review the covered documents and to notify suppliers of any missing documents.

(B) *For subsequent Round bids.* CMS has 90 days after the covered document review date to provide notify suppliers of any missing covered documents.

(iii) *Submission of missing covered documents.* Suppliers notified by CMS of missing covered documents have 10 business days after the date of such notice to submit the missing documents. CMS does not reject the supplier's bid on the basis that the covered documents are late or missing if all the applicable missing covered documents identified in the notice are submitted to CMS not later than 10 business days after the date of such notice.

* * * * *

■ 7. Section 414.422 is amended by—

■ A. Redesignating paragraph (f) as paragraph (g).

■ B. Adding a new paragraph (f).

The addition reads as follows:

§ 414.422 Terms of contracts.

* * * * *

(f) *Disclosure of subcontracting arrangements.*

(1) *Initial disclosure.* Not later than 10 days after the date a supplier enters into a contract under this section the supplier must disclose information on both of the following:

(i) Each subcontracting arrangement that the supplier has in furnishing items and services under the contract.

(ii) Whether each subcontractor meets the requirement of section 1834(a)(20)(F)(i) of the Act if applicable to such subcontractor.

(2) *Subsequent disclosure.* Not later than 10 days after the date a supplier enters into a subcontracting arrangement subsequent to contract award with CMS, the supplier must disclose information on both of the following:

(i) The subcontracting arrangement that the supplier has in furnishing items and services under the contract.

(ii) Whether the subcontractor meets the requirement of section 1834(a)(20)(F)(i) of the Act, if applicable to such subcontractor.

* * * * *

BILLING CODE 4120-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

42 CFR Parts 423

[CMS 4138-IFC4]

RIN 0938-AP24

Medicare Program: Medicare Advantage and Prescription Drug Programs MIPPA Drug Formulary & Protected Classes Policies

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Interim final rule with comment period.

SUMMARY: This interim final rule with comment period revises the regulations governing the Medicare prescription drug benefit program (Part D). This regulation makes conforming changes to reflect revisions to the rules governing Part D that were made as a result of provisions in the Medicare Improvements for Patients and Providers Act (MIPPA), which became law on July 15, 2008. These MIPPA provisions change the definition of a covered Part D drug, and add new requirements that apply to Part D formularies.

DATES: Effective date: These regulations are effective January 16, 2009.

Comment date: To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on March 17, 2009.

ADDRESSES: In commenting, please refer to file code CMS-4138-IFC4. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

You may submit comments in one of four ways (please choose only one of the ways listed)

1. *Electronically.* You may submit electronic comments on specific issues in this regulation to <http://www.regulations.gov>. Follow the instructions for "Comment or Submission" and enter the file code to find the document accepting comments.

2. *By regular mail.* You may mail written comments (one original and two copies) to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-4138-IFC4, P.O. Box 8016, Baltimore, MD 21244-8016.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments (one original and two copies) to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-4138-IFC4, Mail Stop C4-26-05, 7500 Security Boulevard, Baltimore, MD 21244-1850.

4. *By hand or courier.* If you prefer, you may deliver (by hand or courier) your written comments (one original and two copies) before the close of the comment period to either of the following addresses:

a. Room 445-G, Hubert H. Humphrey Building, 200 Independence Avenue, SW., Washington, DC 20201;

(Because access to the interior of the HHH Building is not readily available to persons without Federal Government identification, commenters are encouraged to leave their comments in the CMS drop slots located in the main lobby of the building. A stamp-in clock is available for persons wishing to retain a proof of filing by stamping in and retaining an extra copy of the comments being filed.)

b. 7500 Security Boulevard, Baltimore, MD 21244-1850.

If you intend to deliver your comments to the Baltimore address, please call telephone number (410) 786-7195 in advance to schedule your arrival with one of our staff members.

Comments mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT: Alissa DeBoy at (410) 786-6041 or Vanessa Duran at (410) 786-8697.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following Web site as soon as possible after they have

been received: <http://regulations.gov>. Follow the search instructions on that Web site to view public comments.

Comments received timely will be also available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, at the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, Maryland 21244, Monday through Friday of each week from 8:30 a.m. to 4 p.m. To schedule an appointment to view public comments, phone 1-800-743-3951.

I. Background

The Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108-173) was enacted on December 8, 2003. Section 101 of title I of the MMA added a new "Part D" to title XVIII of the Social Security Act (the Act), creating the Medicare prescription drug benefit program. The prescription drug benefit program is one of the most significant changes to the Medicare program since its inception in 1965. The MMA also made revisions to the provisions in Medicare Part C, governing what is now called the Medicare Advantage (MA) program (formerly Medicare+Choice). The MMA directed that important aspects of the new Medicare prescription drug benefit program under Part D be similar to and coordinated with regulations for the MA program.

A final rule implementing the Part D prescription drug program appeared in the **Federal Register** on January 28, 2005 (70 FR 4194). The provisions of that rule became effective on March 22, 2005.

The Medicare Improvements for Patients and Providers Act (MIPPA) (Pub. L. 110-275) was enacted on July 15, 2008. MIPPA made a number of changes to the statutory provisions governing both the MA program under Part C and the prescription drug program under Part D. On September 18, 2008, we published an interim final rule with comment period that made a wide array of revisions to regulations governing the Part C and Part D programs to reflect changes in the statutory provisions governing these programs made in MIPPA [see 73 FR 54226]. This interim final rule with comment period similarly makes conforming changes to the Part D regulations to reflect certain statutory changes made in MIPPA that were not addressed in the September 18, 2008 interim final rule.

II. Provisions of the Interim Final Rule

A. Medically Accepted Indication (§ 423.100 Definitions)

Section 182 of MIPPA amends section 1860D-2(e)(1) of the Act to add a new definition for "medically accepted indication," effective January 1, 2009, for Part D drugs used in anticancer chemotherapeutic regimens, specifically, and all other Part D drugs. Under new section 1860D-2(e)(4) of the Act, a "medically accepted indication" for Part D drugs used in anticancer chemotherapeutic regimens has the meaning given in section 1861(t)(2)(B) of the Act, except that in applying the 1861(t)(2)(B) definition, the terms "prescription drug plan" or "MA-PD plan" are substituted for "carrier," and the compendia described in section 1927(g)(1)(B)(i)(III) of the Act are added to those listed in section 1861(t)(2)(B)(ii)(I) of the Act. Also, on and after January 1, 2010, this last requirement shall not apply unless the compendia described in section 1927(g)(1)(B)(i)(III) of the Act meets the requirement in the third sentence of section 1861(t)(2)(B) of the Act.

Also under section 182 of MIPPA, for all Part D drugs not used in anticancer chemotherapeutic regimens, "medically accepted indication" has the meaning given in section 1927(k)(6) of the Act, except that in applying this provision, the Secretary shall revise the list of compendia described in section 1927(g)(1)(B)(i) of the Act as appropriate for identifying medically accepted indications for drugs, in a manner consistent with the process for revising compendia under section 1861(t)(2)(B) of the Act.

Consistent with these new statutory requirements, we have amended § 423.100 by revising the definition of a Part D drug at § 423.100 to incorporate the new definition of medically accepted indication in section 1860D-2(e)(4) of the Act.

B. Access to Covered Part D Drugs (§ 423.120)

Section 176 of MIPPA added a new section 1860D-4(b)(3)(G)(i) to the Act requiring, effective for plan year 2010, that CMS identify, as appropriate, certain categories or classes of drugs which meet the following two pronged test: (1) Restricted access to the drugs in the category or class would have major or life threatening clinical consequences for individuals who have a disease or disorder treated by drugs in such category or class; and (2) there is a significant need for such individuals to have access to multiple drugs within a category or class due to unique chemical

actions and pharmacological effects of the drugs within the category or class, such as drugs used in the treatment of cancer.

Under a new section 1860D-4(b)(3)(G)(ii) of the Act, subject to the authority in section 1860D-4(b)(3)(G)(iii) of the Act to provide for exceptions, Part D formularies must include all covered Part D drugs in each class identified under section 1860D-4(b)(3)(G)(i) of the Act. Section 1860D-4(b)(3)(G)(iii), in turn, provides CMS the discretion to establish exceptions permitting sponsors of a prescription drug plan to exclude from their formularies, or to otherwise limit access to (including through prior authorization or other utilization management restrictions), certain Part D drugs from the protected categories and classes established consistent with section 1860D-4(b)(3)(G)(i) of the Act. As provided in section 1860D-4(b)(3)(G)(iii)(I) of the Act, any such exception must be based on scientific evidence and medical standards of practice (and, in the case of antiretroviral medications, be consistent with the Department of Health and Human Services Guidelines for the Use of Antiretroviral Agents in HIV-1-Infected Adults and Adolescents). In addition, as provided in section 1860D-4(b)(3)(G)(iii)(II) of the Act, such exceptions must be provided under a process that includes an opportunity for public notice and comment. We have added § 423.120(b)(2)(v) to reflect the new formulary requirements in section 1860D-4(b)(3)(G) of the Act.

Based on our program experience, and consistent with our formulary review process, we plan to conduct an examination, described below, of widely used treatment guidelines in order to establish protected categories and classes for Part D sponsors that meet the requirements established by section 1860D-4(b)(3)(G) of the Act. Additionally, consistent with section 1860D-4(b)(3)(G)(iii) of the Act and § 423.120(b)(2)(v) of this interim final rule, we may establish exceptions to the requirement that Part D sponsors include all Part D drugs in the protected categories and classes. Given the complexity involved in modern medicine and changes in drug therapies with availability of new information reaching providers almost daily, we anticipate that exceptions to our regulatory requirements will be necessary. For example, we believe that in certain circumstances the application of prior authorization may be appropriate to ensure use of Part D drugs in line with medically necessary

indications. As described below, we will therefore establish exceptions to the protected categories and classes through notice-and-comment rulemaking to ensure that they are established in a manner that provides for meaningful public input, in a fully transparent manner (in which we will formally respond to the public comments), that also enables us to meet operational timeframes.

We note that Part D sponsors may apply edits to make appropriate coverage determinations for drugs included in the protected classes that may be covered under Medicare Part B. Until the Part D sponsor is able to affirm there is no Part B reimbursement, we do not consider the definition of a Part D drug to be satisfied. Furthermore, the limitation of drug utilization management relating to drugs in the protected classes does not extend to the application of safety edits. Part D sponsors and their subcontracted network pharmacies must apply established safety edits to drugs from the protected classes to ensure their enrollees are not harmed by inadvertent medication errors.

We also note that, as stated in our January 28, 2005 Part D final rule (70 FR 4194, 4260), inclusion of “all covered Part D drugs” from a protected class or category does not extend to inclusion of all brand-name drugs and generic versions of the covered drug in question. Under our longstanding interpretation of the term “covered Part D drug,” Part D sponsors will only be required to include on their formularies all chemically distinct drugs from the protected classes or categories in order to meet the provisions of § 423.120(b)(2)(v). We have consistently held that two drug products that are determined to be therapeutic equivalents by the Food and Drug Administration (FDA) and identified as such in the FDA’s Orange Book are considered to be the same Part D “drug.” (According to the Orange Book: “Drug products are considered to be therapeutic equivalents only if they are pharmaceutical equivalents and if they can be expected to have the same clinical effect and safety profile when administered to patients under the conditions specified in the labeling.”) Thus, therapeutic equivalents are not counted twice for purposes of satisfying the CMS minimum formulary requirements.

In planning for the implementation of section 1860D–4(b)(3)(G) of the Act, we note that we have gained valuable experience since 2006 in evaluating various drug classification systems and ensuring that Medicare beneficiaries

reliant on drugs contained in certain categories or classes are neither substantially discouraged from enrolling in a Part D plan nor experience unnecessary complications related to accessing these drugs. Our experience has provided insight into the type of evaluation process that will be required to ensure that the classes and categories of drugs we are protecting are appropriate. In this rule, below, we describe our current thinking on the process we believe will allow us to most appropriately identify the classes and categories of drugs that should be protected. We would welcome comments on this process.

We believe that it is necessary to establish a multi-level review process to ensure that we are appropriately identifying classes or categories that meet the criteria set forth in section 1860D–4(b)(3)(G)(i) of the Act. Under this multi-level process, we are planning on conducting an initial analysis that is predominantly research and data driven, followed by a secondary clinical analysis that will serve as a validation review. Both processes will involve the identification of potential exceptions to the protected categories or classes provision.

We plan on initiating the first-level review by selecting a contractor familiar with our CMS Part D formulary process. This contractor will review all the widely used treatment guidelines and generate a list highlighting those categories or classes in which multiple drugs within classes or categories are typically used to treat a specific disorder. Simultaneously, CMS will provide information to the contractor on beneficiary utilization of multiple drugs within categories and classes based on analysis of prescription drug event (PDE) data. The contractor will relate these findings to the information obtained from the examination of widely used treatment guidelines.

For the second level validation, an expert panel of physicians and pharmacists will be organized to review the initial data developed from the contractor and offer recommendations based on a consensus opinion on the identification of protected categories and classes under the statute. Information regarding the independence, potential conflicts of interest, expertise, and balance of the individuals chosen to participate in this expert panel will be made publicly available.

We firmly believe an expert panel can assist us in appropriately weighing the data derived from the initial analysis against the statutory requirements to identify protected categories or classes

of drugs in which “access to multiple drugs within a category or class” is needed and in which “major or life threatening clinical consequences” may arise if access is restricted. Furthermore, we believe the expert panel will be well positioned to consider the data suggesting possible exceptions and overlay this with the protected categories or classes in order to identify exceptions that are based upon available scientific evidence and medical standards of practice. These exceptions will be subject to notice and comment as previously described.

The results from the panel on the protected classes and exceptions will then be published in the **Federal Register** in a notice of proposed rulemaking seeking public comment, to be followed by the issuance of a final rule that responds to the public’s comments. We believe that reliance on the rulemaking process will better facilitate openness and transparency of the process for identifying, as appropriate, classes and categories of drugs that meet the MIPPA criteria.

Given the contracting activities and subsequent extensive analysis necessary for reviewing all widely used treatment guidelines relative to the requirements of section 1860D–4(b)(3)(G)(i) of the Act, as well as commonly-used drug classification systems, we have determined that we will be unable to complete a full evaluation of what constitutes a protected category or class under the criteria set forth in section 1860D–4(b)(3)(G)(i) of the Act in time for the 2010 plan year, as this would require that we hire a contractor, convene an expert panel, and go through notice of proposed and final rulemaking prior to April 2009, when Part D sponsors are required to submit their formularies. Therefore, although the new regulation text at 42 CFR 423.120(b)(2)(v) states that “Effective contract year 2010,” formularies must include all Part D drugs in the categories or classes CMS has identified as meeting the MIPPA criteria, in practice, CMS will not have identified any such categories or classes for the contract year 2010.

Rather, for 2010, given the timeframes discussed above, as well as the need to ensure consistency in formulary coverage as we complete our analysis to implement the requirements of section 1860D–4(b)(3)(G)(i) of the Act, in the meantime we will retain our existing six classes of clinical concern contained in Chapter 6 of the Medicare Prescription Drug Benefit Manual (section 30.2.5), which were incorporated into the Manual under the statutory authority set out in section 1860D–11(e)(2)(D)(i) of

the Act. Accordingly, Part D sponsors will continue to be expected to include all or substantially all drugs in the antidepressant, antipsychotic, and anticonvulsant classes, immunosuppressant (for prophylaxis of organ transplant rejection), antiretroviral, and antineoplastic (those not generally covered under Part B) drugs for coverage year 2010. We are retaining the policy providing for coverage of all or substantially all drugs in these six classes under our existing authority in section 1860D–11(e)(2)(D)(i) of the Act in order to ensure that Part D sponsors do not discriminate against any class of beneficiary by substantially discouraging enrollment.

For contract years 2011 and beyond, any modifications we make to the protected categories and classes, whether under the existing MMA non-discrimination authority or new authority under MIPPA, will be made through notice-and-comment rulemaking. Specifically, prior to establishing the protected categories and classes under the new MIPPA authority, CMS will (i) engage in an identification and validation process, such as the process described above and (ii) engage in a process of notice and comment rulemaking for any modifications (including any additions, subtractions, or exceptions) to the protected categories and classes under the MIPPA authority. In such rulemaking, or a separate rulemaking, we may further articulate our interpretation of the new statutory criteria. We believe that asking for (and responding to) public comment on results from the contractor and expert panel will better facilitate openness and transparency of the process for identifying, as appropriate, classes and categories of drugs that meet the MIPPA criteria.

Similarly, if CMS makes modifications to the existing protected categories and classes under the MMA authority (i.e., the existing six classes of clinical concern), we will (i) engage in an identification and validation process, such as the process described above and (ii) engage in notice and comment rulemaking for any such modifications (including any additions, subtractions, or exceptions). Any such rulemaking may also further articulate our interpretation of the statutory language at section 1860D–11(e)(2)(D)(i) of the Act. This process will mirror the process for establishing the protected categories and classes under the new MIPPA authority. Soliciting, and responding to, public comment on results from the contractor and expert panel will increase the openness and transparency of the process for

protecting classes and categories of drugs under the MMA non-discrimination authority.

In the past, we have used annual Call Letters and other guidance memorandums to announce the policy of expecting plan sponsors to cover “all or substantially all” drugs in the six classes of clinical concern. We announced the policy to ensure that enrollees had as smooth of a transition as possible into the Part D program. We also wanted to minimize potential beneficiary concern about access to drugs in the six protected classes and categories.

However, we now have much more experience with Part D since the program started in January 2006. Thus, we are in a better position to consider drug categories and classes that should receive protection either under MIPPA or the MMA. Further, the public now has greater experience with a fully implemented Part D program and can provide more comprehensive comments on our continuing considerations about the program.

Hence, CMS has decided that any modifications to the current six categories and classes, whether under MIPPA or the MMA authority, will go through the process described above that includes notice of proposed and final rulemaking. The rulemaking process will provide for more transparency in the process of identifying protected categories and classes, enabling the public to comment on how modifications to the current six classes will impact various stakeholders, including beneficiaries, beneficiary advocates, plan sponsors, contractors of plan sponsors, and governmental entities, among others.

In addition, CMS believes that identifying protected classes and categories in the Code of Federal Regulations will provide greater clarity and transparency about those drug classes that are protected.

III. Waiver of Proposed Rulemaking and Delay in Effective Date

We ordinarily publish a notice of proposed rulemaking in the **Federal Register** and invite public comment on the proposed rule. The notice of proposed rulemaking includes a reference to the legal authority under which the rule is proposed, and the terms and substances of the proposed rule or a description of the subjects and issues involved. This procedure can be waived; however, if an agency finds good cause that a notice and comment procedure is impracticable, unnecessary, or contrary to the public interest and incorporates a statement of

the finding and its reasons in the rule issued. We also usually provide for a delay in effective date under section 553(d) of the APA (5 U.S.C. 553(d), as well as section 801(a)(3) of the Congressional Review Act (5 U.S.C. 801(a)(3)) (when applicable). However, such delay in effective date may be waived for good cause, when such delay is impracticable, unnecessary, or contrary to the public interest, and the agency incorporates a statement of the finding and a brief statement of the reasons therefore in the notice. 5 U.S.C. 553(d)(3), 808(2). Because this interim final rule simply makes conforming changes to the Code of Federal Regulations to reflect changes in the statute, we find it would be unnecessary and contrary to the public interest to seek public comment on these provisions. For the same reasons, we also find that it would be unnecessary and contrary to the public interest to delay the effective date of such provisions beyond January 16, 2009.

IV. Collection of Information Requirements

This document does not impose any new information collection and recordkeeping requirements. Currently approved and forthcoming controls account for any collection of information burden relative to the provisions of this interim final rule, as outlined below.

Section 423.120 Formulary Requirements

Section 423.120(b)(2)(v) requires Part D sponsors to include in their contract year 2010 formularies all drugs in certain protected categories of classes of drugs specified by CMS, with certain exceptions that CMS establishes.

The burden associated with this requirement is the time and effort put forth by Part D sponsors to submit their formularies to CMS. These collection of information requirements are currently approved under the Office of Management and Budget (OMB) Control No. 0938–0763.

V. Regulatory Impact Analysis

A. Overall Impact

We have examined the impacts of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993, as further amended), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), and the

Congressional Review Act (5 U.S.C. 804(2)).

Executive Order 12866, as amended, directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects (\$100 million or more in any 1 year). We estimate that this interim final rule with comment is economically significant under the Executive Order 12866, as it contains impacts of \$100 million or more in any one year, and hence also a

major rule under the Congressional Review Act.

The RFA requires agencies to analyze options for regulatory relief of small businesses, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals and most other providers and supplies are small entities, either by nonprofit status or by having revenues of \$7 million or less to \$34.5 million in any 1 year. Individuals and States are not included in the definition of a small entity.

We estimate that the coverage of all drugs by Part D sponsors from the CMS-established protected classes or

categories to have a cost impact to the federal budget in an amount exceeding \$100 million for any given calendar year (CY). Table 1 provides the costs associated with these provisions for CY 2010 through CY 2018. The assumptions underlying these cost estimates are explained later in this section.

With respect to economic benefits, we have no reliable basis for estimating the effects of the proposals contained in this IFC. Accordingly, we estimate that while there could be economic benefits associated with these proposals, they are difficult to gauge at this time.

The economically significant costs are reflected below in table 1.

TABLE 1—PROJECTED PART D COSTS FOR CY 2010—CY 2018
[Amounts in \$ millions]

	CY 2010	CY 2011	CY 2012	CY 2013	CY 2014	CY 2015	CY 2016	CY 2017	CY 2018	CY 2010–2018
Formulary requirements with respect to certain categories or classes of drugs	0	160	340	460	520	570	640	710	800	4200

We note that the change in the definition of a Part D drug to revise the meaning of the term “medically accepted indication,” as provided under section 1860D–2(e)(4) of the Act, was scored at zero additional cost to the program. Most of the anticancer chemotherapeutic regimens utilized by Medicare beneficiaries are covered under Part B, and while this new provision may extend coverage for anticancer therapeutic regimens under Part D, we believe the number of Part D drugs claims impacted by this change will be minimal. Therefore, we do not expect that this provision will significantly impact program costs.

a. Regulatory Flexibility Analysis

Under the RFA, we are not required to conduct an initial regulatory flexibility analysis for interim final rules. However, it is our longstanding policy to provide an analysis whenever we believe it would aid in the understanding of the effects of the interim final rule with comment.

The RFA requires agencies to determine whether a rule will have a “significant economic impact on a substantial number of small entities.” Under the RFA, a “small entity” is defined as a small business (as determined by the Small Business Administration (SBA)), a non-profit

entity of any size that is not dominant in its field, or a small government jurisdiction. HHS uses its measure of a significant economic impact on a substantial number of small entities to be a change in revenues of more than 3 to 5 percent.

With respect to the provisions contained in this interim final rule, we believe only retail pharmacies which are small businesses will be impacted. Other small businesses, such as physicians in private practice or small businesses that deliver prescriptions to beneficiaries, will be unaffected by this interim final rule since there is no direct impact to their operations or profitability. For example, private physicians will generally continue to follow current prescribing practices regardless of Part D formularies. Small delivery businesses will continue to deliver the same number of prescriptions regardless of the drug name or formulary inclusion.

The Small Business Administration (SBA) considers pharmacies with firm revenues less than \$7 million to be small businesses. The 2004 Business Census (the latest available detailed data) indicated that there were approximately 19,443 firms operating about 40,115 retail pharmacies and drug store establishments (NAICS code 44611). Of these firms, 17,835 had

revenues under \$7 million and operated a total of 17,835 establishments. As a result, we estimate that more than 90 percent of retail pharmacy firms are small businesses (as defined by the SBA size standards).

We do not believe that retail pharmacies would be significantly impacted by the requirement for Part D sponsors to include all drugs in protected classes or categories specified by CMS. While the number of brand name drugs dispensed in these categories may increase, we do not think there will be a substantial increase in overall retail pharmacy profits. Retail pharmacies may incur some limited costs relative to this provision, since they may need to inventory more drugs within these classes given that Part D sponsors may not be able to concentrate volume on lower cost salts, esters and active moieties.

As previously discussed, the other change contained in this interim final rule is not expected to affect small businesses in a significant manner, if at all. For example, section 182 of the MIPPA requires modification to the definition of a medically accepted indication for purposes of a Part D drug. While Part D sponsors will be expected to implement this new definition through their drug utilization management programs, small

businesses, such as retail pharmacies or physicians, will not require any changes to their existing operations. The application of drug utilization management is common in the commercial market, and small businesses already have processes (that is, administrative staff or pharmacy technicians) to supply the necessary information to address drug utilization management requirements. As a result, we do not anticipate any additional costs or burdens to be placed on other small businesses.

Section 1102(b) of the Social Security Act requires us to prepare a regulatory flexibility impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area and has fewer than 100 beds. This interim final rule will not affect small rural hospitals since the program will be directed at outpatient prescription drugs, not drugs provided during a hospital stay. As required by law, prescription drugs provided during hospital stays are covered under a separate Medicare payment system. Therefore, we are not providing an analysis in this rule.

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditure in any one year by State, local, or tribal governments, in the aggregate, or by the private sector, of \$100 million. That threshold, updated for inflation, is currently approximately \$130 million. We anticipate that this interim final rule will not impose costs above the \$130 million UMRA threshold on State, local, tribal governments, in the aggregate, or by the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a final rule that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. The changes and additions contained in this interim final rule do not impose new costs on states or local governments.

There are no anticipated Federalism implications because none of the provisions contained in this interim final rule place any requirements on States.

B. Anticipated Effects on Health Plans and Pharmacy Benefit Managers (PBMs)

Part D sponsors will be significantly impacted by this IFC rule. For example, we believe that the new provision relative to the establishment of certain protected classes and categories of Part D drugs will have a significant impact on Part D sponsors, a class of beneficiaries and the Federal Government. This new provision requires that Part D sponsors include all drugs in protected classes and categories of drugs that CMS specifies as meeting both of the following conditions:

1. Restricted access to drugs in the category or class would have a major or life threatening clinical consequence.
2. A significant clinical need exists for individuals to have access to multiple drugs within a category or class due to unique chemical actions and pharmacological effects.

We expect these conditions will likely expand access to drugs for certain classes or categories and provide greater inclusion of manufacturers' drugs associated with those classes or categories in the Part D program. If additional drug classes and categories are required to be included on Part D sponsor formularies, Part D sponsors' costs could increase, since more drugs could need to be covered. Conversely, if fewer classes and categories are required to be included on Part D sponsors' formularies, Part D sponsors' costs could decrease, since less drugs could require coverage. Since we are only now beginning our examination of widely used treatment guidelines in order to establish the protected classes or categories that meet the aforementioned requirements, we estimate that this provision will add an additional \$160 million to the cost of the Part D program in CY 2011. We believe this will increase to \$800 million in CY 2018, with total costs of approximately \$4.2 billion dollars for the period CY 2010 through CY 2018.

To arrive at the cost estimate for the implementation of the protected categories and classes, we began by putting drug spending into 3 groupings: (1) Drugs that were already included in the six classes of clinical concern; (2) drugs with a greater likelihood of being affected by this statutory change; and (3) drugs with a lesser likelihood of being affected by this statutory change. For each of these categories, we estimated the likelihood that they would ultimately be included in the protected categories and classes. A very preliminary review of commonly used classification systems revealed that additional categories and classes of

drugs may be included in the protected categories and classes based upon the statutory requirements in section 1860D-4(b)(3)(G)(i) of the Act. We assumed that it would take several years for the full impact of this policy to take effect as new formulary requirements are fully implemented and manufacturers discover their new negotiating positions. Finally, we estimated the impact on drug expenditures for those drugs that could potentially be moved into protected categories or classes of drugs based on the statutory requirements. These impacts reflect our best estimates of a range of possibilities that cannot be more accurately projected until actual decisions are made.

There is a large amount of uncertainty in the cost impact presented above. As described above, the cost impact is calculated based on making a series of assumptions regarding potential classes that may become protected. It is possible that the actual number of classes that would be protected will be different than we've estimated. For example, if no classes beyond the current six become protected, there would be no cost impact at all. Alternatively, if a greater number of classes than we estimate become protected, the actual cost impact will be greater than presented above. Moreover, if this process only resulted in the elimination of the existing six classes, savings could accrue.

If additional categories and classes are included on Part D sponsor formularies as a result of the new statutory provisions, we expect sponsors' negotiating power to be diminished. If this were to occur, Part D sponsors could incur higher drug costs and could be forced to raise their bids, which could result in higher premiums and co-pays to offset these increases. We also anticipate that Part D sponsors could have additional costs associated with managing a larger overall formulary—for example, increased Pharmacy and Therapeutics Committee oversight and increased expenses in marketing more products on comprehensive formularies. Alternatively, however, the number of protected classes and categories meeting the MIPPA requirement could decline relative to the current six protected under the MMA authority. If this were the case, we expect Part D sponsors' negotiating power to increase. As a result, Part D sponsors could incur lower drug costs and could lower their bids, which could result in lower premiums and co-pays.

We are also uncertain at this time what exceptions to the requirement that Part D sponsor formularies include all

drugs in the protected categories and classes of drugs will be established by CMS. We anticipate establishing exceptions similar to those available under our existing six classes of clinical concern policy. It is possible we will establish fewer exceptions, and Part D sponsors may have to include more drugs on their formularies than current policy. However, it is also possible that we may establish more exceptions than current policy. We are also uncertain how Part D sponsors will be permitted to apply drug utilization management to drugs in the protected classes until we finalize the exceptions to the protected categories and classes requirement. We believe that if we are unable to permit Part D sponsors to apply meaningful utilization management to these drugs—even if only for beneficiaries initiating therapy in these categories or classes—the result could be an increased use of brand-name or higher cost drugs and an increase in costs overall. These costs could be reflected in bids submitted to CMS by Part D sponsors and could result in increased premiums for Medicare beneficiaries. We plan on working closely with all of our Part D sponsors as our guidance in this area develops to ensure they have the information they need to negotiate as efficiently as possible and continue to provide high quality prescription drug coverage at the most economical price.

Except for the potential impact of increased or decreased costs (that is,

increased or decreased copayments and premiums) on beneficiaries, we do not believe that the implementation of the protected classes and categories requirement will negatively impact enrollment in Part D plans. We also do not believe that the provisions of this rule will lead to greater beneficiary confusion or any increased difficulty in making enrollment decisions. While increased copayments and premiums may dissuade some beneficiaries from enrolling in particular Part D plans, we continue to believe that overall enrollment will increase given demographic trends and the increasing cash prices for drugs. Accordingly, we believe Medicare beneficiaries will continue to find Part D to be a cost efficient method of obtaining robust drug coverage at a range of acceptable costs.

We also believe that PBMs could experience higher administrative costs as a result of the provisions contained in this rule. The protected classes provision may increase a number of formulary maintenance expenses ranging from managing a larger formulary to increased support of technical call centers to address requests for assistance in processing a wider range of covered drugs. As a result, PBMs may increase their fees to Part D sponsors to offset these increased costs. We do not believe these additional costs will negatively impact the PBM industry given its ability to

pass these onto the Part D sponsors. Similar to our ongoing communications with our Part D sponsors, we intend to work closely with the PBM industry to ensure as much efficiency as possible and minimize any resulting increases in beneficiary costs.

C. Alternatives Considered

All of the provisions in this interim final rule are a result of the recent passage of the MIPPA and are largely self-implementing. With the publication of this interim final rule, we desire to make our implementing regulations available to industry and the public as soon as possible to facilitate continued, efficient operation of the Parts C and D programs.

D. Accounting Statement

As required by OMB Circular A-4 (available at <http://www.whitehouse.gov/omb/circulars/index.html>), Table 2 below provides an accounting statement showing the classification of the expenditures associated with the provisions of this IFC rule. This table provides our best estimate of the increase in costs as a result of the changes presented in this final rule. All costs, including increases and reductions, are classified as transfers by the Federal Government to Part D plans or MAOs.

TABLE 2—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES

Category	Transfers (\$ millions)
Formulary requirements with respect to certain categories or classes of drugs, CYs 2010–2018:	
Undiscounted Annualized Monetized Transfers	466.7.
Annualized Monetized Transfers Using 7% Discount Rate	424.5.
Annualized Monetized Transfers Using 3% Discount Rate	448.3.
From Whom to Whom?	Federal Government to Part D Plans.

D. Conclusion

Given that we expect the cost of implementing a number of the provisions contained in this IFC rule, as specified in Table 1, will exceed the \$100 million threshold within a single year between CY 2010 and CY 2018, we conducted an economic impact analysis with regard to those entities potentially impacted by these provisions. As we stated previously in this preamble, we expect that entities such as pharmacies will benefit from these changes, whereas other entities, such as Part D sponsors, will experience additional costs which they will pass on to CMS through direct subsidy payments and to beneficiaries through additional premiums as

reflected in their bids. In accordance with the provisions of Executive Order 12866, this final rule was reviewed by the Office of Management and Budget.

List of Subjects in 42 CFR Part 423

Administrative practice and procedure, Emergency medical services, Health facilities, Health maintenance organizations (HMO), Medicare, Penalties, Privacy, Reporting and recordkeeping.

■ For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 423—VOLUNTARY MEDICARE PRESCRIPTION DRUG BENEFIT

Subpart C—Benefits and Beneficiary Protections

■ 1. The authority citation for part 423 continues to read as follows:

Authority: Secs. 1102, 1106, 1860D–1 through 1860D–42, and 1871 of the Social Security Act (42 U.S.C. 1302, 1306, 1395w–101 through 1395w–152, and 1395hh).

■ 2. Amend § 423.100 by revising the introductory text of paragraph (1) under the definition of “Part D drug” to read as follows:

§ 423.100 Definitions.

* * * * *

Part D drug means—

(1) Unless excluded under paragraph (2) of this definition, any of the following if used for a medically accepted indication (as defined in section 1860D–2(e)(4) of the Act)—

* * * * *

■ 3. Amend § 423.120 by—

■ A. Revising (b)(2) introductory text.

■ B. Revising (b)(2)(i).

■ C. Adding (b)(2)(v).

The revisions and additions to read as follows:

§ 423.120 Access to covered Part D drugs.

* * * * *

(b) * * *

(2) Provision of an Adequate Formulary. A Part D plan's formulary must—

(i) Except as provided in paragraphs (b)(2)(ii) and (v) of this section, include within each therapeutic category and class of Part D drugs at least two Part D drugs that are not therapeutically equivalent and bioequivalent, with different strengths and dosage forms available for each of those drugs, except that only one Part D drug must be included in a particular category or class of covered Part D drugs if the category or class includes only one Part D drug.

* * * * *

(v) Effective contract year 2010, a Part D Sponsor's formulary will include all Part D drugs in a category or class that CMS has identified as meeting the two conditions set forth in section 1860D–4(b)(3)(G)(i) of the Act. CMS may establish certain exceptions, which may include the application of drug utilization management under certain circumstances, through a process that provides for public notice and comment, and ensures that any exception to such requirements is based upon scientific evidence and medical standards of practice (and, in the case of antiretroviral medications, is consistent with the Department of Health and Human Services Guidelines for the Use of Antiretroviral Agents in HIV–1–Infected Adults and Adolescents).

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES**45 CFR Parts 88 and 89****RIN 0991–AB46**

**Office of Global Health Affairs:
Regulation on the Organizational
Integrity of Entities That Are
Implementing Programs and Activities
Under the Leadership Act; Correction**

OFFICE: Office of Global Health Affairs, HHS.

ACTION: Rule; Correction.

SUMMARY: This document corrects technical errors that appeared in the final rule published in the **Federal Register** on December 24, 2008, entitled “Regulation on the Organizational Integrity of Entities That Are Implementing Programs and Activities Under the Leadership Act” (73 FR 78997).

DATES: Effective January 20, 2009.

FOR FURTHER INFORMATION CONTACT: Jeanne Monahan, Office of Global Health Affairs, Hubert H. Humphrey Building, Room 639H, 200 Independence Avenue, SW., Washington, DC 20201, Tel: 202–690–6174, e-mail: Jeanne.monahan@hhs.gov.

SUPPLEMENTARY INFORMATION:**I. Background**

In FR Doc. E8–30686, published on December 24, 2008 (73 FR 78997), there were technical errors that are identified and corrected in the Correction of Errors section below. The correction of errors identified in this correction notice do not change any policies contained in the final rule published December 24, 2008, and thus are effective as if they had been included in the final rule.

II. Summary of Errors

HHS published a final rule entitled “Regulation on the Organizational Integrity of Entities That Are Implementing Programs and Activities Under the Leadership Act.” This final rule provided for creation of a new Part 88 of 45 CFR. A final rule published on December 19, 2008 (73 FR 78071), entitled “Ensuring That Department of

Health and Human Services Funds Do Not Support Coercive or Discriminatory Policies or Practices in Violation of Federal Law,” however, also purported to create a new Part 88. We are correcting this error by creating a new Part 89 and moving the regulatory text from the final rule published on December 24, 2008 (73 FR 78997) to Part 89. We are correcting text throughout the preamble and regulatory text to reflect this move.

III. Correction of Errors

In FR Doc. E8–30686, published on December 24, 2008 (73 FR 78997), make the following corrections:

[Corrections to the preamble]

1. On page 78997, in the heading, third line, “45 CFR Part 88” is corrected to read “45 CFR Part 89.”

2. On page 78998, in the first column, following the sixth full paragraph, the heading “Section 88.1 Definitions” is corrected to “Section 89.1 Definitions.”

3. On page 78998, in the second column, following the fifth paragraph, the heading “Section 88.2 Objective Integrity of Recipients” is corrected to “Section 89.2 Objective Integrity of Recipients.”

4. On page 78998, in the third column, in the first full paragraph, line 6, “section 88.3” is corrected to “section 89.3.”

5. On page 78998, in the third column, following the first full paragraph, the heading “Section 88.3 Certifications” is corrected to “Section 89.3 Certifications.”

6. On page 78998, in the third column, third full paragraph, line 3, “section 88.3(d)(1)” is corrected to “section 89.3(d)(1).”

7. On page 78998, in the third column, fourth full paragraph, lines 3–4, “section 88.3(d)(2) and (3)” is corrected to “section 89.3(d)(2) and (3).”

8. On page 79001, in the first column, following the second full paragraph, the heading “List of Subjects in the 45 CFR Part 88” is corrected to “List of Subjects in the 45 CFR Part 89.”

[Corrections to the regulatory text]

9. On page 79001, in the first column, in the words of issuance, immediately following paragraph captioned “Editorial Note,” revise the paragraph to read “For the reasons stated in the preamble, the Office of Global Health Affairs amends 45 CFR subtitle A to add Part 89 as follows:”

10. On page 79001, in the first column, in the part heading, “Part 88” is corrected to “Part 89.”

11. On page 79001, in the first column, in the table of contents, “88.1 Definitions” is corrected to “89.1 Definitions.”

12. On page 79001, in the first column, in the table of contents, “88.2 Organizational integrity of recipients” is corrected to “89.2 Organizational integrity of recipients.”

13. On page 79001, in the first column, in the table of contents, “88.3 Certifications” is corrected to “89.3 Certifications.”

14. On page 79001, in the first column, the heading “88.1 Definitions” is corrected to “89.1 Definitions.”

15. On page 79001, in the second column, the heading “88.2 Organizational integrity of recipients” is corrected to “89.2 Organizational integrity of recipients.”

16. On page 79001, in the third column, in newly redesignated § 89.2, in paragraph (b), “required by § 88.3” is corrected to “required by § 89.3.”

17. On page 79001, in the third column, the heading “88.3 Certifications” is corrected to “89.3 Certifications.”

Dated: January 12, 2009.

Ann C. Agnew,

Executive Secretary to the Department.

[Docket No. PHMSA–2007–0033]

Pipeline Safety: Administrative Procedures, Address Updates, and Technical Amendments

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA), U.S. Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: This final rule adopts, with minor modifications, an interim final rule issued by PHMSA on March 28, 2008, conforming PHMSA’s administrative procedures with the Pipeline Inspection, Protection, Enforcement, and Safety Act of 2006 by establishing the procedures PHMSA will follow for issuing safety orders and handling requests for special permits, including emergency special permits. The rule also notifies operators about electronic docket information availability; updates addresses for filing reports, telephone numbers, and routing

symbols; and clarifies the time period for processing requests for written interpretations of the regulations. This final rule makes minor amendments and technical corrections to the regulatory text in response to written public comments received after issuance of the interim final rule.

DATES: *Effective Date:* This final rule is effective February 17, 2009.

FOR FURTHER INFORMATION CONTACT: Larry White, PHMSA, Office of Chief Counsel, 202–366–4400, or by e-mail at *lawrence.white@dot.gov*.

SUPPLEMENTARY INFORMATION:

Background

On March 28, 2008, PHMSA issued an interim final rule (73 FR 16562) conforming PHMSA’s administrative procedures with the Pipeline Inspection, Protection, Enforcement, and Safety Act of 2006 (PIPES Act) (Pub. L. 109–468) by establishing the procedures PHMSA will follow for issuing safety orders and handling requests for special permits, including emergency special permits. The interim final rule also notified operators about electronic docket information availability; updated addresses, telephone numbers, and routing symbols; and clarified the time period for processing requests for written interpretations of the regulations. Because we considered these amendments to be procedural and ministerial in nature, PHMSA made them effective immediately, while inviting public comment on any and all terms. Having since received and considered written comments in response to our March 28, 2008, notice, PHMSA now is issuing this final rule, incorporating minor amendments and technical corrections to the regulatory text.

Safety Orders. Pursuant to section 13 of the PIPES Act, the interim final rule established the process by which PHMSA will initiate safety order proceedings to address identified pipeline integrity risks that may not rise to the level of a hazardous condition requiring immediate corrective action under 49 U.S.C. 60112, but should be addressed over time to prevent failures. The rule requires PHMSA to provide operators with notice and an opportunity for a hearing before issuing a safety order and expressly authorizes informal consultation in advance of an administrative hearing. In the absence of consent, a safety order must be based on a finding by the Associate Administrator for Pipeline Safety that a pipeline facility has a condition that poses a risk to public safety, property, or the

environment. In making the required finding, the Associate Administrator considers all relevant information, including the nine considerations expressly enumerated in 49 U.S.C. 60117(l)(2). PHMSA expects the majority of safety order proceedings to be resolved by consent agreement between the operator and PHMSA. The safety order process established in the interim final rule is largely unchanged in this final rule.

Special Permits. To clarify the procedures governing special permits, and to establish new procedures for exercise of the agency’s emergency authority, the interim final rule added a new section, entitled “Special permits,” to our administrative procedures in 49 CFR Part 190. The rule outlines the procedures under which pipeline operators (and prospective operators) may request special permits. It specifies the information that must be provided in each application and, in accordance with 49 U.S.C. 60118(c)(1)(B), provides for public notice and hearing on applications for (non-emergency) special permits. Section 10 of the PIPES Act provided PHMSA with the authority to issue an emergency waiver of a pipeline safety regulation without prior notice and hearing if necessary to address an emergency involving pipeline transportation, and the rule outlines the procedures for operators to request such emergency special permits. The special permit process established in the interim final rule is largely unchanged in this final rule.

Other Amendments. The interim final rule also amended part 190 by adding a new paragraph notifying operators that all materials they submit in response to administrative enforcement actions may be placed on publicly accessible websites. The rule sets forth the procedure for seeking confidential treatment, along with other information concerning the agency’s new enforcement transparency website. The rule also reflects the recent relocation of DOT Headquarters and the transition from the Department’s electronic docket management system to the government-wide electronic docket system (found at *regulations.gov*), enabling electronic service of enforcement documents. This final rule also amends 49 CFR Parts 191–199 to correct the address for filing annual, accident, and safety-related condition reports for hazardous liquid pipelines (which was inadvertently omitted from the interim final rule) and corrects addresses, telephone numbers, and routing symbols in the regulations for filing various other forms and reports.

Comments on the Interim Final Rule

The interim final rule conformed agency practice and procedures to current public law and reflected the relocation of PHMSA headquarters; it did not impose any new substantive requirements on operators or the public. Accordingly, we determined that it was unnecessary to precede it with a notice of proposed rulemaking. Nevertheless, we encouraged interested persons to participate in this rulemaking proceeding by submitting comments containing relevant information, data, or views and indicated that we may later amend the rule based on comments received.

PHMSA received comments on the interim final rule from ten organizations, including industry associations, individual pipeline operators, and a state pipeline safety representative. Most comments expressed strong support for the rulemaking action itself or for particular aspects of the interim final rule. For example, one commenter stated that it “applauds and supports the Interim Rule as an important new tool to proactively address pipeline safety issues before they become imminent hazards.” Another commenter praised the informal consultation process set forth in the rule as a “forward thinking and cost-effective alternative for examining and addressing safety concerns.”

These and other commenters also questioned certain aspects of the interim rule, in some cases suggesting modifications to the regulatory text. PHMSA reviewed these comments and used them in developing this final rule. The following is a discussion of the comments by issue.

I. Address Updates and Form Filing Instructions

One commenter representing a state pipeline safety program pointed out that the interim final rule left various discrepancies in address-updates and form filing instructions in parts 191–199.

Response: PHMSA appreciates the commenter’s careful review and agrees that the address and form filing modifications identified by the commenter should have been made in the interim rule. These remaining address corrections and other modifications are included in this final rule.

II. Safety Orders

Need for Prior Notice and Comment on Proposed Actions Not Expressly Set Forth in the Statute

Several commenters pointed out that the interim rule (§ 190.239(a)) identifies among the corrective actions that PHMSA may prescribe in a safety order certain activities (specifically, “risk assessment”, “risk control”, “data integration”, and “information management”) that are not expressly authorized in the statute (49 U.S.C. 60117(l)(1)). These commenters contend that full notice and comment proceedings would be needed to include these terms in the regulatory text. The Association of Oil Pipelines and American Petroleum Institute express concern that including these actions “opens operators to potentially significant and unbounded actions with no certainty of beneficial outcome, limitations on scope, or time frames.” They suggest “keeping to the language in the statute” by striking these terms from the paragraph.

Response: PHMSA is revising the regulatory text in order to minimize unnecessary concern over the exercise of its new statutory authority. Although we included terms that are not in the underlying statutory language, we have no intention of imposing requirements beyond what the law allows. PHMSA understands the need to ensure a strong linkage between identified risk conditions and any mandated corrective actions, and we are committed to tailoring any mandatory actions to the nature and scope of the threat. Consistent with PHMSA’s regulatory approach, we consider the acquisition and use of information key elements in the design and implementation of safety controls.

When appropriately framed and implemented, such activities can support more flexible and adaptive measures, as opposed to prescriptive remedial requirements. Accordingly, we anticipate that initial actions proposed in a Notice of Proposed Safety Order (NOPSO) will typically be diagnostic and performance-oriented, requiring the operator to evaluate conditions, conduct testing, and, on the basis of these activities, develop a work plan. Far from exceeding PHMSA’s jurisdiction, we believe this approach, and the inclusion of risk assessment and related measures in specific cases, generally will tend to protect operator interests and ensure a direct nexus between risk conditions and required safety controls. As we regularly do in other enforcement actions, PHMSA will be prepared to work closely with the operator in the

resolution of technical issues and development and review of work plans.

It remains our view that Congress intended PHMSA to have broad discretion to address identified pipeline risks. By its terms, the statute authorizes PHMSA, in addition to ordering physical inspection, testing, and repair, to require “other appropriate action to remedy the identified risk condition.” This language is broad enough to cover risk assessment, data integration and the other actions listed actions if justified in the specific circumstances. By the same token, we acknowledge that including the challenged terminology in the regulatory text is not necessary in order to preserve the full scope of PHMSA’s statutory authority and that we need not consider the propriety of any particular remedial actions in this rulemaking proceeding. Accordingly, we are striking the challenged regulatory text and will address the scope of PHMSA’s authority to prescribe remedial actions under § 60117(l)(1) should the issue arise in the context of a specific enforcement case.

1. Including Initial Proposed Actions in Notice of Proposed Safety Order.

One commenter contended that the NOPSO should not include any proposed actions at all. The commenter stated that it believed the informal consultation was the appropriate time for the corrective actions to be determined by both parties.

Response: As we have discussed, the informal consultation process will provide an opportunity for reaching a mutually agreeable outcome, which may or may not include the specific corrective measures initially proposed by PHMSA. As a process matter, however, we must specify proposed measures in the NOPSO, in order to put the operator on due notice of the proceeding and potential adjudicatory outcome. The corrective measures proposed in the NOPSO limit the initial actions that PHMSA may order unilaterally in the event that the operator does not respond at all to a NOPSO, or if a consent agreement is not reached. As discussed above, we anticipate that actions proposed in the initial notice will typically be diagnostic- and performance-oriented, requiring the operator to evaluate conditions, conduct testing, and develop a work plan. Because the details of a work plan must be tied to the results of diagnostic evaluation and testing, we anticipate that most safety orders will require or contemplate consultation with PHMSA in the development of a specific work plan.

2. Extent of PHMSA’s Discretion to Use Safety Orders.

Several commenters noted that under § 60117(l), PHMSA has broad discretion concerning when to use a safety order as an enforcement tool. These commenters express concern that PHMSA might use a safety order for inappropriate purposes and suggest that PHMSA coordinate detailed criteria for the use of safety orders with industry groups or advisory committees.

Response: PHMSA understands the importance of working cooperatively with operators in carrying out our shared responsibility for pipeline safety. The safety order process was carefully designed to provide for maximum cooperation between PHMSA and the affected operator. A safety order, however, is only one of several enforcement tools PHMSA may use to address a safety problem. Selections among available enforcement tools in particular cases are discretionary decisions for which PHMSA is responsible and are not coordinated with industry groups or advisory committees. PHMSA has previously outlined the basic circumstances in which it will consider use of a safety order. As we explained in the March 28, 2008, notice, PHMSA will consider initiating safety order proceedings to address identified long-term risks before they become acute and result in a hazardous condition or imminent failure. PHMSA will consider use of a safety order when it is appropriate to this purpose and will continue to use its other enforcement tools (*i.e.*, notices of probable violation, civil penalty assessments, compliance orders, corrective action orders, etc.) when their use is deemed appropriate. PHMSA does not frequently encounter situations in which a safety order would be appropriate and is unlikely to initiate more than a very few safety order proceedings per year.

It should also be emphasized that safety orders will be highly case-specific and dependent on detailed facts and circumstances in each case. Each safety order used in a given instance must be based on a finding that the pipeline facility involved has a condition that poses a pipeline integrity risk to public safety, property, or the environment and the basis for that finding must be explained in the order itself. Therefore, generic discussions about when a safety order is appropriate may not be very useful; nor is it feasible to list all types of scenarios in which we would or would not use one. Nevertheless, PHMSA is always open to hearing from operators and other stakeholders about their views on when a safety order should be used, and operators are encouraged to communicate their views

to PHMSA at any time and by any means they find convenient. If an operator is aware of a long-term risk condition on its pipeline that would be suitable for a cooperative resolution with PHMSA, we encourage the operator to come forward and inform us about the situation so a determination can be made if a safety order proceeding would be appropriate.

3. *Transcription of Hearings.*

One commenter representing natural gas pipeline operators contended that, in the event a safety order proceeding was not resolved through a consent agreement and a hearing was held, a transcript should be made of all hearings, presumably at PHMSA's expense. Another industry commenter disagreed, stating that hearings should not be transcribed.

Response: An operator participating in any pipeline safety enforcement hearing may arrange for the hearing to be transcribed at its own expense. Requesting that PHMSA provide a transcript of every hearing at government expense would be a resource and budget issue for PHMSA and would have to be revisited at a later time. Accordingly, no change to this effect will be made in this final rule.

4. *Ensuring Unbiased Hearing Officers.*

One commenter acknowledged that the rule ensured that hearing officers would have "no significant prior involvement" in the case, but argued that the rule should be amended to prohibit hearing officers from having any prior involvement whatsoever. PHMSA is committed to ensuring that its informal enforcement hearings are fair for all concerned. Hearing officers must be unbiased and are expected to provide a full opportunity for the operator to present all information it contends is relevant to the issue(s). PHMSA's hearing officers have expertise in due process requirements, evidentiary matters, and construing laws and regulations and have consistently executed their responsibilities in a fair and professional manner. We would not disqualify a hearing officer merely because he or she heard the case mentioned or otherwise gained some general awareness of the matter. Hearing officers are trained to identify and avoid conflicts of interest, including recusal from hearing a case if a conflict of interest is present or an issue of bias has arisen for any reason. Accordingly, no change was made in the rule on this issue.

5. *Availability of Informal Consultation/Consent Agreement*

Option in Other Types of PHMSA Enforcement Actions.

One commenter suggested that the rule be amended to make the informal consultation/consent agreement process established by the rule for safety order proceedings available in other PHMSA enforcement actions such as a Notice of Probable Violation (NOPV), Proposed Compliance Order, or Proposed Civil Penalty. This commenter also suggested that with respect to an operator's response options for a NOPV with a Proposed Compliance Order, an operator must choose between either objecting and providing an explanation or requesting a hearing.

Response: PHMSA's existing regulations expressly authorize consent agreement discussions in enforcement cases involving only a Proposed Compliance Order (see § 190.219(a)). The proposal to adopt a similar provision for enforcement cases involving a Proposed Civil Penalty (with or without a Proposed Compliance Order), however, is beyond the scope of this rulemaking proceeding but may be considered as part of future policy and/or rule change(s).

Although the options for responding to a NOPV were not the subject of the interim final rule, in the interests of clarity, we note that the following options are available:

- An operator that chooses not to contest any of the violations may still submit written explanations or other information it contends may warrant mitigation of the penalty or may reduce the need to order compliance actions;
- An operator that chooses to contest one or more of the violations but not request an oral hearing may still submit a written response to the allegation(s) and/or seek mitigation of any proposed penalty;
- An operator may request an oral hearing to contest the allegation(s) and/or proposed assessment of a civil penalty; or
- An operator may submit a written response to the allegation(s) and also request an oral hearing.

We appreciate the comment and have recently clarified this point in the "Response Options" enclosure which is sent out with enforcement notices. If the opportunity arises, we may also make a minor amendment reflecting this clarification in a future rulemaking involving § 190.209.

6. *Miscellaneous Comments on Safety Orders.*

One commenter suggested that PHMSA should consider using safety orders to address mining subsidence concerns.

Response: PHMSA is aware that in certain parts of the country, mining subsidence is a serious issue and would not rule out use of a safety order to address it. However, this involves no change in the rule.

Finally, we are making a minor change to § 190.239(b) to clarify that an operator's response to a NOPSO should be addressed to the PHMSA official who issued the NOPSO (typically the Regional Director); that the Regional Director may sign a consent agreement for PHMSA; and that a consent order must be signed by the Associate Administrator.

III. Special Permits

1. Modification of Special Permits on an Emergency Basis.

One commenter noted that modification or revocation of a special permit without prior notice and hearing should only be done in the event of a true safety problem or emergency.

Response: PHMSA agrees and believes that this is clearly reflected in the rule. Accordingly, no change was necessary in the rule on this issue.

2. Modification or Revocation of a Special Permit for Non-Compliance with a Term or Condition.

One commenter expressed concern that the word "material" does not precede the words "term or condition" in § 190.341(h)(1)(v) and, accordingly, that the interim final rule could be read to permit revocation of a special permit based on a clerical error.

Response: PHMSA understands that pipeline infrastructure projects involve major investment decisions based to some degree on reliance on special permits and that modification or revocation is a serious matter. PHMSA has no history of modifying or revoking special permits for clerical errors or other immaterial or frivolous reasons, and nothing in the rule suggested a change in policy. However, in order to prevent any conceivable misunderstanding, and for the sake of consistency with subparagraph (ii) of this section, we are adding the word "material" in this final rule. Moreover, it is worth noting that PHMSA's enforcement remedies for noncompliance with a special permit are not limited to modification or revocation of the permit under the final rule. A special permit is a form of agency order, the violation of which may subject the operator to civil penalties and other remedies pursuant to 49 CFR 190.221. Because a holder of a special permit is not operating under the rule that was waived, it is obligated to adhere to all of the terms and conditions of its special permit.

This commenter also stated its view that modification or revocation of a special permit for non-compliance with a term or condition should be limited to the affected pipeline segment as opposed to the entire line.

Response: PHMSA considers such issues on a case-by-case basis and makes a determination concerning the proper scope of any revocation or modification based on the nature and severity of the non-compliance and PHMSA's assessment of the actions necessary to ensure safe operation. If an operator contends that PHMSA's enforcement action should be confined to a smaller portion of its line, with the exception of emergencies, under § 190.341(h)(2), the operator will have the opportunity to show cause for narrower relief.

Accordingly, no change was made in the rule on this issue.

3. Handling of Confidential Materials.

One commenter suggested that materials submitted to PHMSA, that the applicant designates as confidential, should be protected pending PHMSA's decision whether the materials qualify for confidential treatment.

Response: This reflects current practice, and nothing in the rule suggests that PHMSA would do otherwise. PHMSA intends to continue this practice to the extent consistent with DOT policy and applicable law. Accordingly, no change was made in the rule on this issue.

4. Compliance Enforcement While Special Permit Application Is Pending.

One commenter suggested that PHMSA should include a "safe harbor" or "permit shield" that would prohibit PHMSA from citing an operator for non-compliance with a regulation pending review and consideration of a related special permit application.

Response: We understand that an operator who has come forward with a special permit application might be concerned about being cited for non-compliance while its application is pending. Likewise, we acknowledge that specific circumstances might warrant forbearance of enforcement action pending consideration of a special permit application, as where the operator has in good faith implemented alternative safety controls and when strict compliance with an otherwise applicable requirement would be unduly burdensome or unreasonable. However, operators must recognize that failure to comply with an applicable regulatory requirement is not itself a basis for seeking a special permit and necessarily exposes an operator to some risk of enforcement. PHMSA reviews these circumstances on a case-by-case basis and has the discretion to conduct

enforcement or refrain from doing so. PHMSA will not enact a blanket prohibition on its exercise of enforcement authority based on the pendency of a special permit application. Accordingly, no change was made in the rule on this issue.

5. Special Permits Without an End Date.

One commenter sought clarification that renewal does not apply to special permits without an end date.

Response: PHMSA agrees, and nothing in the rule would suggest otherwise. Accordingly, no change was necessary in the rule on this issue.

6. Availability of Informal Consultation/Hearing Option in Special Permit Proceedings.

One commenter suggested that the informal consultation and hearing process used for safety orders should also be used for special permit proceedings.

Response: PHMSA recognizes the importance of working closely with special permit applicants and communicates extensively with applicants about information that may be needed by PHMSA to process the application and about the kinds of alternative measures that would be needed to ensure an adequate level of safety. Since special permits already involve extensive informal (technical) consultations between PHMSA and the applicant and because there is also an opportunity for (paper) hearing in the special permit process, it is unnecessary to make any changes to the rule on this issue.

7. Miscellaneous Comments on Special Permits.

One commenter representing local gas distribution companies (LDCs) voiced concern about the length of time it has historically taken to obtain special permits for gas utilities from the responsible State agencies and commissions. The commenter also suggested that PHMSA should work with the LDC trade associations and State regulators to develop guidance for issuing emergency special permits for predictable situations such as severe winter conditions. Another commenter pointed out that gas LDCs often develop long-term remedial plans with the State commissions.

Response: States handle special permits for gas distribution systems, and State proceedings are not part of this rule. PHMSA has been working with the States to help them develop guidance for issuing emergency special permits and will continue to assist the States on these issues. Nothing in the rule affects the ability of LDCs to develop long-term

remedial plans with the State commissions.

Finally, we are making a minor change to § 190.341(c) to clarify that the information needed by PHMSA to process a special permit application may include environmental information where necessary.

Rulemaking Analyses and Notices

A. Executive Order 12866 and DOT Regulatory Policies and Procedures

This final rule is not considered a significant regulatory action under section 3(f) of Executive Order 12866 and, therefore, was not subject to review by the Office of Management and Budget (OMB). This final rule is not significant under DOT Regulatory Policies and Procedures (44 FR 11034; Feb. 26, 1979). Because this rule conforms agency practice and procedure to reflect current public law and does not impose any new substantive requirements on operators or the public, it has no significant economic impact on regulated entities, and preparation of a regulatory impact analysis was not warranted.

B. Executive Order 13132

This final rule has been analyzed in accordance with the principles and criteria contained in Executive Order 13132 ("Federalism"). This rule does not introduce any regulation that: (1) Has substantial direct effects on the States, the relationship between the national government and the States, or the distribution of power and responsibilities among the various levels of government; (2) imposes substantial direct compliance costs on State and local governments; or (3) preempts State law. Therefore, the consultation and funding requirements of Executive Order 13132 do not apply. Further, this rule does not have impacts on federalism sufficient to warrant the preparation of a federalism assessment.

C. Executive Order 13175

This final rule has been analyzed in accordance with the principles and criteria contained in Executive Order 13175 ("Consultation and Coordination With Indian Tribal Governments"). Because this rule does not significantly or uniquely affect the communities of the Indian tribal governments, the funding and consultation requirements of Executive Order 13175 do not apply.

D. Executive Order 13211

This final rule is not a significant energy action under Executive Order 13211. It is not a significant regulatory action under Executive Order 12866 and is not likely to have a significant

adverse effect on the supply, distribution, or use of energy. Further, this rule has not been designated by the Administrator of the Office of Information and Regulatory Affairs as a significant energy action.

E. Regulatory Flexibility Act

Because this final rule conforms 49 CFR part 190 to the PIPES Act, updates the part 190 procedures to reflect current public law, and reflects the relocation of PHMSA headquarters, and will have no direct or indirect economic impacts for government units, businesses, or other organizations, I certify that this rule will not have a significant economic impact on a substantial number of small entities.

F. Paperwork Reduction Act

This final rule contains no new information collection requirements and imposes no additional paperwork burdens. Therefore, submitting an analysis of the burdens to OMB pursuant to the Paperwork Reduction Act was unnecessary.

G. Unfunded Mandates Reform Act

This final rule does not impose unfunded mandates under the Unfunded Mandates Reform Act of 1995. It does not result in costs of \$100 million or more, as adjusted for inflation, to either State, local or tribal governments, in the aggregate, or to the private sector, and is the least burdensome alternative that achieves the objectives of the rule.

H. Environmental Assessment

Because it imposes no new substantive requirements on operators or the public, no significant environmental impacts are associated with this final rule.

List of Subjects

49 CFR Part 190

Administrative practice and procedure, Penalties.

49 CFR Part 191

Pipeline safety, Reporting and recordkeeping requirements.

49 CFR Part 192

Pipeline safety, Fire prevention, Security measures.

49 CFR Part 193

Pipeline safety, Fire prevention, Security measures, and Reporting and recordkeeping requirements.

49 CFR Part 194

Oil pollution, Pipeline safety, Reporting and recordkeeping requirements.

49 CFR Part 195

Ammonia, Carbon dioxide, Incorporation by reference, Petroleum, Pipeline safety, Reporting and recordkeeping requirements.

49 CFR Part 199

Drug testing, Pipeline safety, Reporting and recordkeeping requirements, Safety, Transportation.

■ For the reasons discussed in the preamble, the interim rule amending 49 CFR parts 190, 191, 192, 193, 194, 195, and 199 which was published at 73 FR 16562 on March 28, 2008, is adopted as a final rule with the following amendments:

PART 190—PIPELINE SAFETY PROGRAMS AND RULEMAKING PROCEDURES

■ 1. The authority citation for part 190 continues to read as follows:

Authority: 33 U.S.C. 1321; 49 U.S.C. 5101–5127, 60101 *et seq.*; 49 CFR 1.53.

§ 190.239 [Amended]

■ 2. Section 190.239 is amended as follows:

■ a. Paragraph (a) is amended by removing the phrase "risk assessment, risk control, data integration, information management," from the last sentence.

■ b. Paragraph (b)(1) is amended by revising the last sentence to read as set forth below.

■ c. Paragraph (b)(2) is amended by replacing the word PHMSA the third time it appears with the words "Regional Director" and replacing the word "PHMSA" the fourth time it appears with the words "Associate Administrator."

§ 190.239 Safety orders.

(b) * * *

(1) * * * An operator receiving a notice will have 30 days to respond to the PHMSA official who issued the notice.

§ 190.341 [Amended]

■ 3. Section 190.341 is amended as follows:

■ a. Remove the word "and" at the end of paragraph (c)(7) and add the word "and" to the end of paragraph (c)(8).

■ b. Add paragraph (c)(9) and revise paragraph (h)(1)(v) to read as follows:

§ 190.341 Special permits.

* * * * *

(c) * * *

(9) Any other information PHMSA may need to process the application including environmental analysis where necessary.

* * * * *

(h) * * *

(1) * * *

(v) The holder has failed to comply with any material term or condition of the special permit.

* * * * *

PART 191—TRANSPORTATION OF NATURAL AND OTHER GAS BY PIPELINE: ANNUAL REPORTS, AND SAFETY-RELATED CONDITION REPORTS

■ 4. The authority citation for part 191 continues to read as follows:

Authority: 49 U.S.C. 5121, 60102, 60103, 60104, 60108, 60117, 60118, and 60124; and 49 CFR 1.53.

§ 191.7 [Amended]

■ 5. The first sentence of § 191.7 is amended by adding the words “the Information Resources Manager,” before “PHP-10,” and by adding “-0001” to the zip code “20590”. and the first sentence of 191.7 is also amended by inserting a comma after the word “Avenue.”

§ 191.27 [Amended]

■ 6. In § 191.27, paragraph (b) is amended by: adding the words “Office of Pipeline Safety,” before the words “Pipeline and Hazardous Materials Safety Administration”, adding the words “Information Resources Manager,” before “PHP-10,”; and adding “-0001” to the zip code “20590”.

PART 192—TRANSPORTATION OF NATURAL AND OTHER GAS BY PIPELINE: MINIMUM FEDERAL SAFETY STANDARDS

■ 7. The authority citation for part 192 continues to read as follows:

Authority: 49 U.S.C. 5103, 60102, 60104, 60108, 60109, 60110, 60113, and 60118; and 49 CFR 1.53.

§ 192.7 [Amended]

■ 8. In § 192.7, paragraph (b) is amended by adding the words “Office of Pipeline Safety,” before the words “Pipeline and Hazardous Materials Safety Administration,” and adding “20590-0001” after the words “Washington, DC.”

§ 192.727 [Amended]

■ 9. In § 192.727, paragraph (g)(1) is amended by:

- a. Adding the words “Office of Pipeline Safety,” before the words “Pipeline and Hazardous Materials Safety Administration.”;
- b. Adding “Information Resources Manager,” before “PHP-10,”;
- c. Adding “-0001” to the zip code “20590”.

§ 192.949 [Amended]

■ 10. In § 192.949, paragraph (a) is amended by moving the words “Information Resources Manager,” from their current position and placing them before “PHP-10,” and by adding “-0001” to the zip code “20590”.

§ 192.951 [Amended]

■ 11. In § 192.951, paragraph (a) is amended by adding the words “Information Resources Manager,” before “PHP-10,” and by adding “-0001” to the zip code “20590”.

PART 193—LIQUIFIED NATURAL GAS FACILITIES: FEDERAL SAFETY STANDARDS

■ 12. The authority citation for part 193 continues to read as follows:

Authority: 49 U.S.C. 5103, 60102, 60104, 60108, 60109, 60110, 60113, and 60118; and 49 CFR 1.53.

§ 193.2013 [Amended]

■ 13. In § 193.2013, paragraph (b) is amended by adding “20590-0001” after the words “Washington, DC.”

PART 194—RESPONSE PLANS FOR ONSHORE OIL PIPELINES

■ 14. The authority citation for part 194 continues to read as follows:

Authority: 33 U.S.C. 1231, 1321(j)(1)(C), (j)(5) and (j)(6); sec. 2, E.O. 12777, 56 FR 54757, 3 CFR, 1991 Comp., p. 351; 49 CFR 1.53.

§ 194.119 [Amended]

■ 15. In § 194.119, paragraph (a) is amended by adding the words “Office of Pipeline Safety” before the words “Pipeline and Hazardous Materials Safety Administration.”

PART 195—TRANSPORTATION OF HAZARDOUS LIQUIDS BY PIPELINE

■ 16. The authority citation for part 195 continues to read as follows:

Authority: 49 U.S.C. 5103, 60102, 60104, 60108, 60109, 60118; and 49 CFR 1.53.

§ 195.3 [Amended]

■ 17. In § 195.3, paragraph (b) is amended by adding the words “Office of Pipeline Safety,” before the words “Pipeline and Hazardous Materials Safety Administration,” by adding the

words “U.S. Department of Transportation” following the words “Pipeline and Hazardous Materials Safety Administration” and by adding the zip code “20590-0001” following the words “Washington, DC.”

§ 195.52 [Amended]

■ 18. In § 195.52, paragraph (b) is amended by removing the words “267-2675,” and adding in their place “(202) 372-2428,” and by adding the zip code “20590-0001” after “Washington, DC”.

§ 195.57 [Amended]

■ 19. In § 195.57, paragraph (b) is amended by adding the words “Office of Pipeline Safety” before “Pipeline and Hazardous Materials Safety Administration,” and by adding “Information Resources Manager” before “PHP-10.”

§ 195.58 [Amended]

■ 20. Section 195.58 is amended by removing the words “the Information Resources Manager,”; removing the words “Room 7128, 400 Seventh Street, SW,,” and adding in their place “Information Resources Manager, PHP-10, 1200 New Jersey Avenue, SE,,”; and by adding “-0001” to the zip code “20590”.

§ 195.59 [Amended]

■ 21. In § 195.59, paragraph (a) is amended by adding the words “Office of Pipeline Safety,” before “Pipeline and Hazardous Materials Safety Administration,”; adding the words “Information Resources Manager,” before “PHP-10,”; and adding “-0001” to the zip code “20590”.

§ 195.62 [Amended]

■ 22. Section 195.62 is amended by removing the words “Information Resources Manager, Office of Pipeline Safety, Department of Transportation, Washington, DC 20590.” and adding the words “Office of Pipeline Safety, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, Information Resources Manager, PHP-10, 1200 New Jersey Avenue, SE., Washington, DC 20590-0001.” in their place.

PART 199—DRUG AND ALCOHOL TESTING

■ 23. The authority citation for part 199 continues to read as follows:

Authority: 49 U.S.C. 5103, 60102, 60104, 60108, 60117, and 60118; 49 CFR 1.53.

§ 199.7 [Amended]

■ 24. In § 199.7, paragraph (a) is amended by: adding “U.S.” before

“Department of Transportation,”; adding “1200 New Jersey Avenue, SE” before “Washington, DC”; and adding “-0001” to the zip code “20590”.

§ 199.229 [Amended]

■ 25. Section 199.229(c) is amended by adding “-0001” to the zip code.

Authority: 49 U.S.C. 60101 *et seq.*

Issued in Washington, DC on January 9, 2009.

Carl T. Johnson,
Administrator.

BILLING CODE 4910-60-P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

49 CFR Parts 356, 365, and 374

[Docket No. FMCSA-2008-0235]

RIN 2126-AB16

Elimination of Route Designation Requirement for Motor Carriers Transporting Passengers Over Regular Routes

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Final rule.

SUMMARY: FMCSA discontinues the administrative requirement that applicants seeking for-hire authority to transport passengers over regular routes submit a detailed description and a map of the route(s) over which they propose to operate. The Agency will register such carriers as regular-route carriers without requiring the designation of specific regular routes and fixed end-points. Once motor carriers have obtained regular-route, for-hire operating authority from FMCSA, they will no longer need to seek additional FMCSA approval in order to change or add routes. Each registered regular-route motor carrier of passengers will continue to be subject to the full safety oversight and enforcement programs of FMCSA and its State and local partners.

DATES: This rule is effective March 17, 2009. The compliance date for this rule is July 15, 2009.

FOR FURTHER INFORMATION CONTACT: Mr. David Miller, Regulatory Development Division, (202) 366-5370 or by e-mail at FMCSAregs@dot.gov.

SUPPLEMENTARY INFORMATION:

I. Description of the Rulemaking

FMCSA is discontinuing the administrative requirement that motor carriers must describe specific routes and provide maps of these routes when

seeking authority to provide regular-route, for-hire transportation of passengers in interstate commerce. Except for carriers who are public recipients of governmental assistance, regular-route passenger carriers will be issued motor carrier certificates of registration that are not route specific.

Designation of regular routes in motor carrier operating authority is not currently required by statute and administratively discontinuing this requirement will streamline the registration process by eliminating the need for motor carriers to file new applications when seeking to change or expand their routes. It will also benefit new entrants by simplifying the OP-1(P) application for operating authority. Designation of regular routes is an administrative requirement associated with the economic regulation of the passenger carrier industry. With the elimination of certain economic regulations beginning in 1980, the Agency believes continuing the practice of approving applications for changing and adding routes is unnecessary and offers no additional safety benefits to the public or the commercial passenger carrier community.

However, the Agency will continue to require public recipients of governmental assistance to designate specific routes when applying for regular-route authority because 49 U.S.C. 13902(b)(2)(B) permits persons to challenge specific regular-route transportation service provided by public entities on the ground that authorizing such service is not consistent with the public interest. Eliminating the route designation requirement in these circumstances would prevent the Agency from evaluating proposed transportation services under the public interest standard, in violation of its statutory mandate.

This final rule amends several FMCSA regulations that reference authorized routes or points of service in order to make them consistent with the Agency's discontinuation of the route designation requirement. The OP-1(P) application form will also be changed to eliminate the current route-designation and mapping requirements. Because changes to the OP-1(P) form must be approved by the Office of Management and Budget (OMB), and FMCSA plans to seek approval of additional modifications to the form in response to recent legislative changes unrelated to route designation requirements, the OMB approval process is expected to take several months. As a result, FMCSA will not implement the new

procedures until 180 days after publication of this final rule.

II. Legal Basis for the Rulemaking

The Motor Carrier Act of 1935 (MCA) (Pub. L. 74-255, 49 Stat. 543, Aug. 9, 1935) authorized the Interstate Commerce Commission (ICC) to regulate motor carriers by, among other things, issuing certificates of operating authority to motor carriers of property and passengers operating in interstate commerce. Section 207(a) of the MCA stated that “no certificate shall be issued to any common carrier of passengers for operations over other than a regular route or regular routes, and between fixed termini [end-points], except as such carriers may be authorized to engage in special or charter operations.” Section 208(a) of the MCA required that certificates issued to regular-route passenger carriers specify the routes, end-points, and intermediate points to be served under the certificate. Section 208(b) permitted occasional deviations from authorized routes, if permitted by ICC regulations.

These MCA provisions were subsequently recodified without substantive change as 49 U.S.C. 10922(f)(1)-(3). However, they were repealed by the ICC Termination Act of 1995 (ICCTA) (Pub. L. 104-88, 109 Stat. 888, Dec. 29, 1995). The statutory registration requirements specific to passenger carriers are now codified at 49 U.S.C. 13902(b). Section 103 of the ICCTA retained some of the former registration requirements of section 10922 applicable to regular-route passenger carriers but eliminated many others, including 49 U.S.C. 10922(f)(1)-(3).

The ICCTA also transferred the ICC's authority to issue for-hire motor carrier operating authority to the Secretary of Transportation (Secretary). Section 101 of the Motor Carrier Safety Improvement Act of 1999 (Pub. L. 106-159, 113 Stat. 1750, Dec. 9, 1999) (MCSIA) created the FMCSA and directed the Administrator of the FMCSA to carry out the duties and powers vested in the Secretary by Title 49 United States Code, Chapters 133 through 149. These powers include the authority of the Secretary, under 49 U.S.C. 13301(a), to prescribe regulations governing registration requirements for motor carriers transporting passengers in interstate commerce for compensation. In addition to the statutory delegation, the Secretary has administratively delegated this authority to the FMCSA Administrator under 49 CFR 1.73(a).

III. Notice of Proposed Rulemaking

Although the ICCTA no longer required regular-route operating authority to specify routes and fixed end-points, FMCSA continued to require applicants seeking such authority to submit maps and a detailed description of proposed operating route(s) as attachments to the Form OP-1(P) application. Carriers proposing to add routes to their operating systems were required to file new applications in order to do so. Pursuant to Part 365 of Title 49, Code of Federal Regulations (CFR), the route descriptions submitted by an applicant were published in the *FMCSA Register* and subject to protests by interested parties. The number of protests received has been very small, an average of one protest per year between 2003 and 2007.

On August 7, 2008, FMCSA published a Notice of Proposed Rulemaking (NPRM) (73 FR 45929) requesting public comment on its proposal to discontinue the route designation requirement and make conforming changes to its regulations. FMCSA proposed to henceforth issue motor carrier certificates of registration authorizing service as a regular-route passenger carrier without designating specific regular routes or fixed end-points. As a result of this proposal, registered regular-route passenger carriers would no longer need to submit a new application to FMCSA in order to add new routes or change existing routes. The Agency asserted that the paperwork and administrative burden on both the industry and the Agency would be reduced as a result of eliminating the need to file and process multiple applications containing detailed routes.

FMCSA proposed to modify existing certificates of regular-route authority to make them consistent with the broader authority that would be issued to new entrants pursuant to the final rule in this proceeding. Such certificates would supersede any route-specific authority issued by FMCSA or its predecessor agencies.

In order to implement this proposal, FMCSA proposed to amend various sections of Title 49 CFR to make them consistent with the Agency's proposed registration procedures. These amendments included: (1) Removing 49 CFR 356.3, which prescribes the extent to which passenger carriers may serve points not located on their "authorized routes"; (2) modifying 49 CFR 365.101, which identifies the types of operating authority applications filed with the Agency, to reflect that the Agency would no longer grant authority to passenger carriers to operate over

specific routes; (3) eliminating references to "authorized points" or "authorized routes" in 49 CFR 374.303(f) and 374.311(a); and (4) amending 49 CFR 374.311(b) by removing the requirement that carriers file notices of schedule and route changes with FMCSA. Regular-route motor passenger carriers would still be required to post notices of schedule changes in each affected bus and carrier facility for the convenience of their passengers.

The basis for the NPRM was FMCSA's belief that the route designation requirement no longer serves a useful purpose. The requirement was enacted primarily to protect existing carriers serving particular routes from competition. Subsequent legislative changes limited the ability of existing carriers to protest applications based on economic grounds and there was no measurable nexus between the route designation requirement and motor carrier safety.

In the NPRM, FMCSA noted that the proposal would result in uniform treatment of regular-route motor passenger carriers and passenger carriers that provide charter and special transportation (as well as property carriers), who need only file a single application in order to provide nationwide interstate transportation. Applicants would remain subject to the applicable statutory fitness standards in 49 U.S.C. 13902(a) and potential safety problems would be addressed through new entrant safety audits, compliance reviews, or vehicle inspections. The Agency believed there was no justification for treating regular-route passenger carriers differently from other carriers to ensure their compliance with the Federal Motor Carrier Safety Regulations.

In summary, the Agency concluded that the current route designation requirement, and the related requirement that existing registered carriers file new applications when adding or changing routes, had no discernible safety benefit, yet burdened the industry and the Agency with unnecessary paperwork.

IV. Discussion of Comments to the NPRM

FMCSA received eight comments in response to the NPRM. Commenters included three transportation companies—Greyhound Lines, Inc., Coach USA, Inc., and Peter Pan Bus Lines, Inc; two labor organizations—the Amalgamated Transit Union (ATU) and the Transportation Trades Department, AFL-CIO (TTD); one trade association—the American Bus Association (ABA);

one State regulatory agency—the Missouri Department of Transportation, Motor Carrier Services Division (MoDOT); and one public interest advocacy group—the Disability Rights Education and Defense Fund (DREDF). The commenters opposed the Agency's proposal. The three primary objections regarding the proposal were: (1) It would adversely impact motor carrier safety; (2) it would prevent meaningful implementation of the recently enacted Over-the-Road Bus Transportation Accessibility Act of 2007; and (3) it would create serious problems in determining the scope of Federal preemption of State authority to regulate the intrastate regular-route transportation of passengers.

A. Impact on Motor Carrier Safety

The six transportation industry-related commenters raised concerns regarding motor carrier safety issues. Greyhound urged FMCSA to propose procedures that would enable the Agency to conduct a meaningful assessment of a passenger carrier's fitness to comply with regulatory requirements before allowing it to operate or expand its interstate operations. Greyhound agreed there was little need for route descriptions under the current system, where applications are rarely protested and grants of operating authority are virtually automatic. However, Greyhound believed that if FMCSA decides to "reconstitute" a system where it conducts a thorough investigation of a bus carrier's fitness prior to granting operating authority, route descriptions would be essential. According to Greyhound, FMCSA must know the specific route(s) over which an applicant will operate in order to determine whether the applicant has a sufficient number of qualified drivers and vehicles, as well as adequate safety management controls, to operate safely over these routes. It contended that such an analysis is mandated by 49 U.S.C. 13902(a)(1), which requires FMCSA to register a person to provide transportation as a motor carrier only if it finds the person willing and able to comply with the applicable regulations and safety fitness requirements. The ABA and other commenters echoed Greyhound's views.

Along similar lines, Coach USA believed that the application process is an important tool in monitoring and enhancing safety compliance because it provides an additional incentive for existing carriers to maintain compliance. This incentive would be lost if carriers are no longer required to file new applications to expand their

operations. Coach USA also believed that FMCSA will have difficulty assessing the adequacy of a regular-route carrier's safety program during a new entrant safety audit or compliance review unless it knows whether the carrier plans to operate in a large geographic area or a small one.

Peter Pan believed that the minimal cost of the route designation requirement is outweighed by the benefits of continuing existing procedures, which allow knowledgeable parties to raise safety compliance concerns by protesting new applications. Peter Pan interpreted the NPRM as suggesting that the States will oversee safety compliance issues connected with expanded service, and questioned the ability of the States to do so adequately. Peter Pan claimed FMCSA has not offered any meaningful justification for the proposed change.

ATU and TTD agreed with Greyhound that disclosure of route designations can play a crucial role in enforcing and ensuring compliance with safety regulations, since the requirements to operate a limited route differ from those necessary to run a nationwide network. ATU believed route designations can also assist inspectors in locating operators for additional safety audits, inspections and compliance reviews, while TTD contended that FMCSA must know the routes of cross-border bus operations to ensure such carriers comply with safety regulations and do not engage in cabotage.

FMCSA Response:

FMCSA acknowledges the commenters' concerns about highway safety. However, this rulemaking does not affect the applicability of any of the Agency's safety regulations intended to prevent crashes and save lives. Neither FMCSA nor its predecessor agencies have considered the routes over which a passenger carrier proposes to operate when investigating the carrier's fitness prior to granting operating authority. The fitness standard set forth in 49 U.S.C. 13902(a)(1) pertains to a carrier's overall willingness and ability to comply with safety and other applicable regulations, not whether the carrier has sufficient drivers or equipment to operate over a particular route. Accordingly, the statute does not mandate a route-specific safety fitness analysis, as claimed by Greyhound. If Congress had intended to mandate such an analysis, it presumably would have not eliminated the statutory requirement that operating authority specify routes and end points. Moreover, although the commenters contend that scrutiny of particular routes is important for safety reasons, they do not point to a single

protest filed with FMCSA or its predecessor agencies alleging that an applicant would be unable to operate safely over a specific route based on the length or other characteristics of the route.

While FMCSA recognizes the need to continue to give closer scrutiny to passenger carrier applications, it has focused its efforts on carriers that try to reinvent themselves as new entities, after demonstrating serious safety compliance problems identified through compliance reviews, new entrant safety audits and vehicle inspections. The Agency believes its resources are more effectively and efficiently directed to identifying and taking appropriate action against such problem carriers rather than scrutinizing the specific routes carriers propose to serve and speculating about their ability to safely operate over those routes.

While the multiple application requirement can theoretically provide an incentive for existing carriers to maintain compliance, the very small number of applications that are protested indicates that it does not serve this purpose in actual practice. Contrary to claims that operating authority is granted automatically through a computer-driven system, FMCSA provides public notice of all applications and considers all legitimate protests.

While Greyhound claimed, inaccurately, that the Agency's system ignored a protest and granted an application, that claim does not reflect what actually happened. In that case—No MC-405969, Fung Wah Bus Transportation, Inc.—there was a lengthy delay in delivering the protest to FMCSA. As a result, the Agency did not learn about the protest until after the authority was issued. The Agency considered the protest after it was discovered, but rejected it because it raised issues that the Agency believed at the time it could not lawfully consider in evaluating the applicant's fitness to receive new operating authority.

Regular-route passenger carriers are the only motor carriers regulated by FMCSA that must file multiple applications to expand their interstate operations. Passenger carriers providing charter or other non-regular route services, as well as property carriers, are required to file only a single application covering all potential operations in interstate commerce. Safety compliance monitoring for these carriers is carried out through new entrant safety audits, compliance reviews and vehicle inspections. These monitoring activities provide ample incentives to maintain compliance with the Federal Motor

Carrier Safety Regulations, because problem carriers may be placed out of service for lack of safety fitness or be assessed civil penalties for regulatory noncompliance. The commenters have not shown that requiring regular-route carriers to file new applications when expanding their operations has any discernible impact on motor carrier safety.

Contrary to the statement by Peter Pan, FMCSA did not suggest in the NPRM that States would be responsible for overseeing compliance issues connected with potential expansion of regular-route service. Rather, the Agency was soliciting comment on the potential impact of its proposal on the statutory preemption of State regulation of intrastate transportation, which is discussed in more detail below.

Coach USA's comment that FMCSA will have difficulty assessing the adequacy of a regular-route carrier's safety program during a new entrant safety audit or compliance review unless it knows the size of the geographic area in which the carrier plans to operate misconstrues the nature of these safety assurance processes. New entrant safety audits and compliance reviews are designed to provide a snapshot of the carrier's basic safety management controls and regulatory compliance at the time of the audit or compliance review. During the safety audit or compliance review, the auditor or investigator can readily determine the scope of the carrier's existing operations by asking carrier officials or reviewing the carrier's records. Such reviews are not intended to speculate about future safety compliance based on potential future expansion or contraction of a carrier's operations, regardless of whether the carrier transports passengers or property. For example, a new property carrier may only operate a small number of trucks at the time of the new entrant safety audit, but may plan to expand its service territory and lease or purchase a significant number of additional vehicles in the future. The safety audit determines the carrier's compliance based on its existing operations, not future plans that may never come to fruition. In the event the carrier eventually follows through on its expansion plans, vehicle inspections would identify potential safety problems that warrant closer scrutiny of the carrier through a compliance review. Contrary to ATU's comments, route designations are not needed to locate carriers for additional safety audits, inspections and compliance reviews. Safety audits and compliance reviews are generally conducted at the carrier's principal place of business and vehicle

inspections are not scheduled to coincide with a carrier's designated route system.

Finally, TTD's comment that FMCSA must know the routes of cross-border bus operations to ensure such carriers comply with safety regulations and do not engage in cabotage fails to take into account that FMCSA is not issuing operating authority to regular-route passenger carriers domiciled in Mexico. If the Agency does so in the future, there is an extensive safety monitoring system in place, which includes pre-authorization safety audits, mandated safety inspection decals and compliance reviews designed to ensure compliance with the applicable safety regulations (see 49 CFR Part 365, Subpart E, and 49 CFR Part 385, Subpart B).

Cabotage is generally defined as the prohibited point-to-point transportation of property or passengers within the United States by foreign-domiciled motor carriers. Identifying routes in a foreign motor carrier's operating authority would not ensure that the carrier does not engage in cabotage. If a carrier were issued broad general regular-route operating authority in accordance with the final rule, it would still need to publish schedules listing pickup and drop-off locations along the route to make the operation financially viable. Such schedules would be more useful to enforcement officials in identifying potential cabotage violations than a route described in the carrier's operating certificate, which would not indicate pickup and drop-off times and locations.

B. The Over-the-Road Bus Transportation Accessibility Act of 2007

The Over-the-Road Bus Transportation Accessibility Act of 2007 (OTRB Act), Public Law 110-291, 122 Stat. 2915, became law on July 30, 2008. This legislation was enacted in response to the Fung Wah case mentioned in the previous section of this preamble. In that case, FMCSA determined that it lacked statutory authority to consider compliance with the Department of Transportation's (DOT) Americans With Disabilities Act (ADA) accessibility regulations in determining whether a passenger carrier should be granted interstate operating authority. The OTRB Act directed FMCSA to determine: (1) An over-the-road bus (OTRB) company's willingness and ability to comply with DOT's ADA accessibility requirements in 49 CFR Part 37, Subpart H, before granting new operating authority to provide interstate passenger transportation; and (2) an OTRB company's compliance with 49 CFR Part 37, Subpart H, in determining

whether to suspend or revoke existing operating authority. The Act also required DOT and the U.S. Department of Justice to enter into a Memorandum of Understanding delineating their respective roles and responsibilities in enforcing the DOT ADA regulations.

Most of the commenters expressed concern that the Agency's proposal would prevent meaningful implementation of the OTRB Act. The commenters noted that without route designations, FMCSA would be unable to assess whether an applicant for new operating authority has adequate equipment and systems to comply with the ADA. Moreover, eliminating the need for existing carriers to seek new authority before expanding their operations would eliminate FMCSA's ability to assess ADA compliance before allowing route expansion. DREDF supported an ABA proposal that would have FMCSA: (1) Investigate all bus applications that are protested on ADA grounds and issue a written decision setting forth the grounds for approval or denial of the application; (2) include ADA compliance as a pass/fail factor in the new entrant safety audit because noncompliance with ADA regulations is indicative of breakdowns in a carrier's management controls; (3) make clear that a bus company's failure to comply with DOT's ADA regulations is grounds for revocation of operating authority; and (4) establish procedures for investigating ADA compliance and determining whether revocation is appropriate.

FMCSA Response:

The OTRB Act requires that FMCSA determine compliance with DOT's ADA accessibility regulations as an additional element to consider in determining an applicant's fitness to receive new operating authority. Other statutory fitness criteria include compliance with FMCSA's commercial and safety regulations, the Agency's safety fitness standards, and the applicable financial responsibility regulations. In amending 49 U.S.C. 13902(a), Congress placed compliance with the ADA regulations on the same footing as compliance with the commercial and safety regulations. Therefore, the Agency will consider ADA compliance (as it does with compliance issues regarding the other applicable regulations) when protesting parties allege that an applicant's failure to comply with the ADA regulations requires the Agency to withhold new operating authority, or when the Agency otherwise has reason to believe the applicant may not be ADA-compliant. The Agency's decision to withhold operating authority will be based on its evaluation of whether the applicant is

willing and able to prospectively comply with the regulations and is not intended to be a sanction for past noncompliance. Accordingly, although past noncompliance with regulatory requirements is certainly an important factor in evaluating a carrier's fitness, it does not automatically bar an applicant from receiving new operating authority.

This change in the Agency's application procedures will not prevent meaningful implementation of the OTRB Act. The Act amended 49 U.S.C. 13905 to permit FMCSA to suspend or revoke a carrier's operating authority based on willful noncompliance with the DOT ADA regulations.

Consequently, it is unnecessary to wait for a carrier to file a new application before filing a complaint with the Agency requesting suspension or revocation of the carrier's operating authority. FMCSA also has the authority to initiate a suspension or revocation proceeding based on findings of willful noncompliance discovered during compliance reviews, new entrant safety audits or other means. Unlike denial of an application for new authority based on ADA noncompliance, suspension or revocation can be more comprehensive, affecting the carrier's ability to operate over all of its existing routes, not just the new routes proposed in the application. Moreover, the Agency is in the process of implementing the Act's requirement to enter into a Memorandum of Understanding (MOU) with the U.S. Department of Justice to more effectively coordinate enforcement of DOT's ADA accessibility regulations.

DREDF's comment supporting ABA's proposal to include ADA compliance as a pass/fail factor in the new entrant safety audit raises issues that are beyond the scope of this rulemaking proceeding, which is limited to modifying the Agency's regulations to correspond with its removal of the route-designation requirement.

C. State Preemption Issues

As was noted in the NPRM, 49 U.S.C. 13902(b)(3) preempts States from regulating intrastate service provided by interstate regular-route passenger carriers over interstate routes. If a regular-route passenger carrier obtains operating authority from FMCSA, a State is prohibited from requiring the carrier to obtain operating authority to provide intrastate service on an interstate route operated by the carrier. Because the preemption is limited to operations over specific routes, FMCSA requested comment on whether elimination of route designations in FMCSA operating certificates would make this preemption provision more

difficult to enforce and perhaps result in increased State regulation of intrastate regular-route transportation.

Under 49 U.S.C. 14501(a)(1)(A), States are also preempted from regulating the scheduling of interstate or intrastate transportation (including discontinuance of or reduction in the level of service) on an interstate route. FMCSA requested comment on whether elimination of route designations will affect this preemption provision.

Greyhound contended that section 13902(b)(3) clearly shows that Congress intended for Federal operating authority to be issued on a route-specific basis. It claimed that without specific route designations, preemption would be impossible to administer because, on the one hand, States could argue that the lack of a specific route designation would permit them to license all regular-route intrastate service within their borders while, on the other hand, interstate carriers could argue that the broad scope of their interstate authority prohibits the States from licensing any intrastate service they provide. Greyhound argued that elimination of route designations would also encourage States to regulate schedules and rates on all intrastate bus routes, thus vitiating the section 14501(a)(1)(A) preemption.

Coach USA pointed out that a route-specific certificate issued by FMCSA is important evidence of the interstate service provided by the carrier which makes it easier to preempt States from regulating intrastate transportation provided over a carrier's designated interstate routes. Removal of route designations, it claims, would make it more difficult to administer the statutory preemption.

MoDOT submitted the lengthiest comment regarding this issue. Contrary to Greyhound and Coach USA, who indicated that removal of the route designation requirement could encourage the States to significantly increase their regulatory presence, MoDOT argued that FMCSA's proposal would radically expand the Federal preemption of State and local laws regulating wholly intrastate commerce in excess of the statutory limits intended by Congress and would unlawfully deregulate market entry into the intrastate passenger transportation industry.

MoDOT asserted that elimination of the route designation requirement would negate any meaningful distinction between regular-route and irregular-route service since irregular-route service, at least under Missouri law, includes transportation not restricted to any specific route or routes

within the carrier's authorized service area. Consequently, MoDOT believed that the FMCSA proposal would effectively preempt State and local entry regulations with reference to all intrastate transportation of passengers provided by federally-authorized motor carriers within any State.

FMCSA Response:

We do not agree with Greyhound that section 13902(b)(3) requires FMCSA regular-route operating authority to be route specific. That provision authorizes federally-registered carriers to provide regular-route transportation entirely in one State if such intrastate transportation is to be provided on a route over which the carrier provides interstate transportation of passengers. There is no reference to authorized routes in section 13902(b)(3), as there was in former 49 U.S.C. 10922(d)(2), which authorized the ICC to issue interstate operating authority that would allow interstate carriers to provide intrastate transportation on a route over which a carrier has, or will be granted, Federal authority. The ICCTA, the same statute that eliminated the route designation requirements of 49 U.S.C. 10922(f)(1)–(3), also eliminated the authorized route language that appeared in former section 10922(d)(2). Therefore, an FMCSA-licensed passenger carrier need only provide interstate transportation of passengers over a regular route in order to provide intrastate transportation along that route. There is no requirement that the route be specified in the motor carrier's FMCSA operating authority certificate in order to qualify as an interstate route for purposes of implementing section 13902(b)(3).

FMCSA also disagrees with MoDOT's assertion that elimination of the route designation requirement effectively eliminates the distinction between regular-route and irregular-route service. Passenger carriers will continue to receive operating authority based on the type of service being provided—regular-route or charter and special operations. Carriers registered to provide regular-route service are required by 49 CFR 374.305(c) to provide printed schedules to the traveling public at all facilities where tickets are sold. Such schedules must show for each route operated by the carrier: (a) The points along the route where facilities are located or where the bus trips originate or terminate; and (b) the arrival or departure time for each such point. Even without these regulatory requirements, regular-route carriers would need to provide such schedules out of business necessity in order to attract ridership along their routes.

In the absence of route designations in a carrier's operating certificate, the States can readily obtain copies of schedules from carriers to determine which routes they are operating over. After obtaining these schedules, the States would still have to show a lack of sufficient nexus between intrastate transportation provided over the route and legitimate interstate service over the route in order to legally regulate the intrastate transportation. Accordingly, we believe the most significant difficulties in implementing section 13902(b)(3) would result from establishing the presence or absence of legitimate interstate transportation along the route, not the elimination of the route designation requirement. Based on the comments, the precise impact of eliminating the route designation requirement on Federal preemption of State regulation of intrastate regular-route transportation is still uncertain.

In conclusion, FMCSA adopts its proposal to discontinue the requirement that applicants seeking for-hire operating authority to transport passengers over regular routes submit a detailed description and a map of the route(s) over which they propose to operate. The Agency will continue to require public recipients of governmental assistance to designate specific routes when applying for regular-route authority because eliminating the route designation requirement in these circumstances would prevent the Agency from evaluating proposed transportation services under the public interest standard, in violation of its statutory mandate.

In order to implement the Agency's new policy, FMCSA removes 49 CFR 356.3, which prescribes the extent to which passenger carriers may serve points not located on their "authorized routes." The final rule also amends: (1) 49 CFR 365.101 to reflect that the Agency will no longer be granting authority to passenger carriers to operate over specific routes; (2) 49 CFR 374.303(f) and 374.311(a) by removing language indicating that the Agency grants authority to operate over specific routes; and (3) 49 CFR 374.311(b) by removing the requirement that carriers must file with FMCSA notices of schedule and route changes. FMCSA will continue to require regular-route motor passenger carriers to post notices of schedule changes in each affected bus and carrier facility for the convenience of their passengers.

V. Regulatory Analyses and Notices

Executive Order 12866 (Regulatory Planning and Review); DOT Regulatory Policies and Procedures

FMCSA has determined that this action is not significant under Executive Order 12866. This rule does not have an annual effect on the economy of \$100 million or more and does not adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities. The rule does not create a serious inconsistency or otherwise interfere with an action taken or planned by another agency, does not materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients, and does not raise novel legal or policy issues arising out of legal mandates or the Administration's priorities. FMCSA prepared a regulatory impact assessment for this rule as required by Executive Order 12866, but the final rule and the regulatory impact assessment have not been reviewed by OMB because it was determined to be not significant under the Executive Order.

The Agency prepared a regulatory impact assessment for the NPRM, which evaluated route deregulation options under three industry growth/change scenarios. Based on these scenarios, FMCSA estimated annual net benefits to the industry of \$36,000 to \$44,000 from avoided costs related to the elimination of the route designation application requirement. Evaluated over a 10-year period, the estimated net present value of the industry cost savings ranged from \$222,000 to \$341,000 based on discount rates of 3 to 7 percent depending on whether one uses a 3-year average, 5-year average, or 5-year median. No comments were received disputing these figures.

Regulatory Flexibility Act, as Amended by the Small Business Regulatory Enforcement Fairness Act of 1996

The Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121, 110 Stat. 857), requires Federal agencies, as a part of each rulemaking, to consider regulatory alternatives that minimize the impact on small entities while achieving the objectives of the rulemaking. FMCSA evaluated the effects of this proposed rule on small entities as required by the RFA.

All new entrant regular-route carriers are affected by the proposed rulemaking action because all such carriers must file

an OP–1(P) application to obtain regular-route authority. Existing regular-route carriers are affected only if they seek to expand their routes. New entrants and existing carriers submitted an average of 92 regular-route authority applications each year between 2003 and 2005. Currently, there are 272 active regular route authority carriers. The Small Business Administration (SBA) Small Business Size Standard for Interurban and Rural Bus Transportation is no more than \$6.5 million in gross annual revenue. Based on U.S. industry statistics for 2002 provided by the SBA Office of Advocacy, 279 out of 323 firms in the interurban and rural bus transportation industry (roughly 86 percent) reported annual receipts of less than \$5 million. Additionally, carriers with annual gross revenues between \$5 million and \$6.5 million would also be classified as small businesses, though FMCSA is unable to quantify the number of carriers within this range. Absent more current detailed data, the Initial Regulatory Flexibility Analysis prepared for the NPRM assumed that approximately 86 percent of regular route authority carriers are small entities. Comments received on the NPRM did not dispute these figures or provide additional data.

This rule is a deregulatory action implementing a policy change intended to provide relief to industry. There are no additional costs specific to these entities as a result of this rulemaking, and the underlying policy change provides applicants with a cost saving of approximately \$300 for each application. Therefore, FMCSA certifies this action will have no significant economic impact on a substantial number of small entities.

Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531 *et seq.*) requires each agency to assess the effects of its regulatory actions on State, local, and tribal governments and the private sector. Any agency promulgating a final rule likely to result in a Federal mandate requiring expenditures by State, local, or tribal governments, in the aggregate, or by the private sector, of \$136.1 million or more in any 1 year must prepare a written statement incorporating various assessments, estimates, and descriptions that are delineated in the Act. FMCSA determined that this rule would not have an impact of \$136.1 million or more in any 1 year.

Environmental Impacts

The Agency analyzed this rule for the purpose of the National Environmental

Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*), the Council on Environmental Quality regulations implementing NEPA (40 CFR 1500–1508), and FMCSA's NEPA Implementation Order 5610.1 published March 1, 2004 (69 FR 9680). This action is categorically excluded under Appendix 2, paragraph 6.d of the Order (regulations governing applications for operating authority) from further environmental documentation. The Agency believes that the action includes no extraordinary circumstances that would have any effect on the quality of the environment. Thus, the action does not require an environmental assessment or an environmental impact statement.

FMCSA also analyzed this rule under the Clean Air Act, as amended (CAA) section 176(c), (42 U.S.C. 7401 *et seq.*) and implementing regulations promulgated by the Environmental Protection Agency. Approval of this action is exempt from the CAA's general conformity requirement since it involves rulemaking and policy development and issuance. (See 40 CFR 93.153(c)(2).) It would not result in any emissions increase nor would it have any potential to result in emissions that are above the general conformity rule's *de minimis* emission threshold levels. Moreover, it is reasonably foreseeable that the rule would not increase total CMV mileage, how CMVs operate, or the CMV fleet-mix of motor carriers. This action merely allows passenger carriers to make changes to their regular routes without FMCSA approval. Such alterations are routinely approved under current Agency procedures.

Environmental Justice

The FMCSA evaluated the environmental effects of this rule in accordance with Executive Order 12898 and determined that there are no environmental justice issues associated with its provisions nor any collective environmental impact resulting from its promulgation. Environmental justice issues would be raised if there were “disproportionate” and “high and adverse impact” on minority or low-income populations. None of the alternatives analyzed in the Agency's categorical exclusion determination, discussed under National Environmental Policy Act, would result in high and adverse environmental impacts.

Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), a Federal agency must obtain approval from OMB for each collection of

information it conducts, sponsors, or requires. This rulemaking would affect a currently-approved information collection request (ICR) covered by OMB Control Number 2126-0016, entitled "Licensing Applications for Motor Carrier Operating Authority." This ICR has an annual burden of 55,738 burden hours, and will expire on January 31, 2009.

FMCSA is authorized to register for-hire motor passenger carriers under the provisions of 49 U.S.C. 13902. The form used to apply for operating authority with FMCSA is Form OP-1(P) for motor passenger carriers. This form requests information on the applicant's identity, location, familiarity with safety requirements, and type of proposed operations. The OP-1(P) application form will be changed to eliminate the current route-designation and mapping requirements. Changes to the OP-1(P) form must be approved by the Office of Management and Budget (OMB); consequently, FMCSA will seek OMB approval of this change, as well as other modifications to the form in response to recent legislative changes unrelated to route designation requirements.

The Agency's discontinuation of its current requirement that motor carriers seeking authority to transport passengers over regular routes submit to FMCSA a detailed description and map of the proposed route(s) for approval would reduce the currently approved ICR annual burden by 180 hours [2 hours to provide description and map of regular routes in Form OP-1(P) × 90 regular route applications per year = 180 hours]. The estimated annual burden for this ICR would decrease to 55,558 hours [55,738 currently approved annual burden hours - 180 hours less time to complete Form OP-1(P) regular route applications = 55,558]. No comments were received regarding Paperwork Reduction Act issues.

Executive Order 12988 (Civil Justice Reform)

This rulemaking meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, entitled "Civil Justice Reform," to minimize litigation, eliminate ambiguity, and reduce burden.

Executive Order 12630 (Taking of Private Property)

FMCSA has analyzed this rule under Executive Order 12630, entitled "Governmental Actions and Interference with Constitutionally Protected Property Rights." We do not anticipate that this action would effect a taking of private property or otherwise have taking

implications under Executive Order 12630.

Executive Order 13132 (Federalism)

This action has been analyzed in accordance with the principles and criteria contained in Executive Order 13132, and FMCSA has determined that this rulemaking would not warrant the preparation of a Federalism assessment. We have determined that this proposed action would not affect the States' ability to discharge traditional State government functions.

Executive Order 13211 (Energy Effects)

FMCSA has analyzed this action under Executive Order 13211, entitled "Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use." The Agency has determined that it is not a significant energy action within the meaning of section 4(b) of the Executive Order and is not likely to have a significant adverse effect on the supply, distribution, or use of energy. Therefore, a Statement of Energy Effects is not required.

Executive Order 12372 (Intergovernmental Review)

The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities do not apply to this rule.

Executive Order 13175 (Tribal Consultation)

FMCSA has analyzed this action under Executive Order 13175, dated November 6, 2000, and believes that it would not have substantial direct effects on one or more Indian tribes; would not impose substantial compliance costs on Indian tribal governments; and would not preempt tribal law. Therefore, a tribal summary impact statement is not required.

List of Subjects

49 CFR Part 356

Administrative practice and procedure, Routing, Motor carriers.

49 CFR Part 365

Administrative practice and procedure, Brokers, Buses, Freight forwarders, Motor carriers, Moving of household goods, Reporting and recordkeeping requirements.

49 CFR Part 374

Aged, Blind, Buses, Civil rights, Freight, Individuals with disabilities, Motor carriers, Smoking.

■ For the reasons discussed above, FMCSA amends title 49, Code of

Federal Regulations, chapter III, subchapter B, as set forth below:

PART 356—MOTOR CARRIER ROUTING REGULATIONS

■ 1. The authority citation for part 356 continues to read as follows:

Authority: 5 U.S.C. 553; 49 U.S.C. 13301 and 13902; and 49 CFR 1.73.

§ 356.3 [Removed and Reserved].

■ 2. Remove and reserve § 356.3.

PART 365—RULES GOVERNING APPLICATIONS FOR OPERATING AUTHORITY

■ 3. The authority citation for part 365 continues to read as follows:

Authority: 5 U.S.C. 553 and 559; 16 U.S.C. 1456; 49 U.S.C. 13101, 13301, 13901-13906, 14708, 31138, and 31144; 49 CFR 1.73.

■ 4. Amend § 365.101 by removing and reserving paragraph (f) and revising paragraph (e) to read as follows:

§ 365.101 Applications governed by these rules.

* * * * *

(e) Applications for certificates under 49 U.S.C. 13902(b)(3) to operate as a motor carrier of passengers in intrastate commerce over regular routes if such intrastate transportation is to be provided on a route over which the carrier provides interstate transportation of passengers.

(f) [Reserved].

* * * * *

PART 374—PASSENGER CARRIER REGULATIONS

■ 5. The authority citation for part 374 continues to read as follows:

Authority: 49 U.S.C. 13301 and 14101; and 49 CFR 1.73.

■ 6. Amend § 374.303 by revising paragraph (f) to read as follows:

§ 374.303 Definitions.

* * * * *

(f) *Service* means passenger transportation by bus over regular routes.

* * * * *

■ 7. Amend § 374.311 by revising paragraphs (a) and (b) to read as follows:

§ 374.311 Service responsibility.

(a) *Schedules.* Carriers shall establish schedules that can be reasonably met, including connections at junction points, to serve adequately all points.

(b) *Continuity of service.* No carrier shall change an existing regular-route schedule without first displaying

conspicuously a notice in each facility and on each bus affected. Such notice shall be displayed for a reasonable time before it becomes effective and shall contain the carrier's name, a description of the proposed schedule change, the effective date thereof, the reasons for the change, the availability of alternate service, and the name and address of the carrier representative passengers may contact.

BILLING CODE 4910-EX-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 679

[Docket No. 071106671-8010-02]

RIN 0648-XM71

Fisheries of the Exclusive Economic Zone Off Alaska; Pacific Cod by Non-American Fisheries Act Crab Vessels Catching Pacific Cod for Processing by the Inshore Component in the Central Regulatory Area of the Gulf of Alaska

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is prohibiting directed fishing for the A season allowance of the 2009 Pacific cod sideboard limits apportioned to non-American Fisheries Act (AFA) crab vessels catching Pacific cod for processing by the inshore component in the Central Regulatory Area of the Gulf of Alaska (GOA). This action is necessary to prevent exceeding the A season allowance of the 2009 Pacific cod sideboard limits apportioned

to non-AFA crab vessels catching Pacific cod for processing by the inshore component in the Central Regulatory Area of the GOA.

DATES: Effective 1200 hrs, Alaska local time (A.l.t.), January 13, 2009, until 1200 hrs, A.l.t., September 1, 2009.

FOR FURTHER INFORMATION CONTACT: Josh Keaton, 907-586-7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the GOA exclusive economic zone according to the Fishery Management Plan for Groundfish of the Gulf of Alaska (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The A season allowance of 2009 Pacific cod sideboard limits apportioned to non-AFA crab vessels catching Pacific cod for processing by the inshore component in the Central Regulatory Area of the GOA is 588 metric tons (mt) for the GOA, as established by the 2008 and 2009 harvest specifications for groundfish of the GOA (73 FR 10562, February 27, 2008).

In accordance with § 680.22(e)(2)(i), the Regional Administrator, has determined that the A season allowance of the 2009 Pacific cod sideboard limits apportioned to non-AFA crab vessels catching Pacific cod for processing by the inshore component in the Central Regulatory Area of the GOA will soon be reached. Therefore, the Regional Administrator is establishing a sideboard directed fishing allowance for Pacific cod as 550 mt in the inshore component in the Central Regulatory Area of the GOA. The remaining 38 mt in the inshore component in the Central Regulatory Area of the GOA will be set aside as bycatch to support other anticipated groundfish fisheries. In accordance with § 680.22(e)(3), the Regional Administrator finds that this sideboard directed fishing allowance has been reached. Consequently, NMFS

is prohibiting directed fishing for Pacific cod by non-AFA crab vessels catching Pacific cod for processing by the inshore component in the Central Regulatory Area of the GOA.

After the effective date of this closure the maximum retainable amounts at § 679.20(e) and (f) apply at any time during a trip.

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the sideboard directed fishing closure of Pacific cod apportioned to non-AFA crab vessels catching Pacific cod for processing by the inshore component in the Central Regulatory Area of the GOA. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of January 12, 2009.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by § 680.22 and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: January 13, 2009.

Emily H. Menashes,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Federal Register

Vol. 74, No. 11

Friday, January 16, 2009

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF HOMELAND SECURITY

Office of the Secretary

6 CFR Part 5

[Docket No. DHS-2008-0164]

Privacy Act of 1974: Department of Homeland Security—025 Law Enforcement Authority in Support of the Protection of Property Owned or Occupied by the Department of Homeland Security

AGENCY: Privacy Office, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Department of Homeland Security (DHS) is giving concurrent notice of a revised and updated system of records pursuant to the Privacy Act of 1974 for the Department of Homeland Security Law Enforcement Authority in Support of the Protection of Property Owned or Occupied by the Department of Homeland Security system of records and this proposed rulemaking. In this proposed rulemaking, the Department proposes to exempt portions of the system of records from one or more provisions of the Privacy Act because of criminal, civil, and administrative enforcement requirements.

DATES: Comments must be received on or before February 17, 2009.

ADDRESSES: You may submit comments, identified by docket number DHS-2008-0164, by one of the following methods:

- *Federal e-Rulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.
- *Fax:* 703-483-2999.
- *Mail:* Hugo Teufel III, Chief Privacy Officer, Department of Homeland Security, Washington DC 20528.

Instructions: All submissions received must include the agency name and docket number for this notice. All comments received will be posted without change to <http://www.regulations.gov>, including any personal information provided.

Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: For general questions and privacy issues, please contact: Hugo Teufel III (703-235-0780), Chief Privacy Officer, Privacy Office, Department of Homeland Security, Washington, DC 20528.

SUPPLEMENTARY INFORMATION:

Background: Pursuant to the savings clause in the Homeland Security Act of 2002, Public Law 107-296, Section 1512, 116 Stat. 2310 (November 25, 2002), the Department of Homeland Security (DHS) and its components and offices have relied on preexisting Privacy Act systems of records notices for the collection and maintenance of records that pertain to Law Enforcement Authority in Support of the Protection of Property Owned or Occupied by the Department of Homeland Security activities.

As part of its efforts to streamline and consolidate its Privacy Act record systems, DHS is establishing a new agency-wide system of records under the Privacy Act (5 U.S.C. 552a) for DHS Law Enforcement Authority in Support of the Protection of Property Owned or Occupied by the Department of Homeland Security records. The Law Enforcement Authority in Support of the Protection of Property Owned or Occupied by the Department of Homeland Security system of records is the baseline system for investigative activities. This will ensure that all components of DHS follow the same privacy rules for collecting and handling Law Enforcement Authority in Support of the Protection of Property Owned or Occupied by the Department of Homeland Security records.

In this notice of proposed rulemaking, DHS now is proposing to exempt Law Enforcement Authority in Support of the Protection of Property Owned or Occupied by the Department of Homeland Security, in part, from certain provisions of the Privacy Act.

The Privacy Act embodies fair information principles in a statutory framework governing the means by which the United States Government collects, maintains, uses, and disseminates personally identifiable information. The Privacy Act applies to information that is maintained in a "system of records." A "system of

records" is a group of any records under the control of an agency from which information is retrieved by the name of the individual or by some identifying number, symbol, or other identifying particular assigned to the individual. Individuals may request their own records that are maintained in a system of records in the possession or under the control of DHS by complying with DHS Privacy Act regulations, 6 CFR part 5.

The Privacy Act requires each agency to publish in the **Federal Register** a description of the type and character of each system of records that the agency maintains, and the routine uses that are contained in each system in order to make agency recordkeeping practices transparent, to notify individuals regarding the uses to which personally identifiable information is put, and to assist individuals in finding such files within the agency.

The Privacy Act allows Government agencies to exempt certain records from the access and amendment provisions. If an agency claims an exemption, however, it must issue a Notice of Proposed Rulemaking to make clear to the public the reasons why a particular exemption is claimed.

DHS is claiming exemptions from certain requirements of the Privacy Act for Law Enforcement Authority in Support of the Protection of Property Owned or Occupied by the Department of Homeland Security. Some information in Law Enforcement Authority in Support of the Protection of Property Owned or Occupied by the Department of Homeland Security relates to official DHS national security, law enforcement, immigration, and intelligence activities. These exemptions are needed to protect information relating to DHS activities from disclosure to subjects or others related to these activities. Specifically, the exemptions are required to preclude subjects of these activities from frustrating these processes; to avoid disclosure of activity techniques; to protect the identities and physical safety of confidential informants and law enforcement personnel; to ensure DHS' ability to obtain information from third parties and other sources; to protect the privacy of third parties; and to safeguard classified information. Disclosure of information to the subject of the inquiry could also permit the subject to avoid detection or apprehension.

The exemptions proposed here are standard law enforcement and national security exemptions exercised by a large number of Federal law enforcement and intelligence agencies. In appropriate circumstances, where compliance would not appear to interfere with or adversely affect the law enforcement purposes of this system and the overall law enforcement process, the applicable exemptions may be waived on a case by case basis.

A notice of system of records for Law Enforcement Authority in Support of the Protection of Property Owned or Occupied by the Department of Homeland Security is also published in this issue of the **Federal Register**.

List of Subjects in 6 CFR Part 5

Freedom of information; Privacy.

For the reasons stated in the preamble, DHS proposes to amend Chapter I of Title 6, Code of Federal Regulations, as follows:

PART 5—DISCLOSURE OF RECORDS AND INFORMATION

1. The authority citation for Part 5 continues to read as follows:

Authority: 6 U.S.C. 101 *et seq.*; Pub. L. 107–296, 116 Stat. 2135; 5 U.S.C. 301. Subpart A also issued under 5 U.S.C. 552. Subpart B also issued under 5 U.S.C. 552a.

2. Add at the end of Appendix C to Part 5, the following new paragraph “14”:

Appendix C to Part 5—DHS Systems of Records Exempt From the Privacy Act

* * * * *

14. The Department of Homeland Security—025 Law Enforcement Authority in Support of the Protection of Property Owned or Occupied by the Department of Homeland Security system of records consists of electronic and paper records and will be used by DHS and its components. DHS/All—025 Law Enforcement Authority in Support of the Protection of Property Owned or Occupied by the Department of Homeland Security is a repository of information held by DHS in connection with its several and varied missions and functions, including, but not limited to: The enforcement of civil and criminal laws; investigations, inquiries, and proceedings there under; and national security and intelligence activities. DHS/All—025 Law Enforcement Authority in Support of the Protection of Property Owned or Occupied by the Department of Homeland Security contains information that is collected by, on behalf of, in support of, or in cooperation with DHS and its components and may contain personally identifiable information collected by other Federal, State, local, tribal, foreign, or international government agencies. Pursuant to 5 U.S.C. 552a(k)(1), (2), and (5), this system is exempt from the following provisions of the Privacy Act, subject to the limitations set forth in

those subsections: 5 U.S.C. 552a (c)(3), (d), (e)(1), (e)(4)(G), (e)(4)(H), (e)(4)(I), and (f). Exemptions from these particular subsections are justified, on a case-by-case basis to be determined at the time a request is made, for the following reasons:

(a) From subsection (c)(3) (Accounting for Disclosures) because release of the accounting of disclosures could alert the subject of an investigation of an actual or potential criminal, civil, or regulatory violation to the existence of the investigation, and reveal investigative interest on the part of DHS as well as the recipient agency. Disclosure of the accounting would therefore present a serious impediment to law enforcement efforts and/or efforts to preserve national security. Disclosure of the accounting would also permit the individual who is the subject of a record to impede the investigation, to tamper with witnesses or evidence, and to avoid detection or apprehension, which would undermine the entire investigative process.

(b) From subsection (d) (Access to Records) because access to the records contained in this system of records could inform the subject of an investigation of an actual or potential criminal, civil, or regulatory violation, to the existence of the investigation, and reveal investigative interest on the part of DHS or another agency. Access to the records could permit the individual who is the subject of a record to impede the investigation, to tamper with witnesses or evidence, and to avoid detection or apprehension. Amendment of the records could interfere with ongoing investigations and law enforcement activities and would impose an impossible administrative burden by requiring investigations to be continuously reinvestigated. In addition, permitting access and amendment to such information could disclose security-sensitive information that could be detrimental to homeland security.

(c) From subsection (e)(1) (Relevancy and Necessity of Information) because in the course of investigations into potential violations of Federal law, the accuracy of information obtained or introduced occasionally may be unclear or the information may not be strictly relevant or necessary to a specific investigation. In the interests of effective law enforcement, it is appropriate to retain all information that may aid in establishing patterns of unlawful activity.

(d) From subsections (e)(4)(G), (e)(4)(H), and (e)(4)(I) (Agency Requirements), and (f) (Agency Rules) because portions of this system are exempt from the individual access provisions of subsection (d) for the reasons noted above, and therefore DHS is not required to establish requirements, rules, or procedures with respect to such access. Providing notice to individuals with respect to existence of records pertaining to them in the system of records or otherwise setting up procedures pursuant to which individuals may access and view records pertaining to themselves in the system would undermine investigative efforts and reveal the identities of witnesses, and potential witnesses, and confidential informants.

Dated: December 22, 2008.

Hugo Teufel III,

Chief Privacy Officer, Department of Homeland Security.

[FR Doc. E9–926 Filed 1–15–09; 8:45 am]

BILLING CODE 4410–10–P

DEPARTMENT OF HOMELAND SECURITY

Office of the Secretary

6 CFR Part 5

[Docket No. DHS–2008–0151]

Privacy Act of 1974: Department of Homeland Security—023 Personnel Security Management

AGENCY: Privacy Office, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Department of Homeland Security (DHS) is giving concurrent notice of a revised and updated system of records pursuant to the Privacy Act of 1974 for the Department of Homeland Security—023 Personnel Security Management system of records and this proposed rulemaking. In this proposed rulemaking, the Department proposes to exempt portions of the system of records from one or more provisions of the Privacy Act because of criminal, civil, and administrative enforcement requirements.

DATES: Comments must be received on or before February 17, 2009.

ADDRESSES: You may submit comments, identified by docket number DHS–2008–0151, by one of the following methods:

- *Federal e-Rulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.
- *Fax:* 703–483–2999.
- *Mail:* Hugo Teufel III, Chief Privacy Officer, Department of Homeland Security, Washington, DC 20528.

Instructions: All submissions received must include the agency name and docket number for this notice. All comments received will be posted without change to <http://www.regulations.gov>, including any personal information provided.

Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: For general questions and privacy issues, please contact: Hugo Teufel III (703–235–0780), Chief Privacy Officer, Privacy Office, Department of Homeland Security, Washington, DC 20528.

SUPPLEMENTARY INFORMATION:

Background: Pursuant to the savings clause in the Homeland Security Act of 2002, Public Law 107–296, Section 1512, 116 Stat. 2310 (November 25, 2002), the Department of Homeland Security (DHS) and its components and offices have relied on preexisting Privacy Act systems of records notices for the collection and maintenance of records that pertain to personnel security management.

As part of its efforts to streamline and consolidate its Privacy Act record systems, DHS is establishing a new agency-wide system of records under the Privacy Act (5 U.S.C. 552a) for DHS personnel security management records. The personnel security management system of records is the baseline system for personnel security activities, as led by the DHS Office of the Chief Security Officer, for the Department. This will ensure that all DHS components follow the same privacy rules for collecting and handling personnel security management records. In this notice of proposed rulemaking, DHS now is proposing to exempt Personnel Security Management, in part, from certain provisions of the Privacy Act.

The Privacy Act embodies fair information principles in a statutory framework governing the means by which the United States Government collects, maintains, uses, and disseminates personally identifiable information. The Privacy Act applies to information that is maintained in a “system of records.” A “system of records” is a group of any records under the control of an agency from which information is retrieved by the name of the individual or by some identifying number, symbol, or other identifying particular assigned to the individual. Individuals may request their own records that are maintained in a system of records in the possession or under the control of DHS by complying with DHS Privacy Act regulations, 6 CFR part 5.

The Privacy Act requires each agency to publish in the **Federal Register** a description of the type and character of each system of records that the agency maintains, and the routine uses that are contained in each system in order to make agency recordkeeping practices transparent, to notify individuals regarding the uses to which personally identifiable information is put, and to assist individuals in finding such files within the agency.

The Privacy Act allows Government agencies to exempt certain records from the access and amendment provisions. If an agency claims an exemption, however, it must issue a Notice of Proposed Rulemaking to make clear to

the public the reasons why a particular exemption is claimed.

DHS is claiming exemptions from certain requirements of the Privacy Act for Personnel Security Management. Some information in Personnel Security Management relates to official DHS national security, law enforcement, immigration, intelligence activities, and protective services to the President of the United States or other individuals pursuant to Section 3056 and 3056A of Title 18. These exemptions are needed to protect information relating to DHS activities from disclosure to subjects or others related to these activities. Specifically, the exemptions are required to preclude subjects of these activities from frustrating these processes; to avoid disclosure of activity techniques; to protect the identities and physical safety of confidential informants and law enforcement personnel; to ensure DHS’ ability to obtain information from third parties and other sources; to protect the privacy of third parties; to safeguard classified information; and to safeguard records in connection with providing protective services to the President of the United States or other individuals pursuant to Section 3056 and 3056A of Title 18. Disclosure of information to the subject of the inquiry could also permit the subject to avoid detection or apprehension.

The exemptions proposed here are standard law enforcement and national security exemptions exercised by a large number of Federal law enforcement and intelligence agencies. In appropriate circumstances, where compliance would not appear to interfere with or adversely affect the law enforcement purposes of this system and the overall law enforcement process, the applicable exemptions may be waived on a case by case basis.

A notice of system of records for Personnel Security Management is also published in this issue of the **Federal Register**.

List of Subjects in 6 CFR Part 5

Freedom of information; Privacy.

For the reasons stated in the preamble, DHS proposes to amend Chapter I of Title 6, Code of Federal Regulations, as follows:

PART 5—DISCLOSURE OF RECORDS AND INFORMATION

1. The authority citation for Part 5 continues to read as follows:

Authority: 6 U.S.C. 101 *et seq.*; Pub. L. 107–296, 116 Stat. 2135; 5 U.S.C. 301. Subpart A also issued under 5 U.S.C. 552. Subpart B also issued under 5 U.S.C. 552a.

2. Add at the end of Appendix C to Part 5, the following new paragraph “14”:

Appendix C to Part 5—DHS Systems of Records Exempt From the Privacy Act

* * * * *

14. The Department of Homeland Security—023 Personnel Security Management system of records consists of electronic and paper records and will be used by DHS and its components. DHS/ALL—023 Personnel Security Management is a repository of information held by DHS in connection with its several and varied missions and functions, including, but not limited to: The enforcement of civil and criminal laws; investigations, inquiries, and proceedings there under; national security and intelligence activities; and protection of the President of the United States or other individuals pursuant to Section 3056 and 3056A of Title 18. Personnel Security Management contains information that is collected by, on behalf of, in support of, or in cooperation with DHS and its components and may contain personally identifiable information collected by other Federal, State, local, tribal, foreign, or international government agencies. Pursuant to 5 U.S.C. 552a(k)(1), (2), (3), and (5), this system is exempt from the following provisions of the Privacy Act, subject to the limitations set forth in those subsections: 5 U.S.C. 552a(c)(3), (d), (e)(1), (e)(4)(G), (e)(4)(H), (e)(4)(I), and (f). Exemptions from these particular subsections are justified, on a case-by-case basis to be determined at the time a request is made, for the following reasons:

(a) From subsection (c)(3) (Accounting for Disclosures) because release of the accounting of disclosures could alert the subject of an investigation of an actual or potential criminal, civil, or regulatory violation to the existence of the investigation, and reveal investigative interest on the part of DHS as well as the recipient agency. Disclosure of the accounting would therefore present a serious impediment to law enforcement efforts and/or efforts to preserve national security. Disclosure of the accounting would also permit the individual who is the subject of a record to impede the investigation, to tamper with witnesses or evidence, and to avoid detection or apprehension, which would undermine the entire investigative process.

(b) From subsection (d) (Access to Records) because access to the records contained in this system of records could inform the subject of an investigation of an actual or potential criminal, civil, or regulatory violation, to the existence of the investigation, and reveal investigative interest on the part of DHS or another agency. Access to the records could permit the individual who is the subject of a record to impede the investigation, to tamper with witnesses or evidence, and to avoid detection or apprehension. Amendment of the records could interfere with ongoing investigations and law enforcement activities and would impose an impossible administrative burden by requiring investigations to be continuously reinvestigated. In addition, permitting access and amendment to such

information could disclose security-sensitive information that could be detrimental to homeland security.

(c) From subsection (e)(1) (Relevancy and Necessity of Information) because in the course of investigations into potential violations of Federal law, the accuracy of information obtained or introduced occasionally may be unclear or the information may not be strictly relevant or necessary to a specific investigation. In the interests of effective law enforcement, it is appropriate to retain all information that may aid in establishing patterns of unlawful activity.

(d) From subsections (e)(4)(G), (H), and (I) (Agency Requirements), and (f) (Agency Rules) because portions of this system are exempt from the individual access provisions of subsection (d) for the reasons noted above, and therefore DHS is not required to establish requirements, rules, or procedures with respect to such access. Providing notice to individuals with respect to existence of records pertaining to them in the system of records or otherwise setting up procedures pursuant to which individuals may access and view records pertaining to themselves in the system would undermine investigative efforts and reveal the identities of witnesses, and potential witnesses, and confidential informants.

Dated: December 22, 2008.

Hugo Teufel III,

Chief Privacy Officer, Department of Homeland Security.

BILLING CODE 4410-10-P

DEPARTMENT OF HOMELAND SECURITY

Office of the Secretary

6 CFR Part 5

[Docket No. DHS-2008-0152]

Privacy Act of 1974: Department of Homeland Security—024 Facility and Perimeter Access Control and Visitor Management.

AGENCY: Privacy Office, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Department of Homeland Security (DHS) is giving concurrent notice of a revised and updated system of records pursuant to the Privacy Act of 1974 for the Department of Homeland Security—024 Facility and Perimeter Access Control and Visitor Management system of records and this proposed rulemaking. In this proposed rulemaking, the Department proposes to exempt portions of the system of records from one or more provisions of the Privacy Act because of criminal, civil, and administrative enforcement requirements.

DATES: Comments must be received on or before February 17, 2009.

ADDRESSES: You may submit comments, identified by docket number DHS-2008-0152, by one of the following methods:

- *Federal e-Rulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

- *Fax:* 703-483-2999.

- *Mail:* Hugo Teufel III, Chief Privacy Officer, Department of Homeland Security, Washington, DC 20528.

Instructions: All submissions received must include the agency name and docket number for this notice. All comments received will be posted without change to <http://www.regulations.gov>, including any personal information provided.

Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: For general questions and privacy issues, please contact: Hugo Teufel III (703-235-0780), Chief Privacy Officer, Privacy Office, Department of Homeland Security, Washington, DC 20528.

SUPPLEMENTARY INFORMATION:

Background: Pursuant to the savings clause in the Homeland Security Act of 2002, Public Law 107-296, Section 1512, 116 Stat. 2310 (November 25, 2002), the Department of Homeland Security (DHS) and its components and offices have relied on preexisting Privacy Act systems of records notices for the collection and maintenance of records that pertain to facility and perimeter access control and visitor management.

As part of its efforts to streamline and consolidate its Privacy Act record systems, DHS is establishing a new agency-wide system of records under the Privacy Act (5 U.S.C. 552a) for DHS facility and perimeter access control and visitor management records. The access control and visitor management system of records is the baseline system for facility and perimeter access control and visitor management, as led by the DHS Office of the Chief Security Officer. This will ensure that all components of DHS follow the same privacy rules for collecting and handling access control and visitor management records.

The Privacy Act embodies fair information principles in a statutory framework governing the means by which the United States Government collects, maintains, uses, and disseminates personally identifiable information. The Privacy Act applies to information that is maintained in a "system of records." A "system of

records" is a group of any records under the control of an agency from which information is retrieved by the name of the individual or by some identifying number, symbol, or other identifying particular assigned to the individual. Individuals may request their own records that are maintained in a system of records in the possession or under the control of DHS by complying with DHS Privacy Act regulations, 6 CFR part 5.

The Privacy Act requires each agency to publish in the **Federal Register** a description of the type and character of each system of records that the agency maintains, and the routine uses that are contained in each system in order to make agency recordkeeping practices transparent, to notify individuals regarding the uses to which personally identifiable information is put, and to assist individuals in finding such files within the agency.

The Privacy Act allows Government agencies to exempt certain records from the access and amendment provisions. If an agency claims an exemption, however, it must issue a Notice of Proposed Rulemaking to make clear to the public the reasons why a particular exemption is claimed.

DHS is claiming exemptions from certain requirements of the Privacy Act for Facility and Perimeter Access Control and Visitor Management. Some information in Facility and Perimeter Access Control and Visitor Management relates to official DHS national security, law enforcement, immigration, and intelligence activities. These exemptions are needed to protect information relating to DHS activities from disclosure to subjects or others related to these activities. Specifically, the exemptions are required to preclude subjects of these activities from frustrating these processes; to avoid disclosure of activity techniques; to protect the identities and physical safety of confidential informants and law enforcement personnel; to ensure DHS' ability to obtain information from third parties and other sources; to protect the privacy of third parties; and to safeguard classified information. Disclosure of information to the subject of the inquiry could also permit the subject to avoid detection or apprehension.

The exemptions proposed here are standard law enforcement and national security exemptions exercised by a large number of Federal law enforcement and intelligence agencies. In appropriate circumstances, where compliance would not appear to interfere with or adversely affect the law enforcement purposes of this system and the overall law enforcement process, the applicable

exemptions may be waived on a case by case basis.

A notice of system of records for Facility and Perimeter Access Control and Visitor Management is also published in this issue of the **Federal Register**.

List of Subjects in 6 CFR Part 5

Freedom of information; Privacy.

For the reasons stated in the preamble, DHS proposes to amend Chapter I of Title 6, Code of Federal Regulations, as follows:

PART 5—DISCLOSURE OF RECORDS AND INFORMATION

1. The authority citation for Part 5 continues to read as follows:

Authority: 6 U.S.C. 101 *et seq.*; Pub. L. 107–296, 116 Stat. 2135; 5 U.S.C. 301. Subpart A also issued under 5 U.S.C. 552. Subpart B also issued under 5 U.S.C. 552a.

2. Add at the end of Appendix C to Part 5, the following new paragraph “14”:

Appendix C to Part 5—DHS Systems of Records Exempt From the Privacy Act

* * * * *

14. The Department of Homeland Security—024 Facility and Perimeter Access Control and Visitor Management system of records consists of electronic and paper records and will be used by DHS and its components. DHS/All—024 Facility and Perimeter Access Control and Visitor Management is a repository of information held by DHS in connection with its several and varied missions and functions, including, but not limited to: The enforcement of civil and criminal laws; investigations, inquiries, and proceedings thereunder; and national security and intelligence activities. Facility and Perimeter Access Control and Visitor Management contains information that is collected by, on behalf of, in support of, or in cooperation with DHS and its components and may contain personally identifiable information collected by other Federal, State, local, tribal, foreign, or international government agencies. Pursuant to 5 U.S.C. 552a(k)(1), (2), and (5), this system is exempt from the following provisions of the Privacy Act, subject to the limitations set forth in those subsections: 5 U.S.C. 552a(c)(3), (d), (e)(1), (e)(4)(G), (e)(4)(H), (e)(4)(I), and (f). Exemptions from these particular subsections are justified, on a case-by-case basis to be determined at the time a request is made, for the following reasons:

(a) From subsection (c)(3) (Accounting for Disclosures) because release of the accounting of disclosures could alert the subject of an investigation of an actual or potential criminal, civil, or regulatory violation to the existence of the investigation, and reveal investigative interest on the part of DHS as well as the recipient agency. Disclosure of the accounting would therefore present a serious impediment to law

enforcement efforts and/or efforts to preserve national security. Disclosure of the accounting would also permit the individual who is the subject of a record to impede the investigation, to tamper with witnesses or evidence, and to avoid detection or apprehension, which would undermine the entire investigative process.

(b) From subsection (d) (Access to Records) because access to the records contained in this system of records could inform the subject of an investigation of an actual or potential criminal, civil, or regulatory violation, to the existence of the investigation, and reveal investigative interest on the part of DHS or another agency. Access to the records could permit the individual who is the subject of a record to impede the investigation, to tamper with witnesses or evidence, and to avoid detection or apprehension. Amendment of the records could interfere with ongoing investigations and law enforcement activities and would impose an impossible administrative burden by requiring investigations to be continuously reinvestigated. In addition, permitting access and amendment to such information could disclose security-sensitive information that could be detrimental to homeland security.

(c) From subsection (e)(1) (Relevancy and Necessity of Information) because in the course of investigations into potential violations of Federal law, the accuracy of information obtained or introduced occasionally may be unclear or the information may not be strictly relevant or necessary to a specific investigation. In the interests of effective law enforcement, it is appropriate to retain all information that may aid in establishing patterns of unlawful activity.

(d) From subsections (e)(4)(G), (e)(4)(H), and (e)(4)(I) (Agency Requirements), and (f) (Agency Rules) because portions of this system are exempt from the individual access provisions of subsection (d) for the reasons noted above, and therefore DHS is not required to establish requirements, rules, or procedures with respect to such access. Providing notice to individuals with respect to existence of records pertaining to them in the system of records or otherwise setting up procedures pursuant to which individuals may access and view records pertaining to themselves in the system would undermine investigative efforts and reveal the identities of witnesses, and potential witnesses, and confidential informants.

Dated: December 22, 2008.

[Docket No. APHIS–2008–0023]

RIN 0579–AC31

Importation, Interstate Movement, and Release Into the Environment of Certain Genetically Engineered Organisms

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Proposed rule; reopening of comment period.

SUMMARY: We are reopening the comment period for our proposed rule that would revise our regulations regarding the importation, interstate movement, and environmental release of certain genetically engineered organisms. This action will allow interested persons additional time to prepare and submit comments.

DATES: We will consider all comments that we receive on or before March 17, 2009.

ADDRESSES: You may submit comments by any of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov/fdmspublic/component/main?main=DocketDetail&d=APHIS-2008-0023> to submit or view comments and to view supporting and related materials available electronically.

- *Postal Mail/Commercial Delivery:* Please send two copies of your comment to Docket No. APHIS–2008–0023, Regulatory Analysis and Development, PPD, APHIS, Station 3A–03.8, 4700 River Road Unit 118, Riverdale, MD 20737–1238. Please state that your comment refers to Docket No. APHIS–2008–0023.

- *Public Forum:* Written and oral comment will be accepted at a public forum held during the comment period. See Public Forums below.

Reading Room: You may read any comments that we receive on this docket in our reading room. The reading room is located in room 1141 of the USDA South Building, 14th Street and Independence Avenue, SW., Washington, DC. Normal reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 690–2817 before coming.

Other Information: Additional information about APHIS and its programs is available on the Internet at <http://www.aphis.usda.gov>.

FOR FURTHER INFORMATION CONTACT:

Biotechnology Regulatory Services, APHIS, 4700 River Road Unit 147, Riverdale, MD 20737-1236; (301) 734-5710.

SUPPLEMENTARY INFORMATION:

On October 9, 2008, we published in the *Federal Register* (73 FR 60007-60048, Docket No. APHIS-2008-0023) a proposal¹ to revise our regulations regarding the importation, interstate movement, and environmental release of certain genetically engineered (GE) organisms. The proposed revisions would bring the regulations into alignment with provisions of the Plant Protection Act (PPA, 7 U.S.C. 7701 *et seq.*) and update the regulations in response to advances in genetic science and technology and our accumulated experience in implementing the current regulations.

By the time the public comment period closed on November 24, 2008, we had received over 15,000 comments, including requests for APHIS to extend the public comment period. We are currently evaluating all the comments, and it is apparent that additional time for public comment is warranted and that it would be particularly helpful to receive additional comments on a variety of specific issues that have been raised thus far on the proposed rule.

Therefore, we are reopening the comment period on Docket No. APHIS-2008-0023 for an additional 60 days. We will also consider all comments received between November 25, 2008 (the date following the close of the original comment period), and the date of this notice. This action will allow interested persons additional time to prepare and submit comments. While all aspects of the proposal may be addressed by the public, we are particularly seeking additional comments on the issues listed below. In some cases commenters identified concerns about these issues, but did not provide specific suggestions as to how the proposed rule could be modified to address these concerns. By reopening the comment period, we hope to elicit more specific information and detailed suggestions regarding these issues.

Issue 1: Scope of the regulation and which GE organisms should be regulated. Section 340.0 of the proposed rule lists a number of criteria or factors to consider to identify those GE organisms which would be subject to the regulations. The proposal stated that

in many cases a person could correctly apply the criteria to determine whether a specific GE organism is subject to the regulations, and stated that consultation with APHIS would be available in cases where it was not readily apparent whether or not a GE organism is regulated. Some commenters questioned whether the proposed scope could be interpreted with reasonable certainty. Some commenters thought the scope was effectively too broad and would regulate too many harmless GE organisms, while others thought it was too narrow and would exempt GE organisms that should be regulated. Some commenters stated that all GE plants should be subject to the regulations. We welcome additional comments on these subjects, including suggestions on what the criteria should be for determining the scope and applicability of the regulations and suggestions on which specific GE organisms should be included or excluded from the regulations based upon the potential risks consistent with the authorities provided in the PPA.

Issue 2: Incorporation of the Plant Protection Act noxious weed provisions. The proposed rule included APHIS evaluating certain GE organisms as a noxious weed risk pursuant to the PPA definition of "noxious weed" including consideration of noxious weed attributes in the scope of the regulation and in the decision making standards proposed in the regulations. Some comments suggested that this aspect of the proposal overestimates the likelihood that the use of GE techniques will create a noxious weed, whereas other comments suggested that the proposal did not pay enough attention to noxious weed attributes. Other comments broadly discussed the utility of the noxious weed authority of the PPA and how APHIS should apply it in these regulations. We welcome additional comments on how APHIS should include and apply the PPA's noxious weed provisions in the regulations in order to provide an appropriate level of protection based upon the potential risks consistent with the authorities provided in the PPA.

Issue 3: Elimination of notification procedure and revision of the permit procedure. The proposed rule would eliminate the notification procedure for authorizing importations, interstate movements, and releases into the environment, and instead use the permitting procedure for these activities. The proposal provided categories that APHIS would use for environmental release permits. Commenters raised many questions about the consequences of eliminating

notifications. They also raised questions about the clarity of the requirements associated with the proposed permit categories. Some commenters expressed concern that the proposal would remove from the regulations firm timeframes for APHIS administrative action on applications, and that the proposed generalized timeframes were much longer than the timeframes under the current notification procedure. Several commenters saw this proposed change as detrimental to planning activities, especially for conducting field tests. Some commenters raised concerns that the proposed changes would substantially increase the data collection and recordkeeping burden on all applicants and responsible persons, whereas the current recordkeeping requirements for notifications are less than the requirements for permits. We welcome additional comments on these issues, including specific suggestions on how the regulations could achieve the necessary level of protection against the introduction and dissemination of plant pests or noxious weeds while minimizing any additional compliance burden for applicants or delay in processing applications.

Issue 4: Environmental release permit categories and regulation of GE crops that produce pharmaceutical and industrial compounds. In the proposal, the categories for environmental release permits would be an initial administrative sorting done by APHIS prior to a full evaluation and determination of appropriate permit conditions for that particular permit. Most of the comments focused on the four categories APHIS proposed for GE plants. The two primary factors APHIS identified as most relevant to define its initial sorting system for environmental release permits were (1) the ability of the unmodified recipient plant species to persist in the wild and (2) the potential of the engineered trait to cause harm, injury, or damage, as described in the definitions of plant pest and noxious weed. The categories in the proposal were not based on intended use of the GE plant, but rather its properties. Many commenters, however, stated that they wanted APHIS to act on the intended use of the GE plant and ban all environmental releases of GE plants that are intended to produce compounds to be used in pharmaceutical or industrial uses, especially if that plant species is also used for the production of food or feed. We are seeking further comment on whether or how an intended use to produce pharmaceutical or industrial compounds contributes to an increase in plant pest or noxious weed risks. We

¹ To view the proposed rule, supporting documents, and any comments we have received, go to <http://www.regulations.gov/fdmspublic/component/main?main=DocketDetail&d=APHIS-2008-0023>.

welcome additional comments on all these issues, including specific suggestions on how the regulations could best provide the appropriate level of protection based upon the potential risks consistent with the authorities provided in the PPA.

Public Forums

In order to provide additional opportunities for the public to comment on the proposed rule, APHIS held public forums on the proposal in Davis, CA, on October 28, 2008; in Kansas City, MO, on October 30, 2008; and Riverdale, MD, on November 13, 2008. APHIS intends to hold one additional public forum on the proposed rule during the extended public comment period. The time and place of the public forum will be announced in the **Federal Register**.

Authority: 7 U.S.C. 7701–7772 and 7781–7786; 31 U.S.C. 9701; 7 CFR 2.22, 2.80, and 371.3.

Done in Washington, DC, this 13th day of January 2009.

Cindy J. Smith,

Administrator, Animal and Plant Health Inspection Service.

BILLING CODE 3410–34–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2008–1229; Airspace Docket No. 08–ASW–26]

Proposed Amendment of Class E Airspace; Natchitoches, LA

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to amend Class E airspace at Natchitoches, LA. Additional controlled airspace is necessary to accommodate new Standard Instrument Approach Procedures (SIAPs) at Natchitoches Regional Airport, Natchitoches, LA. The FAA is taking this action to enhance the safety and management of Instrument Flight Rules (IFR) aircraft operations at Natchitoches Regional Airport.

DATES: 0901 UTC. Comments must be received on or before March 2, 2009.

ADDRESSES: Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, 1200 New Jersey Avenue, SE., West Building Ground Floor, Room W12–140,

Washington, DC 20590–0001. You must identify the docket number FAA–2008–1229/Airspace Docket No. 08–ASW–26, at the beginning of your comments. You may also submit comments on the Internet at <http://www.regulations.gov>. You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The Docket Office (telephone 1–800–647–5527), is on the ground floor of the building at the above address.

FOR FURTHER INFORMATION CONTACT: Scott Enander, Central Service Center, Operations Support Group, Federal Aviation Administration, Southwest Region, 2601 Meacham Blvd., Fort Worth, TX 76193–0530; telephone: (817) 222–5582.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify both docket numbers and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: “Comments to Docket No. FAA–2008–1229/Airspace Docket No. 08–ASW–26.” The postcard will be date/time stamped and returned to the commenter.

Availability of NPRMs

An electronic copy of this document may be downloaded through the Internet at <http://www.regulations.gov>. Recently published rulemaking documents can also be accessed through the FAA’s Web page at http://www.faa.gov/airports_airtraffic/air_traffic/publications/airspace_amendments/.

Additionally, any person may obtain a copy of this notice by submitting a request to the Federal Aviation Administration (FAA), Office of Air Traffic Airspace Management, ATA–400, 800 Independence Avenue, SW.,

Washington, DC 20591, or by calling (202) 267–8783. Communications must identify both docket numbers for this notice. Persons interested in being placed on a mailing list for future NPRMs should contact the FAA’s Office of Rulemaking (202) 267–9677, to request a copy of Advisory Circular No. 11–2A, Notice of Proposed Rulemaking Distribution System, which describes the application procedure.

The Proposal

This action proposes to amend Title 14, Code of Federal Regulations (14 CFR), Part 71 by adding additional Class E airspace for SIAPs operations at Natchitoches Regional Airport, Natchitoches, LA. The area would be depicted on appropriate aeronautical charts.

Class E airspace areas are published in Paragraph 6005 of FAA Order 7400.9S, dated October 3, 2008, and effective October 31, 2008, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document would be published subsequently in the Order.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore, (1) is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. The FAA’s authority to issue rules regarding aviation safety is found in Title 49 of the U.S. Code. Subtitle 1, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency’s authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it would add additional controlled airspace at

Natchitoches Regional Airport,
Natchitoches, LA.

Navigation (Air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR Part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINTS

1. The authority citation for Part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of Federal Aviation Administration Order 7400.9S, Airspace Designations and Reporting Points, dated October 3, 2008, and effective October 31, 2008, is amended as follows:

Paragraph 6005 Class E Airspace areas extending upward from 700 feet or more above the surface of the earth.

* * * * *

ASW LA E5 Natchitoches, LA [Amended]

Natchitoches Regional Airport
(Lat. 31°44'09" N., long. 93°05'57" W.)

That airspace extending upward from 700 feet above the surface within a 6.6-mile radius of Natchitoches Regional Airport, and within 4 miles each side of the 166° bearing from the airport extending from the 6.6-mile radius to 11.4 miles northeast of the airport.

BILLING CODE 4910–13–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 41

[Reg–116699–07]

RIN 1545–BG63

Highway Use Tax; Sold Vehicles and Electronic Filing

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of Proposed Rulemaking.

SUMMARY: This document contains proposed regulations that provide guidance on mandatory electronic filing of Form 2290, “Heavy Highway Vehicle Use Tax Return,” for 25 or more vehicles; credits or refunds for sold, destroyed or stolen vehicles; and paying tax on the use of certain second-hand vehicles. The regulations reflect changes to the law made by the American Jobs Creation Act of 2004. The regulations would affect owners and operators of highway motor vehicles with a taxable gross weight of 55,000 pounds or more.

DATES: Written or electronic comments and requests for a public hearing must be received by April 16, 2009.

ADDRESSES: Send submissions to: CC:PA:LPD:PR (REG–116699–07), Room 5203, Internal Revenue Service, PO Box 7604, Ben Franklin Station, Washington, DC 20044. Submissions may be hand-delivered to: CC:PA:LPD:PR Monday through Friday between the hours of 8 a.m. and 4 p.m. to: CC:PA:LPD:PR (REG–116699–07), Courier’s Desk, Internal Revenue Service, 1111 Constitution Avenue, NW., Washington, DC, or sent electronically via the Federal eRulemaking Portal at <http://www.regulations.gov> (IRS REG–116699–07).

FOR FURTHER INFORMATION CONTACT:

Concerning the proposed regulations, Taylor Cortright, (202) 622–3130; concerning submissions of comments and requests for a public hearing, Oluwafunmilayo.P.Taylor@irs.counsel.treas.gov, or (202) 622–7180 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Background

This document contains proposed amendments to the Excise Tax on Use of Certain Highway Motor Vehicles (26 CFR Part 41) under section 4481 of the Internal Revenue Code (Code). Section 4481 was amended by section 867 of the American Jobs Creation Act of 2004, Public Law 108–357 (118 Stat. 1418) to require electronic filing of a return for 25 or more highway motor vehicles, allow a proration of the tax for vehicles that are sold, and eliminate the ability to pay the tax in installments.

Explanation of Provisions

Section 4481 imposes an annual tax on the use of highway vehicles with a taxable gross weight of 55,000 pounds or more. For this purpose, the tax year is from July 1 to the following June 30. For vehicles used in July, the tax is due on August 31 and is filed on Form 2290, “Heavy Highway Vehicle Use Tax

Return.” For vehicles first used in later months of the tax year, the tax is prorated. Thus, for example, for a vehicle that is not used in July but is used in August, the tax is 11/12 of the full rate and the return is due September 30. After a return is filed with the IRS, the IRS will return Schedule 1 of Form 2290 to the taxpayer as proof of payment of the tax. Under 23 U.S.C. 141, state governments are required to receive proof of payment of the tax as a condition of registering a vehicle for highway use.

Section 4481(e), as added by the American Jobs Creation Act, provides that any taxpayer that files a highway use tax return for 25 or more vehicles for any taxable period must file the return electronically. The proposed regulations provide that submitting a Form 2290 for 25 or more vehicles on paper rather than electronically constitutes a failure to file for purposes of the penalty under section 6651. In addition, if a Form 2290 for 25 or more vehicles is filed on paper rather than electronically, the regulations provide that the IRS will not return to the taxpayer the Schedule 1 (Form 2290), which is necessary to register the vehicle with the State. The regulations provide guidance on the vehicles that are taken into account in determining whether the “25 or more” requirement applies.

The regulations provide guidance for claiming a credit or refund of the statutory overpayment upon the sale of a vehicle. The regulations also clarify that the triggering event for overpayments, and hence the ability to claim a prorated credit or refund of tax paid, is the sale, destruction, or theft of a vehicle.

The regulations clarify that when a vehicle is sold during a tax period, separate and prorated taxes are imposed on the use of the vehicle before the sale and the use after the sale. The regulations provide rules for the computation of these taxes.

Special Analyses

It has been determined that this notice of proposed rulemaking is not a significant regulatory action as defined in Executive Order 12866. Therefore, a regulatory assessment is not required. It has also been determined that section 553(b) of the Administrative Procedure Act (5 U.S.C. chapter 5) does not apply to these regulations.

Pursuant to the Regulatory Flexibility Act (5 U.S.C. chapter 6), it is hereby certified that this regulation will not have a significant economic impact on a substantial number of small entities. The regulations affect owners and

operators of highway motor vehicles with a taxable gross weight of 55,000 pounds or more, some of which may be small entities. Although a number of small entities may be subject to the requirements of this rule, any economic impact is minimal. First, the regulations merely implement the electronic filing requirement under section 4481 and any cost associated with electronic filing is minimal. In addition, the regulations provide guidance for claiming a refund or credit when a vehicle is sold during the tax year. In order to make the claim, the taxpayer must submit Form 2290 or Form 8849, "Claim for Refund of Excise Taxes." The information to complete these forms is readily available to the taxpayer and the forms take little time to complete. Without the claim information, the IRS could not determine taxpayer eligibility or determine the accuracy of the claim. Accordingly, a regulatory flexibility analysis is not required.

Pursuant to section 7805(f) of the Code, this regulation has been submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on its impact on small entities.

Comments and Requests for a Public Hearing

Before these proposed regulations are adopted as final regulations, consideration will be given to any written (a signed original and eight (8) copies) or electronic comments that are submitted timely to the IRS. The IRS and the Treasury Department request comments on the clarity of the proposed regulations and how they may be made easier to understand. All comments will be available for public inspection and copying. A public hearing will be scheduled if requested in writing by any person that timely submits written comments. If a public hearing is scheduled, notice of the date, time, and place for the hearing will be published in the **Federal Register**.

Drafting Information

The principal author of these regulations is Taylor Cortright, Office of the Associate Chief Counsel (Passthroughs and Special Industries). However, other personnel from the IRS and the Treasury Department participated in their development.

List of Subjects in 26 CFR Part 41

Excise taxes, Motor vehicles, Reporting and recordkeeping requirements.

Proposed Amendments to the Regulations

Accordingly, 26 CFR part 41 is proposed to be amended as follows:

PART 41—EXCISE TAX ON USE OF CERTAIN HIGHWAY MOTOR VEHICLES

Paragraph 1. The authority citation for part 41 is revised to read as follows:

Authority: 26 U.S.C. 7805.

Section 41.4482(b)–1 also issued under 26 U.S.C. 4482(b).

Section 41.4483–1 also issued under 26 U.S.C. 4483(a).

Section 41.4483–2 also issued under 26 U.S.C. 4483(c).

Section 41.4483–3 also issued under 26 U.S.C. 4483(d).

Section 41.6001–1 also issued under 26 U.S.C. 6001.

Section 41.6001–2 also issued under 26 U.S.C. 6001.

Section 41.6001–3 also issued under sec. 507, Public Law 100–17 (101 Stat. 260).

Section 41.6011(a)–1 also issued under 26 U.S.C. 6011(a).

Section 41.6071(a)–1 also issued under 26 U.S.C. 6071 (a).

Section 41.6091–1 also issued under 26 U.S.C. 6091(a).

Section 41.6101–1 also issued under 26 U.S.C. 6101.

Section 41.6109–1 also issued under 26 U.S.C. 6109(a).

Section 41.6151(a)–1 also issued under 26 U.S.C. 6151(a).

Par. 2. Section 41.4481–1 is amended by:

1. Revising the section heading.
2. Removing the third sentence from paragraph (b).
3. Adding headings to paragraphs (c)(1), (c)(2), and (c)(3).
4. Revising paragraphs (c)(4) and (c)(5).
5. Removing paragraphs (c)(6) and (d).
6. Redesignating paragraph (e) as paragraph (d) and revising the introductory text.
7. In newly-redesignated paragraph (d), revising *Example (3)* and adding *Example (4)*.
8. Adding paragraph (e).

The additions and revisions read as follows:

§ 41.4481–1 Imposition and computation of tax.

* * * * *

(c) * * *

(1) In general. * * *

(2) Certain prorated taxable periods.
* * *

(3) *Increase in taxable gross weight during the taxable period.* * * *

(4) *Prorated taxable period for sold, destroyed, or stolen vehicles*—(i) *In general.* The tax on a taxpayer's use of a highway vehicle for a taxable period is determined under paragraph (c)(4)(ii) of this section if—

(A) The vehicle is destroyed or stolen before the first day of the last month in the taxable period and is not subsequently used during the period; or

(B) The taxpayer sells the vehicle before the first day of the last month in the taxable period and does not subsequently use the vehicle during the period.

(ii) *Computation of tax.* If the tax on a taxpayer's use of a highway vehicle for a taxable period is determined under this paragraph (c)(4)(ii), the tax is calculated proportionately from the first day of the month in the period in which the first use of the highway motor vehicle occurs to and including the last day of the month in which the highway motor vehicle was sold, destroyed or stolen.

(iii) *Overpayment.* If a taxpayer's liability for the tax on the use of a highway vehicle for a taxable period is determined under paragraph (c)(4)(ii) of this section, any tax the taxpayer paid under section 4481(a) on the use of the vehicle for such period in excess of the tax calculated under paragraph (c)(4)(ii) of this section is an overpayment of tax.

(iv) *Definition of destroyed vehicle.* For purposes of this paragraph (c)(4), a highway motor vehicle is destroyed if the vehicle is damaged due to an accident or other casualty to such an extent that it is not economical to rebuild.

(v) *Form and content of claim.* A claim for refund of an overpayment described in paragraph (c)(4)(iii) of this section must be made on Form 8849, "Claim for Refund of Excise Taxes" (or such other form as the Commissioner may designate) in accordance with the instructions for that form. A claim for a credit must be made on Form 2290, "Heavy Highway Vehicle Use Tax Return," (or such other form as the Commissioner may designate) in accordance with the instructions for that form. A claim for refund or credit for any vehicle must include—

(A) The Vehicle Identification Number (VIN) and taxable gross weight of the vehicle;

(B) The date of the sale, destruction or theft of the vehicle; and

(C) If the vehicle was sold, the name and address of the purchaser of the vehicle.

(vi) *Tax on use of second-hand vehicles.* If a vehicle is sold during the taxable period and a credit or refund of the tax imposed by section 4481 is allowable upon the sale under paragraph (c)(4)(iii) of this section, tax is imposed on the use of the vehicle after the sale and before the end of the taxable period.

(vii) *Computation of tax on second-hand vehicles.* The tax under paragraph (c)(4)(vi) of this section on the use of a vehicle after a sale upon which a credit or refund is allowable is computed by multiplying the amount of tax that would be due for a full taxable period as computed under paragraph (c)(1) of this section by a fraction. This fraction shall have as its numerator the number of months in the period from the month of the first taxable use of the vehicle after the sale (the month after such month if the first taxable use after the sale occurs in the month of the sale) through the end of the taxable period and as its denominator the number of months in the entire taxable period. For purposes of determining the fraction, any part of a month is counted as a full month. (See example (3) of paragraph (d) of this section.)

(5) *Decrease in taxable gross weight, discontinued use, or converted use.* The computation of the tax is not affected, and no right to a credit or refund of any tax paid under section 4481 arises, if in any taxable period—

(i) The taxable gross weight of a highway motor vehicle is decreased;

(ii) The use of a highway motor vehicle is discontinued (for reasons other than sale, destruction, or theft as described in paragraph (c)(4) of this section); or

(iii) The highway motor vehicle is converted to a use which is exempt from the tax imposed by section 4481(a).

(d) *Examples.* The application of §§ 41.4481-1, 41.4481-2 and 41.4482(c)-1(c) may be illustrated by the following examples:

Example (3). (i) In July 2008, X uses a vehicle with a taxable gross weight of 70,000 pounds. The vehicle is not a logging vehicle. The vehicle is registered in X's name so X pays the tax imposed by section 4481 of \$430 for the taxable period ending June 30, 2009. On January 2, 2009, X sells the vehicle to Y. X's tax for the taxable period is determined under this paragraph (c)(4) and is based on the number of months in the period from the beginning of July 2008 (the month of first use in the taxable period) through the end of January 2009 (the month of the sale). Thus, X's tax for the period is \$250.83 ($\frac{7}{12}$ of \$430) and X may claim a refund of \$179.17 (\$430.00 - \$250.83) immediately after X sells the vehicle.

(ii) On January 23, 2009, Y uses the vehicle. Y is liable for tax on the use of the vehicle during the taxable period ending June 30, 2009. Y's first use of the vehicle occurs in the month of the sale. Accordingly, Y's tax is based on the number of months in the period from February (the month following the month of the first taxable use) through June, and Y owes a section 4481 tax of \$179.17 ($\frac{5}{12}$ of \$430) for the taxable period ending June 30, 2009.

Example (4). Assume the same facts as in Example (3) except that on January 2, 2009, X sells the vehicle to Dealer, a dealer in highway motor vehicles. X may claim a refund of \$179.17. Dealer operates the vehicle exclusively for the purpose of demonstration, which is not a "use" of the vehicle under § 41.4482(c)-1(c). On May 2, 2009, Dealer sells the vehicle to Y. Dealer does not owe a section 4481 tax and may not claim a refund. Y's first taxable use of the vehicle occurs on May 3, 2009. Y's first taxable use of the vehicle does not occur in the month of a sale upon which a credit or refund is allowable. Accordingly, Y's tax is based on the number of months in the period from May (the month of the first taxable use after the sale) through June, and Y owes a section 4481 tax of \$71.67 ($\frac{2}{12}$ of \$430) for the taxable period ending June 30, 2009.

(e) *Effective/Applicability date.* This section applies on and after the date of publication of the Treasury decision adopting these rules as final regulations in the **Federal Register**. For rules applicable before that date, see 26 CFR § 41.4481-1 (revised as of April 1, 2008).

Par. 3. Section 41.4481-2 is amended by:

1. Removing the language "or any installment payment of the tax" in paragraph (a)(1)(i)(D).
2. Revising paragraph (a)(2).
3. Adding paragraphs (a)(3) and (a)(4).
4. Removing paragraph (c).

The addition and revisions read as follows:

§ 41.4481-2 Persons liable for tax.

(a) * * *

(2) If a vehicle is sold during the taxable period and a credit or refund is allowable upon the sale under § 41.4481-1(c)(4)(iii), paragraph (a)(1) of this section is applied with the following modifications:

(i) For purposes of determining the person liable for the tax determined under § 41.4481-1(c)(4)(ii), each reference to a taxable period in paragraph (a)(1) of this section is treated as a reference to the period that begins on the first day of the taxable period in which the vehicle is sold and ends on the date of the sale.

(ii) For purposes of determining the person liable for the tax determined under § 41.4481-1(c)(4)(vi), each reference to a taxable period in paragraph (a)(1) of this section is treated as a reference to the period that begins on the date of the sale and ends on the last day of the taxable period in which the vehicle is sold.

(3) The application of this section may be illustrated by *Example (3)* in § 41.4481-1(d).

(4) *Effective/Applicability date.* This section applies on and after the date of

publication of the Treasury decision adopting these rules as final regulations in the **Federal Register**. For rules applicable before that date, see 26 CFR 41.4481-2 (revised as of April 1, 2008).

* * * * *

Par. 4. Section 41.4483-3(f), fourth sentence, is amended by removing the language "to the extent that the tax or an installment payment of the tax has" and adding "(determined in the case of a transfer described in § 41.4481-1(c)(4)(i) under § 41.4481-1(c)(4)(ii) to the extent that the tax has" in its place.

§ 41.4483-7 [Removed]

Par. 5. Section 41.4483-7 is removed.

Par. 6. Section 41.6001-1 is amended to read as follows:

1. In the first sentence of paragraph (a), the language "district director" is removed and "Commissioner" is added in its place.

2. In paragraph (a)(3), the language "In the case of any such vehicle acquired after June 30, 1956, the date" is removed and "The date" is added in its place.

Par. 7. Section 41.6001-2 is amended as follows:

1. In paragraph (a), the third and fourth sentences are removed.

2. Paragraph (c)(1) is revised.

3. In paragraph (c)(2), the third sentence is revised.

4. Paragraph (e) is added.

The revisions and addition read as follows:

§ 41.6001-2 Proof of payment for State registration purposes.

* * * * *

(c) * * *

(1) *In general.* The proof of payment required in paragraph (b) of this section shall consist of a receipted Schedule 1 (Form 2290 "Heavy Highway Vehicle Use Tax Return") that is returned by the Internal Revenue Service, by mail or electronically, to a taxpayer that files a return of tax under section 4481(a), meets the requirements of § 41.6011(a)-1, and pays the amount of tax due with such return. A photocopy of such receipted Schedule 1 shall also serve as proof of payment. Such Schedule 1 shall serve as proof of suspension of such tax under § 41.4483-3 for the number of vehicles entered in that part of the Schedule 1 designated for vehicles for which tax has been suspended. The vehicle identification number of the vehicle being registered must appear on the Schedule 1 (or an attached page) in order for the Schedule 1 to be a valid proof of payment for such vehicle.

(2) * * * However, a State shall not accept any substitute proof of payment if 25 or more vehicles are reported for

purposes of § 41.6011(a)–1(c) on the Form 2290, “Heavy Highway Vehicle Use Tax Return,” for the vehicle being registered.

* * * * *

(e) *Effective/Applicability date.* This section applies to registrations of highway motor vehicles pursuant to applications that are received by a State on or after the date of publication of the Treasury decision adopting these rules as final regulations in the **Federal Register**. For this purpose, an application for registration that is mailed will be considered to be received by a State on the date on which it is postmarked. For rules applicable with respect to applications received before that date, see 26 CFR 41.6001–2 (revised as of April 1, 2008).

Par. 8. Section 41.6011(a)–1 is amended by adding paragraphs (a)(4) and (c) to read as follows:

§ 41.6011(a)–1 Returns.

(a) * * *

(4) A person that is liable for tax under § 41.4481–2(a)(1)(i)(A), (B), (C), or (D), after taking into account the modification required under § 41.4481–2(a)(2), is treated as liable for tax by the same provision of § 41.4481–2(a)(1)(i) for purposes of this section and must file a return.

* * * * *

(c) *Required use of electronic filing—*
(1) *Rule for 25 or more vehicles.* A person that files any return reporting 25 or more vehicles must file the return electronically, as prescribed by the Commissioner. For this purpose, the number of vehicles reported on a return is the total number of vehicles for which tax is reported and does not include vehicles for which a suspension from tax is claimed.

(2) *Effect of failure to file.* If a person fails to file a return electronically when required to do so by this section, the person has failed to file the return. In such a case, the Internal Revenue Service (IRS) will not return a receipted Schedule 1 (Form 2290 “Heavy Highway Vehicle Use Tax Return”) as proof of payment as defined in § 41.6001–2(c). See section 6651 for the addition to tax for failure to file a tax return.

(3) *Examples.* The application of this paragraph (c) may be illustrated by the following examples:

Example 1. A has 100 vehicles registered in its name, all of which have a taxable gross weight in excess of 55,000 pounds. Seventy-five of the vehicles are in use on July 1, 2009. Twenty-five are in dead storage as described in 41.4482(c)–1(c). The vehicles in dead storage are not in use and they are not listed on the Schedule 1. A files Form 2290

electronically for the 75 vehicles in use on July 1 and receives a receipted Schedule 1. On August 23, 2009, A uses the remaining 25 vehicles. A does not file Form 2290 electronically but uses a paper Form 2290. A has failed to file a return as required by section 4481(e) for the remaining 25 vehicles. Accordingly, the IRS does not return the receipted Schedule 1 (Form 2290) for those vehicles, and A may be liable for additions to tax under section 6651.

Example 2. Assume the same facts as in Example (1) except that on August 23, 2009, A uses 15 of the vehicles that were not used in July. The remaining 10 vehicles are not used in August. A does not file Form 2290 electronically but uses a paper Form 2290. A has correctly filed and the IRS returns the receipted Schedule 1 (Form 2290) to A for 15 vehicles.

(4) *Effective/Applicability date.* This paragraph (c) applies to returns filed after the date of publication of the Treasury decision adopting these rules as final regulations in the **Federal Register**.

Par. 9. Section 41.6071(a)–1 is amended by adding paragraph (c) to read as follows:

§ 41.6071(a)–1 Time for filing returns.

* * * * *

(c) *Effect of sale during taxable period.* A person that is liable for tax under § 41.4481–2(a)(1)(i)(A), (B), (C), or (D) after taking into account the modification required under § 41.4481–2(a)(2) is treated as liable for tax under the same provision of § 41.4481–2(a)(1)(i) for purposes of this section.

§ 41.6156–1 [Removed]

Par. 10. Section 41.6156–1 is removed.

Linda E. Stiff,

Deputy Commissioner for Services and Enforcement.

**Religious Beliefs and Practices:
Chapel Library Materials**

AGENCY: Bureau of Prisons, Justice.

ACTION: Proposed rule.

SUMMARY: The Bureau of Prisons (Bureau) amends its regulations on religious beliefs and practices to add a new regulation regarding chapel library

materials. The regulations are necessary to notify inmates that certain materials that could incite, promote, or otherwise suggest the commission of violence or criminal activity may be excluded from chapel libraries. This change is also being made in connection with passage of the Second Chance Act.

DATES: Comments are due by March 17, 2009.

ADDRESSES: Written comments should be submitted to the Rules Unit, Office of General Counsel, Bureau of Prisons, 320 First Street, NW., Washington, DC 20534. You may view an electronic version of this regulation at <http://www.regulations.gov>. You may also comment by using the <http://www.regulations.gov> comment form for this regulation. When submitting comments electronically you must include the BOP Docket No. in the subject box.

Posting of Public Comments

Please note that all comments received are considered part of the public record and made available for public inspection online at <http://www.regulations.gov>. Such information includes personal identifying information (such as your name, address, etc.) voluntarily submitted by the commenter.

If you want to submit personal identifying information (such as your name, address, etc.) as part of your comment, but do not want it to be posted online, you must include the phrase “PERSONAL IDENTIFYING INFORMATION” in the first paragraph of your comment. You must also locate all the personal identifying information you do not want posted online in the first paragraph of your comment and identify what information you want redacted.

If you want to submit confidential business information as part of your comment but do not want it to be posted online, you must include the phrase “CONFIDENTIAL BUSINESS INFORMATION” in the first paragraph of your comment. You must also prominently identify confidential business information to be redacted within the comment. If a comment has so much confidential business information that it cannot be effectively redacted, all or part of that comment may not be posted on <http://www.regulations.gov>.

Personal identifying information identified and located as set forth above will be placed in the agency's public docket file, but not posted online. Confidential business information identified and located as set forth above will not be placed in the public docket file. If you wish to inspect the agency's public docket file in person by appointment, please see the **FOR FURTHER INFORMATION CONTACT** paragraph.

Chapel Library Materials

The Bureau amends its regulations on religious beliefs and practices to add a new regulation (Section 548.21) regarding chapel library materials. The regulations are necessary to notify inmates that certain materials that could incite, promote, or otherwise suggest the commission of violence or criminal activity may be excluded from chapel libraries. This change is also being made in connection with section 214 of the Second Chance Act of 2007, approved April 9, 2008, (Pub. L. 110-199; 122 Stat. 657) ("Second Chance Act").

In addition to the Second Chance Act, concerns related to chapel libraries were also raised in an April 2004 report from the Office of the Inspector General (OIG) examining Bureau religious services. The OIG report stated that exclusions of material from Bureau chapel libraries are necessary to prevent criminal activity and radicalization of inmates. The OIG report indicated that terrorist groups are likely to attempt to radicalize and recruit inmates in the United States "because they may be predisposed to violence, feel disenfranchised from society, desire power and influence, seek revenge against those who incarcerated them, be hostile towards authority and the United States, or cling to a radical or extremist religious 'family.'" (OIG Report, April 2004, page 7.)

As a matter of correctional security and management, it is essential that the Bureau be cognizant of the risks of unrest within prisons. Violence among particular inmates or groups of inmates, who must live together, jeopardizes the safety of inmates and staff, as well as potentially involving the destruction of government property. Under 18 U.S.C. 4042(a) the Bureau is specifically charged with providing for the safekeeping and protection of inmates. In carrying out this duty the Bureau must ensure that materials provided to inmates will not promote violence or criminal activity, thereby endangering the safety, security, and good order of Bureau facilities, and the protection of the public. In addition, under 28 CFR 548.15, no one may "disparage the

religious beliefs of an inmate * * *'' The Bureau is very aware of the sensitivity related to religious issues and the real possibility for strife to be fostered in this context.

Section 548.21(a) of the proposed rule states that the Bureau maintains chapel library materials for inmates to pursue religious beliefs and practices while in Bureau custody consistent with ensuring that such materials do not jeopardize the safety, security, or orderly operation of Bureau facilities, or protection of the public. The Bureau maintains custody of more than 200,000 inmates in 114 facilities nationwide. All Bureau facilities maintain chapels for inmate religious activities and chapel libraries that provide inmates with access to religious books, audiotapes, and videos relating to many different religions. The Bureau recognizes the importance of providing inmates with materials necessary to support their pursuit of religious interests. However, the Bureau must evaluate chapel library materials to ensure that the safety of inmates, staff, and the public are not adversely affected.

Therefore, based on the criteria listed in the Second Chance Act, subparagraph (b) of the proposed rule lists possible reasons for excluding chapel library material. Generally, materials may be excluded from the chapel library if the material could incite, promote, or otherwise suggest the commission of violence or criminal activity. This language derives from section 214 of the Second Chance Act, which states that "the Bureau of Prisons may restrict access to * * * (1) Any materials in a chapel library that seek to incite, promote, or otherwise suggest the commission of violence or criminal activity; and (2) any other materials prohibited by any other law or regulation." Section 214 also states that "[n]othing in this section shall be construed to impact policies of the Bureau of Prisons related to access by specific prisoners to materials for security, safety, sanitation, or disciplinary reasons."

Subparagraph (c) explains that inciting, promoting, or otherwise suggesting the commission of violence or criminal activity includes: (1) Advocating or fostering violence, vengeance, or hatred toward particular religious, racial, or ethnic groups; or (2) urging the overthrow or destruction of the United States.

Therefore, to implement the provisions of the Second Chance Act, as well as the Bureau's statutory and regulatory duties, the Bureau proposes this addition to its regulations regarding religious beliefs and practices.

Executive Order 13132

This regulation will not have substantial direct effects on the States, on the relationship between the national government and the States, or on distribution of power and responsibilities among the various levels of government. Therefore, under Executive Order 13132, we determine that this regulation does not have sufficient Federalism implications to warrant the preparation of a Federalism Assessment.

Regulatory Flexibility Act

The Director of the Bureau of Prisons, under the Regulatory Flexibility Act (5 U.S.C. 605(b)), reviewed this regulation and by approving it certifies that it will not have a significant economic impact upon a substantial number of small entities for the following reasons: This regulation pertains to the correctional management of offenders and immigration detainees committed to the custody of the Attorney General or the Director of the Bureau of Prisons, and its economic impact is limited to the Bureau's appropriated funds.

Unfunded Mandates Reform Act of 1995

This regulation will not result in the expenditure by State, local and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more in any one year, and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

Small Business Regulatory Enforcement Fairness Act of 1996

This regulation is not a major rule as defined by Section 804 of the Small Business Regulatory Enforcement Fairness Act of 1996. This regulation will not result in an annual effect on the economy of \$100,000,000 or more; a major increase in costs or prices; or significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based companies to compete with foreign-based companies in domestic and export markets.

List of Subjects in 28 CFR Part 548

Prisoners.

Harley G. Lappin,

Director, Bureau of Prisons.

Under rulemaking authority vested in the Attorney General in 5 U.S.C. 301; 28 U.S.C. 509, 510 and delegated to the Director, Bureau of Prisons in 28 CFR

0.96, we amend 28 CFR part 548 as follows.

Subchapter C—Institutional Management

PART 548—RELIGIOUS PROGRAMS

1. The authority citation for 28 CFR part 548 continues to read as follows:

Authority: 5 U.S.C. 301; 18 U.S.C. 3621, 3622, 3624, 4001, 4042, 4081, 4082 (Repealed in part as to offenses committed on or after November 1, 1987), 5006–5024 (Repealed October 12, 1984 as to offenses committed after that date), 5039; 28 U.S.C. 509, 510; 42 U.S.C. 1996; 28 CFR 0.95–0.99.

2. Add a new § 548.21 to read as follows:

§ 548.21 Chapel library materials.

(a) The Bureau maintains chapel library materials for inmates to pursue religious beliefs and practices while in Bureau custody consistent with ensuring that such materials do not jeopardize the safety, security, or orderly operation of Bureau facilities, or protection of the public.

(b) Material may be excluded from the chapel library if it is determined that such material could incite, promote, or otherwise suggest the commission of violence or criminal activity.

(c) For purposes of this subpart, inciting, promoting, or otherwise suggesting the commission of violence or criminal activity may include, but is not limited to:

(1) Advocating or fostering violence, vengeance, or hatred toward particular religious, racial, or ethnic groups; or

(2) Urging the overthrow or destruction of the United States.

[FR Doc. E9–550 Filed 1–15–09; 8:45 am]

BILLING CODE 4410–05–P

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Part 74

RIN 1219–AB61

Coal Mine Dust Personal Monitors

AGENCY: Mine Safety and Health Administration (MSHA), Labor.

ACTION: Proposed rule and close of comment period.

SUMMARY: This proposed rule would revise requirements that the Mine Safety and Health Administration (MSHA) and the National Institute for Occupational Safety and Health (NIOSH) apply to approve sampling devices that monitor miner exposure to respirable coal mine dust. The proposal would establish criteria for approval of a new type of

technology, the “continuous personal dust monitor,” which would be worn by the miner and would report exposure to dust levels continuously during the shift. In addition, the proposal would update application requirements for the existing “coal mine dust personal sampler unit” to reflect improvements in this sampler over the past 15 years. This rulemaking is limited to approval requirements and does not address requirements concerning how sampling devices must be used to determine compliance, e.g., who and when to sample. Those requirements are addressed in existing 30 CFR parts 70, 71, and 90.

DATES: MSHA and NIOSH invite comments on this proposed rule from interested parties. All comments must be received by midnight Eastern Standard Time on March 17, 2009.

ADDRESSES: Comments must clearly be identified with “RIN 1219–AB61” and may be submitted to MSHA by any of the following methods:

(1) *Federal e-Rulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

(2) *Electronic mail:* zzMSHA-Comments@dol.gov. Include “RIN 1219–AB61” in the subject line of the message.

(3) *Facsimile:* (202) 693–9441. Include “RIN 1219–AB61” in the subject line of the message.

(4) *Regular Mail:* MSHA, Office of Standards, Regulations, and Variances, 1100 Wilson Blvd., Room 2350, Arlington, Virginia 22209–3939.

(5) *Hand Delivery or Courier:* MSHA, Office of Standards, Regulations, and Variances, 1100 Wilson Blvd., Room 2350, Arlington, Virginia 22209–3939. Sign in at the receptionist’s desk on the 21st floor.

Comments can be accessed electronically at <http://www.msha.gov> under the “Rules and Regs” link. MSHA will post all comments on the Internet without change, including any personal information provided. Comments may also be reviewed at the Office of Standards, Regulations, and Variances, 1100 Wilson Blvd., Room 2350, Arlington, Virginia. Sign in at the receptionist’s desk on the 21st floor.

MSHA maintains a list that enables subscribers to receive e-mail notification when rulemaking documents are published in the **Federal Register**. To subscribe to the list, go to <http://www.msha.gov/subscriptions/subscribe.aspx>.

Information Collection Requirements: Comments concerning the information collection requirements of this proposed rule must be clearly identified with

“RIN 1219–AB61” and sent to both the Office of Management and Budget (OMB) and MSHA. Comments to OMB may be sent by mail addressed to the Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, 725 17th Street, NW., Washington, DC 20503, Attn: Desk Officer for MSHA. Comments to MSHA may be transmitted either electronically to zzMSHA-Comments@dol.gov, by facsimile to (202) 693–9441, or by regular mail, hand delivery, or courier to MSHA, Office of Standards, Regulations, and Variances, 1100 Wilson Blvd., Room 2350, Arlington, Virginia 22209–3939.

FOR FURTHER INFORMATION CONTACT:

Patricia W. Silvey, Director, Office of Standards, Regulations, and Variances, MSHA, at silvey.patricia@dol.gov (e-mail), (202) 693–9440 (voice), or (202) 693–9441 (facsimile).

I. Background

A. Introduction

The Coal Mine Health and Safety Act of 1969, the predecessor to the Federal Mine Safety and Health Act of 1977, specified that the average concentration of respirable coal mine dust be measured by a device approved by the Secretary of Interior and the Secretary of Health Education and Welfare (Secretaries). In 1972, the Secretary of Interior promulgated 30 CFR part 74—Coal Mine Dust Personal Sampler Units. That rulemaking established the requirements for joint approval of the device by both Secretaries and specified that MSHA's role was to determine if the unit was intrinsically safe. NIOSH would determine if the unit met the requirements of part 74.¹

Since 1970, coal mine operators and MSHA have used approved coal mine dust personal sampler units (CMDPSUs) to determine the concentration of respirable dust in coal mine atmospheres. These devices sample the mine atmosphere by drawing mine air through a filter cassette that collects respirable coal mine dust. At the end of a full shift or 8 hours, whichever time is less, the cassette is sent to MSHA for processing. Each cassette is precisely weighed under controlled conditions to determine the average concentration of respirable coal mine dust to which the miner was exposed.

In the 1990s, NIOSH began research and development to produce a prototype technology for a new type of personal dust monitor that could provide readings of dust levels in the mine immediately during the shift and

at the end of the shift. This would eliminate the delay of obtaining an offsite laboratory analysis which requires days before the results are made available to the mine operator and MSHA. The promise of the new technology, which is referred to generically as a "continuous personal dust monitor" (CPDM), was that it would allow mine operators to identify and immediately respond to high dust exposures. Operators would evaluate causes of over exposures, implement solutions to reduce exposures, and adjust them as necessary.

In 2003, a private sector monitoring technology company, Rupprecht and Patashnick Co., Inc., now Thermo Fisher Scientific, developed an initial prototype CPDM under contract with NIOSH. The prototype incorporates a unique mechanical mass sensor system called Tapered Element Oscillating Microbalance (TEOM®). The TEOM mass sensor is made up of a hollow tapered tube, which is clamped at its base and free to oscillate at its narrow or free end on which the collection filter is mounted. Electronics positioned around the sensor cause the tube to oscillate (or resonate) at its natural frequency. When dust particles are deposited on the collection filter, the mass of the collection filter increases, causing the natural oscillating frequency of the tapered element to decrease. Because of the direct relationship between mass and frequency change, the amount of respirable dust deposited on the filter can be determined by measuring the frequency change. The concentration of respirable dust in the mine atmosphere is then determined by a computer internal to the monitor, which divides the mass of dust collected by the volume of mine air that passed through the system during the time period sampled. The result is reported on the monitor's digital display. The cumulative average dust concentration is calculated and reported continuously over the duration of the shift and at the end of the shift. The data are also retained by the computer for downloading onto any personal computer with a Microsoft Windows® operating system using accompanying software. The prototype also projects the end-of-shift average dust concentration continuously during the shift. These projections can serve as a warning system to mine operators, assisting them in recognizing exposure levels that, if not reduced, would result in full-shift exposures exceeding regulatory limits.²

In 2006, NIOSH, in collaboration with MSHA and stakeholders representing the mining industry and labor, completed extensive testing to evaluate the accuracy of the pre-commercial unit and its suitability for use in the coal mine in terms of ergonomics and durability. The testing verified that the device achieved with 95 percent confidence end-of-shift measurements within ± 25 percent of reference measurements³ taken in a variety of coal mines. The testing also demonstrated that the device was acceptable to miners from an ergonomics standpoint, and was sufficiently durable to withstand the conditions of transportation and use in the mines. Thus, the testing demonstrated to MSHA and NIOSH that it is technically feasible to introduce the CPDM as an innovative new measurement tool for the protection of coal miners.⁴

B. Need for Rulemaking

Existing 30 CFR part 74, "Coal Mine Dust Personal Sampler Units," specifies procedures and requirements by which MSHA and NIOSH⁵ jointly approve the design, construction, performance, and manufacturing quality of the CMDPSU. These regulatory requirements, which were issued in 1972, are design-specific and do not permit the approval of any monitoring device of a different design. The CMDPSU is currently the only personal dust monitor approved for use in coal mines to monitor miners' exposure to respirable coal mine dust.

As discussed above, NIOSH, in collaboration with a private technology firm, MSHA, and representatives of industry and labor, has developed and evaluated a prototype for a new type of personal monitoring device, the "continuous personal dust

D.P. Tuchman. Laboratory and field performance of a continuously measuring personal respirable dust monitor. CDC RI 9669. September 2006. 47 pp. and Volkwein, J.C., R.P. Vinson, L.J. McWilliams, D.P. Tuchman, and S.E. Mischler, Performance of a New Personal Respirable Dust Monitor for Mine Use. CDC RI 9663. June 2004.

³ Reference measurements were established using multiple gravimetric samplers in dust exposure chambers for laboratory testing and using CMDPSUs in a variety of coal mines for field testing.

⁴ See: Volkwein, J.C., R.P. Vinson, S.J. Page, L.J. McWilliams, G.J. Joy, S.E. Mischler, and D.P. Tuchman. Laboratory and field performance of a continuously measuring personal respirable dust monitor. CDC RI 9669. September 2006. 47 pp. and Volkwein, J.C., R.P. Vinson, L.J. McWilliams, D.P. Tuchman, and S.E. Mischler. Performance of a New Personal Respirable Dust Monitor for Mine Use. CDC RI 9663. June 2004.

⁵ MSHA's role is to approve the "intrinsic safety" of the device, which assures that the device could be operated safely in the potentially explosive atmosphere of an underground coal mine.

¹ In 1978, responsibility for mine safety and health was transferred from the Department of Interior to the Department of Labor. In 1980 the Department of Health Education and Welfare became the Department of Health and Human Services (HHS).

² For a more complete description of the technology, see: Volkwein, J.C., Vinson, R.P., S.J. Page, L.J. McWilliams, G.J. Joy, S.E. Mischler, and

monitor"(CPDM). The unit is capable of continuously monitoring and immediately displaying concentrations of respirable coal mine dust during the shift and also provides the end-of-shift summary measurements.

MSHA and NIOSH recognize that the ability to measure in real time the amount of respirable coal mine dust to which a miner is exposed offers the best solution for protecting miners from occupational lung disease. Knowing the actual respirable dust level and being able to project the end-of-shift dust exposure continuously during the shift will enable mine operators to take immediate action to prevent overexposure. This new technology can be a critical element in the strategy used by mine operators and MSHA to control respirable dust exposure.

The 1995 Advisory Committee on the Elimination of Pneumoconiosis Among Coal Mine Workers, which was established by the Secretary of Labor to make recommendations for improving the program to control respirable coal mine dust, also supported the use of continuous monitoring devices. That committee, which included representatives from the mining industry, the United Mine Workers of America and technical experts with no economic interests in mining, unanimously concluded that continuous monitors have the potential to improve monitoring of the work environment significantly and to contribute to the effective control of exposure.

However, existing MSHA standards and procedures for operator and agency monitoring of respirable coal mine dust specify that sampling must be conducted with an approved sampling device. The new CPDM technology cannot be approved under the existing part 74 requirements. MSHA and NIOSH are proposing to revise part 74 to accommodate this new technology.

While the proposed requirements under part 74 would allow the Secretaries to approve new types of sampling devices, existing standards under 30 CFR parts 70, 71 and 90 would need to be revised prior to using any new monitoring technology in coal mines for compliance purposes. Compliance issues are not within the scope of this rulemaking.

The proposed part 74 addresses performance-based and other requirements by which MSHA and NIOSH would approve CPDM devices for use in coal mines. The performance-based approach would allow for continued innovation in CPDM designs, which would accommodate improvements or alternative designs in

the technology to be introduced in the future.

MSHA and NIOSH are also proposing in this rulemaking to revise the existing requirements in part 74 applicable to the approval of CMDPSUs. This proposed revision reflects improvements incorporated voluntarily by the manufacturer into the sampler design since the mid-1990s.

C. Public Hearings

MSHA and NIOSH will hold two hearings to provide the public with an opportunity to present oral statements, written comments, and other data on this rulemaking. One of the hearings will be held in the eastern part of the United States and the other will be held in the west. The hearings will be announced in a separate **Federal Register** notice. As indicated above, the nature of this rulemaking involves establishing performance-based approval requirements for manufacturers of monitoring devices. MSHA and NIOSH anticipate that two hearings will allow for full public input to the proposed rule.

II. Summary of Proposed Rule

This proposed rule would revise requirements for the approval of personal dust monitoring devices in 30 CFR part 74, currently titled "Coal Mine Dust Personal Sampler Units," and would retitle the part "Coal Mine Dust Personal Monitors." This rulemaking would establish performance-based and other requirements for approval of the new CPDMs. The requirements would facilitate innovation among direct-reading device manufacturers for the continued improvement of this technology.

The proposal also updates the existing design-based requirements for CMDPSUs. It is not the intent of this rulemaking to require changes in the current technology of CMDPSUs, although MSHA and NIOSH invite the public to comment on any aspect of this rulemaking.

Part 74 would be renumbered in this rulemaking as follows:

Subpart A—Introduction—Purpose and definitions.

Subpart B—Requirements for Coal Mine Dust Personal Sampler Unit—specifications for existing technology.

Subpart C—Requirements for Continuous Personal Dust Monitors—specifications for new technology.

Subpart D—General Requirements for All Devices—administrative provisions applicable to both the CMDPSU and CPDM.

III. Section-by-Section Analysis

The section-by-section analysis below describes and explains the proposed provisions of part 74. The proposed regulatory text is provided in the last section of this notice.

Subpart A—Introduction would be a new section which would cover the purpose and definitions.

A. Section 74.1 Purpose

Proposed § 74.1 describes the purpose of the rule and would be essentially unchanged from the existing provision. The scope has been expanded to include both CPDMSU and CPDM technology.

B. Section 74.2 Definitions

Proposed § 74.2 would be a new section to define key terms in the proposal.

Proposed paragraphs (a) and (b) would define the concepts of accuracy and bias as they apply to measurement devices such as the CPDM. They are key performance parameters for testing and approving of the CPDM.

Proposed paragraphs (c) and (d) would define the two types of sampling devices covered by this proposal, the CMDPSU and the CPDM. The definitions are included to distinguish between the two types of dust monitoring technology.

Proposed paragraph (e) would define the International Organization for Standardization (ISO), a voluntary consensus standards-setting organization. An ISO standard is relied on in this proposal (see § 74.9).

Proposed paragraph (f) would define the concept of precision as it applies to the CPDM. Precision is the third key performance parameter for the testing and approval of CPDMs.

Subpart B contains the requirements that apply to the CMDPSU.

C. Section 74.3 Sampler Unit

Proposed § 74.3 would renumber existing § 74.2, which specifies the major components of a CMDPSU and would be substantially unchanged from the existing provisions.

D. Section 74.4 Specifications of Sampler Unit

Proposed § 74.4 would renumber existing § 74.3 and update the requirements of the existing provision to reflect the sampling technology approved for use in coal mines today.

Existing paragraph (a) would update the existing design requirements for the pump unit of the CMPDSU.

Proposed paragraph (a)(1) would update pump dimensions to reflect the smaller size of the device used today: 4 inches (10 centimeters) in height; 4

inches (10 centimeters) in width; and 2 inches (5 centimeters) in thickness. The existing specifications allow for dimensions of up to 8 inches (20 centimeters), 6 inches (15 centimeters), and 4 inches (10 centimeters), respectively.

Proposed paragraph (a)(2), which specifies the maximum pump weight, would be updated to reflect the reduction in the weight of these units, from 4 pounds (1.814 kilograms) to 20 ounces (567 grams).

Proposed paragraph (a)(3), which specifies the characteristics of the construction of the pump case and pump components, would be updated to add the requirement that they must protect against radio frequency interference and electromagnetic interference. This improvement, implemented in the 1990s, is necessary to prevent potential instrument error or malfunction due to exposure to electromagnetic fields and various radio frequency ranges and signal strengths encountered in coal mines from power stations, electric motors and remote control transmitters. The proposal would retain the existing requirement that the case and components of the pump unit must be of durable construction and tight-fitting.

Proposed paragraphs (a)(4) and (a)(5) would be unchanged from the existing provisions. These paragraphs require that the pump exhaust into the pump case to maintain a slight positive pressure and the pump unit be equipped with an ON/OFF switch to protect against accidental operation during use.

Existing paragraph (a)(6), which specifies pump design characteristics for flow rate adjustment, would be revised to provide more flexibility in the design to avoid inadvertent changes in the flow rate. The existing specification requires the use of a flow rate adjusting "tool" to prevent inadvertent changes in the flow rate. This specific requirement would be deleted.

Proposed paragraph (a)(7), like the existing provision, would require that the power supply for the pump be a suitable battery located in the pump case or in a separate case which is attached by a permissible electrical connection.

Existing paragraph (a)(8), which concerns regulating the effect of pulsation on the flow rate of the pump, would be revised to delete the reference to the expired date (July 1, 1974) in paragraph (ii).

Proposed paragraphs (9) and (10), like the existing provisions, would require that the pump unit be equipped with a belt clip and that a suitable connection

be provided to allow the battery to be recharged without removing it from the pump case or battery case.

Existing paragraph (a)(11), which requires a visual indication of the flow rate and specifies the calibration of the flow rate indicator, would be updated to require that it be calibrated within ± 5 percent at 2.2, 2.0, and 1.7 liters per minute, versus at 2.0, 1.8, and 1.6 liters per minute as required under the existing rule. The proposed higher flow rates better reflect the operating flow rate range specified in proposed paragraph (a)(12).

Proposed paragraph (a)(12), like the existing provision, would require that the pump operate within a range from 1.5 to 2.5 liters per minute and be adjustable over this range.

Existing paragraph (a)(13), which requires the flow rate to remain consistent or stable during sampling, would be revised to require that the consistency be sustained over at least a 10-hour period, versus an 8-hour period under the existing provision. This change reflects the operating performance of these devices today and the prevalence of 10-hour shifts in coal mining. The existing requirements for readjustment of the flow rate would be deleted since all units currently in use have constant flow pumps and do not require readjustment.

Proposed paragraph (a)(14) would be a new provision that would require a flow restriction indicator. This new requirement would reflect current technology and would be incorporated to prevent the shutdown of a pump and loss of a sample if the flow restriction is not corrected. This helps assure that the mine atmosphere is accurately sampled. The requirements in existing paragraph (a)(14), which address duration of operation of the pump unit, would be transferred to new proposed paragraph (a)(15).

Existing paragraph (a)(14) would be redesignated as paragraph (a)(15). This provision would specify the required maximum expected operating time that the pump with a fully charged battery pack must be capable of operating at specific flow rates and sampling device loading. This paragraph would be revised to reflect the extended and higher level of performance achieved by existing technology. This increased capacity is necessary to enable the sampling of work shifts longer than 8 hours, which are prevalent today. The existing resistance requirement for 8 hours of operation at a flow rate of 2 liters per minute would be increased from 4 inches (10 centimeters) of water to 25 inches (64 centimeters) of water, as measured at the inlet of the pump.

The proposal adds a new provision that reflects existing technology by requiring the pump to operate for not less than 10 hours at a flow rate of 2.5 liters per minute against a resistance of 15 inches (38 centimeters) of water.

Proposed paragraph (a)(16) is a new provision which would require the pump unit to be equipped with a low battery indicator. This provision reflects existing technology and is an important feature for ensuring the successful sampling of the mine atmosphere. Failure of the battery during sampling results in invalidation of the sample and the inability to determine the respirable coal mine dust concentration measured by the CMDPSU.

Proposed paragraph (a)(17) is a new provision which would require the pump unit to be equipped with an elapsed time indicator displaying the actual pump run time after the pump is shut down due to a flow restriction or low battery power, or at the end of the sampling shift. This proposal reflects existing technology and is necessary to determine if sampling was conducted for the required duration, which is essential for the accurate measurement of the respirable coal mine dust concentration that occurred during the work shift.

Proposed paragraph (b) addresses requirements for the sampling head assembly of the CMDPSU.

Proposed paragraphs (b)(1) and (b)(2)(i), retain the requirements of the existing provisions for the cyclone and the filter (with a minor wording change).

Proposed paragraph (b)(2)(ii), which specifies characteristics of the capsule enclosing the filter, would be revised to require that the capsule prevent visual inspection of the filter surface or filter loading. This reflects existing technology and is intended to safeguard the accuracy, integrity, and validity of the sample.

Existing paragraph (b)(2)(iii), which specifies characteristics of the cassette enclosing the capsule, would be revised to add the requirement that the cassette be designed to prevent intentional or inadvertent alteration of the dust deposited on the filter. The proposal would also add a requirement that the capsule covers be designed to prevent reversal of the air flow through the capsule or other means of removing dust collected on the filter. These provisions would reflect existing technology and are intended to safeguard the accuracy, integrity, and validity of the sample.

Proposed paragraphs (b)(3) and (b)(4) are the same as the existing provisions. Proposed paragraph (b)(3) relates to the connections between the cyclone vortex

finder and the capsule and between the capsule and hose. Proposed paragraph (b)(4) requires that the clamping and positioning of the cyclone-cassette assembly be firmly in contact, airtight and be attached firmly to a backing plate.

Existing paragraph (b)(5), which specifies the characteristics of the hose connecting the sampler pump and the filter assembly, would be revised to require that the hose be clear plastic. This proposed revision would reflect existing technology and allow the examination of the external tubing to assure that it is clean and free of leaks, as accumulations or leaks could affect the accuracy of the sampling results.

Proposed paragraph (c) would address requirements for the battery charger of the CMDPSU.

Existing paragraph (c)(1), which specifies the voltage and frequency requirements for the battery charger, would be updated to reflect currently used power supply voltage of 110 (VAC) (nominal), versus 117 volt in the existing standard.

Proposed paragraphs (c)(2) and (c)(3) are identical to existing (c)(2) and (c)(3), which require that the battery charger be provided with a cord and polarized connector and that it be fused and have a grounded power plug.

Existing paragraph (c)(4), which specifies the recharging rate of the battery charger, would be revised to reflect current technology, which fully recharges the battery in the pump unit within 16 hours.

E. Section 74.5 Tests of Coal Mine Dust Personal Sampler Units

Proposed § 74.5 renumbers existing § 74.4 and would provide authority for NIOSH and MSHA testing to evaluate whether the CMDPSU meets the requirements of this rule. This section has not been substantively changed.

F. Section 74.6 Quality Control

Proposed § 74.6 is derived from existing § 74.6(d) regarding applications. The proposal makes only clarifying changes by referencing proposed § 74.13 (filing applications).

Subpart C—Requirements for Continuous Personal Dust Monitors (CPDMs)

G. Section 74.7 Design and Construction Requirements

Proposed § 74.7 would provide design and construction requirements for the CPDM. The requirements would be performance oriented to the extent possible to allow manufacturers flexibility for continued innovation in

this new technology. Design-specific requirements are proposed when necessary and appropriate for assuring miner safety or accommodating mining conditions.

Proposed paragraph (a) would require that the CPDM be designed and constructed to allow miners to work safely and be suited to work requirements and working conditions of coal mining.

Proposed paragraph (b) addresses ergonomic design and would require that, prior to filing an application under proposed § 74.13, the applicant must develop a testing protocol to determine if coal miners can wear the CPDM safely and without discomfort or impairment in the performance of their work duties throughout a full work shift. The protocol would be required to include provisions for testing in one or more active mines under routine operating conditions. NIOSH would approve the protocol prior to testing and would review the written results as a component of the application for approval. NIOSH would advise and assist the applicant in developing an adequate testing protocol and arranging for adequate and competent testing resources, including but not limited to identifying testing experts and facilitating the cooperation of coal operators and miners. NIOSH would reserve the authority to waive the requirement for the applicant to conduct such testing when it is apparent “that the device can be worn safely, without discomfort, and without impairing a coal miner in the performance of duties throughout a full work shift.”

Proposed paragraph (c) would require that the weight of a CPDM add no more than 2 kg to the total weight carried by the miner. However, a CPDM combined with other functions, such as communications or illumination, could weigh more than 2 kg if offset by other means. The result should be that the total extra weight is no more than 2 kg more than the weight normally carried by miners without the CPDMs. The 2-kg limit is proposed based on the professional judgment of MSHA and NIOSH field staff that the added load to miners needs to be minimized, considering that the safety gear and equipment currently worn and carried by underground coal miners can weigh up to approximately 16 kg. The proposed limit accommodates the weight of the prototype CPDM, which in NIOSH testing was worn and used by miners for full shifts and proved to be acceptable. The prototype weighed approximately 3 kg, but served to power the cap lamp as well, so that a separate battery was not required for the cap

lamp. In combination, the prototype with its dual-use battery increased the personal equipment load of the miners by less than 2 kg.

Proposed paragraph (d) would require that the CPDM provide accurate measurements of respirable coal mine dust concentrations within the range of 10% to 2 times the permissible exposure limit (PEL) for respirable coal mine dust (currently 2.0 mg/m³ when quartz content does not exceed 5%) for an end-of-shift average measurement, and provide a reliable indication when the concentration exceeds 2 times the PEL.

Proposed paragraph (e) would require that the CPDM operate reliably and accurately within the full range of environmental conditions encountered in coal mines. It would require that the CPDM operate reliably and accurately at any ambient temperature and varying temperatures ranging from minus 30 to plus 40 degrees centigrade; at any atmospheric pressure from 700 to 1000 millibars; at any ambient humidity from 10 to 100 percent relative humidity; and while exposed to water mists generated for dust suppression and while monitoring atmospheres including such water mists. These proposed parameters, in addition to those in proposed paragraphs (f) and (g) of this section, would address the full range of environmental conditions found in coal mines. MSHA and NIOSH specifically solicit comments on these parameters, as well as any others that might be appropriate.

Proposed paragraph (f) would require that the CPDM meet standards for the control of and protection from electromagnetic interference established by the American National Standards Institute (ANSI), the Federal Communications Commission (FCC), and the International Electrotechnical Commission (IEC). The FCC is an independent federal agency that regulates radiofrequency emitting devices. ANSI and IEC are voluntary standards-setting organizations, the former covering a wide array of technical and management fields and the latter specializing in electrotechnology. The use of these standards would address the potential for interference associated with the increasing use of radiofrequency controls for mining machinery and mine communication systems.

Proposed paragraph (g) would require that the CPDM be designed and constructed to remain intrinsically safe and accurate after undergoing vibration and shock tests representative of conditions of use in the mine. In testing for vibration, NIOSH proposes to use Military Standard 810F, 514.5. This test

would measure the degree of vibration expected while the device is worn by miners on and operating mining equipment and during transport in and out of the mine. The shock test that NIOSH would apply would involve three 3-foot drops onto a bare concrete surface (one drop testing each axis of the device). This test would represent the occasional drops and knocking of the device expected during use of the device by miners. NIOSH would conduct the testing regime on test units prior to further testing by the applicant under § 74.8 and intrinsic safety testing by MSHA under § 74.11(d).

Proposed paragraphs (h)(1) and (2) would require adequate legibility or audibility of monitoring results, computer (*i.e.*, digital) recording of results in a form compatible with widely available computer technology, and reporting of results as cumulative mass concentration in units of mass per volume of air (mg/m^3). The proposed visibility requirement for a minimum digital character height of 6 millimeters is based on testing during CPDM prototype development. All other proposed requirements in this provision allow flexibility for new innovative designs that would provide timely, reliable, and appropriately quantified information.

Proposed paragraph (i) would require that the power source for the CPDM have sufficient capacity to enable continuous sampling for 12 hours in a coal mine dust atmosphere of 2 times the PEL. This requirement would provide reasonable assurance that the power supply would be sufficient to enable accurate measurement of respirable dust concentrations for 12 hour work shifts, which are the longest current work shifts in U.S. coal mines. If the dust concentrations in a mine exceeded $4 \text{ mg}/\text{m}^3$ continuously for 12 hours, a power supply meeting this proposed standard might not be sufficient to sustain monitoring for the complete shift, since a higher dust concentration would place higher power demands on certain types of filtering technology. Nevertheless, this proposed standard would be sufficient to assure that the CPDM would have the power capacity to measure high dust concentrations during the shift, and to cumulatively document that they substantially exceeded the PEL for the full shift. These are the essential performance considerations for the CPDM for continuous and end-of-shift monitoring.

Proposed paragraph (i) also would require that a CPDM that uses a rechargeable battery must be recharged

using the standard power supplies in mines (110 VAC).

Proposed paragraph (j) would require that if a CPDM uses a pump to sample the atmosphere, it must perform with a flow stability within \pm five percent of the calibrated flow for a continuous duration of 12 hours.⁶ This requirement is integral to achieving representative, accurate measurements of respirable coal mine dust concentrations. The paragraph would also require that the applicant specify in the calibration instructions for the device the flow calibration maintenance interval required to achieve this level of flow stability.

Proposed paragraph (k) would require that a CPDM using a rechargeable battery have a feature to indicate to the user that the unit is adequately recharged to provide accurate measurements for an entire shift of 12 hours. This feature is necessary to avoid monitoring failures due to power deficiency. The requirement of “* * * under normal conditions of use” is included to account for the possibility that exceptionally high dust concentrations, exceeding $4 \text{ mg}/\text{m}^3$, which normally should not occur, might deplete the battery power before the end of the shift. CPDM battery power does not have to be sufficient to continue accurate monitoring under such excessive exposure conditions for an entire 12-hour shift, since the non-compliant exposure would be measured and documented within the initial portion of the shift during which the device would operate with adequate battery power.

Proposed paragraph (l) sets forth requirements for CPDMs that share components with other personal equipment carried by an underground miner, such as cap lamps.

Proposed paragraph (l)(1) would require that the applicant obtain any necessary approvals required for the non-CPDM equipment prior to receiving final certification of the CPDM from NIOSH. This provision will enable NIOSH to assure that all approvals for devices not approved by NIOSH are obtained, as appropriate.

Proposed paragraph (l)(2) would require that the CPDM operate effectively with the integrated function or functions. This provision would assure that the CPDM is not compromised by integration of functions and provide reasonable assurance that the integrated non-CPDM functions operate as intended.

Proposed paragraph (m) would specify performance requirements that would help assure that CPDMs are designed to prevent intentional tampering and limit inadvertent altering of monitoring results. It would require that the CPDM have a safeguard or indicator which either prevents altering the measuring or reporting function of the device or indicates if these functions have been altered.

This proposed provision is intended to direct manufacturers to design tampering safeguards and indicators that address foreseeable actions by users. In addition, the provision would allow NIOSH to require, to the extent feasible, changes in the design of an already approved device, following the discovery of tampering methods or inadvertent actions that can alter monitoring results.

Proposed paragraph (n) would require that the CPDM be designed to assure it can be properly cleaned and maintained to perform accurately and reliably for the duration of its service life. The infiltration and accumulation of dust and moisture in components might adversely affect the operability and monitoring accuracy of a CPDM.

H. Section 74.8 Measurement, Accuracy, and Reliability Requirements

Proposed § 74.8 is new and would establish the performance requirements for CPDMs. These proposed requirements reflect current evaluation methods regarding the assessment of direct reading monitors. These methods have been summarized and issued as general guidelines by NIOSH (Components for the Evaluation of Direct-Reading Monitors for Gases and Vapors).⁷ The proposed requirements also reflect the state-of-the-art technology of the CPDM prototype. Accordingly, this proposed rulemaking establishes a science-based, feasible baseline for the performance of this new CPDM technology. Upon request, NIOSH will provide a report on the performance of the prototype CPDMs, which are partially summarized in several peer-reviewed journal articles.⁸

Proposed paragraph (a) would require that the CPDM be capable of measuring

⁷ Kennedy, E. R., T.J. Fischbach, R. Song, P.M. Eller, and S.A. Shulman, 1995. Guidelines for air sampling and analytical method development and evaluation, DHHS (NIOSH) Publication No. 95-117.

CDC RI 9669. September 2006. 47 pp. and Volkwein, J.C., R.P. Vinson, L.J. McWilliams, D.P. Tuchman, and S.E. Mischler. Performance of a New Personal Respirable Dust Monitor for Mine Use. CDC RI 9663. June 2004.

⁶ NIOSH Manual of Analytic Methods, Method 6000, Issue 3, Fourth Edition, January 15, 1998.

respirable dust within the personal breathing zone of the miner whose exposure is being monitored. The breathing zone is generally considered to be the area surrounding the worker's nose and mouth. This zone is pictured by drawing a sphere with a 10-inch radius which is centered on the nose. Current industrial hygiene principles accept breathing zone samples as most representative of the atmosphere to which workers are exposed.⁹ The proposed rule provides a reasonably specific definition of the breathing zone to guide applicants.

Proposed paragraph (b) would provide requirements for the measurement accuracy of the CPDM.

Proposed paragraph (b)(1) would require for full-shift measurements of 8 hours or more, a 95 percent confidence that the recorded measurements are within ± 25 percent of the true dust concentration, as determined by CMDPSU reference measurements, over a concentration range of 10% to 2 times the PEL. The specific quantified degree of accuracy proposed is based on the current state of the technology of direct reading monitors and on the need for reasonable accuracy in industrial hygiene assessments to assure worker protection. NIOSH has demonstrated the feasibility of this accuracy requirement through testing of the CPDM prototype.¹⁰

The proposed measurement range over which the CPDM must be accurate is also based on the current CPDM technology, as represented by the pre-commercial unit. This technology requires a minimum quantity of filter loading on the microbalance filter before the CPDM can measure accurately, distinguishing actual exposure quantities from small measurement variations due to imperfections of the CPDM equipment. The lower bound assures that accuracy is maintained for situations where silica is present and the permitted levels of respirable dust are reduced. Similarly, there is an upper bound of loading, which is likely to exceed the specified 4.0 mg/m³ level,¹¹

after which current CPDM technology may lose sensitivity as a result of the heavily loaded filter on the microbalance. Nonetheless, the proposed standard would assure that the range of average, full-shift dust concentrations over which the CPDM would perform accurately would be adequate to quantify full shift exposures that range from exceptionally low to exceptionally high, allowing for identification of overexposures.

For intra-shift measurements of less than 8 hours, proposed paragraph (b)(2) would require a 95 percent confidence that the recorded measurements are within ± 25 percent of the true dust concentration, as determined by CMDPSU reference measurements, over the dust concentration of 10% to 2 times the PEL for an 8-hour period. The proposal includes a formula for calculating the equivalent dust concentration range for assessing the accuracy of intra-shift measurements.

Proposed paragraph (c) would require the CPDM to meet the accuracy requirements regardless of the variation in density, composition, size distribution of respirable coal mine dust particles, or presence of spray mist found in U.S. coal mines. Some monitoring devices, such as light scattering detectors, use technologies that have potential for monitoring aerosol dust concentrations. These devices currently lack the ability to distinguish differences in density and composition of coal mine dust particles and other aerosols in the mine, or to accommodate variation in the coal mine dust particle distribution. To be effective, the CPDM must produce accurate measurements for any coal mine atmosphere.

Proposed paragraph (d) would establish a requirement for the CPDM to monitor with sufficient precision, meaning the degree to which it is able to closely replicate its measurement result, when monitoring identical dust concentrations. The proposed precision requirement is a relative standard deviation of less than 0.1275 without bias for multiple measurements. The proposed precision requirement will enable MSHA and mine operators to monitor changes in dust concentrations with reasonable confidence.

Proposed paragraph (e) would require the bias of CPDM measurements to be limited such that the uncorrectable discrepancy between the mean of the distribution of measurements and the

true dust concentration being measured during testing shall be no greater than 10 percent. The proposal requires that measurement bias be constant over the range of dust concentration levels tested, between 10% and 2 times the PEL, for an 8-hour sampling period. The proposed bias requirement is sufficient to assure that the CPDM does not consistently either overestimate or underestimate respirable coal mine dust concentrations to a substantial degree. This provides further assurance of the accuracy of the CPDM with respect to multiple measurements and would also provide useful information to MSHA in support of compliance determinations and actions.

Proposed paragraph (f) would require that applicants use the NIOSH testing procedure "Continuous Personal Dust Monitor Testing Procedures" to evaluate the accuracy (including reliability, precision, and bias) of a CPDM. The procedure is available at the NIOSH Web site: <http://www.cdc.gov/niosh/mining>. The protocol would assure that all CPDMs are evaluated consistently. NIOSH will provide assistance to applicants, as necessary, to make the arrangement of such testing feasible.

I. Section 74.9 Quality Assurance

Proposed § 74.9 is new and would establish quality assurance requirements for CPDM manufacturers.

Proposed paragraph (a) would require that the applicant establish and maintain a quality control system that assures devices produced under the applicant's certificate of approval meet the specifications to which they are certified under this part and are reliable, safe, effective, and otherwise fit for their intended use. The proposed quality control system must be compliant with ISO Q9001–2000 standard established by the ISO.¹² The ISO standard is incorporated by reference. This consensus standard for quality management is in widespread use in U.S. and international manufacturing and service industries. It requires a comprehensive quality management system, which is essential for the manufacture of sophisticated technical equipment used in worker safety and health.

Proposed paragraph (a) would also require the applicant to submit a copy of the most recent registration under ISO Q9001–2000 to NIOSH, together with the application and, subsequent to

⁹ Guffy, S.E., M.E. Flanagan, G. VanBelle. Air Sampling at the chest and ear as representative of the breathing zone. *AIHAJ*, 62:416–427, 2001, show that ear locations are preferred and that dust sources relative to sample position are important. A NIOSH study on miners shows that the chest and cap lamp positions are representative of exposures at the miner's nose (Vinson, R.P. and J.C. Volkwein, Determining the Spatial Variability of Personal Sampler Inlet Locations (in press) JOEH, 2007).

¹⁰ Volkwein, J.C., R.P. Vinson, L.J. McWilliams, D.P. Tuchman, and S.E. Mischler. Performance of a New Personal Respirable Dust Monitor for Mine Use. CDC RI 9663. June 2004.

¹¹ NIOSH testing of the CPDM prototype used 4.0 mg/m³ dust concentrations as the upper limit in challenging the device for accuracy. NIOSH did not

conduct testing to identify the upper bound at which the accuracy of the prototype would be degraded below the testing standard, although the ultimate occurrence of such degradation is predictable based on engineering principles.

¹² ISO Q9001:2000 is the International Standard: *Quality management systems—Requirements, 3rd edition*, approved on December 15, 2000 and available from the International Organization for Standardization and the American National Standards Institute.

an approval, upon request. Registration under any updated version of ISO Q9001–2000 would be considered evidence of compliance with the ISO Q9001–2000 standard. Registration under the ISO quality management standard would represent evidence that the applicant has established a sound quality assurance program, and allow for the use of existing and widely available independent auditing services.

Proposed paragraph (b) would require applicants or approval holders to allow NIOSH to conduct quality management audits when requested or in response to quality-related complaints. NIOSH has similar authority under its respirator certification program (42 CFR part 84), which has been used to assure product quality in the respirator market. This authority is essential in the event of substantial quality management problems in the manufacture of CPDMs.

Proposed paragraph (c) would require a manufacturer to remedy a quality management deficiency identified by NIOSH or an independent audit within a reasonable time as determined by NIOSH. Refusal by the manufacturer would potentially result in the disapproval of a pending application or revocation of an approval until such time as NIOSH has determined that the deficiency is remedied. NIOSH has similar authority under its respirator certification program, although NIOSH has rarely had to employ it.

J. Section 74.10 Operating and Maintenance Instructions

Proposed § 74.10(a) is new and would require the manufacturer to include operating and maintenance instructions with each new CPDM unit sold.

Proposed paragraph (b) would require the manufacturer to submit the instructions to NIOSH with the application for approval. It would also require that revised instructions be submitted if any substantive changes are made to the unit or the approved instructions after initial approval. Adequate instructions must be provided to facilitate effective use of sophisticated monitoring equipment. NIOSH review and approval of instructions would serve an important final quality control function for the manufacturer and assure that instructions are clearly written and easily understood. NIOSH has similar authority under its respirator certification program (42 CFR part 84).

K. Section 74.11 Tests of the Continuous Personal Dust Monitor

This section is new and would establish testing requirements and services for the evaluation of CPDMs.

Proposed paragraph (a) would require the applicant to conduct all testing regarding design, construction, and measurement accuracy requirements specified in §§ 74.7–74.8 of this part, with the exception of durability testing under § 74.7(g). It would further require that the testing be performed by an independent testing entity approved by NIOSH. This requirement would reduce concerns about conflicts of interest and would provide reasonable assurance of the quality of the testing and the reliability of the results.

NIOSH considered the alternative of developing an in-house testing program for the evaluation of CPDMs. This alternative is not being proposed because NIOSH does not expect a substantial number of CPDM applications.

Proposed paragraph (b) would provide for NIOSH to assist the applicant in identifying appropriate testing services and in assuring that testing protocols used by the independent testing entity are adequate. Applicants would be required to submit testing protocols to NIOSH prior to testing. It is unlikely that a manufacturer would be familiar with testing resources capable of addressing every element of the proposed requirements. NIOSH would be able to provide the applicant with information on private and university laboratories available for testing. In addition, NIOSH review of testing protocols would minimize the possibility of inadequate testing, which might result in the applicant incurring unnecessary delay and costs.

Proposed paragraph (c) would require the applicant to arrange for the independent testing entity to report testing protocols and results directly to NIOSH. This direct reporting relationship between the testing entity and NIOSH would further establish the independence of the testing from the applicant.

Under proposed paragraph (d) MSHA would evaluate and determine the intrinsic safety of a CPDM submitted for approval. MSHA conducts all intrinsic safety testing for mining equipment used in underground coal mines. A CPDM that does not pass such testing would not be approved for use in U.S. coal mines.

Subpart D—General Requirements for All Devices

L. Section 74.12 Conduct of Tests; Demonstrations

Proposed § 74.12, concerning the conduct of tests, renumbers existing § 74.5 and would make clarifying

changes to the existing provision. This section, which concerns the management of testing information prior to and after the issuance of a certificate of approval, would clarify that MSHA and NIOSH may reveal test protocols and results considered for approval of the device.

M. Section 74.13 Applications

Proposed § 74.13 would renumber existing § 74.6 and add requirements necessary for filing an application for CPDMs. The application requirements for CMDPSUs remain substantively unchanged.

Proposed paragraph (a) would require that a written application in duplicate be submitted to NIOSH and MSHA for approval of a CMDPSU (*i.e.*, a total of four applications). Also, 10 complete units must be submitted to NIOSH with the application and one pump must be sent to MSHA. This is the same as the existing requirement for the CMDPSU.

Proposed paragraph (b) would require the submission of an application in duplicate and 4 complete CPDM units, 3 to NIOSH and one to MSHA. The 4 units would allow MSHA to conduct intrinsic safety testing and NIOSH to evaluate compliance with the “Design and Construction Requirements” (See § 74.7), verify any testing results, evaluate the use and maintenance instructions, and address quality assurance matters.

Proposed paragraph (c) would require that drawings and specifications provided in the application identify the design, dimension, and materials of the CMDPSU or CPDM. This information is necessary for a complete evaluation of compliance with design and construction requirements proposed under this part.

N. Section 74.14 Certificate of Approval

Proposed § 74.14 renumbers existing § 74.7 and would specify procedures by which NIOSH and MSHA would approve or disapprove an application for either a CMDPSU or CPDM. Proposed § 74.14 is unchanged from the existing provision, except to expand the scope to include the CPDM.

O. Section 74.15 Approval Labels

Proposed § 74.15 renumbers existing § 74.8 and would specify labeling procedures, requirements, and related obligations of the applicant. Proposed § 74.15 is unchanged from the existing provision, except to expand the scope to include the CPDM.

P. Section 74.16 Material Required for Record

Proposed § 74.16 renumbers existing § 74.9 and would provide for adequate records on each application, the return of CMDPSU or CPDM test units to the applicant, and the delivery of a commercially produced unit to NIOSH. Proposed § 74.16 is unchanged from the existing provision, except to expand the scope to include the CPDM.

Q. Section 74.17 Changes After Certification

Proposed § 74.17 renumbers § 74.10 and would specify procedures by which the applicant could seek to change features of an approved CMDPSU or CPDM. This section requires the manufacturer to file an application to change any feature and to test the modified device if NIOSH determines that testing is required. Proposed § 74.17 is unchanged from the existing provision, except to expand the scope to include the CPDM.

R. Section 74.18 Withdrawal of Certification

Proposed § 74.18 renumbers § 74.11 and would authorize NIOSH or MSHA to revoke for cause any certification of approval for a CMDPSU or CPDM. Proposed § 74.18 is unchanged from the existing provision, except to expand the scope to include the CPDM.

IV. Regulatory Economic Analysis

A. Executive Order 12866

Under Executive Order (E.O.) 12866 (58 FR 51735), as amended by Executive Order 13258 (amending Executive Order 12866 on Regulatory Planning and Review (67 FR 9385)), the Agency must determine whether a regulatory action is “significant” and subject to review by the Office of Management and Budget (OMB) and the requirements of the Executive Order. Under section 3(f), the order defines a “significant regulatory action” as an action that is likely to result in a rule (1) Having an annual effect on the economy of \$100 million or more, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities (also referred to as “economically significant”); (2) creating serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues

arising out of legal mandates, the President’s priorities, or the principles set forth in this Executive Order. MSHA has determined that the proposed rule would not have annual effect of \$100 million or more on the economy and, therefore, it is not an economically “significant regulatory action” pursuant to section 3(f) of Executive Order 12866. MSHA, however, has concluded that the proposed rule is otherwise significant under Executive Order 12866 because it raises novel legal or policy issues.

This proposed rule would update existing requirements for the approval of a CMPDSU to reflect the current state of this technology. The current approval holder of this device has voluntarily incorporated these improved requirements into the device. The proposal would also provide procedures and requirements by which NIOSH and MSHA could approve a new monitoring technology, CPDM devices, for use in coal mines.

Providing requirements to allow the approval of a new monitoring technology, the CPDM, for use in coal mines, does not have any potential for adversely impacting the economy. No such device has been commercialized for the mining industry. This proposal does not establish compliance requirements. It addresses the approval of dust monitoring devices.

B. Benefits

Coal mine dust is produced when material is extracted from the coal seam by drilling, blasting, and cutting, and during loading and transporting of that material from the mine. Respirable coal mine dust consists of a mixture of very small particles of coal, silica, and other mineral and organic materials found in the mine environment that can be inhaled and deposited in the lungs. It presents a significant health hazard if not adequately controlled. Long-term exposure to excessive levels of respirable coal mine dust causes coal workers’ pneumoconiosis (CWP), commonly known as “black lung.” Overexposure to respirable silica dust can lead to silicosis. These occupational lung diseases can devastate a miner’s quality of life, create a heavy burden on the victim and the victim’s family, and in some cases lead to premature death. While significant progress has been made over the years in reducing respirable dust levels, coal miners continue to be at risk of developing CWP and silicosis, including progressive massive fibrosis (PMF), the most disabling and potentially fatal form of CWP. While there is no cure for these disabling lung diseases, they are entirely preventable.

According to the U.S. Department of Labor’s (DOL) Office of Workers’ Compensation Programs, which administers the Black Lung benefits program to compensate victims of dust exposure in mines and certain eligible survivors of deceased miners, black lung benefits (monthly wage replacement and medical benefits) totaled \$676 million in FY 2005.¹³

Under the Federal Coal Mine Health and Safety Act of 1969 (Pub. L. 91–173), the predecessor to the Federal Mine Safety and Health Act of 1977 (Pub. L. 95–164), the dust sampling technology used to measure miners’ exposure to respirable coal mine dust has basically remained unchanged since 1970. The existing approved dust sampler used by coal mine operators and MSHA consists of a person-wearable battery-powered pump that draws mine air through a cyclone that separates respirable dust that can enter the inner lung and deposits it on a filter that is then weighed by MSHA. The dust concentration is calculated based on the volume of air sampled and the mass of dust collected. Usually, this procedure takes several days before mine operators and MSHA receive the results. By that time, the mining workplace has moved and conditions may have changed substantially. Under the existing sampling method, it may be difficult for a mine operator to identify conditions of high dust exposure as they occur, often preventing necessary and timely intervention to reduce the exposures.

CPDMs represent an innovative technology that provides real-time and continuous accurate measurement of respirable coal mine dust during a working shift. Continuous exposure readings enable mine management to be proactive and take immediate preventive action to avoid potentially excessive exposures. The devices can also be used as an engineering tool to permit the operator to rapidly evaluate the effectiveness of various dust control strategies.

MSHA and NIOSH recognize that the major benefits to be derived from real-time continuous monitoring will occur when monitoring devices with this new technology and strategies for their use are developed and implemented. However, before CPDMs can be introduced in coal mines, they must be approved for use by MSHA and NIOSH. The existing regulations limit approval to dust sampling devices of the current design and do not permit the Agencies

¹³ U.S. DOL Employment Standards Administration, Office of Workers’ Compensation Programs, Annual Report to Congress FY 2005, Submitted to Congress 2008.

to approve other technologically advanced sampling devices that are capable of monitoring dust concentrations on a real-time and continuous basis.

MSHA and NIOSH have developed new procedures that would allow manufacturers to apply for approval of the new CPDM technology. This proposal would require manufacturers to demonstrate that devices using continuous monitoring technology are durable and can withstand the mine environment; can be worn by miners performing normal tasks for an entire work shift; provide accurate and precise measurements; and can be safely used in mine atmospheres where explosive mixtures of gases may occur.

This proposed revision to the approval regulations is an important initial step to permit the introduction of the new continuous monitoring technology in coal mines. The use of real-time monitoring devices in the future would allow mine management to take immediate action to prevent miner overexposure and thereby reduce occupational lung disease.

This proposed rule would assure that existing health benefits associated with the CMDPSU are maintained by updating existing requirements for the approval of a CMDPSU to reflect the current state of this technology.

The introduction of the CPDM likely would establish some degree of competition in the broader market of personal monitoring technology for coal mining, since the CPDM is likely to evolve as a potential substitute for the existing CMDPSU, which is currently unique to this broader market and produced by a single manufacturer. Moreover, the proposed requirements for the approval of the CPDM, which are essentially performance-oriented, would provide incentives for continued innovation of this technology.

C. Compliance Costs

There is only one manufacturer of the existing sampler technology, CMDPSU. No new applications for approval have been received in over 30 years. The proposed revisions to the design requirements for the CMDPSU would not require this manufacturer to submit an application for a new approval or any additional information to MSHA and NIOSH. The CMDPSU approved under existing requirements already meets the proposed updated requirements since the requirements have been integrated by policy into existing approvals.

MSHA and NIOSH are aware of only one prospective manufacturer capable of mass producing a CPDM that could be submitted for approval under this

proposal. The Agencies believe that very few instrument manufacturers have the capacity or interest to develop technology suitable for directly and continuously measuring concentrations of respirable coal mine dust in mine atmospheres. The current pre-commercial CPDM required a federal investment of approximately \$5.3 million, an additional private investment of approximately \$750,000, and more than four years of development before a suitable device could be produced that could accurately measure respirable dust concentrations in coal mine atmospheres. It is likely that few, if any, firms would undertake this substantial level of research and development given the limited market for such a product.

Consequently, MSHA and NIOSH expect that in the first year under the proposed rule, there would be one manufacturer filing an application seeking approval of a CPDM. The cost of the proposed rule in the first year is estimated to be \$293,000. The first year approval costs are annualized over an indefinite time period by using a 7 percent discount factor that results in a cost of approximately \$20,500 ($\$293,000 \times 0.07$). The \$293,000 consists of approximately: \$250,000 for the applicant to have tests performed on the CPDM by a third party (under proposed §§ 74.7 and 74.8); \$9,500 for MSHA to evaluate and test the CPDM for intrinsic safety (under proposed § 74.11); \$3,200 to file an application for approval of the CPDM (under proposed § 74.13); and \$30,000 for the cost of the CPDMs provided to NIOSH and MSHA by the applicant (under proposed §§ 74.16(a) and (b)). Derivation of the proposed rule costs are detailed below.

Proposed §§ 74.7 and 74.8 would require tests that the applicant must have performed by a third party. These tests are for: Ergonomic design (under proposed § 74.7(b)); environmental conditions (under proposed § 74.7(e)); electromagnetic interference (under proposed § 74.7(f)); flow stability and calibration of pump (under proposed § 74.7(j)); and accuracy testing which includes reliability measurement, precision, and bias testing (under proposed §§ 74.8(c), (d), and (e)). MSHA estimates that it would cost the applicant approximately \$250,000 to conduct the tests that are required by proposed §§ 74.7 and 74.8. The annualized cost is \$17,500 ($\$250,000 \times 0.07$).

Proposed § 74.11 requires that the applicant submit the CPDM to MSHA for testing and evaluation, pursuant to 30 CFR § 18.68 to determine whether the electronic components of the CPDM

unit submitted for approval meet the applicable permissibility provisions. The following tests would be performed by MSHA under § 18.68(a)(1): Current limiting resistor adequacy test; coal dust thermal ignition test; optical isolator test; impact test and force test of encapsulated electrical assemblies; drop testing intrinsically safe apparatus; mechanical test of partitions; piezoelectric device impact test; and dielectric strength test. The battery flash current test would be performed under §§ 18.68(a)(1) and (b)(1). The methane thermal ignition test would be performed under §§ 18.68(a)(1) and (b)(6). The maximum surface temperature test would be performed under § 18.68(a)(1) and (b)(3). The spark ignition test would be performed under §§ 18.68(a)(1), (a)(2), (a)(4), (a)(5), (b)(4), and (b)(5).

The estimated time per application is 45 hours for evaluation and 40 hours for testing. MSHA charges an hourly fee of \$84 per hour for evaluation and testing time. In addition, MSHA applies a support factor of 1.617 to cover the administrative, clerical and technical support services involved in evaluating an application. Thus, the cost for MSHA evaluation and testing is approximately \$9,500 [(45 hrs. \times \$84 \times 1.617) + (40 hrs. \times \$84)]. The annualized cost is approximately \$700 ($\$9,500 \times 0.07$).

Proposed § 74.13(b) requires that a written application for approval be submitted to MSHA and NIOSH in duplicate. MSHA estimates that it would take an engineer, earning \$74.32 per hour, a total of 40 hours to prepare and compile the materials needed to accompany an application. MSHA estimates that it would take a clerical employee, earning \$26.37 per hour, 0.25 hours (15 minutes) to copy an application, averaging 250 pages, at \$0.15 per page. The postage cost per application is estimated to be \$5. Thus, the cost to file an application is estimated at \$3,200 [(1 application \times 40 hrs. \times \$74.32 per hr.) + (0.25 hrs. \times \$26.37 per hour \times 4 copies) + (250 pages \times \$0.15 cost per page \times 4 copies) + (\$5 \times 4 copies)]. The annualized cost is approximately \$200 ($\$3,200 \times 0.07$).

Proposed § 74.16(a) would require that MSHA and NIOSH each retain one CPDM that is submitted with the application. In addition, proposed § 74.16(b) would require that NIOSH receive one commercially produced CPDM free of charge, if it is approved by NIOSH and MSHA. MSHA estimates that the cost of a CPDM would range between \$8,000 and \$12,000 (for an average of \$10,000 per device). Thus, the cost to provide two CPDMs with the application and one subsequent to the

approval of the application is estimated to be \$30,000 (3 CPDMs \times \$10,000 per CPDM). The annualized cost is \$2,100 (\$30,000 \times 0.07).

D. Economic and Technological Feasibility

Although the CPDM is a new type of sampling device, the proposed rule is technologically feasible. The device has been developed and successfully tested in underground coal mines. This proposed rule would put in place the necessary requirements to enable a prospective manufacturer to seek NIOSH and MSHA approval of a CPDM for use in coal mines. The one-time, first year cost to obtain an approval for the CPDM is estimated to be approximately \$293,000, which MSHA concludes is economically feasible for a CPDM manufacturer.

V. Regulatory Flexibility Act and Small Business Regulatory Enforcement Fairness Act

Pursuant to the Regulatory Flexibility Act (RFA) of 1980, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA), MSHA has analyzed the impact of the proposed rule on small entities. Based on that analysis, MSHA has notified the Chief Counsel for Advocacy, Small Business Administration, and made the certification under the Regulatory Flexibility Act at 5 U.S.C. 605(b) that the proposed rule would not have a significant economic impact on a substantial number of small entities.

The proposed rule establishes procedures and requirements for approving a CPDM for use in coal mines. A manufacturer of a CPDM receiving such an approval would thus be able to market the device to U.S. coal mine operators and MSHA. This U.S. market might also provide a commercial base for marketing the device to coal mine operators internationally.

Currently, such device has not been commercialized because the existing design specifications of 30 CFR Part 74 provide for the approval of only one, substantially different type of technology for monitoring concentrations of respirable dust in coal mine atmospheres. The proposed requirements take into account the design and performance of a prototype CPDM, which was developed with the financial and technical support of MSHA and NIOSH, in collaboration with a private sector monitoring technology company, as discussed under section I(A) of this preamble. NIOSH has carefully evaluated the design and performance of this prototype. This empirical basis assures

the feasibility of the proposed requirements.

Accordingly, since this proposed rule would foster rather than inhibit such commercialization, since there is not currently a CPDM commercialized by any entity, and since the proposed rule takes into account the capabilities of the single currently available prototype for such devices, the proposed rule should not have a significant economic impact on a substantial number of small entities.

VI. Paperwork Reduction Act of 1995

The proposed rule will impose estimated information collection requirements of 41 burden hours which are related to filing approval applications required by proposed § 74.13. This burden would occur in the first year that the rule is in effect. MSHA estimates that it would take an engineer 40 hours to compile the material for the application, and a clerical employee 1 hour to prepare and send four copies of the application (0.25 hours per application \times 4 copies). Two copies each of the application would need to be sent to MSHA and NIOSH. Based on hourly wage rates of \$74.32 for an engineer and \$26.37 for a clerical employee, the related burden costs are estimated to be approximately \$3,000 (40 hrs. \times \$74.32) + (0.25 hrs. \times \$26.37 \times 4 copies). The proposed burden will be accounted for in OMB control No. 1219-0066 which contains the burden for applications filed with MSHA that involve intrinsic safety testing. The information collection package has been submitted to the Office of Management and Budget (OMB) for review under 44 U.S.C. 3504(h) of the Paperwork Reduction Act of 1995, as amended. A copy of the information collection package can be obtained from the Department of Labor by e-mail request to king.darrin@dol.gov or by phone request at (202) 693-4129.

MSHA requests comments to:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other

technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Comments regarding the information collection requirements should be sent to both OMB and MSHA. Addresses for both offices can be found in the **ADDRESSES** section of this preamble. The regulated community is not required to respond to any collection of information unless it displays a current, valid, OMB control number. MSHA displays OMB control numbers in 30 CFR part 3.

VII. Other Regulatory Considerations

A. The Unfunded Mandates Reform Act of 1995

MSHA has reviewed the proposed rule under the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1501 *et seq.*). MSHA has determined that this proposed rule would not include any Federal mandate that may result in increased expenditures by State, local, or tribal governments; nor would it increase private sector expenditures by more than \$100 million in any one year or significantly or uniquely affect small governments. Accordingly, the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1501 *et seq.*) requires no further agency action or analysis.

B. The Treasury and General Government Appropriations Act of 1999: Assessment of Federal Regulations and Policies on Families

This proposed rule would have no effect on family well-being or stability, marital commitment, parental rights or authority, or income or poverty of families and children. Accordingly, section 654 of the Treasury and General Government Appropriations Act of 1999 (5 U.S.C. 601 note) requires no further agency action, analysis, or assessment.

C. Executive Order 12630: Government Actions and Interference With Constitutionally Protected Property Rights

This proposed rule would not implement a policy with takings implications. Accordingly, E.O. 12630 requires no further Agency action or analysis.

D. Executive Order 12988: Civil Justice Reform

This proposed rule was written to provide a clear legal standard for affected conduct and was carefully reviewed to eliminate drafting errors and ambiguities, so as to minimize litigation and undue burden on the Federal court system. Accordingly, this proposed rule meets the applicable

standards provided in section 3 of E.O. 12988.

E. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This proposed rule would have no adverse impact on children. Accordingly, E.O. 13045 requires no further Agency action or analysis.

F. Executive Order 13132: Federalism

This proposed rule would not have "federalism implications" because it would not "have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government." Accordingly, E.O. 13132, requires no further Agency action or analysis.

G. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This proposed rule would not have "tribal implications" because it would not "have substantial direct effects on one or more Indian tribes, on the relationship between the Federal government and Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes." Accordingly, E.O. 13175 requires, no further Agency action or analysis.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

Executive Order 13211 requires agencies to publish a statement of energy effects when a rule has a significant energy action that adversely affects energy supply, distribution, or use. This proposed rule does not directly affect coal mines, only prospective manufacturers of CPDMs that seek to obtain the Agencies' approval for use of such monitoring devices in coal mines. Accordingly, MSHA has concluded that the proposed rule is not a "significant energy action" because it is not "likely to have a significant adverse effect on the supply, distribution, or use of energy * * * (including a shortfall in supply, price increases and increased use of foreign supplies)." Accordingly, E.O. 13211 requires no further Agency action or analysis.

I. Executive Order 13272: Proper Consideration of Small Entities in Agency Rulemaking

MSHA has reviewed the proposed rule to assess and take appropriate

account of its potential impact on small businesses, small governmental jurisdictions, and small organizations. MSHA has determined and certified that the proposed rule would not have a significant economic impact on a substantial number of small entities.

List of Subjects in 30 CFR Part 74

Mine safety and health, Incorporation by reference, Occupational safety and health, Direct reading devices, Monitoring technology.

Dated: January 8, 2009.

Richard E. Stickler,

Acting Assistant Secretary for Mine Safety and Health.

For the reasons set out in the preamble, and under the authority of the Federal Mine Safety and Health Act of 1977 as amended by the Mine Improvement and New Emergency Response Act of 2006, MSHA proposes to amending chapter I of title 30 of the Code of Federal Regulations by revising part 74 to read as follows:

PART 74—COAL MINE DUST PERSONAL MONITORS

Subpart A—Introduction

Sec.

74.1 Purpose.

74.2 Definitions.

Subpart B—Requirements for Coal Mine Dust Personal Sampler Unit

74.3 Sampler unit.

74.4 Specifications of sampler unit.

74.5 Tests of coal mine dust personal sampler units.

74.6 Quality control.

Subpart C—Requirements for Continuous Personal Dust Monitors (CPDMs)

74.7 Design and construction requirements.

74.8 Measurement, accuracy, and reliability requirements.

74.9 Quality assurance.

74.10 Operating and maintenance instructions.

74.11 Tests of the CPDM.

Subpart D—General Requirements for All Devices

74.12 Conduct of tests; demonstrations.

74.13 Applications.

74.14 Certificate of approval.

74.15 Approval labels.

74.16 Material required for record.

74.17 Changes after certification.

74.18 Withdrawal of certification.

Authority: 30 U.S.C. 957.

Subpart A—Introduction

§74.1 Purpose.

The regulations in this part set forth the requirements for approval of coal mine dust measurement units designed to determine the concentrations of respirable dust in coal mine

atmospheres; procedures for applying for such approval; test procedures; and labeling.

§74.2 Definitions.

(a) *Accuracy*: The ability of a monitor to determine the "true" concentration of the environment sampled. Accuracy describes the closeness of a typical measurement to the quantity measured, although it is defined and expressed in terms of the relative discrepancy of a typical measurement from the quantity measured. The accuracy of a monitor is the theoretical maximum error of measurement, expressed as the proportion or percentage of the amount being measured, without regard for the direction of the error, which is achieved with a 0.95 probability by the method.

(b) *Bias*: the uncorrectable relative discrepancy between the mean of the distribution of measurements from a monitor and the true concentration being measured.

(c) *Coal mine dust personal sampler unit (CMDPSU)*: a personal device for measuring concentrations of respirable dust in coal mine atmospheres that meets the requirements specified under Subpart B of this part.

(d) *Continuous personal dust monitor (CPDM)*: a personal device for continuously measuring concentrations of respirable dust in coal mine atmospheres that reports within-shift and end-of shift measurements of dust concentrations immediately upon the completion of the period of exposure that was monitored and that meets the requirements specified under Subpart C of this part.

(e) *ISO*: the International Organization for Standardization, an international standard-setting organization composed of representatives from various national standards-setting organizations. ISO produces industrial and commercial voluntary consensus standards used worldwide.

(f) *Precision*: the relative variability of measurements from a homogeneous atmosphere about the mean of the population of measurements, divided by the mean at a given concentration. It reflects the ability of a monitor to replicate measurement results.

Subpart B—Requirements for Coal Mine Dust Personal Sampler Unit

§74.3 Sampler unit.

A CMDPSU shall consist of (a) a pump unit, (b) a sampling head assembly, and (c) if rechargeable batteries are used in the pump unit, a battery charger.

§74.4 Specifications of sampler unit.

(a) *Pump unit*:

(1) *Dimensions.* The overall dimensions of the pump unit, hose connections, and valve or switch covers shall not exceed 4 inches (10 centimeters) in height, 4 inches (10 centimeters) in width, and 2 inches (5 centimeters) in thickness.

(2) *Weight.* The pump unit shall not weigh more than 20 ounces (567 grams).

(3) *Construction.* The case and all components of the pump unit shall be of sufficiently durable construction to endure the wear of use in a coal mine, shall be tight fitting to minimize the amount of dust entering the pump case, and shall be designed to protect against radio frequency interference and electromagnetic interference.

(4) *Exhaust.* The pump shall exhaust into the pump case, maintaining a slight positive pressure which will reduce the entry of dust into the pump case.

(5) *Switch.* The pump unit shall be equipped with an ON/OFF switch or equivalent device on the outside of the pump case. This switch shall be protected against accidental operation during use and protected to keep dust from entering the mechanisms.

(6) *Flow rate adjustment.* Except as provided in the last sentence of this paragraph, the pump unit shall be equipped with a suitable means of flow rate adjustment accessible from outside the case. The flow rate adjuster shall be recessed in the pump case and protected against accidental adjustment. If the pump is capable of maintaining the flow rate consistency required in this part without adjustment, an external flow rate adjuster is not required.

(7) *Battery.* The power supply for the pump shall be a suitable battery located in the pump case or in a separate case which attaches to the pump case by a permissible electrical connection.

(8) *Pulsation.* (i) The irregularity in flow rate due to pulsation shall have a fundamental frequency of not less than 20 Hz.

(ii) The quantity of respirable dust collected with a sampler unit shall be within ± 5 percent of that collected with a sampling head assembly operated with nonpulsating flow.

(9) *Belt clips.* The pump unit shall be provided with a belt clip which will hold the pump securely on a coal miner's belt.

(10) *Recharging connection.* A suitable connection shall be provided so that the battery may be recharged without removing the battery from the pump case or from the battery case if a separate battery case is used.

(11) *Flow rate indicator.* A visual indicator of flow rate shall be provided either as an integral part of the pump unit or of the sampling head assembly.

The flow rate indicator shall be calibrated within ± 5 percent at 2.2, 2.0, and 1.7 liters per minute to indicate the rate of air passing through the accompanying sampling head assembly.

(12) *Flow rate range.* The pump shall be capable of operating within a range of from 1.5 to 2.5 liters per minute and shall be adjustable over this range.

(13) *Flow rate consistency.* The flow shall remain within ± 0.1 liters per minute over at least a 10-hour period when the pump is operated at 2 liters per minute with a standard sampling head assembly.

(14) *Flow restriction indicator.* The pump shall be capable of detecting restricted flow and providing a visual indication if it occurs. The flow restriction indicator shall remain activated until the cause is corrected. The pump shall shut down automatically if flow is restricted for one minute.

(15) *Duration of operation.* The pump with a fully charged battery pack shall be capable of operating for (i) not less than 8 hours at a flow rate of 2 liters per minute against a resistance of 25 inches (64 centimeters) of water measured at the inlet of the pump; and (ii) for not less than 10 hours at a flow rate of 2 liters per minute against a resistance of 15 inches (38 centimeters) of water measured at the inlet of the pump.

(16) *Low battery indicator.* The pump unit shall be equipped with a visual indicator of low battery power.

(17) *Elapsed time indicator.* The pump unit shall be capable of (i) displaying the actual pump run time in minutes (up to 999 minutes) and (ii) retaining the last reading after the pump is shut down due to either a flow restriction described in paragraph (a)(14) or low battery power described in paragraph (a)(16) or at the end of the sampling shift.

(b) *Sampling head assembly.* The sampling head assembly shall consist of a cyclone and a filter assembly as follows:

(1) *Cyclone.* The cyclone shall consist of a cyclone body with removable grit cap and a vortex finder and shall be constructed of nylon or a material equivalent in performance. The dimensions of the components, with the exception of the grit cap, shall be identical to those of a Door-Oliver 10 millimeter cyclone body, part No. 28541/4A or 01B11476-01 and vortex finder, part No. 28541/4B.

(2) *Filter assembly.* The filter assembly shall meet the following requirements:

(i) *Filter.* The filter shall be a membrane filter type with a nominal pore size not over 5 micrometers. It

shall be nonhygroscopic and shall not dissolve or decompose when immersed in ethyl or isopropyl alcohol. The strength and surface characteristics of the filter shall be such that dust deposited on its surface may be removed by ultrasonic methods without tearing the filter. The filter resistance shall not exceed 2 inches (0.5 centimeters) of water at an airflow rate of 2 liters per minute.

(ii) *Capsule.* The capsule enclosing the filter shall not permit sample air to leak around the filter and shall prevent visual inspection of the filter surface or filter loading. The capsule shall be made of nonhygroscopic material. Its weight, including the enclosed filter, shall not exceed 5 grams and it shall be pre-weighed by the manufacturer with a precision of ± 0.001 milligrams. Impact to the capsule shall not dislodge any dust from the capsule, which might then be lost to the weight measurement.

(iii) *Cassette.* The cassette shall enclose the capsule so as to prevent contamination and the intentional or inadvertent alteration of the dust deposited on the filter. The cassette must be easily removable without causing a loss or gain of capsule weight. Covers enclosing the capsule shall be designed to prevent contaminants from entering or dust from leaving the capsule when it is not in use, and to prevent the reversal of airflow through the capsule and other means of removing dust collected on the filter.

(3) *Arrangement of components.* The connections between the cyclone vortex finder and the capsule and between the capsule and the $\frac{1}{4}$ -inch (0.64 centimeters) (inside diameter) hose mentioned in paragraph (b)(5) of this section shall be mechanically firm and shall not leak at a rate of more than 0.1 liters per hour under a vacuum of 4 inches (10 centimeters) of water.

(4) *Clamping of components.* The clamping and positioning of the cyclone body, vortex finder, and cassette shall be rigid, remain in alignment, be firmly in contact and airtight. The cyclone-cassette assembly shall be attached firmly to a backing plate or other means of holding the sampling head in position. The cyclone shall be held in position so that the inlet opening of the cyclone is pointing perpendicular to, and away from, the backing plate.

(5) *Hose.* A 3-foot (91 centimeter) long, $\frac{1}{4}$ -inch (0.64 centimeters) (inside diameter) clear plastic hose shall be provided to form an airtight connection between the inlet of the sampler pump and the outlet of the filter assembly. A device, capable of sliding along the hose and attaching to the miner's outer garment, shall be provided.

(c) *Battery charger.*

(1) *Power supply.* The battery charger shall be operated from a 110 (VAC)(nominal), 60 Hz power line.

(2) *Connection.* The battery charger shall be provided with a cord and polarized connector so that it may be connected to the charge socket on the pump or battery case.

(3) *Protection.* The battery charger shall be fused, shall have a grounded power plug, and shall not be susceptible to damage by being operated without a battery on charge.

(4) *Charge rates.* The battery charger shall be capable of fully recharging the battery in the pump unit within 16 hours.

§ 74.5 Tests of coal mine dust personal sampler units.

(a) The National Institute for Occupational Safety and Health (NIOSH), Department of Health and Human Services, shall conduct tests to determine whether a CMDPSU that is submitted for approval under these regulations meets the requirements set forth in § 74.4.

(b) The Mine Safety and Health Administration (MSHA), Department of Labor, will conduct tests and evaluations to determine whether the pump unit of a CMDPSU that is submitted for approval under these regulations complies with the applicable permissibility provisions of this 30 CFR part 18.68.

§ 74.6 Quality control.

The applicant shall describe the way in which each lot of components will be sampled and tested to maintain its quality prior to assembly of each sampler unit. In order to assure that the quality of the CMDPSU will be maintained in production through adequate quality control procedures, MSHA and NIOSH reserve the right to have their qualified personnel inspect each applicant's control-test equipment procedures and records and to interview the employees who conduct the control tests. Two copies of the results of any tests made by the applicant on the CMDPSU or the pump unit thereof shall accompany an application provided under § 74.13 of this part.

Subpart C—Requirements for Continuous Personal Dust Monitors

§ 74.7 Design and construction requirements.

(a) *General requirement.* Continuous Personal Dust Monitors (CPDMs) shall be designed and constructed for coal miners to wear and operate without impeding their ability to perform their work safely and effectively, and shall be

sufficiently durable to perform reliably in the normal working conditions of coal mines.

(b) *Ergonomic design testing.* Prior to submitting an application under § 74.13, the applicant shall develop a testing protocol and test the CPDM to assure that the device can be worn safely, without discomfort, and without impairing a coal miner in the performance of duties throughout a full work shift. The results of the test or tests shall also demonstrate that the device will operate consistently throughout a full work shift under representative working conditions of underground coal miners, including representative types and durations of physical activity, tasks, and changes in body orientation.

(1) The testing protocol shall specify that the tests be conducted in one or more active mines under routine operating conditions during production shifts.

(2) The applicant shall submit the testing protocol, in writing, to NIOSH for approval prior to conducting such testing.

(3) The applicant shall include the testing protocol and written test results in the application submitted to NIOSH as specified in § 74.13.

(4) NIOSH will advise and assist the applicant, as necessary, to develop a testing protocol and arrange for the conduct of testing specified in this paragraph.

(5) NIOSH may further inspect the device or conduct such tests as it deems necessary to assure the safety, comfort, practicality, and operability of the device when it is worn by coal miners in the performance of their duties.

(6) NIOSH may waive the requirement for the applicant to conduct testing under paragraph (b) of this section if NIOSH determines that such testing is unnecessary to assure the safety, comfort, practicality, and operability of the device when it is worn by coal miners in the performance of their duties.

(c) *Maximum weight.* A CPDM shall not add more than 2 kg to the total weight carried by the miner. CPDMs that are combined with other functions, such as communication or illumination, may exceed 2 kg provided that the resulting total added weight carried by the miner by such combination does not exceed 2 kg.

(d) *Dust concentration range.* The CPDM shall measure respirable coal mine dust concentrations accurately, as specified under § 74.8, for an end-of-shift average measurement, for concentrations within the range from 10% to 2 times the PEL for respirable coal mine dust. For end-of-shift average

concentrations exceeding 2 times the PEL, the CPDM shall, at minimum, provide a reliable indication that the concentration exceeded 2 times the PEL.

(e) *Environmental conditions.* The CPDM shall operate reliably and measure respirable coal mine dust concentrations accurately, as specified under § 74.8, under the following environmental conditions:

(1) At any ambient temperature and varying temperatures from minus 30 to plus 40 degrees centigrade;

(2) At any atmospheric pressure from 700 to 1000 millibars;

(3) At any ambient humidity from 10 to 100 percent relative humidity; and

(4) While exposed to water mists generated for dust suppression and while monitoring atmospheres including such water mists.

(f) *Electromagnetic interference.* The CPDM shall meet the following standards for the control of and protection from electromagnetic interference.

(1) Emissions: ANSI C95.1–1982 (Standard for Safety Levels with Respect to Human Exposure to Radio Frequency Electromagnetic Fields) and 47 CFR part 15 (FCC Radio Frequency Devices). Persons must proceed in accordance with ANSI C95.1–1982. The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Persons may obtain a copy from American National Standards Institute (ANSI), 25 West 43rd Street, New York, NY 10036, <http://www.ansi.org>.

Persons may inspect a copy at MSHA, Office of Standards, Regulations, and Variances, 1100 Wilson Boulevard, Room 2350, Arlington, Virginia 22209–3939 or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

(2) Immunity/Susceptibility: IEC 61000–4 and –6 (Electromagnetic compatibility—Part 4–6: Testing and measurement techniques—Immunity to conducted disturbances, induced by radio-frequency fields). Persons must proceed in accordance with IEC 61000–4 and 6. The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Persons may obtain a copy from the International Electrotechnical Commission at the address provided below. International Electrotechnical Commission, IEC Central Office, 3, rue de Varembe, P.O.

Box 131, CH-1211 GENEVA 20, Switzerland, <http://www.standardsinfo.net>.

Persons may inspect a copy at MSHA, Office of Standards, Regulations, and Variances, 1100 Wilson Boulevard, Room 2350, Arlington, Virginia 22209-3939 or at the National Archives and Records Administration (NARA). For

information on the availability of this material at NARA, call 202-741-6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

(g) *Durability testing.* The CPDM shall be designed and constructed to remain safe and measure respirable coal mine

dust concentrations accurately, as specified under § 74.8 of this part, after undergoing the following durability tests, which NIOSH will apply to test units prior to their use in further testing under § 74.8 of this subpart:

Vibration	Mil-Std-810F, 514.5	US Highway vibration, restrained figure 514.5C-1	1 Hours/axis, 3 axis; total duration = 3 hrs, equivalent to 1,000 miles
Drop	3-foot drop onto bare concrete surface	In standard in-use configuration	1 drop per axis (3 total).

Persons must proceed in accordance with Mil-Std-810F, 514.5. The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Persons may obtain a copy from the U.S. Department of Defense at the address provided below. ASC/ENOI, Bldg. 560, 2530 Loop Road West, Wright-Patterson AFB OH 45433-7101, <http://www.dtc.army.mil/navigator/>.

Persons may inspect a copy at MSHA, Office of Standards, Regulations, and Variances, 1100 Wilson Boulevard, Room 2350, Arlington, Virginia 22209-3939 or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

(h) *Reporting of monitoring results.*

(1) The CPDM shall report continuous monitoring results legibly and/or audibly during use. A digital display, if used, shall be illuminated and shall provide a minimum character height of 6 millimeters. Other forms of display (e.g., analogue) must provide comparable visibility. Auditory reporting, if used, shall be clear, have adjustable volume, and provide means for the user to obtain data reports repetitively. The CPDM shall also report end-of-shift results using computer software compatible with current, commonly used personal computer technology.

(2) The CPDM shall report results as cumulative mass concentration in units of mass per volume of air (mg/m³).

(i) *Power requirements.*

The power source of the CPDM shall have sufficient capacity to enable continuous sampling for 12 hours in a coal mine dust atmosphere of 4.0 mg/m³. If the CPDM uses a rechargeable battery, the battery charger shall be operated from a 110 (VAC) (nominal), 60 Hz power line.

(j) *Flow stability and calibration of pump.* If a pump is used, the flow shall not vary more than ±5 percent from the calibrated flow for 95 percent of samples taken of any continuous duration for up to 12 hours. The flow calibration maintenance interval to assure such performance shall be specified in the calibration instructions for the device.

(k) *Battery check.* If the CPDM uses a rechargeable battery, the CPDM shall have a feature to indicate to the user that the unit is adequately charged to provide accurate measurements for an entire shift of 12 hours under normal conditions of use.

(l) *Integration with other personal mining equipment.*

(1) If the CPDM is integrated or shares functions with any other devices used in mines, such as cap lights or power sources, then the applicant shall obtain approvals for such other devices, as might be required under federal regulations, prior to receiving final certification of the CPDM under this part.

(2) A CPDM that is integrated with another device shall be tested, pursuant to all the requirements under this part, with the other device coupled to the CPDM and operating.

(m) *Tampering safeguards or indicators.* The CPDM shall include a safeguard or indicator which either prevents intentional or inadvertent altering of the measuring or reporting functions or provides an indication that the measuring or reporting functions have been altered.

(n) *Maintenance features.* The CPDM shall be designed to assure that the device can be cleaned and maintained to perform accurately and reliably for the duration of its service life.

§ 74.8 Measurement, accuracy, and reliability requirements.

(a) *Breathing zone measurement requirement.* The CPDM shall be capable of measuring respirable dust within the personal breathing zone of

the miner whose exposure is being monitored.

(b) *Accuracy.* The ability of a CPDM to determine the true concentration of respirable coal mine dust at the end of a shift shall be established through testing that demonstrates the following:

(1) For full-shift measurements of 8 hours or more, a 95 percent confidence that the recorded measurements are within ±25 percent of the true respirable dust concentration, as determined by CMDPSU reference measurements, over a concentration range of 10% to 2 times the PEL; and

(2) For intra-shift measurements of less than 8 hours, a 95 percent confidence that the recorded measurements are within ± 25 percent of the true respirable dust concentration, as determined by CMDPSU reference measurements, over the concentration range equating to 10% to 2 times the PEL for an 8-hour period.¹

(c) *Reliability of measurements.* The CPDM shall meet the accuracy requirements under paragraph (b) of this section, regardless of the variation in density, composition, or size distribution of respirable coal mine dust particles, or the presence of spray mist.

(d) *Precision.* The precision of the CPDM shall be established through testing to determine the variability of multiple measurements of the same dust concentration, as defined by the relative standard deviation of the distribution of measurements. The relative standard

¹ The equivalent dust concentration range to the 8-hour range of 10% to 2 times the PEL (currently 0.2 – 4 mg/m³) is calculated by multiplying this 8-hour range by the dividend of eight hours divided by the duration of the intrashift measurement specified in units of hours. For example, for a measurement taken at exactly one hour into the shift, the 8-hour equivalent dust concentration range would be a one-hour average concentration range of: 8 hours/1 hour × (0.2 – 4 mg/m³) = 1.6 – 32 mg/m³; for a two-hour measurement, the applicable concentration range would be calculated as: 8 hours/2 hours × (0.2 – 4 mg/m³) = 0.8 – 16 mg/m³; for a 4-hours measurement, the equivalent range would be: 0.4 – 8 mg/m³; * * * etc. A CPDM must perform accurately, as specified, for intrashift measurements within such equivalent concentration ranges.

deviation shall be less than 0.1275 without bias for both full-shift measurements of 8 hours or more, and for intra-shift measurements of less than 8 hours within the dust concentration range equating to 10% to 2 times the PEL for an 8-hour period, as specified under paragraph (b)(2) of this section.

(e) *Bias*. The bias of the CPDM measurements shall be limited such that the uncorrectable discrepancy between the mean of the distribution of measurements and the true dust concentration being measured during testing shall be no greater than 10 percent. Bias must be constant over the range of dust concentration levels tested, between 10% and 2 times the PEL for an 8-hour sampling period.

(f) *Testing conditions*. Laboratory and mine testing of the CPDM for accuracy, precision, bias, and reliability under diverse environmental conditions (as defined under § 74.7(e) and (g)) shall be determined using the NIOSH testing procedure: "Continuous Personal Dust Monitor Testing Procedures" available at: <http://www.cdc.gov/niosh/mining>. All testing results shall be submitted to NIOSH in writing on the application filed under § 74.13.

§ 74.9 Quality assurance.

(a) *General requirements*. The applicant shall be responsible for the establishment and maintenance of a quality control system that assures that devices produced under the applicant's certificate of approval meet the specifications to which they are certified under this part and are reliable, safe, effective, and otherwise fit for their intended use. To establish and to maintain an approval under this part, the applicant shall:

Submit a copy of the most recent registration under ISO Q9001–2000, or under any updated version of this quality management standard published by ISO:

(i) With the application for approval under § 74.13 of this part; and

(ii) Upon request by NIOSH, subsequent to the approval of a CPDM under this part.

Persons must proceed in accordance with Q9001–2000. The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Persons may obtain a copy from the International Organization for Standardization at the address provided below. International Organization for Standardization, ISO Central Secretariat, 1, ch. de la Voie-Creuse, Case Postale 56, CH–1211 GENEVA 20, Switzerland, <http://www.standardsinfo.net>.

Persons may inspect a copy at MSHA, Office of Standards, Regulations, and Variances, 1100 Wilson Boulevard, Room 2350, Arlington, Virginia 22209–3939 or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

(b) *Quality management audits*. Upon request, applicants or approval holders must allow NIOSH to inspect the quality management procedures and records, and to interview any employees who may be knowledgeable of quality management processes associated with the production of the CPDM. Audits may be conducted either on an occasional or periodic basis or in response to quality-related complaints or concerns.

(c) *Applicant remediation of quality management deficiencies*.

An applicant or approval holder must correct any quality management deficiency identified by an audit within a reasonable time as determined by NIOSH. Failure to correct a deficiency may result in NIOSH disapproving the pending application or, in the case of an approved device, revoking the approval of the device, until such time as NIOSH has determined that the deficiency is remedied.

§ 74.10 Operating and maintenance instructions.

(a) *Contents*. The manufacturer must include operating instructions and a maintenance and service life plan with each new CPDM unit sold. These documents must be clearly written.

(1) Operating and storage instructions must address the following topics and elements:

(i) An explanation of how the CPDM works;

(ii) A schematic diagram of the CPDM;

(iii) Procedures for wearing and use of the CPDM;

(iv) Procedures for calibration of the CPDM;

(v) Procedures for inspecting the operating condition of the CPDM;

(vi) Procedures and conditions for storage, including the identification of any storage conditions that would likely impair the effective functioning of the CPDM; and

(vii) Procedures and conditions of use, including identification of any conditions of use that would likely impair the effective functioning of the CPDM.

(2) The maintenance and service life plan must completely address the following topics:

(i) Any conditions that should govern the removal from service of the CPDM; and

(ii) Any procedures by which a user or others should inspect the CPDM, perform any maintenance and calibration procedures, and determine when the CPDM should be removed from service.

(b) *Submission to NIOSH for approval*. A copy of the instructions and plan under paragraph (a) of this section shall be submitted to NIOSH for approval with the application for approval of the device and resubmitted to NIOSH if substantive changes are made to the approved unit or approved instructions.

§ 74.11 Tests of the continuous personal dust monitor.

(a) *Applicant testing*. The applicant shall conduct tests to determine whether a CPDM that is submitted for approval under these regulations meets the requirements specified in §§ 74.7–74.8 of this part, with the exception of durability testing, which shall be conducted by NIOSH as specified in § 74.7(g) of this part. Applicant testing shall be performed by an independent testing entity approved by NIOSH.

(b) *NIOSH testing assistance*. NIOSH will provide consultation to the applicant to identify and secure necessary testing services for meeting the requirements specified in §§ 74.7–74.8 of this part. Applicants must submit testing protocols to NIOSH prior to the conduct of testing to verify that protocols are adequate to address the requirements.

(c) *Reporting of applicant testing results*. The applicant shall arrange for the protocols and results from testing specified under paragraph (a) of this section to be reported by the independent testing entity directly to NIOSH when submitting the application under § 74.13 of this part.

(d) *Intrinsic safety testing*. The applicant shall submit the CPDM to MSHA for testing and evaluation, pursuant to 30 CFR 18.68, to determine whether the electronic components of the CPDM submitted for approval meet the applicable permissibility provisions.

Subpart D—General Requirements for All Devices

§ 74.12 Conduct of tests; demonstrations.

(a) Prior to the issuance of a certificate of approval, only personnel of MSHA and NIOSH, representatives of the applicant, and such other persons as may be mutually agreed upon may observe the tests conducted. MSHA and NIOSH shall hold as confidential, and

shall not disclose, principles of patentable features, nor shall MSHA or NIOSH disclose any details of the applicant's drawings or specifications or other related material.

(b) After the issuance of a certificate of approval, MSHA or NIOSH will conduct such public demonstrations and tests of the approved device as MSHA or NIOSH deem appropriate, and may reveal the protocols and results of testing considered for the approval of the device. The conduct of any additional investigations, tests, and demonstrations shall be under the sole direction of MSHA and NIOSH and any other persons shall be present only as observers. The Freedom of Information Act governs disclosure of applicant materials requested by the public.

§ 74.13 Applications.

(a) Testing of a CMDPSU will be undertaken by NIOSH, and testing of the pump unit of such a sampler unit will be undertaken by MSHA, only pursuant to a written application in duplicate. Each copy of the application must be accompanied by complete scale drawings, specifications, and a description of materials. Ten complete CMDPSUs must be submitted to NIOSH with the application, and one pump unit must be sent to MSHA.

(b) Testing of a CPDM will be undertaken by the applicant as specified under § 74.11 and by MSHA only pursuant to a written application in duplicate. Each copy of the application must be accompanied by complete scale drawings, specifications, a description of materials, and a copy of the testing protocol and test results which were provided directly to NIOSH by the independent testing entity, as specified under § 74.11. Three complete CPDM units must be sent to NIOSH with the application, and one CPDM unit must be sent to MSHA.

(c) Complete drawings and specifications shall be adequate in number and fully detailed to identify the design of the CMDPSU or pump unit thereof or of the CPDM and to disclose the dimensions and materials of all component parts.

§ 74.14 Certificate of approval.

(a) Upon completion of the testing of a CMDPSU or the pump unit thereof, or after review of testing protocols and testing results for the CPDM, NIOSH or MSHA, as appropriate, shall issue to the applicant either a certificate of approval or a written notice of disapproval, as the case may require. NIOSH shall not issue a certificate of approval unless MSHA has first issued a certificate of approval for either the pump unit of a CMDPSU

or for the CPDM. No informal notification of approval will be issued. If a certificate of approval is issued, no test data or detailed results of tests will accompany such approval. If a notice of disapproval is issued, it will be accompanied by details of the defects, resulting in disapproval, with a view to possible correction.

(b) A certificate of approval will be accompanied by a list of the drawings and specifications covering the details of design and construction of the CMDPSU and the pump unit thereof, or of the CPDM, as appropriate, upon which the certificate of approval is based. The applicant shall keep exact duplicates of the drawings and specifications submitted to NIOSH and to MSHA relating to the CMDPSU, the pump unit thereof, or the CPDM, which has received a certificate of approval. The approved drawings and specifications shall be adhered to exactly in the production of the certified CMDPSU, including the pump unit thereof, or of the CPDM, for commercial purposes. In addition, the applicant shall observe such procedures for, and keep such records of, the control of component parts as either MSHA or NIOSH may in writing require as a condition of certification.

§ 74.15 Approval labels.

(a) Certificates of approval will be accompanied by photographs of designs for the approval labels to be affixed to each CMDPSU or CPDM, as appropriate.

(b) The labels showing approval by NIOSH and by MSHA shall contain such information as MSHA or NIOSH may require and shall be reproduced legibly on the outside of a CMDPSU or CPDM, as appropriate, as directed by NIOSH or MSHA.

(c) The applicant shall submit full-scale designs or reproductions of approval labels and a sketch or description of the position of the labels on each unit.

(d) Use of the approval labels obligates the applicant to whom the certificates of approval were issued to maintain the quality of the complete CMDPSU or CPDM, as appropriate, and to guarantee that the complete CMDPSU or CPDM, as appropriate, is manufactured or assembled according to the drawings and specifications upon which the certificates of approval were based. Use of the approval labels is authorized only on CMDPSUs or CPDMs, as appropriate, that conform strictly to the drawings and specifications upon which the certificates of approval were based.

§ 74.16 Material required for record.

(a) As part of the permanent record of the investigation, NIOSH will retain a complete CMDPSU or CPDM, as appropriate, and MSHA will retain a CMDPSU or CPDM, as appropriate, that has been tested and certified. Material not required for record purposes will be returned to the applicant at the applicant's request and expense upon receipt of written shipping instructions by MSHA or NIOSH.

(b) As soon as a CMDPSU or CPDM, as appropriate, is commercially available, the applicant shall deliver a complete unit free of charge to NIOSH at the address specified on the NIOSH Web page: <http://www.cdc.gov/niosh/mining>.

§ 74.17 Changes after certification.

(a) If the applicant desires to change any feature of a certified CMDPSU or a certified CPDM, the applicant shall first obtain the approval of NIOSH pursuant to the following procedures:

(1) Application shall be made as for an original certificate of approval, requesting that the existing certification be extended to encompass the proposed change. The application shall be accompanied by drawings, specifications, and related material, as in the case of an original application.

(2) The application and accompanying material will be examined by NIOSH to determine whether testing of the modified CMDPSU or CPDM or components will be required. Testing will be necessary if there is a possibility that the modification may adversely affect the performance of the CMDPSU or CPDM. NIOSH will inform the applicant whether such testing is required.

(3) If the proposed modification meets the pertinent requirements of these regulations, a formal extension of certification will be issued, accompanied by a list of new and revised drawings and specifications to be added to those already on file as the basis for the extension of certification.

(b) If a change is proposed in a pump unit of a certified CMDPSU or in electrical components of a CPDM, the approval of MSHA with respect to intrinsic safety shall be obtained in accordance with the procedures set forth in § 74.11(d).

§ 74.18 Withdrawal of certification.

Any certificate of approval issued under the regulations in this part may be revoked for cause by NIOSH or MSHA which issued the certificate.

[FR Doc. E9-534 Filed 1-15-09; 8:45 am]

BILLING CODE 4510-43-P

DEPARTMENT OF DEFENSE**Office of the Secretary**

[DoD-2008-OS-0009; RIN 0790-AH77]

32 CFR Part 260**Vending Facility Program for the Blind on DoD-Controlled Federal Property****AGENCY:** Department of Defense.**ACTION:** Proposed rule.

SUMMARY: This proposed rule would reinstate Department of Defense regulations related to the vending facility program for the blind on DoD-controlled Federal property. This rule will not apply to military dining facilities that are subject to and defined in section 856 of the John Warner National Defense Authorization Act for Fiscal Year 2007.

DATES: Comments must be received by March 17, 2009.

ADDRESSES: You may submit comments, identified by docket number and/or RIN number and title, by any of the following methods:

- *Federal Rulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

- *Mail:* Federal Docket Management System Office, 1160 Defense Pentagon, Washington, DC 20301-1160.

Instructions: All submissions received must include the agency name and docket number or Regulatory Information Number (RIN) for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: Priscilla Pazzano, 703-602-4601.

SUPPLEMENTARY INFORMATION: This proposed rule would reinstate 32 CFR Part 260 which was removed from the Code of Federal Regulations in 2004 and excerpts from applicability military dining facilities that are subject to and defined in section 856 of the John Warner National Defense Authorization Act for Fiscal Year 2007 (Pub. L. 109-364).

Executive Order 12866, "Regulatory Planning and Review"

It has been certified that proposed 32 CFR part 260 does not:

(1) Have an annual effect on the economy of \$100 million or more or adversely affect in a material way the

economy; a section of the economy; productivity; competition; jobs; the environment; public health or safety; or State, local, or tribal governments or communities;

(2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another Agency;

(3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or

(4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in this Executive Order.

Section 202, Public Law 104-4, "Unfunded Mandates Reform Act"

It has been certified that proposed 32 CFR part 260 does not contain a Federal mandate that may result in the expenditure by State, local and tribal governments, in aggregate, or by the private sector, of \$100 million or more in any 1 year.

Public Law 96-354, "Regulatory Flexibility Act" (5 U.S.C. 601)

It has been certified that proposed 32 CFR part 260 is not subject to the Regulatory Flexibility Act (5 U.S.C. 601) because it would not, if promulgated, have a significant economic impact on a substantial number of small entities. This proposed rule is consistent with the Randolph-Sheppard Act (20 U.S.C. 107), the implementing regulations of the U.S. Department of Education (34 CFR part 395), and Section 856 of the John Warner National Defense Authorization Act for Fiscal Year 2007.

Public Law 96-511, "Paperwork Reduction Act" (44 U.S.C. Chapter 35)

It has been certified that proposed 32 CFR part 260 does not impose reporting or recordkeeping requirements under the Paperwork Reduction Act of 1995.

Executive Order 13132, "Federalism"

It has been certified that proposed 32 CFR part 260 does not have federalism implications, as set forth in Executive Order 13132. This rule does not have substantial direct effects on:

(1) The States;

(2) The relationship between the National Government and the States; or

(3) The distribution of power and responsibilities among the various levels of Government.

List of Subjects in 32 CFR Part 260

Persons with disabilities, Blind, Vending.

Accordingly, 32 CFR part 260 would be added to read as follows:

PART 260—VENDING FACILITY PROGRAM FOR THE BLIND ON DOD-CONTROLLED FEDERAL PROPERTY

Sec.

- 260.1 Purpose.
260.2 Applicability.
260.3 Definitions.
260.4 Policy.
260.5 Responsibilities.
260.6 Procedures.
260.7 Information requirements.

Authority: 20 U.S.C. 107.

§ 260.1 Purpose.

This part:

(a) Assigns responsibilities in compliance with 20 U.S.C. 107 *et seq.* and 34 CFR part 395 and establishes the following policies within the Department of Defense:

(1) Uniform policies for application of priority accorded the blind to operate vending facilities;

(2) Requirements for satisfactory vending facility sites on DoD-controlled property; and

(3) Vending machine income-sharing requirements on DoD-controlled property

(b) Prescribes requirements and operating procedures for the vending facility program for the blind on DoD-controlled property.

(c) Does not apply to full food services, mess attendant services, or services supporting the operation of a military dining facility.

§ 260.2 Applicability.

This part applies to:

(a) Office of the Secretary of Defense, the Military Departments, the Office of the Chairman of the Joint Chiefs of Staff and the Joint Staff, the Combatant Commands, the Office of the Inspector General of the Department of Defense, the Defense Agencies, the Department of Defense Field Activities, and all other organizational entities in the Department of Defense (hereafter referred to collectively as the "DoD Components").

(b) Vending facility sites on DoD-controlled property.

§ 260.3 Definitions.

Blind licensee. A blind person licensed by the State licensing agency to operate a vending facility on DoD-controlled property.

Cafeteria. A food dispensing facility capable of providing a broad variety of prepared foods and beverages (including hot meals) primarily through the use of a line where the customer serves himself or herself from displayed selections. A cafeteria may be fully automatic, or some limited waiter or waitress service may be available and

provided within a cafeteria and table or booth seating facilities are always provided. The DoD Component food dispensing facilities that conduct cafeteria-type operations during part of their normal operating day and full table-service operations during the remainder of their normal operating day are not "cafeterias" if they engage primarily in full table service operations.

Direct competition. The presence and operation of a DoD Component vending machine or a vending facility on the same DoD-controlled property as a vending facility operated by a blind vendor. Vending machines or vending facilities operated in areas serving employees, the majority of whom normally do not have access (in terms of uninterrupted ease of approach and the amount of time required to patronize the vending facility) to the vending facility operated by a blind vendor, shall not be considered to be in direct competition with the vending facility operated by a blind vendor.

DoD-controlled property. Federal property that is owned, leased, or occupied by DoD.

Federal employees. Civilian-appropriated fund and nonappropriated fund employees of the United States.

Federal property. Any building, land, or other real property owned, leased, or occupied by DoD in the United States.

Individual location, installation, or facility. A single building or a self-contained group of buildings. A self-contained group of buildings refers to two or more buildings that must be located in close proximity to each other and between which a majority of the Federal employees working in such buildings regularly move from one building to another in the normal course of their official business during a normal working day.

License. A written instrument issued by a State licensing agency to a blind person, authorizing that person to operate a vending facility on DoD-controlled property.

Military dining facility. A facility owned, operated, or leased and wholly controlled by DoD and used to provide dining services to members of the Armed Forces, including a cafeteria, military mess hall, military troop dining facility, or any similar dining facility operated for the purpose of providing meals to members of the Armed Forces.

Normal working hours. An 8-hour work period between the approximate hours of 0800 and 1800, Monday through Friday.

On-site official. The individual in command of an installation or separate facility or location. For the Pentagon

Reservation only, the Washington Headquarters Services (WHS) Director of the Defense Facilities Directorate, is designated as the on-site official.

Permit. The official approval given a State licensing agency by a department, agency, or instrumentality responsible for DoD &-controlled property whereby the State licensing agency is authorized to establish a vending facility.

Satisfactory site. An area fully accessible to vending facility patrons and having sufficient electrical, plumbing, heating, and ventilation outlets for the location and operation of a vending facility in compliance with applicable health laws and building requirements. A "satisfactory site" shall have a minimum of 250 square feet available for sale of items and for storage of articles necessary for the operation of a vending facility.

State. A state, the District of Columbia, the Commonwealth of Puerto Rico, a territory, or possession of the United States.

State licensing agency. The State agency designated by the Secretary of Education, to issue licenses to blind persons for the operation of vending facilities on Federal and other property.

Substantial alteration or renovation. A permanent material change in the floor area of a building that would render it appropriate for the location and operation of a vending facility by a blind vendor.

United States. The several States, the District of Columbia, the Commonwealth of Puerto Rico, and the territories and possessions of the United States.

Vending facility. Automatic vending machines, cafeterias, snack bars, cart service, shelters, counters, and such other appropriate auxiliary equipment that may be operated by blind licensees and that are necessary for the sale of newspapers, periodicals, confections, tobacco products, foods, beverages, and other articles and services to be dispensed automatically or manually and that are prepared on or off the premises according to applicable health laws. Also includes facilities providing the vending or exchange of chances for any lottery authorized by State law and conducted by an agency of a State within such State.

Vending machine. For the purposes of assigning vending machine income, a coin or currency operated machine that dispenses articles or services except that those machines operated by the United States Postal Service for the sale of postage stamps or other postal products and services, machines providing services of a recreational nature, and

telephones shall not be considered to be vending machines.

Vending machine income.

(1) DoD Component receipts from the DoD Component vending machine operations on DoD-controlled property, where the machines are operated by any DoD Component activity, less costs incurred; or

(2) Commissions received by any DoD Component activity from a commercial vending firm that provides vending machines on DoD-controlled property.

(3) "Costs incurred" include costs of goods, including reasonable service and maintenance costs in accordance with customary business practices of commercial vending concerns, repair, cleaning, depreciation, supervisory and administrative personnel, normal accounting, and accounting for income-sharing.

Vendor. A blind licensee who is operating a vending facility on DoD-controlled property.

§ 260.4 Policy.

It is DoD policy that a DoD Component having accountability for real property shall extend priority on such property to the blind when implementing the Randolph-Sheppard Act, as set out in the following paragraphs:

(a) The blind shall be given priority in the establishment and operation of vending facilities.

(b) The blind shall be given priority in the award of contracts to operate cafeterias pursuant to Section 856 of the John Warner National Defense Authorization Act for Fiscal Year 2007 (Pub. L. 109-364).

(c) In conjunction with acquisition or substantial alteration or renovation of a building, satisfactory sites shall be provided for operation of blind vending facilities.

(d) Specified income from vending machines operated on DoD controlled property by a DoD Component either directly or by contract shall be given to State licensing agencies.

§ 260.5 Responsibilities.

(a) The Principal Deputy Under Secretary of Defense for Personnel and Readiness (PDUSD (P&R)), under the Under Secretary of Defense for Personnel and Readiness, shall establish policies and procedures and monitor the Vending Facility Program

(b) The Head of the DoD Components, in monitoring their respective programs, shall:

(1) Approve or disapprove State licensing agency applications for permits and the provision of satisfactory sites;

(2) Issue policies and procedures to designate and establish responsibilities of the on-site official;

(3) Suspend or terminate a permit to operate a vending facility after consulting with the PDUUSD(P&R) where circumstances warrant.

(4) Ensure appropriate real property outgrants are accomplished in accordance with DoDI 4165.70¹ and consistent with the Randolph-Sheppard Act (20 U.S.C. 107) and the implementing regulations (34 CFR part 395).

(5) The On-Site Official shall be the point of contact with State licensing agencies and shall:

(i) Consult with State licensing agencies on articles and services to be provided;

(ii) Establish appropriate limitations on the location or operation of a vending facility upon finding that the granting of a priority under the Act would adversely affect the interests of the United States. The On-Site Official shall justify this limitation in writing through the Head of the DoD Component and the PDUUSD(P&R) to the Secretary of Education for determination of whether the limitation is warranted.

(iii) Notify State licensing agencies of acquisition or substantial alteration or renovation of property;

(iv) Negotiate with State licensing agencies on other matters and adhere to guidance provided in § 260.6 of this part.

§ 260.6 Procedures.

The DoD Components in control of the maintenance, operation, and protection of Federal property shall take necessary action to ensure the requirements set forth in this Section are implemented for these properties.

(a) The blind have a priority to operate vending facilities on DoD property, whenever feasible, in light of appropriate space and potential patronage. Implementation of this priority is not required when:

(1) The number of people using the property is or will be insufficient to support a vending facility; or

(2) The Secretary of Education determines that the limitation on the placement or operation of a vending facility is warranted pursuant to 260.5(b)(5)(ii), which is binding on the DoD Component. Notice of the Secretary of Education's determination will be published in the **Federal Register**.

(b) Applications for permits by the State licensing agency to operate

vending facilities (except cafeterias) on DoD-controlled property must be submitted in writing to the Head of the DoD Component through the on-site official. When an application is not approved, the Head of the DoD Component shall advise the State licensing agency in writing and shall indicate the reasons for the disapproval. Permits shall describe the location of the vending facility and shall be subject to the following requirements:

(1) The permit shall be issued in the name of the State licensing agency.

(2) The permit shall be issued for an indefinite period of time subject to suspension or termination upon failure to comply with agreed-upon terms. It shall be subject to termination by either party on 60 days written notice to the other party, in cases of:

(i) Inactivation of the installation or activity.

(ii) Loss of use of a building or other facility housing the vending facility.

(iii) Change in the DoD Component's requirements for service.

(iv) Inability of the State licensing agency to continue to operate the vending facility.

(3) The permit shall provide:

(i) No charge shall be made by the DoD Component to the State licensing agency for normal repair and maintenance of the building, cleaning areas adjacent to the designated vending facility boundaries, or trash removal from a designated collection point (not to include any hazardous waste).

(ii) The State licensing agency shall be responsible for cleaning and maintaining the vending facility appearance and its security within the designated boundaries of such facility and for all costs of every kind in conjunction with vending facility equipment, merchandise, and other products to be sold, except as provided in paragraph (b)(3)(v) of this section. Neither party shall be responsible for loss or damage to the other's property, unless caused by its acts or omissions. The State licensing agency shall also be responsible for the acts or omissions of the blind vendor, the vendor's employees, or agents.

(iii) Articles sold at such vending facilities may consist of newspapers, periodicals, publications, confections, tobacco products, foods, beverages, chances for any lottery authorized by State law and conducted by an agency of a State within such State, and other articles or services traditionally found in blind-operated vending facilities operated under 20 U.S.C. 107 *et seq.*, as determined by the State licensing agency, in consultation with the on-site official, to be suitable for a particular

location. Articles and services may be automatically or manually dispensed.

(iv) Vending facilities shall be operated in compliance with applicable Federal, state, interstate and local laws and regulations, including those concerning health and sanitation, the environment, and building codes.

(v) Installation, modification, relocation, removal, and renovation of vending facilities shall be subject to the prior approval of the on-site official and the State licensing agency. The initiating party shall pay the costs of installation, modification, removal, relocation, or renovation. In any case of suspension or termination of a permit to operate a vending facility on the basis of noncompliance by either party, the costs of removal from the building shall be borne by the non-complying party.

(4) The permit shall also contain appropriate provisions for reimbursement or direct payment for support services such as utilities and telephone service.

(5) In the event the blind licensee fails to provide satisfactory service or otherwise fails to comply with the requirements of the permit issued to the State licensing agency, the on-site official shall, after coordinating with the Head of the DoD Component, notify the State licensing agency of this deficiency in writing and request corrective action within a specified reasonable time. The notice shall indicate that failure to correct the deficiency shall result in temporary suspension or termination of the permit, as appropriate. Suspension or termination action shall be taken by the Head of the DoD Component after consultation with the PDUUSD(P&R).

(c) Any DoD Component-acquired (purchased, rented, leased, or constructed), substantially altered, or renovated building is required to have one or more satisfactory sites for a blind-operated vending facility, except as provided in paragraph (d)(1) of this section.

(1) A determination that a building contains a satisfactory site or sites is presumed if the State licensing agency and the on-site official consult and agree that the site or sites provided are satisfactory.

(i) The Heads of the DoD Components shall notify the appropriate State licensing agency² by certified or registered mail, return receipt requested, of buildings to be acquired or substantially altered or renovated. This notification shall be provided at least 60 days in advance of the intended

¹ Available from <http://www.dtic.mil/whs/directives/corres/html/416570.htm>.

² See the U.S. Department of Education Web site, Office of Special Education and Rehabilitative Services at <http://www.ed.gov>.

acquisition date or the initiation of actual construction, alteration, or renovation.

As a practical matter, the State licensing agency should be contacted early in the planning or design stage of a project. This notification shall:

(A) State that a satisfactory site(s) for the location and operation of a blind vending facility is (are) included in the plans for the building.

(B) Include a copy of a single line drawing indicating the proposed location of such site(s).

(C) Advise the State licensing agency that, subject to the approval of the DoD Component, it shall be offered the opportunity to select the location and type of vending facility to be operated by a blind vendor prior to completion of the final space layout of the building.

(ii) Advise that the State licensing agency must respond within 30 days to the DoD Component, acknowledging receipt of the correspondence from the DoD Component and indicating whether it is interested in establishing a vending facility and, if interested, signifying its agreement or alternate selection of a location and its selection of type of vending facility. A copy of the written notice to the State licensing agency and the State licensing agency's response, if any, shall be provided to the Secretary of Education.

(iii) If the State licensing agency's response to the DoD Component indicates it does not desire to establish and operate a vending facility and sets forth any specific basis other than the insufficiency of patrons to support a vending facility, or if the State licensing agency does not respond within 30 days, then a site meeting the anticipated needs of the DoD Component shall be incorporated. Each such site shall have a minimum of 250 square feet for sale of items and for storage of articles necessary for the operation of a vending facility.

(iv) If the State licensing agency indicates that the number of persons using the property is or will be insufficient to support a vending facility, then a satisfactory site to be operated under the auspices of the State licensing agency shall not be incorporated. The On-Site Official shall, through the Head of the DoD component, notify the Secretary of Education of the State licensing agency's response.

(2) The requirement to provide a satisfactory site shall not apply:

(i) When fewer than 100 Federal employees (as defined in § 260.3 of this part) are located in the building during normal working hours; or

(ii) When the building contains less than 15,000 square feet to be used for Federal Government purposes, and the Federal Government space is used to provide services to the general public.

(iii) The provisions of paragraphs (d)(iv)(2)(i) and (d)(iv)(2)(ii) of this section do not preclude arrangements under which blind vending facilities may be established in buildings of a size or with an employee population less than that specified. For example, if a building is to be constructed that will contain only 30 Federal employees, upon agreement of the on-site official and the State licensing agency, the DoD Component may decide to provide a satisfactory site for a blind vending facility.

(3) When a DoD Component is leasing all or part of a privately owned building in which the lessor or any of its tenants have an existing restaurant or other food facility in a part of the building not covered by the lease, and operation of a vending facility would be in substantial direct competition with such restaurant or other food operation, the requirement to provide a satisfactory site does not apply.

(e) Vending machine income generated by the Department of Defense shall be shared with State licensing agencies as prescribed in paragraph (e)(1) of this section. The on-site official is responsible for collecting and accounting for such vending machine income (as defined in § 260.3 of this part) and for ensuring compliance with the requirements of this paragraph.

(1) The vending machine income-sharing requirements are as follows:

(i) One hundred percent of the vending machine income from vending machines in direct competition with blind-operated vending facilities shall be provided to the State licensing agency.

(ii) Fifty percent of the vending machine income from vending machines not in direct competition with blind-operated vending facilities shall be provided to the State licensing agency.

(iii) Notwithstanding paragraph (e)(1)(ii) of this section, thirty percent of the vending machine income from vending machines not in direct competition with blind-operated vending facilities and located where at least fifty percent of the total hours worked on the premises occurs during other than normal working hours (as defined in § 260.3 of this part) shall be provided to the State licensing agency.

(2) The determination of whether a vending machine is in direct competition with the blind-operated vending facility is the responsibility of

the on-site official subject to the concurrence of the State licensing agency.

(3) These vending machine income-sharing requirements do not apply to:

(i) Income from vending machines operated by or for the military exchanges or ships' store systems; or

(ii) Income from vending machines, not in direct competition with a blind-operated vending facility, at any individual location, installation, or facility where the total of the vending machine income from all such machines at such location, installation, or facility does not exceed \$3,000 annually.

(4) The payment to State licensing agencies under these income-sharing requirements must be made quarterly on a fiscal year basis.

(f) Pursuant to 34 CFR 395.37, whenever any State licensing agency for the blind determines that any DoD activity is failing to comply with the provisions of 20 U.S.C. 107 *et seq.* and all informal attempts to resolve the issues have been unsuccessful, the State licensing agency may file a complaint with the Secretary of Education.

§ 260.7 Information requirements.

Within 90 days after the end of each fiscal year, the DoD Components shall forward to the PDUSD (P&R) the total number of applications for vending facility locations received from State licensing agencies, the number accepted, the number denied, the number still pending, the total amount of vending machine income collected (as defined in § 260.3 of this part, excluding income exempt from the income sharing requirements by § 260.6(e)(3) of this part), and the amount of such vending machine income disbursed to State licensing agencies in each State. These reporting requirements have been assigned Report Control Symbol DD-P&R(A)2210, according to DoD 8910.1-M.³

Dated: January 8, 2009.

Patricia L. Toppings,

*OSD Federal Register, Liaison Officer,
Department of Defense.*

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 50 and 51

[EPA-HQ-OAR-2007-0956, FRL-8762-5]

RIN 2060-AO96

Proposed Rule To Implement the 1997 8-Hour Ozone National Ambient Air Quality Standard: Revision on Subpart 1 Area Reclassification and Anti-Backsliding Provisions Under Former 1-Hour Ozone Standard; Proposed Deletion of Obsolete 1-Hour Ozone Standard Provision

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The EPA proposes to revise the rule for implementing the 1997 8-hour ozone national ambient air quality standard (NAAQS) for several of the limited portions of the rule vacated by the U.S. Circuit Court of Appeals for the District of Columbia. The proposal addresses the classification system for the subset of initial 8-hour ozone nonattainment areas that the implementation rule originally covered under Clean Air Act (CAA or Act) title I, part D, subpart 1. The proposal also addresses how 1-hour ozone contingency measures that apply for failure to attain or make reasonable progress toward attainment of the 1-hour standard should apply under the anti-backsliding provisions of the implementation rule. In addition, the proposal removes language relating to the vacated provisions of the rule that provided exemptions from the requirements of nonattainment new source review (NSR) and CAA section 185 penalty fees under the 1-hour standard. The EPA plans to issue a separate proposed rule providing additional guidance as to how these two requirements (185 fees and NSR) now apply.

In addition, this proposal includes the deletion of an obsolete provision in the 1-hour ozone standard itself.

DATES: *Comments.* Comments must be received on or before February 17, 2009.

Public Hearing. If anyone contacts us requesting a public hearing by January 26, 2009, we will hold a public hearing approximately 30 days after publication in the **Federal Register**. Additional information about the hearing would be published in a subsequent **Federal Register** notice.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-HQ-OAR-2007-0956, by one of the following methods:

- *www.regulations.gov:* Follow the on-line instructions for submitting comments.

- *E-mail:* a-and-r-docket@epa.gov.

- *Fax:* (202) 566-9744.

- *Mail:* Air and Radiation Docket and Information Center, Attention Docket ID No. EPA-HQ-OAR-2007-0956, Environmental Protection Agency, 1301 Constitution Ave., NW., Washington, DC 20460. *Mail Code:* 2822T. Please include two copies if possible.

- *Hand Delivery:* Air and Radiation Docket and Information Center, Attention Docket ID No. EPA-HQ-OAR-2007-0956, Environmental Protection Agency in the EPA Headquarters Library, Room Number 3334 in the EPA West Building, located at 1301 Constitution Ave., NW., Washington, DC. The EPA/DC Public Reading Room hours of operation will be 8:30 a.m. to 4:30 p.m. Eastern Standard Time (EST), Monday through Friday, Air and Radiation Docket and Information Center.

Instructions: Direct your comments to Docket ID No. EPA-HQ-OAR-2007-0956. The EPA's policy is that all comments received will be included in the public docket without change and may be made available on-line at www.regulations.gov, including any personal information provided, unless the comment includes information claimed to be confidential business information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through www.regulations.gov, or e-mail. The www.regulations.gov Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through www.regulations.gov, your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket, visit the EPA Docket Center homepage at <http://www.epa.gov/epahome/dockets.htm>.

For additional instructions on submitting comments, go to the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: All documents in the docket are listed in www.regulations.gov. Although listed in the index, some information is not publicly available, i.e., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically in www.regulations.gov or in hard copy at the Air and Radiation Docket and Information Center in the EPA Headquarters Library, Room Number 3334 in the EPA West Building, located at 1301 Constitution Ave., NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744.

Public Hearing: If a hearing is held, it will be held at the U.S. Environmental Protection Agency, 109 TW Alexander Drive, Research Triangle Park, North Carolina 27709, Building C.

FOR FURTHER INFORMATION CONTACT: For further general information or information on the issue of reclassification of subpart 1 areas, contact Mr. John Silvasi, Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, (C539-01), Research Triangle Park, NC 27711, phone number (919) 541-5666, fax number (919) 541-0824 or by e-mail at silvasi.john@epa.gov. For information on the 1-hour contingency measures issue discussed in this notice, contact Ms. Denise Gerth, Office of Air Quality Planning and Standards, (C504-03), U.S. EPA, Research Triangle Park, North Carolina 27711, phone number (919) 541-5550 or by e-mail at gerth.denise@epa.gov, fax number (919) 541-0824. To request a public hearing, contact Mrs. Pamela Long, Office of Air Quality Planning and Standards, (C504-03), U.S. EPA, Research Triangle Park, North Carolina 27711, telephone number (919) 541-0641 or by e-mail at long.pam@epa.gov, fax number (919) 541-5509.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does This Action Apply to Me?

Entities potentially affected directly by the subject rule for this action include state, local, and Tribal governments. Entities potentially

affected indirectly by this action include owners and operators of sources of emissions (volatile organic compounds (VOCs) and nitrogen oxides (NO_x)) that contribute to ground-level ozone concentrations.

B. What Should I Consider as I Prepare My Comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through www.regulations.gov or e-mail. Clearly mark the part or all of the information that you claim to be CBI. For CBI information on a disk or CD-ROM that you mail to EPA, mark the outside of the disk or CD-ROM as CBI and then identify electronically within the disk or CD-ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed to be CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for Preparing Your Comments.* When submitting comments, remember to:

- Identify the rulemaking by docket number and other identifying information (subject heading, **Federal Register** date and page number).
- Follow directions—The agency may ask you to respond to specific questions or organize comments by referencing a Code of Federal Regulations (CFR) part or section number.
- Explain why you agree or disagree; suggest alternatives and substitute language for your requested changes.
- Describe any assumptions and provide any technical information and/or data that you used.
- If you estimate potential costs or burdens, explain how you arrived at your estimate in sufficient detail to allow for it to be reproduced.
- Provide specific examples to illustrate your concerns, and suggest alternatives.
- Explain your views as clearly as possible, avoiding the use of profanity or personal threats.
- Make sure to submit your comments by the comment period deadline identified.

C. Where Can I Get a Copy of This Document and Other Related Information?

In addition to being available in the docket, an electronic copy of this notice is also available on the World Wide Web. A copy of this notice will be

posted at <http://www.epa.gov/ttn/naaqs/ozone/o3imp8hr/>.

D. What Information Should I Know About the Public Hearing?

EPA will hold a hearing only if a party notifies EPA by January 26, 2009, expressing its interest in presenting oral testimony on issues addressed in this notice. Any person may request a hearing by calling Mrs. Pamela Long at (919) 541-0641 before 5 p.m. by January 26, 2009. Persons interested in presenting oral testimony should contact Mrs. Pamela Long at (919) 541-0641. Any person who plans to attend the hearing should also contact Mrs. Pamela S. Long at (919) 541-0641 or visit the EPA's Web site at <http://www.epa.gov/ttn/naaqs/ozone/o3imp8hr/> and to learn if a hearing will be held.

If a public hearing is held on this notice, it will be held at the EPA, Building C, 109 T.W. Alexander Drive, Research Triangle Park, NC 27709. Because the hearing will be held at a U.S. Government facility, everyone planning to attend should be prepared to show valid picture identification to the security staff in order to gain access to the meeting room. Please check our Web site at <http://www.epa.gov/ttn/naaqs/ozone/o3imp8hr/> for information and updates concerning the public hearing.

If held, the public hearing will begin at 10 a.m. and end 1 hour after the last registered speaker has spoken. The hearing will be limited to the subject matter of this document. Oral testimony will be limited to 5 minutes. The EPA encourages commenters to provide written versions of their oral testimony either electronically (on computer disk or CD-ROM) or in paper copy. The list of speakers will be posted on EPA's Web site at <http://www.epa.gov/ttn/naaqs/ozone/o3imp8hr/>. Verbatim transcripts and written statements will be included in the rulemaking docket.

A public hearing would provide interested parties the opportunity to present data, views, or arguments concerning issues addressed in this notice. The EPA may ask clarifying questions during the oral presentations, but would not respond to the presentations or comments at that time. Written statements and supporting information submitted during the comment period will be considered with the same weight as any oral comments and supporting information presented at a public hearing.

E. How Is This Document Organized?

The Information Presented in This Document is Organized as Follows

- I. General Information
 - A. Does This Action Apply to Me?
 - B. What Should I Consider as I Prepare My Comments for EPA?
 - C. Where Can I Get a Copy of This Document and Other Related Information?
 - D. What Information Should I Know About the Public Hearing?
 - E. How Is This Document Organized?
- II. What Is the Background for This Proposal?
 - A. Litigation on EPA's 8-Hour Ozone NAAQS Implementation Rule (40 CFR Part 51, Sections 51.900 Through 51.918 (Collectively Subpart X))
 - B. Obsolete Provision in 1-Hour Ozone Standard (40 CFR Part 50)
- III. This Action
 - A. Reclassification of Subpart 1 8-Hour Ozone Nonattainment Areas
 1. Current Rule
 2. Effect of Court Ruling
 3. Proposed Rule
 4. Consequences of Proposed Rule
 - B. Anti-Backsliding Under 1-Hour Ozone Standard—In General (Also Discussing NSR and Section 185 Penalty Fees)
 - C. Contingency Measures
 1. Phase 1 Rule
 2. Effect of Court Ruling
 3. Proposed Rule
 - D. Deletion of Obsolete 1-Hour Ozone Standard Provision
- IV. Statutory and Executive Order Reviews
 - A. Executive Order 12866: Regulatory Planning and Review
 - B. Paperwork Reduction Act
 - C. Regulatory Flexibility Act
 - D. Unfunded Mandates Reform Act
 - E. Executive Order 13132—Federalism
 - F. Executive Order 13175—Consultation and Coordination With Indian Tribal Governments
 - G. Executive Order 13045: Protection of Children From Environmental Health and Safety Risks
 - H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use
 - I. National Technology Transfer Advancement Act
 - J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations
 - K. Determination Under Section 307(d) Appendix A to Preamble. Application of the Proposed Classification Scheme

II. What Is the Background for This Proposal?

A. Litigation on EPA's 8-Hour Ozone NAAQS Implementation Rule (40 CFR Part 51, Sections 51.900 Through 51.918 (Collectively Subpart X))

On April 30, 2004 (69 FR 23951), EPA published Phase 1 of a final rule that addressed the following key elements for implementing the 1997 8-hour ozone NAAQS: Classifications for the 1997 8-hour NAAQS; revocation of the 1-hour NAAQS (i.e., when the 1-hour NAAQS will no longer apply); anti-backsliding principles for 1-hour ozone

requirements to ensure continued progress toward attainment of the 1997 8-hour ozone NAAQS; attainment dates; and the timing of emissions reductions needed for attainment.

Following publication of the April 30, 2004 final Phase 1 Rule, the Administrator received three petitions, pursuant to section 307(b)(7)(B) of the CAA requesting reconsideration of a number of aspects of the final rule.¹ In final rulemaking on one of these petitions, EPA further clarified the implementation rule in two respects: (a) Section 185 penalty fees under the 1-hour standard would no longer be applicable after revocation of the 1-hour standard, and (b) the effective date of designations under the 1997 8-hour standard (i.e., for almost all areas, June 15, 2004) is the date for determining which 1-hour control measures continue to apply in an area once the 1-hour standard is revoked.² Additionally, EPA clarified that the requirement to have 1-hour contingency measures for failure to make progress or failure to attain would no longer apply once the 1-hour standard was revoked. On April 4, 2005 (70 FR 17018), we published a proposed rule to take comment on the issue of whether we should interpret the Act to require areas to retain major NSR requirements that apply to certain 1-hour ozone nonattainment areas in implementing the 1997 8-hour standard. We took final action on the NSR issues on June 30, 2005 (70 FR 39413; July 8, 2005), to interpret the CAA to not require NSR under the 1-hour standard once the 1-hour standard was revoked.

Several parties challenged EPA's Phase 1 Rule and the two reconsideration rules, and on December 22, 2006, the Court upheld certain challenges and rejected others, but purported to vacate the Phase 1 Implementation Rule in its entirety. *South Coast Air Quality Management District, et al., v. EPA*, 472 F.3d 882 (D.C. Cir. 2006) *reh'g denied* 489 F.3d 1245 (clarifying that the vacatur was limited to the issues on which the court granted the petitions for review).

The EPA requested rehearing and clarification of the ruling and on June 8, 2007, the Court clarified that it was

vacating the rule only to the extent that it had upheld petitioners' challenges. Thus, the following provisions of the Phase 1 rule were vacated:

- The provisions that placed 8-hour ozone nonattainment areas under subpart 1, part D, title I of the CAA instead of subpart 2.
- The provisions that waived obligations under the revoked 1-hour standard for NSR, section 185 penalty fees, and contingency measures for failure to attain or to make reasonable progress toward attainment of the 1-hour standard.³

B. Obsolete Provision in 1-Hour Ozone Standard (40 CFR Part 50)

When EPA promulgated the 8-hour ozone standard on July 18, 1997 (62 FR 38856), EPA initially revised 40 CFR 50.9 to revoke the 1-hour ozone standard once EPA determined that an area had air quality meeting the 1-hour standard. Subsequently, because the pending litigation over the 8-hour NAAQS created uncertainty regarding the 8-hour NAAQS and our implementation strategy, we revised 40 CFR 50.9 to place two limitations on our authority to apply the revocation rule: (1) The 8-hour NAAQS must no longer be subject to legal challenge, and (2) it must be fully enforceable.⁴ (65 FR 45182, July 20, 2000). These limitations were codified as § 50.9(c). In the final Phase 1 Rule, we again revised § 50.9, this time to revise § 50.9(b) to provide for revocation of the 1-hour standard one year after designation of areas under the 1997 8-hour ozone standard. However, we neglected to remove paragraph (c) which was no longer necessary as the 8-hour standard was no longer subject to legal challenge and the standard had been upheld and was enforceable. *American Trucking Assoc. v. EPA* 283 F.3d 355 (DC Cir. 2002) (resolving all remaining legal challenges to the 8-hour ozone standard and upholding EPA's rule establishing that standard.)

III. This Action

A. Reclassification of Subpart 1 8-Hour Ozone Nonattainment Areas

1. Current Rule

In the Phase 1 implementation rule, EPA established which planning

requirements of part D of title I of the Act would apply to areas for purposes of implementing the 8-hour ozone standard. 40 CFR 51.902. ("Which classification and nonattainment area planning provisions of the CAA shall apply to areas designated nonattainment for the 8-hour NAAQS?") Paragraph (a) provided that areas with a 1-hour ozone design value equal to or greater than 0.121 parts per million (ppm) at the time of 8-hour NAAQS nonattainment designation (April 2004) would be classified in accordance with CAA title I, part D, section 181 of the CAA as interpreted in 40 CFR 51.903(a) for purposes of the 8-hour NAAQS, and would be subject to the requirements of CAA title I, part D, subpart 2 that apply for the area's classification. 40 CFR 51.903(a) set forth a translation into 8-hour design values of the CAA section 181 classification table, which is written in terms of 1-hour ozone design values. The preamble to the Phase 1 Rule provides the rationale and procedure for that translation. (See 69 FR 23958 *et seq.*) Section 181 in subpart 2 provides for specific classifications of each area by the magnitude of the ozone problem, providing shorter time periods for attainment for lower classifications and longer time periods for higher classifications. Higher classified areas also face additional specified control requirements than lower classified areas. A summary listing of the subpart 2 requirements by classification compared to subpart 1 requirements appeared in the proposed 8-hour ozone implementation rule. (See 68 FR 32864, Appendix A; June 2, 2003.)

Paragraph (b) of § 51.902 provided that 1997 8-hour ozone nonattainment areas with a 1-hour design value less than 0.121 ppm at the time of 8-hour NAAQS nonattainment designation would be covered under section 172(a)(1) of the CAA and would be subject to the requirements of CAA title I, part D, subpart 1 and not those of subpart 2.

The EPA designated areas for the 1997 8-hour standard on April 30, 2004 (69 FR 23858), and in accordance with section 181(a), the areas subject to subpart 2 under the Phase 1 Rule were classified by operation of law at that time. Of the 126 areas designated nonattainment, 84 were classified as under subpart 1, and the remaining 42 as under subpart 2.⁵

¹ Three petitions for reconsideration of the Phase 1 Rule were filed by: (1) Earthjustice on behalf of the American Lung Association, Environmental Defense, Natural Resources Defense Council, Sierra Club, Clean Air Task Force, Conservation Law Foundation, and Southern Alliance for Clean Energy; (2) the National Petrochemical and Refiners Association and the National Association of Manufacturers; and (3) the American Petroleum Institute, American Chemistry Council, American Iron and Steel Institute, National Association of Manufacturers and the U.S. Chamber of Commerce.

² 70 FR 30592 (May 26, 2005).

³ The Court's June clarification confirmed that the December 2006 decision was not intended to establish a requirement that areas continue to demonstrate conformity for the 1-hour ozone standard for anti-backsliding purposes.

⁴ In addition, in June 2003, we stayed our authority to apply the revocation rule pending our reconsideration in this rulemaking of the basis for revocation. (68 FR 38160, June 26, 2003).

⁵ 13 of the 84 subpart 1 areas and one subpart 2 area were designated as "Early Action Compact Areas" with a deferred effective date for their nonattainment designation.

2. Effect of Court Ruling

In its decisions on the Phase 1 rule, the Court vacated the provisions that subjected any 8-hour ozone nonattainment areas to coverage under subpart 1. As the basis for its decision, the Court first agreed that Congress mandated that certain areas be subject to subpart 2, but ruled that our use of 0.121 ppm 1-hour design value as a dividing line was incorrect, holding that the Supreme Court had required use of 0.09 ppm on the 8-hour scale as the level for determining which areas Congress mandated would be subject to subpart 2.⁶ Furthermore, although recognizing that Congress did not mandate that areas with an 8-hour design value be subject to subpart 2, the Court rejected as unreasonable our rationale for placing certain areas in subpart 1 instead of subpart 2. The Court vacated the Phase 1 rule to the extent it placed certain areas solely under the implementation provisions of subpart 1. Thus, a rule revision is necessary to address which provisions of the Act—only subpart 1 or subpart 2⁷—should apply to those areas that were placed solely under subpart 1 in the Phase 1 Rule.

3. Proposed Rule

We are proposing that all areas designated nonattainment for the 1997 8-hour ozone standard will be classified under and subject to the nonattainment planning requirements of subpart 2. We would modify the regulatory text to remove current § 51.902(b) (which was vacated by the Court), which placed certain areas only under subpart 1. We considered the possibility of proposing to place areas with design values below 0.09 ppm 8-hour design value under subpart 1, but are not proposing this option in the interest of not further delaying implementation of the 8-hour ozone NAAQS that was established over

⁶ “* * * the gap identified in Whitman affords EPA discretion only to the extent that an area is nonattaining but its air quality is not as dangerous as the level addressed by the 1990 Amendments, which now translates to 0.09 ppm on the 8 hour scale. Thus, the gap extends only to the extent that the standard was strengthened and not to the extent that the measurement technique merely changed * * * We therefore hold that the 2004 Rule violates the Act insofar as it subjects areas with 8-hour ozone in excess of 0.09 ppm to Subpart 1. We further hold that EPA’s interpretation of the Act in a manner to maximize its own discretion is unreasonable because the clear intent of Congress in enacting the 1990 Amendments was to the contrary.”

⁷ We note that areas subject to subpart 2 are also subject to subpart 1 to the extent subpart 1 specifies requirements that are not superseded by more specific obligations under subpart 2.

10 years ago.⁸ However, we solicit comment on this part of this proposal.

Because these are the initial classifications for these areas for the 1997 ozone standard, the EPA further proposes to use the 8-hour ozone design values (from 2001–2003 air quality data) that were used to designate these areas nonattainment initially as the basis for classification and that the classification table in 40 CFR 51.903 (established by the Phase 1 Rule) be used for the classification. CAA section 181(a) provides that “at the time” areas are designated for a NAAQS, they will be classified “by operation of law” based on the “design value” of the areas and in accordance with table 1 of that section. Thus, this language specifies that the area will be classified based on the design value that existed for the area “at the time” of designation. Areas were designated nonattainment in 2004, based on design values derived from data from 2001–2003. We are soliciting comment on the approach of classifying these areas based on the same data that was used for designation.

Also, since the classification under this proposal would be the initial one under the 1997 8-hour standard for these areas after court vacatur of the method EPA used to treat these areas under subpart 1 only, EPA proposes that the provision of CAA section 181(a)(4) would apply to these areas, which would allow the Administrator in his discretion to adjust the classification—within 90 days after the initial classification—to a higher or lower classification “* * * if the design value were 5 percent greater or 5 percent less than the level on which such classification was based.” The EPA proposes to address requests for such classification adjustments for the newly-classified areas that were originally covered under subpart 1 in a manner similar to the way described for the original round of subpart 2 classifications.⁹ This process is described at 69 FR 23863 *et seq.* (April 30, 2004).

Of the original 84 subpart 1 areas designated in the April 30, 2004 rulemaking, 13 areas successfully completed participation in the Early

⁸ As the court made clear in its decision on rehearing, the CAA does not mandate coverage under subpart 2 of all areas designated nonattainment for an ozone NAAQS. As EPA moves forward to develop an implementation strategy for the new 2007 ozone NAAQS, we will consider whether subpart 1 alone might apply in some areas for purposes of implementing that NAAQS.

⁹ Note, however, that if a State requests a reclassification from moderate to marginal and the attainment date for marginal areas has passed and the area is violating the standard, EPA would not grant the request for the reclassification.

Action Compacts (EAC) program. As a result, these areas received deferred designations and classifications for as long as they continued to meet program requirements. These requirements were designed to ensure early reductions of ozone and progress toward attainment of the 1997 NAAQS. At the completion of the program, these areas were designated attainment for the 8-hour ozone NAAQS effective April 15, 2008.¹⁰

Despite the proposal to implement the 1997 8-hour standard by classifying nonattainment areas under title I, part D, subpart 2 at this time, EPA reserves the right to propose to cover future ozone nonattainment areas under title I, part D, subpart 1, in accordance with the constraints outlined in the Court’s rulings. The EPA may in the future examine the appropriate role for subpart 1 in classifying nonattainment areas and in flexible, efficient, enforceable implementation of an ozone NAAQS.

Note that CAA section 182(h) (“Rural Transport Areas”) would be available for any nonattainment area that qualifies as a rural transport area under that section. A Rural Transport Area would have to only meet requirements of a marginal area.

4. Consequences of Proposed Rule

Areas originally covered under subpart 1 that have already been redesignated to attainment will not be affected by this rule, including the 13 EAC areas noted above.¹¹ Appendix A provides a listing of the former subpart 1 areas that are still designated nonattainment and that would be classified under subpart 2 under this proposed rule and provides the subpart 2 classification for the area based on the air quality data initially used to designate the area in the 2004 designation rule. All of these areas would be classified as either marginal or moderate.¹² The classification table of 40 CFR 51.903 provides an outside attainment date based on a number of years after the effective date of the

¹⁰ One area (Denver, CO) that was originally part of the EAC program did not successfully complete all milestones and was subsequently designated nonattainment under subpart 1. Thus, this area would be treated the same as all areas classified under subpart 1 under the original provisions of the Phase 1 Rule.

¹¹ See, e.g., 73 FR 11558 (col. 2) (March 4, 2008), together with e.g., 73 FR 1166 (col. 3) (January 8, 2008).

¹² Note that Essex Co (the top of Whiteface Mtn), NY, and Door County, WI would be eligible for consideration under CAA section 182(h) as a Rural Transport Area. This is based on the 1999 definition of Metropolitan Statistical Areas; neither of the above two areas is in or adjacent to an MSA as defined by the Office of Management and Budget (OMB) in 1999 (June 30, 1999; 64 FR 35548).

nonattainment designation (3 years for marginal and 6 years for moderate). For all areas other than Denver, the effective date of designation for the 8-hour standard was June 15, 2004. Thus, marginal nonattainment areas would have a maximum statutory attainment date of June 15, 2007 and moderate areas a maximum date of June 15, 2010. Since the marginal area attainment date

has passed, EPA proposes that any area that would be classified under the proposal as marginal, and that did not attain by June 15, 2007, or that does not meet the criteria for an attainment date extension under CAA section 181(a)(5)(B) and 40 CFR 51.907, would be reclassified immediately as moderate under this rule.

Areas classified marginal or moderate would be required to meet the marginal or moderate area requirements of CAA section 182(a) and/or (b). Moderate area requirements include the requirements for the marginal classification. Briefly, these requirements are depicted in Table 1:

TABLE 1

Element	Subpart 2 ^a	
	Classification	Requirement
Attainment Dates For all areas, attainment should occur as expeditiously as practicable, but no later than specified timeframe.	Marginal	3 years from CAA Amendments enactment.
Reasonable Further Progress (RFP)	Moderate	6 years from CAA Amendments enactment.
	Marginal	None.
Attainment demonstration submission	Moderate	15% VOC reduction from baseline within 6 years of enactment.
	Marginal	None.
NSR and Reasonable Achievable Technology (RACT) major source applicability.	Moderate	Due 3 years after CAA Amendments enactment.
	Marginal	100 tons per year (TPY).
NSR offsets	Moderate	100 TPY.
	Marginal	1.1 to 1.
Bump-up to higher classification	Moderate	1.15 to 1.
	All except severe & extreme.	Required to bump up to higher classification if area doesn't meet attainment date.
NO _x control for RACT	Moderate & above; all areas in Ozone Transport Commission.	Requirements under this subpart for major stationary VOC sources (NSR & RACT) also apply to all major NO _x sources, unless EPA approves NO _x waiver.
	All	Comprehensive emissions inventory within 2 years of enactment; update every 3 years (until area attains). Provision for submission to state of annual emissions statements from VOC and NO _x stationary sources.
RACT	Marginal & above	Pre-1990 RACT fix-up.
	Moderate & above	RACT for all Control Techniques Guidelines sources and all other major sources.
Inspection and Maintenance (I/M)	Marginal	Pre-1990 corrections to previously required I&M programs.
	Moderate	Basic I/M.
Consequences of failure to attain	Marginal, moderate	Bump-up for failure to attain.
Contingency measures	All	Required for failure to meet the Rate of Progress milestones or attain.

^a Note that subpart 1 requirements also apply to subpart 2 areas to the extent that the CAA does not provide an exemption (e.g., 182(a) (last paragraph, which exempts marginal areas from the requirement to submit an attainment demonstration)) or such requirements are not superseded by more specific obligations under subpart 2 (e.g., where subpart 2 specifies specific increments of progress for moderate and above areas in place of the more general requirement for "reasonable further progress" under subpart 1). Subpart 1 requirements that are also applicable to subpart 2 areas (but that are not addressed in subpart 2) include reasonably available control measures (RACM) requirement and transportation and general conformity requirements.

With respect to transportation conformity requirements, current transportation plan and transportation improvement program conformity determinations for the 1997 8-hour ozone standard will remain valid, and are not impacted by this action. Areas that would be reclassified under subpart 2 are already satisfying the applicable CAA section 176(c) conformity requirements for the 1997 8-hour ozone standard. In addition, no new conformity deadline would be triggered in the subject areas after their classification under subpart 2. Nonattainment areas that are classified

as marginal or moderate under Subpart 2 would continue to make future conformity determinations according to the applicable requirements of 40 CFR 93.109(d) and (e). EPA notes that any new moderate areas that continue to be required to use the interim emissions tests will be required to meet additional test requirements that do not apply to marginal areas (40 CFR 93.119(b)(1)).

The Phase 1 Rule provided that states must submit the major SIP elements for the subpart 1 areas no later than June 15, 2007. For areas classified as moderate, EPA also provided a submission date of June 15, 2007 for

most requirements, but required states to submit the reasonably available control technology requirement (RACT) SIP by September 15, 2006. The EPA proposes to require states to submit all required SIP elements for the areas' marginal or moderate classification one year after the effective date of a final rule classifying the areas. The EPA believes this is an appropriate and reasonable amount of time given the attainment dates that will apply to these areas and the fact that the areas should have made significant progress toward meeting these requirements based on the obligations that applied before the

subpart 1 classification provision of the Phase 1 rule was vacated. As subpart 1 areas, these areas should have been well along the path to developing SIPs at the time the Court issued its decision in December 2006. We believe states have already had ample opportunity to complete the technical work to support development of these major SIP elements prior to now. Also, EPA has encouraged states to continue planning for clean air in the prior subpart 1 areas.¹³ Therefore, EPA believes one year from the date of final rule should be sufficient time for states to submit these SIPs. However, EPA solicits comment on this aspect of the proposal.

B. Anti-Backsliding Under 1-Hour Ozone Standard—In General (Also Discussing NSR and Section 185 Penalty Fees)

The EPA codified the anti-backsliding provisions governing the transition from the revoked 1-hour ozone NAAQS to the 1997 8-hour ozone NAAQS in 40 CFR 51.905(a). These provisions, as promulgated, retained most of the 1-hour ozone requirements as “applicable requirements” (defined in 40 CFR 51.900(f)). The requirements that are retained are those that applied in an area based on the area’s 1-hour ozone designation and classification as of the effective date of its 8-hour designation (for most areas, June 15, 2004).

Section 51.905(b) provides that a state remains subject to the listed 1-hour standard obligations until the area attains the 8-hour NAAQS.

Furthermore, § 51.905(b) provides that such obligations cannot be removed from a SIP, even if the area is redesignated to attainment for the 8-hour NAAQS, but must remain in the SIP as applicable requirements or as contingency measures, as appropriate.

Section 51.905(e), as promulgated in 2004, indicated that certain 1-hour standard requirements are not part of the list of anti-backsliding requirements. These include 1-hour NSR, section 185 penalty fees, and 1-hour contingency measures for failure to attain or make reasonable progress toward attainment of the 1-hour NAAQS.¹⁴ The Court

vacated these exemption provisions, and accordingly EPA is proposing to delete these exemptions from the rule. Thus, this proposal would remove language relating to the vacated provisions of the rule that provided exemptions from the requirements of nonattainment NSR and CAA section 185 penalty fees under the 1-hour standard in addition to the provision for contingency measures. The EPA plans to issue a separate proposed rule providing further guidance on how the section 185 fee provisions and the 1-hour NSR requirements apply as a result of the Court’s vacatur.¹⁵

In the following section, in response to the Court vacatur, EPA proposes the manner in which the 1-hour NAAQS contingency measure requirement applies as an anti-backsliding requirement.

C. Contingency Measures

1. Phase 1 Rule

The Phase 1 Rule did not address anti-backsliding provisions related to sections 172(c)(9) and 182(c)(9) of the CAA, which require nonattainment area SIPs to contain contingency measures that would be implemented if an area fails to attain or fails to make RFP toward attainment of the 1-hour NAAQS. In the Reconsideration Rule published on May 26, 2005 (70 FR 30592), we determined that these 1-hour contingency measures would no longer be considered required SIP measures once the 1-hour standard was revoked. This meant that after the 1-hour standard was revoked, areas that had not submitted 1-hour attainment

¹⁵ As noted above in a previous footnote, the Court’s June 2007 clarification confirms that the December 2006 decision was not intended to establish a requirement that areas continue to demonstrate conformity under the 1-hour ozone standard for anti-backsliding purposes. Therefore, no revisions are necessary to 40 CFR 51.905(e)(3) of the Phase 1 implementation rule. Section 40 CFR 51.905(e)(3) establishes that conformity determinations for the 1-hour standard are not required beginning 1 year after the effective date of the revocation of the 1-hour standard and any state conformity provisions in an applicable SIP that require 1-hour ozone conformity determinations are no longer federally enforceable. This provision does not require revision in light of the Court’s decision and clarification, because the Court did not require conformity determinations for the 1-hour standard, and existing regulations already implement the Court’s holding that 8-hour ozone nonattainment and maintenance areas must use 1-hour ozone budgets to determine conformity to the 1997 8-hour standard until such time as 8-hour ozone budgets are approved or found adequate for the area. Therefore, current transportation conformity-related regulations set forth in 40 CFR part 93 and 40 CFR 51.905(e)(3), and the general conformity regulations in 40 CFR part 93 are consistent with the Court’s decision and clarification on the Phase 1 8-hour ozone implementation rule and do not require revision.

demonstrations or a specific 1-hour RFP SIP would no longer be required to submit contingency measures in conjunction with those SIPs. Also, the reconsideration rule stated that areas with approved section 172 and 182 contingency measures in the adopted SIP could submit a revision to remove them from their SIP when the 1-hour standard was revoked.

2. Effect of Court Ruling

The Court concluded that EPA improperly waived the CAA requirements for contingency measures that would apply based on the failure of an area to meet a 1-hour RFP milestone or 1-hour attainment date. The Court vacated the provision of the Phase 1 Rule that waived this requirement for areas once the 1-hour standard was revoked. Consequently, areas remain subject to the obligation to have contingency measures for failure to attain the 1-hour NAAQS or make RFP toward attainment of the 1-hour NAAQS and cannot remove section 172 or 182 contingency measures from their SIPs based on revocation of the 1-hour standard.

3. Proposed Rule

The EPA is proposing that states be required to retain contingency measures in their SIPs that would apply based on a failure to meet a 1-hour RFP milestone or upon a failure to attain the 1-hour standard by the area’s attainment date. Consistent with the Court’s vacatur of § 51.905(e)(2)(iii), which waived this requirement once the 1-hour standard was revoked, EPA proposes to remove this provision from the regulations. Furthermore, consistent with EPA’s proposal to retain these 1-hour contingency measure requirements as anti-backsliding measures, we also propose to list contingency measures under sections 172(c)(9) and 182(c)(9) of the CAA as applicable requirements under § 51.900(f).

In situations where an area attains the 1-hour NAAQS by its applicable attainment date, the area is not subject to the requirement to implement contingency measures for failure to attain the standard by its attainment date. As a result, any area that meets or has met its attainment deadline, even if the area subsequently lapses into nonattainment, would not be required to implement the contingency measures for failure to attain the standard by its attainment date for purposes of anti-backsliding.

In situations where a 1-hour ozone nonattainment area is in attainment based on current air quality (e.g., after the area’s attainment date), EPA can

¹³ Memorandum of March 19, 2007 from William L. Wehrum to EPA Regional Administrators, re: “Impacts of the Court Decision on the Phase 1 Ozone Implementation Rule” (response to Question 2) and memorandum of June 15, 2007 from Robert J. Meyers to Regional Administrators re: “Decision of the U.S. Court of Appeals for the District of Columbia Circuit on our Petition for Rehearing of the Phase 1 Rule to Implement the 8-Hour Ozone NAAQS” (Implications for Subpart 1 Areas).

¹⁴ Note that if the area is nonattainment for the 1997 8-hour standard, it is subject to nonattainment NSR, contingency measures and (if severe or extreme) the section 185 penalty fee provision for that 1997 NAAQS.

propose to make a finding of attainment.¹⁶ This finding would be pursuant to the interpretation set forth in the May 10, 1995 memorandum from John S. Seitz, Director, Office of Air Quality Planning and Standards, entitled “Reasonable Further Progress, Attainment Demonstration, and Related Requirements for Ozone Nonattainment Areas Meeting the Ozone Ambient Air Quality Standard” (Clean Data Policy). Under this policy, if EPA determines through rulemaking that the area is meeting the 1-hour ozone standard, the requirements for the state to submit an attainment demonstration and related components such as reasonably available control measures (RACM), RFP demonstration, contingency measures for failure to attain or make reasonable further progress and the section 185 fees program are suspended as long as the area continues to attain the 1-hour ozone NAAQS. If the area subsequently violates the ozone NAAQS, EPA would initiate notice-and-comment rulemaking to withdraw the determination of attainment, which would result in reinstatement of the requirement for the state to submit such plans.

The Tenth, Seventh and Ninth Circuits have upheld EPA rulemakings applying the Clean Data Policy. See *Sierra Club v. EPA*, 99 F. 3d 1551 (10th Cir. 1996); *Sierra Club v. EPA*, 375 F.3d 537 (7th Cir. 2004) and *Our Children’s Earth Foundation v. EPA*, No. 04–73032 (9th Cir. June 28, 2005) memorandum opinion.¹⁷ See also the discussion and rulemakings cited in EPA’s Phase 2, 8-Hour Ozone Implementation Rulemaking, 70 FR 71644–71646 (November 29, 2005), which codified the policy for the 8-hour NAAQS.

Thus if EPA makes a determination of attainment under the Clean Data Policy, EPA would find that the requirement to submit section 172 and 182 contingency measures under the 1-hour anti-backsliding provisions (40 CFR 51.905) would be suspended for so long as the area continues to attain the 1-hour standard.

Under 40 CFR 51.905(b), states remain subject to the obligations under § 51.905(a)(1)(i) and (a)(2) until the area attains the 8-hour NAAQS for purposes of anti-backsliding. After the area attains the 8-hour NAAQS, states may request

that these obligations be shifted to contingency measures, consistent with sections 110(l) and 193 of the CAA; however, the state cannot remove the obligations from the SIP.

D. Deletion of Obsolete 1-Hour Ozone Standard Provision

For the reasons stated above in the background section concerning the obsolete nature of 40 CFR 50.9(c), we are proposing to delete that paragraph. This will have no effect on the status of the 1-hour ozone standard,¹⁸ or on the anti-backsliding provisions which set forth how areas must meet 1-hour requirements that applied to the area at the time the area was designated for the 8-hour standard.

IV. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review

Under Executive Order 12866 (58 FR 51735, October 4, 1993), this action is a significant regulatory action because it raises novel legal or policy issues arising out of legal mandates. Accordingly, EPA submitted this action to the Office of Management and Budget (OMB) for review under EO 12866 and any changes made in response to OMB recommendations have been documented in the docket for this action.

B. Paperwork Reduction Act

This action does not impose any new information collection burden. This action sets forth EPA’s proposed rule for addressing portions of the partial vacatur of EPA’s Phase 1 rule for implementation of the 1997 8-hour ozone NAAQS. However, the Office of Management and Budget (OMB) has previously approved the information collection requirements contained in the existing Phase 1 Rule (April 30, 2004; 69 FR 23951) and the Phase 2 Rule (November 29, 2005; 70 FR 71612) regulations and has been assigned OMB Control Number 2060–0594. The OMB control numbers for EPA’s regulations in 40 CFR are listed in 40 CFR part 9.

C. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) generally requires an Agency to prepare a regulatory flexibility analysis of any regulation subject to notice and

comment rulemaking requirements under the Administrative Procedures Act or any other statute unless the Agency certifies the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small organizations, and small governmental jurisdictions.

For purposes of assessing the impacts of these proposed regulations revisions on small entities, small entity is defined as: (1) A small business that is a small industrial entity as defined in the U.S. Small Business Administration (SBA) size standards. (See 13 CFR 121.); (2) A governmental jurisdiction that is a government of a city, county, town, school district or special district with a population of less than 50,000; and (3) A small organization that is any not-for-profit enterprise which is independently owned and operated and is not dominant in its field.

After considering the economic impact of these proposed revisions to the regulations on small entities, I certify that this action will not have a significant economic impact on a substantial number of small entities. This proposal will not impose any requirements on small entities.

We continue to be interested in the potential impacts of the proposed rule on small entities and welcome comments on issues related to such impacts.

D. Unfunded Mandates Reform Act

This action contains no Federal mandate under the provisions of Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), 2 U.S.C. 1531–1538 for State, local, or tribal governments or the private sector. The action imposes no enforceable duty on any State, local or tribal governments or the private sector. Therefore, this action is not subject to the requirements of section 202 and 205 of the UMRA.

This action is also not subject to the requirements of section 203 of UMRA because it contains no regulatory requirements that might significantly or uniquely affect small governments. The EPA has determined that these proposed regulation revisions contain no regulatory requirements that may significantly or uniquely affect small governments, including tribal governments because these regulations affect Federal agencies only.

E. Executive Order 13132—Federalism

Executive Order 13132, entitled “Federalism” (64 FR 43255, August 10, 1999), requires EPA to develop an accountable process to ensure “meaningful and timely input by state

¹⁶ This applies even if the area did not attain by its attainment date; however, the CAA requires EPA in these cases to make a finding of failure to attain by the attainment date and either reclassify the area or apply other requirements (such as section 185) as specified for the area’s classification.

¹⁷ The Clean Data Policy, as it is embodied in 40 CFR 51.918, is being challenged in the context of the 8-hour ozone standard in the Phase 2 Rule ozone litigation pending in the DC Circuit, *NRDC v. EPA*, No. 06–1045 (DC Cir.).

¹⁸ The 1-hour standard was revoked for most areas on June 15, 2005, the date one-year after the effective date of designation. For the 13 EAC areas designated attainment with an effective date of April 15, 2008, the 1-hour standard will be revoked April 15, 2009, and for the Denver EAC area, which was designated nonattainment effective November 20, 2007, the 1-hour standard will be revoked November 20, 2008.

and local officials in the development of regulatory policies that have Federalism implications." Policies that have "Federalism implications" are defined in the Executive Order to include regulations that have "substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government."

This action does not have Federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132. This proposed rule, if made final, would restore provisions that existed under the 1-hour ozone standard and that would have continued under the 1-hour standard had not EPA issued a revised ozone standard. Those provisions were revoked when EPA revoked the 1-hour standard itself. Although a court upheld EPA's right to revoke the 1-hour standard, the court ruled that EPA erroneously revoked several 1-hour NAAQS provisions and vacated those portion of EPA's rule. Thus, the court's own ruling restored the former 1-hour NAAQS provisions. This proposed rule merely proposes a corrective regulatory mechanism for restoring the 1-hour contingency measure provision that the court had already restored. Thus, Executive Order 13132 does not apply to these proposed regulation revisions.

In the spirit of Executive Order 13121 and consistent with EPA policy to promote communications between EPA and state and local governments, EPA is soliciting comments on this proposal from state and local officials.

F. Executive Order 13175—Consultation and Coordination With Indian Tribal Governments

This action does not have Tribal implications as specified in Executive Order 13175. They do not have a substantial direct effect on one or more Indian Tribes, since no Tribe has to develop a SIP under these proposed regulatory revisions. Furthermore, these proposed regulation revisions do not affect the relationship or distribution of power and responsibilities between the Federal government and Indian Tribes. The CAA and the Tribal Air Rule establish the relationship of the Federal

government and Tribes in developing plans to attain the NAAQS, and these revisions to the regulations do nothing to modify that relationship. Thus, Executive Order 13175 does not apply.

EPA specifically solicits additional comment on the proposed revisions to the regulations from Tribal officials.

G. Executive Order 13045: Protection of Children From Environmental Health and Safety Risks

EPA interprets EO 13045 (62 FR 19885, April 23, 1997) as applying only to those regulatory actions that concern health or safety risks, such that the analysis required under section 5–501 of the EO has the potential to influence the regulation. This action is not subject to EO 13045 because these proposed rule revisions address whether a SIP will adequately attain and maintain the NAAQS and meet the obligations of the CAA. The NAAQS are promulgated to protect the health and welfare of sensitive population, including children. However, EPA solicits comments on whether the proposed action would result in an adverse environmental effect that would have a disproportionate effect on children.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211 (66 FR 28355 (May 22, 2001)), because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer Advancement Act

Section 12(d) of the National Technology Transfer and Advancement Act of 1995 ("NTTAA"), Public Law 104–113, 12(d) (15 U.S.C. 272 note) directs EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (*e.g.*, materials specifications, test methods, sampling procedures, and business practices) that are developed or adopted by voluntary consensus standards bodies. NTTAA directs EPA to provide Congress, through OMB, explanations when the Agency decides not to use available and applicable voluntary consensus standards.

This proposed rulemaking does not involve technical standards. Therefore,

EPA is not considering the use of any voluntary consensus standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

Executive Order (EO) 12898 (59 FR 7629 (Feb. 16, 1994)) establishes Federal executive policy on environmental justice. Its main provision directs Federal agencies, to the greatest extent practicable and permitted by law, to make environmental justice part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations and low-income populations in the United States.

EPA has determined that this proposed rule will not have disproportionately high and adverse human health or environmental effects on minority or low-income populations because it does not affect the level of protection provided to human health or the environment. The proposed revisions to the regulations would, if promulgated revise procedures for states to follow in developing SIPs to attain the NAAQS, which are designed to protect all segments of the general populations. As such, they do not adversely affect the health or safety of minority or low income populations and are designed to protect and enhance the health and safety of these and other populations.

K. Determination Under Section 307(d)

Pursuant to sections 307(d)(1)(E) and 307(d)(1)(V) of the CAA, the Administrator determines that this action is subject to the provisions of section 307(d). Section 307(d)(1)(V) provides that the provisions of section 307(d) apply to "such other actions as the Administrator may determine."

Appendix A to Preamble. Application of the Proposed Classification Scheme

This appendix lists the proposed new subpart 2 classifications for the areas that were originally covered under subpart 1 in the phase 1 rule (April 30, 2004) and that are currently still designated nonattainment. The geographic boundaries of these nonattainment areas are provided in 40 CFR Part 81, Subpart C.

Current nonattainment areas not classified under phase 1 rule, as vacated by the court ^a	2001–2003 8-hour ozone design value ppm	Proposed subpart 2 classification	2004–2006 8-hour ozone design value ppm	2005–2007 8-hour ozone design value ppm

Sutter Co (Sutter Buttes), CA ^e	0.088	Marginal	0.082	0.081

^a A number of areas that were placed in Subpart 1 under the vacated portion of the Phase 1 Rule have since attained the 8-hour ozone standard and have been redesignated to attainment. Because these areas are now designated attainment for the ozone standard, they are not nonattainment areas subject to classification and thus are not included in this table.

^b Denver originally participated in the Early Action Compact (EAC) program and was listed in the April 30, 2004 designation action as a nonattainment area under subpart 1; its nonattainment designation was deferred until November 20, 2007, at which time based on a violation of the 1997 8-hour ozone NAAQS, Denver's nonattainment designation became effective. Denver has planning requirements as a former EAC area.

^c Area would have been marginal but did not have attaining design values by the marginal area attainment date (June 15, 2007) (based on 2004-2006 design values).

^d Essex Co (the top of Whiteface Mtn), NY, and Door County, WI, would be eligible for consideration under CAA section 182(h) as Rural Transport Areas. This is based on the 1999 definition of Metropolitan Statistical Areas; neither of the above two areas is in or adjacent to an MSA as defined by the Office of Management and Budget (OMB) in 1999 (June 30, 1999; 64 FR 35548). Essex Co does not have a design value for the 2005-2007 period (indicated by NAV (not available)).

^e These areas had attaining design values as of the marginal area attainment date (June 15, 2007) (based on 2004–2006 design values).

List of Subjects

40 CFR Part 50

Environmental protection, Air pollution control, Carbon monoxide, Lead, Nitrogen dioxide, Ozone, Particulate matter, Sulfur oxides.

40 CFR Part 51

Air pollution control, Intergovernmental relations, Ozone, Particulate matter, Transportation, Volatile organic compounds.

Authority: 42 U.S.C. 7409; 42 U.S.C. 7410; 42 U.S.C. 7511–7511f; 42 U.S.C. 7601(a)(1).

Dated: January 9, 2009.

Stephen L. Johnson,
Administrator.

For the reasons stated in the preamble, title 40, chapter I of the Code of Federal Regulations is proposed to be amended as follows:

PART 50—NATIONAL PRIMARY AND SECONDARY AMBIENT AIR QUALITY STANDARDS

1. The authority citation for part 50 continues to read as follows:

Authority: 42 U.S.C. 7401, *et seq.*

§ 50.9 [Amended]

2. Section 50.9 is amended by removing and reserving paragraph (c).

PART 51—REQUIREMENTS FOR PREPARATION, ADOPTION, AND SUBMITTAL OF IMPLEMENTATION PLANS

3. The authority citation for part 51 continues to read as follows:

Authority: 23 U.S.C. 101; 42 U.S.C. 7401–7671q.

Subpart X—[Amended]

4. Section 51.900 is amended by adding paragraph (f)(14) to read as follows:

§ 51.900 Definitions.

* * * * *

(f) * * *

(14) Contingency measures under CAA sections 172(c)(9) and 182(c)(9) that would be triggered based on a failure to attain the 1-hour NAAQS by the applicable attainment date or to make reasonable further progress toward attainment of the 1-hour NAAQS.

* * * * *

5. Section 51.902 is revised to read as follows:

§ 51.902 Which classification and nonattainment area planning provisions of the CAA shall apply to areas designated nonattainment for the 8-hour NAAQS?

(a) An area designated nonattainment for the 8-hour NAAQS will be classified in accordance with section 181 of the CAA, as interpreted in § 51.903(a), for purposes of the 8-hour NAAQS, and will be subject to the requirements of subpart 2 that apply for that classification.

(b) [Reserved]

6. Section 51.905 is amended as follows:

a. By adding a sentence to the end of paragraph (b).

- b. By removing and reserving paragraphs (e)(2)(ii) and (e)(2)(iii).
c. By removing paragraph (e)(4).

§ 51.905 How do areas transition from the 1-hour NAAQS to the 8-hour NAAQS and what are the anti-backsliding provisions?

* * * * *

(b) * * * Once an area attains the 1-hour NAAQS, the section 172 and 182 contingency measures under the 1-hour NAAQS can be shifted to contingency measures for the 8-hour ozone NAAQS and must remain in the SIP until the area is redesignated to attainment for the 8-hour NAAQS.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R02-OAR-2008-0497, FRL-8763-4]

Approval and Promulgation of Implementation Plans; New Jersey Reasonable Further Progress Plans, Reasonably Available Control Technology, Reasonably Available Control Measures and Conformity Budgets

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing action on portions of two State Implementation Plan revisions submitted by New Jersey that are intended to meet several Clean Air Act (Act) requirements for attaining the 0.08 part per million (ppm) 8-hour ozone national ambient air quality standards. EPA is proposing approval of: The 2008 reasonable further progress plan and associated 2008 ozone projection year emission inventories, contingency measures for the 2008 reasonable further progress plan, 2008 conformity budgets used for planning purposes, and the reasonably available control measure analysis. In addition, EPA is proposing a conditional approval of New Jersey's efforts to meet the reasonably available control technology requirement. The intended effect of this action is to approve those programs that meet Act requirements and to further achieve emission reductions that will be critical to attainment of the national ambient air quality standard for ozone in New Jersey's two nonattainment areas.

DATES: Comments must be received on or before February 17, 2009.

ADDRESSES: Submit your comments, identified by Docket Number EPA-R02-OAR-2008-0497, by one of the following methods:

- <http://www.regulations.gov>: Follow the on-line instructions for submitting comments.

- *E-mail:* Werner.Raymond@epa.gov.
- *Fax:* 212-637-3901

- *Mail:* Raymond Werner, Chief, Air Programs Branch, Environmental Protection Agency, Region 2 Office, 290 Broadway, 25th Floor, New York, New York 10007-1866.

- *Hand Delivery:* Raymond Werner, Chief, Air Programs Branch, Environmental Protection Agency, Region 2 Office, 290 Broadway, 25th Floor, New York, New York 10007-1866. Such deliveries are only accepted during the Regional Office's normal hours of operation. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30 excluding Federal holidays.

Instructions: Direct your comments to Docket No. EPA-R02-OAR-2008-0497. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at <http://www.regulations.gov>, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through <http://www.regulations.gov> or e-mail. The <http://www.regulations.gov> Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through <http://www.regulations.gov> your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters or any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit the EPA Docket Center homepage at <http://www.epa.gov/epahome/dockets.htm>.

VI. Statutory and Executive Order Reviews

I. What Action Is EPA Proposing?

The Environmental Protection Agency (EPA) has reviewed elements of New Jersey's comprehensive State Implementation Plan (SIP) revision for the 0.08 ppm 8-hour ozone national ambient air quality standards (NAAQS or standard)¹ along with other related Clean Air Act (Act) requirements necessary to ensure attainment of the standard. The EPA is proposing approval of: the 2008 reasonable further progress plan and associated 2008 ozone projection emission inventories, contingency measures for the 2008 reasonable further progress plan, 2008 conformity budgets used for planning purposes, and the reasonably available control measure analysis, because the State of New Jersey's Department of Environmental Protection (NJDEP) has fully addressed the Act's requirements. In addition, while EPA commends New Jersey for its excellent effort to meet the reasonably available control technology (RACT) requirement, EPA is unable to fully approve the State's RACT SIP revision because portions of the submission are deficient. Because the State has committed to correct the deficiencies by April 1, 2009, which is no more than one year from our anticipated final action on the SIP, we are proposing to conditionally approve this component of the SIP submittal. At this time, EPA is continuing to review the other components of the New Jersey submission and plans to address those other components of the SIP submittal in one or more separate proposed actions in the near future.

EPA's analysis and findings are discussed in this proposed rulemaking and a more detailed discussion is contained in the Technical Support Document for this Proposal which is available on line at <http://www.regulations.gov>, Docket number EPA-R02-OAR-2008-0497.

¹ Unless otherwise specifically noted in the action, references to the 8-hour ozone standard are to the 0.08 ppm ozone standard promulgated in 1997.

II. Background Information*A. What Are the Act Requirements for a Moderate 8-Hr Ozone Nonattainment Area?*

1. History and Time Frame for the State's Attainment Demonstration SIP

In 1997, EPA revised the health-based NAAQS for ozone, setting it at 0.08 parts per million (ppm) averaged over an 8-hour time frame. EPA set the 8-hour ozone standard based on scientific evidence demonstrating that ozone causes adverse health effects at lower ozone concentrations and over longer periods of time than was understood when the pre-existing 1-hour ozone standard was set. EPA determined that the 8-hour standard would be more protective of human health, especially with regard to children and adults who are active outdoors, and individuals with a pre-existing respiratory disease, such as asthma.

On April 30, 2004 (69 FR 23951), EPA finalized its attainment/nonattainment designations for areas across the country with respect to the 8-hour ozone standard. These actions became effective on June 15, 2004. The entire state of New Jersey is located in two multi-state 8-hour ozone moderate nonattainment areas, the New York-Northern New Jersey-Long Island, NY-NJ-CT nonattainment area, and the Philadelphia-Wilmington-Atlantic City, PA-NJ-MD-DE nonattainment area. The New Jersey portion of the New York-Northern New Jersey-Long Island, NY-NJ-CT nonattainment area consists of the following New Jersey counties: Bergen, Essex, Hudson, Hunterdon, Middlesex, Morris, Monmouth, Passaic, Somerset, Sussex, Union and Warren and will be referred to as the Northern New Jersey Counties. The New Jersey portion of the Philadelphia-Wilmington-Atlantic City, PA-NJ-MD-DE nonattainment area consists of the following New Jersey counties: Atlantic, Burlington, Camden, Cape May, Cumberland, Gloucester, Ocean, Mercer and Salem and will be referred to as the Southern New Jersey Counties.

These designations triggered the Act's requirements under section 182(b) for moderate nonattainment areas, including a requirement to submit an attainment demonstration. EPA's Phase 1 8-hour ozone implementation rule, published on April 30, 2004 (69 FR 23951) (Phase 1 Rule) specifies that states must submit attainment demonstrations for their nonattainment areas to the EPA by no later than three years from the effective date of designation, that is, by June 15, 2007.

2. Moderate Area Requirements

On November 9, 2005, EPA published Phase 2 of the 8-hour ozone implementation rule (70 FR 71612) (Phase 2 Rule) in which it addresses the control obligations that apply to areas designated nonattainment for the 8-hour NAAQS. Among other things, the Phase 1 and Phase 2 Rules outline the SIP requirements and deadlines for various requirements in areas designated as moderate nonattainment. For such areas, reasonably available control technology plans were due by September 2006 (40 CFR 51.912(a)(2)). The rules further require that modeling and attainment demonstrations, reasonable further progress plans, reasonably available control measures, projection year emission inventories, motor vehicle emissions budgets and contingency measures were all due by June 15, 2007 (40 CFR 51.908(a), and (c)).

III. What Was Included in New Jersey's SIP Submittals?

After completing the appropriate public notice and comment procedures, New Jersey made a series of submittals in order to address the Act's 8-hour ozone attainment requirements described in Section II.A.2. On August 1, 2007, New Jersey submitted its RACT rules, which included a determination that many of the RACT rules currently contained in its SIP meet the RACT obligation for the 8-hour standard, and also included commitments to adopt revisions to several regulations where the State identified more stringent emission limitations that it believed should now be considered RACT. On October 29, 2007, New Jersey submitted a comprehensive 8-hour ozone SIP for the New Jersey portions of the New York-Northern New Jersey-Long Island, NY-NJ-CT and the Philadelphia-Wilmington-Atlantic City, PA-NJ-MD-DE nonattainment areas. It included attainment demonstrations, reasonable further progress (RFP) plans for 2008 and 2009, reasonably available control measures analyses for both areas, contingency measures, on-road motor vehicle emission budgets, and general conformity emission budgets for McGuire Air Force Base and Lakehurst Naval Air Station. These SIP revisions were subject to notice and comment by the public and the State addressed the comments received on the proposed SIPs before adopting the plans and submitting them for EPA review and approval into the SIP. Finally, as part of the RACT evaluation, on December 14, 2007, New Jersey submitted to EPA an assessment of how it planned to address

EPA's recently revised Control Technique Guidelines (CTGs).

IV. EPA's Review and Technical Information

A. Emission Inventories

1. What Are the Act Requirements?

An emissions inventory is a comprehensive, accurate, current inventory of actual emissions from all sources and is required by section 172(c)(3) of the Act. For ozone nonattainment areas, the emissions inventory must contain volatile organic compounds (VOC) and nitrogen oxides (NO_x) emissions because these pollutants are precursors to ozone formation.

2. What Emission Inventories Were Included in the SIP?

a. 2002 Base Year

New Jersey submitted its proposed 2002 Base Year emission inventories on February 21, 2006 and final 2002 Base Year emission inventories on May 18, 2006. EPA proposed to approve New Jersey's 2002 Base Year inventories on May 9, 2006 (71 FR 26895) and approved the emission inventories on July 10, 2006 (71 FR 38770). The reader is referred to these rulemakings for additional information concerning the emission inventories and EPA's approval. A summary of the 2002 base year emission inventory is included in Tables 1 and 2 of this action.

b. Projection Years

The 2002 VOC and NO_x anthropogenic emissions are projected to 2008 and 2009 in order to determine

the VOC and NO_x reductions needed for the rate of progress plans and for the attainment demonstrations. The 2008 and 2009 projection year emission inventories are calculated by adjusting the 2002 base year inventory using factors that estimate growth from 2002 to 2008 and 2009. EPA requires specific growth factors be considered for each source type in the inventory since sources typically change at different rates. The 2008 and 2009 inventories were also adjusted by the State to reflect the benefits of control measures that were adopted since the 2002 emission inventory and those that are expected to be adopted. Tables 1 and 2 show 2008 and 2009 VOC and NO_x projection emission inventories after applying the appropriate growth indicators/methodologies to the 2002 base year emission inventory for New Jersey's portion of each ozone nonattainment area and to the expected controls.

TABLE 1—NORTHERN NEW JERSEY COUNTIES 2002 BASE YEAR, 2008 AND 2009 PROJECTION YEAR EMISSION INVENTORIES

	Ozone season VOC and NO _x emissions (in tons/day)					
	2002 Base year actual inventory		2008 Projection year inventory controlled		2009 Projection year inventory controlled	
	VOC	NO _x	VOC	NO _x	VOC	NO _x
Point	68.2	152.7	50.5	51.3	48.9	53.8
Area	243.5	24.4	218.7	21.8	210.8	22
Non-Road Mobile	121.6	161	87.9	120.9	82.2	117.2
On-Road Mobile	183	378.9	85.3	143.6	79	133.5
Total	616.3	717	442.4	337.6	420.9	326.5

TABLE 2—SOUTHERN NEW JERSEY COUNTIES 2002 BASE YEAR, 2008 AND 2009 PROJECTION YEAR EMISSION INVENTORIES

	Ozone season VOC and NO _x emissions (in tons/day)					
	2002 Base year actual inventory		2008 Projection year inventory controlled		2009 Projection year inventory controlled	
	VOC	NO _x	VOC	NO _x	VOC	NO _x
Point	45.4	127.7	28	17.5	26	25.9
Area	126.4	11.5	114.8	10.5	110.3	10.6
Non-Road Mobile	99	70.6	80.1	63.18	76.2	62.13
On-Road Mobile	91.8	179.8	48.8	111.3	45.4	105.9
Total	362.6	389.6	271.7	202.48	257.9	204.53

3. What Is EPA's Evaluation?

Based on EPA review, the 2008 and 2009 inventories are determined to be complete and consistent with EPA guidance. A more detailed discussion of how the emission inventories were reviewed and the results of these reviews is provided in the Technical Support Document for this action. Since

the 2009 emission inventory is an integral part of the attainment demonstration which EPA is not acting on at this time, EPA is deferring action on the 2009 emission inventory. EPA will act on the 2009 projection year emission inventory when it acts on the attainment demonstration. EPA is proposing to approve the 2008

projection year emission inventories as the State used them in developing the RFP Plans.

B. Reasonable Further Progress Plans

1. What Are the Act Requirements?

Section 182(b)(1) of the Act and EPA's 8-hour ozone implementation rule (40 CFR 51.910) require each 8-hour ozone

nonattainment area designated moderate and above to submit an emissions inventory and RFP Plan, for review and approval into its SIP, that describes how the area will achieve actual emissions reductions of VOC and NO_x from a baseline emissions inventory.

The process for determining the emissions baseline from which the RFP reductions are calculated is described in section 182(b)(1) of the Act and 40 CFR 51.910. This baseline value has been determined to be the 2002 adjusted base year inventory. Sections 182(b)(1)(B) and (D) require the exclusion from the base year inventory of emissions benefits resulting from the Federal Motor Vehicle Control Program (FMVCP) regulations promulgated by January 1, 1990, and the Reid Vapor Pressure (RVP) regulations promulgated June 11, 1990 (55 FR 23666). The FMVCP and RVP emissions reductions are determined by the State using EPA's on-road mobile source emissions modeling software, MOBILE6. The FMVCP and RVP emission reductions are then removed from the base year inventory by the State, resulting in an adjusted base year inventory. The emission reductions needed to satisfy the RFP requirement are then calculated from the adjusted base year inventory.

These reductions are then subtracted from the adjusted base year inventory to establish the emissions target for the RFP milestone year (2008).

For moderate areas like New Jersey's, the Act specifies a 15 percent reduction in ozone precursor emissions over an initial six year period. In the Phase 2 Rule, EPA interpreted this requirement for areas that were also designated nonattainment and classified as moderate or higher for the 1-hour ozone standard. In the Phase 2 Rule, EPA provided that an area classified as moderate or higher that has the same boundaries as an area, or is entirely composed of several areas or portions of areas, for which EPA fully approved a 15 percent plan for the 1-hour NAAQS, is considered to have met the requirements of section 182(b)(1) of the Act for the 8-hour NAAQS. In this situation, a moderate nonattainment area is subject to RFP under section 172(c)(2) of the Act and shall submit, no later than 3 years after designation for the 8-hour NAAQS, a SIP revision that meets the requirements of 40 CFR 51.910(b)(2). The RFP SIP must provide for a 15 percent emission reduction (either NO_x and/or VOC) accounting for any growth that occurs during the six year period following the baseline

emissions inventory year, that is, 2002–2008. The section 182 and 172 requirements differ in that section 182(b)(1) specifies that it must be a 15 percent VOC reduction where section 172(c)(2) provides that the 15 percent reduction can be either a VOC and/or NO_x reduction.

2. What Reasonable Further Progress Plans Were Included in the SIP?

New Jersey followed EPA's requirements and guidance in calculating the "adjusted baseline inventory," 2008 target level emissions and the RFP emission reductions. The total emission reductions required to meet the 2008 target level in the Northern and Southern New Jersey Counties are 96.65 tons per day (tpd) and 59.96 tpd, respectively. New Jersey's RFP Plans for the Northern and Southern New Jersey Counties are summarized in Table 3. Based on Table 3, New Jersey's VOC control plan for the Northern and Southern New Jersey Counties meets the 15 percent reduction requirements and, in addition, results in a 70.15 tpd reduction surplus in the Northern New Jersey Counties and a 30.64 tpd reduction surplus in the Southern New Jersey Counties.

TABLE 3—VOC MEASURES INCLUDED IN THE NEW JERSEY 2008 RFP PLAN

VOC control measures	Northern NJ counties (tons per day)	Southern NJ counties (tons per day)
Required Reduction In VOC To Meet 2008 Milestone	96.65	59.96
Non-Road Mobile Source:		
Portable Fuel Containers 2005	1	.4
Non-road Mobile Federal Control Measures	45	24.3
On-Road Mobile Source:		
Stage II (Gasoline Transfer Operations)	1.3	.8
Onboard Diagnostic (OBD) I/M	2.9	1.6
Total Federal Control Measures Benefits In Mobile Model	82.5	48.0
Stationary Area Source:		
Autobody (Mobile Equipment Repair and Refinishing)	1.5	.5
Solvent Cleaning (Degreasing)	2.4	.8
Consumer Products 2005	3.6	0
Portable Fuel Containers (2005 and 2009)	2.6	0.6
Stage I (Gasoline Transfer Operations-Balanced Submerged Filling)	5.9	2.9
Total VOC Benefits From All Sources	148.7	79.9
Reduction Surplus	52.05	19.94

3. What Is EPA's Evaluation?

New Jersey determined the required emission reductions for its RFP plan consistent with the Act, as interpreted in EPA's regulations, guidance and policies. All the measures included in the New Jersey RFP Plans have been adopted. New Jersey also generated a significant amount of NO_x reductions

that could be used for RFP. The emission reduction benefits from certain measures have been divided between the RFP and the contingency measure requirements, but are not being double counted. Even without these measures, the RFP plans contain sufficient emission reductions to satisfy the RFP

requirement, therefore EPA is proposing to approve the RFP Plans.

C. Contingency Measures

1. What Are the Act Requirements?

For ozone nonattainment areas classified as moderate or above, states must include in their submittal contingency measures to be

implemented if the area fails to make RFP or to attain the NAAQS by the applicable attainment date (sections 172(c)(9) and 182(c)(9)). Contingency measures are additional controls to be implemented in the event the area fails to meet an RFP or attainment milestone. They are intended to achieve reductions over and beyond those relied on in the RFP and attainment demonstrations. The Act does not preclude a state from implementing such measures before they are triggered. EPA interprets the Act to require sufficient contingency measures in the submittal, so that upon implementation of such measures, additional emissions reductions of up to three percent of the adjusted base year inventory (or a lesser percentage that will make up for the identified shortfall)

would be achieved in the year after the failure has been identified. For more information on contingency measures please see the April 16, 1992 General Preamble (57 FR 13512) and the November 29, 2005 Phase 2 8-hour ozone implementation rule (70 FR 71612).

2. What Contingency Measures Were Included in the SIP?

The New Jersey SIP includes the control measures that will provide additional emission reductions should the State not achieve the 15 percent RFP target in 2008 and/or attainment in 2010. The 2010 contingency measures are not included in the attainment demonstration, but since EPA is not acting on the attainment demonstration

in this action, EPA is deferring action on the contingency measures for attainment. EPA will act on these measures when it acts on the attainment demonstration.

Based on the 3 percent reduction needed for RFP contingency, and using only VOC emission reductions in 2008, New Jersey calculated it would need 18.1 tpd of VOC emission reduction in the Northern New Jersey Counties and 10.7 tpd of VOC emission reduction in the Southern New Jersey Counties should New Jersey fail to meet RFP. The measures and associated emission reductions are identified in Table 4 and the emission reductions are not relied on in the RFP or in the attainment demonstration.

TABLE 4—VOC REDUCTIONS FOR REASONABLE FURTHER PROGRESS CONTINGENCY MEASURES FOR 2008
[Ozone season tons per day]

	VOC (TPD)
Northern New Jersey Counties	
Contingency Requirement: 3 percent VOC	18.1
Control Measures:	
Architectural Coatings 2005	15
Consumer Products 2005	3.1
Reductions allocated to RFP contingency	18.1
Southern New Jersey Counties	
Contingency Requirement: 3 percent VOC	10.7
Control Measures:	
Architectural Coatings 2005	7
Consumer Products 2005	3
Portable Fuel Containers 2005 and 2009	0.7
Reductions allocated to RFP contingency	10.7

3. What Is EPA's Evaluation?

New Jersey determined the required emission reductions for its RFP contingency plans consistent with the Act, as interpreted in EPA's regulations, guidance and policies and identified the specific measures needed to achieve them. All the emission reductions included in the RFP contingency plans are from adopted measures. EPA is proposing to approve the State's RFP contingency plans.

D. RACT for Stationary Sources

1. What Are the Act Requirements?

Sections 172(c)(1), 182(b)(2) and 182(f) of the Act require nonattainment areas that are designated as moderate or above for ozone to adopt RACT. All of New Jersey is subject to this requirement since all counties in the State are located in either of two nonattainment areas that are classified as moderate ozone nonattainment areas

for the 8-hour NAAQS for ozone (40 CFR 81.331). In accordance with section 182(b), New Jersey must, at a minimum, adopt RACT level controls for sources covered by a Control Techniques Guidelines (CTG) document and for any major non-CTG sources.

Section IV.G of EPA's Phase 2 Rule discusses the RACT requirements. It states, in part, that where a RACT SIP is required, SIPs implementing the 8-hour standard generally must assure that RACT is met, either through a certification that previously required RACT controls represent RACT for 8-hour implementation purposes or, where necessary, through a new RACT determination. The majority of counties in New Jersey were previously classified under the 1-hour ozone NAAQS as severe, while the remaining counties were subject to RACT as part of the Ozone Transport Region. New Jersey chose a uniform applicability level for RACT based on the severe classification

which resulted in a statewide requirement for major sources to be defined as those having emissions of 25 tons per year or more for both VOC and NO_x. In areas classified as moderate, the definition for major sources in New Jersey would have been 50 tons per year for VOC and 100 tons per year for NO_x. However, New Jersey chose to retain the original 1-hour ozone limits statewide in New Jersey for purposes of the RACT analysis resulting in a more stringent evaluation of RACT. New Jersey's use of 25 tons per year for RACT is consistent with court decision concerning anti-backsliding. See *South Coast Air Quality Management Dist. (SCAQMD) v. EPA*, 472 F.3d 882 (D.C. Cir. 2006).

2. How Did New Jersey Perform Its RACT Analysis?

New Jersey combined the results of three separate information gathering efforts from industry, environmental groups and the general public in order

to get the greatest input on the stringency of the existing requirements and the possibility of new RACT controls. The first effort was the exchange of information and experience through a public forum entitled, “*Reducing Air Pollution Together*” (a multi-pollutant effort), the second was through state participation in regional control development efforts, and the third was an internal NJDEP assessment of RACT controls. The internal assessment also included a review of EPA’s 56 CTGs and Alternative Control Techniques (ACTs) where the CTG’s and ACT’s level of control and applicability were compared to New Jersey’s regulations. The results of these three efforts were consolidated and presented to the NJDEP Air Quality Management team for its consideration. The Air Quality Management team then discussed and prioritized the recommendations resulting in a list of approximately 60 potential control measures for further evaluation. The NJDEP’s engineers and scientists were assigned the task of further investigating and writing white papers for each potential control measure. Each control measure was evaluated based on information collected regarding emission benefits, implementation issues, cost-effectiveness, and existing controls.

The white papers were then made available to the public for its review and comment and the evaluated control measures were added to the other recommended control measures for further evaluation. New Jersey’s RACT evaluation, “Reasonably Available Control Technology (RACT) for the 8-Hour Ozone National Ambient Air Quality Standard (NAAQS) and other Associated State Implementation Plan (SIP) Revisions for the Fine Particulate Matter National Ambient Air Quality Standard (NAAQS), Regional Haze, and the Clean Air Act Requirements on Transport of Air Pollution” dated August 1, 2007, addressed approximately 115 source categories covering multiple pollutants, as well as New Jersey’s commitments to adopt more stringent controls for the 8-hour ozone, PM_{2.5} and Regional Haze SIPs and was the subject of a public hearing.

3. What Were the Results of New Jersey’s Analysis of RACT for Stationary Sources?

a. CTGs and ACTs

New Jersey has implemented RACT controls statewide for the 56 CTGs and

ACTs that EPA has issued to meet the requirements of the Act. These RACT controls were promulgated in the New Jersey Administrative Code, Title 7: Chapter 27, Air Pollution Control in:

- Subchapter 16, “Control and Prohibition of Air Pollution by Volatile Organic Compounds,”
- Subchapter 19, “Control and Prohibition of Air Pollution from Oxides of Nitrogen,” and
- Subchapter 23, “Prevention of Air Pollution From Architectural Coatings.”

The New Jersey RACT SIP contains a table (see Table 4—RACT Determinations Based on Existing USEPA Guidance) listing all the CTG and ACT categories (56 categories in total) and the corresponding Subchapter and section which address the requirements. These have all been approved by EPA and made part of the SIP.

For many source categories, the existing New Jersey rules go beyond the recommendations contained in the CTG/ACT documents in terms of more stringent emission rates and lower thresholds of applicability. New Jersey identified several categories where controls may be more stringent and these are included in Section D.3.d. below. Based on the August 1, 2007 RACT evaluation, New Jersey’s existing RACT rules for the remaining CTG and ACT categories met the RACT requirement for the 8-hour ozone NAAQS implementation purposes.

b. Negative Declaration

By comparing the sources covered in the existing CTGs and ACTs with New Jersey’s adopted rules, and searching the New Jersey Environmental Management System permitting and emission inventory databases, and emission statements for source categories by Standard Industrial Code (SIC), New Jersey determined that for the following CTGs and ACTs, either no sources exist in New Jersey, or the sources fall below the CTG/ACT applicability thresholds:

- (1) Surface Coating of Automobiles and Light-Duty Trucks;
- (2) Manufacture of Vegetable Oils;
- (3) Manufacture of Pneumatic Rubber Tires;
- (4) Aerospace Coatings;
- (5) Iron and Steel Mills;
- (6) Cement Manufacturing;
- (7) Nitric and Adipic Manufacturing Plants;
- (8) Flat Wood Paneling Coatings; and
- (9) Shipbuilding and Ship Repair Operations.

New Jersey will review all new CTGs issued by EPA since the preparation of this SIP revision and adopt provisions to address any new requirements for those categories for which sources exist in the State. This includes those covered by the present negative declaration.

c. Facility-Specific Emission Limits and Alternative Emission Limits

The requirement to review and update 1-hour ozone RACT SIP limits also applies to any uniquely determined RACT limits for major stationary sources that are located in nonattainment areas. In New Jersey, uniquely determined RACT limits may result from two situations: Where major sources are not regulated by a CTG but are still required to have controls based on its size and on a requirement to perform a case-by-case determination (facility specific emission limit (FSEL)), or where the facility could not reasonably meet the RACT limit because of site specific factors and applied for an alternative emission limit (AEL). In both cases the limits are adopted by the State and approved into the SIP.

As part of the 8-hr ozone RACT determination, New Jersey is including new source categories required to have RACT and tightening emission limits for some source categories that would be applicable to all sources, including some which had a FSEL or AEL. At the same time, New Jersey is requiring all facilities that were previously granted FSELs or AELs to now comply with the new emission requirements were applicable, or obtain a new FSEL if the source category still has no specific RACT limits in the rule. Should any facility not be able to meet the new rule requirements, it could apply for a new AEL that would be based on the facilities abilities to comply with current technology and the present cost of those controls.

d. Source Categories Identified for Further Control

The results of NJDEP’s assessment of RACT for the CTG and ACT categories, non-CTG major sources regulated by the State, as well as categories identified by the regional and local workgroups are identified in Table 5. Table 5 lists the RACT source categories for which the State will propose new or revised emission standards along with the targeted pollutants and affected rules and categories which will be the subject of future rule revisions.

TABLE 5—SUMMARY OF NEW JERSEY CANDIDATE SOURCE CATEGORIES AND FUTURE RULE REVISIONS

Candidate source categories	Targeted pollutants				Affected rules
	NO _x	VOC	SO ₂	PM _{2.5}	
Ozone Transport Commission (OTC)					
Asphalt Paving	X	N.J.A.C. ¹ 7:27–16.19.

³ BART—Best Available Retrofit Technology.
⁴ Future Rule Revisions.

4. What Is EPA’s Evaluation?

New Jersey submitted a RACT assessment in a SIP revision dated August 1, 2007 and supplemented the submittal on December 14, 2007. New Jersey’s RACT analysis included 56 CTG and ACT source categories and over 59 non-CTG source categories.

Of those 115 categories New Jersey has concluded that the RACT rules currently approved into the SIP meet the RACT requirement for 102 categories under the 8-hour ozone standard. New Jersey has identified 13 categories for which it has preliminarily determined that new limits should be proposed. New Jersey has since proposed provisions for all 13 of these categories.

The RACT submission from the State of New Jersey consists of: (1) A certification that previously adopted RACT controls in New Jersey’s SIP for 101 source categories that were approved by EPA under the 1-hour ozone NAAQS are based on the currently available technically and economically feasible controls, and that they continue to represent RACT for the 8-hour ozone implementation purposes; (2) a commitment to adopt new or more stringent regulations that represent RACT control levels for both specific source categories and specific sources; and (3) a negative declaration that for

certain of CTGs and/or ACTs there are no sources within New Jersey or that there are no sources above the applicability thresholds.

EPA has reviewed the State’s RACT analysis and agrees with the State’s conclusions. EPA is proposing to conditionally approve the RACT SIP for the 8-hour ozone NAAQS based on New Jersey’s commitment to submit adopted RACT rules for 13 source categories by April 1, 2009. We believe that New Jersey will be able to meet this commitment because the State has already proposed RACT provisions for all 13 source categories and has recently adopted a rule for one of the source categories and the comment period for the remaining categories has closed.

E. RACM Analysis

1. What Are the Act Requirements?

Pursuant to section 172(c)(1) of the Act, states are required to implement all Reasonably Available Control Measures (RACM) as expeditiously as practicable. Specifically, section 172(c)(1) states the following: “In general—Such plan provisions shall provide for the implementation of all reasonably available control measures as expeditiously as practicable (including such reductions in emissions from existing sources in the area as may be obtained through the adoption, at a

minimum, of reasonably available control technology) and shall provide for attainment of the national primary ambient air quality standards.”

Furthermore, in EPA’s Phase 2 Rule, EPA describes how states must include with their attainment demonstration a RACM analysis (70 FR 71659). The purpose of the RACM analysis is to determine whether or not reasonably available control measures exist that would advance the attainment date for nonattainment areas. Control measures that would advance the attainment date are considered RACM and must be included in the SIP. RACM are necessary to ensure that the attainment date is achieved “as expeditious as practicable.”

RACM is defined by the EPA as any potential control measure for application to point, area, on-road and non-road emission source categories that meets the following criteria:

- The control measure is technologically feasible
- The control measure is economically feasible
- The control measure does not cause “substantial widespread and long-term adverse impacts”
- The control measure is not “absurd, unenforceable, or impracticable”
- The control measure can advance the attainment date by at least one year.

2. How Did the State Perform the RACM Analysis?

New Jersey used four separate efforts to identify measures that might be considered as potential RACM: The transportation control measures (TCMs) for on-road mobile sources effort, the non-TCM measures (point, area and off-road sources) effort, the New Jersey workgroup measures effort, and the OTC measures effort.

a. Transportation Control Measures

The New Jersey Department of Transportation (NJDOT), in consultation with the NJDEP, identified 26 measures to be evaluated as prospective mobile source measures that could be considered reasonably available control measures. After identifying these measures, NJDOT analyzed each measure for its potential emissions reduction benefit, economic impact, practicability and potential adverse impact. NJDOT analyzed each prospective emission control measure for each nonattainment area. Eleven measures advanced to the final stage of the RACM analysis.

b. Non-TCM Measures (Point, Area and Off-Road Sources)

NJDEP reviewed a variety of sources of information, such as, those from regional planning organizations, other state organizations, existing NJDEP documents, EPA regional efforts, and "Early Action Compact" plans (plans developed and implemented by some states to avoid being designated nonattainment), to develop a list of 457 potential non-transportation control measures (non-TCMs). After focusing on those measures with significant VOC and NO_x emissions and eliminating those that were already in place in New Jersey and those that are more stringently addressed at the Federal level, a list of 81 potential non-TCMs was advanced to the next phase of the analysis and added to the compiled list.

c. New Jersey Workgroup Measures

New Jersey organized the "Reducing Air Pollution Together Initiative," which brought together over 200 people representing various industries, environmental and civic groups. Six workgroups were formed to develop potential control measures for NJDEP consideration. A list of 250 potential measures was developed and ranked and the workgroups prepared "White Papers" for 60 measures that passed the next round of evaluations. A more extensive review followed with 21 measures being added to the compiled list of potential RACM measures.

d. OTC Measures

New Jersey worked with the other states that are part of the Ozone Transport Commission to identify regional control measures that would be of greater benefit if implemented by all the states in the OTC region. Several of these control measures were identified for adoption and the remaining measures were added to the compiled list.

e. Compiled Measures

NJDEP compiled a list of 103 non-TCM measures [81 from the Non-TCM (point, area and off-road sources), 21 from NJDEP workgroup (white papers), and 1 OTC measure] and analyzed these measures using the RACM criterion for technological feasibility. A total of 85 measures passed the technological feasibility criterion. Table F2.1 in Appendix F2 of the State's SIP includes a list of all measures considered and the reasons that they passed or failed each RACM criterion. If sufficient information was not available for a technological feasibility determination to be made for a measure, the measure was evaluated for the remaining criteria, and a "N/A" determination was made for technological feasibility. The remaining 85 measures were analyzed for economic feasibility and other local factors, such as whether the measure could be implemented by June 2008.² A total of 17 non-TCM measures advanced to the final stage of analysis. A total of 28 measures, 11 TCMs and 17 non-TCMs, passed the technological feasibility, economic feasibility and "other local considerations" RACM criteria.

3. What Were the Results of the RACM Analysis?

In order for any measure to advance the attainment date of June 2010 to June 2009, the measures would have to be implemented and achieve the emission reductions by June 2008. The combined emission benefits from VOC and NO_x measures were 15.5 tons/day in the Northern New Jersey Counties and 7.4 tons/day in the Southern New Jersey Counties. The State's analysis demonstrated that none of the RACM's, singularly or in combination, will yield emissions benefits sufficient to advance the 2010 attainment date for the two nonattainment areas in which the New

² June 2008 was selected as measures would need to be implemented by that time in order to advance the attainment date. Measures relied on for attainment need to be implemented by the beginning of the final full ozone season preceding the attainment date. Thus, to advance attainment to 2009, measures would need to be implemented by the beginning of the 2008 ozone season.

Jersey counties are located. Regardless, the State committed to develop and implement five of these measures as part of its RACT control program and New Jersey has proposed all five of these measures for rulemaking.

4. What Is EPA's Evaluation?

New Jersey evaluated all source categories that could contribute meaningful emission reductions and identified and evaluated an extensive list of potential control measures. The State considered the time needed to develop and adopt regulations and the time it would take to see the benefit from these measures as a further screen of their reasonableness and availability. The State has proceeded with developing several of the measures as part of its RACT control program. EPA has reviewed the RACM analysis and finds that there are no RACM that would advance the moderate area attainment date of 2010 for the two nonattainment areas in which the New Jersey counties are located.

Therefore, EPA is proposing to approve New Jersey's moderate area RACM SIP for the two moderate nonattainment areas in which New Jersey is located.

F. Conformity Budgets

1. What Are the Act Requirements?

The Act requires Federal actions in nonattainment and maintenance areas to "conform to" the goals of SIPs. This means that such actions will not: (a) Cause or contribute to violations of a NAAQS; (b) worsen the severity of an existing violation; or (c) delay timely attainment of any NAAQS. Actions involving Federal Highway Administration (FHWA) or Federal Transit Administration (FTA) funding or approval are subject to the transportation conformity rule (40 CFR part 93, subpart A). Under this rule, metropolitan planning organizations (MPOs) in nonattainment and maintenance areas coordinate with state air quality and transportation agencies, EPA, and the FHWA and FTA to demonstrate that their long range transportation plans ("plans") and transportation improvement programs (TIP) conform to applicable SIPs. This is typically determined by showing that estimated emissions from existing and planned highway and transit projects are less than or equal to the motor vehicle emissions budgets ("budgets") contained in a SIP. The General Conformity regulation (40 CFR part 93, subpart B) requires actions initiated by other Federal agencies in nonattainment and maintenance areas to also conform

to the SIP. One option for Federal agencies to demonstrate conformity is to meet facility-wide emissions budgets that are specified in the SIP. New Jersey has two major Federal facilities for which it has chosen to establish facility-wide emissions budgets.

2. What Conformity Budgets Were Included in the SIP?

Three MPOs cover New Jersey's two ozone nonattainment areas. New Jersey sets budgets per MPO (called "sub-area budgets"), allowing each MPO to make a conformity determination independent of the other two on the

condition that the other MPOs in the same nonattainment area have conforming plans and TIPs in place when the new determination is made. Both the Delaware Valley Regional Planning Commission (DVRPC) and the South Jersey Transportation Planning Organization (SJTPO) reside within the Southern New Jersey Counties. Twelve of the thirteen counties covered by the North Jersey Transportation Planning Authority (NJTPA) are within the Northern New Jersey Counties, while one county (Ocean County) is within the Southern New Jersey Counties. Since

conformity is determined on a nonattainment area basis, New Jersey is designating separate budgets for Ocean County and the remaining 12-county NJTPA area. As these budgets cover separate nonattainment areas, NJTPA may not combine the Ocean County budget with the 12-county budget to make an overall conformity determination in the event that one area is unable to meet its individual budget; however, this does not preclude NJTPA from making a positive conformity finding in the other area. Table 6 lists New Jersey's submitted budgets.

TABLE 6—MOTOR VEHICLE EMISSIONS BUDGETS SUBMITTED BY NEW JERSEY
[Tons per day]

MPO	2008		2009	
	VOC	NO _x	VOC	NO _x
NJTPA (except Ocean County)	85.38	143.60	79.00	133.39
NJTPA (Ocean County only)	6.93	8.69	6.45	12.65
DVRPC	27.75	69.67	25.98	63.66
SJTPO	14.14	32.93	13.04	29.64

Table 7 contains emission budgets for McGuire Air Force Base (AFB) and Lakehurst Naval Air Station (NAS). These budgets were established in

consultation with the United States Air Force and the Navy and will provide McGuire AFB and Lakehurst NAS the operational flexibility necessary to meet

their missions and future missions of the Department of Defense and allow them to meet the requirements of the General Conformity regulation.

TABLE 7—EMISSION BUDGETS FOR MCGUIRE AFB AND LAKEHURST NAS

Base	Year	VOC (tons/year)	NO _x (tons/year)
McGuire AFB	2008	730	1,534
	2009	730	1,534
	2010	730	1,534
	2011	730	1,534
Lakehurst NAS	2008	109	563
	2009	115	639
	2010	122	716
	2011	129	793

3. What Is EPA's Evaluation?

For budgets to be approvable, they must meet, at a minimum, EPA's adequacy criteria (40 CFR 93.118(e)(4)). EPA made an adequacy determination on New Jersey's 2008 and 2009 budgets on July 17, 2008 (73 FR 41068). In our Notice of Adequacy we found that the budgets were "clearly identified and precisely quantified" and were "consistent with applicable requirements.* * *" We also found that the budgets were "consistent with and clearly related to the emissions inventory and the control measures in the submitted control strategy implementation plan revision." The budgets are identical to the projected 2008 and 2009 on-road mobile source emission inventories.

When EPA determines that budgets are adequate for transportation conformity, we note that an adequacy finding does not imply that budgets will ultimately be approved. In our adequacy determination EPA found that the 2009 budgets demonstrate additional progress toward attainment, however, since EPA will be taking action on the attainment demonstration at a later date, EPA will at that time take action on the 2009 budgets. Consistent with our adequacy review of New Jersey's submittal, EPA is proposing to approve New Jersey's 2008 budgets associated with the 2008 RFP budgets. EPA is also proposing to approve the general conformity budgets for McGuire AFB and Lakehurst NAS.

V. What Are EPA's Conclusions?

EPA is proposing to approve the following SIP elements required by the Act: 2008 RFP and associated 2008 ozone projection year emission inventories, contingency measures for failure to meet the 2008 RFP milestone, 2008 conformity budgets used for planning purposes, moderate area RACM analysis, and general conformity budgets.

EPA has reviewed the State's RACT analysis and agrees with the State's conclusions. EPA is proposing to conditionally approve the RACT analysis for the 8-hour ozone NAAQS based on New Jersey's commitment to submit adopted RACT rules for 13 source categories by April 1, 2009. We believe that New Jersey will be able to

meet this commitment because the State has proposed RACT rules for all 13 source categories and has recently adopted a rule for one of these source categories.

EPA is proposing to conditionally approve the RACT analysis based on a commitment submitted by New Jersey. Under section 110(k)(4) of the Act, EPA may conditionally approve a plan based on a commitment from the State to adopt specific enforceable measures by a date certain, but not later than 1 year from the date of approval. If EPA conditionally approves the commitment in a final rulemaking action, the State must meet its commitment to adopt the identified regulations. If the State fails to do so, this action will become a disapproval upon the State's failure to meet its commitment. EPA will notify the State by letter that this action has occurred. If the conditional approval converts to a disapproval, the commitment will no longer be a part of the approved New Jersey SIP. Upon notification of the State that the conditional approval has converted to a disapproval, EPA will publish a notice in the **Federal Register** notifying the public that the conditional approval automatically converted to a disapproval. If the State meets its commitment, within the applicable time frame, the conditionally approved submission will remain a part of the SIP until EPA takes final action approving or disapproving the new SIP revision. If EPA disapproves the RACT SIP submittal, such action will start a sanctions and FIP clock. If EPA approves the submittal, the RACT analysis will be fully approved in its entirety and will replace the RACT conditionally approved into the SIP.

EPA is not taking action at this time on New Jersey's attainment demonstrations for the New York-Northern New Jersey-Long Island, NY-NJ-CT and the Philadelphia-Wilmington-Atlantic City, PA-NJ-MD-DE 8-hour ozone moderate nonattainment areas, but will do so in a future rulemaking.

VI. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this proposed action merely approves state law as meeting Federal requirements and does not

impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a "significant regulatory action" subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the state, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

RIN-2060-A077

Protection of Stratospheric Ozone: Allocation of Essential Use Allowances for Calendar Year 2009

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing to allocate essential use allowances for import and production of Class I ozone-depleting substances (ODSs) for calendar year 2009. Essential use allowances enable a person to obtain controlled Class I ODSs as part of an exemption to the regulatory ban on the production and import of these chemicals, which became effective as of January 1, 1996. EPA allocates essential use allowances for exempted production or import of a specific quantity of Class I substances solely for the designated essential purpose. The proposed allocation in this action is 63.0 metric tons (MT) of chlorofluorocarbons (CFCs) for use in metered dose inhalers (MDIs) for 2009.

DATES: Written comments on this proposed rule must be received by the EPA Docket on or before February 17, 2009, unless a public hearing is requested. Comments must then be received on or before 30 days following the public hearing. Any party requesting a public hearing must notify the contact listed below under **FOR FURTHER INFORMATION CONTACT** by 5 p.m. Eastern Standard Time on January 21, 2009. If a hearing is held, it will take place on February 2, 2009 at EPA headquarters in Washington DC. EPA will post a notice on our Web site (<http://www.epa.gov/ozone>) announcing further information on the hearing if it is requested.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-HQ-OAR-2008-0503, by one of the following methods:

- <http://www.regulations.gov>: Follow the on-line instructions for submitting comments.
- *E-mail:* A-and-R-docket@epa.gov
- *Fax:* 202-566-9744
- *Mail:* Air Docket, Environmental Protection Agency, Mailcode 2822T,

1200 Pennsylvania Ave., NW., Washington, DC 20460.

• *Hand Delivery or Courier.* Deliver your comments to: EPA Air Docket, EPA West 1301 Constitution Avenue, NW., Room 3334, Mail Code 2822T, Washington, DC 20460. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA-HQ-OAR-2008-0503. EPA's policy is that all comments received by the docket will be included in the public docket without change and may be made available online at www.regulations.gov, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information through www.regulations.gov or e-mail that you consider to be CBI or otherwise protected. If you would like the Agency to consider comments that include CBI, EPA recommends that you submit the comments to the docket that exclude the CBI portion but that you provide a complete version of your comments, including the CBI, to the person listed under **FOR FURTHER INFORMATION CONTACT** below. The www.regulations.gov Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through www.regulations.gov your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet.

If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit the EPA Docket Center homepage at <http://www.epa.gov/epahome/dockets.htm>.

Docket: All documents in the docket are listed in the www.regulations.gov index. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute.

Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available either electronically in www.regulations.gov or in hard copy at the Air Docket, EPA/DC, EPA West, Room 3334, 1301 Constitution Ave., NW., Washington, DC. This Docket Facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the Air Docket is (202) 566-1742.

FOR FURTHER INFORMATION CONTACT: Jennifer Bohman, by regular mail: U.S. Environmental Protection Agency, Stratospheric Protection Division (6205), 1200 Pennsylvania Avenue, NW., Washington, DC 20460; by courier service or overnight express: 1301 L Street, NW., Room 1013K, Washington, DC 20005; by telephone: (202) 343-9548; or by e-mail: bohman.jennifer@epa.gov.

I. General Information

A. What should I consider when preparing my comments?

1. *Confidential Business Information.* Do not submit this information to EPA

through www.regulations.gov or e-mail. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD-ROM that you mail to EPA, mark the outside of the disk or CD-ROM as CBI and then identify electronically within the disk or CD-ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for Preparing Your Comments.* When submitting comments, remember to:

- Identify the rulemaking by docket number and other identifying information (subject heading, **Federal Register** date and page number).
- Follow directions—The agency may ask you to respond to specific questions or organize comments by referencing a Code of Federal Regulations (CFR) part or section number.
- Explain why you agree or disagree; suggest alternatives and substitute language for your requested changes.
- Describe any assumptions and provide any technical information and/or data that you used.
- If you estimate potential costs or burdens, explain how you arrived at your estimate in sufficient detail to allow for it to be reproduced.
- Provide specific examples to illustrate your concerns, and suggest alternatives.
- Explain your views as clearly as possible, avoiding the use of profanity or personal threats.
- Make sure to submit your comments by the comment period deadline identified.

II. Basis for Allocating Essential Use Allowances

A. What are essential use allowances?

Essential use allowances are allowances to produce or import certain ozone depleting substances (ODSs) in the U.S. for purposes that have been deemed "essential" by the U.S. Government and by the Parties to the Montreal Protocol on Substances that Deplete the Ozone Layer (Montreal Protocol).

The Montreal Protocol is the international agreement aimed at reducing and eliminating the

production and consumption¹ of ODSs. The elimination of production and consumption of Class I ODSs is accomplished through adherence to phaseout schedules for specific Class I ODSs,² which include CFCs, halons, carbon tetrachloride, and methyl chloroform. As of January 1, 1996, production and import of most Class I ODSs were phased out in developed countries, including the United States.

However, the Montreal Protocol and the Clean Air Act (the Act) provide exemptions that allow for the continued import and/or production of Class I ODSs for specific uses. Under the Montreal Protocol, exemptions may be granted for uses that are determined by the Parties to be "essential." Decision IV/25, taken by the Parties to the Protocol in 1992, established criteria for determining whether a specific use should be approved as essential, and set forth the international process for making determinations of essentiality. The criteria for an essential use, as set forth in paragraph 1 of Decision IV/25, are the following:

"(a) That a use of a controlled substance should qualify as 'essential' only if:

(i) It is necessary for the health, safety or is critical for the functioning of society (encompassing cultural and intellectual aspects); and

(ii) There are no available technically and economically feasible alternatives or substitutes that are acceptable from the standpoint of environment and health;

(b) That production and consumption, if any, of a controlled substance for essential uses should be permitted only if:

(i) All economically feasible steps have been taken to minimize the essential use and any associated emission of the controlled substance; and

(ii) The controlled substance is not available in sufficient quantity and quality from existing stocks of banked or recycled controlled substances, also bearing in mind the developing countries' need for controlled substances."

B. Under what authority does EPA allocate essential use allowances?

Title VI of the Act implements the Montreal Protocol for the United

States.³ Section 604(d) of the Act authorizes EPA to allow the production of limited quantities of Class I ODSs after the phaseout date for the following essential uses:

(1) Methyl Chloroform, "solely for use in essential applications (such as nondestructive testing for metal fatigue and corrosion of existing airplane engines and airplane parts susceptible to metal fatigue) for which no safe and effective substitute is available." Under section 604(d)(1) of the Act, this exemption was available only until January 1, 2005. Prior to that date, EPA issued methyl chloroform allowances to the U.S. Space Shuttle and Titan Rocket programs.

(2) Medical devices (as defined in section 601(8) of the Act), "if such authorization is determined by the Commissioner [of the Food and Drug Administration], in consultation with the Administrator [of EPA] to be necessary for use in medical devices." EPA issues allowances to manufacturers of MDIs that use CFCs as propellant for the treatment of asthma and chronic obstructive pulmonary disease.

(3) Aviation safety, for which limited quantities of halon-1211, halon-1301, and halon-2402 may be produced "if the Administrator of the Federal Aviation Administration, in consultation with the Administrator [of EPA] determines that no safe and effective substitute has been developed and that such authorization is necessary for aviation safety purposes." Neither EPA nor the Parties have ever granted a request for essential use allowances for halon, because alternatives are available or because existing quantities of this substance are large enough to provide for any needs for which alternatives have not yet been developed.

An additional essential use exemption under the Montreal Protocol, as agreed in Decision X/19, is the general exemption for laboratory and analytical uses. This exemption is reflected in EPA's regulations at 40 CFR part 82, subpart A. While the Act does not specifically provide for this exemption, EPA has determined that an exemption for essential laboratory and analytical uses is allowable under the Act as a *de minimis* exemption. The *de minimis* exemption is addressed in EPA's final rule of March 13, 2001 (66 FR 14760-14770). The Parties to the Protocol subsequently agreed (Decision XI/15) that the general exemption does not apply to the following uses: testing of oil and grease, and total petroleum

hydrocarbons in water; testing of tar in road-paving materials; and forensic finger-printing. EPA incorporated this exemption at Appendix G to Subpart A of 40 CFR part 82 on February 11, 2002 (67 FR 6352). In a December 29, 2005 final rule, EPA extended the general exemption for laboratory and analytical uses through December 31, 2007 (70 FR 77048), in accordance with Decision XV/8 of the Parties to the Protocol. At the 19th Meeting of the Parties in September 2007, the Parties agreed to extend the global laboratory and analytical use exemption through December 31, 2011, in Decision XIX/18. In a December 27, 2007 final rulemaking EPA took action to (1) extend the laboratory and analytical use exemption from December 31, 2007 to December 31, 2011 for specific laboratory uses, (2) apply the laboratory and analytical use exemption to the production and import of methyl bromide, and (3) eliminate the testing of organic matter in coal from the laboratory and analytical use exemption (72 FR 73264).

C. What is the process for allocating essential use allowances?

The procedure set out by Decision IV/25 calls for individual Parties to nominate essential uses and the total amount of ODSs needed for those essential uses on an annual basis. The Protocol's Technology and Economic Assessment Panel (TEAP) evaluates the nominated essential uses and makes recommendations to the Parties. The Parties make the final decisions on whether to approve a Party's essential use nomination at their annual meeting. This nomination process occurs approximately two years before the year in which the allowances would be in effect. The allowances proposed for allocation for 2009 were first nominated by the United States in January 2007.

For MDIs, EPA requests information from manufacturers about the number and type of MDIs they plan to produce, as well as the amount of CFCs necessary for production. EPA then forwards the information to the Food and Drug Administration (FDA), which determines the amount of CFCs necessary for MDIs in the coming calendar year. Based on FDA's determination, EPA proposes allocations to each eligible entity. Under the Act and the Montreal Protocol, EPA may allocate essential use allowances in quantities that together are below or equal to the total amount approved by the Parties. EPA will not allocate essential use allowances in amounts higher than the total approved by the Parties. For 2009, the Parties authorized

¹ "Consumption" is defined as the amount of a substance produced in the United States, plus the amount imported into the United States, minus the amount exported to Parties to the Montreal Protocol (see Section 601(6) of the Clean Air Act).

² Class I ozone depleting substances are listed at 40 CFR part 82, subpart A, appendix A.

³ See Section 614(b) of the Act. EPA's regulations implementing the essential use provisions of the Act and the Protocol are located in 40 CFR part 82.

the United States to allocate up to 282 MT of CFCs for essential uses.

III. Essential Use Allowances for Medical Devices

The following is a step-by-step list of actions EPA and FDA have taken thus far to implement the exemption for medical devices found at section 604(d)(2) of the Act for the 2009 calendar year.

1. On January 16, 2008, EPA sent letters to MDI manufacturers requesting the following information under section 114 of the Act ("114 letters"):

- a. The MDI product where CFCs will be used.
- b. The number of units of each MDI product produced from 1/1/07 to 12/31/07.
- c. The number of units anticipated to be produced in 2008.
- d. The number of units anticipated to be produced in 2009.
- e. The gross target fill weight per unit (grams).
- f. Total amount of CFCs to be contained in the MDI product for 2009.
- g. The additional amount of CFCs necessary for production.
- h. The total CFC request per MDI product for 2009.

The 114 letters are available for review in the Air Docket ID No. EPA-HQ-OAR-2008-0503. The companies requested that their responses be treated as confidential business information; for this reason, EPA has placed the responses in the confidential portion of the docket.

2. At the end of January 2008, as required by 40 CFR 82.13(u), EPA received information from MDI manufacturers that included such data as the type and quantity of CFCs held at the end of the year (i.e. stocks of pre-1996 and post-1996 CFCs). The data submitted from the MDI manufacturers is available for review in the Air Docket ID No. EPA-HQ-OAR-2008-0503. The companies requested that their individual responses be treated as confidential business information; for this reason, EPA has placed the individual responses in the confidential portion of the docket.

3. On February 13, 2008, EPA sent FDA the information MDI manufacturers provided in response to the 114 letters and information required by 40 CFR 82.13(u) with a letter requesting that FDA make a determination regarding the amount of CFCs necessary for MDIs for calendar year 2009. This letter is available for review in Air Docket ID No. EPA-HQ-OAR-2008-0503.

4. On April 28, 2008, FDA sent a letter to EPA stating the amount of CFCs

determined by the Commissioner to be necessary for each MDI company in 2009. This letter is available for review in the Air Docket ID No. EPA-HQ-OAR-2008-0503. FDA's letter informed EPA that it had determined that 88.0 MT of CFCs were necessary for use in medical devices in the year 2009.

5. On August 12, 2008, FDA sent a letter to EPA revising its April 28, 2008 essential use determination. FDA's revised letter informed EPA that it had determined that 63.0 MT of CFCs were necessary for use in medical devices for the year 2009. In its letter FDA stated, "This letter revises our recommendations for the amount of CFCs necessary for use in medical devices in the year 2009. The amount of CFCs recommended in our April 28, 2008 letter was based on information available then, that led to assumptions that are now outdated." This letter is available for review in the Air Docket ID No. EPA-HQ-OAR-2008-0503.

With respect to the 2009 determination, FDA stated, "FDA's determination for the allocation of CFCs is lower than the total amount requested by sponsors. In reaching this determination, we took into account the sponsors' production of MDIs that used CFCs as a propellant in 2007, their estimated production in 2008, their estimated production in 2009, their anticipated essential-use allocations in 2008, their current (as of December 31, 2007) stockpile levels, and any intercompany transfers of CFCs. Finally, FDA based its determination for 2009 on an estimate of the quantity of CFCs that would allow manufacturers to have a 12-month stockpile at the end of 2009, in accordance with paragraph 3 of Decision XVI/12 and paragraph 2 of Decision XVII/5."

The letter stated that in making its determination, FDA made the following assumptions:

- All manufacturers will receive the full essential-use allocation proposed by EPA for calendar year 2008 (72 FR 32269, June 12, 2007);
- All manufacturers will procure the full quantity of CFCs allocated to them for 2008; and
- No bulk CFCs currently held by, or allocated to, any manufacturer will be exported from the United States.

EPA has confirmed with FDA that this determination is consistent with Decision XVII/5, including language on stocks that states that Parties "shall take into account pre- and post-1996 stocks of controlled substances as described in paragraph 1(b) of Decision IV/25, such that no more than a one-year operational supply is maintained by that manufacturer." Allowing manufacturers

to maintain up to a one-year operational supply accounts for unexpected variability in the demand for MDI products or other unexpected occurrences in the market and therefore ensures that MDI manufacturers are able to produce their essential use MDIs.

For calendar year 2009, FDA's determination aggregates the amounts of CFC-11, -12, or -114 being allocated to the MDI manufacturer. In its letter FDA stated, "As has generally been our practice, FDA is aggregating the amounts for CFCs, and is providing recommendations on the total amounts of CFCs necessary to protect the public health. FDA expects manufacturers to maintain an appropriate balance of CFCs necessary to produce their CFC MDIs."

In accordance with the FDA determination, today's action proposes to allocate essential use allowances for a total of 63.0 MT of CFCs for use in MDIs for calendar year 2009.

The amounts listed in this proposal are subject to additional review and revision by EPA and FDA if information demonstrates that the proposed allocations are either too high or too low. We specifically request comment on the extent to which the proposed allocation of CFCs is sufficient to protect public health and ensure the manufacture and continuous availability of CFCs necessary to meet the expected demand. We also request comment on whether the proposed allocation, when considered along with current stocks, will best protect consumers by providing a smooth transition to non-CFC alternatives. Commenters requesting increases or decreases of essential use allowances should provide detailed information supporting a claim for additional or fewer CFCs. Any company that needs less than the full amount listed in this proposal should notify EPA of the actual amount needed.

IV. Proposed Allocation of Essential Use Allowances for Calendar Year 2009

TABLE I—ESSENTIAL USE ALLOWANCES FOR CALENDAR YEAR 2009

Company	Chemical	2009 Quantity (metric tons)
(i) Metered Dose Inhalers (for oral inhalation) for Treatment of Asthma and Chronic Obstructive Pulmonary Disease		
Armstrong	CFC-11 or CFC-12 or CFC-114.	63.0

EPA proposes to allocate essential use allowances for calendar year 2009 to the

entity listed in Table I. These allowances are for the production or import of the specified quantity of Class I controlled substances solely for the specified essential use.

V. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review

Under Executive Order (EO) 12866 (58 FR 51735, October 4, 1993), this action is a “significant regulatory action” because it raises novel legal or policy issues. Accordingly, EPA submitted this action to the Office of Management and Budget (OMB) for review under EO 12866 and any changes made in response to OMB recommendations have been documented in the docket for this action.

EPA prepared an analysis of the potential costs and benefits related to this action. This analysis is contained in the Agency’s Regulatory Impact Analysis (RIA) for the entire Title VI phaseout program (U.S. Environmental Protection Agency, “Regulatory Impact Analysis: Compliance with Section 604 of the Clean Air Act for the Phaseout of Ozone Depleting Chemicals,” July 1992). A copy of the analysis is available in the docket for this action and the analysis is briefly summarized here. The RIA examined the projected economic costs of a complete phaseout of consumption of ozone-depleting substances, as well as the projected benefits of phased reductions in total emissions of CFCs and other ozone-depleting substances, including essential use CFCs used for MDIs.

B. Paperwork Reduction Act

This action does not impose any new information collection burden. The recordkeeping and reporting requirements included in this action are already included in an existing information collection burden and this action does not propose any changes that would affect the burden. However, the Office of Management and Budget (OMB) has previously approved the information collection requirements contained in the existing regulations at 40 CFR 82.8(a) under the provisions of the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*, and has assigned OMB control number 2060–0170. The OMB control numbers for EPA’s regulations in 40 CFR are listed in 40 CFR part 9.

C. Regulatory Flexibility Act

The Regulatory Flexibility Act generally requires an agency to prepare a regulatory flexibility analysis of any

rule subject to notice and comment rulemaking requirements under the Administrative Procedure Act or any other statute unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small organizations, and small governmental jurisdictions.

For purposes of assessing the impact of today’s proposed rule on small entities, small entity is defined as: (1) A small business that is primarily engaged in pharmaceutical preparations manufacturing as defined by NAICS code 325412 with less than 750 employees; (2) a small governmental jurisdiction that is a government of a city, county, town, school district or special district with a population of less than 50,000; and (3) a small organization that is any not-for-profit enterprise which is independently owned and operated and is not dominant its field.

After considering the economic impacts of today’s proposed rule on small entities, I certify that this action will not have a significant economic impact on a substantial number of small entities. In determining whether a rule has a significant economic impact on a substantial number of small entities, the impact of concern is any significant adverse economic impact on small entities, since the primary purpose of the regulatory flexibility analyses is to identify and address regulatory alternatives “which minimize any significant economic impact of the rule on small entities.” 5 U.S.C. 603 and 604. Thus, an agency may certify that a rule will not have a significant economic impact on a substantial number of small entities if the rule relieves regulatory burden, or otherwise has a positive economic effect on all of the small entities subject to the rule.

This proposed action will provide an otherwise unavailable benefit to those companies that are receiving essential use allowances by creating an exemption to the regulatory phaseout of chlorofluorocarbons. We have therefore concluded that today’s proposed rule will relieve regulatory burden for all small entities. We continue to be interested in the potential impact of the proposed rule on small entities and welcome comments on issues related to such impacts.

D. Unfunded Mandates Reform Act

This action contains no Federal mandates under the provisions of Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), 2 U.S.C. 1531–1538 for State, local, or tribal

governments or the private sector. The action imposes no enforceable duty on any State, local or tribal governments or the private sector. This action is deregulatory and does not impose any new requirements on any entities. Therefore, this action is not subject to the requirements of sections 202 and 205 of the UMRA. This action is also not subject to the requirements of section 203 of UMRA because it contains no regulatory requirements that might significantly or uniquely affect small governments because this rule merely allocates essential use exemptions to entities as an exemption to the ban on production and import of Class I ODSs.

E. Executive Order 13132: Federalism

Executive Order 13132, titled “Federalism” (64 FR 43255, August 10, 1999), requires EPA to develop an accountable process to ensure “meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.” “Policies that have federalism implications” is defined in the Executive Order to include regulations that have “substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.”

This proposed rule does not have federalism implications. It will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132. Thus, Executive Order 13132 does not apply to this rule.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications, as specified in Executive Order 13175 (65 FR 67249, November 9, 2000). This action does not impose substantial direct compliance costs on Indian tribal governments. Thus, Executive Order 13175 does not apply to this action. EPA specifically solicits additional comment on this proposed action from tribal officials.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

EPA interprets EO 13045 as applying to those regulatory actions that concern health or safety risks, such that the analysis required under section 5–501 of the Order has the potential to influence the regulation. This proposed rule is not

subject to EO 13045 because it implements Section 604(d)(2) of the Clean Air Act which states that the Agency shall authorize essential use exemptions should the Food and Drug Administration determine that such exemptions are necessary.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211 (66 FR 28355 (May 22, 2001)), because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act

Section 12(d) of the National Technology Transfer and Advancement Act of 1995 ("NTTAA"), Public Law 104-113, 12(d) (15 U.S.C. 272 note) directs EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., materials specifications, test methods, sampling procedures, and business practices) that are developed or adopted by voluntary consensus standards bodies. The NTTAA directs EPA to provide Congress, through OMB, explanations when the Agency decides not to use available and applicable voluntary consensus standards. This proposed rule does not involve technical standards. Therefore, EPA did not consider the use of any voluntary consensus standards.

J. Executive Order 12898: Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations

Executive Order (EO) 12898 (59 FR 7629 (Feb. 16, 1994)) establishes federal executive policy on environmental justice. Its main provision directs federal agencies, to the greatest extent practicable and permitted by law, to make environmental justice part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations and low-income populations in the United States.

EPA has concluded that it is not practicable to determine whether there would be disproportionately high and adverse human health or environmental effects on minority and/or low income populations from this proposed rule. EPA believes, however, that this action affects the level of environmental

protection equally for all affected populations without having any disproportionately high and adverse human health or environmental effects on any population, including any minority or low-income population. Any ozone depletion that results from this proposed rule will impact all affected populations equally because ozone depletion is a global environmental problem with environmental and human effects that are, in general, equally distributed across geographical regions.

List of Subjects in 40 CFR Part 82

Environmental protection, Administrative practice and procedure, Air pollution control, Chemicals, Chlorofluorocarbons, Imports, Methyl Chloroform, Ozone, Reporting and recordkeeping requirements.

Dated: January 12, 2009.

Stephen L. Johnson,
Administrator.

40 CFR Part 82 is proposed to be amended as follows:

PART 82—PROTECTION OF STRATOSPHERIC OZONE

1. The authority citation for part 82 continues to read as follows:

Authority: 42 U.S.C. 7414, 7601, 7671–7671q.

Subpart A—Production and Consumption Controls

2. Section 82.8 is amended by revising the table in paragraph (a) to read as follows:

§ 82.8 Grant of essential use allowances and critical use allowances.

(a) * * *

TABLE I.—ESSENTIAL USE ALLOWANCES FOR CALENDAR YEAR 2009

50 CFR Part 648

[Docket No. 080521698-8699-01]

RIN 0648-AW87

Fisheries of the Northeastern United States; Northeast Multispecies Fishery; Secretarial Interim Action

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comment.

SUMMARY: NMFS proposes a temporary Secretarial interim action under the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) to implement measures intended to immediately reduce overfishing in the Northeast (NE) multispecies fishery, while addressing the need to help sustain fishing communities, without compromising rebuilding objectives. Measures proposed for the commercial fishery include the following: A differential days-at-sea (DAS) area north of 41°30' N. lat., whereby a vessel would be charged 2 days for every day fished; a large Southern New England (SNE) Closure Area; and modified groundfish trip limits. This action does not change the scheduled DAS reduction in the NE Multispecies Fishery Management Plan (FMP), which would result in an approximate 18-percent reduction in DAS. For private recreational vessels fishing in the Exclusive Economic Zone (EEZ) and for federally permitted charter/party vessels, this action would extend in time a seasonal prohibition on the possession of Gulf of Maine (GOM) cod, and prohibit the possession of SNE winter flounder. For federally permitted charter/party vessels, this action would implement a trip limit for Georges Bank (GB) cod. In addition, this action proposes to mitigate some of the negative short-term economic impacts of the FMP by making modifications to the DAS Leasing Program, the Regular B DAS Program, and the DAS Transfer Program; continuing the Eastern U.S./Canada Haddock Special Access Program (SAP); and implementing a reduction in the haddock minimum size to 18 inches (45 cm). Finally, this action would specify management measures for the U.S./Canada Management Area for fishing year (FY) 2009.

DATES: Comments must be received by February 17, 2009.

ADDRESSES: You may submit comments, identified by 0648-AW87, by any one of the following methods:

- Electronic Submissions: Submit all electronic public comments via the Federal e-rulemaking portal: <http://www.regulations.gov>.
- Mail: Paper, disk, or CD-ROM comments should be sent to Patricia A. Kurkul, Regional Administrator, National Marine Fisheries Service, 55 Great Republic Drive, Gloucester, MA 01930-2276. Mark the outside of the envelope: "Comments on NE Multispecies Interim Rule."
- Fax: (978) 281-9135.

Instructions: All comments received are part of the public record and will generally be posted to <http://www.regulations.gov> without change. All Personal Identifying Information (for example, name, address, etc.) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.

NMFS will accept anonymous comments (enter "N/A" in the required fields, if you wish to remain anonymous). Attachments to electronic comments will be accepted in Microsoft Word, Excel, WordPerfect, or Adobe PDF formats only.

NMFS prepared an Initial Regulatory Flexibility Analysis (IRFA), which is contained in the Classification section of this proposed rule. Copies of the Environmental Assessment (EA) prepared for this rule may be found at the following internet address: <http://www.nero.noaa.gov/nero/regs/frdoc/08/08MultiInterimEA.pdf>.

FOR FURTHER INFORMATION CONTACT: Thomas Warren, Fishery Policy Analyst, (978) 281-9347, fax (978) 281-9135.

SUPPLEMENTARY INFORMATION: The FMP specifies the management measures for 12 species in Federal waters off the New England and Mid-Atlantic coasts, which are Atlantic cod, haddock, yellowtail flounder, pollock, American plaice, witch flounder, white hake, windowpane flounder, Atlantic halibut, winter flounder, ocean pout, and redfish, comprising a total of 19 individual stocks (groundfish). A major overhaul of the FMP occurred in 2004 with implementation of Amendment 13 and the establishment of rebuilding programs for all stocks managed by the FMP, including specification of status determination criteria for each stock.

Amendment 13 established two different strategies for rebuilding (an adaptive and a phased rebuilding

strategy), and a rebuilding plan for each overfished stock was developed in accordance with one of the two strategies. Under the "adaptive" rebuilding strategy, fishing mortality is held at Fmsy from 2004 through 2008, and then subsequently reduced to the level required to rebuild by the selected end-date of the rebuilding period. In 2008, the effectiveness of the management measures and the validity of the status determination criteria (biological reference points) were fully evaluated. Eight stocks (GOM cod, GB haddock, GOM haddock, SNE/Mid Atlantic (MA) winter flounder, GB yellowtail flounder, redfish, windowpane flounder (southern stock), and ocean pout) are managed under the adaptive rebuilding strategy. In contrast, under the "phased" rebuilding strategy, fishing mortality is allowed to remain above Fmsy at the start of the rebuilding period in 2004, and then reduced sequentially in 2006 and 2009. Five stocks (GB cod, Cape Cod (CC)/GOM yellowtail flounder, SNE/MA yellowtail flounder, American plaice, and white hake) are managed under the phased rebuilding strategy. The end of the rebuilding period for all stocks is 2014, with the exception of GB cod (2026), CC/GOM yellowtail flounder (2023), and redfish (2051).

Amendment 13 also implemented a process whereby the NE multispecies complex is routinely evaluated through a biennial adjustment. This adjustment process provides an update of the scientific information regarding the status of the stocks, and an evaluation of the effectiveness of the regulations. The biennial adjustment provides the New England Fishery Management Council (Council) with information to make adjustments to management measures necessary to modify fishing mortality to comply with the rebuilding schedules and approach optimum yield. The FMP further specified a benchmark stock assessment and review of the biological reference points (stock status determination criteria) in 2008. This planned assessment of the biological reference points (Groundfish Assessment Review Meeting, (GARM III) in 2008) was part of the biennial adjustment process, but was also part of the adaptive rebuilding strategy described above, which sought to evaluate the more fundamental scientific information mid-way through the rebuilding period for most stocks. Although, strictly speaking, the adaptive rebuilding strategy applies to only five stocks, the intent of the Council in scheduling a benchmark assessment in

2008 was an evaluation of the biological reference points for all stocks.

In order to implement these rebuilding strategies, Amendment 13 included default management measures for implementation in FY 2006 and FY 2009, which were designed to reduce fishing mortality on certain stocks, and established criteria to determine conditions under which the default measures would not be triggered. The default measure developed for FY 2009 is a modification to the Category A DAS and Category B DAS ratio from 55:45 to 45:55 (respectively). This decrease in the amount of A DAS represents an 18.2-percent decrease in the number of A DAS a vessel may fish. Amendment 13 noted the challenge of implementing the rebuilding program due to the difficulty of designing effort controls that would precisely achieve the desired fishing mortality reductions for all stocks.

The Council began development of Amendment 16 in 2006 to meet a required May 1, 2009, implementation date because it anticipated that new scientific information from the scheduled 2008 biennial review and benchmark assessment (GARM III) would indicate that additional fishing mortality reductions may be necessary for FY 2009 in order to continue rebuilding at the required rate. At the Council meeting on June 3, 2008, the Northeast Fisheries Science Center (NEFSC) presented preliminary estimates of stock size and fishing mortality in 2006, which indicated that draft effort control measures under development for Amendment 16 were not targeting the correct stocks. Based on this information, the Council decided to wait until receipt of the final GARM III assessment results in September 2008 to design appropriate management measures and hold public hearings.

The Council subsequently developed a revised schedule of development for Amendment 16, which, if approved, would be implemented on May 1, 2010. The Council voted on September 4, 2008, to request that NMFS implement an interim action for the duration of FY 2009 (May 1, 2009–April 30, 2010), and recommended a specific suite of management measures for the interim action. As explained fully under section 12 below, NMFS did not adopt the Council's recommendations for this proposed interim action because it was determined that the Council's recommended alternative was insufficient to end overfishing.

GARM III, completed in August 2008, was an extensive benchmark assessment. GARM III evaluated the

underlying data and models utilized for assessment of the groundfish stocks, evaluated the biological reference points, established new reference points, assessed the biomass and fishing mortality status of the groundfish stocks in 2007, and provided examples of fishing mortality rates that would be expected to rebuild overfished stocks.

Incorporation of new scientific information and revisions to management measures in the FMP, effective May 1, 2009, are necessary to continue rebuilding to comply with the intent of the FMP. However, due to the Council's revised Amendment 16 schedule, such revisions to the FMP would not be implemented, without this interim action.

Section 305(c) of the Magnuson-Stevens Act authorizes the Secretary of Commerce (Secretary) to amend an FMP if the appropriate Council fails to develop and submit to the Secretary any necessary amendment to an FMP if the fishery requires conservation and management. NMFS promulgated guidelines to further clarify how this authority to amend an FMP should be interpreted (63 FR 24212; May 1, 1998). The Secretary, on his/her own initiative,

or in response to a Council request, may implement interim measures to reduce overfishing under section 305(c), until such measures can be replaced by an FMP amendment or regulations taking remedial action. The measures may remain in place for 180 days, but may be extended for an additional 186 days if the public has had an opportunity to comment on the measures.

Because of the need to eliminate and reduce overfishing, as well as to reduce fishing mortality to more closely comply with the FMP rebuilding schedules, NMFS is proposing this interim action. To that end, this action would implement management measures that, as much as practicable, build upon the Amendment 13 default measures and include major elements of the Council's Amendment 16 alternatives, such as differential DAS. Measures that are similar to Amendment 16 would facilitate industry understanding, enable NMFS to administer such short-term measures, and allow vessels to adapt any measures implemented by Amendment 16 if they are adopted. Further, it is important that NMFS can enforce and administer the interim measures, and that such measures are

fair and simple. The proposed interim action management measures are more narrowly focused than what is currently under consideration in the Council's Amendment 16 draft document, which contains measures beyond those designed to reduce fishing mortality, such as inclusion of many new sectors and measures to address new Magnuson-Stevens Act requirements (e.g., annual catch limits and accountability measures). Failure to reduce or prevent overfishing by May 1, 2009, while the Council completes Amendment 16, would likely lead to continued overfishing of several groundfish stocks, resulting in slower rebuilding that would likely require more stringent future measures, with additional economic and social consequences.

A summary of the GARM III results that form the basis for this proposed interim rule is in Table 1 below. Overfishing is occurring on stocks when the fishing mortality to Fmsy ratio (F/Fmsy) is greater than 1.0, and a stock is overfished if the biomass level to Bmsy ratio (B/Bmsy) is equal to or less than 0.5.

TABLE 1. GARM III STOCK STATUS DETERMINATION CRITERIA AND 2007 STATUS

Species	Stock	Fmsy	Bmsy	2007 Fishing Mortality (2007 F/ Fmsy)	2007 Biomass (2007 B/ Bmsy)
Cod	GB	0.2466	148,084	1.2	0.12
	GOM	0.237	58,248	1.9	0.58
Haddock	GB	0.350	158,873	0.49	2.05
	GOM	0.430	5,900	0.8	0.99
Yellowtail flounder	GB	0.254	43,200	1.1	0.22
	SNE/MA	0.254	27,400	1.6	0.13
	CC/GOM	0.239	7,790	1.7	0.25
American plaice		0.190	21,940	0.5	0.51
Witch flounder		0.200	11,447	1.5	0.30
Winter flounder	GB	0.260	16,000	1.1	0.31

Ocean pout		0.760	4.94	0.5	0.10

TABLE 1. GARM III STOCK STATUS DETERMINATION CRITERIA AND 2007 STATUS—Continued

Species	Stock	Fmsy	Bmsy	2007 Fishing Mortality (2007 F/ Fmsy)	2007 Biomass (2007 B/ Bmsy)
Atlantic halibut		0.073	49,000	0.9	0.03

* Pollock and windowpane flounder information was revised subsequent to GARM III in order to utilize 3 yr averages. Pollock is approaching an overfished condition.

Because GARM III revised the biological reference points and the 2007 stock status determination, and the current status of stocks is different from the understanding of stock status based on GARM I and II, it is necessary to utilize new fishing mortality targets that are appropriate to the revised stock status. Therefore, this interim action would utilize the GARM III revised stock status determination as the basis for developing fishing mortality targets in order to be consistent with National Standard 2, which requires that conservation and management measures shall be based upon the best scientific information available.

New rebuilding plans for those stocks recently determined to be overfished or approaching an overfished condition, based on results from GARM III (windowpane flounder (northern stock), GOM and GB winter flounder, witch flounder, and pollock), are not proposed in this interim action, but rather are being considered by the Council in Amendment 16. For these five stocks, the fishing mortality target of the interim action is proposed to be Fmsy, although, as explained later in this preamble, the proposed measures would not achieve this objective for windowpane north.

For those stocks that are either rebuilt (GB haddock) or for stocks where Fmsy would rebuild the stock (GOM haddock, GOM cod, American plaice, redfish), the fishing mortality target for the interim action would be Fmsy. For these stocks, which are currently in rebuilding programs, Fmsy is the appropriate target fishing mortality rate because Fmsy is lower than Frebuild, and the stocks are projected to rebuild to Bmsy within their rebuilding periods.

For stocks currently under rebuilding programs and for which the fishing mortality rate required to rebuild the

stock (Frebuild) is less than Fmsy (GB cod, GB yellowtail, SNE yellowtail, CC yellowtail, SNE winter flounder, white hake), the fishing mortality target under this interim action would be Frebuild, with one exception (noted below).

For GB cod, fishing mortality under this interim action would be reduced to a level less than Fmsy, but would not achieve Frebuild. The two recent stock assessments that pertain to GB cod (GARM III for the entire stock; Transboundary Resource Assessment Committee 2008 for the eastern portion of the stock) were unable to be reconciled with each other, with the assessment of the size of the overall stock relatively low and the assessment of the size of the eastern portion of the stock relatively high. Given the scientific uncertainty, the fact that the fishing mortality of the eastern portion of the stock is strictly controlled through a hard total allowable catch (TAC), and the limited scope of this action, Fmsy is being proposed as the fishing mortality rate target for this stock. However, the fishing mortality rate that would be achieved by the proposed interim action is estimated to be between Fmsy and Frebuild.

GARM III provided example estimates of Frebuild for overfished stocks, making assumptions about the rebuild period end-dates and the starting conditions at the beginning of the rebuilding periods. In doing so, GARM III assumed that the catch in FY 2008 will equal the catch in FY 2007. In contrast, for this interim action, an estimated catch in FY 2008 was used to recalculate the starting conditions in FY 2008, and the Frebuilds. For Amendment 16, the Plan Development Team (PDT) estimated catch for the entire FY 2008 year based upon an extrapolation of landings data for calendar year 2008 through June 2008.

This interim action relies on the PDT's estimated landings for FY 2008 and a derived estimate of fishing mortality for Calendar Year (CY) 2008 and the recalculated Frebuilds. The probabilities associated with the Frebuilds and rebuilding end dates are consistent with the current FMP. Stocks would rebuild with a 50-percent probability, with the exception of GB yellowtail flounder, which has a 75-percent probability of rebuilding by the end of the rebuilding period. The end of the rebuilding period for all stocks with rebuilding plans is 2014, with the exception of GB cod (2026), CC/GOM yellowtail flounder (2023), and redfish (2051). Because the measures to be implemented by this action would begin in FY 2009, an estimate of fishing mortality in CY 2008 more closely represents the starting conditions of the remainder of the rebuilding periods. For GB yellowtail flounder, Frebuild was calculated utilizing an assumed catch in CY 2008 of 2,500 mt.

In a similar manner, in order to calculate the amount of reduction in fishing mortality required for pertinent stocks, the estimated fishing mortality in CY 2008 was considered as the starting condition. For example, in order to calculate the required fishing mortality reduction for the CC/GOM stock of yellowtail flounder, Frebuild (0.238) was compared to F 2008 (0.289). An 18-percent reduction in fishing mortality is required to reduce F from 0.289 in CY 2008 to achieve an Frebuild of 0.238 in CY 2009. Table 2 below summarizes information on the CY 2008 fishing mortality, the fishing mortality goal of the interim action, and the percentage fishing reduction objective to reduce fishing mortality from the starting conditions (F 2008) to the fishing mortality rate goal.

TABLE 2. FISHING MORTALITY REDUCTION OBJECTIVES FOR THE PROPOSED INTERIM ACTION

Species	Stock	2008 F	Fishing Mortality Rate Goal	Value Associated with Fishing Mortality Rate Goal	Fishing Mortality Rate Reduction Objective
Cod	GB	0.410	Fmsy	0.2466	- 40 %
	GOM	0.300	Fmsy	0.237	- 21 %

Proposed Management Measures

All measures in effect prior to May 1, 2009, including the default measures relating to DAS reductions scheduled to go into place and not amended by this proposed interim rule, would remain in effect on and after May 1, 2009. This proposed interim action would implement management measures to reduce fishing mortality on the commercial and recreational fisheries, without compromising rebuilding objectives, as well as revise various management programs in order to mitigate the negative economic and social impacts of the FMP to ensure consistency with National Standards and required provisions of the Magnuson-Stevens Act and to enhance the likelihood of compliance with the measures. Routine specification of TAC and annual specifications for the U.S./Canada Management Area are also proposed. As is more fully discussed later in this document, these measures would result in both quantifiable and non-quantifiable reductions in fishing mortality for virtually all of the NE multispecies stocks managed under the FMP.

The proposed interim measures are designed to work in conjunction with the current FMP to achieve the fishing mortality requirements of the FMP. The analysis of this action presumes that the proposed measures would be in effect throughout FY 2009, and that a subsequent management action (Amendment 16) will be implemented on May 1, 2010. The current FMP management measures include a FY 2009 default measure that will change the allocation ratio of Category A:B DAS from 60:40 to 55:45. This measure, therefore, is not discussed specifically in the description of the proposed interim measures that follows. NMFS anticipates that, if approved and implemented, this interim action may be renewed upon expiration for an additional 185 days, given that the Council does not anticipate the implementation of Amendment 16 until May 2010. The Council also recommended to NMFS that any interim action should be in effect for all of FY 2009. The following measures are proposed to be implemented on May 1, 2009, to reduce overfishing.

Commercial Measures

1. Differential DAS Counting

Under this proposed interim action, the existing differential DAS areas in the GOM and SNE would no longer apply, and a single, larger differential DAS area would be implemented in the entire GOM and in the northern portion of GB, north of 41° 30'N. lat. For the revised Interim Differential DAS Area, the DAS accrual rate would be 2:1. In other words, under this action, if a vessel declares into the Interim Differential DAS Area for 10 hr, the vessel's DAS balance would be debited 20 hr. A vessel would not be charged at the differential DAS rate if it declared and transited to another area outside of the Interim Differential DAS Area. For example, if a vessel steams through the Interim Differential DAS Area on its way to and from the fishing grounds in the southern portion of the U.S./Canada Management Area, where DAS are not counted differentially, it would not be charged at the 2:1 rate for part of the trip spend steaming through the Interim Differential DAS Area. If a vessel declared and fished both inside the Interim Differential DAS Area and

outside that area on the same trip, it would be charged differential DAS (2:1) for all the DAS accrued on that trip.

The interaction of current groundfish and non-groundfish regulatory programs and the different DAS counting rules would remain unchanged under this action (e.g., the cod running clock, Day Gillnet Category rules, the application of per DAS possession limits, the Eastern U.S./Canada Area rules, use of Regular B DAS, and monkfish/groundfish permitted vessels fishing under a NE multispecies DAS). For example, vessels fishing in the Interim Differential DAS Area and the Eastern U.S./Canada Management Area (exclusively) would be charged at the differential DAS rate of 2:1, but would not be charged steaming time to or from the area. For vessels fishing in multiple geographic areas where different rules apply to each area (such as differential DAS and trip limits), the most restrictive rule would apply for the entire trip. The current regulations that allow monkfish Category C and D vessels to fish as a monkfish Category A or B vessel, and land monkfish under certain conditions, would still apply.

As under the current regulations, vessels would be required to declare, prior to leaving port, their intent to fish in the Interim Differential DAS Area, via Vessel Monitoring System (VMS). The VMS declaration screens would be modified slightly to accommodate the fact that the southern border of the Interim Differential DAS Area divides the U.S./Canada Management Area into two portions. For example, a vessel intending to fish in the Eastern U.S./Canada Area would also have to specify whether it would also fish in the Interim Differential DAS Area.

The Interim Differential DAS Area is proposed as a means to reduce fishing mortality on multiple stocks instead of further reductions in DAS allocations in order to provide flexibility for vessel owners.

2. SNE Closure Area

The area in SNE between 40° 30' and 41° 30' N. lat., and west of 68° 30' W. long. to the shore, including Nantucket Sound (30-minute square blocks of 97–107 and 80–90) would be closed to federally permitted groundfish vessels (both open access and limited access) when fishing on groundfish, with the exception of NE multispecies vessels using hook gear, provided such vessels do not retain winter flounder, and provided the vessels have only hook gear on board. This interim rule proposes that groundfish vessels using only hook gear on a particular trip may fish in the SNE Closure Area because

the catch rate of winter flounder is likely to be very low. Non-groundfish commercial trips fishing in exempted fisheries (e.g., summer flounder, scallop, and skate exemptions), or using exempted gear, could also fish in the SNE Closure Area. NE multispecies vessels not fishing in the SNE Closure Area would be allowed to transit through the area, provided all fishing gear is properly stowed. The SNE Closure Area is proposed as a means to reduce fishing mortality on SNE winter flounder primarily, but would also reduce fishing mortality on other stocks such as SNE/MA yellowtail flounder.

3. Modified Trip Limits

Under this interim rule, the current white hake possession limit of 1,000 lb (454 kg) per DAS would be increased to 2,000 lb (907 kg) per DAS, with the same maximum of 10,000 lb (4,536 kg) per trip, and the trip limit for GB winter flounder, currently 5,000 lb (2,268 kg) per trip, would be removed. No retention of any fish would be allowed for SNE winter flounder, northern windowpane flounder, or ocean pout. Vessels fishing for winter flounder or windowpane flounder in multiple stock areas would be subject to the most restrictive possession limit for the pertinent species. In other words, if a vessel fishes in the SNE winter flounder stock area and the GB winter flounder stock area on the same trip, the vessel would be subject to the prohibition on retention for that trip. Lastly, as explained further under item 7 (“Annual Specifications for U.S./Canada Management Area”), a limit of 5,000 lb (2,268 kg) of GB yellowtail flounder per trip would be specified. Modifications to trip limits are proposed as a means to reduce fishing mortality or increase yield because they are a management tool that can effectively target particular stocks and are an important component of the current FMP.

4. Specification of Target TACs

Target TACs are utilized in the FMP as one method of evaluating the success of management measures and providing a way to make simple comparisons between different fishing years. Secondly, target TACs form the basis of calculating allocations of GB cod to sectors, and the basis of calculating the incidental catch TACs for the Special Management Programs. Table 3 lists the target TACs for FY 2009, based upon GARM III data and estimated CY 2008 fishing mortalities.

TABLE 3. TARGET TACs (MT) FOR FY 2009

Species	Stock	Target TAC
Cod	GB	3,506
Cod	GOM	10,327
Haddock	GB	86,520
Haddock	GOM	1,564
Yellowtail flounder	GB	1,617
Yellowtail flounder	SNE/MA	389
Yellowtail flounder	CC/GOM	860
Plaice		3,214
Witch flounder		928
Winter flounder	GB	2,004
Winter flounder	GOM	379
Redfish		8,614
White hake		2,376
Pollock		6,486
Windowpane flounder N.		299
Windowpane flounder S.		338
Halibut		68

* A hard TAC, set through a separate process described in item 6.

5. Revisions to Incidental Catch TACs and Allocations to Special Management Programs

This proposed interim action would revise the specification of incidental catch TACs applicable to the Special Management Programs of the FMP based upon the most recent scientific information. Incidental catch TACs are specified for certain stocks of concern for Special Management Programs in order to limit the amount of catch of stocks of concern that can be caught under such programs, and to fully account for fishing mortality. The incidental catch TACs apply to catch (landings and discards) caught under Category B DAS (either Regular or Reserve B DAS) on trips that end on a Category B DAS. The catch of stocks for which incidental catch TACs are specified on trips that start under a Category B DAS and then flip to a Category A DAS do not accrue toward such TACs.

A stock of concern is defined as a stock that is in an overfished condition or subject to overfishing. Due to the revised status of stocks (GARM III) that would be adopted under this action, an incidental catch TAC would no longer be appropriate for American plaice, because it would no longer be considered a stock of concern. Further, new incidental catch TACs would be required for GOM winter flounder and pollock, because they would now be considered stocks of concern. The percentages that the TACs are currently based on would remain unchanged, with the exception of witch flounder, which would be reduced from 5-percent to 2-percent, due to its new

proposed status and the fact that the fishing mortality rate and total catch need to be reduced. The incidental catch TACs for GOM winter flounder would be set at 5-percent, based on the rationale described in Framework (FW) 40A to the FMP: If the recent catch levels are less than the expected future catch levels, and proposed management measures are likely to achieve more than the required reduction in fishing mortality, then the size of an incidental catch TAC relative to the size of the overall TAC is larger (set as a larger percent). The incidental catch TAC for pollock would be set at 5-percent because of the prevalence of pollock catch in the Special Management

Programs, and based upon the rationale cited above. The utility of the Special Management Programs would be severely constrained if the incidental catch TAC is set too low. The number of total incidental catch TACs would increase from the current number (8), to 10. Due to the severe fishing mortality reduction necessary for the SNE/MA stock of winter flounder, no retention of this stock would be allowed under this alternative, and there would be no incidental catch TAC specified (see additional discussion under item 10, Mitigating Measures). The calculation of incidental catch TACs by stock based on the target TACs is shown in Table 4.

TABLE 4. INCIDENTAL CATCH TACs FOR FY 2009

Stock	Percentage of Total TAC	Initial TAC	Incidental TAC
GB cod	2	3,506	70.1
GOM cod	1	10,327	103.3
GB yellowtail	2	1,617	32.3
CC/GOM yellowtail	1	860	8.6
SNE/MA yellowtail	1	389	3.9
Pollock	5	6,486	324.3
Witch flounder	2	928	18.6
GB winter flounder	2	2,004	40.1
White hake	2	2,376	47.5
GOM winter	5	379	19.0

This proposed rule would also modify the allocation of the incidental catch TACs to the various Special Management Programs due to the change in status of stocks, as well as to optimize the design of the programs based on the operation of the programs since their inception. For example, the Eastern U.S./Canada Haddock SAP was not used at all in FY 2007, and only two trips were taken in the area in FY 2006.

Therefore, the percent allocations to this SAP would be reduced for GB cod, GB yellowtail, and GB winter flounder, and the percent allocation to the Regular B DAS Program would be increased due to higher participation in that program historically. Secondly, this rule would provide the Administrator, Northeast Region, NMFS (Regional Administrator) the authority to modify the allocations among programs in-season, or prior to

the beginning of the season, because it is difficult to estimate the appropriate TAC since the level of participation and rate of catch of stocks of concern in the various programs is highly variable. The proposed changes to the allocations are summarized in Table 5. Table 6, contains the incidental catch TACs that result from applying the percentages in Table 5 to the incidental TACs in Table 4.

TABLE 5. MODIFICATIONS TO THE INCIDENTAL CATCH TAC ALLOCATIONS FOR FY 2009

Stock	Regular B DAS Program		Eastern U.S./Canada Haddock SAP		Closed Area I Hook Gear Haddock SAP

6. Annual Specifications for U.S./Canada Management Area

In consultation with the Council, NMFS annually implements management measures for the U.S./Canada Management Area through proposed and final rules. For FY 2009, because NMFS will also be proposing management measures for the entire fishery to reduce fishing mortality as described above and expects to implement measures for the entire FY 2009, NMFS is including the specification of the TACs and other measures for the U.S./Canada Management Area in this proposed rule in order to streamline the regulatory process.

The FMP specifies a procedure for setting annual hard TAC levels (i.e., the fishery or area closes when a TAC is reached) for Eastern GB cod, Eastern GB

haddock, and GB yellowtail flounder in the U.S./Canada Management Area. The regulations governing the annual development of TACs were implemented by Amendment 13 to the FMP in order to be consistent with the U.S./Canada Resource Sharing Understanding (Understanding), which is an informal (i.e., non-binding) understanding between the Northeast Region of NMFS and the Maritimes Region of the Department of Fisheries and Ocean of Canada (DFO) that outlines a process for the management of the shared GB groundfish resources. The Understanding specifies an allocation of TAC for these three stocks for each country, based on a formula that considers historical catch percentages and current resource distribution.

Annual TACs are determined through a process involving the Council, the

Transboundary Management Guidance Committee (TMGC), and the U.S./Canada Transboundary Resources Steering Committee. In September 2008, the TMGC approved the 2008 Guidance Document for Eastern GB cod, Eastern GB haddock, and GB yellowtail flounder, which included recommended U.S. TACs for these stocks. The recommended FY 2008 TACs were based upon the most recent stock assessments TRAC Status Reports for 2008), and the fishing mortality strategy shared by both NMFS and DFO. The strategy is to maintain a low to neutral (less than 50-percent) risk of exceeding the fishing mortality limit reference ($F_{ref} = 0.18, 0.26, \text{ and } 0.25$ for cod, haddock, and yellowtail flounder, respectively). When stock conditions are poor, fishing mortality rates should be further reduced to promote rebuilding.

The TMGC concluded that the most appropriate combined U.S./Canada TAC for Eastern GB cod for FY 2009 is 1,700 mt. This corresponds to a low risk (less than 25-percent) of exceeding the Fref of 0.18 (i.e., Fmsy) in 2009. However, due to poor recruitment, there is a high risk (greater than 75-percent) that stock biomass will not increase from CY 2009 to CY 2010. The annual allocation shares between countries for FY 2009 are based on a combination of historical catches (15-percent weighting) and resource distribution based on trawl surveys (85-percent weighting). Combining these factors entitles the United States to 31-percent of the shared TAC and Canada to 69-percent, resulting in a national quota of 527 mt for the United States and 1,173 mt for Canada.

For Eastern GB haddock, the TMGC concluded that the most appropriate combined U.S./Canada TAC for FY 2009 fishing year is 30,000 mt. This represents a low to neutral risk (greater

than 25-percent but less than 50-percent) of exceeding the Fref of 0.26. Adult biomass is projected to peak at 158,000 mt in CY 2008 (reflecting the recruitment and growth of the exceptional 2003 year class), and decline to 131,000 mt in 2010. The annual allocation shares between countries for FY 2009 are based on a combination of historical catches (15-percent weighting) and resource distribution based on trawl surveys (85-percent weighting). Combining these factors entitles the United States to 37-percent of the shared TAC and Canada to 63-percent, resulting in a national quota of 11,100 mt for the United States and 18,900 mt for Canada.

For GB yellowtail flounder, the TMGC concluded that the most appropriate combined U.S./Canada TAC for the 2009 fishing year is 2,100 mt. This corresponds to an F of 0.11, lower than the Fref of 0.25, and is consistent with the fishing mortality required to rebuild GB yellowtail flounder by 2014. With a

catch of 2,100 mt in 2009, the age 3+ biomass is expected to increase by about 21-percent. The annual allocation shares between countries for 2008 are based on a combination of historical catches (15-percent weighting) and resource distribution based on trawl surveys (85-percent weighting). Combining these factors entitles the U.S. to 77-percent of the shared TAC and Canada to 23-percent, resulting in a national quota of 1,617 mt for the U.S. and 483 mt for Canada.

On October 8, 2009, the Council approved, consistent with the 2008 Guidance Document, the following U.S./TACs recommended by the TMGC: 527 mt of Eastern GB cod; 11,100 mt of Eastern GB haddock; and 1,617 mt of GB yellowtail flounder. The proposed 2009 fishing year TACs for the U.S./Canada Management Area represent a decrease for cod and yellowtail flounder, and an increase for haddock compared with those specified for the 2008 fishing year (Tables 7 and 8).

TABLE 7. 2009 U.S./CANADA TACS (MT) AND PERCENTAGE SHARES (IN PARENTHESES)

	GB Cod	GB Haddock	GB Yellowtail Flounder
Total Shared TAC	1,700	30,000	2,100
U.S. TAC	527 (31%)	11,100 (37%)	1,617 (77%)
Canada TAC	1,173 (69%)	18,900 (63%)	483 (23%)

TABLE 8. 2008 U.S./CANADA TACS (MT) AND PERCENTAGE SHARES (IN PARENTHESES)

	GB Cod	GB Haddock	GB Yellowtail Flounder
Total Shared TAC	2,300	23,000	2,500
U.S. TAC	667 (29%)	8,050 (35%)	* 1,950 (78%)
Canada TAC	1,633 (71%)	14,950 (65%)	550 (22%)

* Adjusted downward to 1,868.7 mt due to overharvest of 2007 TAC

The 2009 TACs are based upon stock assessments conducted in June 2008 by the TRAC. The proposed TACs are consistent with the results of the TRAC and the TMGC's harvest strategy, as well as the GB yellowtail flounder rebuilding plan implemented by FW 42. The regulations for the Understanding, promulgated by the final rule implementing Amendment 13, state that "Any overages of the GB cod, haddock, or yellowtail flounder TACs that occur in a given fishing year will be subtracted from the respective TAC in the following fishing year."

Therefore, should an analysis of the catch of the shared stocks by U.S. vessels indicate that an over-harvest occurred during FY 2008, the pertinent TAC would be adjusted downward in order to be consistent with the FMP and Understanding. Although it is very unlikely, it is possible that a very large over-harvest could result in an adjusted

TAC of zero. If an adjustment to one of the FY 2008 TACs of cod, haddock, or yellowtail flounder is necessary, the public will be notified through publication in the **Federal Register** and through a letter to permit holders.

NMFS is also proposing, through the authority granted to the Regional Administrator by the FMP, measures to optimize the harvest of the shared resources. The regulations under § 648.85(a)(3)(iv)(D) provide the Regional Administrator the authority to implement in-season adjustments to various measures in order to prevent over-harvesting, or to facilitate achieving the TAC.

Based on the Council's vote to postpone the opening of the Eastern U.S./Canada Area for vessels fishing with trawl gear in FY 2008 from May 1, 2008, to August 1, 2008, and the success of this management measure in slowing the annual catch rate of cod during the

early part of the year, NMFS is proposing this same measure for FY 2009. Thus, the FY 2009 opening of the Eastern U.S./Canada Area for trawl vessels would be postponed from May 1, 2009, until August 1, 2009, while allowing more selective longline gear access during May through July. Such vessels would be limited to a cod catch of 5-percent of the cod TAC, or 26.4 mt of cod. The objective of the proposed action is to prevent trawl fishing in the Eastern U.S./Canada Area during the time period when cod bycatch is likely to be very high. The goal of this measure is to prolong access to this area in order to maximize the catch of available cod, haddock, and yellowtail flounder.

Secondly, the Regional Administrator is proposing implementation of a possession limit of 5,000 lb (2,268 kg) per trip for GB yellowtail flounder. Although the regulations under § 648.86(a)(3)(iv)(C) indicate an initial

trip limit of 10,000–lb (4,536 kg) at the beginning of a fishing year for GB yellowtail flounder, based on the yellowtail flounder catch rate from the U.S./Canada Management Area under a 5,000–lb (2,268–kg) trip limit during FY 2008, and analyses conducted by NMFS during FY 2007, a 5,000–lb (2,268–kg) trip limit would be an appropriate trip limit to allow harvesting of the TAC and increase the likelihood that further restrictions will not be necessary during the fishing year to slow the catch rate.

Third, the Regional Administrator is proposing to allow the use of the Ruhle Trawl in the Eastern U.S./Canada Area. Under current regulations, only a flounder net and the haddock separator trawl are permanently authorized for such use. The trawl, which is a modified trawl that substantially reduces the catch rate of most stocks of concern, was approved for use in the Regular B DAS Program and the Eastern U.S./Canada Haddock SAP (73 FR 40186, July 14, 2008). Approval of the use of the Ruhle trawl in the Eastern U.S./Canada Area would provide another alternative for trawl vessel operators and, therefore, provide additional flexibility. As detailed in the July 14, 2008 rule, the Ruhle trawl has been demonstrated to substantially reduce catch of many species of groundfish, and therefore its use would be consistent with the management objectives for the Eastern U.S./Canada Area.

Lastly, the Regional Administrator is proposing zero trips into the Closed Area (CA) II Yellowtail Flounder SAP during FY 2009, based on a determination that the available TAC of GB yellowtail flounder is insufficient to support a minimum level of fishing activity within the CA II SAP. The Regional Administrator has the authority to determine the allocation of the total number of trips into the CA II SAP based upon several criteria, including: GB yellowtail flounder TAC level and the amount of GB yellowtail flounder caught outside of the SAP. As implemented by FW 40B, zero trips to this SAP should be allocated if the available GB yellowtail flounder catch is not sufficient to support 150 trips with a 15,000–lb (6,804–kg) trip limit (i.e., if the available GB yellowtail flounder catch is less than 1,021 mt). This calculation takes into account the projected catch from the area outside of the SAP. Based on the estimate for catch outside of the SAP utilized for FY 2008 (1,376 mt), and the proposed GB yellowtail flounder TAC for FY 2009 (1,617 mt), there is insufficient available catch to allow the SAP to proceed (i.e., $1,617 - 1,376 = 241$; $241 < 1,021$ mt).

7. Haddock TAC for CA I Hook Gear Haddock SAP

Under this action, a haddock TAC for the CA I Hook Gear Haddock SAP would be specified based upon the GARM III stock assessment and a formula implemented in FW 42. The haddock TAC in a particular year is based upon the TAC that was specified for the SAP in 2004 (1,130 mt), and scaled according to the size of the exploitable biomass of western GB haddock compared to the biomass size in 2004 (35,317 mt). The size of the western component of the GB haddock stock is estimated as 35-percent of the size of the total GB haddock stock. Therefore, if the 2007 exploitable biomass of haddock is 321,870 mt, the formula and resultant TAC would be as follows: $((.35)(321,870)/35,317) \times 1,130 = 3,604.5$ mt.

8. Elimination of the SNE/MA Winter Flounder SAP

The SNE/MA Winter Flounder SAP currently allows a limited access NE multispecies vessel fishing for summer flounder west of 72° 30' W. long. to retain up to 200 lb (91 kg) of winter flounder while not under a NE multispecies DAS, provided the vessel complies with various restrictions. Due to the severely depleted status of SNE/MA winter flounder, and the goal of reducing fishing mortality to as close to zero as practicable, this SAP would be eliminated. Because the SAP could enable limited targeting of winter flounder, elimination of the SAP may prevent some catch of winter flounder from occurring.

9. Elimination of the State Waters Winter Flounder Exemption

The State Waters Winter Flounder Exemption currently allows vessels issued a NE multispecies permit to fish in state waters for winter flounder using gear with mesh smaller than required for other vessels in the fishery (provided various requirements and criteria are met). Due to the severely depleted status of the SNE/MA winter flounder stock, and the goal of reducing fishing mortality to as close to zero as practicable, this SAP would be eliminated. Because the SAP could enable limited targeting of winter flounder, elimination of the SAP may prevent some catch of winter flounder from occurring.

10. Mitigating Measures

Reduction of Haddock Minimum Size. Under this interim action, the haddock minimum size would be reduced to 18 inches (45 cm) for both the commercial and recreational fisheries in order to

increase yield and decrease bycatch (as defined by the Magnuson-Stevens Act). Information from GARM III indicates that the GB stock is very large and is rebuilt, while the GOM stock is 99-percent rebuilt. Furthermore, a portion of the large 2003 year class of haddock is still below the current 19-inch (47.5-cm) minimum size. A reduced minimum size for haddock would allow vessels to retain additional haddock, thereby increasing yield for this species. Other recreational measures are described under item 11.

Extension of the Eastern U.S./Canada Haddock SAP. The Eastern U.S./Canada Haddock SAP, which is set to expire at the end of FY 2008 on April 30, 2009, would be extended through this proposed interim action, in order to continue to facilitate access to GB haddock. This SAP allows vessels fishing with trawl gear to fish in a portion of the Eastern U.S./Canada Area, including a section of the northern portion of CA II (the “triangle”), under a Regular B DAS or a Reserve B DAS. This SAP allows a vessel to utilize a Category B DAS and fish in the “triangle” that is not otherwise accessible. The geographic area would remain unchanged, and the rules that apply would remain unchanged, with the exception of the reallocation of the incidental catch TACs (see Table 5).

When fishing in this SAP, vessels must currently fish with either a haddock separator trawl or a Ruhle Trawl, and are subject to restrictive possession limits in order to provide an incentive to correctly use the specialized trawl gear to help minimize bycatch of stocks of concern. Catch of stocks of concern on trips that end under a B DAS count toward the incidental catch TACs specified for pollock, GB cod, GB winter flounder, and GB yellowtail flounder (see Table 6). The total amount of these stocks of concern caught is limited by these incidental catch TACs and the program is typically subject to a higher level of observer coverage than the NE multispecies fishery at large. Furthermore, there are specialized rules that are required when fishing in this SAP, including those regarding observer notification, VMS declaration, reporting requirements, and a no discard provision.

Modifications to the Regular B DAS Program. The Regular B DAS Program was designed to provide opportunities to target healthy stocks without threatening stocks for which a mortality reduction is required. The program allows the use of Regular B DAS, provided the Program requirements designed to minimize impacts of stocks

of concern are met. Under this proposed rule, in addition to the modifications proposed under item 5 (Revisions to Incidental Catch TACs and Allocations to Special Management Programs), several revisions would be made to the Regular B DAS Program in order to address the current status of stocks and necessary reductions to fishing mortality, as well as to maintain the usefulness of the Regular B DAS Program. Under current regulations, the Regional Administrator has the authority to close the Regular B DAS Program if it is projected that continuation of the Regular B DAS Program would undermine the achievement of the objectives of the FMP. In addition to monitoring the incidental TACs proposed under item 5, NMFS would closely monitor the level of discarding of stocks that are proposed to have zero retention, but for which there is no incidental TAC proposed (i.e., SNE/MA winter flounder, northern windowpane flounder, and ocean pout) to ensure that fishing mortality objectives for all stocks are not jeopardized.

In order to prevent the quarterly incidental catch TACs from limiting the usefulness of the program, any quarterly incidental catch TAC that remains uncaught from quarters one, two, and three would roll over into the subsequent quarter.

Due to the number of flatfish stocks that need reductions in fishing mortality, the use of low profile (tie-down) gillnets under this interim action would be prohibited on trips fishing under the Regular B DAS Program. Within the NE multispecies fishery, flatfish are traditionally targeted by reducing the vertical height of bottom-set gillnets by tying the floatline of a gillnet to the leadline, or modifying the construction of the floatline to reduce or eliminate its buoyancy. Thus, because most stocks of concern are flatfish and targeting stocks of concern is not consistent with the goals of the Regular B DAS Program, the use of low profile gillnet gear would be prohibited under this Program. The use of gillnet gear to catch haddock would still be allowed.

Under current regulations, when 100 percent of the Incidental Catch TAC for white hake has been harvested, vessels fishing under a Regular B DAS are prohibited from retaining white hake. This is in contrast to the rules pertaining to the other Incidental Catch TACs in the Regular B DAS Program, whereby when the TAC is projected to be harvested, the use of Regular B DAS are prohibited in the pertinent stock area for the duration of the quarter. This proposed interim rule would treat

pollock and witch flounder in the same manner as white hake. Therefore, when 100 percent of the Incidental Catch TAC for white hake, pollock, or witch flounder has been harvested, vessels fishing under a Regular B DAS would be prohibited from retaining white hake, pollock, or witch flounder, respectively. Because white hake, pollock, and witch flounder have stock areas that cover the GOM, GB, and SNE/MA areas, if the harvest of the TAC were to trigger a shutdown of the pertinent stock area, the entire Regular B DAS Program would be shut down. The Regional Administrator would be provided the authority to modify the pertinent possession restriction, or implement other measures, including a partial closure for the Regular B DAS Program, in order to prevent excessive discarding of the stock.

DAS Leasing Program Modifications. Under this proposed rule, the current prohibition on leasing DAS between sector and common pool vessels would be eliminated in order to increase flexibility and efficiency in the DAS leasing market. Secondly, the limit on the maximum number of DAS that a vessel sector and common-pool vessels may lease would be eliminated. Amendment 13 implemented a restriction that a lessee may lease Category A DAS in an amount up to the vessel's FY 2001 allocation (excluding carry-over DAS from the previous year, or additional DAS associated with obtaining a Large Mesh permit). This restriction would be removed in order to increase flexibility and efficiency in the DAS leasing market. These mitigation measures, including the DAS Transfer Program modifications described below, would also enhance the likelihood of compliance with the measures by providing additional fishing opportunities.

DAS Transfer Program Modifications. Under this proposed rule, the DAS conservation tax would be removed from the DAS Transfer Program. Specifically, the mandatory reduction of Category A and B DAS (20 percent), and Category C DAS (90 percent), would no longer apply when vessels participate in the DAS Transfer Program. The Council, is expected to propose modifications to the DAS Transfer Program in Amendment 16 in order to provide an additional incentive to permanently transfer groundfish DAS, provide for parity of the DAS Transfer Program with the DAS Leasing Program, facilitate consolidation of permits, and provide flexibility for vessels to mitigate the negative impacts of DAS reductions and other management measures. NMFS is proposing this temporary modification

to the program for the same reasons the Council is expected to propose such changes. The limited duration of the tax-free period (due to the limited duration of the proposed interim action) would limit the amount of any effect the change may have on increasing the overall DAS use rate. NMFS is not proposing a DAS tax refund, because it would be counter to the regulations that have been in place.

11. Recreational Measures

This action proposes to reduce fishing mortality on the GOM cod, GB cod, and SNE winter flounder fisheries for private recreational vessels fishing in the EEZ and for federally permitted charter/party vessels, commensurate with the reduction proposed for the commercial fishery. Following are the recreational measures proposed under this action: The current seasonal prohibition on the possession of GOM cod for both private recreational and charter/party vessels would be extended from its current duration of November through March, to November through April 15. Secondly, this action would implement a GB cod trip limit of 10 cod per person per day for charter/party vessels, consistent with the GB cod trip limit for private recreational vessels. Retention of winter flounder caught in the SNE/MA stock area would be prohibited for both private recreational and charter/party vessels. Recreational vessels in possession of winter flounder caught outside of the SNE/MA winter flounder stock area could transit this area, provided all bait and hooks are removed from fishing rods, and any winter flounder on board has been gutted and stored. Lastly, as a mitigation measure as further described above, the minimum size for haddock caught by recreational vessels fishing in the EEZ and federally permitted charter/party vessels would be reduced to 18-inches (45.7-cm).

12. Council's Recommended Measures for Interim Action Considered, but Rejected

At its September 4, 2008, meeting, the Council recommended that NMFS implement an interim action for the duration of FY 2009 and proposed specific management measures. The Council's alternative proposed an 18-percent default DAS reduction; and target TACs for GB yellowtail flounder, SNE/MA yellowtail flounder, CC/GOM yellowtail flounder, American plaice, witch flounder, GB winter flounder, GOM winter flounder, redfish, white hake, pollock, GB cod, and GOM cod. The Council's proposed TACs were those associated with Frebuild for all

stocks except for the two cod stocks, which would be the TACs associated with Fmsy, and the TAC for SNE/MA winter flounder, which would be lower than that associated with Fmsy. The Council's proposal also included a 5,000-lb (2,268-kg) trip limit for SNE/MA winter flounder, and a 1,000-lb (454-kg)/DAS and 5,000-lb (2,268-kg)/trip limit for witch flounder. TAC overharvests in FY 2009 would be deducted from the FY 2010 TACs, and sectors would not be held responsible for FY 2009 over-harvests that they were not responsible for. Amendment 16 was proposed as the means by which the FY 2009 TAC overharvests would be reconciled in FY 2010.

In addition, the Council recommended mitigation measures, as follows: An 18-inch (45-cm) haddock minimum fish size; extension of the Eastern U.S./Canada Haddock SAP; expansion of the CA I Hook Gear Haddock SAP; removal of the DAS Transfer Program's conservation tax; and removal of the restriction that prohibits sector members from leasing to and from common pool vessels.

Although, for some stocks, the appropriate amount of catches in FY 2009 (i.e., the projected TACs associated with Fmsy or F rebuild) would be similar to or larger than recent catch levels, because of the large fishing mortality reductions necessary to end overfishing NMFS has determined that the Council's recommended measures to reduce fishing mortality are insufficient to meet NMFS' objectives.

To estimate the amount of fishing mortality that can be expected from a given allocation of DAS, NMFS utilizes the Closed Area Model (CAM), which incorporates multiple factors, and provides indications of relative changes in fishing exploitation. NMFS could not adopt the Council's alternative because CAM analyses of a similar alternative (i.e., the no action alternative), indicated that fishing mortality reductions would be insufficient for a number of stocks (7 of 11 requiring fishing mortality reductions). Even if the trip limits associated with the Council's alternative achieved the witch flounder objective, the fishing mortality associated with six stocks would have been excessive. Further, deductions of TAC overharvests in the subsequent fishing year would compound the challenge of rebuilding stocks (depending upon the biomass trend, stock structure, and recruitment) in the time required by the Magnuson-Stevens Act and the FMP. Finally, an interim action cannot implement measures that would go into place in a subsequent fishing year, such as a TAC deduction for over-harvest that

could occur in 2009, because of the statutory limitations on its duration.

NMFS explored whether the Council's recommended measures could be modified to meet the objectives of the interim action, and developed a hard TAC alternative in order to reduce the risk that appropriate catch levels would be exceeded. As detailed in the EA developed for this proposed action, NMFS ultimately rejected the hard TAC alternative for two principal reasons: 1) It is likely that the TACs for at least two stocks (GB cod and pollock) would have resulted in fishery closures relatively early in each trimester, thereby causing severe economic costs to the industry; and 2) the complexity of a hard TAC management system and the associated cost and difficulties in its implementation to both the fishing industry and NMFS would make it impractical to successfully implement in the short period of an interim action and possibly inconsistent with Magnuson-Stevens Act National Standards and required provisions.

This proposed interim action would adopt the following mitigation measures proposed by the Council: Extension of the Eastern U.S./Canada Haddock SAP; revision of the DAS Leasing Program; revision of the DAS Transfer Program; and reduction of the haddock minimum size limit.

NMFS considered but rejected the Council's Amendment 16 proposed mitigating measures that would modify the CA I Hook Gear Haddock SAP, and the extension of the CA II Yellowtail Flounder SAP to include haddock. The Amendment 16 proposal to modify the CA I Hook Gear Haddock SAP would expand the geographic and temporal scope of the SAP. The expansion of the CA I Hook Gear Haddock SAP is not supported by relevant research. The data relied upon for the approval of the CA I Hook Gear Haddock SAP in FW 40A were from the months of October through December. These data supported the determination that the SAP would have minimal impacts on stocks of concern (notably cod). In contrast, the SAP, as expected to be proposed in Amendment 16, would be open for a 9-month period from May through January. NMFS is unaware of pertinent research that would support the conclusion that the expansion would have minimal impacts on stocks of concern. Although the expansion of the SAP may provide some mitigating effect for some members of the fishery, only one gear type would be affected and the measures would represent an expansion of effort into a closed area. Such an expansion may not be fully consistent with the intent of this action.

Similarly, the Council's proposal for the CA II Yellowtail Flounder SAP, which would allow targeting of either haddock or yellowtail flounder in this area, would represent a major modification to this SAP. NMFS is unaware of pertinent research that would support the conclusion that the expansion would have minimal impacts on stocks of concern. Therefore, the Council's proposed SAP modification may have potential adverse impacts on stocks of concern, and could undermine the utility of CA II.

Classification

Because this action is a proposed rule, at this time, NMFS has not made a final determination that the interim measures that this proposed rule would implement are consistent with the national standards of the Magnuson-Stevens Act and other applicable laws. NMFS, in making this final determination, will take into account the data, views, and comments received during the comment period.

This proposed rule has been determined to be significant for the purposes of Executive Order (E.O.) 12866.

This proposed rule does not contain policies with Federalism or "takings" implications as those terms are defined in E.O. 13132 and E.O. 12630, respectively. This proposed rule does not contain any new recordkeeping or reporting requirements.

NMFS prepared an IRFA as required by section 603 of the Regulatory Flexibility Act (RFA). The IRFA describes the economic impact this proposed rule, if adopted, would have on small entities. A description of the action, why it is being considered, and the legal basis for this action are contained in the preamble to this proposed rule and in the Executive Summary and Background (Section 3.0) of the EA prepared for this action.

As described above, this action is necessary to comply with the fish stock rebuilding requirements of the FMP and the Magnuson-Stevens Act. In response to new scientific information, this action would reduce fishing mortality on all groundfish stocks and provide flexibility to the fishing industry to adapt to the new regulations and help mitigate negative economic impacts. The principal goal of this interim action is to eliminate or reduce overfishing and achieve the rebuilding fishing mortality rates to the extent practicable for an interim period, while the Council develops more comprehensive, permanent measures. The Preferred Alternative would achieve an appropriate balance of short-term costs

and benefits that would strictly maintain adherence to rebuilding plans for most stocks, and reduce fishing mortality to Fmsy or below for all stocks except northern windowpane flounder.

NMFS fully analyzed and considered three principal alternatives (plus the No Action Alternative), and considered, but did not fully analyze, several additional alternatives characterized as considered but rejected. Alternative 1 relies upon an 18-percent DAS reduction combined with two different configurations of differential DAS areas; Alternative 2 is based upon a 40-percent DAS reduction; and Alternative 3, the Preferred Alternative relies on an 18-percent DAS reduction and one large differential DAS area. Fishing mortality reductions for all three alternatives include management measures for the commercial and recreational portions of the fishery. The No Action Alternative consists of the management measures currently in effect for the FMP, as well as the May 1, 2009, default measures specified under Amendment 13. Under the default measures, Category A DAS would be reduced by approximately 18-percent, and all other management measures would remain the same. Under all alternatives (except the No Action Alternative) the trip limit for white hake would be modified from 1,000-lb (454-kg) per DAS, to 2,000-lb (907-kg) per DAS (with the maximum per trip remaining at 10,000-lb (4,536-kg)); the current trip limit of 5,000-lb (2,268-kg)/trip for GB winter flounder would be removed; and the retention of ocean pout, SNE winter flounder, and the northern stock of windowpane flounder would be prohibited. Also, under all alternatives, a SNE Closure Area is being proposed to protect SNE winter flounder. Furthermore, the two current regulatory programs that allow vessels to retain winter flounder (that would otherwise be prohibited from retaining winter flounder) would be eliminated, i.e., the SNE Winter Flounder SAP and the State Waters Winter Flounder Exemption.

The following measures for the recreational sector would be implemented under the Preferred Alternative, as well as the other two principal alternatives considered: The current seasonal prohibition on the retention of GOM cod (for both private recreational vessels fishing in the EEZ and federally permitted party/charter vessels) would be lengthened by 2 weeks, with the resulting seasonal closure of November through April 15; persons fishing on federally permitted party/charter vessels would be prohibited from possessing more than 10 cod per day (caught anywhere), a

more restrictive limit than the current limit of 10 cod per day when fishing only in the GOM; and private recreational vessels fishing in the EEZ and federally permitted party/charter vessels would not be allowed to retain SNE winter flounder.

In addition, the following mitigation measures would be implemented under the proposed rule and other alternatives considered: The DAS Transfer Program would be modified to remove the DAS tax on transferred DAS; the Eastern U.S./Canada Haddock SAP, which is scheduled to expire, would be renewed; the DAS Leasing Program rules would be modified to remove the cap on the number of DAS that can be leased and to allow leasing between sector and common pool vessels; the minimum size for haddock would be reduced from 19 inches (47.5 cm) to 18 inches (45 cm) for both the recreational and commercial fisheries; and modifications would be made to the Regular B DAS Program, including roll-over of quarterly incidental catch TACs. A more detailed description of the proposed and other two principal alternatives analyzed and considered may be found in the preamble of this proposed rule and in the EA, respectively.

Description of and Estimate of the Number of Small Entities to Which the Proposed Rule Would Apply

The Preferred Alternative would affect regulated entities engaged in commercial fishing for groundfish and entities that provide recreational fishing services to anglers. These entities include any vessel that has been issued either an open access or a limited access Federal permit under the FMP. The size standard for commercial fishing entities is \$4 million in sales, while the size standard for party/charter operators is \$7 million in sales. Available data indicate that, based on 2005–2007 average conditions, median gross sales by commercial fishing vessels were just over \$200,000 and no single fishing entity earned more than \$2 million. Available data are not adequate to identify affiliated vessels, so each operating unit is considered a small entity for purposes of the RFA. For regulated party/charter operators, the median value of gross receipts from passengers was just over \$9,000 and did not exceed \$500,000 in any year during 2001 to 2007. Therefore, all regulated commercial fishing and all regulated party/charter operators are determined to be small entities under the RFA, and, accordingly, there are no differential impacts between large and small entities under his proposed rule. The remaining discussion describes the number of

regulated entities, the number of participating regulated entities, and the potential economic impacts on participating regulated entities for party/charter operators and for commercial fishing vessels.

Economic Impacts of the Proposed Action

The Preferred Alternative contains several different measures that may affect regulated vessels holding either an open access or limited access NE multispecies permit. During FY 2007, there were a total of 1,292 commercial open access permits (Handgear B) and a total of 1,530 limited access permits issued. Of these permits, 664 limited access permit holders and 123 open access permit holders participated in the groundfish fishery during FY 2007. The principal proposed management measures include a reduction in DAS; specification of differential DAS in the entire GOM, as well as a portion of GB; a SNE Closure Area; and modifications to trip limits. Because of statutory and regulatory requirements to meet certain conservation objectives, the overall short term economic impact of the proposed action and any alternative considered would be negative.

Region-wide, the impact on revenue received on trips where groundfish were landed was estimated to fall by 31 percent, while sales of all species was estimated to be reduced by 20 percent (from \$156 million to \$126 million). Among individual vessels, a small number of regulated entities, primarily from NJ, may be able to increase sales due to the location of the SNE Closure Area relative to taking no action (i.e., the SNE Differential DAS Area would remain in place under the No Action Alternative). That is, fishing opportunities in the area that would now be opened to these vessels would more than offset the changes in trip limits and DAS reduction. However, for the overwhelming majority of regulated small entities, the economic impacts would be negative. The impact on total revenue would vary depending on a port's dependence on groundfish, with the greatest reductions for ME and MA (34 percent and 27 percent, respectively). For vessels that fish exclusively in the GOM, the 2:1 differential DAS counting, coupled with the default 18-percent reduction in DAS, is equivalent to a 36-percent reduction in DAS. For vessels with a low dependence on groundfish, even this reduction in DAS may not result in a large reduction in total catch. The combination of where vessels fish, and higher dependence on groundfish trip

income, results in the highest impacts on fishing revenue.

The estimated reduction in total revenue to NH and CT home port vessels was 16 percent, and 17 percent, respectively. For the other states, the expected reduction ranged from 6 percent in NY to 8 percent in RI.

In relative terms, the proposed measures would have similar impacts among vessels of different sizes. Among the most affected vessels (the 20 percent that would experience the greatest impacts), the adverse impact on small vessels was less (39 percent) than for either medium or large vessels. For those vessels least affected by the Preferred Alternative, with respect to impacts by primary fishing gear, the reduction in total revenue was similar for vessels using gillnet or trawl gear. However, for those vessels more highly impacted by the Preferred Alternative, trawl gear impacts were higher than for either gillnet or hook gear vessels. For trawl vessels, an average of above average level of severity of impacts would mean a 30 percent reduction in total revenue, whereas gillnet and hook gear vessels would experience a 19 percent and 12 percent reduction, respectively.

Although analyses of the anticipated impacts of past management actions and subsequent comparison with the realized impacts of such actions suggests that realized revenue losses have been lower than estimated, the proposed restrictions would make it more difficult for vessels to cover fixed costs on available groundfish trips and would place greater pressure on vessels to earn additional income from non-groundfish fishing opportunities. The proposed action would implement some mitigating measures, but not all vessels would be able to take advantage of these opportunities; some would still require financial outlays that may not be supportable, given the reduced fishing opportunities that would be available.

The proposed measures would affect not only regulated entities engaged in commercial fishing for groundfish, but also entities that provide recreational fishing services to anglers. Available data indicate that, of the 92 federally permitted charter/party vessels that reported keeping cod, haddock, or winter flounder, approximately one-third would be adversely affected by one or more of the proposed measures, and about two-thirds of participating party/charter operators would not be adversely affected. Party/charter receipts may be expected to be reduced by approximately 6 percent. The impact of extending the closed season for recreationally caught GOM cod is

difficult to predict due to the highly variable catch during the month of April. Reducing the size limit for haddock would increase the number of opportunities to keep haddock on all fishing trips.

The overall economic impact of the FY 2009 U.S./Canada TACs would likely be similar or slightly negative, compared to the economic impacts of the TACs specified for FY 2008. The specification of the proposed U.S./Canada TACs would result in a similar, or slightly reduced level of income from trips into the U.S./Canada Management Area. The FY 2009 cod and yellowtail flounder TACs would represent a decrease from the FY 2008 TAC levels. The changes in TAC reflect changes in stock size and the U.S. percentage share.

The principal effort reduction measures may reduce monkfish fishing effort due to the requirement that limited access monkfish Category C and D vessels that also hold a NE multispecies DAS permit use a NE multispecies DAS in conjunction with a monkfish DAS. The proposed measures would particularly impact those vessels with relatively few multispecies DAS. Monkfish vessels with a Category C or D permit may experience revenue loss if they previously fished in the proposed SNE Closure Area and cannot catch a similar amount of monkfish from outside of this area. The current regulations that allow limited access monkfish Category C and D vessels with fewer allocated NE multispecies DAS than allocated monkfish DAS to fish the difference between these two allocations, as monkfish-only DAS would still apply and would help mitigate the impact of the proposed measures (in particular, the reduction in NE multispecies DAS and the SNE Closure Area) on monkfish fishing effort.

The two primary skate fisheries, a wing fishery and a lobster bait fishery, are largely interwoven with the NE multispecies fishery. The regulations require that vessels must be fishing on a NE multispecies, monkfish, or scallop DAS, or fish in an exempted fishery, in order to possess skates. The vast majority of skate landings are landed on NE multispecies Category A DAS, and the DAS restrictions and SNE Closure Area of the Preferred Alternative would reduce fishing effort on skates. Thus, the proposed measures would have a negative economic impact on the skate fishery. The SNE Closure Area may have a greater negative impact on the skate bait fishery than the skate wing fishery, because the SNE Closure Area encompasses the bulk of the area fished in the skate bait fishery. If vessels were

able to catch skate outside of the SNE Closure Area, the impacts would be mitigated.

Economic Impact of Alternatives to the Proposed Action

Under the No Action Alternative the estimated groundfish trip revenue would decline by 12.1 percent to \$89 million, and total fishing revenue would decline by 7.7 percent to \$145 million. The relative reduction in groundfish trip revenue varied little by home port state ranging from 10.3 percent to 12.8 percent. However, the change in total trip revenue varied among home port states primarily based on the relative contribution of groundfish trip revenue to total revenue. For example, total trip revenue declined by approximately 10 percent in ME, NH, and MA, but declined by no more than 6 percent in any other state. The change in revenue for individual vessels depends upon DAS use rate, as well as dependence upon groundfish. Under No Action, any vessel whose current DAS use rate was low would be unaffected, since their allocated A DAS under No Action would still be greater than the DAS they used. In relative terms, the No Action alternative would have similar impacts among vessels of different sizes. Among primary gears, the relative distribution of adverse impact on total revenue was nearly identical for vessels using gillnet or trawl gear, and less for most hook vessels.

Under Alternative 1 (inshore and offshore GOM differential DAS areas, with a relative high rate), the estimated groundfish trip revenue would decline by 28 percent to \$72 million, and total fishing revenue would decline by 18 percent to \$129 million. Alternative 1 would have an adverse impact on 477 of the 509 vessels included in the analysis. With a few exceptions, Alternative 1 would have similar impacts among vessels of different sizes. Compared to all other states, adverse impact on fishing revenue for ME home port vessels was much higher for vessels up to the 20th percentile (12 percent), and was higher for vessels between the 20th percentile and the median (21 percent). At intervals above the median, the impacts on ME home port vessels were similar to those on MA home port vessels. Vessels with high dependence on groundfish trip revenue may be expected to be more adversely affected by Alternative 1 than less dependent vessels.

Alternative 1 reduces fishing effort, and therefore reduces opportunities to catch and land skates. Compared to the No Action alternative, Alternative 1 would have negative economic impacts

on skate fishing vessels. The SNE Closure Area may have greater negative economic impacts on the skate bait fishery than on the skate wing fishery. Skate vessels potentially impacted by the SNE Closure Area may be able to mitigate some of their revenue losses by fishing in exempted fisheries. In general terms, Alternative 1 could have greater negative economic impacts on skate vessels than the other alternatives due to the 2.25:1 differential DAS area in the western GOM, where a great deal of skate fishing occurs.

Under Alternative 1, the 18-percent DAS reduction may reduce monkfish fishing effort, due to the requirement that limited access monkfish Category C and D vessels that also hold a NE multispecies DAS permit use a NE multispecies DAS in conjunction with a monkfish DAS. However, the existing regulation that allows limited access monkfish Category C and D vessels with fewer allocated NE multispecies DAS than allocate monkfish DAS to use the difference between these two allocations as monkfish-only DAS will help mitigate such impact on monkfish fishing effort. The SNE year-round closure, although smaller in size than the SNE Differential DAS Area currently in effect, would likely impact inshore monkfish gillnet vessels that fish in this region, reducing monkfish fishing effort overall in this area with a subsequent negative economic impact to the monkfish fishery. The extent of this potential negative social and economic impact would depend on the number of limited access monkfish Category C and D vessels actively fishing in the statistical areas encompassed by the closure, how much monkfish is landed from these areas, and whether or not these vessels could move their fishing operations into an open area in an effort to mitigate the impacts of the closure.

Under Alternative 2 (40-percent DAS reduction), the estimated groundfish trip revenue would decline by 33 percent to \$68 million and total fishing revenue would decline by 21 percent to \$124 million. Reflecting the relatively larger share of groundfish trip income in total revenue, the expected reduction in total fishing revenue was estimated to be at least 25 percent in ME (27 percent), and MA (27 percent). Across all vessels, gross revenues for only eight of the vessels included in the analysis would not change relative to status quo conditions, while for the remaining vessels the estimated reduction in total revenue ranged from 3 percent to 37 percent. In relative terms, Alternative 2 would have somewhat similar impacts among vessels of different sizes. Among primary gears the relative distribution of

adverse impact on total revenue was similar for vessels using gillnet or trawl gear. The relative distribution of adverse impacts differed between states that border the GOM (ME, NH, and MA) and those that do not. Vessels with high dependence on groundfish trip revenue may be expected to be more adversely affected by Alternative 2 than less dependent vessels.

Alternative 2 reduces fishing effort, and therefore reduces opportunities to catch and land skates. Compared to the No Action alternative, Alternative 2 would be expected to have negative economic impacts on skate fishing vessels. The SNE Closure Area may have greater negative economic impacts on the skate bait fishery than on the skate wing fishery. Skate vessels potentially impacted by the SNE closure area may be able to mitigate some of their revenue losses by fishing in exempted fisheries. Alternatives 2 and 3 are difficult to differentiate from an economic impact standpoint.

Under Alternative 2, the 40-percent DAS reduction may reduce monkfish fishing effort due to the requirement that limited access monkfish Category C and D vessels that also hold a NE multispecies DAS permit use a NE multispecies DAS in conjunction with a monkfish DAS. However, the existing regulation that allows limited access monkfish Category C and D vessels with fewer allocated NE multispecies DAS than allocate monkfish DAS to use the difference between these two allocations as monkfish-only DAS will help mitigate such impact on monkfish fishing effort. The SNE year-round closure, although smaller in size than the SNE Differential DAS Area currently in effect, would likely impact inshore monkfish gillnet vessels that fish in this region, reducing monkfish fishing effort overall in this area with a subsequent negative economic impact to the monkfish fishery. The extent of this potential negative social and economic impact would depend on the number of limited access monkfish Category C and D vessels actively fishing in the statistical areas encompassed by the closure, how much monkfish is landed from these areas, and whether or not these vessels could move their fishing operations into an open area in an effort to mitigate the impacts of the closure.

List of Subjects in 50 CFR part 648

Fisheries, Fishing, Reporting and recordkeeping requirements.

Dated: January 9, 2009

Samuel D. Rauch III,

Deputy Assistant Administrator For Regulatory Programs, National Marine Fisheries Service.

For the reasons stated in the preamble, 50 CFR part 648 is proposed to be amended as follows:

PART 648—FISHERIES OF THE NORTHEASTERN UNITED STATES

1. The authority citation for part 648 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

2. In § 648.2, a new definition for “low profile gillnet” is added, in alphabetical order, to read as follows:

§ 648.2 Definitions.

* * * * *

Low profile gillnet, with respect to the NE multispecies fishery, means a bottom-set gillnet with reduced vertical height achieved by tying the floatline to the leadline or by modifying the construction of the floatline, or through other means, to reduce or eliminate its buoyancy.

* * * * *

3. In § 648.10, paragraph (b)(5) is suspended, and paragraph (b)(6) is added to read as follows:

§ 648.10 DAS and VMS notification requirements.

* * * * *

(b) * * *

(6) *VMS notification requirements for other fisheries.* Unless otherwise specified in this part, or via letters sent to affected permit holders under paragraph (b)(2) of this section, the owner or authorized representative of a vessel that is required to use VMS, as specified in paragraph (b)(1) of this section, must notify the Regional Administrator of the vessel's intended fishing activity by entering the appropriate VMS code prior to leaving port at the start of each fishing trip. Notification of a vessel's intended fishing activity includes, but is not limited to, gear and DAS type to be used; area to be fished; and whether the vessel will be declared out of the DAS fishery, or will participate in the NE multispecies and monkfish DAS fisheries, including approved special management programs. A vessel cannot change any aspect of its VMS activity code outside of port, except that a NE multispecies vessel is authorized to change the category of DAS used (i.e., flip its DAS), as provided at § 648.85(b), or change the area declared to be fished so that the vessel may fish both inside and outside of the Eastern U.S./Canada Area on the same trip, as provided

at § 648.85(a)(3)(viii)(A). VMS activity codes and declaration instructions are available from the Regional Administrator upon request.

* * * * *

4. In § 648.14:

A. Paragraphs (a)(50), (53), (121), (129), (130), (132), (146), (153), (165), (173) through (175), and (177) are suspended.

B. Paragraphs (c)(7), (23) through (26), (33), (39), (50), (51), (57) through (60), (62) through (66), (70), (76), (81) through (83), and (85) through (89) are suspended.

C. Paragraphs (g)(4) and (5) are suspended.

D. Paragraphs (a)(183) through (192), (c)(90) through (122), and (g)(6) and (7) are added.

The additions read as follows:

§ 648.14 Prohibitions.

* * * * *

(a) * * *

(183) Enter, or be on a fishing vessel with a NE multispecies permit in the area described in § 648.81(n), except as provided for in § 648.81(n).

(184) Fish for, harvest, possess, or land regulated species in or from the closed area specified in § 648.81(n), unless otherwise allowed under § 648.81(n).

(185) Enter or fish in the Western U.S./Canada Area or Eastern U.S./Canada Area specified in § 648.85(a)(1), unless declared into the area in accordance with § 648.85(a)(3)(viii).

(186) If declared into one of the areas specified in § 648.85(a)(1), fish during that same trip outside of the declared area, unless in compliance with the applicable restrictions specified under § 648.85(a)(3)(viii)(A) or (B).

(187) Fail to notify NMFS via VMS prior to departing the Eastern U.S./Canada Area, when fishing inside and outside of the area on the same trip, in accordance with § 648.85(a)(3)(viii)(A)(1).

(188) When fishing inside and outside of the Eastern U.S./Canada Area on the same trip, fail to abide by the most restrictive DAS counting, trip limits, and reporting requirements that apply, as described in § 648.85(a)(3)(viii)(A).

(189) If fishing inside the Eastern U.S./Canada Area and in possession of fish in excess of what is allowed under most restrictive regulations that apply outside of the Eastern U.S./Canada Area on the same trip, as prohibited under § 648.85(a)(3)(viii)(A).

(190) Fail to comply with the reporting requirements under § 648.85(a)(3)(viii)(A)(2) when fishing

inside and outside of the Eastern U.S./Canada Area on a trip.

(191) If fishing with trawl gear under a NE multispecies DAS in the Eastern U.S./Canada Area defined in § 648.85(a)(1)(ii), fail to fish with a haddock separator trawl, flounder trawl net, or Ruhle trawl, as specified in § 648.85(a)(3)(ix) and (b)(10)(iv)(j)(3), unless otherwise allowed under the Eastern U.S./Canada Haddock SAP rules in § 648.85(b)(8)(v)(E).

(192) Possess, land, or fish for regulated species while in possession of scallop dredge gear on a vessel not fishing under the scallop DAS program as described in § 648.53, or fishing under a general scallop permit, unless the vessel and the dredge gear conform with the stowage requirements of § 648.23(b), or unless the vessel has not been issued a multispecies permit and fishes for NE multispecies exclusively in state waters.

* * * * *

(c) * * *

(90) If fishing under the Eastern U.S./Canada Haddock SAP, fish for, harvest, possess, or land any regulated NE multispecies from the area specified in § 648.85(b)(8)(ii), unless in compliance with the restrictions and conditions specified in § 648.85(b)(8)(v)(A) through (M).

(91) If fishing under a Category B DAS in the Closed Area II Yellowtail Flounder SAP specified in § 648.85(b)(3), the Regular B DAS Pilot Program specified in § 648.85(b)(10), or the Eastern U.S./Canada Haddock SAP Pilot Program specified in § 648.85(b)(8), remove any fish caught with any gear, including dumping the contents of a net, except on board the vessel.

(92) Possess or land per trip more than the possession or landing limits specified under § 648.86(a), (g), (h), and (l), if the vessel has been issued a limited access NE multispecies permit or open access NE multispecies permit, as applicable.

(93) Fail to declare through VMS the intent to be exempt from the GOM cod trip limit under § 648.86(l)(1), as required under § 648.86(l)(4), or fish north of the exemption line if in possession of more than the GOM cod trip limit specified under § 648.86(l)(1).

(94) Enter port, while on a NE multispecies DAS trip, in possession of more than the allowable limit of cod specified in § 648.86(l)(1), unless the vessel is fishing under the cod exemption specified in § 648.86(l)(4).

(95) For vessels fishing in the NE multispecies DAS program under the provisions of § 648.10(c), the call-in

system, fail to remain in port for the appropriate time specified in § 648.86(l)(1)(ii)(A), except for transiting purposes, provided the vessel complies with § 648.86(l)(3). For vessels fishing in the NE multispecies DAS program under the provisions of § 648.10(b), the VMS system, fail to declare through VMS that insufficient DAS have elapsed in order to account for the amount of cod on board the vessel as required under § 648.86(l)(1)(ii)(B).

(96) Enter port, while on a NE multispecies DAS trip, in possession of more than the allowable limit of cod specified in § 648.86(l)(2).

(97) For vessels fishing in the NE multispecies DAS program under the provisions of § 648.10(c), the call-in system, fail to remain in port for the appropriate time specified in § 648.86(l)(2)(ii)(A), except for transiting purposes, provided the vessel complies with § 648.86(l)(3). For vessels fishing in the NE multispecies DAS program under the provisions of § 648.10(b), the VMS system, fail to declare through VMS that insufficient DAS have elapsed in order to account for the amount of cod on board the vessel as required under § 648.86(l)(2)(ii)(B).

(98) If fishing under the party/charter or private recreational regulations in the SNE Closure Area defined under § 648.81(n)(1), fish for or retain winter flounder.

(99) Discard legal-sized NE regulated multispecies, ocean pout, Atlantic halibut, or monkfish while fishing under a Regular B DAS in the Regular B DAS Program, as described in § 648.85(b)(10)(iv)(E).

(100) If fishing under a Regular B DAS in the Regular B DAS Program, fail to comply with the DAS flip requirements of § 648.85(b)(10)(iv)(E) if the vessel harvests and brings on board more than the landing limit for a groundfish stock of concern specified in § 648.85(b)(10)(iv)(D), other groundfish specified under § 648.86, or monkfish under § 648.94.

(101) If fishing in the Regular B DAS Program specified in § 648.85(b)(10), fail to comply with the requirements and restrictions specified in § 648.85(b)(10)(iv)(A) through (F), (I), and (J).

(102) If fishing in the Regular B DAS Program specified in § 648.85(b)(6), fail to comply with the VMS requirement specified in § 648.85(b)(6)(iv)(A).

(103) If fishing in the Regular B DAS Program specified in § 648.85(b)(10), fail to comply with the observer notification requirement specified in § 648.85(b)(10)(iv)(B).

(104) If fishing in the Regular B DAS Program specified in § 648.85(b)(10), fail

to comply with the VMS declaration requirement specified in § 648.85(b)(10)(iv)(C).

(105) If fishing in the Regular B DAS Program specified in § 648.85(b)(10), fail to comply with the landing limits specified in § 648.85(b)(10)(iv)(D).

(106) If fishing in the Regular B DAS Program specified in § 648.85(b)(10), fail to comply with the no discard and DAS flip requirements specified in § 648.85(b)(10)(iv)(E).

(107) If fishing in the Regular B DAS Program specified in § 648.85(b)(10), fail to comply with the minimum Category A DAS and Category B DAS accrual requirements specified in § 648.85(b)(10)(iv)(F).

(108) Use a Regular B DAS in the Regular B DAS Program specified in § 648.85(b)(10), if the program has been closed as specified in § 648.85(b)(10)(iv)(H) or (b)(10)(vi).

(109) If fishing in the Regular B DAS Program specified in § 648.85(b)(10), use a Regular B DAS after the program has closed, as required under § 648.85(b)(10)(iv)(G) or (H).

(110) If fishing in the Regular B DAS Program specified in § 648.85(b)(10), fail to comply with the reporting requirements specified in § 648.85(b)(10)(iv)(I).

(111) If fishing in the CA I Hook Gear Haddock SAP specified in § 648.85(b)(7), fail to comply with the DAS use restrictions specified in § 648.85(b)(7)(iv)(J), and (b)(7)(v)(A) or (b)(7)(vi)(A), whichever is applicable.

(112) If fishing in the CA I Hook Gear Haddock SAP specified in § 648.85(b)(7), fail to comply with the reporting requirement specified in § 648.85(b)(7)(v)(F) or (b)(7)(vi)(D), whichever is applicable.

(113) If fishing in the Regular B DAS Program specified in § 648.85(b)(10), fail to use a haddock separator trawl as described under § 648.85(a)(3)(iii)(A), or other approved gear as described under § 648.85(b)(10)(iv)(J).

(114) If fishing under a NE multispecies Category A DAS in the Interim Differential DAS Area, defined under § 648.82(e)(4)(i), fail to declare into the area through VMS as required under § 648.82(e)(4)(ii).

(115) If fishing under a NE multispecies Category A DAS in the Interim Differential DAS Area defined in § 648.82(e)(4)(i), and under the restrictions of one or more of the Special Management Programs under § 648.85, fail to comply with the most restrictive regulations.

(116) Possess or land more white hake than allowed under § 648.86(m).

(117) Retain or land zero retention stocks as specified under § 648.86(n).

(118) If possessing a Rühle Trawl, either at sea or elsewhere, as allowed under § 648.85(b)(10)(iv)(J)(1) or (b)(8)(v)(E)(1), fail to comply with the net specifications under § 648.85(b)(10)(iv)(J)(3).

(119) If fishing as a private recreational and charter/party vessel in the SNE/MA winter flounder stock area defined in § 648.85(b)(10)(v)(E), fish for or retain winter flounder or transit this area in possession of winter flounder caught outside this area, unless all bait and hooks are removed from fishing rods and any winter flounder on board has been gutted and stored.

(120) If fishing in the Regular B DAS Program specified in § 648.85(b)(10), fail to use a haddock separator trawl as described under § 648.85(a)(3)(ix)(A), or other approved gear as described under § 648.85(b)(10)(iv)(J).

(121) For vessels fishing inside and outside the Eastern U.S./Canada Area on the same trip, fail to comply with the most restrictive regulations that apply on the trip as required under § 648.85(a)(3)(viii)(A).

(122) For vessels fishing inside and outside the Eastern U.S./Canada Area on the same trip, fail to notify NMFS via VMS that the vessel is electing to fish in this manner, as required by § 648.85(a)(3)(viii)(A)(1).

(g) * * *

(6) If the vessel is a private recreational fishing vessel, fail to comply with the seasonal GOM cod possession prohibition described in § 648.89(c)(1)(vi) or, if the vessel has been issued a charter/party permit or is fishing under charter/party regulations, fail to comply with the prohibition on fishing under § 648.89(c)(5)(v).

(7) If fishing under the recreational or charter/party regulations, fish for or possess cod caught in the GOM Regulated Mesh Area during the seasonal GOM cod possession prohibition under § 648.89(c)(1)(vi) or (c)(5)(v) or, fail to abide by the appropriate restrictions if transiting with cod on board.

§ 648.80 [Amended]

5. In § 648.80, paragraph (i) is suspended.

6. In § 648.81, paragraph (b)(2)(iv)(B) is suspended, and paragraphs (b)(2)(iv)(C) and (n) are added to read as follows:

§ 648.81 NE multispecies closed areas and measures to protect EFH.

* * * * *

(b) * * *

(2) * * *

(iv) * * *

(C) The vessel has declared into the Eastern U.S./Canada Area as specified in § 648.85(a)(3)(viii) and is transiting CA II in accordance with the provisions of § 648.85(a)(3)(vii).

* * * * *

(n) *Southern New England (SNE) Closure Area.* (1) No fishing vessel, or person on such vessel, may enter, fish in, or be in; and no fishing gear capable of catching NE multispecies, unless otherwise allowed in this part, may be in, or on board a vessel, in the area known as the SNE Closure Area, as defined by straight lines connecting the following points in the order stated, except as specified in paragraphs (n)(2) and (3) of this section (a chart depicting this area is available from the Regional Administrator upon request).

SNE CLOSURE AREA

Point	N. lat.	W. long.
SNECA1	(¹)	70°00'
SNECA2	41°30'	70°00'
SNECA3	41°30'	68°30'
SNECA4	40°30'	68°30'
SNECA5	40°30'	(²)

(¹) Intersection of the shoreline of Cape Cod, Massachusetts and 70°00' W. long.

(²) Intersection of the shoreline of Staten Island, New York, and 40°30' N. lat.

(2) Paragraph (n)(1) of this section does not apply to persons on fishing vessels or fishing vessels:

(i) Fishing with exempted gear, as defined in this part, or under the exemptions specified in § 648.80(b)(2)(vi) and (b)(3);

(ii) Fishing with hook gear, provided that no gear other than hook gear is on board, and the vessel abides by the NE multispecies possession restrictions under § 648.86; or

(iii) Fishing under the charter/party or private recreational regulations, provided that vessel abides by the recreational restrictions under § 648.89, and:

(A) With the except of tuna, fish harvested or possessed by the vessel are not sold or intended for trade, barter or sale, regardless of where the regulated species are caught; and

(B) The vessel has no gear other than rod and reel or handline on board.

(3) NE multispecies permitted vessels possessing NE multispecies on board the vessel and transiting through the SNE Closure Area, provided gear other than hook gear is stowed in accordance with § 648.23(b).

7. In § 648.82:

A. Paragraphs (e)(2) and (3); (j)(1)(iii)(A) through (D); (k)(4)(iv) and (x); and (l)(1)(iv) and (ix) are suspended.

B. Paragraphs (e)(4) and (5), and (j)(1)(iii)(E), (F), and (G) are added. The additions read as follows:

§ 648.82 Effort-control program for NE multispecies limited access vessels.

* * * * *

(e) * * *

(4) *Differential DAS*. For a NE multispecies DAS vessel that intends to fish some or all of its trip, or fishes some or all of its trip other than for transiting purposes, under a Category A DAS in the Interim Differential DAS Area, as defined in paragraph (e)(4)(i) of this section, with the exception of Day gillnet vessels, which accrue DAS in accordance with paragraph (j)(1)(iii) of this section, each Category A DAS, or part thereof, shall be counted at the differential DAS rate described in paragraph (e)(4)(iii) of this section, and be subject to the restrictions defined in this paragraph (e).

(i) *Interim Differential DAS Area*. The Interim Differential DAS Area is defined as that area bounded on the west by the coast of Massachusetts, New Hampshire, and Maine, on the east by the U.S.-Canada maritime boundary, and by straight lines connecting the following points in the order stated (a chart depicting this area is available from the Regional Administrator upon request):

Point	N. lat.	W. long.
ID10	41°30'	66°35' ⁽¹⁾
ID8	41°30'	70°00'
ID9	(²)	70°00'

⁽¹⁾ The U.S.-Canada Maritime Boundary.

⁽²⁾ The intersection of the Cape Cod, Massachusetts, shoreline and 70°00' W. long.

(ii) *Declaration*. A NE multispecies DAS vessel that intends to fish, or fishes under a Category A DAS in the Interim Differential DAS Area, as described in paragraph (e)(4)(i) of this section, must, prior to leaving the dock, declare through the VMS, in accordance with instructions to be provided by the Regional Administrator, that the vessel will fish in the Interim Differential DAS Area. A DAS vessel that fishes in the Eastern U.S./Canada Area and intends to fish, or fishes, subsequently in the Interim Differential DAS Area under a Category A DAS, must declare its intention to do so through its VMS prior to leaving the dock at the start of the trip or prior to leaving the Eastern U.S./Canada Area, as specified in § 648.85(a)(3)(viii)(A)(3).

(iii) *Differential DAS counting*. For a NE multispecies DAS vessel that intends to fish, or fishes for some or all of its trip other than for transiting purposes under a Category A DAS in the Interim Differential DAS Area, each

Category A DAS, or part thereof, shall be counted at the ratio of 2 to 1 for the entire trip, even if only a portion of the trip is spent fishing in the Interim Differential DAS Area. A vessel that has not declared its intent to fish in the Interim Differential DAS Area and that is not transiting, as specified in paragraph (e)(4)(v) of this section, may be in the Interim Differential DAS Area, provided the vessel's fishing gear is stowed in accordance with the provisions of § 648.23(b) for the entire time the vessel is in the area, and the vessel declares immediately upon entering the Interim Differential DAS Area, via VMS, that it is in the area.

(iv) *Restrictions*. A NE multispecies vessel fishing under a Category A DAS in the Interim Differential DAS Area defined in paragraph (e)(4)(i) of this section, under the restrictions of this paragraph (e)(4) and under the restrictions of one or more of the Special Management Programs under § 648.85, must comply with the most restrictive DAS counting, trip limits, and reporting requirements, specified in this paragraph (e)(4) and in § 648.85, under the pertinent Special Management Program.

(v) *Transiting*. A vessel may transit the Interim Differential DAS Area, as defined in paragraph (e)(4)(i) of this section, provided the gear is stowed in accordance with the provisions of § 648.23(b).

(5) *Regular B DAS Program 24-hr clock*. For a vessel electing to fish in the Regular B DAS Program, as specified at § 648.85(b)(10), and that remains fishing under a Regular B DAS for the entire fishing trip (without a DAS flip), DAS used shall accrue at the rate of 1 full DAS for each calendar day, or part of a calendar day fished. For example, a vessel that fished on one calendar day from 6 a.m. to 10 p.m. would be charged 24 hr of Regular B DAS, not 16 hr; a vessel that left on a trip at 11 p.m. on the first calendar day and returned at 10 p.m. on the second calendar day would be charged 48 hr of Regular B DAS instead of 23 hr, because the fishing trip would have spanned 2 calendar days. For the purpose of calculating trip limits specified under § 648.86, the amount of DAS deducted from a vessel's DAS allocation shall determine the amount of fish the vessel can legally land. For a vessel electing to fish in the Regular B DAS Program, as specified at § 648.85(b)(10), while also fishing in the Interim Differential DAS Area, defined in paragraph (e)(4)(i) of this section, Category B DAS shall accrue at the rate described in this paragraph (e)(5), unless the vessel flips to a Category A DAS, in which case the vessel is subject

to the pertinent DAS accrual restrictions of paragraph (e)(4)(iii) of this section for the entire trip. For vessels electing to fish in both the Regular B DAS Program, as specified in § 648.85(b)(10), and in the Eastern U.S./Canada Area, as specified in § 648.85(a), DAS counting will begin and end according to the DAS accounting rules specified in § 648.10(b)(2)(iii).

* * * * *

(j) * * *

(1) * * *

(iii) * * *

(E) A Day gillnet vessel fishing with gillnet gear that has elected to fish in the Regular B DAS Program, as specified in § 648.85(b)(10), under a Category B DAS, is subject to the DAS accrual provisions of paragraph (e)(5) of this section.

(F) A Day gillnet vessel fishing with gillnet gear under a NE multispecies Category A DAS, when not subject to differential DAS counting as specified under paragraph (e)(4) of this section, shall accrue 15 hr of DAS for each trip of more than 3 hr, but less than or equal to 15 hr. Such vessel shall accrue actual DAS time at sea for trips less than or equal to 3 hr, or more than 15 hr.

(G) A Day gillnet vessel fishing with gillnet gear under a NE multispecies Category A DAS that is fishing in the Interim Differential DAS Area and, therefore, subject to differential DAS counting as specified under paragraph (e)(4)(iii) of this section, shall accrue DAS at a differential DAS rate of 2 to 1 for the actual hours used for any trip of less than or equal to 3 hr in duration, and for any trip of greater than 7.5 hr. For such vessels fishing on any trip of more than 3 hr, but less than or equal to 7.5 hr duration, vessels will be charged a full 15 hr. For example, a Day gillnet vessel fishing in the Interim Differential DAS Area for 8 actual hr would be charged 16 hours of DAS, or if fishing for 5 actual hr, would be charged 15 hours of DAS.

* * * * *

8. In § 648.83, paragraph (a)(1) is suspended and paragraph (a)(3) is revised to read as follows:

§ 648.83 Multispecies minimum fish sizes.

(a) * * *

(3) Minimum fish sizes for recreational vessels and charter/party vessels that are not fishing under a NE multispecies DAS are specified in § 648.89. Except as provided in § 648.17, all other vessels are subject to the following minimum fish sizes, determined by total length (TL):

MINIMUM FISH SIZES (TL) FOR
COMMERCIAL VESSELS

Species	Sizes (inches)
Cod	22 (55.9 cm)
Haddock	18 (45.7 cm)
Pollock	19 (48.3 cm)
Witch flounder (gray sole)	14 (35.6 cm)
Yellowtail flounder	13 (33.0 cm)
American plaice	14 (35.6 cm)
Atlantic halibut	36 (91.4 cm)
Winter flounder (blackback)	12 (30.5 cm)
Redfish	9 (22.9 cm)

* * * * *

9. In § 648.85:

A. Paragraphs (a)(3)(ii) and (iii); and (a)(3)(v)(A), (B), and (C) are suspended.

B. Paragraphs (b)(4), (5), and (6); (b)(7)(iv)(A); (b)(7)(v)(D); (b)(7)(vi)(E); (b)(8)(v)(E)(2); and (b)(8)(v)(H) are suspended.

C. Paragraphs (a)(3)(v)(D), (E), and (F); (a)(3)(viii) and (ix); (b)(7)(iv)(J); (b)(7)(v)(F); and (b)(7)(vi)(G); (b)(8)(v)(E)(3); (b)(8)(v)(M); and (b)(9) and (10) are added.

The additions read as follows:

§ 648.85 Special management programs.

* * * * *

(a) * * *

(3) * * *

(v) * * *

(D) Total pounds of cod, haddock, yellowtail flounder, winter flounder, witch flounder, pollock, windowpane flounder, and white hake kept;

(E) Date fish were caught and statistical area in which fish were caught; and

(F) Vessel Trip Report (VTR) serial number, as instructed by the Regional Administrator.

* * * * *

(viii) *Declaration.* To fish in the U.S./Canada Management Area under a groundfish DAS, a NE multispecies DAS vessel, prior to leaving the dock, must declare through the VMS, in accordance with instructions to be provided by the Regional Administrator, which specific U.S./Canada Management Area described in paragraphs (a)(1)(i) or (ii) of this section, or which specific SAP, described in paragraph (b) of this section, within the U.S./Canada Management Area the vessel will fish in, and comply with the restrictions and conditions in paragraphs (a)(3)(viii)(A) through (C) of this section. Vessels other than NE multispecies DAS vessels are not required to declare into the U.S./Canada Management Areas.

(A) A vessel fishing under a NE multispecies DAS in the Eastern U.S./Canada Area may fish both inside and

outside of the Eastern U.S./Canada Area on the same trip, provided it complies with the most restrictive DAS counting, trip limits, and reporting requirements for the areas fished for the entire trip, and provided it complies with the restrictions specified in paragraphs (a)(3)(viii)(A)(1) through (4) of this section. On a trip when the vessel operator elects to fish both inside and outside of the Eastern U.S./Canada Area, all cod, haddock, and yellowtail flounder caught on the trip shall count toward the applicable hard TAC specified for the U.S./Canada Management Area.

(1) The vessel operator must notify NMFS via VMS any time prior to leaving the dock at the start of the trip or prior to leaving the Eastern U.S./Canada Area (including at the time of initial declaration into the Eastern U.S./Canada Area) that it is also electing to fish outside the Eastern U.S./Canada Area. With the exception of vessels participating in the Regular B DAS Program and fishing under a Regular B DAS, once a vessel that has elected to fish outside of the Eastern U.S./Canada Area leaves the Eastern U.S./Canada Area, Category A DAS shall accrue from the time the vessel crosses the VMS demarcation line at the start of its fishing trip until the time the vessel crosses the demarcation line on its return to port, in accordance with § 648.10(b)(2)(iii).

(2) The vessel must comply with the reporting requirements of the U.S./Canada Management Area specified under paragraph (a)(3)(v) of this section for the duration of the trip.

(3) If the vessel fishes or intends to fish in the Interim Differential DAS Area defined under § 648.82(e)(4)(i), it must declare its intent to fish in the Interim Differential DAS Area prior to leaving the Eastern U.S./Canada Area (including at the time of initial declaration into the Eastern U.S./Canada Area), and must not have exceeded the CC/GOM or SNE/MA yellowtail flounder trip limits, specified in § 648.86(g), for the respective areas.

(4) If a vessel possesses yellowtail flounder in excess of the trip limits for CC/GOM yellowtail flounder or SNE/MA yellowtail flounder, as specified in § 648.86(g), the vessel may not fish in either the CC/GOM or SNE/MA yellowtail flounder stock area during that trip (i.e., may not fish outside of the U.S./Canada Management Area).

(B) A vessel fishing under a NE multispecies DAS in the Western U.S./Canada Area may fish inside and outside the Western U.S./Canada Area on the same trip, provided it complies with the most restrictive regulations

applicable to the area fished for the entire trip (e.g., the possession restrictions specified in paragraph (a)(3)(iv)(C)(4) of this section), and the reporting requirements specified in paragraph (a)(3)(v) of this section.

(C) For the purposes of selecting vessels for observer deployment, a vessel fishing in either of the U.S./Canada Management Areas specified in paragraph (a)(1) of this section must provide notice to NMFS of the vessel name; contact name for coordination of observer deployment; telephone number for contact; and the date, time, and port of departure, at least 72 hr prior to the beginning of any trip that it declares into the U.S./Canada Management Area, as required under this paragraph (a)(3)(viii).

(ix) *Gear requirements.* NE multispecies vessels fishing with trawl gear in the Eastern U.S./Canada Area defined in paragraph (a)(1)(ii) of this section, unless otherwise provided in paragraphs (b)(8) and (b)(10) of this section, must fish with a Ruhle trawl, as described in paragraph (b)(10)(iv)(J)(1) of this section, or a haddock separator trawl or a flounder trawl net, as described in paragraphs (a)(3)(ix)(A) and (B) of this section (all three nets may be onboard the fishing vessel simultaneously). Gear other than the Ruhle trawl, haddock separator trawl, or the flounder trawl net as described in paragraph (a)(3)(ix) of this section, or gear authorized under paragraphs (b)(8) and (b)(10) of this section, may be on board the vessel during a trip to the Eastern U.S./Canada Area, provided the gear is stowed according to the regulations at § 648.23(b). The description of the Ruhle trawl, the haddock separator trawl and flounder trawl net in paragraph (b)(10)(iv)(J)(1) of this section and in this paragraph (a)(3)(ix) may be further specified by the Regional Administrator through publication of such specifications in the **Federal Register**, consistent with the requirements of the Administrative Procedure Act.

(A) *Haddock separator trawl.* A haddock separator trawl is defined as a groundfish trawl modified to a vertically oriented trouser trawl configuration, with two extensions arranged one over the other, where a codend shall be attached only to the upper extension, and the bottom extension shall be left open and have no codend attached. A horizontal large-mesh separating panel constructed with a minimum of 6.0-inch (15.2-cm) diamond mesh must be installed between the selvages joining the upper and lower panels, as described in this paragraph (a)(3)(ix)(A) and in paragraph (B) of this section,

extending forward from the front of the trouser junction to the aft edge of the first belly behind the fishing circle.

(1) *Two-seam bottom trawl nets.*—For two-seam nets, the separator panel will be constructed such that the width of the forward edge of the panel is 80–85 percent of the width of the after edge of the first belly of the net where the panel is attached. For example, if the belly is 200 meshes wide (from selvedge to selvedge), the separator panel must be no wider than 160–170 meshes.

(2) *Four-seam bottom trawl nets.*—For four-seam nets, the separator panel will be constructed such that the width of the forward edge of the panel is 90–95 percent of the width of the after edge of the first belly of the net where the panel is attached. For example, if the belly is 200 meshes wide (from selvedge to selvedge), the separator panel must be no wider than 180–190 meshes. The separator panel will be attached to both of the side panels of the net along the midpoint of the side panels. For example, if the side panel is 100 meshes tall, the separator panel must be attached at the 50th mesh.

(B) *Flounder trawl net.* A flounder trawl net is defined as bottom trawl gear meeting one of the following two net descriptions:

(1) A two-seam, low-rise net constructed with mesh size in compliance with § 648.80(a)(4), where the maximum footrope length is not greater than 105 ft (32.0 m) and the headrope is at least 30-percent longer than the footrope. The footrope and headrope lengths shall be measured from the forward wing end.

(2) A two-seam, low-rise net constructed with mesh size in compliance with § 648.80(a)(4), with the exception that the top panel of the net contains a section of mesh at least 10 ft (3.05 m) long and stretching from selvedge to selvedge, composed of at least 12-inch (30.5-cm) mesh that is inserted no farther than 4.5 meshes behind the headrope.

(b) * * *

(7) * * *

(iv) * * *

(J) *DAS use restrictions.* A vessel fishing in the CA I Hook Gear Haddock SAP may not initiate a DAS flip. A vessel is prohibited from fishing in the CA I Hook Gear Haddock SAP while making a trip under the Regular B DAS Program described under paragraph (b)(10) of this section. DAS will be charged as described in § 648.10.

(v) * * *

(F) *Reporting requirements.* The owner or operator of a Sector vessel declared into the CA I Hook Gear Haddock SAP must submit reports to

the Sector Manager, with instructions to be provided by the Sector Manager, for each day fished in the CA I Hook Gear Haddock SAP Area. The Sector Manager shall provide daily reports to NMFS, including at least the following information: Total pounds of cod, haddock, yellowtail flounder, winter flounder, witch flounder, pollock, windowpane flounder, and white hake kept; date fish were caught; and VTR serial number, as instructed by the Regional Administrator. Daily reporting must continue even if the vessel operator is required to exit the SAP as required under paragraph (b)(7)(iv)(F) of this section.

(vi) * * *

(G) *GB cod incidental catch TAC.* The maximum amount of GB cod (landings and discards) that may be cumulatively caught by non-Sector vessels from the CA I Hook Gear Haddock Access Area in a fishing year is the amount specified under paragraph (b)(9)(ii) of this section.

(8) * * *

(v) * * *

(E) * * *

(3) *Approval of additional gear.* The Regional Administrator may authorize additional gear for use in the Eastern U.S./Canada Haddock SAP in accordance with the standards and requirements specified at paragraph (b)(10)(iv)(J)(2) of this section.

* * * * *

(M) *Incidental TACs.* The maximum amount of GB cod, and the amount of GB yellowtail flounder, GB winter flounder, and pollock, both landings and discards, that may be caught when fishing in the Eastern U.S./Canada Haddock SAP Program in a fishing year by vessels fishing under a Category B DAS, as authorized in paragraph (b)(8)(v)(A) of this section, is the amount specified in paragraphs (b)(9)(ii), (iii), and (iv) of this section, respectively.

(9) *Incidental Catch TACs.* Unless otherwise specified in this paragraph (b)(9), Incidental Catch TACs shall be specified through the periodic adjustment process described in § 648.90, and allocated as described in this paragraph (b)(9), for each of the following stocks: GOM cod, GB cod, GB yellowtail flounder, GB winter flounder, GOM winter, white hake, CC/GOM yellowtail flounder, SNE/MA yellowtail flounder, witch flounder, and pollock. NMFS shall send letters to limited access NE multispecies permit holders notifying them of such TACs.

(i) *Stocks other than GB cod, GB yellowtail flounder, GB winter flounder, and pollock.* With the exception of GB cod, GB yellowtail flounder, GB winter flounder, and pollock, the Incidental

Catch TACs specified under this paragraph (b)(9) shall be allocated to the Regular B DAS Program described in paragraph (b)(10) of this section.

(ii) *GB cod.* The Incidental TAC for GB cod specified under this paragraph (b)(9) shall be subdivided as follows: 70-percent to the Regular B DAS Program described in paragraph (b)(10) of this section; 16-percent to the CA I Hook Gear Haddock SAP described in paragraph (b)(7) of this section; and 14-percent to the Eastern U.S./Canada Haddock SAP described in paragraph (b)(8) of this section.

(iii) *GB yellowtail flounder and GB winter flounder.* Each of the Incidental Catch TACs for GB yellowtail flounder and GB winter flounder specified under this paragraph (b)(9) shall be subdivided as follows: 80-percent to the Regular B DAS Program described in paragraph (b)(10) of this section; and 20-percent to the Eastern U.S./Canada Haddock SAP described in paragraph (b)(8) of this section.

(iv) *Pollock.* The Incidental TAC for pollock specified under this paragraph (b)(9) shall be subdivided as follows: 90-percent to the Regular B DAS Program described in paragraph (b)(10) of this section; 5-percent to the CA I Hook Gear Haddock SAP described in paragraph (b)(7) of this section; and 5-percent to the Eastern U.S./Canada Haddock SAP described in paragraph (b)(8) of this section.

(10) *Regular B DAS Program—(i) Eligibility.* Vessels issued a valid limited access NE multispecies DAS permit and allocated Regular B DAS are eligible to participate in the Regular B DAS Program and may elect to fish under a Regular B DAS, provided they comply with the requirements and restrictions of this paragraph (b)(10), and provided the use of Regular B DAS is not restricted according to paragraphs (b)(10)(iv)(G) or (H) of this section, or paragraph (b)(10)(vi) of this section. Vessels are required to comply with the no discarding and DAS flip requirements specified in paragraph (b)(10)(iv)(E) of this section and the DAS balance and accrual requirements specified in paragraph (b)(10)(iv)(F) of this section. Vessels may fish under the B Regular DAS Program and in the U.S./Canada Management Area on the same trip, but may not fish under the Regular B DAS Program and in a SAP on the same trip.

(ii) [Reserved]

(iii) *Quarterly Incidental Catch TACs.* The Incidental Catch TACs specified in accordance with paragraph (b)(9) of this section shall be divided into quarterly catch TACs as follows: The first quarter shall received 13 percent of the

Incidental Catch TACs and the remaining three quarters shall each receive 29 percent of the Incidental Catch TACs. When the Regional Administrator projects that there is uncaught TAC in quarters one, two, or three, the uncaught TAC will be added to the TAC allocated for the subsequent quarter. Uncaught TAC at the end of the fishing year will not be added to allocations in subsequent fishing years. NMFS shall send letters to all limited access NE multispecies permit holders notifying them of such TACs and any adjustments to such TACs.

(iv) *Program requirements*—(A) *VMS requirement*. A NE multispecies DAS vessel fishing in the Regular B DAS Program described in paragraph (b)(10)(i) of this section must have installed on board an operational VMS unit that meets the minimum performance criteria specified in §§ 648.9 and 648.10.

(B) *Observer notification*. For the purposes of selecting vessels for observer deployment, a vessel must provide notice to NMFS of the vessel name; contact name for coordination of observer deployment; telephone number for contact; the date, time, and port of departure; and the planned fishing area or areas (GOM, GB, or SNE/MA) at least 72 hr prior to the beginning of any trip that it declares into the Regular B DAS Program, as required under paragraph (b)(10)(iv)(C) of this section, and in accordance with instructions provided by the Regional Administrator. Providing notice of the area that the vessel intends to fish does not restrict the vessel's activity to only that area on that trip (i.e., the vessel operator may change his/her plans regarding planned fishing area).

(C) *VMS declaration*. To participate in the Regular B DAS Program under a Regular B DAS, a vessel must declare into the Program via VMS prior to departure from port, in accordance with instructions provided by the Regional Administrator. A vessel declared into the Regular B DAS Program cannot fish in an approved SAP described under this section on the same trip. Mere declaration of a Regular B DAS Program trip does not reserve a vessel's right to fish under the Program, if the vessel has not crossed the VMS demarcation line.

(D) *Landing limits*. Unless otherwise specified in this paragraph (b)(10)(iv)(D), a NE multispecies vessel fishing in the Regular B DAS Program described in this paragraph (b)(10), and fishing under a Regular B DAS, may not land more than 100 lb (45.5 kg) per DAS, or any part of a DAS, up to a maximum of 1,000 lb (454 kg) per trip of any of the following species/stocks

from the areas specified in paragraph (b)(10)(v) of this section: Cod, pollock, white hake, witch flounder, GB winter flounder, GB yellowtail flounder, and southern windowpane flounder; and may not land more than 25 lb (11.3 kg) per DAS, or any part of a DAS, up to a maximum of 250 lb (113 kg) per trip of CC/GOM or SNE/MA yellowtail flounder. In addition, trawl vessels that are required to fish with a haddock separator trawl or Ruhle trawl, as specified under paragraph (b)(10)(iv)(J) of this section, and other gear that may be required in order to reduce catches of stocks of concern as described under paragraph (b)(10)(iv)(J) of this section, are restricted to the following trip limits: 500 lb (227 kg) of all flatfish species (American plaice, witch flounder, winter flounder (GOM or GB), windowpane flounder (south), and yellowtail flounder), combined; 500 lb (227 kg) of monkfish (whole weight); 500 lb (227 kg) of skates (whole weight); and zero possession of lobsters, ocean pout, SNE/MA winter flounder, and windowpane (north), unless otherwise restricted by § 648.94(b)(3).

(E) *No-discard provision and DAS flips*. A vessel fishing in the Regular B DAS Program under a Regular B DAS may not discard legal-sized regulated species, Atlantic halibut, or monkfish, unless otherwise specified in this paragraph (b)(10)(iv)(E). This prohibition on discarding does not apply to ocean pout, windowpane (north), or SNE winter flounder, or in areas or times where the possession or landing of regulated species is prohibited. If such a vessel harvests and brings on board legal-sized regulated NE multispecies, or Atlantic halibut (unless exempted above) in excess of the allowable landing limits specified in paragraph (b)(10)(iv)(D) of this section, or § 648.86, the vessel operator must notify NMFS immediately via VMS to initiate a DAS flip from a B DAS to an A DAS. Once this notification has been received by NMFS, the vessel shall automatically be switched by NMFS to fishing under a Category A DAS for its entire fishing trip. Thus, any Category B DAS that accrued between the time the vessel declared into the Regular B DAS Program at the beginning of the trip (i.e., at the time the vessel crossed the demarcation line at the beginning of the trip) and the time the vessel declared its DAS flip shall be accrued as Category A DAS, and not Regular B DAS. After flipping to a Category A DAS, the vessel is subject to the applicable trip limits specified under § 648.86 or paragraph (a) of this section and may discard fish in excess of the applicable trip limits.

(F) *Minimum Category A DAS and B DAS accrual*. For a vessel fishing under the Regular B DAS Program, the number of Regular B DAS that may be used on a trip cannot exceed the number of Category A DAS that the vessel has at the start of the trip. If a vessel is fishing in the Interim Differential DAS area, as described in § 648.82(e)(4)(i), the number of Regular B DAS that may be used on a trip cannot exceed the number of Category A DAS that the vessel has at the start of the trip divided by 2. For example, if a vessel plans a trip under the Regular B DAS Program into the Interim Differential DAS Area and has 10 Category A DAS available at the start of the trip, the maximum number of Regular B DAS that the vessel may fish under the Regular B DAS Program is 5. A vessel fishing in the Regular B DAS Program for its entire trip shall accrue DAS in accordance with § 648.82(e)(4).

(G) *Restrictions when 100 percent of the incidental catch TAC is harvested*. With the exception of white hake, witch flounder, and pollock, when the Regional Administrator provides notification through methods consistent with the Administrative Procedure Act, that 100 percent of one or more of quarterly incidental TACs specified under paragraph (b)(10)(iii) of this section has projected to have been harvested, the use of Regular B DAS shall be prohibited in the pertinent stock area(s) as defined under paragraph (b)(10)(v) of this section for the duration of the calendar quarter. The closure of a stock area to all Regular B DAS use shall occur even if the quarterly incidental catch TACs for other stocks in that stock area have not been completely harvested. When the Regional Administrator projects that 100 percent of the quarterly white hake, witch flounder, or pollock incidental catch TAC specified under paragraph (b)(10)(iii) of this section has been harvested, vessels fishing under a Regular B DAS, or that complete a trip under a Regular B DAS, shall be prohibited from retaining white hake, witch flounder, or pollock, respectively.

(H) *Closure of Regular B DAS Program and quarterly DAS limits*. Unless otherwise closed as a result of the harvest of an Incidental Catch TAC as described in paragraph (b)(10)(iv)(G) of this section, or as a result of an action by the Regional Administrator under paragraph (b)(10)(vi) of this section, the use of Regular B DAS shall, in a manner consistent with the Administrative Procedure Act, be prohibited when 500 Regular B DAS have been used during the first quarter of the fishing year (May-July), or when 1,000 Regular B DAS

have been used during any of the remaining quarters of the fishing year, in accordance with § 648.82(e)(5).

(I) *Reporting requirements.* The owner or operator of a NE multispecies DAS vessel must submit catch reports via VMS in accordance with instructions provided by the Regional Administrator, for each day fished when declared into the Regular B DAS Program. The reports must be submitted in 24-hr intervals for each day, beginning at 0000 hr and ending at 2400 hr. The reports must be submitted by 0900 hr of the following day. For vessels that have declared into the Regular B DAS Program in accordance with paragraph (b)(10)(iv)(C) of this section, the reports must include at least the following information: Statistical area fished; total pounds of cod, haddock, yellowtail flounder, winter flounder, witch flounder, pollock, and white hake kept; date fish were caught; and VTR serial number, as instructed by the Regional Administrator. Daily reporting must continue even if the vessel operator is required to flip, as described under paragraph (b)(10)(iv)(E) of this section.

(J) *Gear requirement*—(1) Vessels fishing with trawl gear in the Regular B DAS Program must use a haddock separator trawl or Ruhle trawl, as described under paragraphs (a)(3)(iii)(A) and (b)(10)(iv)(J)(3) of this section, respectively, or other type of gear, if approved as described under this paragraph (b)(10)(iv)(J). Other gear may be on board the vessel, provided it is stowed when the vessel is fishing under the Regular B DAS Program. Vessels fishing with gillnet gear in the Regular B DAS Program may not use a low profile (“tie-down” type) gillnet.

(2) Approval of additional gear. At the request of the Council or Council’s Executive Committee, the Regional Administrator may authorize additional gear for use in the Regular B DAS Program, through notice consistent with the Administrative Procedure Act. The proposed gear must satisfy standards specified in paragraphs (b)(10)(iv)(J)(2)(i) or (ii) of this section in a completed experiment that has been reviewed according to the standards established by the Council’s research policy before the gear can be considered and approved by the Regional Administrator. Comparisons of the criteria specified in this paragraph (b)(10)(iv)(J)(2) will be made to an appropriately selected control gear.

(i) The gear must show a statistically significant reduction in catch of at least 50 percent (by weight, on a trip-by-trip basis) of each regulated species stock of concern, unless otherwise allowed in this paragraph (b)(10)(iv)(J)(2)(i), or

other non-groundfish stocks that are overfished or subject to overfishing identified by the Council. This requirement does not apply to regulated species identified by the Council as not being subject to gear performance standards; or

(ii) The catch of each regulated species stock of concern, unless otherwise allowed in this paragraph (b)(10)(iv)(J)(2)(ii), or other non-groundfish stocks that are overfished or subject to overfishing identified by the Council, must be less than 5 percent of the total catch of regulated groundfish by weight, on a trip-by-trip basis. This requirement does not apply to regulated species identified by the Council as not being subject to gear performance standards.

(3) *Ruhle Trawl.* The Ruhle Trawl is a four-seam bottom groundfish trawl designed to reduce the bycatch of cod while retaining or increasing the catch of haddock, when compared to traditional groundfish trawls. A Ruhle Trawl must be constructed in accordance with the standards described and referenced in this paragraph (b)(10)(iv)(J)(3). The mesh size of a particular section of the Ruhle Trawl is measured in accordance with § 648.80(f)(2), unless insufficient numbers of mesh exist, in which case the maximum total number of meshes in the section will be measured (between 2 and 20 meshes).

(i) The net must be constructed with four seams (i.e., a net with a top and bottom panel and two side panels), and include at least the following net sections as depicted in Figure 1 of this part A “Nomenclature for 4-seam Ruhle Trawl” (this figure is also available from the Administrator, Northeast Region): Top jib, bottom jib, jib side panels (x 2), top wing, bottom wing, wing side panels (x 2), square, bunt, square side panels (x 2), first top belly, first bottom belly, first belly side panels (x 2), second top belly, second bottom belly, second belly side panels (x 2), and third bottom belly.

(ii) The first bottom belly, bunt, the top and bottom wings, and the top and bottom jibs, jib side panels, and wing side panels (the first bottom belly and all portions of the net in front of the first bottom belly, with the exception of the square and the square side panels) must be at least two meshes long in the fore and aft direction. For these net sections, the stretched length of any single mesh must be at least 7.9 ft (240 cm), measured in a straight line from knot to knot.

(iii) Mesh size in all other sections must be consistent with mesh size requirements specified under § 648.80 and meet the following minimum

specifications: Each mesh in the square, square side panels, and second bottom belly must be 31.5 inches (80 cm); each mesh in the first and second top belly, the first belly side panels, and the third bottom belly must be at least 7.9 inches (20 cm); and 6 inches (15.24 cm) or larger in sections following the second top belly and third bottom belly sections, all the way to the codend. The mesh size requirements of the top sections apply to the side panel sections.

(iv) The trawl must have a fishing circle of at least 398 ft (121.4 m). This number is calculated by separately counting the number of meshes for each section of the net at the wide, fore end of the first bottom belly, and then calculating a stretched length as follows: For each section of the net (first bottom belly, two belly side panels and first top belly) multiply the number of meshes times the length of each stretched mesh to get the stretched mesh length for that section, and then add the sections together. For example, if the wide, fore end of the bottom belly of the Ruhle Trawl is 22 meshes (and the mesh is at least 7.9 ft (240 cm)), the stretched mesh length for that section of the net is derived by multiplying 22 times 7.9 ft (240 cm) and equals 173.2 ft (52.8 m). The top and sides (x 2) of the net at this point in the trawl are 343 meshes (221 + 61 + 61, respectively) (each 7.9 inches (20 cm)), which equals 225.1 ft (68.6 m) stretched length. The stretched lengths for the different sections of mesh are added together (173.2 ft + 225.1 ft (52.8 + 68.6 m)) and result in the length of the fishing circle, in this case 398.3 ft (121.4 m).

(v) The trawl must have a single or multiple kite panels with a total surface area of at least 29.1 sq. ft. (2.7 sq. m) on the forward end of the square to help maximize headrope height, for the purpose of capturing rising fish. A kite panel is a flat structure, usually semi-flexible used to modify the shape of trawl and mesh openings by providing lift when a trawl is moving through the water.

(vi) The sweep must include rockhoppers of various sizes, which are arranged along the sweep in size order, graduated from 16-inch (40-cm) diameter in the sweep center down to 12-inch (30-cm) diameter at the wing ends. There must be six or fewer 12- to 16-inch (30- to 40-cm) rockhopper discs over any 10-ft (3.0-m) length of the sweep. The 12- to 16-inch (30- to 40-cm) discs (minimum size) must be spaced evenly, with one disc placed approximately every 2 ft (60 cm) along the sweep. The 12- to 16-inch (30- to 40-cm) discs must be separated by

smaller discs, no larger than 3.5 inches (8.8 cm) in diameter.

(vii) *Definition of incidental TAC stock areas.* For the purposes of the Regular B DAS Program, including the stocks that may not be retained by vessels as specified under § 648.86, the species stock areas are defined below. Copies of a chart depicting these areas are available from the Regional Administrator upon request.

(A) *GOM cod stock area.* The GOM cod stock area for the purposes of the Regular B DAS Program is the area defined by straight lines connecting the following points in the order stated:

GULF OF MAINE COD STOCK AREA

Point	N. lat.	W. long.
GOM1	(¹)	70°00'
GOM2	42°20'	70°00'
GOM3	42°20'	67°40'
GOM4	43°50'	67°40'
GOM5	43°50'	66°50'
GOM6	44°20'	66°50'
GOM7	44°20'	67°00'
GOM8	(²)	67°00'

(¹) Intersection of the north-facing coastline of Cape Cod, MA, and 70° 00' W. Long.

(²) Intersection of the south-facing Maine coastline and 67° 00' W. Long.

(B) *GB cod stock area.* The GB cod stock area for the purposes of the Regular B DAS Program is the area defined by straight lines connecting the following points in the order stated:

GEORGES BANK COD STOCK AREA

Point	N. lat.	W. long.
GB1	(¹)	70°00'
GB2	42°20'	70°00'
GB3	42°20'	66°00'
GB4	42°10'	66°00'
GB5	42°10'	65°50'
GB6	42°00'	65°50'
GB7	42°00'	65°40'
GB8	40°30'	65°40'
GB9	39°00'	65°40'
GB10	39°00'	70°00'
GB11	35°00'	70°00'
GB12	35°00'	(²)

(¹) Intersection of the north-facing coastline of Cape Cod, MA, and 70° 00' W. Long.

(²) Intersection of the east-facing coastline of Outer Banks, NC, and 35° 00' N. Lat.

(C) *CC/GOM yellowtail flounder stock area.* The CC/GOM yellowtail flounder stock area for the purposes of the Regular B DAS Program is the area defined by straight lines connecting the following points in the order stated:

CC/GOM YELLOWTAIL FLOUNDER STOCK AREA

Point	N. lat.	W. long.
CCGOM1	43°00'	(¹)
CCGOM2	42°20'	70°00'
CCGOM3	42°20'	66°00'
CCGOM4	42°10'	66°00'
CCGOM5	42°10'	65°50'
CCGOM6	42°00'	65°50'
CCGOM7	42°00'	65°40'
CCGOM8	40°30'	65°40'
CCGOM9	39°00'	65°40'
CCGOM10	(²)	
CCGOM11	35°00'	(³)
CCGOM12	35°00'	(⁴)
CCGOM13	(³)	

¹ Intersection with the New Hampshire coastline.

² Intersection of the south-facing shoreline of Cape Cod, Massachusetts.

³ Intersection with the east-facing shoreline of Cape Cod, Massachusetts.

⁴ Intersection with the west-facing shoreline of Massachusetts

(D) *SNE/MA yellowtail flounder stock area.* The SNE/MA stock area for the purposes of the Regular B DAS Program is the area bounded on the north, east, and south by straight lines connecting the following points in the order stated:

SNE/MA YELLOWTAIL FLOUNDER STOCK AREA

Point	N. lat.	W. long.
SNEMA1	40°00'	74°00'
SNEMA2	40°00'	72°00'
SNEMA3	40°30'	72°00'
SNEMA4	40°30'	69°30'
SNEMA5	41°00'	69°30'
SNEMA6	41°00'	69°00'
SNEMA7	41°30'	70°00'
SNEMA8	39°00'	70°00'
SNEMA9	41°00'	70°00'
SNEMA10	41°00'	70°30'
SNEMA11	41°30'	70°30'
SNEMA12	(¹)	72°00'
SNEMA13	(²)	72°00'
SNEMA14	(³)	73°00'
SNEMA15	40°30'	73°00'
SNEMA16	40°30'	74°00'
SNEMA17	40°00'	74°00'

(¹) South-facing shoreline of Connecticut.

(²) North-facing shoreline of Long Island, New York.

(³) South-facing shoreline of Long Island, New York.

(E) *SNE/MA winter flounder stock area.* The SNE winter flounder stock area, for the purposes of the Regular B DAS Program and the prohibition on retention of winter flounder specified under § 648.86, is the area defined by straight lines connecting the following points in the order stated:

SOUTHERN NEW ENGLAND/MID-ATLANTIC WINTER FLOUNDER STOCK AREA

Point	N. lat.	W. long.
SNEW1	(¹)	70°00'
SNEW2	42°20'	70°00'
SNEW3	42°20'	68°50'
SNEW4	39°50'	68°50'
SNEW5	39°50'	71°40'
SNEW6	39°00'	71°40'
SNEW7	39°00'	70°40'
SNEW8	35°00'	70°00'
SNEW9	35°00'	(²)

(¹) Intersection of the north-facing Coastline of Cape Cod, MA, and 70° 00' W. Long.

(²) The intersection of the east-facing coastline of Outer Banks, NC, and 35° 00' N. Lat.

(F) *Windowpane flounder northern stock area.* The windowpane flounder northern stock area, for the purposes of prohibition on retention of northern windowpane flounder specified under § 648.86, is the area defined by straight lines connecting the following points in the order stated:

WINDOWPANE FLOUNDER NORTHERN STOCK AREA:

Point	N. lat.	W. long.
G12	(¹)	70°00'
WIN1	41°20'	70°00'
WIN2	41°20'	69°50'
WIN3	41°10'	69°50'
WIN4	41°10'	69°50'
WIN5	41°00'	69°30'
WIN6	41°00'	68°50'
WIN7	39°50'	68°50'
WIN8	39°50'	69°00'
WIN9	39°00'	69°00'
WIN10	39°00'	(²)

(¹) South-facing coastline of Cape Cod, MA.

(²) Intersection of 39° 00' N. Lat. and the boundary of the EEZ.

(viii) *Closure and in-season modification to the Regular B DAS Program.* The Regional Administrator, based upon information required under §§ 648.7, 648.9, 648.10, or this paragraph 648.85, and any other relevant information, may, in a manner consistent with the Administrative Procedure Act, may prohibit the use of Regular B DAS, modify possession restrictions, or implement other measures, including a partial closure for the Regular B DAS Program, for the duration of a quarter or fishing year, if it is projected that continuation of the Regular B DAS Program would undermine the achievement of the objectives of the FMP or Regular B DAS Program. Reasons for modification or termination of the program include, but are not limited to, the following: Inability to constrain catches to the Incidental Catch TACs; evidence of excessive discarding; a significant

difference in flipping rates between observed and unobserved trips; or insufficient observer coverage to adequately monitor the program.

* * * * *

10. In § 648.86, paragraphs (b), (e), and (j) are suspended, and paragraphs (l), (m), and (n) are added to read as follows:

§ 648.86 NE multispecies possession restrictions.

* * * * *

(l) *Cod*—(1) *GOM cod landing limit.*

(i) Except as provided in paragraphs (l)(1)(ii) and (l)(4) of this section, or unless otherwise restricted under § 648.85, a vessel fishing under a NE multispecies DAS may land only up to 800 lb (362.9 kg) of cod during the first 24-hr period after the vessel has started a trip on which cod were landed (e.g., a vessel that starts a trip at 6 a.m. may call out of the DAS program at 11 a.m. and land up to 800 lb (362.9 kg), but the vessel cannot land any more cod on a subsequent trip until at least 6 a.m. on the following day). For each trip longer than 24 hr, a vessel may land up to an additional 800 lb (362.9 kg) for each additional 24-hr block of DAS fished, or part of an additional 24-hr block of DAS fished, up to a maximum of 4,000 lb (1,814.4 kg) per trip (e.g., a vessel that has been called into the DAS program for more than 24 hr, but less than 48 hr, may land up to, but no more than, 1,600 lb (725.7 kg) of cod). A vessel that has been called into only part of an additional 24-hr block of a DAS (e.g., a vessel that has been called into the DAS program for more than 24 hr, but less than 48 hr) may land up to an additional 800 lb (362.9 kg) of cod for that trip, provided the vessel complies with the provisions of paragraph (l)(1)(ii) of this section. Cod on board a vessel subject to this landing limit must be separated from other species of fish and stored so as to be readily available for inspection.

(ii) A vessel that has been called into or declared into only part of an additional 24-hr block may come into port with and offload cod up to an additional 800 lb (362.9 kg), provided that the vessel operator, with the exception of vessels fishing in the Interim Differential DAS Area under the restrictions of § 648.82(e)(4)(i), complies with the following:

(A) For a vessel that is subject to the VMS provisions specified under § 648.10(b), the vessel declares through VMS that insufficient DAS have elapsed in order to account for the amount of cod onboard and, after returning to port, does not depart from a dock or mooring in port, unless transiting as allowed under paragraph (l)(3) of this section,

until the rest of the additional 24-hr block of the DAS has elapsed, regardless of whether all of the cod on board is offloaded (e.g., a vessel that has been in the DAS program for 25 hr prior to crossing the VMS demarcation line on the return to port may land only up to 1,600 lb (725.7 kg) of cod, provided the vessel does not declare another trip or leave port until 48 hr have elapsed from the beginning of the trip).

(B) For a vessel that has been authorized by the Regional Administrator to utilize the DAS call-in system, as specified under § 648.10(c), in lieu of VMS, the vessel does not call out of the DAS program as described under § 648.10(c)(3) and does not depart from a dock or mooring in port, unless transiting as allowed in paragraph (l)(3) of this section, until the rest of the additional 24-hr block of DAS has elapsed, regardless of whether all of the cod on board is offloaded (e.g., a vessel that has been called into the DAS program for 25 hr at the time of landing may land only up to 1,600 lb (725.6 kg) of cod, provided the vessel does not call out of the DAS program or leave port until 48 hr have elapsed from the beginning of the trip).

(2) *GB cod landing and maximum possession limits.* (i) Unless otherwise restricted under § 648.85 or the provisions of paragraph (l)(2)(ii) of this section, or unless exempt from the landing limit under paragraph (l)(1) of this section as authorized under the Sector provisions of § 648.87, a NE multispecies DAS vessel may land up to 1,000 lb (453.6 kg) of cod per DAS, or part of a DAS, provided it complies with the requirements specified at paragraph (l)(4) of this section and this paragraph (l)(2). A NE multispecies DAS vessel may land up to 1,000 lb (453.6 kg) of cod during the first 24-hr period after such vessel has started a trip on which cod were landed (e.g., a vessel that starts a trip at 6 a.m. may call out of the DAS program at 11 a.m. and land up to 1,000 lb (453.6 kg) of cod, but the vessel cannot land any more cod on a subsequent trip until at least 6 a.m. on the following day). For each trip longer than 24 hr, a vessel may land up to an additional 1,000 lb (453.6 kg) of cod for each additional 24-hr block of DAS fished, or part of an additional 24-hr block of DAS fished, up to a maximum of 10,000 lb (4,536 kg) of cod per trip (e.g., a vessel that has been called into the DAS program for more than 24 hr, but less than 48 hr, may land up to, but no more than, 2,000 lb (907.2 kg) of cod). A vessel that has been called into only part of an additional 24-hr block of a DAS (e.g., a vessel that has been called into the DAS program for more

than 24 hr, but less than 48 hr) may land up to an additional 1,000 lb (453.6 kg) of cod for that trip, provided the vessel complies with the provisions of paragraph (l)(2)(ii) of this section. Cod on board a vessel subject to this landing limit must be separated from other species of fish and stored so as to be readily available for inspection.

(ii) A vessel that has been called into or declared into only part of an additional 24-hr block may come into port with and offload cod up to an additional 1,000 lb (453.6 kg), provided that the vessel operator, with the exception of vessels fishing in the Interim Differential DAS Area under the restrictions of § 648.82(e)(4)(i), complies with the following:

(A) For a vessel that has been authorized by the Regional Administrator to utilize the DAS call-in system as specified under § 648.10(c), in lieu of VMS, the vessel does not call out of the DAS program as described under § 648.10(c)(3) and does not depart from a dock or mooring in port, unless transiting, as allowed in paragraph (l)(3) of this section, until the rest of the additional 24-hr block of DAS has elapsed, regardless of whether all of the cod on board is offloaded (e.g., a vessel that has been called into the DAS program for 25 hr at the time of landing may land only up to 2,000 lb (907.2 kg) of cod, provided the vessel does not call out of the DAS program or leave port until 48 hr have elapsed from the beginning of the trip.)

(B) For a vessel that is subject to the VMS provisions specified under § 648.10(b), the vessel declares through VMS that insufficient DAS have elapsed in order to account for the amount of cod onboard, and after returning to port does not depart from a dock or mooring in port, unless transiting, as allowed under paragraph (l)(3) of this section, until the rest of the additional 24-hr block of the DAS has elapsed, regardless of whether all of the cod on board is offloaded (e.g., a vessel that has been in the DAS program for 25 hr prior to crossing the VMS demarcation line on the return to port may land only up to 2,000 lb (907.2 kg) of cod, provided the vessel does not declare another trip or leave port until 48 hr have elapsed from the beginning of the trip.)

(3) *Transiting.* A vessel that has exceeded the cod landing limit as specified in paragraphs (l)(1) and (2) of this section, and that is, therefore, subject to the requirement to remain in port for the period of time described in paragraphs (l)(1)(ii)(A) and (l)(2)(ii)(A) of this section, may transit to another port during this time, provided that the vessel operator notifies the Regional

Administrator, either at the time the vessel reports its hauled weight of cod, or at a later time prior to transiting, and provides the following information: Vessel name and permit number, destination port, time of departure, and estimated time of arrival. A vessel transiting under this provision must stow its gear in accordance with one of the methods specified in § 648.23(b) and may not have any fish on board the vessel.

(4) *Exemption.* A vessel fishing under a NE multispecies DAS is exempt from the landing limit described in paragraph (l)(1) of this section when fishing south of the Gulf of Maine Regulated Mesh Area, defined in § 648.80(a)(1), provided that it complies with the requirement of this paragraph (l)(4).

(i) *Declaration.* With the exception of vessels declared into the U.S./Canada Management Area, as described under § 648.85(a)(3)(ii), a NE multispecies DAS vessel that fishes or intends to fish south of the line described in this paragraph (l)(4), under the cod trip limits described under paragraph (l)(2) of this section, must, prior to leaving the dock, declare its intention to do so through the VMS, in accordance with instructions to be provided by the Regional Administrator. In lieu of a VMS declaration, the Regional Administrator may authorize such vessels to obtain a letter of authorization. If a letter of authorization is required, such vessel may not fish north of the exemption area for a minimum of 7 consecutive days (when fishing under the NE multispecies DAS program), and must carry the authorization letter on board.

(ii) A vessel exempt from the GOM cod landing limit may not fish north of the line specified in this paragraph (l)(4) for the duration of the trip, but may transit the GOM Regulated Mesh Area, provided that its gear is stowed in accordance with the provisions of § 648.23(b). A vessel fishing north and south of the line on the same trip is subject to the most restrictive applicable cod trip limit.

(m) *White hake.* Unless otherwise restricted under this part, a vessel issued a NE multispecies DAS permit, a limited access Handgear A permit, an open access Handgear B permit, or a monkfish limited access permit and fishing under the monkfish Category C or D permit provisions, may land up to 2,000 lb (907.2 kg) of white hake per DAS, or any part of a DAS, up to 10,000 lb (4,536 kg) per trip.

(n) *Zero retention stocks*—(1) *SNE winter flounder.* Private recreational vessels fishing in the EEZ, and vessels issued a NE multispecies permit, may not fish for, possess, or land winter

flounder caught in the SNE/MA winter flounder stock area, defined in § 648.85(b)(10)(v)(E). Vessels may transit this area with GOM or GB winter flounder on board the vessel, provided that gear is stowed in accordance with the provisions of § 648.23(b). Vessels fishing for winter flounder in multiple stock areas would be subject to the most restrictive possession limit.

(2) *Northern windowpane flounder.* Vessels issued a NE multispecies permit may not fish for, possess, or land windowpane flounder caught in the northern windowpane flounder stock area, defined in § 648.85(b)(10)(v)(F). Vessels may transit this area with southern windowpane flounder on board, provided that gear is stowed in accordance with the provisions of § 648.23(b) or § 648.89(f), as appropriate. Vessels fishing for windowpane flounder in multiple stock areas would be subject to the most restrictive possession limit.

(3) *Ocean pout.* Vessels issued a NE multispecies permit may not fish for, possess or land ocean pout.

11. In § 648.89, paragraphs (b)(1), (c)(1)(v), and (c)(2) are suspended, and paragraphs (b)(5), (c)(1)(vi), (c)(5), and (f) are added to read as follows:

§ 648.89 Recreational and charter/party vessel restrictions.

* * * * *

(b) * * *

(5) *Minimum fish sizes.* Unless further restricted under paragraph (b)(3) of this section, persons aboard charter or party vessels permitted under this part and not fishing under the NE multispecies DAS program, and recreational fishing vessels in or possessing fish from the EEZ, may not possess fish smaller than the minimum fish sizes, measured in total length (TL), as follows:

MINIMUM FISH SIZES (TL) FOR CHARTER, PARTY, AND PRIVATE RECREATIONAL VESSELS

Species	Sizes
Cod	22in (58.4 cm)
Haddock	18in (45.7 cm)
Pollock	19in (48.3 cm)
Witch flounder (gray sole)	14in (35.6 cm)
Yellowtail flounder	13in (33.0 cm)
Atlantic halibut	36in (91.4 cm)
American plaice	14in (35.6 cm)
Winter flounder (blackback)	12in (30.5 cm)
Redfish	9in (22.9 cm)

(c) * * *

(1) * * *

(vi) *Seasonal GOM cod possession prohibition.* Persons aboard private recreational fishing vessels fishing in

the GOM Regulated Mesh Area specified under § 648.80(a)(1) may not fish for, possess, or land any cod from November 1 through April 15. Private recreational vessels in possession of cod caught outside the GOM Regulated Mesh Area may transit this area, provided all bait and hooks are removed from fishing rods and any cod on board has been gutted and stored.

* * * * *

(5) *Charter/party vessels.* Charter/party vessels fishing any part of a trip in the GOM Regulated Mesh Area, as defined in § 648.80(a)(1), are subject to the following possession limit restrictions:

(i) Unless further restricted by the Seasonal GOM Cod Possession Prohibition, specified under paragraph (c)(5)(v) of this section, each person on a charter/party vessel may possess no more than 10 cod per day in, or harvested from, the EEZ.

(ii) For purposes of counting fish, fillets shall be converted to whole fish at the place of landing by dividing the number of fillets by two. If fish are filleted into a single (butterfly) fillet, such fillet shall be deemed to be from one whole fish.

(iii) Cod harvested by charter/party vessels with more than one person aboard may be pooled in one or more containers. Compliance with the possession limits will be determined by dividing the number of fish on board by the number of persons on board. If there is a violation of the possession limits on board a vessel carrying more than one person, the violation shall be deemed to have been committed by the owner or operator of the vessel.

(iv) Cod must be stored so as to be readily available for inspection.

(v) Seasonal GOM cod possession prohibition. Persons aboard charter/party fishing vessels fishing in the GOM Regulated Mesh Area specified under § 648.80(a)(1) may not fish for or possess any cod from November 1 through April 15. Charter/party vessels in possession of cod caught outside the GOM Regulated Mesh Area may transit this area, provided all bait and hooks are removed from fishing rods and any cod on board has been gutted and stored.

* * * * *

(f) *SNE/MA winter flounder retention prohibition.* Private recreational and charter/party vessels fishing in the SNE/MA winter flounder stock area as defined in § 648.85(b)(10)(v)(E), may not fish for, possess, or land winter flounder. Recreational vessels in possession of winter flounder caught outside of the

SNE/MA winter flounder may transit this area, provided all bait and hooks are removed from fishing rods and any winter flounder on board has been stored.

National Oceanic and Atmospheric Administration

50 CFR Part 679

[Docket No. 080612764-8801-01]

RIN 0648-AW94

Fisheries of the Exclusive Economic Zone Off Alaska; Groundfish Fisheries of the Bering Sea and Aleutian Islands Management Area and Gulf of Alaska, Seabird Avoidance Requirements Revisions for International Pacific Halibut Commission Regulatory Area 4E

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: NMFS issues a proposed rule that would revise the seabird avoidance requirements for the hook-and-line groundfish and halibut fisheries in International Pacific Halibut Commission Area 4E. The proposed rule would eliminate seabird avoidance requirements for hook-and-line vessels less than or equal to 55 ft (16.8 m) length overall in portions of Area 4E in the eastern Bering Sea. This action is necessary to revise seabird avoidance measures based on the latest scientific information and to reduce unnecessary regulatory burdens and associated costs.

DATES: Written comments must be received by February 17, 2009.

ADDRESSES: Send comments to Sue Salvesson, Assistant Regional Administrator, Sustainable Fisheries Division, Alaska Region, NMFS, Attn: Ellen Sebastian. You may submit comments, identified by 0648-AW94, by any one of the following methods:

- Electronic Submissions: Submit all electronic public comments via the Federal eRulemaking Portal website at <http://www.regulations.gov>.

- Mail: P. O. Box 21668, Juneau, AK 99802.

- Fax: (907) 586-7557.

- Hand delivery to the Federal Building: 709 West 9th Street, Room 420A, Juneau, AK.

All comments received are a part of the public record and will generally be posted to <http://www.regulations.gov> without change. All Personal Identifying Information (e.g., name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit Confidential Business Information or otherwise sensitive or protected information.

NMFS will accept anonymous comments (enter N/A in the required fields, if you wish to remain anonymous). Attachments to electronic comments will be accepted in Microsoft Word, Excel, WordPerfect, or Adobe portable document file (pdf) formats only.

Copies of the map of the seabird avoidance measures in Area 4E, and the Environmental Assessment/Regulatory Impact Review/Initial Regulatory Flexibility Analysis (EA/RIR/IRFA) for this action may be obtained from the Alaska Region NMFS address above or from the Alaska Region NMFS website at <http://www.alaskafisheries.noaa.gov>.

FOR FURTHER INFORMATION CONTACT: Melanie Brown, 907-586-7228.

SUPPLEMENTARY INFORMATION: The groundfish fisheries in the exclusive economic zone (EEZ) off Alaska are managed under the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area and the Fishery Management Plan for Groundfish of the Gulf of Alaska (FMPs). The North Pacific Fishery Management Council (Council) prepared the FMPs under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), 16 U.S.C. 1801, *et seq.* Regulations implementing the FMPs appear at 50 CFR part 679. General regulations governing U.S. fisheries also appear at 50 CFR part 600.

Management of the Pacific halibut fisheries in and off Alaska is governed by an international agreement between Canada and the United States. This agreement, entitled the "Convention Between the United States of America and Canada for the Preservation of the Halibut Fishery of the Northern Pacific Ocean and Bering Sea" (Convention), was signed at Ottawa, Canada, on March 2, 1953, and was amended by the "Protocol Amending the Convention," signed at Washington, D.C., March 29, 1979. The Convention is implemented in the United States by the Northern Pacific Halibut Act of 1982 (Halibut Act). The directed commercial Pacific halibut fishery in Alaska is managed under an individual fishing quota (IFQ) program, as is the fixed gear sablefish fishery. The IFQ Program is a limited

access management system. This program is codified at 50 CFR part 679.

Background

The purpose of this proposed action is to revise the seabird avoidance measures currently implemented for the hook-and-line groundfish and halibut fisheries based on the best available information regarding seabird occurrence and potential fishing vessel interactions. Seabird avoidance measures reduce the incidental mortality of seabirds in the hook-and-line fisheries off Alaska. Since 1997, NMFS has implemented and revised seabird avoidance measures to mitigate interactions between the federal hook-and-line fisheries and seabirds (62 FR 23176, April 29, 1997; 63 FR 11161, March 6, 1998; 69 FR 1930, January 13, 2004; and 72 FR 71601, December 18, 2007).

NMFS compiled seabird sightings data from the following sources: from 1988-2004 records from seabird observers on the U.S. Fish and Wildlife Service's (FWS) research vessel M/V TIGLAX; from incidental sightings by biologists, fishermen, seamen, fisheries observers, and birdwatchers provided to the FWS; from the International Pacific Halibut Commission (IPHC); from the Alaska Natural Heritage Program; from historical sightings documented in published literature; from satellite tagging data; and from the North Pacific Pelagic Seabird Database. The EA/RIR/IRFA for this action describes this information (see **ADDRESSES**). This information showed that seabird species of concern are not likely to occur in portions of Area 4E where fishing vessels using hook-and-line gear may operate; and therefore, it is not likely that interactions between the fishing vessels and these seabird species of concern would occur in those portions of Area 4E. Thus, the Council recommended revisions to the seabird avoidance measures in a portion of Area 4E. These revisions would eliminate seabird avoidance measures in the portion of Area 4E where seabird species of concern are not likely to occur. The revisions would apply to vessels greater than 26 ft (7.9 m) to less than or equal to 55 ft (16.8 m) length overall (LOA) fishing in the EEZ. Vessels less than or equal to 26 ft (7.9 m) LOA are not required to use seabird avoidance measures. Vessels greater than 55 ft (16.8 m) LOA would continue to be required to use seabird avoidance measures in all of Area 4E. Vessels this size and larger are more likely to interact with other seabirds because of the greater amount of offal discharge and greater number of hooks fished

compared to smaller vessels. Vessels greater than 55 ft (16.8 m) LOA are capable of efficiently deploying seabird avoidance gear, as further discussed in the Classification section.

Species of concern of pelagic seabirds (particularly the Endangered Species

Act (ESA)-listed short-tailed albatross) are rarely observed in most of Area 4E; and therefore, are not likely to interact with hook-and-line fisheries in most of this area (Figure 1). Pelagic seabird species of concern that may interact with hook-and-line vessels have been

observed and documented in the southern portion of Area 4E west of Bristol Bay. The seabird avoidance measures would continue to be required in this area for all hook-and-line vessels greater than 26 feet (7.9 m) LOA.

BILLING CODE 3510-22-S

Figure 1. International Pacific Halibut Commission Regulatory Area 4E is shown as the striated area.

Notes: Under the proposed rule, hook-and-line vessels > 26 ft (7.9 m) LOA fishing in the shaded portion of the striated area would be required to continue using seabird avoidance measures. In the striated area of Area 4E, vessels > 26 ft (7.9 m) to 55 ft (16.8 m) would be exempt from seabird avoidance measures, and vessels > 55ft (16.8 m) would continue to use seabird avoidance measures. Vessels \leq 26ft (7.9 m) would continue to be exempt from seabird avoidance measures throughout all of Area 4E.

Eliminating unnecessary seabird avoidance measures is intended to remove associated economic burdens on affected vessels. These revisions are the result of adaptive management using the best available information to focus regulatory requirements where they are needed. Research results and the environmental and economic considerations of the proposed action are summarized in the EA/RIR/IRFA for this action (see **ADDRESSES**).

Proposed Regulatory Amendments

In June 2008, the Council unanimously recommended revisions to the seabird avoidance measures in a portion of Area 4E. These measures would apply to operators of vessels fishing for Pacific halibut in the IFQ and Community Development Quota (CDQ) management programs in waters from 0 nm to 200 nm; for IFQ sablefish in waters from 0 nm to 200 nm; and for groundfish with hook-and-line gear in the EEZ.

The proposed rule to implement the Council's recommendations would reorganize and revise § 679.24(e)(3) and Table 20 to part 679 to clarify existing regulatory text and to eliminate unnecessary seabird avoidance gear requirements for all hook-and-line vessels less than or equal to 55 ft (16.8 m) LOA fishing in Area 4E, except in the southern portion of Area 4E as shown in Figure 1. Hook-and-line vessels fishing in the portion of Area 4E south of 60 degrees N latitude and west of 160 degrees W longitude would continue to be required to use seabird avoidance measures. The best available scientific information regarding seabird observations in the Area 4E indicates that ESA-listed seabirds and other seabird species of concern are not likely to occur in Area 4E, except for the southern portion where seabird avoidance measures would continue to be required. Therefore, the proposed rule would eliminate seabird avoidance measures where interactions with seabird species of concern is not likely to occur and ensure that such measures are used in waters where interactions with seabird species of concern are likely to occur.

Table 19 to part 679 also would be revised to correct cross references. Under the descriptions for the seabird avoidance gear and other methods, the reference to § 679.24(e)(5) would be corrected to read § 679.24(e)(4).

Classification

Pursuant to section 304(b)(1)(A) of the Magnuson-Stevens Act, the NMFS Assistant Administrator has determined that this proposed rule is consistent

with the FMPs, other provisions of the Magnuson-Stevens Act, the Halibut Act, and other applicable law, subject to further consideration after public comment.

This proposed rule has been determined to be not significant for the purposes of Executive Order 12866.

An IRFA was prepared as required by section 603 of the Regulatory Flexibility Act (RFA). The IRFA describes the economic impact this proposed rule, if adopted, would have on small entities. A description of the action, why it is being considered, and the legal basis for this action are contained at the beginning of this section in the preamble and in the **SUMMARY** section of the preamble. A summary of the analysis follows. A copy of this analysis is available from NMFS (see **ADDRESSES**).

The vessels that fish for groundfish or halibut with hook-and-line gear in the waters off Alaska would be directly regulated by the proposed action. The seabird avoidance measures presently in place, and the alternatives and options considered, apply directly to the operator of a vessel deploying hook-and-line gear in the waters off Alaska. These regulations apply to the operation of a vessel and not directly to the halibut or sablefish IFQ-holder unless the holder is also the owner/operator of a vessel. Multiple IFQs may be used on a single vessel. Thus, the IRFA analysis of large and small entities is conducted at the vessel level and not the IFQ level. This analysis is complicated by the fact that the halibut fishery is managed somewhat separately from the Federal groundfish fisheries, resulting in multiple data sources being synthesized for the analysis. Thus, data from multiple sources and years have been used to estimate the numbers of large and small entities.

Approximately 70 vessels ranging between 26 ft (7.9 m) and 55 ft (16.8 m) LOA, participated in the CDQ Pacific halibut fishery in Area 4E. The 70 vessels that fished in the CDQ halibut fishery in Area 4E are mostly small vessels, 66 are less than 33 ft (10.1 m) LOA. These small vessels fish in the salmon and herring fisheries in the Bristol Bay and Togiak Bay areas of Alaska. None of the 70 vessels harvest groundfish in other Federal fisheries; thus, comprehensive annual revenue data are not available for these vessels in the way that they are for vessels that participate in Federal groundfish fisheries. However, given the small size of these vessels and the small scale of the fisheries they participate in, it is not expected that any of these vessels would earn more than \$4 million in annual

revenue. Thus, these 70 vessels are believed to be small entities, as defined by Small Business Administration criteria.

Comprehensive annual revenue data, from all sources, are available for the 92 vessels that participated in the Federal hook-and-line groundfish fisheries in the Bering Sea and Aleutian Islands management area in 2006. In 2006, 52 hook and line catcher vessels (CVs) and 6 hook-and-line catcher processors (CPs) reported that they caught and processed less than \$4 million in gross ex-vessel or gross first wholesale product value. Thus, these 58 vessels are considered small entities.

In total, this analysis has identified 128 vessels that are believed to be directly regulated small entities. A review of American Fisheries Act (AFA) permit data revealed that none of the 128 vessels with gross revenue less than \$4 million in 2006 are AFA-permitted vessels. Because AFA affiliations are relatively stable across years, none of these vessels are large because of AFA affiliations.

The IRFA indicates that this proposed action is not likely to impose significant costs on directly regulated small entities. The action reduces the regulatory burden on hook-and-line vessels 55 ft (16.8 m) LOA or less by eliminating all seabird avoidance requirements for these vessels operating in portions of Area 4E. The reduced regulatory burden under the proposed action would tend to reduce the costs for the directly regulated vessels. Vessel operational cost of production data are not presently collected, making it impossible to quantify the net effect on operational costs that might occur under each alternative and option.

Since the initial adoption of seabird avoidance regulations, research has been conducted to more precisely identify the geographical distribution and range of seabirds of concern, and on the efficacy of required seabird avoidance devices. Recent research has shown the likely locations of interaction between seabirds of concern and fishing vessels in Area 4E and has provided the information necessary to identify waters where seabird avoidance measures may not be necessary. The proposed action, which is intended to reduce the economic burden placed on small entities operating in these fisheries, is a direct result of this research.

An IRFA must describe any significant alternatives to the proposed rule that accomplish the stated objectives of the proposed action, consistent with applicable statutes, and that would minimize any significant economic impact of the proposed rule

on small entities. Including status quo, this proposed action has four alternatives and two options.

Alternative 1 is the status quo, which would require the continued use of seabird avoidance measures for all hook-and-line vessels fishing for groundfish or halibut in the federal waters of Area 4E. This alternative would not provide economic relief; and therefore, does not meet the objectives of this action.

Alternative 2 would exempt hook-and-line vessels 26 ft (7.9 m) to 32 ft (9.8 m) LOA from seabird avoidance measures while fishing for groundfish or halibut in Area 4E. This alternative would provide economic relief to only vessels in this size class, partially meeting the objectives of the action for the hook-and-line fleet.

Alternative 3 (preferred) would exempt hook-and-line vessels 26 ft (7.9 m) to 55 ft (16.8 m) LOA from seabird avoidance measures while fishing for groundfish or halibut in Area 4E. This alternative would provide more economic relief to the hook-and-line fleet than Alternatives 1 and 2.

Alternative 4 would exempt all hook-and-line vessels from seabird avoidance measures while fishing for groundfish or halibut in Area 4E. This alternative would provide the most economic relief to the hook-and-line fleet compared to the other alternatives, but the economic relief in comparison to Alternative 3 is not likely a large difference. Very few vessels over 55 ft (16.8 m) LOA participate in the hook-and-line fishery in Area 4E, and the larger vessels have the capability to use seabird avoidance gear based on larger deck space, adequate superstructure, and available crew.

Two options were also considered for this action. Option 1 (preferred) would require full compliance with the seabird avoidance measures inside the shaded portion of Area 4E, as shown in Figure 1, while option 2 would require only the use of a buoy bag in the shaded area. Option 1 would require more costs to deploy seabird avoidance gear that meets the streamer standards than option 2, which required a buoy bag with no standards and no supporting superstructure for streamer lines. Because the buoy bag is not likely as effective as the streamer lines, option 1 is more protective of short-tailed albatross and other seabirds that may occur in the shaded area shown in Figure 1.

The preferred action is Alternative 3 with option 1, which provides more economic relief than Alternatives 1 or 2 with option 1. Alternative 3 and option 1 were selected because most of the

vessels participating in the hook-and-line fishery in Area 4E are less than 55 ft (16.8 m) LOA. The use of seabird avoidance gear on these vessels can be difficult because of limited deck space for the gear or the lack of superstructure to support the streamer lines. Smaller vessels also are likely to have fewer crew members available to handle the gear. Only Alternative 4 has smaller economic impacts on the directly regulated small entities than Alternative 3. Because very few large vessels participate in the Area 4E fishery, Alternative 4 is not likely to provide much more economic relief than Alternative 3. Alternative 4 was not chosen because larger vessels are more likely to have adequate deck space, superstructure, and crew available to allow for safe and effective use of seabird avoidance gear. Because of the presence of short-tailed albatross in the shaded area of Figure 1, the Council recommended option 1 for vessels fishing in this area to ensure the continued protection of short-tailed albatross from potential incidental takes by any hook-and-line vessel. Option 1 has a marginally greater potential adverse economic impact on directly regulated small entities than does option 2, but option 1 more fully achieves the objectives of the proposed action and is necessary for the protection of short-tailed albatross and other seabirds that may occur in the shaded area of Figure 1, making it more compliant with other applicable law (e.g., ESA).

No Federal rules duplicate, overlap, or conflict with the proposed action.

An informal consultation with the FWS under the Endangered Species Act was concluded for this proposed action on September 15, 2008. As a result of the informal consultation, NMFS determined that fishing activities under this rule are not likely to adversely affect endangered or threatened species or their designated critical habitat. The FWS concurred with this determination.

List of Subjects in 50 CFR Part 679

Alaska, Fisheries, Recordkeeping and reporting requirements.

Dated: January 12, 2009.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For reasons set out in the preamble, NMFS proposes to amend 50 CFR part 679 as follows:

PART 679—FISHERIES OF THE EXCLUSIVE ECONOMIC ZONE OFF ALASKA

1. The authority citation for part 679 is revised to read as follows:

Authority: 16 U.S.C. 773 *et seq.*; 1801 *et seq.*; 3631 *et seq.*; Pub. L. 108 447.

2. In § 679.24, redesignate paragraphs (e)(3)(i) and (e)(3)(ii) as paragraphs (e)(3)(ii) and (e)(3)(iii), respectively; add new paragraph (e)(3)(i); and revise paragraph (e)(3) introductory text to read as follows:

§ 679.24 Gear limitations.

* * * * *

(e) * * *

(3) *Seabird avoidance gear requirements.* (See also Table 20 to this part.)

(i) The operator of a vessel identified in paragraph (e)(1) of this section must comply with paragraph (e)(3)(ii) or (e)(3)(iii) of this section while fishing with hook-and-line gear for groundfish, IFQ halibut, CDQ halibut, or IFQ sablefish in Federal waters (EEZ) and for IFQ halibut, CDQ halibut, or IFQ sablefish in the State of Alaska waters, excluding fishing in

(A) NMFS Reporting Area 649 (Prince William Sound);

(B) State waters of Cook Inlet;

(C) NMFS Reporting Area 659 (Eastern GOA Regulatory Area; Southeast Inside District), but including waters in the areas south of a straight line at 56°17.25 N. lat. between Point Harris and Port Armstrong in Chatham Strait, State statistical areas 325431 and 325401, and west of a straight line at 136°21.17 E. long. from Point Wimbledon extending south through the Inian Islands to Point Lavinia; and

(D) Area 4E with a vessel less than or equal to 55 ft (16.8 m) LOA, but including fishing in waters south of 60°00.00 N. lat. and west of 160°00.00 W. long.

* * * * *

3. Tables 19 and 20 to part 679 are revised to read as follows:

TABLE 19 TO PART 679—SEABIRD AVOIDANCE GEAR CODES

VESSEL LOGBOOK	
CODE	SEABIRD AVOIDANCE GEAR OR METHOD.
1	<i>Paired Streamer Lines:</i> Used during deployment of hook-and-line gear to prevent birds from taking hooks. Two streamer lines used, one on each side of the main groundline. Each streamer line consists of three components: a length of line, streamers attached along a portion of the length and one or more float devices at the terminal end. See performance and material standards at § 679.24(e)(4)(iii).
2	<i>Single Streamer Line:</i> Used during deployment of hook-and-line gear to prevent birds from taking hooks. The streamer line consists of three components: a length of line, streamers attached along a portion of the length and one or more float devices at the terminal end. See performance and material standards at § 679.24(e)(4)(ii).
3	<i>Single Streamer Line, used with Snap Gear:</i> Used during the deployment of snap gear to prevent birds from taking hooks. The streamer line consists of three components: a length of line, streamers attached along a portion of the length and one or more float devices at the terminal end. See performance and material standards at § 679.24(e)(4)(iv).
4	<i>Buoy Bag Line:</i> Used during the deployment of hook-and-line gear to prevent birds from taking hooks. A buoy bag line consists of two components: a length of line (without streamers attached) and one or more float devices at the terminal end. See performance and material standards at § 679.24(e)(4)(i).
Other Device used in conjunction with Single Streamer Line or Buoy Bag Line	
5	<i>Add weights to groundline:</i> Applying weights to the groundline for the purpose of sinking the hook-and-line gear more quickly and preventing seabirds from accessing the baited hooks.
6	<i>Additional Buoy Bag Line or Single Streamer Line:</i> Using a second buoy bag line or streamer line for the purpose of enhancing the effectiveness of these deterrent devices at preventing seabirds from accessing baited hooks.

TABLE 19 TO PART 679—SEABIRD AVOIDANCE GEAR CODES—Continued

VESSEL LOGBOOK	
CODE	SEABIRD AVOIDANCE GEAR OR METHOD.
7	<i>Strategic Offal Discharge:</i> Discharging fish, fish parts (i.e., offal) or spent bait for the purpose of distracting seabirds away from the main groundline while setting gear.
Additional Device Used	
8	<i>Night Fishing:</i> Setting hook-and-line gear during dark (night time hours). <i>Line Shooter:</i> A hydraulic device designed to deploy hook-and-line gear at a speed slightly faster than the vessel's speed during setting. <i>Lining Tube:</i> A device used to deploy hook-and-line gear through an underwater-setting device. <i>Other (Describe)</i>
9	No Deterrent Used Due to Weather. [See weather exceptions at § 679.24(e)(4)(i), (e)(4)(ii)(B), (e)(4)(iii)(B), (e)(4)(iv)(B), and (e)(4)(v).]
0	No Deterrent Used.

Notices

Federal Register

Vol. 74, No. 11

Friday, January 16, 2009

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Forest Service

White River National Forest, Eagle/Holy Cross Ranger District, Eagle County, CO; Edwards Inholding Easement Proposal

AGENCY: Forest Service, USDA.

ACTION: Notice of Intent to prepare an Environmental Impact Statement.

SUMMARY: The USDA Forest Service will prepare an Environmental Impact Statement (EIS) to disclose the anticipated environmental effects of a proposal to approve a permanent easement across National Forest System (NFS) lands for access to a 680-acre private inholding. The private land is entirely surrounded by NFS lands managed by the White River National Forest (WRNF). The proposed easement would provide year-round motorized access to the private inholding, enabling the owner "reasonable use and enjoyment" of the parcel as required by the Alaska National Interest Lands Conservation Act (ANILCA) of 1980.

DATES: Comments concerning the scope of the analysis must be received by February 19, 2009. The draft EIS is expected to be released in summer 2009 and the final EIS is expected in early 2010.

ADDRESSES: Send written comments to Brian Lloyd, District Ranger, Holy Cross Ranger District, P.O. Box 190, Minturn, CO 81645. Comments may also be sent via e-mail to wrrnf_scoping_comments@fs.fed.us, or via facsimile to (970) 827-9343.

Comments received in response to this solicitation, including names and addresses of those who comment, will be part of the public record for this proposed action. Comments submitted anonymously will be accepted and considered; however, anonymous comments will not provide the

respondent with standing to appeal the subsequent decision.

FOR FURTHER INFORMATION CONTACT:

Brian Lloyd,
wrrnf_scoping_comments@fs.fed.us.
Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 between 8 a.m. and 8 p.m., Eastern Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: The property is located approximately 1.25 miles north of the I-70 Edwards interchange and is currently accessible in the summer months via Forest System Road (FSR) 774 and FSR 780. A 0.8-mile segment of FSR 780 traverses the southeastern leg of the private land inholding.

Purpose and Need for Action

The owner of the 680-acre inholding (the Proponent) plans to exercise their legal right to plat this private land into 19 individual lots (each 35 acres in size or greater) for development of a low-density, year-round residential community. As such, development of the inholding into a viable residential community requires year-round, vehicular access across NFS lands. Per ANILCA, the WRNF is obligated to " * * * provide such access to nonfederally owned land within the boundaries of the National Forest System * * * to secure the owner reasonable use and enjoyment thereof * * *" (16 U.S.C. 3210, Title I, § 1323). Therefore, the purpose and need of this proposal is rooted in the Forest Service's legal obligations under ANILCA.

Proposed Action

The Proposed Action would satisfy the Forest Service's minimum obligations to accommodate "reasonable use and enjoyment" under ANILCA. Issuance of a permanent easement would provide year-round motorized access to the private inholding, thus enabling the owner to develop it as legally entitled. The easement would be for reconstruction and use of two existing Forest System roads—FSR 774 and FSR 780. The total length of the easement on NFS lands (FSR 774 and FSR 780) would be approximately 2.6 miles (approximately 13,550 feet). The easement would include:

- 1.1 miles on FSR 774 (beginning at the Forest Service gate at the beginning of FSR 774 and would be followed until its intersection with FSR 780),

- 1.5 miles on FSR 780 (until it intersects the lower southeastern leg of the inholding).

FSR 774 and FSR 780 would be placed within a permanent easement and paved/maintained for homeowners' year-round use; the public would continue to have access to these roads consistent with the current seasonal closures.

This alignment would provide access to the southeastern portion of the inholding. Conceptually, an additional 5.5 miles of private road would be constructed throughout the eastern and northern portions of the private inholding to accommodate access to each of the 19 lots. Road construction within the inholding is not within the jurisdiction of the Forest Service.

Responsible Official

The Responsible Official is the WRNF Supervisor. The Responsible Official will document the decision and reasons for the decision in a Record of Decision. That decision will be subject to appeal under 36 CFR part 215 or part 251.

Nature of Decision To Be Made

Based on the analysis that will be documented in the forthcoming EIS, the Responsible Official will decide whether or not to implement, in whole or in part, the Proposed Action or another alternative developed by the Forest Service.

Preliminary Issues

As indicated in the 2002 WRNF Land and Resource Management Plan (Forest Plan), NFS lands in the vicinity of the private inholding are within two Management Areas (MA): 5.41—Deer and Elk Winter Range, and 8.32—Designated Utility Corridors. Per MA 5.41, deer and elk winter ranges are managed to provide adequate amounts of quality forage, cover and solitude for deer, elk, and other species. Consistent with management direction in MA 5.41, human activities are managed so that deer and elk can effectively use NFS lands in the area.

Due to the existence of NFS lands managed in MA 5.41, motorized travel, including over-the-snow vehicles, on FSR 774 and FSR 780 is restricted during winter and spring. Granting a

year-round easement could result in an inconsistency with Forest Plan standards for MA 5.41. In order to approve road reconstruction and year-round access to the inholding across NFS lands, an amendment to the Forest Plan would be necessary. This amendment would be specific to standards included in MA 5.41 related to biodiversity and infrastructure.

Permits or Licenses Required

- An Eagle County grading permit(s) would be required for road construction on NFS and private lands.
- Building construction permits would be required for individual buildings on each lot.

Scoping Process

Publication of a Notice of Intent (NOI) in the **Federal Register** begins the planning process under provisions of the National Environmental Policy Act. Comments will be accepted during the 45-day scoping period as described in this NOI. Comments will be reviewed and issues identified. Issues that cannot be resolved by mitigation or minor changes to the proposed action may generate alternatives to the proposed action. This process is driven by comments received from the public, other agencies, and internal Forest Service concerns. To assist in commenting, a scoping letter providing more detailed information on the project proposal (including a map) has been prepared and is available to interested parties. Contact Brian Lloyd, District Ranger, at the address listed in this NOI if you would like to receive a copy.

Comment Requested

This notice of intent initiates the scoping process that guides the development of the environmental impact statement. Comments that are site-specific in nature are most helpful to resource professionals when trying to narrow and address the public's issues and concerns.

Early Notice of Importance of Public Participation in Subsequent Environmental Review

A Draft Environmental Impact Statement will be prepared for comment. The comment period on the Draft Environmental Impact Statement will be 45 days from the date the Environmental Protection Agency publishes the notice of availability in the **Federal Register**.

The Forest Service believes, at this early stage, it is important to give reviewers notice of several court rulings related to public participation in the environmental review process. First,

reviewers of Draft Environmental Impact Statements must structure their participation in the environmental review of the proposal so that it is meaningful and alerts an agency to the reviewer's position and contentions. *Vermont Yankee Nuclear Power Corp. v. NRDC*, 435 U.S. 519, 553 (1978). Also, environmental objections that could be raised at the Draft Environmental Impact Statement stage but that are not raised until after completion of the Final Environmental Impact Statement may be waived or dismissed by the courts. *City of Angoon v. Hodel*, 803 F.2d 1016, 1022 (9th Cir. 1986) and *Wisconsin Heritages, Inc. v. Harris*, 490 F. Supp. 1334, 1338 (E.D. Wis. 1980). Because of these court rulings, it is very important that those interested in this proposed action participate by the close of the 45 day comment period so that substantive comments and objections are made available to the Forest Service at a time when it can meaningfully consider them and respond to them in the Final Environmental Impact Statement.

To assist the Forest Service in identifying and considering issues and concerns on the proposed action, comments on the Draft Environmental Impact Statement should be as specific as possible. It is also helpful if comments refer to specific pages or chapters of the draft statement. Comments may also address the adequacy of the Draft Environmental Impact Statement or the merits of the alternatives formulated and discussed in the statement. Reviewers may wish to refer to the Council on Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3 in addressing these points.

It is important that reviewers provide their comments at such times and in such manner that they are useful to the agency's preparation of the Environmental Impact Statement. Therefore, comments should be provided prior to the close of the comment period and should clearly articulate the reviewer's concerns and contentions. The submission of timely and specific comments can affect a reviewer's ability to participate in subsequent administrative appeal or judicial review.

Dated: January 6, 2009.

Mary Morgan,

White River National Forest Supervisor.

BILLING CODE 3410-11-P

DEPARTMENT OF AGRICULTURE

Forest Service

National Urban and Community Forestry Advisory Council

AGENCY: Forest Service, USDA.

ACTION: Notice of meeting.

SUMMARY: The National Urban and Community Forestry Advisory Council will meet in Washington DC, February 10-12, 2009. The purpose of the meeting is to discuss emerging issues in urban and community forestry and hear public input related to urban and community forestry.

DATES: The meeting will be held on February 10-11, 2009, 9 a.m. to 5 p.m. and February 12, 2009, 9 a.m. to 12 noon.

ADDRESSES: The meeting will be held at the Holiday Inn Capital, 550 C Street, SW., Washington, DC 20024, phone: 202-479-4000. Written comments concerning this meeting should be addressed to Nancy Stremple, Executive Staff to National Urban and Community Forestry Advisory Council, 201 14th St. SW., Yates Building (1 Central) MS-1151, Washington, DC 20250-1151. Comments may also be sent via e-mail to nstremple@fs.fed.us, or via facsimile to 202-690-5792.

All comments, including names and addresses when provided, are placed in the record and are available for public inspection and copying. The public may inspect comments received at 201 14th St., SW., Yates Building (1 Central) MS-1151, Washington, DC 20250-1151. Visitors are encouraged to call ahead to 202-205-1054 to facilitate entry into the building.

FOR FURTHER INFORMATION CONTACT: Nancy Stremple, Executive Staff or Robert Prather, Staff Assistant to National Urban and Community Forestry Advisory Council, 201 14th St., SW., Yates Building (1 Central) MS-1151, Washington, DC 20250-1151, phone 202-205-1054.

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 between 8 a.m. and 8 p.m., Eastern Standard Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: The meeting is open to the public. Council discussion is limited to Forest Service staff and Council members; however, persons who wish to bring urban and community forestry matters to the attention of the Council may file written statements with the Council staff (201 14th St., SW., Yates Building (1 Central)

MS-1151, Washington, DC 20250-1151, e-mail: nstremple@fs.fed.us) before or after the meeting. Public input sessions will be provided at the meeting. Public comments will be compiled and provided to the Secretary of Agriculture along with the Council's recommendations.

Dated: January 8, 2009.

Robin L. Thompson,

Associate Deputy Chief, State and Private Forestry.

Forest Service

Opal Creek Scenic Recreation Area (SRA) Advisory Council

AGENCY: Forest Service, USDA Forest Service

ACTION: Notice of Meeting.

SUMMARY: Opal Creek Scenic Recreation Area Advisory Council meetings will convene in Stayton, Oregon on Wednesday, February 11, 2009. These meetings are scheduled to begin at 6:30 p.m., and will conclude at approximately 8:30 p.m. Meetings will be held in the South Room of the Stayton Community Center located on 400 West Virginia Street in Stayton, Oregon.

The Opal Creek Wilderness and Opal Creek Scenic Recreation Area Act of 1996 (Opal Creek Act) (Pub. L. 104-208) directed the Secretary of Agriculture to establish the Opal Creek Scenic Recreation Area Advisory Council. The Advisory Council is comprised of thirteen members representing state, county and city governments, and representatives of various organizations, which include mining industry, environmental organizations, inholders in Opal Creek Scenic Recreation Area, economic development, Indian tribes, adjacent landowners and recreation interests. The council provides advice to the Secretary of Agriculture on preparation of a comprehensive Opal Creek Management Plan for the SRA, and consults on a periodic and regular basis on the management of the area. Tentative agenda items include: Forest Service updates and future projects.

A direct public comment period is tentatively scheduled to begin at 8 p.m. Time allotted for individual presentations will be limited to 3 minutes. Written comments are encouraged, particularly if the material cannot be presented within the time limits of the comment period. Written

comments may be submitted prior to scheduled meetings by sending them to Designated Federal Official Paul Matter at the address given below.

FOR FURTHER INFORMATION CONTACT: For more information regarding this meeting, contact Designated Federal Official Paul Matter; Willamette National Forest, Detroit Ranger District, HC 73 Box 320, Mill City, OR 97360; (503) 854-3366.

Dated: January 9, 2009.

Dallas J. Emch,

Forest Supervisor.

BILLING CODE 3410-11-M

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Additions and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed Additions to and Deletions from Procurement List.

SUMMARY: The Committee is proposing to add to the Procurement List services to be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities, and to delete products previously furnished by such agencies

Comments Must Be Received on or Before: 2/15/2009.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, Jefferson Plaza 2, Suite 10800, 1421 Jefferson Davis Highway, Arlington, Virginia 22202-3259.

FOR FURTHER INFORMATION OR TO SUBMIT COMMENTS CONTACT: Barry S. Lineback, Telephone: (703) 603-7740, Fax: (703) 603-0655, or e-mail CMTEFedReg@AbilityOne.gov.

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C 47(a)(2) and 41 CFR 51-2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Additions

If the Committee approves the proposed additions, the entities of the Federal Government identified in this notice for each product or service will be required to procure the services listed below from nonprofit agencies employing persons who are blind or have other severe disabilities.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. If approved, the action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities other than the small organizations that will furnish the services to the Government.

2. If approved, the action will result in authorizing small entities to furnish the services to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 46-48c) in connection with the services proposed for addition to the Procurement List.

Comments on this certification are invited. Commenters should identify the statement(s) underlying the certification on which they are providing additional information.

End of Certification

The following services are proposed for addition to the Procurement List for production by the nonprofit agencies listed:

Services

Service Type/Location:

Base Information Transfer Center, BITC, Multiple Locations, AF Air Combat Command

COMMISSION ON CIVIL RIGHTS

**Agenda and Notice of Public Meeting
of the Arkansas Advisory Committee**

Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission), and the Federal Advisory Committee Act (FACA), that a meeting of the Arkansas Advisory Committee to the Commission will convene on Wednesday, February 11, 2009 at 1:30 p.m. and adjourn at approximately 3:30 p.m. at the University of Arkansas at Little Rock, William H. Bowen School of Law. The purpose of the meeting is to conduct long range planning for future activities in 2009-10.

Members of the public are entitled to submit written comments. The comments must be received in the regional office by February 4, 2009. The address is U.S. Commission on Civil Rights, 400 State Avenue, Suite 908, Kansas City, Kansas 66101. Persons wishing to e-mail their comments, or to present their comments verbally at the meeting, or who desire additional information should contact Farella E. Robinson, Regional Director, Central Regional Office, at (913) 551-1400 or by e-mail to frobinson@usccr.gov.

Hearing-impaired persons who will attend the meeting and require the services of a sign language interpreter should contact the Regional Office at least ten (10) working days before the scheduled date of the meeting.

Records generated by this meeting may be inspected and reproduced at the Central Regional Office, as they become available, both before and after the meeting. Persons interested in the work of this advisory committee are advised to go to the Commission's Web site, <http://www.usccr.gov>, or to contact the Central Regional Office at the above e-mail or street address.

The meeting will be conducted pursuant to the provisions of the rules and regulations of the Commission and FACA.

Dated in Washington, DC, January 12,
2009.

Christopher Byrnes,

Chief, Regional Programs Coordination Unit.

COMMISSION ON CIVIL RIGHTS

**Agenda and Notice of Public Meeting
of the Kansas Advisory Committee**

Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission), and the Federal Advisory Committee Act (FACA), that a public briefing meeting of the Kansas Advisory Committee to the Commission will convene on Thursday, February 26, 2009 at 9 a.m. and adjourn at approximately 4 p.m. at the Dillon House located on the grounds of the Kansas State Capitol, 404 Southwest North 9th Street, Topeka, KS 66612. The purpose of the meeting is to conduct a public briefing meeting to receive information on the "Civil Rights Implications of Kansas Caucus Process Related Voting Rights Issues." Information will also be collected on "Enforcement of Employment Civil Rights Laws in Kansas."

Members of the public are entitled to submit written comments. The comments must be received in the regional office by February 16, 2009. The address is U.S. Commission on Civil Rights, 400 State Avenue, Suite 908, Kansas City, Kansas 66101. Persons wishing to e-mail their comments, or to present their comments verbally at the meeting, or who desire additional information should contact Farella E. Robinson, Regional Director, Central Regional Office, at (913) 551-1400 or by e-mail to frobinson@usccr.gov.

Hearing-impaired persons who will attend the meeting and require the services of a sign language interpreter should contact the Regional Office at least ten (10) working days before the scheduled date of the meeting.

Records generated by this meeting may be inspected and reproduced at the Central Regional Office, as they become available, both before and after the meeting. Persons interested in the work of this advisory committee are advised to go to the Commission's Web site, <http://www.usccr.gov>, or to contact the Central Regional Office at the above e-mail or street address.

The meeting will be conducted pursuant to the provisions of the rules and regulations of the Commission and FACA.

Dated in Washington, DC, January 12,
2009.

AGENCIES: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce; Fish and Wildlife Service (USFWS), Interior.

ACTION: Notice of availability.

SUMMARY: We, NMFS and USFWS, announce the availability of the revised Recovery Plan for the Northwest Atlantic Population of the Loggerhead Sea Turtle (*Caretta caretta*). The revised recovery plan includes specific recovery objectives and criteria to be met in order to delist this species under the Endangered Species Act of 1973, as amended (Act).

ADDRESSES: The Recovery Plan for the Northwest Atlantic Population of the Loggerhead Sea Turtle is available on the Internet at <http://www.nmfs.noaa.gov/pr/recovery/plans.htm#turtles> or <http://www.fws.gov/northflorida>. Copies also may be obtained by contacting NMFS Office of Protected Resources, 1315 East-West Highway, Room 13657, Silver Spring, MD 20910 (telephone 301–713–1401) or USFWS North Florida Field Office, 7915 Baymeadows Way, Suite 200, Jacksonville, FL 32256 (telephone 904–731–3336).

FOR FURTHER INFORMATION CONTACT: Barbara Schroeder (ph. 301–713–1401, fax 301–713–0376, e-mail barbara.schroeder@noaa.gov) or Sandy MacPherson (ph. 904–731–3328, fax 904–731–3045, e-mail sandy_macpherson@fws.gov).

SUPPLEMENTARY INFORMATION: The Endangered Species Act of 1973 (15 U.S.C. 1531 *et seq.*) requires that NMFS and USFWS develop and implement recovery plans for the conservation and survival of threatened and endangered species under their jurisdiction, unless it is determined that such plans would not promote the conservation of the species. Section 4(f) of the Act requires us to provide a public notice and an opportunity for public review and comment during recovery plan development. We made the draft

revision of the Recovery Plan for the Northwest Atlantic Population of the Loggerhead Sea Turtle available for public comment from May 30, 2008, through July 29, 2008 (73 FR 31066, May 30, 2008). We considered information we received during the public comment period and information from peer reviewers in our preparation of this final revised recovery plan.

The plan discusses the natural history, current status, and the known and potential threats to the loggerhead turtle in the Northwest Atlantic. The plan lays out a recovery strategy to address the potential threats based on the best available science and includes recovery goals and criteria. The plan is not a regulatory action, but presents guidance for use by agencies and interested parties to assist in the recovery of loggerhead turtles. The plan identifies substantive actions needed to achieve recovery by addressing the threats to the species. Recovery of loggerhead turtles in the Northwest Atlantic is a long-term effort and will require cooperation and coordination of Federal, state, and local government agencies, and the community, as well as international cooperation.

Dated: January 9, 2009.

BILLING CODES 3510–22–S, 4310–55–S

DEPARTMENT OF COMMERCE**National Oceanic and Atmospheric Administration**

RIN 0648–XL89

Incidental Takes of Marine Mammals During Specified Activities; Marine Geophysical Survey in Southeast Asia, March–July 2009

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; proposed incidental take authorization; extension of comment period.

SUMMARY: On December 22, 2008, the NMFS announced notice of its proposed issuance of an Incidental Harassment Authorization (IHA) to Lamont-Doherty Earth Observatory (L-DEO), a part of Columbia University, to take small

numbers of marine mammals, by harassment incidental to conducting a marine seismic survey in Southeast Asia during March–July 2009. Written comments were due by January 21, 2009. Under the unique circumstances of the timing of the publication of the **Federal Register** notice relative to several Federal holidays, NMFS has decided to extend the public comment period by 15 days, to February 5, 2009.

DATES: The public comment period for this action has been extended from January 21 to February 5, 2009. Written comments and information must be received no later than February 5, 2009.

ADDRESSES: Comments on the application should be addressed to P. Michael Payne, Chief, Permits, Conservation, and Education Division, Office of Protected Resources, National Marine Fisheries Service, 1315 East-West Highway, Room 13705, Silver Spring, MD 20910–3225. The mailbox address for providing email comments is PR1.0648-XL89@noaa.gov. Comments sent via email, including all attachments, must not exceed 10–megabyte file size.

FOR FURTHER INFORMATION CONTACT: Howard Goldstein, Office of Protected Resources, NMFS, 301–713–2289.

SUPPLEMENTARY INFORMATION: On December 22, 2008 (73 FR 78294), the NMFS announced notice of its proposed issuance of an Incidental Harassment Authorization (IHA) to L-DEO, a part of Columbia University, to take small numbers of marine mammals by harassment incidental to conducting a marine seismic survey in Southeast Asia during March–July 2009. Under the unique circumstances of the timing of the publication of the **Federal Register** notice relative to several Federal holidays, NMFS had decided to extend the public comment period by 15 days, to February 5, 2009. The **Federal Register** notice published three days before the Christmas holiday, which fell on Thursday, December 25, 2008. The following day, Friday, December 26, 2008 was declared a Federal holiday for executive branch departments and agencies. New Year's Day, a Federal holiday, was the following Thursday, January 1, 2009. In recognition of the fact that the timing of these three holidays led many workers to be away for much of the two-week period and some non-government organizations closed their offices during that period, NMFS' public comment period for this proposed action is hereby extended to February 5, 2009. NMFS is also aware that the proposed action is for a new geographical area rather than a renewal of a prior action, where the associated

documents are lengthy and would likely not be familiar to many interested parties. Finally, NMFS does not anticipate that the comment period extension will delay its decision of whether to issue an IHA.

Background information concerning the proposed IHA can be found in the **Federal Register** notice and is not repeated here. For additional information about the IHA application and associated EA, please visit the website at: <http://www.nmfs.noaa.gov/pr/permits/incidental.htm>

Dated: January 12, 2009.

BILLING CODE 3510-22-S

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XM73

National Marine Fisheries Service; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of a public workshop.

SUMMARY: NMFS will hold a workshop for participants that are required to submit an Economic Data Report for the Bering Sea and Aleutian Islands Crab Rationalization Program.

DATES: The workshop will be held on Thursday, January 22, 2009, from 1:30 p.m. to 5 p.m. Pacific Standard Time.

ADDRESSES: The workshop will be held at the Pacific Seafood Processors Association office, 1900 W. Emerson Place, 1205, Seattle, WA 98119.

FOR FURTHER INFORMATION CONTACT: Brian Garber-Yonts; (206) 526-6301 or brian.garber-yonts@noaa.gov.

SUPPLEMENTARY INFORMATION: The Bering Sea and Aleutian Islands (BSAI) Crab Rationalization Program requires any owner or leaseholder of a vessel or processing plant that harvested or processed crab in certain BSAI fisheries to submit an Economic Data Report (EDR) for the previous calendar year. NMFS staff will hold a workshop with BSAI crab industry members to review current crab EDR data documentation and data quality findings. Workshop participants will also discuss the development of best practices guidelines for completing crab EDR forms and discuss possible revisions to

the current crab EDR forms. For further information on the Crab Rationalization Program, please visit the NMFS Alaska Region website at <http://www.alaskafisheries.noaa.gov>.

Special Accommodations

This workshop is physically accessible to people with disabilities. Requests for special accommodations should be directed to Brian Garber-Yonts (see **FOR FURTHER INFORMATION CONTACT**) at least 5 working days before the workshop date.

Dated: January 13, 2009.

Tracey L. Thompson,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XM70

North Pacific Fishery Management Council; Public Meetings

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meetings.

SUMMARY: The North Pacific Fishery Management Council (Council) and its advisory committees will hold public meetings.

DATES: The meetings will be held Monday, February 2 through Tuesday, February 10, 2009. See **SUPPLEMENTARY INFORMATION** for specific dates and times.

ADDRESSES: The meetings will be held at the Renaissance Hotel, 515 Madison Street, Seattle, WA.

Council address: North Pacific Fishery Management Council, 605 W. 4th Avenue, Suite 306, Anchorage, AK 99501-2252.

FOR FURTHER INFORMATION CONTACT: David Witherell, Council staff, telephone: (907) 271-2809.

SUPPLEMENTARY INFORMATION: The Council will begin its plenary session at 8 a.m. on Wednesday, February 4 continuing through Tuesday, February 10, 2009. The Council's Advisory Panel (AP) will begin at 8 a.m., Monday, February 2 and continue through Friday, February 6. The Scientific and Statistical Committee (SSC) will begin at 8 a.m. on Monday, February 2 and continue through Wednesday, February

4, 2009. The Ecosystem Committee will meet Tuesday, February 3, from 4 p.m. to 6 p.m. The Enforcement Committee will meet Tuesday, February 3, from 1 p.m. to 4 p.m. in the. The Comprehensive Data Collection Committee may also meet this week at the hotel, time TBA. All meetings are open to the public, except executive sessions.

Council Plenary Session: The agenda for the Council's plenary session will include the following issues. The Council may take appropriate action on any of the issues identified.

1. Reports
Executive Director's Report
NMFS Management Report
NMFS Enforcement Report
Alaska Department of Fish & Game Report

U.S. Coast Guard Report
U.S. Fish & Wildlife Service Report
International Pacific Halibut Commission Report

Protected Species Report (update on schedule of Steller Sea Lion (SSL) draft Status Quo Biological Opinion (BiOp) and Environmental Impact Statement (EIS); Bering Sea and Aleutian Island (BSAI) Pacific cod split.

2. American Fisheries Act (AFA)
Cooperative reports: Receive reports from BSAI Pollock cooperatives.

3. Arctic Fishery Management Plan (FMP): Final action to adopt FMP for the Arctic region.

4. Salmon Bycatch: Review Inter-Cooperative Agreement (ICA) incentive proposals and Bycatch Committee Report.

5. Amendment 80: Initial review of analysis for Amendment 80 Cooperative Formation.

6. BSAI Fixed Gear: Initial review of BSAI fixed gear parallel fisheries analysis.

7. Gulf of Alaska (GOA) Sideboards: Discussion paper on GOA Sideboards for AFA catcher vessels; Initial review of GOA Pacific cod sideboards for crab vessels.

8. BSAI Crab Issues: Initial review BSAI Crab Regional Delivery Relief; Receive Committee report; Receive proposed workplan and timeline for crab analysis/discussion papers for changes to the program, and action as necessary; Receive progress report on Crab Economic Data Report (EDR) surveys.

9. Marine Protection Act Nomination Process: Review NMFS letter and discuss next steps (T).

10. Halibut/Sablefish Issues: Review/Rescind previous action to remove inactive Individual Fishing Quota (IFQ) shares; Review halibut catch sharing plan discussion papers (SSC only): (i)

Maximum size limit analysis (ii) ADF&G charter halibut harvest projection methodology.

11. Miscellaneous Issues: Receive Committee report on comprehensive data collection; Review of Halibut Prohibited Species Catch (PSC) Discard Survival Exempted Fishing Permit (EFP); Review of halibut sorting EFP (T); Review discussion paper on BS bottom trawl sweeps; Review discussion paper on GOA Rockfish Program changes; Review revised discussion paper on AI Pacific cod processing sideboards (T).

12. Staff Tasking: Review Committees and tasking; Receive report on Alaska Native/Community Outreach.

13. Other Business.

The SSC agenda will include the following issues:

1. Arctic FMP
2. Salmon Bycatch
3. Amendment 80
4. BSAI Fixed gear
5. GOA Sideboards
6. BSAI Crab Issues
7. Halibut Catch Sharing plan
8. Committee report on Crab EDR surveys
9. Halibut PSC discard survival EFP
10. Halibut sorting EFP

Additionally, the SSC will hold a Science Workshop on the role of Stock Structure in management of commercial fisheries.

The Advisory Panel will address most of the same agenda issues as the Council, except for 11 reports. The Agenda is subject to change, and the latest version will be posted at <http://www.fakr.noaa.gov/npfmc/>.

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Gail Bendixen at (907) 271-2809 at least 7 working days prior to the meeting date.

Dated: January 13, 2009.

Tracey L. Thompson,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510-22-S

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD-2008-OS-0091]

Submission for OMB Review; Comment Request

ACTION: Notice.

The Department of Defense has submitted to OMB for clearance, the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

DATES: Consideration will be given to all comments received by February 6, 2009.

Title, Form, and OMB Number: National Language Service Corps; DD Test Forms 2932, 2933, 2934 and 2935; OMB Number 0704-0449.

Type of Request: Extension.

Number of Respondents: 4,000.

Responses per Respondent: 1.75.

Annual Responses: 7,000.

Average Burden per Response: 18.86 minutes.

Annual Burden Hours: 2,200.

Needs and Uses: The information collection requirement is necessary to identify individuals with language and special skills who potentially qualify for employment or service opportunities in the public section during periods of national need or emergency.

Affected Public: Individuals or households.

Frequency: On occasion.

Respondent's Obligation: Voluntary.

OMB Desk Officer: Ms. Jasmeet Seehra

Written comments and recommendations on the proposed information collection should be sent to Ms. Seehra at the Office of Management and Budget, Desk Officer for DoD, Room 10236, New Executive Office Building, Washington, DC 20503.

You may also submit comments, identified by docket number and title, by the following method:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

DoD Clearance Officer: Ms. Patricia Toppings.

Written requests for copies of the information collection proposal should be sent to Ms. Toppings at WHS/ESD/Information Management Division, 1777 North Kent Street, RPN, Suite 11000, Arlington, VA 22209-2133.

Dated: January 8, 2009.

Patricia L. Toppings,

BILLING CODE 5001-06-P

DEPARTMENT OF DEFENSE

Office of the Secretary

Defense Science Board

AGENCY: Department of Defense.

ACTION: Notice of advisory committee meetings.

SUMMARY: The Defense Science Board will meet in closed session on February 4 and 5, 2009; at the Pentagon, Arlington, VA.

The mission of the Defense Science Board is to advise the Secretary of Defense and the Under Secretary of Defense for Acquisition, Technology & Logistics on scientific and technical matters as they affect the perceived needs of the Department of Defense. At this meeting, the Board will discuss interim finding and recommendations resulting from ongoing Task Force activities. The Board will also discuss plans for future consideration of scientific and technical aspects of specific strategies, tactics, and policies as they may affect the U.S. national defense posture and homeland security.

FOR FURTHER INFORMATION CONTACT: Ms. Debra Rose, Executive Officer, Defense Science Board, 3140 Defense Pentagon, Room 3B888A, Washington, DC 20301-3140, via e-mail at debra.rose@osd.mil, or via phone at (703) 571-0084.

SUPPLEMENTARY INFORMATION:

In accordance with section 10(d) of the Federal Advisory Committee Act, Public Law No. 92-463, as amended (5 U.S.C. App. 2) and 41 CFR 102-3.155, the Department of Defense has determined that these Defense Science Board Quarterly meetings will be closed to the public. Specifically, the Under Secretary of Defense (Acquisition, Technology and Logistics), with the coordination of the DoD Office of General Counsel, has determined in writing that all sessions of these meetings will be closed to the public because they will be concerned throughout with matters listed in 5 U.S.C. 552b(c)(1).

Interested persons may submit a written statement for consideration by the Defense Science Board. Individuals submitting a written statement must submit their statement to the Designated Federal Official at the address detailed above, at any point, however, if a

written statement is not received at least 10 calendar days prior to the meeting, which is the subject of this notice, then it may not be provided to or considered by the Defense Science Board. The Designated Federal Official will review all timely submissions with the Defense Science Board Chairperson, and ensure they are provided to members of the Defense Science Board before the meeting that is the subject of this notice.

Dated: January 12, 2009.

Patricia L. Toppings,

*OSD Federal Register Liaison Officer,
Department of Defense.*

BILLING CODE 5001-06-P

DEPARTMENT OF DEFENSE

DEPARTMENT OF ENERGY

**ENVIRONMENTAL PROTECTION
AGENCY**

**NUCLEAR REGULATORY
COMMISSION**

[Docket No. CP08-6-002]

**Multi-Agency Radiation Survey and
Assessment of Materials and
Equipment Manual**

AGENCY: Department of Defense, Department of Energy, Environmental Protection Agency, and the Nuclear Regulatory Commission.

ACTION: Notice of availability.

SUMMARY: The Department of Defense (DoD), Department of Energy (DOE), U.S. Environmental Protection Agency (EPA), and the U.S. Nuclear Regulatory Commission (NRC) are announcing the availability of the final "Multi-Agency Radiation Survey and Assessment of Materials and Equipment manual" (MARSAME). MARSAME provides information on planning, conducting, evaluating, and documenting radiological surveys for demonstrating compliance with measurable action levels. The MARSAME manual is a multi-agency consensus document. The agencies previously have sought public comment in order to receive feedback from the widest range of interested parties and to ensure that all information relevant to developing the document was received. The agencies reviewed public comments received on the draft MARSAME as well as comments from a concurrent, independent, technical peer review. Suggested changes were incorporated, where appropriate, in response to those comments.

ADDRESSES: Copies of the draft MARSAME and all comments received may be examined or copied for a fee electronically in <http://www.regulations.gov>, or in hard copy at the HQ EPA Docket Public Reading Room, U.S. Environmental Protection Agency, Room 3334, Docket ID No. EPA-HQ-OAR-2006-0957, 1301 Constitution Ave., NW., Washington, DC 20460, and the NRC Public Document Room, 11555 Rockville Pike, Rockville, Maryland 20852-2747. The HQ EPA Docket Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the EPA HQ Docket Public Reading Room is (202) 566-1744. DOE, EPA, and NRC each have a publication number for MARSAME. They are: For DOE, DOE/HS-0004; for EPA, EPA 402-R-09-001; for NRC, NUREG-1575, Supp. 1. Copies of the final MARSAME may be purchased by requests in writing to: The Superintendent of Documents, U.S. Government Printing Office, P.O. Box 37082, Washington, DC 20402-9328. The document will be available through the Internet at: <http://www.epa.gov/radiation/marssim>.

FOR FURTHER INFORMATION CONTACT: Any of the following points of contact for each agency for technical information (see **ADDRESSES** section above for directions on obtaining a copy of the draft MARSAME): DoD: Steven Doremus, Phone: (757) 887-7745, U.S. Navy, NAVSEADET RASO, NWS, P.O. Drawer 260, Yorktown, VA 23691-0260; DOE: W. Alexander Williams, Phone: (301) 903-8149, U.S. Department of Energy (EM-23), 1000 Independence Avenue, SW., Washington, DC 20585; EPA: Kathryn Snead, Phone: (202) 343-9228, U.S. Environmental Protection Agency, Mail Stop 6608J, 1200 Pennsylvania Avenue, NW., Washington, DC 20460-1000; NRC: Robert A. Meck, Phone: (301) 251-7548, U.S. Nuclear Regulatory Commission, Mail Stop C3 C07M, Washington, DC 20555. Questions concerning the multi-agency document development project should be addressed to Kathryn Snead, Phone: (202) 343-9228, U.S. Environmental Protection Agency, Mail Stop 6608J, 1200 Pennsylvania Avenue, NW., Washington, DC 20460-1000.

SUPPLEMENTARY INFORMATION: MARSAME provides information on planning, conducting, evaluating, and documenting environmental radiological surveys for demonstrating compliance with measurable action levels applied to materials and equipment. MARSAME is a multi-agency consensus document and a

supplement to the Multi-Agency Radiation Survey and Site Investigation Manual (MARSSIM).

MARSAME was developed collaboratively over the past six years by the technical staffs of the four Federal agencies having authority for control of radioactive materials: DoD, DOE, EPA, and NRC. For a time, staff from the Department of Homeland Security participated in the development of MARSAME. Contractors to the DOE, EPA, and NRC, and members of the public have been present during the open meetings of the MARSAME workgroup. MARSAME's objective is to describe standardized and consistent approaches for surveys, which provide a high degree of assurance that established action levels can be measured and an appropriate disposition of materials or equipment can be technically defended. The techniques, methodologies, and philosophies that form the bases of this manual were developed to be consistent with current Federal limits, guidelines, and procedures.

MARSAME benefited from extensive internal, public, and technical peer reviews. In addition to written comments, the work group provided the public with the opportunity to comment during the open meetings. The document also received formal technical peer review under the auspices of the EPA Science Advisory Board (SAB). The results of the peer review and the responses to comments by the EPA are publicly available for examination and may be copied for a fee (see **ADDRESSES** section above for directions). In its findings, the SAB stated that, "The MARSAME manual impresses the Panel as an excellent technical document for guiding a materials and equipment survey." The responses to the technical review comments by the SAB may be viewed at the following World-Wide-Web site: [http://yosemite.epa.gov/sab/sabproduct.nsf/5520FF23A405DCEB8525749E00737EEF/\\$File/EPA-SAB-08-010+Response+09-22-2008.pdf](http://yosemite.epa.gov/sab/sabproduct.nsf/5520FF23A405DCEB8525749E00737EEF/$File/EPA-SAB-08-010+Response+09-22-2008.pdf).

The author agencies solicit comments arising from review and use of the final MARSAME. Comments will be reviewed periodically by the author agencies, resolved as appropriate, and incorporated into future revisions of the MARSAME. Members of the public are invited to submit written comments to the Chief, Rules and Directives Branch, Division of Administrative Services, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001. Copies of all comments received by one agency will be periodically copied and sent to the others. Revised pages resulting from the resolution of comments will be

available on the Internet at: <http://www.epa.gov/radiation/marssim>. This EPA Web site is also accessible by links from the NRC home page at: <http://www.nrc.gov>; and the DOE home page at: <http://www.doe.gov>.

For the Department of Defense, dated this 16th day of December 2008.

BILLING CODE 7590-01-P

DEPARTMENT OF DEFENSE

Office of the Secretary

Renewal of Department of Defense Federal Advisory Committees

AGENCY: Department of Defense.

ACTION: Renewal of federal advisory committee.

SUMMARY: Under the provisions of the Federal Advisory Committee Act of 1972 (5 U.S.C. Appendix, as amended), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and 41 CFR 102-3.65, the Department of Defense gives notice that it is renewing the charter for the Transformation Advisory Group (hereafter referred to as the Group).

The Group is a discretionary federal advisory committee established to provide the Secretary of Defense, through the Chairman of the Joint Chiefs of Staff and the Commander, U.S. Joint Forces Command, independent advice and recommendations on strategic, scientific technical, intelligence and policy-related issues to the Nation's joint enterprise, and U.S. Joint Forces Command, with emphasis on how these issues relate to the shaping of the command's efforts today and in the future.

The Group shall be composed of no more than twenty four members who are recognized experts and leaders in their fields. These areas of expertise include, but are not limited to, innovation, development, strategic communications, logistics, technologies, business practices, military, government, education, training, intelligence and appropriations. The Secretary of Defense shall appoint group members, and their appointments will be renewed on an annual basis.

Group Members appointed by the Secretary of Defense, who are not full-time or permanent part-time federal employees, are appointed as experts and consultants under the authority of 5 U.S.C. 3109, and shall serve as Special Government employees. Pursuant to 10 U.S.C. 1114(a)(3), the members shall serve with the exception of travel and per diem for official travel without compensation. The Chairperson of the Group shall be designated by the Commander, U.S. Joint Forces Command, on behalf of the Secretary of Defense.

The Group is authorized to establish Subcommittees, as necessary and consistent with its mission, and these Subcommittees shall operate under the provisions of the Federal Advisory Committee Act, the Government in the Sunshine Act of 1976, and other appropriate federal regulations.

Such Subcommittees shall not work independently of the chartered Group, and shall report their recommendations and advice to the Group for full deliberation and discussion. Subcommittees have no authority to make decisions on behalf of the chartered Group nor can they report directly to the Department of Defense or any Federal officers or employees who are not Group Members.

FOR FURTHER INFORMATION CONTACT:

Contact Jim Freeman, Deputy Committee Management Officer for the Department of Defense, 703-601-6128.

SUPPLEMENTARY INFORMATION: The Group shall meet at the call of the Board's Designated Federal Officer, in consultation with the Group's Chairperson. The Designated Federal Officer, pursuant to DoD policy, shall be a full-time or permanent part-time DoD employee, and shall be appointed in accordance with established DoD policies and procedures. The Designated Federal Officer or duly appointed Alternate Designated Federal Officer shall attend all committee meetings and subcommittee meetings.

Pursuant to 41 CFR 102-3.105(j) and 102-3.140, the public or interested organizations may submit written

statements to the Transformation Advisory Group membership about the Group's mission and functions. Written statements may be submitted at any time or in response to the stated agenda of planned meeting of the Transformation Advisory Group.

All written statements shall be submitted to the Designated Federal Officer for the Transformation Advisory Group, and this individual will ensure that the written statements are provided to the membership for their consideration. Contact information for the Transformation Advisory Group's Designated Federal Officer can be obtained from the GSA's FACA Database—<https://www.fido.gov/facadatabase/public.asp>.

The Designated Federal Officer, pursuant to 41 CFR 102-3.150, will announce planned meetings of the Transformation Advisory Group. The Designated Federal Officer, at that time, may provide additional guidance on the submission of written statements that are in response to the stated agenda for the planned meeting in question.

Dated: January 12, 2009.

Patricia L. Toppings,

OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. E9-879 Filed 1-15-09; 8:45 am]

BILLING CODE 5001-06-P

DEPARTMENT OF DEFENSE

Office of the Secretary

Renewal of Department of Defense Federal Advisory Committees

AGENCY: Department of Defense.

ACTION: Renewal of federal advisory committee.

SUMMARY: Under the provisions of the Federal Advisory Committee Act of 1972, (5 U.S.C. Appendix, as amended), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and 41 CFR 102-3.65, the Department of Defense gives notice that it is renewing the charter for the Inland Waterways Users Board (hereafter referred to as the Board).

The Board is a non-discretionary federal advisory committee established under the provisions of 33 U.S.C. 2251(a), to provide the Secretary of Defense, through the Secretary of the Army and the Assistant Secretary of the Army for Civil works, independent advice and recommendations on matters relating to construction and rehabilitation priorities and spending levels on the commercial navigational features and components of U.S. inland

waterways and inland harbors as defined in Public Law 95-502 and amended by Public Law 99-682. The board shall annually file their recommendations with the Secretary of the Army and with the Congress. The Secretary of the Army or designee may act upon the advice of the Board.

Pursuant to 33 U.S.C. 2251(a), the Board shall be composed of eleven members selected by the Secretary of the Army and appointed by the Secretary of Defense. The members shall be selected so as to represent various regions of the country and a spectrum of the primary users and shippers utilizing the inland and intracoastal waterways for commercial purposes. Due consideration shall be given to assure a balance among the members based on the ton-mile shipments of the various categories of commodities shipped on inland waterways. The Board members shall serve two-year terms, with their appointments renewed on an annual basis. No member, unless otherwise selected by the Secretary of the Army or designee and approved by the Secretary of Defense, shall serve more than four consecutive years on the Board. Appointments vacated prior to the expiration of the term of said appointment shall be filled only for the remainder of the term.

The Secretary of the Army shall choose, and the Secretaries of Agriculture, Transportation, and Commerce may designate, representatives to act as non-voting observers of the Board. In addition, the Secretary of the Army or designee through the Secretary of Defense may appoint consultants with special expertise to assist the Board on an ad hoc basis.

Board Members appointed by the Secretary of Defense, who are not full-time federal officers or employees, shall be appointed as experts and consultants under the authority of 5 U.S.C. 3109, and shall serve as Special Government employees. Pursuant to 10 U.S.C. 1114(a)(3), the members shall serve with the exception of travel and per diem for official travel without compensation. The Secretary of the Army shall select the Board's Chairman and Vice Chairman from the total membership, and these individuals shall serve at the discretion of the Secretary of the Army or designee. The Vice Chairman will act as Chairman in the absence or incapacity of the Chairman, or in the event of a vacancy in the office of the Chairman.

The Board is authorized to establish subcommittees, as necessary and consistent with its mission, and these Subcommittees or Work Groups shall

operate under the provisions of the Federal Advisory Committee Act of 1972, the Government in the Sunshine Act of 1976, and other appropriate federal regulations.

Such Subcommittees or Work Groups shall not work independently of the chartered Board, and shall report their recommendations and advice to the Board for full deliberation and discussion. Subcommittees or Working Groups have no authority to make decisions on behalf of the chartered Board nor can they report directly to the Department of Defense or any Federal officers or employees who are not Board Members.

FOR FURTHER INFORMATION CONTACT:

Contact Jim Freeman, Deputy Committee Management Officer for the Department of Defense, 703-601-6128.

SUPPLEMENTARY INFORMATION: The Board shall meet at the call of the Board's Designated Federal Officer, in consultation with the Board's Chairperson. The Designated Federal Officer, pursuant to DoD policy, shall be a full-time or permanent part-time DoD employee, and shall be appointed in accordance with established DoD policies and procedures. The Designated Federal Officer or duly appointed Alternate Designated Federal Officer shall attend all committee meetings and subcommittee meetings.

Pursuant to 41 CFR 102-3.105(j) and 102-3.140, the public or interested organizations may submit written statements to the Inland Waterways Users Board membership about the Board's mission and functions. Written statements may be submitted at any time or in response to the stated agenda of planned meeting of the Inland Waterways Users Board.

All written statements shall be submitted to the Designated Federal Officer for the Inland Waterways Users Board, and this individual will ensure that the written statements are provided to the membership for their consideration. Contact information for the Inland Waterways Users Board's Designated Federal Officer can be obtained from the GSA's FACA Database—<https://www.fido.gov/facadatabase/public.asp>.

The Designated Federal Officer, pursuant to 41 CFR 102-3.150, will announce planned meetings of the Inland Waterways Users Board. The Designated Federal Officer, at that time, may provide additional guidance on the submission of written statements that are in response to the stated agenda for the planned meeting in question.

Dated: January 12, 2009.

Patricia L. Toppings,

*OSD Federal Register Liaison Officer,
Department of Defense.*

BILLING CODE 5001-06-P

DEPARTMENT OF DEFENSE

Department of the Army; Corps of Engineers

Inland Waterways Users Board

AGENCY: Department of the Army, U.S. Army Corps of Engineers, DoD.

ACTION: Notice of open meeting.

SUMMARY: In Accordance with 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), announcement is made of the forthcoming meeting.

Name of Committee: Inland Waterways Users Board (Board).

Date: February 20, 2009.

Location: U.S. Army Corps of Engineers Engineer Research and Development Center (ERDC), Coastal and Hydraulics Laboratory (CHL) Conference Facility, 3909 Halls Ferry Road, Vicksburg, MS 39180-6199, (Point-of-Contact Ms. Dinah McComas, 601-634-2157), with accommodations at the Riverwalk Hotel, 1046 Warrenton Road, Vicksburg, MS (601-634-0100 or 866-615-9125).

Time: Registration will begin at 8 a.m. and the meeting is scheduled to adjourn at approximately 1 p.m.

Agenda: The Board will hear briefings on the status of the funding for inland navigation projects and studies, the status of the Inland Waterways Trust Fund, status of program management team activities for a future business model for the inland waterways system.

For Further Information Contact: Mr. Mark R. Pointon, Headquarters, U.S. Army Corps of Engineers, CECW-ID, 441 G Street, NW., Washington, DC 20314-1000; Ph: 202-761-4691.

Supplementary Information: The meeting is open to the public. Any interested person may attend, appear before, or file statements with the committee at the time and in the manner permitted by the committee.

Brenda S. Bowen,

Army Federal Register Liaison Officer.

BILLING CODE 3720-58-P

DEPARTMENT OF EDUCATION

Notice of Proposed Information Collection Requests

AGENCY: Department of Education.

SUMMARY: The Leader, Information Collection Clearance Division, Regulatory Information Management Services, Office of Management, invites

comments on the proposed information collection requests as required by the Paperwork Reduction Act of 1995.

DATES: Interested persons are invited to submit comments on or before March 17, 2009.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations. The Leader, Regulatory Information Management Services, Office of Management, publishes that notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection, grouped by office, contains the following: (1) Type of review requested, e.g. new, revision, extension, existing or reinstatement; (2) Title; (3) Summary of the collection; (4) Description of the need for, and proposed use of, the information; (5) Respondents and frequency of collection; and (6) Reporting and/or Recordkeeping burden. OMB invites public comment.

The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology.

Dated: January 12, 2009.

Angela C. Arrington,
Leader, Information Collections Clearance
Division, Regulatory Information
Management Services, Office of Management.

Federal Student Aid

Type of Review: Revision.

Title: William D. Ford Federal Direct Loan Program (Direct Loan) Program: Internship/Residency and Loan Debt Burden Forbearance Request Forms.

Frequency: On Occasion.

Affected Public: Individuals or household.

Reporting and Recordkeeping Hour Burden:

Responses: 5,115.

Burden Hours: 1,023.

Abstract: These forms serve as the means by which a borrower may request forbearance of repayment on his or her Direct Loan Program loans based on participation in an eligible internship/residency program or based on having federal education loan debt burden that equals or exceeds 20% of the borrower's monthly gross income. The U.S. Department of Education uses the information collected on these forms to determine whether a borrower meets the eligibility requirements for the specific forbearance type that the borrower has requested.

Requests for copies of the proposed information collection request may be accessed from <http://edicsweb.ed.gov>, by selecting the "Browse Pending Collections" link and by clicking on link number 3930. When you access the information collection, click on "Download Attachments" to view. Written requests for information should be addressed to U.S. Department of Education, 400 Maryland Avenue, SW., LBJ, Washington, DC 20202-4537. Requests may also be electronically mailed to ICDocketMgr@ed.gov or faxed to 202-401-0920. Please specify the complete title of the information collection when making your request.

Comments regarding burden and/or the collection activity requirements should be electronically mailed to ICDocketMgr@ed.gov. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339.

DEPARTMENT OF EDUCATION

Office of Safe and Drug-Free Schools; Overview Information; Carol M. White Physical Education Program; Notice Inviting Applications for New Awards for Fiscal Year (FY) 2009

Catalog of Federal Domestic Assistance (CFDA) Number: 84.215F.

Dates:

Applications Available: January 16, 2009.

Deadline for Transmittal of Applications: March 6, 2009.

Deadline for Intergovernmental Review: May 6, 2009.

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The Carol M. White Physical Education Program (PEP) provides grants to local educational agencies (LEAs) and community-based organizations (CBOs) to initiate, expand, or enhance physical education programs, including after-school programs, for students in kindergarten through 12th grade. Grant recipients must implement programs that help students make progress toward meeting State standards.

Priorities: This competition has three priorities—one absolute priority and a competitive preference priority and invitational priority within the absolute priority. In accordance with 34 CFR 75.105(b)(iv), the absolute priority is from sections 5503 and 5504(a) of the Elementary and Secondary Education Act of 1965, as amended by the No Child Left Behind Act of 2001 (ESEA) (20 U.S.C. 7261b, 7261c). In accordance with 34 CFR 75.105(b)(2)(ii), the competitive preference priority is from 34 CFR 75.225.

Absolute Priority: For FY 2009 and any subsequent year in which we make awards from the list of unfunded applicants from this competition, this priority is an absolute priority. Under 34 CFR 75.105(c)(3), we consider only applications that meet this priority.

This priority is the initiation, expansion, and improvement of physical education programs (which may include after-school programs) in order to make progress toward meeting State standards for physical education for kindergarten through 12th grade students by (1) providing equipment and support to enable students to participate actively in physical education activities; and (2) providing funds for staff and teacher training and education.

A physical education program funded under this absolute priority must provide for one or more of the following:

- (1) Fitness education and assessment to help students understand, improve, or maintain their physical well-being.
- (2) Instruction in a variety of motor skills and physical activities designed to enhance the physical, mental, and social or emotional development of every student.
- (3) Development of, and instruction in, cognitive concepts about motor skills and physical fitness that support a lifelong healthy lifestyle.
- (4) Opportunities to develop positive social and cooperative skills through physical activity participation.

(5) Instruction in healthy eating habits and good nutrition.

(6) Opportunities for professional development for teachers of physical education to stay abreast of the latest research, issues, and trends in the field of physical education.

Competitive Preference Priority:

Within this absolute priority, we give competitive preference to applications that address the following priority.

This priority is for applications from novice applicants.

The term *novice applicant* means any applicant for a grant from the Department of Education that—

(1) Has never received a grant or subgrant under the program from which it seeks funding;

(2) Has never been a member of a group application, submitted in accordance with 34 CFR 75.127 through 75.129, that received a grant under the program from which it seeks funding; and

(3) Has not had an active discretionary grant from the Federal Government in the five years before the deadline date for transmittal of applications under the program. For the purpose of this requirement, a grant is active until the end of the grant's project or funding period, including any extensions of those periods that extend the grantee's authority to obligate funds.

In the case of a group application submitted in accordance with 34 CFR 75.127 through 75.129, to qualify as a novice applicant, all group members must meet the requirements described.

Under 34 CFR 75.105(c)(2)(i) we award an additional 5 points to an application that meets the competitive preference priority.

Invitational Priority: Within this absolute priority, we are particularly interested in applications that address the following invitational priority. Under 34 CFR 75.105(c)(1) we do not give an application that meets this invitational priority a competitive or absolute preference over other applications.

This priority is for projects that propose programs to address problems identified by the applicant in a self-assessment, using the Physical Education and Other Physical Activity Programs and Nutrition Services modules of the Centers for Disease Control and Prevention's School Health Index (SHI) that are appropriate for the schools to be served by the grant. Applicants addressing this priority in their applications are invited to include their SHI scores for these two modules in their application for funding, and to plan on completing the same Physical Education and Other Physical Activity

Programs and Nutrition Services modules of the SHI at the end of the project period.

CBOs are invited to partner with an LEA or school to complete the Physical Education and Other Physical Activity Programs and Nutrition Services modules of the SHI since the self-assessment tool is designed to assess school-based programs and policies related to physical activity and nutrition services.

Information about the SHI is available at the Centers for Disease Control and Prevention's Web site at <http://www.cdc.gov/healthyyouth>.

Program Authority: 20 U.S.C. 7261–7261f.

Applicable Regulations: (a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR parts 74, 75, 77, 79, 80, 81, 82, 84, 85, 86, 97, 98, 99, and 299. (b) The notice of final eligibility requirement for the Office of Safe and Drug-Free Schools discretionary grant programs published in the **Federal Register** on December 4, 2006 (71 FR 70369).

Note: The regulations in 34 CFR part 79 apply to all applicants except federally recognized Indian tribes.

Note: The regulations in 34 CFR part 86 apply to institutions of higher education only.

II. Award Information

Type of Award: Discretionary grants.

Estimated Available Funds: The Administration's budget request for FY 2009 does not include funds for this program. However, we are inviting applications now to allow enough time to complete the grant process before the end of the current fiscal year, if Congress appropriates funds for this program.

Contingent upon the availability of funds and the quality of applications, we may make additional awards later in FY 2009 and in subsequent years from the list of unfunded applicants from this competition.

Estimated Range of Awards: \$100,000–\$500,000.

Estimated Average Size of Awards: \$300,000.

Estimated Number of Awards: 95.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 36 months.

III. Eligibility Information

1. **Eligible Applicants:** (a) LEAs, including charter schools that are considered LEAs under State law, and CBOs, including faith-based organizations provided that they meet

the applicable statutory and regulatory requirements.

(b) The Secretary limits eligibility under this discretionary grant competition to LEAs or CBOs that do not currently have an active grant under the PEP program. For the purpose of this eligibility requirement, a grant is considered active until the end of the grant's project or funding period, including any extensions of those periods that extend the grantee's authority to obligate funds.

2. (a) **Cost Sharing or Matching:** In accordance with section 5506 of the ESEA, the Federal share of the project costs may not exceed (a) 90 percent of the total cost of a program for the first year for which the program receives assistance; and (b) 75 percent of such cost for the second and each subsequent year.

(b) **Supplement-Not-Supplant:** This competition involves supplement-not-supplant funding requirements.

Funds made available under this program must be used to supplement, and not supplant, any other Federal, State, or local funds available for physical education activities in accordance with section 5507 of the ESEA.

3. **Other:** An application for funds under this program may provide for the participation, in the activities funded, of (a) students enrolled in private nonprofit elementary schools or secondary schools, and their parents and teachers; or (b) home-schooled students, and their parents and teachers.

IV. Application and Submission Information

1. **Address to Request Application Package:** You can obtain an application package via the Internet or from the Education Publications Center (ED Pubs). To obtain a copy via the Internet, use the following address: <http://www.ed.gov/programs/whitephysed/applicant.html>. To obtain a copy from ED Pubs, write, fax, or call the following: Education Publications Center, P.O. Box 1398, Jessup, MD 20794–1398. Telephone, toll free: 1–877–433–7827. Fax: (301) 470–1244. If you use a telecommunications device for the deaf (TDD), call, toll free: 1–877–576–7734.

You can contact ED Pubs at its Web site, also: <http://www.ed.gov/pubs/edpubs.html> or at its e-mail address: edpubs@inet.ed.gov.

If you request an application from ED Pubs, be sure to identify this program or competition as follows: CFDA number 84.215F.

Individuals with disabilities can obtain a copy of the application package

in an accessible format (e.g., braille, large print, audiotape, or computer diskette) by contacting the person or team listed under *Alternative Format* in section VIII of this notice.

2. *Content and Form of Application Submission*: Requirements concerning the content of an application, together with the forms you must submit, are in the application package for this competition.

3. *Submission Dates and Times*:
Applications Available: January 16, 2009.

Deadline for Transmittal of Applications: March 6, 2009.

Applications for grants under this program may be submitted electronically using the Grants.gov Apply site (Grants.gov), or in paper format by mail or hand delivery. For information (including dates and times) about how to submit your application electronically, or in paper format by mail or hand delivery, please refer to section IV.6. Other Submission Requirements of this notice.

We do not consider an application that does not comply with the deadline requirements.

Individuals with disabilities who need an accommodation or auxiliary aid in connection with the application process should contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice. If the Department provides an accommodation or auxiliary aid to an individual with a disability in connection with the application process, the individual's application remains subject to all other requirements and limitations in this notice.

Deadline for Intergovernmental Review: May 6, 2009.

4. *Intergovernmental Review*: This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this program.

5. *Funding Restrictions*: Funds may not be used for construction activities or for extracurricular activities, such as team sports and Reserve Officers' Training Corps program activities.

In accordance with section 5505(b) of the ESEA, not more than five percent of grant funds provided under this program to an LEA or CBO for any fiscal year may be used for administrative expenses.

We reference additional regulations outlining funding restrictions in the *Applicable Regulations* section of this notice. Information about prohibited

activities and use of funds also is included in the application package for this competition.

6. *Other Submission Requirements*: Applications for grants under this program may be submitted electronically or in paper format by mail or hand delivery.

a. *Electronic Submission of Applications*.

We are participating as a partner in the Governmentwide Grants.gov Apply site. The Carol M. White Physical Education Program, CFDA Number 84.215F, is included in this project. We request your participation in Grants.gov.

If you choose to submit your application electronically, you must use the Governmentwide Grants.gov Apply site at <http://www.Grants.gov>. Through this site, you will be able to download a copy of the application package, complete it offline, and then upload and submit your application. You may not e-mail an electronic copy of a grant application to us.

You may access the electronic grant application for the Carol M. White Physical Education Program at <http://www.Grants.gov>. You must search for the downloadable application package for this program by the CFDA number. Do not include the CFDA number's alpha suffix in your search (e.g., search for 84.215, not 84.215F).

Please note the following:

- Your participation in Grants.gov is voluntary.
- When you enter the Grants.gov site, you will find information about submitting an application electronically through the site, as well as the hours of operation.
- Applications received by Grants.gov are date and time stamped. Your application must be fully uploaded and submitted and must be date and time stamped by the Grants.gov system no later than 4:30:00 p.m., Washington, DC time, on the application deadline date. Except as otherwise noted in this section, we will not accept your application if it is received—that is, date and time stamped by the Grants.gov system—after 4:30:00 p.m., Washington, DC time, on the application deadline date. We do not consider an application that does not comply with the deadline requirements. When we retrieve your application from Grants.gov, we will notify you if we are rejecting your application because it was date and time stamped by the Grants.gov system after 4:30:00 p.m., Washington, DC time, on the application deadline date.

- The amount of time it can take to upload an application will vary depending on a variety of factors, including the size of the application and

the speed of your Internet connection. Therefore, we strongly recommend that you do not wait until the application deadline date to begin the submission process through Grants.gov.

- You should review and follow the Education Submission Procedures for submitting an application through Grants.gov that are included in the application package for this program to ensure that you submit your application in a timely manner to the Grants.gov system. You can also find the Education Submission Procedures pertaining to Grants.gov at <http://e-Grants.ed.gov/help/GrantsgovSubmissionProcedures.pdf>.

- To submit your application via Grants.gov, you must complete all steps in the Grants.gov registration process (see http://www.grants.gov/applicants/get_registered.jsp). These steps include (1) registering your organization, a multi-part process that includes registration with the Central Contractor Registry (CCR); (2) registering yourself as an Authorized Organization Representative (AOR); and (3) getting authorized as an AOR by your organization. Details on these steps are outlined in the Grants.gov 3-Step Registration Guide (see <http://www.grants.gov/section910/Grants.govRegistrationBrochure.pdf>). You also must provide on your application the same D-U-N-S Number used with this registration. Please note that the registration process may take five or more business days to complete, and you must have completed all registration steps to allow you to submit successfully an application via Grants.gov. In addition you will need to update your CCR registration on an annual basis. This may take three or more business days to complete.

- You will not receive additional point value because you submit your application in electronic format, nor will we penalize you if you submit your application in paper format.

- If you submit your application electronically, you must submit all documents electronically, including all information you typically provide on the following forms: Application for Federal Assistance (SF 424), the Department of Education Supplemental Information for SF 424, Budget Information—Non-Construction Programs (ED 524), and all necessary assurances and certifications.

- If you submit your application electronically, you must attach any narrative sections of your application as files in a .DOC (document), .RTF (rich text), or .PDF (Portable Document) format. If you upload a file type other than the three file types specified in this

paragraph or submit a password-protected file, we will not review that material.

- Your electronic application must comply with any page-limit requirements described in this notice.
- After you electronically submit your application, you will receive from Grants.gov an automatic notification of receipt that contains a Grants.gov tracking number. (This notification indicates receipt by Grants.gov only, not receipt by the Department.) The Department then will retrieve your application from Grants.gov and send a second notification to you by e-mail. This second notification indicates that the Department has received your application and has assigned your application a PR/Award number (an ED-specified identifying number unique to your application).

- We may request that you provide us original signatures on forms at a later date.

Application Deadline Date Extension in Case of Technical Issues with the Grants.gov System: If you are experiencing problems submitting your application through Grants.gov, please contact the Grants.gov Support Desk, toll free, at 1-800-518-4726. You must obtain a Grants.gov Support Desk Case Number and must keep a record of it.

If you are prevented from electronically submitting your application on the application deadline date because of technical problems with the Grants.gov system, we will grant you an extension until 4:30:00 p.m., Washington, DC time, the following business day to enable you to transmit your application electronically or by hand delivery. You also may mail your application by following the mailing instructions described elsewhere in this notice.

If you submit an application after 4:30:00 p.m., Washington, DC time, on the application deadline date, please contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice and provide an explanation of the technical problem you experienced with Grants.gov, along with the Grants.gov Support Desk Case Number. We will accept your application if we can confirm that a technical problem occurred with the Grants.gov system and that that problem affected your ability to submit your application by 4:30:00 p.m., Washington, DC time, on the application deadline date. The Department will contact you after a determination is made on whether your application will be accepted.

Note: The extensions to which we refer in this section apply only to the unavailability

of, or technical problems with, the Grants.gov system. We will not grant you an extension if you failed to fully register to submit your application to Grants.gov before the application deadline date and time or if the technical problem you experienced is unrelated to the Grants.gov system.

b. *Submission of Paper Applications by Mail.*

If you submit your application in paper format by mail (through the U.S. Postal Service or a commercial carrier), you must mail the original and two copies of your application, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: (CFDA Number 84.215F), LBJ Basement Level 1, 400 Maryland Avenue, SW., Washington, DC 20202-4260.

You must show proof of mailing consisting of one of the following:

- (1) A legibly dated U.S. Postal Service postmark.
- (2) A legible mail receipt with the date of mailing stamped by the U.S. Postal Service.

- (3) A dated shipping label, invoice, or receipt from a commercial carrier.

- (4) Any other proof of mailing acceptable to the Secretary of the U.S. Department of Education.

If you mail your application through the U.S. Postal Service, we do not accept either of the following as proof of mailing:

- (1) A private metered postmark.
- (2) A mail receipt that is not dated by the U.S. Postal Service.

If your application is postmarked after the application deadline date, we will not consider your application.

Note: The U.S. Postal Service does not uniformly provide a dated postmark. Before relying on this method, you should check with your local post office.

c. *Submission of Paper Applications by Hand Delivery.*

If you submit your application in paper format by hand delivery, you (or a courier service) must deliver the original and two copies of your application by hand, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: (CFDA Number 84.215F), 550 12th Street, SW., Room 7041, Potomac Center Plaza, Washington, DC 20202-4260.

The Application Control Center accepts hand deliveries daily between 8:00 a.m. and 4:30:00 p.m., Washington, DC time, except Saturdays, Sundays, and Federal holidays.

Note for Mail or Hand Delivery of Paper Applications: If you mail or hand deliver your application to the Department—

- (1) You must indicate on the envelope and—if not provided by the Department—in Item 11 of the SF 424 the CFDA number, including suffix letter, if any, of the competition under which you are submitting your application; and

- (2) The Application Control Center will mail to you a notification of receipt of your grant application. If you do not receive this notification within 15 business days from the application deadline date, you should call the U.S. Department of Education Application Control Center at (202) 245-6288.

V. Application Review Information

1. *Selection Criteria:* The selection criteria for this program are from 34 CFR 75.210 and are listed in the application package.

2. *Review and Selection Process:* An additional factor we consider in selecting an application for an award is equitable distribution of awards among LEAs and CBOs serving urban and rural areas. (See 20 U.S.C. 7261e(b).)

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN). We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Reporting:* There are reporting requirements under this program, including under section 5505(a) of the ESEA and 34 CFR 75.118 and 75.720. In accordance with section 5505(a) of the ESEA, grantees under this program are required to submit an annual report that—

- (1) Describes the activities conducted during the preceding year; and

- (2) Demonstrates that progress has been made toward meeting State standards for physical education.

If you receive a multi-year award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary

may also require more frequent performance reports under 34 CFR 75.720(c).

This annual report must also address progress toward meeting the performance and efficiency measures established by the Secretary for this program and described in the next section of this notice.

At the end of the project period, a final performance and financial report must be submitted as specified by the Secretary in 34 CFR 75.720. For specific requirements on reporting, please go to <http://www.ed.gov/fund/grant/apply/appforms/appforms.html>.

4. *Performance Measures:* The Secretary has established the following key performance measures for collecting data to use in assessing the effectiveness of PEP.

(a) *Physical Activity.*

(i) The percentage of students served by the grant who engage in 150 minutes of moderate to vigorous physical activity per week (elementary school students); and

(ii) The percentage of students served by the grant who engage in 225 minutes of moderate to vigorous physical activity per week (middle and high school students).

(b) *Efficiency.* The cost (based on expenditures of the grant as well as matching funds) per student who achieves the level of physical activity required to meet the physical activity measure (150 minutes of moderate to vigorous physical activity per week for elementary school students, and 225 minutes of moderate to vigorous physical activity per week for middle and high school students).

These measures constitute the Department's measures of success for this program. Consequently, applicants for a grant under this program are advised to give careful consideration to these measures in conceptualizing the approach and evaluation of their proposed project. If funded, applicants will be asked to collect and report data in their performance and final reports about progress toward these measures. For specific requirements on grantee reporting, please go to <http://www.ed.gov/fund/grant/apply/appforms/appforms.html>.

VII. Agency Contact

FOR FURTHER INFORMATION CONTACT:

Carlette Huntley, U.S. Department of Education, 400 Maryland Avenue, SW., room 10071, Potomac Center Plaza, Washington, DC 20202. Telephone: 202-245-7871 or by e-mail: Carlette.Huntley@ed.gov.

If you use a TDD, call the FRS, toll free, at 1-800-877-8339.

VIII. Other Information

Accessible Format: Individuals with disabilities can obtain this document and a copy of the application package in an accessible format (e.g., braille, large print, audiotape, or computer diskette) on request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice.

Electronic Access to This Document: You can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF) on the Internet at the following site: <http://www.ed.gov/news/fedregister>.

To use PDF you must have Adobe Acrobat Reader, which is available free at this site. If you have questions about using PDF, call the U.S. Government Printing Office (GPO), toll free, at 1-888-293-6498; or in the Washington, DC area at (202) 512-1530.

Note: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available on GPO Access at: <http://www.gpoaccess.gov/nara/index.html>.

Dated: January 12, 2009.

Deborah A. Price,

Assistant Deputy Secretary for Safe and Drug-Free Schools.

BILLING CODE 4000-01-P

DEPARTMENT OF EDUCATION

Office of Postsecondary Education; Overview Information; Higher Education Disaster Relief; Notice Inviting Applications for New Awards for Fiscal Year (FY) 2009

Catalog of Federal Domestic Assistance (CFDA) Number: 84.938R.

DATES: Applications Available: January 16, 2009.

Deadline for Transmittal of Pre-Applications: January 27, 2009.

Deadline for Transmittal of Applications: February 26, 2009.

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The Higher Education Disaster Relief Grants Program provides funds to institutions of higher education (IHEs) that are located in an area affected by hurricanes, floods, and other natural disasters occurring during 2008 for which the President declared a major

disaster under Title IV of the Robert T. Stafford Disaster Relief and Emergency Assistance Act of 1974. The funds may only be used to defray the expenses incurred by IHEs that were forced to close, or relocate, or whose operations were impaired as a result of damage directly caused by such hurricanes, floods, and other natural disasters occurring during 2008. Funds may be used to cover lost revenue, reimbursement for expenses already incurred, and for construction. Funds may also be used to enable these IHEs to provide grants to their students who attend the IHE for academic years beginning on or after July 1, 2008.

Criteria for Awarding Funds: Under the Consolidated Security, Disaster Assistance, and Continuing Appropriations Act, 2009 (Pub. L. 110-329), only IHEs as defined in section 101 or section 102(c) of the Higher Education Act of 1965, as amended (HEA), that are located in an area in which a major disaster was declared in accordance with section 401 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act during calendar year 2008, are eligible to apply for funds under this program. A list of these areas is available at: <http://www.gismaps.fema.gov/2008pages/lcurrent.shtm>.

Public Law 110-329 authorizes the Department to make these funds available based on criteria established by the Secretary. Accordingly, the Secretary establishes the following factors as criteria that will be used in allocating these funds:

(1) The expenses that would have been covered by revenues lost by the IHE as a direct result of the major disaster;

(2) The expenses incurred by the IHE in remedying the effects of the disaster;

(3) The costs of construction associated with physical damage caused by the disaster; and

(4) Any amount of any insurance settlement or other reimbursement received by the IHE including from a Federal or other relief agency. An IHE must include information responsive to each of these criteria in its pre-application. After reviewing the pre-applications, the Secretary may decide to use the number or amount of Pell Grants received at any time during the 2006-07 and 2007-08 award years, as reflected in the Department's records, as a factor in determining the amount of the individual grants to ensure a fair distribution of funds in accordance with statutory requirements.

Waiver of Proposed Rulemaking: Under the Administrative Procedure Act (APA) (5 U.S.C. 553), and section 437 of

the General Education Provisions Act (GEPA) (20 U.S.C. 1232), the Department generally offers interested parties the opportunity to comment on proposed selection criteria. However, Public Law 110–329 specifically exempts the establishment of criteria by the Secretary for the award of funds under this program from the rulemaking requirements of the APA and GEPA.

Program Authority: The Consolidated Security, Disaster Assistance, and Continuing Appropriations Act, 2009 (Pub. L. 110–329) and 20 U.S.C. 1138.

Applicable Regulations: The Education Department General Administrative Regulations (EDGAR) in 34 CFR parts 74, 75, 77, 80, 82, 84, 85, 86, 97, 98, and 99.

II. Award Information

Type of Award: Discretionary grants.

Estimated Available Funds:
\$15,000,000.

Estimated Range of Awards:
\$10,000—\$1,000,000.

Estimated Average Size of Awards:
\$300,000.

Estimated Number of Awards: 50.

Note: The Department is not bound by any estimates in this notice.

Project Period: 12 months, except for construction grants, which may be up to 36 months.

III. Eligibility Information

1. *Eligible Applicants:* IHEs (as defined in section 101 or section 102(c) of the HEA) that are located in an area affected by hurricanes, floods, and other natural disasters occurring during 2008, for which the President declared a major disaster under Title IV of the Robert T. Stafford Disaster Relief and Emergency Assistance Act of 1974, are eligible to apply for funds under this program. A list of these areas is available at: <http://www.gismaps.fema.gov/2008pages/lcurrent.shtm>.

2. *Cost Sharing or Matching:* This program does not require cost sharing or matching.

IV. Application and Submission Information

1. *Address to Request Application or Pre-Application Package:* Cassandra Courtney, Fund for the Improvement of Postsecondary Education, U.S. Department of Education, 1990 K Street, NW., room 6166, Washington, DC 20006–8544. Telephone: (202) 502–7506 or by e-mail: HEDR@ed.gov or Cassandra.Courtney@ed.gov.

If you use a telecommunications device for the deaf (TDD), call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

Individuals with disabilities can obtain a copy of the application or pre-application package in an accessible format (e.g., Braille, large print, audiotape, or computer diskette) by contacting the program contact person listed in this section.

2. *Content and Form of Application Submission:* Requirements concerning the content of an application, together with the forms you must submit, are in the application package for this program.

Pre-Application: IHEs intending to submit an application for funds under the Higher Education Disaster Relief Grant Program must first complete and submit a pre-application data information form from which institutional allotments will be calculated. Data forms and instructions can be downloaded from: <http://www.ed.gov/OPE> (click on the Higher Education Disaster Relief link). Complete the form and send it to: HEDR@ed.gov by the date established under *Deadline for Transmittal of Pre-Applications*. Within one week of the Pre-Application Deadline, the Department will calculate the applicant IHE's allotment and e-mail the amount back to the contact person identified by the IHE on the pre-application form. The eligible IHEs will then have until February 26, 2009 to submit their application and budget information to the Department through Grants.gov.

Page Limit: The application narrative (Part III of the application) is where you, the applicant, address the selection criteria that reviewers use to evaluate your application. You must limit the application narrative [Part III] to the equivalent of no more than 25 pages, using the following standards:

- A “page” is 8.5” x 11”, on one side only, with 1” margins at the top, bottom, and both sides.

- Double space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions, as well as all text in charts, tables, figures, and graphs.

- Use a font that is either 12 point or larger; or, no smaller than 10 pitch (characters per inch).

- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial. An application submitted in any other font (including Times Roman or Arial Narrow) will not be accepted.

The page limit does not apply to Part I, the cover sheet; Part II, the budget section, including the narrative budget justification; Part IV, the assurances and certifications; or the one-page abstract,

the resumes, the bibliography, or the letters of support. However, the page limit does apply to all of the application narrative section [Part III].

We will reject your application if you exceed the page limit; or, if you apply other standards and exceed the equivalent of the page limit.

3. *Submission Dates and Times: Applications Available:* January 16, 2009.

Deadline for Transmittal of Pre-Applications: January 27, 2009.

Deadline for Transmittal of Applications: February 26, 2009.

Applications for grants under this competition must be submitted electronically using the Grants.gov Apply site (Grants.gov). For information (including dates and times) about how to submit your application electronically, or in paper format by mail or hand delivery if you qualify for an exception to the electronic submission requirement, please refer to Section IV. 6. *Other Submission Requirements of this notice.*

We do not consider an application that does not comply with the deadline requirements.

Individuals with disabilities who need an accommodation or auxiliary aid in connection with the application process should contact the person listed under **FOR FURTHER INFORMATION CONTACT** in Section VII of this notice. If the Department provides an accommodation or auxiliary aid to an individual with a disability in connection with the application process, the individual's application remains subject to all other requirements and limitations in this notice.

4. *Intergovernmental Review:* This program is not subject to Executive Order 12372 and the regulations in 34 CFR part 79.

5. *Funding Restrictions:* Funds can be used only to defray the expenses (including lost revenue, reimbursement for expenses already incurred, and for construction) incurred by IHEs that were forced to close, or relocate, or whose operations were impaired as a result of damage directly caused by hurricanes, floods, and other natural disasters occurring during 2008 for which the President declared a major disaster under Title IV of the Robert T. Stafford Disaster Relief and Emergency Assistance Act of 1974, and to enable these IHEs to provide grants to their students who attend the IHE for academic years beginning on or after July 1, 2008.

6. *Other Submission Requirements:* Applications for grants under this program must be submitted

electronically unless you qualify for an exception to this requirement in accordance with the instructions in this section.

a. *Electronic Submission of Applications.*

Applications for grants under the Higher Education Disaster Relief Program, CFDA number 84.938R, must be submitted electronically using the Governmentwide Grants.gov Apply site at <http://www.Grants.gov>. Through this site, you will be able to download a copy of the application package, complete it offline, and then upload and submit your application. You may not e-mail an electronic copy of a grant application to us.

We will reject your application if you submit it in paper format unless, as described elsewhere in this section, you qualify for one of the exceptions to the electronic submission requirement and submit, no later than two weeks before the application deadline date, a written statement to the Department that you qualify for one of these exceptions. Further information regarding calculation of the date that is two weeks before the application deadline date is provided later in this section under *Exception to Electronic Submission Requirement*.

You may access the electronic grant application for the Higher Education Disaster Relief Grant Program at <http://www.Grants.gov>. You must search for the downloadable application package for this program by the CFDA number. Do not include the CFDA number's alpha suffix in your search (e.g., search for 84.938, not 84.938R).

Please note the following:

- When you enter the Grants.gov site, you will find information about submitting an application electronically through the site, as well as the hours of operation.
- Applications received by Grants.gov are date and time stamped. Your application must be fully uploaded and submitted and must be date and time stamped by the Grants.gov system no later than 4:30:00 p.m., Washington, DC time, on the application deadline date. Except as otherwise noted in this section, we will not accept your application if it is received—that is, date and time stamped by the Grants.gov system—after 4:30:00 p.m., Washington, DC time, on the application deadline date. We do not consider an application that does not comply with the deadline requirements. When we retrieve your application from Grants.gov, we will notify you if we are rejecting your application because it was date and time stamped by the Grants.gov system after

4:30:00 p.m., Washington, DC time, on the application deadline date.

- The amount of time it can take to upload an application will vary depending on a variety of factors, including the size of the application and the speed of your Internet connection. Therefore, we strongly recommend that you do not wait until the application deadline date to begin the submission process through Grants.gov.

- You should review and follow the Education Submission Procedures for submitting an application through Grants.gov that are included in the application package for this competition to ensure that you submit your application in a timely manner to the Grants.gov system. You can also find the Education Submission Procedures pertaining to Grants.gov at <http://e-Grants.ed.gov/help/GrantsgovSubmissionProcedures.pdf>.

- To submit your application via Grants.gov, you must complete all steps in the Grants.gov registration process (see http://www.grants.gov/applicants/get_registered.jsp). These steps include (1) Registering your organization, a multi-part process that includes registration with the Central Contractor Registry (CCR); (2) registering yourself as an Authorized Organization Representative (AOR); and (3) getting authorized as an AOR by your organization. Details on these steps are outlined in the Grants.gov 3-Step Registration Guide (see <http://www.grants.gov/section910/Grants.govRegistrationBrochure.pdf>). You also must provide on your application the same D-U-N-S Number used with this registration. Please note that the registration process may take five or more business days to complete, and you must have completed all registration steps to allow you to submit successfully an application via Grants.gov. In addition, you will need to update your CCR registration on an annual basis. This may take three or more business days to complete.

- You will not receive additional point value because you submit your application in electronic format, nor will we penalize you if you qualify for an exception to the electronic submission requirement, as described elsewhere in this section, and submit your application in paper format.

- You must submit all documents electronically, including all information you typically provide on the following forms: Application for Federal Assistance (SF 424), the Department of Education Supplemental Information for SF 424, Budget Information—Non-Construction Programs (ED 524), and all necessary assurances and certifications.

- You must attach any narrative sections of your application as files in a .DOC (document), .RTF (rich text), or .PDF (Portable Document) format. If you upload a file type other than the three file types specified in this paragraph or submit a password-protected file, we will not review that material.

- Your electronic application must comply with any page-limit requirements described in this notice.

- After you electronically submit your application, you will receive from Grants.gov an automatic notification of receipt that contains a Grants.gov tracking number. (This notification indicates receipt by Grants.gov only, not receipt by the Department.) The Department then will retrieve your application from Grants.gov and send a second notification to you by e-mail. This second notification indicates that the Department has received your application and has assigned your application a PR/Award Number (an ED-specified identifying number unique to your application).

- We may request that you provide us original signatures on forms at a later date.

Application Deadline Date Extension in Case of Technical Issues with the Grants.gov System: If you are experiencing problems submitting your application through Grants.gov, please contact the Grants.gov Support Desk, toll free, at 1-800-518-4726. You must obtain a Grants.gov Support Desk Case Number and must keep a record of it.

If you are prevented from electronically submitting your application on the application deadline date because of technical problems with the Grants.gov system, we will grant you an extension until 4:30:00 p.m., Washington, DC time, the following business day to enable you to transmit your application electronically or by hand delivery. You also may mail your application by following the mailing instructions described elsewhere in this notice.

If you submit an application after 4:30:00 p.m., Washington, DC time, on the application deadline date, please contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice and provide an explanation of the technical problem you experienced with Grants.gov, along with the Grants.gov Support Desk Case Number. We will accept your application if we can confirm that a technical problem occurred with the Grants.gov system and that that problem affected your ability to submit your application by 4:30:00 p.m., Washington, DC time, on the application deadline date. The

Department will contact you after a determination is made on whether your application will be accepted.

Note: The extensions to which we refer in this section apply only to the unavailability of, or technical problems with, the Grants.gov system. We will not grant you an extension if you failed to fully register to submit your application to Grants.gov before the application deadline date and time or if the technical problem you experienced is unrelated to the Grants.gov system.

Exception to Electronic Submission Requirement: You qualify for an exception to the electronic submission requirement, and may submit your application in paper format, if you are unable to submit an application through the Grants.gov system because—

- You do not have access to the Internet; or
- You do not have the capacity to upload large documents to the Grants.gov system; and
- No later than two weeks before the application deadline date (14 calendar days or, if the fourteenth calendar day before the application deadline date falls on a Federal holiday, the next business day following the Federal holiday), you mail or fax a written statement to the Department, explaining which of the two grounds for an exception prevent you from using the Internet to submit your application.

If you mail your written statement to the Department, it must be postmarked no later than two weeks before the application deadline date. If you fax your written statement to the Department, we must receive the faxed statement no later than two weeks before the application deadline date.

Address and mail or fax your statement to: Cassandra Courtney, Fund for the Improvement of Postsecondary Education, U.S. Department of Education, 1990 K Street, NW., room 6166, Washington, DC 20006–8544. Telephone: (202) 502–7506. Fax: (202) 502–7877.

Your paper application must be submitted in accordance with the mail or hand delivery instructions described in this notice.

b. *Submission of Paper Applications by Mail.*

If you qualify for an exception to the electronic submission requirement, you may mail (through the U.S. Postal Service or a commercial carrier) your application to the Department. You must mail the original and two copies of your application, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: (CFDA Number 84.938R) LBJ Basement

Level 1, 400 Maryland Avenue, SW., Washington, DC 20202–4260.

You must show proof of mailing consisting of one of the following:

- (1) A legibly dated U.S. Postal Service postmark.
- (2) A legible mail receipt with the date of mailing stamped by the U.S. Postal Service.
- (3) A dated shipping label, invoice, or receipt from a commercial carrier.
- (4) Any other proof of mailing acceptable to the Secretary of the U.S. Department of Education.

If you mail your application through the U.S. Postal Service, we do not accept either of the following as proof of mailing:

- (1) A private metered postmark.
- (2) A mail receipt that is not dated by the U.S. Postal Service.

If your application is postmarked after the application deadline date, we will not consider your application.

Note: The U.S. Postal Service does not uniformly provide a dated postmark. Before relying on this method, you should check with your local post office.

c. *Submission of Paper Applications by Hand Delivery.*

If you qualify for an exception to the electronic submission requirement, you (or a courier service) may deliver your paper application to the Department by hand. You must deliver the original and two copies of your application by hand, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: (CFDA Number 84.938R) 550 12th Street, SW., Room 7041, Potomac Center Plaza, Washington, DC 20202–4260.

The Application Control Center accepts hand deliveries daily between 8:00 a.m. and 4:30:00 p.m., Washington, DC time, except Saturdays, Sundays, and Federal holidays.

Note for Mail or Hand Delivery of Paper Applications: If you mail or hand deliver your application to the Department—

- (1) You must indicate on the envelope and—if not provided by the Department—in Item 11 of the SF 424, the CFDA Number, including suffix letter, if any, of the competition under which you are submitting your application; and
- (2) The Application Control Center will mail to you a notification of receipt of your grant application. If you do not receive this notification within 15 business days from the application deadline date, you should call the U.S. Department of Education Application Control Center at (202) 245–6288.

V. *Application Review Information*

Selection Criteria: The Secretary will award funds to eligible IHEs that submit

applications under this program and will allocate funds among the eligible institutions using the following factors as criteria for the distribution of funds:

- (1) The expenses that would have been covered by revenues lost by the IHE as a direct result of the major disaster;
- (2) The expenses incurred by the IHE in remedying the effects of the disaster; the costs of construction associated with physical damage caused by the disaster; and
- (3) Any amount of any insurance settlement or other reimbursement received including from a Federal or other relief agency. After reviewing the pre-applications, the Secretary may decide to use the number or amount of Pell Grants received at any time during the 2006–07 and 2007–08 award years, as reflected in the Department's records, as a factor in determining the amount of the individual grants to ensure a fair distribution of funds in accordance with statutory requirements.

VI. *Award Administration Information*

1. **Award Notices:** If your application is successful, we notify your U.S. Representative and U.S. Senators, and send you a Grant Award Notification (GAN). We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. **Administrative and National Policy Requirements:** We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. **Reporting:** At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multi-year award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to: <http://www.ed.gov/fund/grant/apply/appforms/appforms.html>.

VII. Agency Contact

FOR FURTHER INFORMATION CONTACT:

Cassandra Courtney, Fund for the Improvement of Postsecondary Education, U.S. Department of Education, 1990 K Street, NW., room 6166, Washington, DC 20006-8544. Telephone: (202) 502-7506 or by e-mail: HEDR@ed.gov or Cassandra.Courtney@ed.gov.

If you use a TDD, call the FRS, toll free, at 1-800-877-8339.

VIII. Other Information

Accessible Format: Individuals with disabilities can obtain this document and a copy of the application package in an accessible format (e.g. Braille, large print, audiotape, or computer diskette) on request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice.

Electronic Access to This Document: You can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF), on the Internet at the following site: <http://www.ed.gov/news/fedregister>.

To use PDF, you must have Adobe Acrobat Reader, which is available free at this site. If you have questions about using PDF, call the U.S. Government Printing Office (GPO), toll free, at 1-888-293-6498; or in the Washington, DC, area at (20) 512-1530.

Note: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available on GPO Access at: <http://www.gpoaccess.gov/nara/index.html>.

Dated: January 12, 2009.

Vickie L. Schray,

Acting Deputy Assistant Secretary for Higher Education Programs.

[FR Doc. E9-958 Filed 1-15-09; 8:45 am]

BILLING CODE 4000-01-P

DEPARTMENT OF EDUCATION

Privacy Act of 1974; System of Records—Impact Evaluation of Title I Supplemental Educational Services

AGENCY: Institute of Education Sciences, Department of Education.

ACTION: Notice of a new system of records.

SUMMARY: In accordance with the Privacy Act of 1974, as amended (Privacy Act), the Department of Education (Department) publishes this

notice of a new system of records entitled "Impact Evaluation of Title I Supplemental Educational Services." The National Center for Education Evaluation and Regional Assistance at the Department's Institute of Education Sciences (IES) commissioned this study to evaluate the effectiveness of Title I Supplemental Educational Services (SES) in improving the reading or mathematics achievement, or both, of students in Title I schools that have failed to make adequate yearly progress for three years.

Section 1116 of the Elementary and Secondary Education Act of 1965, as amended by the No Child Left Behind Act of 2001 (20 U.S.C. 6316), requires districts with Title I schools that fail to make adequate yearly progress for three years or more to offer SES to students from low-income families who attend these schools. SES are tutoring and other supplemental academic enrichment services that are offered in addition to instruction provided during the regular school day and are provided by State-approved providers free of charge to eligible students. Parents can choose the specific SES provider from among a list approved to serve their district. The Department has contracted with Mathematica Policy Research, Inc. to evaluate the impact of SES on student achievement in up to twelve school districts across the country.

The study will address the following questions:

(1) What is the impact of participation in Title I SES on student achievement in reading and mathematics?

(2) Are district characteristics and practices, SES provider characteristics and services, and student characteristics related to the impact on student achievement?

The evaluation will target school districts where Title I SES are oversubscribed. When more students apply for SES than the district is able to serve, under statute, the district must give priority to the lowest-achieving students. The students who apply but do not meet the achievement level criteria are an unbiased comparison group for the students who do participate in SES.

The system will contain information about approximately 50,000 third- to eighth-graders from up to twelve school districts. The system of records will include individually identifying information about the student applicants participating in the evaluation, including names; demographic information such as race, ethnicity, gender, age, and educational background; level of participation in SES programs; and scores on State

reading and mathematics achievement tests.

DATES: The Department seeks comment on the new system of records described in this notice, in accordance with the requirements of the Privacy Act. We must receive your comments on the proposed routine uses for the system of records referenced in this notice on or before February 17, 2009.

The Department filed a report describing the new system of records covered by this notice with the Chair of the Senate Committee on Homeland Security and Governmental Affairs, the Chair of the House Committee on Oversight and Government Reform, and the Administrator of the Office of Information and Regulatory Affairs, Office of Management and Budget (OMB) on January 13, 2009. This system of records will become effective at the later date of—(1) the expiration of the 40-day period for OMB review on February 23, 2009 or (2) February 17, 2009, unless the system of records needs to be changed as a result of public comment or OMB review.

ADDRESSES: Address all comments about the proposed routine uses to Dr. Audrey Pendleton, Acting Associate Commissioner, Evaluation Division, National Center for Education Evaluation and Regional Assistance, Institute of Education Sciences, U.S. Department of Education, 555 New Jersey Avenue, NW., room 502E, Washington, DC 20208-0001. Telephone: (202) 208-7085. If you prefer to send comments through the Internet, use the following address: comments@ed.gov.

You must include the term "Impact Evaluation of Supplemental Educational Services" in the subject line of the electronic message.

During and after the comment period, you may inspect all comments about this notice at the U.S. Department of Education in room 502D, 555 New Jersey Avenue, NW., Washington, DC between the hours of 8:00 a.m. and 4:30 p.m., Eastern time, Monday through Friday of each week except Federal holidays.

Assistance to Individuals With Disabilities in Reviewing the Rulemaking Record

On request, we supply an appropriate aid, such as a reader or print magnifier, to an individual with a disability who needs assistance to review the comments or other documents in the public rulemaking record for this notice. If you want to schedule an appointment for this type of aid, please contact the

person listed under **FOR FURTHER INFORMATION CONTACT**.

FOR FURTHER INFORMATION CONTACT: Dr. Audrey Pendleton. Telephone: (202) 208-7085. If you use a telecommunications device for the deaf (TDD), you may call the Federal Relay Service (FRS) at 1-800-877-8339.

Individuals with disabilities can obtain this document in an alternative format (e.g., Braille, large print, audiotape, or computer diskette) on request to the contact person listed in this paragraph.

SUPPLEMENTARY INFORMATION:

Introduction

The Privacy Act (5 U.S.C. 552a) requires the Department to publish in the **Federal Register** this notice of a new system of records maintained by the Department. The Department's regulations implementing the Privacy Act are contained in part 5b of title 34 of the Code of Federal Regulations (CFR).

The Privacy Act applies to information about individuals that contains individually identifying information and that is retrieved by a unique identifier associated with each individual, such as a name or social security number. The information about each individual is called a "record," and the system, whether manual or computer-based, is called a "system of records."

The Privacy Act requires each agency to publish a notice of a system of records in the **Federal Register** and to prepare and send a report to OMB whenever the agency publishes a new system of records. Each agency is also required to send copies of the report to the Chair of the Senate Committee on Homeland Security and Governmental Affairs and the Chair of the House Committee on Oversight and Government Reform. These reports are intended to permit an evaluation of the probable effect of the proposal on the privacy rights of individuals.

Electronic Access to This Document

You may view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF) on the Internet at the following site: <http://www.ed.gov/news/fedregister/index.html>.

To use PDF you must have Adobe Acrobat Reader, which is available free at this site. If you have questions about using PDF, call the U.S. Government Printing Office (GPO), toll free, at 1-888-293-6498; or in the Washington, DC, area at (202) 512-1530.

Note: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available on GPO Access at: <http://www.gpoaccess.gov/nara/index.html>.

Dated: January 13, 2009.

Sue Betka,

Acting Director, Institute of Education Sciences.

For the reasons discussed in the preamble, the Director of the Institute of Education Sciences, U.S. Department of Education, publishes a notice of a new system of records to read as follows:

18-13-20

SYSTEM NAME:

Impact Evaluation of Title I Supplemental Educational Services.

SECURITY CLASSIFICATION:

None.

SYSTEM LOCATION:

(1) Evaluation Division, National Center for Education Evaluation and Regional Assistance, Institute of Education Sciences (IES), U.S. Department of Education, 555 New Jersey Avenue, NW., room 502E, Washington, DC 20208-0001.
(2) Mathematica Policy Research, Inc., 600 Alexander Park, Princeton, NJ 08540-2393 and 955 Massachusetts Avenue, Suite 801, Cambridge, MA 02139-3226.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

This system contains records on third- to eighth-grade students who are participating in an evaluation of the effectiveness of Title I Supplemental Educational Services (SES). Parents will apply to their school districts for their child to participate in SES. For students whose parents apply for them to participate in SES, the districts will provide to the Department's contractor demographic data, data on student achievement, and will report on whether or not students were selected to participate in SES. SES providers will provide information to the Department's contractor on the services provided to students.

The system will contain information about approximately 50,000 third- to eighth-graders. In up to twelve school districts, approximately 50,000 students are expected to apply to participate in Title I SES provided by the district, private providers, or both.

CATEGORIES OF RECORDS IN THE SYSTEM:

The system of records will include individually identifying information

about the student applicants participating in the evaluation, including names; demographic information such as race, ethnicity, gender, age, and educational background; level of participation in SES programs; scores on State reading or mathematics achievement tests, or both; and, for each student participating in SES, the name and characteristics of SES provider organizations such as type of provider (district, private for profit, non-profit, community-based organization), location (at student's school or not at student's school), delivery method (teacher, technology, distance learning), and delivery group size (one-on-one, small group, large group).

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

The evaluation is authorized under section 1501(a)(2) of the Elementary and Secondary Education Act of 1965, as amended by the No Child Left Behind Act of 2001 (20 U.S.C. 6491(a)(2)), as well as sections 171(b) and 173 of the Education Sciences Reform Act of 2002 (ESRA) (20 U.S.C. 9561(b) and 9563).

PURPOSE(S):

The information in this system is used for the following purpose: To evaluate the effectiveness of Title I SES in improving the reading or mathematics achievement, or both, of students in Title I schools that have failed to make adequate yearly progress for three years.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

The Department of Education (Department) may disclose information contained in a record in this system of records under the routine uses listed in this system of records without the consent of the individual if the disclosure is compatible with the purposes for which the record was collected. These disclosures may be made on a case-by-case basis or, if the Department has complied with the computer matching requirements of the Privacy Act, under a computer matching agreement. Any disclosure of individually identifiable information from a record in this system must also comply with the requirements of section 183 of the ESRA (20 U.S.C. 9573) providing for confidentiality standards that apply to all collections, reporting, and publication of data by IES.

Contract Disclosure. If the Department contracts with an entity for the purposes of performing any function that requires disclosure of records in this system to employees of the contractor, the Department may disclose the records to

those employees. Before entering into such a contract, the Department will require the contractor to maintain Privacy Act safeguards as required under 5 U.S.C. 552a(m) with respect to the records in the system.

DISCLOSURE TO CONSUMER REPORTING AGENCIES:

Not applicable to this system notice.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

The Department maintains records on CD-ROM, and the contractor (Mathematica Policy Research, Inc.) maintains data for this system on computers and in hard copy.

RETRIEVABILITY:

Records in this system are indexed and retrieved by a number assigned to each individual that is cross-referenced by the individual's name on a separate list.

SAFEGUARDS:

All physical access to the Department's site and to the sites of the Department's contractor where this system of records is maintained is controlled and monitored by security personnel. The computer system employed by the Department offers a high degree of resistance to tampering and circumvention. This security system limits data access to Department and contract staff on a need-to-know basis, and controls individual users' ability to access and alter records within the system. The contractor will establish similar sets of procedures at its sites to ensure confidentiality of data. The contractor's system is required to ensure that information identifying individuals is in files physically separated from other research data. The contractor will maintain security of the complete set of all master data files and documentation. Access to individually identifying data will be strictly controlled. At each contractor site, all data will be kept in locked file cabinets during nonworking hours, and work on hardcopy data will take place in a single room, except for data entry. Physical and cyber security of electronic data will also be maintained. Security features that protect project data include: Password-protected accounts that authorize users to use the contractor's systems but to access only specific network directories and network software; user rights and directory and file attributes that limit those who can use particular directories and files and determine how they can use them; and additional security

features that the network administrators will establish for projects as needed. The contractor employees who "maintain" (collect, maintain, use, or disseminate) data in this system must comply with the requirements of the confidentiality standards in section 183 of the ESRA (20 U.S.C. 9573).

RETENTION AND DISPOSAL:

Records are maintained and disposed of in accordance with the Department's Records Disposition Schedules (ED/RDS, Part 3, Item 2b and Part 3, Items 4b and 5a).

SYSTEM MANAGER AND ADDRESS:

Acting Associate Commissioner, Evaluation Division, National Center for Education Evaluation and Regional Assistance, Institute of Education Sciences, U.S. Department of Education, 555 New Jersey Avenue, NW., room 502E, Washington, DC 20208.

NOTIFICATION PROCEDURE:

If you wish to determine whether a record exists regarding you in the system of records, contact the systems manager. Your request must meet the requirements of the regulations in 34 CFR 5b.5, including proof of identity.

RECORD ACCESS PROCEDURE:

If you wish to gain access to your record in the system of records, contact the system manager. Your request must meet the requirements of the regulations in 34 CFR 5b.5, including proof of identity.

CONTESTING RECORD PROCEDURE:

If you wish to contest the content of a record regarding you in the system of records, contact the system manager. Your request must meet the requirements of the regulations in 34 CFR 5b.7, including proof of identity.

RECORD SOURCE CATEGORIES:

The system of records will include individually identifying information collected from school districts on third- to eighth graders applying to participate in Title I SES and the SES provider organization for each student participating in SES. Data collected will include information about the student applicants participating in the evaluation, including names; demographic information such as race, ethnicity, gender, age, and educational background; level of participation in SES programs; scores on State reading or mathematics achievement tests, or both; and, for each student participating in SES, the name and characteristics of SES provider organizations such as type of provider (district, private for profit, non-profit, community-based

organization), location (at student's school or not at student's school), delivery method (teacher, technology, distance learning), and delivery group size (one-on-one, small group, large group).

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

[FR Doc. E9-972 Filed 1-15-09; 8:45 am]

BILLING CODE 4000-01-P

DEPARTMENT OF ENERGY

Environmental Management Site-Specific Advisory Board, Hanford

AGENCY: Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces a meeting of the Environmental Management Site-Specific Advisory Board (EM SSAB), Hanford. The Federal Advisory Committee Act (Pub. L. 92-463, 86 Stat. 770) requires that public notice of this meeting be announced in the **Federal Register**.

DATES: Thursday, February 5, 2009, 9 a.m.-5 p.m. Friday, February 6, 2009, 8:30 a.m.-4 p.m.

ADDRESSES: Red Lion Hotel, 1101 North Columbia Center Boulevard, Kennewick, Washington 99336, Phone: (509) 783-0611 or 1-800-733-5466, Fax: (509) 374-0391.

FOR FURTHER INFORMATION CONTACT:

Paula Call, Federal Coordinator, Department of Energy Richland Operations Office, 825 Jadwin Avenue, P.O. Box 550, A7-75, Richland, WA 99352; Phone: (509) 376-2048; or E-mail: Paula_K_Call@rl.gov.

SUPPLEMENTARY INFORMATION:

Purpose of the Board: The purpose of the Board is to make recommendations to DOE in the areas of environmental restoration, waste management, and related activities.

Tentative Agenda:

- Agency Updates (Department of Energy Office of River Protection and Richland Operations Office; Washington State Department of Ecology; and the U.S. Environmental Protection Agency)
- Committee Updates, including: Tank Waste Committee; River and Plateau Committee; Health, Safety and Environmental Protection Committee; Public Involvement Committee; and Budgets and Contracts Committee
- Hanford Advisory Board Principles on Institutional Controls and Long-Term Stewardship
- Public Involvement: Tank Closure and Waste Management Environmental Impact Statement

- Baselines and Integrated Priority Lists

- Plutonium Toxicity Tutorial
- Issue Manager Training
- New Board Member Orientation
- Questions for the New Administration

Public Participation: The meeting is open to the public. The EM SSAB, Hanford, welcomes the attendance of the public at its advisory committee meetings and will make every effort to accommodate persons with physical disabilities or special needs. If you require special accommodations due to a disability, please contact Paula Call at least seven days in advance of the meeting at the phone number listed above. Written statements may be filed with the Board either before or after the meeting. Individuals who wish to make oral statements pertaining to agenda items should contact Paula Call at the address or telephone number listed above. Requests must be received five days prior to the meeting and reasonable provision will be made to include the presentation in the agenda. The Deputy Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Individuals wishing to make public comment will be provided a maximum of five minutes to present their comments.

Minutes: Minutes will be available by writing or calling Paula Call's office at the address or phone number listed above. Minutes will also be available at the following Web site: <http://www.hanford.gov/?page=413&parent=397>.

Issued at Washington, DC on January 12, 2009.

Rachel Samuel,

Deputy Committee Management Officer.

[FR Doc. E9-893 Filed 1-15-09; 8:45 am]

BILLING CODE 6450-01-P

DEPARTMENT OF ENERGY

Environmental Management Site-Specific Advisory Board, Portsmouth

AGENCY: Department of Energy (DOE).

ACTION: Notice of open meeting.

SUMMARY: This notice announces a meeting of the Environmental Management Site-Specific Advisory Board (EM SSAB), Portsmouth. The Federal Advisory Committee Act (Pub. L. No. 92-463, 86 Stat. 770) requires that public notice of this meeting be announced in the **Federal Register**.

DATES: Thursday, February 5, 2009, 6 p.m.

ADDRESSES: Ohio State University, Endeavor Center, 1862 Shyville Road, Piketon, Ohio 45661.

FOR FURTHER INFORMATION CONTACT: David Kozlowski, Deputy Designated Federal Officer, Department of Energy Portsmouth/Paducah Project Office, Post Office Box 700, Piketon, Ohio 45661, (740) 897-2759,

David.Kozlowski@lex.doe.gov.

SUPPLEMENTARY INFORMATION:

Purpose of the Board: The purpose of the Board is to make recommendations to DOE in the areas of environmental restoration, waste management and related activities.

Tentative Agenda:

- Call to Order, Introductions, Review of Agenda

- Deputy Designated Federal Officer's Comments

- Federal Coordinator's Comments
- Liaisons' Comments
- Presentations
- Administrative Issues—Actions:
 - Committee Updates
 - Motions
- Public Comments
- Final Comments
- Adjourn

Breaks taken as appropriate.

Public Participation: The meeting is open to the public. The EM SSAB, Portsmouth, welcomes the attendance of the public at its advisory committee meetings and will make every effort to accommodate persons with physical disabilities or special needs. If you require special accommodations due to a disability, please contact David Kozlowski at least seven days in advance of the meeting at the phone number listed above. Written statements may be filed with the Board either before or after the meeting. Individuals who wish to make oral statements pertaining to agenda items should contact David Kozlowski at the address or telephone number listed above. Requests must be received five days prior to the meeting and reasonable provision will be made to include the presentation in the agenda. The Deputy Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Individuals wishing to make public comment will be provided a maximum of five minutes to present their comments.

Minutes: Minutes will be available by writing or calling David Kozlowski at the address and phone number listed above. Minutes will also be available at the following Web site: <http://www.ports-ssab.org/publicmeetings.html>.

Issued at Washington, DC on January 13, 2009.

BILLING CODE 6450-01-P

DEPARTMENT OF ENERGY

Notice of Availability: Office of Civilian Radioactive Waste Management; National Transportation Plan, Revision 0

AGENCY: Department of Energy.

ACTION: Notice of availability.

SUMMARY: The Department of Energy's (DOE's) Office of Civilian Radioactive Waste Management (OCRWM) is making available its *National Transportation Plan, Revision 0* (DOE/RW-0603, January 2009) for public review and comment. The *National Transportation Plan* outlines OCRWM's current strategy and planning for developing and implementing the transportation system that will be required to transport spent nuclear fuel (SNF) and high-level radioactive waste (HLW) from where the material is generated or stored to the proposed repository at Yucca Mountain, Nevada. OCRWM does not expect actual shipments to begin before 2020, but has started the transportation planning process well in advance to ensure the concerns and input of State, Tribal and local officials, as well as other involved and interested parties, are taken into account. OCRWM's *National Transportation Plan* will be updated as appropriate to accommodate changes to the waste management system, reflect progress in the development and implementation of the transportation system, and incorporate stakeholder and public comments. OCRWM also anticipates that detailed implementation plans will be developed in collaboration with the stakeholder community.

DATES: Interested persons are invited to submit comments on or before April 30, 2009.

ADDRESSES: The document is being made available on the OCRWM Web site at <http://www.ocrwm.doe.gov>. Persons wishing to receive a print copy via regular mail should contact: Mr. Frank Moussa, U.S. Department of Energy, OCRWM Office of Logistics Management, 1000 Independence Avenue, SW., Washington, DC 20585-0001. Written comments should be submitted electronically via the Web at <http://www.ocrwm.doe.gov>, or by regular mail to Mr. Frank Moussa at the address identified above.

SUPPLEMENTARY INFORMATION: The Nuclear Waste Policy Act of 1982, as amended (NWPAA) establishes a process for the siting, construction and operation of one or more national repositories for permanent disposal of the Nation's SNF and HLW. Pursuant to the NWPAA, Yucca Mountain has been designated as the site for the Nation's first SNF and HLW repository, and DOE has submitted an application to the Nuclear Regulatory Commission (NRC) for approval to construct the repository. As part of its obligations under the NWPAA, DOE is also responsible for developing and implementing a system to transport SNF and HLW to the Yucca Mountain repository.

OCRWM's *National Transportation Plan, Revision 0* describes the elements of the national transportation system that OCRWM is developing, the phases of that development effort, and how OCRWM will collaborate with stakeholders in the development and implementation of that system. This Plan describes the transportation system that will be needed when the repository is operating at full capacity. The transportation system will be developed in stages that are consistent with waste acceptance schedules and the start-up and subsequent operation of the repository. The transportation infrastructure will continue to expand until full operating capability is achieved. The development and operations of the OCRWM transportation system will build on many decades of safe and secure transportation of SNF in the United States and abroad.

This Plan will be updated as appropriate to reflect progress in the development and implementation of the transportation system, accommodate changes to the waste management system, and incorporate stakeholder and public comments. OCRWM also anticipates that detailed implementation plans will be developed in the future in collaboration with the stakeholder community.

Issued in Washington, DC, on January 12, 2009.

Edward F. Sproat III,

Director, Office of Civilian Radioactive Waste Management, U.S. Department of Energy.
[FR Doc. E9-894 Filed 1-15-09; 8:45 am]

BILLING CODE 6450-01-P

DEPARTMENT OF ENERGY

Southwestern Power Administration

Integrated System Rate Schedules

AGENCY: Southwestern Power Administration, DOE.

ACTION: Notice of rate order.

SUMMARY: Pursuant to Delegation Order Nos. 00-037.00, effective December 6, 2001, and 00-001.00C, effective January 31, 2007, the Deputy Secretary has approved and placed into effect on an interim basis Rate Order No. SWPA-61, which provides the following Integrated System Rate Schedules:

Rate Schedule P-06A, Wholesale Rates for Hydro Peaking Power.

Rate Schedule NPTS-06A, Wholesale Rates for Non-Federal Transmission Service.

FOR FURTHER INFORMATION CONTACT: Mr. James K. McDonald, Assistant Administrator, Office of Corporate Operations, Southwestern Power Administration, Department of Energy, One West Third Street, Tulsa, Oklahoma 74103, (918) 595-6690, jim.mcdonald@swpa.gov.

SUPPLEMENTARY INFORMATION: The 2008 Power Repayment Studies indicated that rates prescribed by Rate Schedules P-06, Wholesale Rates for Hydro Peaking Power, and NPTS-06, Wholesale Rates for Non-Federal Transmission Service, as approved in Docket No. EF07-4011-000, for the period October 1, 2006, through September 30, 2010, are sufficient to meet repayment criteria and do not require any adjustment. However, it is necessary to make technical, non-revenue impacting changes to the terms and conditions of both rates. The Real Power Losses provisions in rate schedules P-06 and NPTS-06 were revised to specify that all real power losses associated with deliveries of non-Federal energy transmitted by Southwestern on behalf of transmission customers must be scheduled and delivered (self-supplied) to Southwestern by such customers during the second month after such real power losses were incurred by Southwestern. Prior to these new provisions, transmission customers were provided the option to either purchase losses from Southwestern or elect, on an annual basis, to self-provide their respective loss energy subject to certain conditions. These new provisions incorporate comments received by Southwestern during customer meetings held throughout 2008. As a result of these informal meetings, it was determined that the revised rate

schedule provisions can provide cost-savings to Southwestern's transmission customers, operational benefits to Southwestern, and are consistent with Federal Energy Regulatory Commission (FERC) Order No. 888.

Rate Schedule P-06A applies to wholesale customers purchasing hydro peaking power and peaking energy from the Integrated System. This rate schedule is designed for the sale of Federal power and energy. Rate Schedule NPTS-06A applies to wholesale customers purchasing Non-Federal Point-to-Point and Network Transmission Service. In developing the revised real power losses rate schedules provisions, the title of the P-06 and NPTS-06 rate schedules were changed to P-06A and NPTS-06A respectively, to reflect the fact that revisions have been made. In addition to replacing the section entitled "Rates for Real Power Losses" within the rate schedules, minor corrections and modifications were incorporated to clarify and update any sections of the rate schedules containing references to real power losses. These changes will have no impact on the amortization or status of repayment forecasted in the power repayment studies and will not require rate changes. Revenues based on current rates remain sufficient to meet repayment criteria.

The Administrator, Southwestern Power Administration (Southwestern) has followed Title 10, Part 903, Subpart A of the Code of Federal Regulations, "Procedures for Public Participation in Power and Transmission Rate Adjustments and Extensions," in connection with the rate schedule revisions being proposed. The public was advised by notice published in the **Federal Register** (73 FR 63969), October 28, 2008, of proposed rate schedule changes and of the opportunity to provide written comments for a period of 30 days ending November 28, 2008. Accordingly, several informal meetings were held with customers and interested parties to discuss the proposed changes. No comments were received during the period of public participation related to the proposed rate schedule changes.

Following review of Southwestern's proposal within the Department of Energy, I approved Rate Order No. SWPA-61 on an interim basis for the period January 1, 2009, through September 30, 2010, or until confirmed and approved on a final basis by the Federal Energy Regulatory Commission.

Dated: January 8, 2009.

Jeffrey F. Kupfer,
Deputy Secretary.

United States of America, Department of Energy, Deputy Secretary.

In the Matter of: Southwestern Power Administration Integrated System Rate Schedules; Order Confirming, Approving and Placing Revised Power Rate Schedules in Effect On an Interim Basis

Rate Order No. SWPA-61

Pursuant to Sections 302(a) and 301(b) of the Department of Energy Organization Act, Public Law 95-91, the functions of the Secretary of the Interior and the Federal Power Commission under Section 5 of the Flood Control Act of 1944, 16 U.S.C. 825s, relating to the Southwestern Power Administration (Southwestern) were transferred to and vested in the Secretary of Energy. By Delegation Order No. 0204-108, effective December 14, 1983, the Secretary of Energy delegated to the Administrator of Southwestern the authority to develop power and transmission rates, delegated to the Deputy Secretary of the Department of Energy the authority to confirm, approve, and place in effect such rates on an interim basis and delegated to the Federal Energy Regulatory Commission the authority to confirm and approve on a final basis or to disapprove rates developed by the Administrator under the delegation. Delegation Order No. 0204-108, as amended, was rescinded and subsequently replaced by Delegation Orders 00-037.00 (December 6, 2001) and 00-001-00C (January 31, 2007). The Deputy Secretary issued this rate order pursuant to said delegations.

Background

In May 2008, Southwestern Power Administration (Southwestern) completed its review of the adequacy of the current rate schedules for the Integrated System and finalized its 2008 Power Repayment Studies (PRSs). The studies indicated that the proposed rates as shown in Rate Schedules P-06 and NFTS-06 would meet cost recovery criteria for the Integrated System projects. The Federal Energy Regulatory Commission (FERC) confirmation and approval of the following Integrated System (System) rate schedules was provided in FERC Docket No. EF07-4011-000 (118 FERC ¶ 62, 162) issued February 27, 2007, for the period October 1, 2006, through September 30, 2010:

Rate Schedule P-06, Wholesale Rates for Hydro Peaking Power.

Rate Schedule NFTS-06, Wholesale Rates for Point-to-Point and Network Transmission Service.

Rate Schedule EE-06, Wholesale Rate for Excess Energy.

Based on operations under the approved Rate Schedules, the Administrator, Southwestern, has determined that a revision to the Real Power Losses provision within existing rate schedules P-06 and NFTS-06 is required. Since the proposed changes to the rate schedules are associated with Real Power Losses, the net results of the 2008 Integrated System Power Repayment Studies, which was the basis for the existing rate schedules, will not be altered. The designations of the aforementioned rate schedules have been revised from P-06 and NFTS-06 to P-06A and NFTS-06A to reflect the fact that revisions have been made.

Titles 10, Part 903 Subpart A, of the Code of Federal Regulations, "Procedures for Public Participation in Power and Transmission Rate Adjustments and Extensions" (Part 903) have been followed in connection with the proposed Rate Schedules P-06A and NFTS-06A. An opportunity for customers and other interested members of the public to review and comment on the proposed rate schedules was announced by notice published in the **Federal Register** October 28, 2008 (73 FR 63969), with written comments due by November 28, 2008. In addition, Southwestern held informal meetings with customers to discuss proposed changes and to provide opportunity for input in the development of these changes. No comments were received during the period of public participation related to the proposed rate schedule changes.

Discussion

Rate Schedule P-06A applies to wholesale customers purchasing hydro peaking power and peaking energy from the Integrated System. This rate schedule is designed for the sale of Federal power and energy. Rate Schedule NFTS-06A applies to wholesale customers purchasing Non-Federal Point-to-Point and Network Transmission Service. In addition to replacing the section entitled "Rates for Real Power Losses" within the rate schedules, minor corrections and modifications were incorporated to clarify and update any sections of the rate schedules containing references to real power losses. These changes will have no impact on the amortization or status of repayment forecasted in the power repayment studies and will not require rate changes. Revenues based on

current rates remain sufficient to meet repayment criteria.

For the period January 1, 2009, through September 30, 2010, Southwestern's P-06A and NFTS-06A rate schedules will require that all real power losses associated with deliveries of non-Federal energy transmitted by Southwestern must be scheduled and delivered (self-supplied) to Southwestern by customers during the second month after such real power losses were incurred by Southwestern. Southwestern will determine the amount of real power losses associated with non-Federal energy transmitted on behalf of each customer in the manner specified in the rate schedules and provide a written schedule setting forth the delivery rate and total quantity of real power loss energy to be delivered back to Southwestern. Should a customer fail to return the total quantity of real power loss energy to Southwestern, according to the schedule provided during the month in which such loss energy is due, the customer will be invoiced and obligated to purchase, at the rate stipulated in the P-06A and NFTS-06A rate schedules, the quantity of loss energy the customer failed to return to Southwestern.

Availability of Information

Information regarding these rate schedules changes is available for public review and comment in the offices of Southwestern Power Administration, One West Third Street, Tulsa, Oklahoma 74103.

Comments and Responses

Southwestern received no comments during the period of public participation related to the proposed rate schedule changes.

Other Issues

There were no other issues raised during the informal meetings or during the formal public participation period.

Administrator's Certification

The revised rate schedules will repay all costs of the Integrated System including amortization of the power investment consistent with the provisions of Department of Energy Order No. RA 6120.2. In accordance with Delegation Order Nos. 00-037.00, effective December 6, 2001, and 00-001.00C, effective January 31, 2007, and Section 5 of the Flood Control Act of 1944, the Administrator has determined that the proposed Integrated System rate schedules are consistent with applicable law and the lowest possible rates consistent with sound business principles.

Environment

No additional evaluation of the environmental impact of the proposed rate schedule changes was conducted since no change has been made to the currently-approved System rates which were determined to fall within the class of actions that are categorically excluded from the requirements of preparing either an Environmental Impact Statement or an Environmental Assessment.

Order

In view of the foregoing and pursuant to the authority delegated to me by the Secretary of Energy, I hereby confirm, approve and place in effect on an interim basis, effective January 1, 2009, the Southwestern Integrated System Rate Schedules P-06A and NPTS-06A which shall remain in effect on an interim basis through September 30, 2010, or until the FERC confirms and approves the rates on a final basis.

Dated: January 8, 2009.

Jeffrey F. Kupfer,

Deputy Secretary.

[FR Doc. E9-895 Filed 1-15-09; 8:45 am]

BILLING CODE 6450-01-P

DEPARTMENT OF ENERGY**Western Area Power Administration****Loveland Area Projects—Rate Order No. WAPA-142**

AGENCY: Western Area Power Administration, DOE.

ACTION: Notice of order concerning firm electric rates.

SUMMARY: The Acting Deputy Secretary of Energy has confirmed and approved Rate Order No. WAPA-142 and Rate Schedule L-F8, placing firm electric service rates from the Loveland Area Projects (LAP) of the Western Area Power Administration (Western) into effect on an interim basis. The Provisional Rates will be in effect until the Federal Energy Regulatory Commission (FERC) confirms, approves, and places them into effect on a final basis or until they are replaced by other rates. The Provisional Rates will provide sufficient revenue to pay all annual costs, including interest expense, and repayment of power investment and irrigation aid within the allowable periods.

DATES: Rate Schedule L-F8 will be placed into effect on an interim basis on the first day of the first full billing period beginning on or after February 1, 2009, and will remain in effect until

FERC confirms, approves, and places the rate schedule in effect on a final basis ending December 31, 2013, or until the rate schedule is superseded.

FOR FURTHER INFORMATION CONTACT: Mr. James D. Keselburg, Regional Manager, Rocky Mountain Customer Service Region, Western Area Power Administration, 5555 East Crossroads Boulevard, Loveland, CO 80538-8986, telephone (970) 461-7201, or Mrs. Sheila D. Cook, Rates Manager, Rocky Mountain Customer Service Region, Western Area Power Administration, 5555 East Crossroads Boulevard, Loveland, CO 80538-8986, telephone (970) 461-7211, e-mail scook@wapa.gov.

SUPPLEMENTARY INFORMATION: The Deputy Secretary of Energy approved existing Rate Schedule L-F7 for firm electric service on an interim basis on November 1, 2007 (72 FR 64061, November 14, 2007), for a 5-year period beginning on January 1, 2008, and ending December 31, 2012.¹

The LAP firm electric service rates must be increased due to the economic impacts of the ongoing drought. The drought is causing a decrease in hydro-power generation, leading to an increase in purchase power expenses and a decrease in revenue from non-firm energy sales.

Rate Schedule L-F7 is being superseded by Rate Schedule L-F8. Under Rate Schedule L-F7, the composite rate is 32.42 mills per kilowatthour (mills/kWh), the firm energy rate is 16.21 mills/kWh, and the firm capacity rate is \$4.25 per kilowattmonth (kWmonth). Under Rate Schedule L-F8, the Provisional Rates for firm electric service will result in a combined composite rate of 37.24 mills/kWh. The firm energy rate will be 18.62 mills/kWh (a Base component of 12.23 mills/kWh and a Drought Adder component of 6.39 mills/kWh) and the capacity rate will be \$4.88/kWmonth (a Base component of \$3.21/kWmonth and a Drought Adder component of \$1.67/kWmonth). This is a 14.9 percent increase when compared to the LAP firm electric rates under Rate Schedule L-F7.

By Delegation Order No. 00-037.00, effective December 6, 2001, the Secretary of Energy delegated: (1) The authority to develop power and transmission rates to the Administrator of Western; (2) the authority to confirm, approve, and place such rates into effect

on an interim basis to the Deputy Secretary of Energy; and (3) the authority to confirm, approve, and place into effect on a final basis, to remand, or to disapprove such rates to FERC. Existing Department of Energy procedures for public participation in power rate adjustments (10 CFR part 903) were published on September 18, 1985.

Under Delegation Order Nos. 00-037.00 and 00-001.00C, 10 CFR part 903, and 18 CFR part 300, I hereby confirm, approve, and place Rate Order No. WAPA-142, the proposed LAP firm electric service rates, into effect on an interim basis.

The new Rate Schedule L-F8 will be promptly submitted to FERC for confirmation and approval on a final basis.

Jeffrey F. Kupfer,

Acting Deputy Secretary of Energy.

Department of Energy Deputy Secretary

In the matter of: Western Area Power Administration, Rate Adjustment for the, Loveland Area Projects; Rate Order No. WAPA-142; Order Confirming, Approving, and Placing the Loveland Area Projects Firm Electric Service Rates Into Effect on an Interim Basis

These rates for the Loveland Area Projects were established in accordance with section 302 of the Department of Energy (DOE) Organization Act (42 U.S.C. 7152). This Act transferred to and vested in the Secretary of Energy the power marketing functions of the Secretary of the Department of the Interior and the Bureau of Reclamation under the Reclamation Act of 1902 (ch. 1093, 32 Stat. 388), as amended and supplemented by subsequent laws, particularly section (c) of the Reclamation Project Act of 1939 (43 U.S.C. 485h(c)) and section 5 of the Flood Control Act of 1944 (16 U.S.C. 825s); and other acts that specifically apply to the project involved.

By Delegation Order No. 00-037.00, effective December 6, 2001, the Secretary of Energy delegated: (1) The authority to develop power and transmission rates to the Administrator of Western; (2) the authority to confirm, approve, and place such rates into effect on an interim basis to the Deputy Secretary of Energy; and (3) the authority to confirm, approve, and place into effect on a final basis, to remand or to disapprove such rates to the Federal Energy Regulatory Commission. Existing DOE procedures for public participation in power rate adjustments (10 CFR part 903) were published on September 18, 1985.

¹ FERC confirmed and approved Rate Order WAPA-134 on May 16, 2008, in Docket No. EF08-5181. See *United States Department of Energy, Western Area Power Administration, Loveland Area Projects*, 123 FERC ¶ 62,137 (May 16, 2008).

Acronyms and Definitions

As used in this Rate Order, the following acronyms and definitions apply:

Administrator: The Administrator of the Western Area Power Administration.

Base: Revenue requirement component of the firm electric service rate including annual operation and maintenance expenses, investment repayment and associated interest, normal timing power purchases, and transmission costs.

Capacity: The electric capability of a generator, transformer, transmission circuit, or other equipment. It is expressed in kilowatts.

Capacity Rate: The rate which sets forth the charges for capacity. It is expressed in dollars per kilowattmonth.

Composite Rate: The rate for commercial firm power which is the total annual revenue requirement for capacity and energy divided by the total annual energy sales. It is expressed in mills per kilowatthour and used for comparison purposes.

Corps: United States Army Corps of Engineers.

Criteria: The Post-1989 General Power Marketing and Allocation Criteria for the sale of energy with capacity from the Pick-Sloan Missouri Basin Program—Western Division and the Fryingpan-Arkansas Project.

Customer: An entity with a contract that is receiving service from Western's Rocky Mountain Region.

Deficits: Deferred or unrecovered annual and/or interest expenses.

DOE: United States Department of Energy.

DOE Order RA 6120.2: An order outlining power marketing administration financial reporting and rate-making procedures.

Drought Adder: Formula-based revenue requirement component including costs associated with the drought.

Energy: Measured in terms of the work it is capable of doing over a period of time. It is expressed in kilowatthours.

Energy Rate: The rate which sets forth the charges for energy. It is expressed in mills per kilowatthour and applied to each kilowatthour delivered to each customer.

FERC: The Federal Energy Regulatory Commission.

Firm: A type of product and/or service available at the time requested by the customer.

FRN: Federal Register notice.

Fry-Ark: Fryingpan-Arkansas Project.

FY: Fiscal year; October 1 to September 30.

kW: Kilowatt—the electrical unit of capacity that equals 1,000 watts.

kWh: Kilowatthour—the electrical unit of energy that equals 1,000 watts in 1 hour.

kWmonth: Kilowattmonth—the electrical unit of the monthly amount of capacity.

LAP: Loveland Area Projects.

L-F7: Loveland Area Projects existing firm electric service rate schedule (expires December 31, 2012, or until superseded).

L-F8: Loveland Area Projects provisional firm electric service rate schedule to be effective February 1, 2009 (to expire December 31, 2013, or when superseded).

M&I: Municipal and industrial water development.

mills/kWh: Mills per kilowatthour—the unit of charge for energy (equal to one tenth of a cent or one thousandth of a dollar).

MW: Megawatt—the electrical unit of capacity that equals 1 million watts or 1,000 kilowatts.

MISO: Midwest Independent Transmission System Operator.

NEPA: National Environmental Policy Act of 1969 (42 U.S.C. 4321, *et seq.*).

Non-timing Power Purchases: Power purchases that are not related to operational constraints such as management of endangered species, species habitat, water quality, navigation, and control area purposes.

O&M: Operation and Maintenance.

P-SMBP: The Pick-Sloan Missouri Basin Program.

P-SMBP—ED: Pick-Sloan Missouri Basin Program—Eastern Division.

P-SMBP—WD: Pick-Sloan Missouri Basin Program—Western Division.

Power: Capacity and energy.

Power Factor: The ratio of real to apparent power at any given point and time in an electrical circuit. Generally it is expressed as a percentage ratio.

Preference: The provisions of Reclamation Law which require Western to first make Federal power available to certain entities. For example, section 9(c) of the Reclamation Project Act of 1939 (43 U.S.C. 485h(c)) states that preference in the sale of Federal power shall be given to municipalities and other public corporations or agencies and also to cooperatives and other nonprofit organizations financed in whole or in part by loans made under the Rural Electrification Act of 1936.

Provisional Rate: A rate which has been confirmed, approved and placed into effect on an interim basis by the Acting Deputy Secretary.

PRS: Power Repayment Study.

Rate Brochure: An August 2008 document explaining the rationale

and background for the rate proposal contained in this Rate Order.

Ratesetting PRS: The PRS used for the rate adjustment period.

Reclamation: United States Department of the Interior, Bureau of Reclamation.

Reclamation Law: A series of Federal laws. Viewed as a whole, these laws create the originating framework under which Western markets power.

Regions: Western's Rocky Mountain Region and Upper Great Plains Region.

Revenue Requirement: The revenue required to recover annual expenses (such as O&M, purchase power, transmission service expenses, interest and deferred expenses) and repay Federal investments and other assigned costs.

Rocky Mountain Region: The Rocky Mountain Customer Service Region of Western Area Power Administration.

SPP: Southwest Power Pool.

Timing Power Purchases: Power purchases that are due to operational constraints (*e.g.*, management of endangered species, species habitat, water quality, navigation, control area purposes, etc.) not associated with the drought.

Upper Great Plains Region: The Upper Great Plains Customer Service Region of Western Area Power Administration.

Western: United States Department of Energy, Western Area Power Administration.

Effective Date

The Provisional Rates will take effect on the first day of the first full billing period beginning on or after February 1, 2009, and will remain in effect until December 31, 2013, pending approval by FERC on a final basis.

Public Notice and Comment

Western followed the Procedures for Public Participation in Power and Transmission Rate Adjustments and Extensions, 10 CFR part 903, in developing these rates. The steps Western took to involve interested parties in the rate process were:

1. The proposed rate adjustment process began April 9, 2008, when Western's Rocky Mountain Region mailed a notice announcing informal meetings to all LAP preference customers and interested parties. The informal meetings were held on April 29, 2008, in Denver, Colorado, and on April 30, 2008, in Sioux Falls, South Dakota. At these informal meetings, Western explained the rationale for the rate adjustment, presented rate designs and methodologies, and answered questions.

2. A **Federal Register** was published on August 15, 2008 (73 FR 47942), which announced the proposed rates for LAP, began the public consultation and comment period, and announced the public information and public comment forums.

3. On August 22, 2008, Western mailed letters to all LAP preference customers and interested parties transmitting the FRN published on August 15, 2008.

4. On September 9, 2008, beginning at 9 a.m. (MDT), Western held a public information forum at the Ramada Plaza Hotel in Northglenn, Colorado. Western provided updates to the proposed firm electric service rates for LAP and P-SMBP—ED. Western also answered questions and gave notice that more information was available in the Rate Brochure.

5. On September 9, 2008, beginning at 11:30 a.m. (MDT), following the public information forum, a public comment forum was held. The comment forum gave the public an opportunity to comment for the record. No oral or written comments were received at this forum.

6. On September 10, 2008, beginning at 8 a.m. (CDT), Western held a public information forum at the Holiday Inn in Sioux Falls, South Dakota. Western provided updates to the proposed firm electric service rates for LAP and P-SMBP—ED. Western also answered questions and gave notice that more information was available in the rate brochure.

7. On September 10, 2008, beginning at 10:30 a.m. (CDT), following the public information forum, a public comment forum was held. The comment forum gave the public an opportunity to comment for the record. One oral comment was received at this forum.

8. Western provided a Web site with all of the letters, time frames, dates and locations of forums, documents discussed at the information meetings, FRN, Rate Brochure, and all other information about this rate process. The Web site is located at <http://www.wapa.gov/rm/ratesRM/2009/default.htm>.

9. Western received 15 comment letters and one oral comment during the consultation and comment period, which ended November 13, 2008. All formally submitted comments have been considered in preparing this Rate Order.

Comments

Written comments were received from the following organizations:

City of Bayard, Nebraska
City of Benkelman, Nebraska
City of Fort Morgan, Colorado

City of Holyoke, Colorado
City of Gering, Nebraska
City of Imperial, Nebraska
City of Kimball, Nebraska
City of Mitchell, Nebraska
City of Torrington, Colorado
Midwest Electric Consumers Association

Prairie Band Potawatomi Nation
Town of Fleming, Colorado
Town of Julesburg, Colorado
Town of Lyons, Colorado
Village of Morrill, Nebraska

A representative of the following organization made an oral comment: Minnesota Municipal Utilities

Project Descriptions

Loveland Area Projects

The Post-1989 General Power Marketing and Allocation Criteria, published in the **Federal Register** on January 31, 1986 (51 FR 4012), integrated the resources of the P-SMBP—WD and Fry-Ark. This operational and contractual integration, known as LAP, allowed an increase in marketable resource, simplified contract administration, and established a blended rate for LAP power sales.

The P-SMBP—WD and Fry-Ark retain separate financial status. For this reason, separate PRSs are prepared annually for each project. These PRSs are used to determine the sufficiency of the firm electric service rate to generate adequate revenue to repay project investment and costs during each project's prescribed repayment period. The revenue requirement of the Fry-Ark PRS is combined with the P-SMBP—WD revenue requirement, derived from the P-SMBP PRS, to develop one rate for LAP firm electric sales.

Pick-Sloan Missouri Basin Program—Western Division

The P-SMBP was authorized by Congress in section 9 of the Flood Control Act of December 22, 1944, commonly referred to as the Flood Control Act of 1944. This multipurpose program provides flood control, irrigation, navigation, recreation, preservation and enhancement of fish and wildlife, and power generation. Multipurpose projects have been developed on the Missouri River and its tributaries in Colorado, Montana, Nebraska, North Dakota, South Dakota and Wyoming.

In addition to the multipurpose water projects authorized by section 9 of the Flood Control Act of 1944, certain other existing projects have been integrated with the P-SMBP for power marketing, operation and repayment purposes. The Colorado-Big Thompson, Kendrick, and

Shoshone Projects were combined with the P-SMBP in 1954, followed by the North Platte Project in 1959. These projects are referred to as the "Integrated Projects" of the P-SMBP.

The Flood Control Act of 1944 also authorized the inclusion of the Fort Peck Project with the P-SMBP for operation and repayment purposes. The Riverton Project was integrated with the P-SMBP in 1954, and in 1970 was reauthorized as a unit of P-SMBP.

The P-SMBP is administered by two regions. The Rocky Mountain Region with a regional office in Loveland, Colorado, markets the Western Division power of P-SMBP and the Upper Great Plains Region with a regional office in Billings, Montana, markets power from the Eastern Division of P-SMBP. The Rocky Mountain Region markets LAP power (a combination of P-SMBP—WD and Fry-Ark power) in northeastern Colorado, east of the Continental Divide in Wyoming, west of the 101st meridian in Nebraska, and most of Kansas. The Upper Great Plains Region markets power in western Iowa, western Minnesota, Montana east of the Continental Divide, North Dakota, South Dakota, and the eastern two-thirds of Nebraska. P-SMB power is marketed to approximately 60 firm power Customers by the Rocky Mountain Region and approximately 300 firm power Customers by the Upper Great Plains Region.

Fryingpan-Arkansas Project

Fry-Ark is a trans-mountain diversion development in southeastern Colorado authorized by the Act of Congress on August 16, 1962 (Pub. L. 87-590, 76 Stat. 389, as amended by Title XI of the Act of Congress on October 27, 1974 (Pub. L. 93-493, 88 Stat. 1486, 1497)). The Fry-Ark diverts water from the Fryingpan River and other tributaries of the Roaring Fork River in the Colorado River Basin on the West Slope of the Rocky Mountains to the Arkansas River on the East Slope. The water diverted from the West Slope, together with regulated Arkansas River water, provides supplemental irrigation, M&I water supplies, and produces hydroelectric power. Flood control, fish and wildlife enhancement, and recreation are other important purposes of Fry-Ark. The only generating facility in Fry-Ark is the Mt. Elbert Pumped-Storage powerplant on the East Slope.

Power Repayment Studies—Firm Electric Service Rate

Western prepares PRSs each FY to determine if revenues will be sufficient to repay, within the required time, all costs assigned to the LAP. Repayment

criteria are based on law, policies including DOE Order RA 6120.2, and authorizing legislation. To meet Cost Recovery Criteria outlined in DOE Order RA 6120.2, revised studies and rate

adjustments have been developed to demonstrate that sufficient revenues will be collected under the proposed rates to meet future obligations.

Existing and Provisional Rates

A comparison of the existing and Provisional Rates for LAP firm electric service follows:

TABLE 1—COMPARISON OF EXISTING AND PROVISIONAL RATES LAP FIRM ELECTRIC SERVICE

Firm electric service	Existing rate (January 1, 2008) L-F7	Provisional rate L-F8	Percent change (%)
LAP Revenue Requirement (million)	\$66.1	\$75.9	14.9
LAP Composite Rate (mills/kWh)	32.42	37.24	14.9
Firm Energy Rate (mills/kWh)	16.21	18.62	14.9
Firm Capacity Rate (\$/kWmonth)	\$4.25	\$4.88	14.9

Certification of Rates

Western’s Administrator certified that the Provisional Rates for LAP firm electric service under Rate Schedule L-F8 are the lowest possible rates consistent with sound business principles. The Provisional Rates were developed following administrative policies and applicable laws.

LAP Firm Electric Service Rate Discussion

According to Reclamation Law, Western must establish power rates

sufficient to recover operation, maintenance, purchased power and interest expenses, and repay power investment and irrigation aid.

The Criteria, published in the **Federal Register** on January 31, 1986 (51 FR 4012), operationally and contractually integrated the resources of the P-SMBP—WD and Fry-Ark (thereafter referred to as LAP). A blended rate was established for the sale of LAP firm electric service. The P-SMBP—WD portion of the revenue requirement for LAP firm electric service rates was

developed from the revenue requirement calculated in the P-SMBP Ratesetting PRS. The P-SMBP—WD revenue requirement increased approximately 18.6 percent from the previous revenue requirement due to the economic impact of the drought, increased annual expenses, increased investments, and increased interest expenses associated with deficits. The revenue requirements for P-SMBP—WD are as follows:

TABLE 2—SUMMARY OF P-SMBP-WD REVENUE REQUIREMENTS (\$000)

Current Revenue Requirement (Jan 08) (26.04 mills/kWh × 1,988,000,000 kWh)	\$51,767
Provisional Increase (4.85 mills/kWh × 1,988,000,000 kWh)	9,642
Provisional Revenue Requirement (26.04 + 4.85 = 30.89 mills/kWh × 1,988,000,000 kWh)	61,409

The adjustment to the P-SMBP revenue requirement is a separate formal rate process which is documented in Rate Order No. WAPA-140.

Fry-Ark

The Fry-Ark portion of the revenue requirement for LAP firm electric service rates was developed from the revenue requirement calculated in the Fry-Ark Ratesetting PRS. The Fry-Ark revenue requirement increased approximately 1.25 percent due to increased O&M expenses and the economic impact of the drought. The revenue requirements for Fry-Ark are as follows:

TABLE 3—SUMMARY OF FRY-ARK REVENUE REQUIREMENTS (\$000)

Current Revenue Requirement (Jan 08)	\$14,365
Provisional Increase	180
Provisional Revenue Requirement	14,545

The following table compares LAP existing revenue requirements to the proposed revenue requirements:

TABLE 4—SUMMARY OF LAP REVENUE REQUIREMENTS (\$000)

	Existing (January 2008)	Provisional
P-SMBP—WD ..	\$51,767	\$61,409
Fry-Ark	14,365	14,545
Total LAP	66,132	75,954

Western will continue to identify its firm electric service revenue requirement using Base and Drought Adder components. The Base component is a fixed revenue requirement for each project that includes annual O&M expenses, investment repayment and associated interest, normal timing power purchases, and transmission costs. Normal timing power purchases are purchases due to operational constraints (e.g., management of endangered species habitat, water quality, navigation, control area purposes, etc.) not

associated with the current drought in the Regions. The Base component can not be adjusted by Western without a public process.

The Drought Adder component for each project is a formula-based revenue requirement that includes costs attributable to the present drought conditions in the Regions. The Drought Adder component includes costs associated with future non-timing power purchases to meet firm electric service contractual obligations not covered with available system generation due to the drought, previously incurred deficits due to purchased power debt that resulted from non-timing power purchases made during this drought, and the interest associated with the previously incurred and future drought debt. The Drought Adder component is designed to repay the drought debt within 10 years from the time the debt was incurred using balloon-payment methodology. For example, the drought debt incurred by Western in 2007 will be repaid by 2017. Adjustments to the Drought Adder rate component of less than or equal to 2

mills/kWh to the LAP composite rate will be made by Customer notification of a revised rate schedule with a January implementation date.

The annual revenue requirement calculation formula is: Annual Revenue

Requirement = Base Revenue Requirement + Drought Adder Revenue Requirement. Under this Provisional Rate, the LAP annual revenue requirement is \$75.9 million (Base revenue requirement of \$49.9 million

plus a Drought Adder revenue requirement of \$26 million).

A comparison of the current and proposed rate components is listed in the following table:

TABLE 5—SUMMARY OF LAP COMPONENTS

	Existing rates L-F7			Provisional rates L-F8		
	Base	Drought adder	Total	Base	Drought adder	Total
Firm Capacity (\$/kW-month)	\$3.13	\$1.12	\$4.25	\$3.21	\$1.67	\$4.88
Firm Energy (mills/kWh)	11.92	4.29	16.21	12.23	6.39	18.62

Continuing to identify the firm electric service revenue requirement using Base and Drought Adder rate components will assist Western in presenting the effects of the drought within the Regions, demonstrating repayment of the drought related costs, and being more responsive to changes in drought related expenses. Western will continue to charge and bill Customers firm electric service rates for energy and capacity, which are the sum of the Base and Drought Adder rate components.

Western reviews its firm electric service rates annually. Western will review the Base rate component after the annual PRSs are complete, generally in the first quarter of the calendar year. If an adjustment to the Base rate component is necessary, Western will initiate a public process pursuant to 10 CFR part 903 prior to making an adjustment.

In accordance with the original implementation of the Drought Adder rate component, Western will review the Drought Adder rate component each September to determine if drought costs differ from those projected in the PRSs. If drought costs differ, Western will

determine whether an adjustment to the Drought Adder rate component is necessary. Western will use recent Corps and Reclamation hydrological estimates and historical data to determine the estimated amounts for future purchase power costs. For any drought-related adjustments of less than or equal to 2 mills/kWh to the LAP Composite Rate, Western will notify Customers by letter in October and implement the adjustment in the following January billing cycle. For the portion of any planned incremental adjustment greater than 2 mills/kWh to the LAP composite rate, Western will engage in a public process pursuant to 10 CFR part 903 prior to implementing that portion of the adjustment. Although decremental adjustments to the Drought Adder will occur, the adjustment cannot result in the Drought Adder being a negative number. Western will conduct a preliminary review of the Drought Adder in early summer and advise Customers by letter of any estimated change to the Drought Adder for the following January, with the final Drought Adder rate component adjustment verified by notification in

the October letter to the Customers. Implementing the Drought Adder rate component adjustment on January 1 of each year will help keep the drought deficits from escalating, lower the interest expense due to drought deficits, demonstrate responsible deficit management, and provide prompt drought deficit repayments.

Western's current and Provisional Rate schedules permit a formula-based adjustment of the Drought Adder rate component of up to 2 mills/kWh. The 2 mills/kWh cap is intended to place a limit on the amount the Drought Adder formula can be adjusted relative to associated drought costs without initiating a public process to recover costs attributable to the Drought Adder formula rate for any one-year cycle.

Statement of Revenue and Related Expenses

The following table provides a summary of projected revenue and expense data for the Fry-Ark firm electric service revenue requirement through the 5-year Provisional Rate approval period:

TABLE 6—FRY-ARK COMPARISON OF 5-YEAR RATE APPROVAL PERIOD (FY 2009–2013)

[Total revenue and expense (\$000)]

	Existing rate	Provisional rate	Difference
Total Revenues	\$76,744	\$78,983	\$2,239
<i>Revenue Distribution:</i>			
<i>Expenses:</i>			
O&M	25,336	28,868	3,532
Purchase Power	82	1,398	1,316
Transmission	19,889	20,027	138
Interest ¹	22,676	21,383	-1,293
Total Expenses	67,983	71,676	3,693
<i>Principal Payments:</i>			
Capitalized Expenses (deficits)	0	0	0
Original Project and Additions	315	1,762	1,447
Replacements ²	8,446	5,545	-2,901
Total Principal Payments	8,761	7,307	-1,454

TABLE 6—FRY-ARK COMPARISON OF 5-YEAR RATE APPROVAL PERIOD (FY 2009–2013)—Continued
 [Total revenue and expense (\$000)]

	Existing rate	Provisional rate	Difference
Total Revenue Distribution	76,744	78,983	2,239

¹ The decrease in interest expense is primarily due to a decrease in projected replacements.

² The decrease in replacement payments is primarily due to a reduction of planned capital replacements at Mt. Elbert by Reclamation.

The summary of P–SMBP—WD revenues and expenses for the 5-year Provisional Rate approval period is included in the P–SMBP Statement of Revenue and Related Expenses that is part of Rate Order No. WAPA–140.

Basis for Rate Development

The existing rates for LAP firm electric service in Rate Schedule L–F7, which expire December 31, 2012, no longer provide sufficient revenues to pay all annual costs, including interest expense, and repay investment and irrigation aid within the allowable period. The adjusted rates reflect increases due to the economic impact of the drought, annual expenses, investments, and interest expense associated with drought deficits. The Provisional Rates will provide sufficient revenue to pay all annual costs, including interest expense, and repay power investment and irrigation aid within the allowable periods. The Provisional Rates will take effect on the first day of the first full billing period beginning on or after February 1, 2009, and will remain in effect on an interim basis, pending FERC's confirmation and approval of them or substitute rates on a final basis, through December 31, 2013.

Emergency Fund Discussion

Due to continuing below normal hydropower generation, Western may need to use the Continuing Fund (Emergency Fund) to pay for unanticipated purchase power and wheeling expenses necessary to meet its contractual obligations for the sale and delivery of power to its Customers. Should Western use this funding mechanism, Western will replenish the Continuing Fund (Emergency Fund) in accordance with law and Western's current repayment policy.²

Comments

The comments and responses below regarding the firm electric service rates are paraphrased for brevity when not affecting the meaning of the statement(s). Direct quotes from

² Western's Continuing Fund (Emergency Fund) Policy can be found at <http://www.wapa.gov/powerm/pdf/repaypolicy.pdf>.

comment letters are used for clarification when necessary.

The issues discussed are (1) Firm Electric Service Rate and (2) MISO Markets.

1. Firm Electric Service Rate

Comment: Western received numerous comments from Customers stating that they understand the need for the rate increases and support the concept of the Drought Adder, which establishes a window during which drought-related expenses are repaid.

Response: Western appreciates the Customer support received for the rate adjustment proposal. Western continues separation of the annual revenue requirement into the Base and Drought Adder rate components.

Comment: Many comments were received from Customers expressing appreciation for Western's commitment to keep them informed and involved throughout this rate process. Customers were grateful for past cost-cutting measures and encouraged Western's continued vigilance in keeping controllable costs as low as possible.

Response: Western is pleased with the level of Customer interest and participation in the public meetings. Under the Flood Control Act of 1944, power is to be sold at the lowest possible rates consistent with sound business principles. Western is committed to keeping controllable costs as low as possible while continuing to meet our firm electric service commitments.

Comment: Customers state that they are looking forward to working with Western's staff on the projected Base rate adjustments as they pertain to Western's draft Strategic Plan and Western's potential involvement in changes associated with MISO and SPP.

Response: Western's goal is to work closely with our Customers throughout this and future rate adjustments. Changes to the Base rate are made through a public process and allow for Customer input.

Comment: One Customer recognized the impacts that the extended drought has had on the current financial status of the P–SMBP and expressed support for the proposed firm power rate increases. The Customer also stated that

the repayment of Federal investment through Federal power rates is taken very seriously. In the future, the Drought Adder will help to avoid a repetition of the financial impacts that are seen today.

Response: Western acknowledges the financial impact of the extended drought, and the need for a firm power rate increase as well. The Drought Adder will allow Western to be more responsive to the changing hydrological conditions.

Comment: A Customer representative acknowledged the financial challenges of this drought and made note of the difficulties Federal power customers are confronted with in fulfilling their financial responsibilities to the Federal government. They noted the good water years in the 1990's generated significant revenue surplus to P–SMBP's financial requirements. Also noted was Western's administration of repayment according to repayment policies and the repayment of a significant amount of capital investment ahead of schedule. This early repayment benefitted both P–SMBP Customers and the Federal government, but left no financial resources to deal with the drought. Thus, the current repayment practices and policies exacerbate the impacts of the natural swings in hydrology. When the drought deficit is repaid, there will still be a substantial amount of paid ahead investments for the P–SMBP. The Customer would like to work with Western to address this issue.

Response: Western acknowledges the financial impacts of the current drought and believes the ratemaking policy of identifying the Base and Drought Adder components will make the rates more responsive to hydrological changes caused by both drought and flush water years. The Drought Adder component may be adjusted annually up to 2 mills/kWh without a public process to quickly address drought impacts, and the Base Rate component can only be adjusted through a public process. This practice will lower interest expense due to drought deficits and demonstrate responsible deficit management. Western acknowledges the statements regarding Western's adherence to repayment policies and the associated repayment of a significant amount of

capital investment ahead of schedule in the 1990s. Prepayment is an integral part of the long-term plan for the project and has provided rate stability for Consumers while meeting Federal repayment obligations. The ability to reduce the Drought Adder rate component when normal hydrological conditions return to P-SMBP will allow appropriate recognition of repayment obligations. Western appreciates the Customer's support and willingness to work with Western and will continue to discuss issues, impacts, and possible solutions with the Customers.

2. MISO Markets

Comment: Western has received numerous comments concerning the issue of whether the Upper Great Plains Region should join MISO and its Day Two Markets. The comments support a thorough review of costs and benefits to all of Western's Customers, before a change is made. Comments suggest that administrative costs associated with the Day Two markets may impose a significant burden, especially on smaller Customers. There were concerns that if Western joins MISO and other area transmission owners that serve the Customers join the SPP, there could be significant cost issues associated with the delivery of Western's allocation to preferred customer loads. Comments stated that if there are benefits to participating in the Day Two market, those benefits should flow to all of Western's Customers, not just those that participate in joint dispatching arrangements inside the Integrated System. Concerns are that costs associated to deliver Western's allocations to the edge of the system should be recovered as part of the total system transmission rate recovery, as it has been done in the past.

Response: This comment is not directly related to the proposed rate adjustment and it is outside the scope of this rate process. However, Western is actively addressing these issues as well as other options and evaluating them based on cost and benefit to Western's Customers.

Comment: A commenter noted that MISO intends to start an ancillary service market. When that occurs, Western has preference power customers that are served in the MISO footprint. The question asked was, does Western have avoided cost due to the MISO market providing those ancillary services? Specifically, are there avoided

cost in Schedule 3, Regulation and Frequency Response, Schedule 5, Operating Reserves Spinning, and Schedule 6, Operating Reserves Supplemental?

Response: This comment is not directly related to the proposed rate action and is outside the scope of this rate process. However, Western is actively evaluating the MISO Module F, as well as other options. Changes in the electric utility market are still evolving. As Western moves forward in evaluating the impacts on market participation and changes for our Customers, we will continue to keep our Customers informed of our decisions regarding these matters.

Availability of Information

Information about this rate adjustment, including the PRSs, comments, letters, memorandums, and other supporting materials that were used to develop the Provisional Rates are available for public review in the Rocky Mountain Regional Office, Western Area Power Administration, 5555 E. Crossroads Boulevard, Loveland, Colorado.

Ratemaking Procedure Requirements Environmental Compliance

In compliance with the National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321-4347); Council on Environmental Quality Regulations (40 CFR parts 1500-1508); and DOE NEPA Regulations (10 CFR part 1021), Western has determined that this action is categorically excluded from preparing an environmental assessment or an environmental impact statement.

Determination Under Executive Order 12866

Western has an exemption from centralized regulatory review under Executive Order 12866; accordingly, no clearance of this notice by the Office of Management and Budget is required.

Submission to the Federal Energy Regulatory Commission

The Provisional Rates herein confirmed, approved, and placed into effect, together with supporting documents, will be submitted to FERC for confirmation and final approval.

Order

In view of the foregoing and under the authority delegated to me, I confirm and approve on an interim basis, effective on

the first full billing period on or after February 1, 2009, Rate Schedule L-F8 for the Loveland Area Projects of the Western Area Power Administration. The rate schedule shall remain in effect on an interim basis, pending FERC's confirmation and approval of them or substitute rates on a final basis through December 31, 2013.

Dated: January 8, 2009.

Jeffrey F. Kupfer,

Acting Deputy Secretary of Energy.

Rate Schedule L-F8
(Supersedes Rate Schedule L-F7)
Effective February 1, 2009

United States Department of Energy Western Area Power Administration

Loveland Area Projects; Colorado, Kansas, Nebraska, Wyoming

Schedule of Rates for Firm Electric Service

(Approved Under Rate Order No.
WAPA-142)

Effective: The first day of the first full billing period beginning on or after February 1, 2009, through December 31, 2013.

Available: Within the marketing area served by the Loveland Area Projects.

Applicable: To the wholesale power customers for firm electric service supplied through one meter at one point of delivery, or as otherwise established by contract.

Character: Alternating current, 60 hertz, three phase, delivered and metered at the voltages and points established by contract.

Monthly Rates:

Capacity Charge: \$4.88 per kilowatt of billing capacity.

Energy Charge: 18.62 mills per kilowatthour (kWh) of monthly entitlement.

Billing Capacity: Unless otherwise specified by contract, the billing capacity will be the seasonal contract rate of delivery.

Charge Components:

Base: A fixed revenue requirement that includes operation and maintenance expense, investment repayment and associated interest, normal timing power purchases (purchases due to operational constraints, not associated with drought), and transmission costs. The Base revenue requirement is \$49.9 million.

$$\text{Base Capacity} = \frac{50\% \times \text{Base Revenue Requirement}}{\text{Firm Billing Capacity}} = \$3.21/\text{kW month}$$

$$\text{Base Energy} = \frac{50\% \times \text{Base Revenue Requirement}}{\text{Annual Energy}} = 12.23 \text{ mills/kWh}$$

Drought Adder: A formula-based revenue requirement that includes future purchase power expense excluding timing power purchases,

previous purchase power drought deficits, and interest on the purchase power drought deficits. For the period beginning on or after the first day of the

first full billing period beginning on or after February 1, 2009, the Drought Adder revenue requirement is \$26 million.

$$\text{Drought Adder Capacity} = \frac{50\% \times \text{Drought Adder Revenue Requirement}}{\text{Firm Billing Capacity}} = \$1.67/\text{kW month}$$

$$\text{Drought Adder Energy} = \frac{50\% \times \text{Drought Adder Revenue Requirement}}{\text{Annual Energy}} = \$6.39 \text{ mills/kWh}$$

Process: Any proposed change to the Base component will require a public process. The Drought Adder may be adjusted annually using the above formula for any costs attributed to drought of less than or equal to the equivalent of 2 mills/kWh to the LAP composite rate. Any planned incremental adjustment to the Drought Adder component greater than the equivalent of 2 mills/kWh to the LAP composite rate will require a public process.

Adjustments:

For Drought Adder: Adjustments pursuant to the Drought Adder component will be documented in a revision to this rate schedule.

For Transformer Losses: If delivery is made at transmission voltage but metered on the low-voltage side of the substation, the meter readings will be increased to compensate for transformer losses as provided for in the contract.

For Power Factor: None. The customer will be required to maintain a power factor at all points of measurement between 95-percent lagging and 95-percent leading.

[FR Doc. E9-897 Filed 1-15-09; 8:45 am]

BILLING CODE 6450-01-P

DEPARTMENT OF ENERGY

Western Area Power Administration

Pick-Sloan Missouri Basin Program— Eastern Division-Rate Order No. WAPA-140

AGENCY: Western Area Power Administration, DOE.

ACTION: Notice of Order Concerning Firm Power Rates.

SUMMARY: The Acting Deputy Secretary of Energy confirmed and approved Rate Order No. WAPA-140 and Rate Schedules P-SED-F10 and P-SED-FP10, placing firm power and firm peaking power rates from the Pick-Sloan Missouri Basin Program—Eastern Division (P-SMBP—ED) of the Western Area Power Administration (Western) into effect on an interim basis. The provisional rates will be in effect until the Federal Energy Regulatory Commission (FERC) confirms, approves, and places them into effect on a final basis or until they are replaced by other rates. The provisional rates will provide sufficient revenue to pay all annual costs, including interest expense, and repayment of power investment and irrigation aid within the allowable periods.

DATES: Rate Schedules P-SED-F10 and P-SED-FP10 will be placed into effect on an interim basis on the first day of the first full billing period beginning on or after February 1, 2009, and will remain in effect until FERC confirms, approves, and places the rate schedules in effect on a final basis ending December 31, 2013, or until the rate schedules are superseded.

FOR FURTHER INFORMATION CONTACT: Mr. Robert J. Harris, Regional Manager, Upper Great Plains Region, Western Area Power Administration, 2900 4th Avenue North, Billings, MT 59101-1266, telephone (406) 247-7405, e-mail rharris@wapa.gov, or Ms. Linda Cady-Hoffman, Rates Manager, Upper Great Plains Region, Western Area Power Administration, 2900 4th Avenue North, Billings, MT 59101-1266, (406) 247-7439, e-mail cady@wapa.gov.

SUPPLEMENTARY INFORMATION: The Deputy Secretary of Energy approved

existing Rate Schedules P-SED-F9 and P-SED-FP9 for P-SMBP—ED firm and firm peaking electric service, respectively, on an interim basis on November 1, 2007 (72 FR 68,64,067 November 14, 2007), for a 5-year period beginning on January 1, 2008, and ending December 31, 2012.¹

Under Rate Schedule P-SED-F9, the composite rate is 24.49 mills per kilowatt-hour (mills/kWh), the firm energy rate is 13.99 mills/kWh, and the firm capacity rate is \$5.65 per kilowatt-month (kWmonth). Under Rate Schedule P-SED-FP9, the firm peaking capacity rate is \$5.10/kWmonth. These Rate Schedules are formula based with Base and Drought Adder components and provide for an up to 2 mills/kWh increase in the Drought Adder rate component.

The current rate adjustment reflects a rate increase based on the P-SMBP Final Fiscal Year 2007 Power Repayment Study (PRS). The PRS sets the total annual P-SMBP—ED revenue requirement for 2009 for firm and firm peaking electric service at \$283.0 million, or a 19.9 percent increase. The current rates, including the 2 mills/kWh increase provided for under the Drought Adder formula rate component, are not sufficient to meet the P-SMBP—ED revenue requirements.

The P-SMBP—ED revenue requirement increase is mainly attributed to the economic impacts of the drought. A decrease in hydro-power generation has caused purchase power expense to increase and revenue from

¹ FERC confirmed and approved Rate Order No. WAPA-135 on April 14, 2008, in Docket No. EF08-5031-000. See *United States Department of Energy, Western Area Power Administration, Pick-Sloan Missouri Basin Program*, 123 FERC ¶ 62048 (April 14, 2008).

non-firm energy sales to decrease. There has been an increase in both the price and volume of purchase power needed to meet contractual commitments to Western's customers. The purchase price of power is set by supply and demand on the open market.

The existing firm electric service Rate Schedules P-SED-F9 and P-SED-FP9 are being superseded by Rate Schedules P-SED-F10 and P-SED-FP10, respectively. Under Rate Schedule P-SED-F10, the provisional rates for firm electric services will result in a combined composite rate of 29.34 mills/kWh. The energy rate will be 16.71 mills/kWh (a Base component of 9.27 mills/kWh and a Drought Adder component of 7.44 mills/kWh), and the capacity rate will be \$6.80/kWmonth (a Base component of \$3.80/kWmonth and a Drought Adder component of \$3.00/kWmonth). Under Rate Schedule P-SED-FP10, the provisional rates for firm peaking electric services consist of a capacity charge of \$6.20/kWmonth (a Base component of \$3.40/kWmonth and a Drought Adder component of \$2.80/kWmonth) and an energy charge of 16.71 mills/kWh.

By Delegation Order No. 00-037.00, effective December 6, 2001, the Secretary of Energy delegated: (1) The authority to develop power and transmission rates to the Administrator of Western; (2) the authority to confirm, approve, and place such rates into effect on an interim basis to the Deputy Secretary of Energy; and (3) the authority to confirm, approve, and place into effect on a final basis; to remand; or to disapprove such rates to FERC. Existing Department of Energy procedures for public participation in power rate adjustments (10 CFR part 903) were published on September 18, 1985.

Under Delegation Order Nos. 00-037.00 and 00-001.00C, 10 CFR part 903, and 18 CFR part 300, I hereby confirm, approve, and place Rate Order No. WAPA-140, the proposed P-SMBP-ED firm power, and firm peaking power rates into effect on an interim basis.

The new Rate Schedules P-SED-F10 and P-SED-FP10 will be promptly submitted to FERC for confirmation and approval on a final basis.

Dated: January 8, 2009.

Jeffrey F. Kupfer,
Acting Deputy Secretary.

Department of Energy

Deputy Secretary

In the matter of:

Western Area Power Administration Rate Adjustment for the Pick-Sloan Missouri Basin Program—Eastern Division; Rate Order No. WAPA-140;

Order Confirming, Approving, and Placing the Pick-Sloan Missouri Basin Program—Eastern Division Firm Power and Firm Peaking Power Service Rates Into Effect on an Interim Basis

The firm and firm peaking electric service rates for the Pick-Sloan Missouri Basin Program—Eastern Division were established in accordance with section 302 of the Department of Energy (DOE) Organization Act (42 U.S.C. 7152). This Act transferred to and vested in the Secretary of Energy the power marketing functions of the Secretary of the Department of the Interior and the Bureau of Reclamation under the Reclamation Act of 1902 (ch. 1093, 32 Stat. 388), as amended and supplemented by subsequent laws, particularly section 9(c) of the Reclamation Project Act of 1939 (43 U.S.C. 485h(c)) and section 5 of the Flood Control Act of 1944 (16 U.S.C. 825s) and other Acts that specifically apply to the project involved.

By Delegation Order No. 00-037.00, effective December 6, 2001, the Secretary of Energy delegated: (1) The authority to develop power and transmission rates to the Administrator of Western; (2) the authority to confirm, approve, and place such rates into effect on an interim basis to the Deputy Secretary of Energy; and (3) the authority to confirm, approve and place into effect on a final basis; to remand; or to disapprove such rates to the Federal Energy Regulatory Commission. Existing DOE procedures for public participation in power rate adjustments (10 CFR part 903) were published on September 18, 1985.

Acronyms and Definitions

As used in this Rate Order, the following acronyms and definitions apply:

Administrator: The Administrator of the Western Area Power Administration.

Base: Revenue requirement component of the power rate including annual operation and maintenance expenses, investment repayment and associated interest, normal timing power purchases, and transmission costs.

Capacity: The electric capability of a generator, transformer, transmission circuit, or other equipment. It is expressed in kilowatts.

Capacity Charge: The rate which sets forth the charges for capacity. It is expressed in dollars per kilowattmonth.

Composite Rate: The rate for commercial firm power which is the total annual revenue requirement for capacity and energy divided by the total annual energy sales. It is expressed in mills per kilowatthour and used for comparison purposes.

Corps: The United States Army Corps of Engineers.

CROD: Contract Rate of Delivery. The maximum amount of capacity and energy allocated to a preference customer for a period specified under a contract.

Customer: An entity with a contract that is receiving service from Western's Upper Great Plains Region.

Deficits: Deferred or unrecovered annual and/or interest expenses.

DOE: United States Department of Energy.

DOE Order RA 6120.2: An order outlining power marketing administration financial reporting and rate-making procedures.

Drought Adder: Formula-based revenue requirement component including costs associated with the drought.

Energy: Measured in terms of the work it is capable of doing over a period of time. It is expressed in kilowatthours.

Energy Charge: The rate which sets forth the charges for energy. It is expressed in mills per kilowatthour and applied to each kilowatthour delivered to each customer.

FERC: Federal Energy Regulatory Commission.

Firm: A type of product and/or service available at the time requested by the customer.

FRN: Federal Register notice.

Fry-Ark: Fryingpan-Arkansas Project.

FY: Fiscal Year; October 1 to

September 30.

kW: Kilowatt—the electrical unit of capacity that equals 1,000 watts.

kWh: Kilowatthour—the electrical unit of energy that equals 1,000 watts in 1 hour.

kWmonth: Kilowattmonth—the electrical unit of the monthly amount of capacity.

LAP: Loveland Area Projects.

Load Factor: The ratio of average load in kW supplied during a designated period to the peak or maximum load in kW occurring in that period.

mills/kWh: Mills per kilowatthour—the unit of charge for energy (equal to one tenth of a cent or one thousandth of a dollar).

MISO: Midwest Independent Transmission System Operator.

MW: Megawatt—the electrical unit of capacity that equals 1 million watts or 1,000 kilowatts.

NEPA: National Environmental Policy Act of 1969 (42 U.S.C. 4321, *et seq.*).

Non-timing Power Purchases: Power purchases that are not related to operational constraints such as management of endangered species, species habitat, water quality, navigation, control area purposes, etc.

O&M: Operation and Maintenance.

P-SMBP: The Pick-Sloan Missouri Basin Program.

P-SMBP—ED: Pick-Sloan Missouri Basin Program—Eastern Division.

P-SMBP—WD: Pick-Sloan Missouri Basin Program—Western Division.

Power: Capacity and energy.

Power Factor: The ratio of real to apparent power at any given point and time in an electrical circuit. Generally, it is expressed as a percentage.

Preference: The provisions of Reclamation Law which require Western to first make Federal power available to certain entities. For example, section 9(c) of the Reclamation Project Act of 1939 (43 U.S.C. 485h(c)) states that preference in the sale of Federal power shall be given to municipalities and other public corporations or agencies and also to cooperatives and other nonprofit organizations financed in whole or in part by loans made under the Rural Electrification Act of 1936.

Provisional Rate: A rate which has been confirmed, approved, and placed into effect on an interim basis by the Deputy Secretary.

PRS: Power Repayment Study.

Rate Brochure: An August 2008 document explaining the rationale and background for the rate proposal contained in this Rate Order.

Reclamation: The United States Department of the Interior, Bureau of Reclamation.

Reclamation Law: A series of Federal laws. Viewed as a whole, these laws create the originating framework under which Western markets power.

Revenue Requirement: The revenue required to recover annual expenses (such as O&M, purchase power, transmission service expenses, interest, and deferred expenses) and repay Federal investments and other assigned costs.

RMR: The Rocky Mountain Customer Service Region of the Western Area Power Administration.

SPP: Southwest Power Pool.

Timing Power Purchases: Power purchases that are due to operational constraints (e.g. management of

endangered species, species habitat, water quality, navigation, control area purposes, etc.) and not associated with the drought.

UGPR: The Upper Great Plains Customer Service Region of the Western Area Power Administration.

Western: The United States Department of Energy, Western Area Power Administration.

Effective Date

The new provisional rates will take effect on the first day of the first full billing period beginning on or after February 1, 2009, and will remain in effect until December 31, 2013, pending approval by FERC on a final basis.

Public Notice and Comment

Western followed the Procedures for Public Participation in Power and Transmission Rate Adjustments and Extensions, 10 CFR part 903, in developing these rates. The steps Western took to involve interested parties in the rate process were:

1. The proposed rate adjustment process began April 9, 2008, when Western's UGPR mailed a notice announcing informal customer meetings to all P-SMBP—ED preference customers and interested parties. The informal meetings were held on April 29, 2008, in Denver, Colorado, and on April 30, 2008, in Sioux Falls, South Dakota. At these informal meetings, Western explained the rationale for the rate adjustment, presented rate designs and methodologies, and answered questions.

2. A **Federal Register** notice, published on August 15, 2008 (73 FR 47945) announced the proposed rates for P-SMBP—ED, began a public consultation and comment period and announced the public information and public comment forums.

3. On August 18, 2008, Western mailed letters to all P-SMBP—ED preference customers and interested parties transmitting the FRN published on August 15, 2008.

4. On August 29, 2008, a letter was mailed to preference customers and interested parties informing them of a \$400,000 misstatement in the FRN published revenue requirement.

5. On September 9, 2008, at 9 a.m. (MDT), Western held a public information forum at the Ramada Plaza Hotel in Northglenn, Colorado. Western provided updates to the proposed firm power rates for the P-SMBP, which encompasses the P-SMBP—ED and LAP rates. Western also answered questions and gave notice that more information was available in the rate brochure.

6. On September 9, 2008, at 11:30 a.m. (MDT), following the public information forum, and at the same location, a public comment forum was held. The comment forum gave the public an opportunity to comment for the record. No oral or written comments were received at this forum.

7. On September 10, 2008, at 8 a.m. (CDT), Western held a public information forum at the Holiday Inn in Sioux Falls, South Dakota. Western provided updates to the proposed firm power rates for the P-SMBP, which encompasses the P-SMBP—ED and LAP rates. Western also answered questions and gave notice that more information was available in the rate brochure.

8. On September 10, 2008, at 10:30 a.m. (CDT), following the public information forum, and at the same location, a public comment forum was held. The comment forum gave the public an opportunity to comment for the record. One oral comment was received at this forum.

9. Western provided a Web site which contains all of the letters, time frames, dates, and locations of forums, documents discussed at the information meetings, FRNs, rate brochure, and all other information about this rate process for easy customer access. The Web site is located at <http://www.wapa.gov/ugpr/rates/2009FirmRateAdjust>.

10. During the consultation and comment period, which ended November 13, 2008, Western received 17 comment letters. One comment letter was rescinded. Western also received an oral comment. All formally submitted comments have been considered in preparing this Rate Order.

Comments

Written comments were received from the following organizations:

City of Blue Hill, Nebraska.
City of Burwell, Nebraska (2).
City of Fort Morgan, Colorado.
City of Sargent, Nebraska.
City of Wall Lake, Iowa.
City of West Point, Nebraska.
City of Wisner, Nebraska.
City of Wood River, Nebraska.
Corn Belt Power Cooperative, Iowa.
Mid-West Electric Consumers Association, Colorado.
North Iowa Municipal Electric Cooperative Association, Iowa.
Spencer Municipal Utilities, Iowa.
Village of Oxford, Nebraska.
Village of Shickley, Nebraska.
Village of Spencer, Nebraska.
Village of Stuart, Nebraska.

A representative of the following organization made an oral comment:
Minnesota Municipal Utilities, Minnesota.

Project Description

The P-SMBP was authorized by Congress in section 9 of the Flood Control Act of December 22, 1944, commonly referred to as the 1944 Flood Control Act. This multipurpose program provides flood control, irrigation, navigation, recreation, preservation and enhancement of fish and wildlife, and power generation. Multipurpose projects have been developed on the Missouri River and its tributaries in Colorado, Montana, Nebraska, North Dakota, South Dakota, and Wyoming.

In addition to the multipurpose water projects authorized by Section 9 of the Flood Control Act of 1944, certain other existing projects have been integrated with the P-SMBP for power marketing, operation, and repayment purposes. The Colorado-Big Thompson, Kendrick, and Shoshone Projects were combined with the P-SMBP in 1954, followed by the North Platte Project in 1959. These projects are referred to as the "Integrated Projects" of the P-SMBP.

The Flood Control Act of 1944 also authorized the inclusion of the Fort Peck Project with the P-SMBP for operation and repayment purposes. The Riverton Project was integrated with the

P-SMBP in 1954 and in 1970 was reauthorized as a unit of P-SMBP.

The P-SMBP is administered by two regions. The UGPR, with a regional office in Billings, Montana, markets power from the Eastern Division of P-SMBP, and the RMR, with a regional office in Loveland, Colorado, markets the Western Division power of P-SMBP. The UGPR markets power in western Iowa, western Minnesota, Montana east of the Continental Divide, North Dakota, South Dakota, and the eastern two-thirds of Nebraska. The RMR markets P-SMBP—WD power, which in combination with Fry-Ark power is known as LAP power, in northeastern Colorado, east of the Continental Divide in Wyoming, west of the 101st meridian in Nebraska, and most of Kansas. The P-SMBP power is marketed to approximately 300 firm power customers by the UGPR and approximately 60 firm power customers by the RMR.

Power Repayment Study—Firm Power Rate

Western prepares a PRS each FY to determine if revenues will be sufficient to repay, within the required time, all costs assigned to the P-SMBP. Repayment criteria are based on law,

policies including DOE Order RA 6120.2, and authorizing legislation. To meet Cost Recovery Criteria outlined in DOE Order RA 6120.2, a revised study and rate adjustment has been developed to demonstrate that sufficient revenues will be collected under proposed rates to meet future obligations.

Existing and Provisional Rates

Eastern Division

Under Rate Schedule P-SED-F9, the composite rate is 24.49 mills/kWh, the firm energy rate is 13.99 mills/kWh, and the firm capacity rate is \$5.65/kWmonth. For Rate Schedule P-SED-FP9 the firm peaking capacity rate is \$5.10/kWmonth. These Rate Schedules are formula based with Base and Drought Adder components and provide for an up to a 2 mills/kWh increase in the Drought Adder rate component.

The current rate adjustment reflects a rate increase based on the P-SMBP Fiscal Year 2007 PRS. The PRS sets the total annual P-SMBP—ED revenue requirement for 2009 for firm and firm peaking electric service at \$283.0 million, or a 19.9 percent increase.

A comparison of the existing and provisional firm power and firm peaking power rates follow:

TABLE 1—COMPARISON OF EXISTING AND PROVISIONAL RATES PICK-SLOAN MISSOURI BASIN PROGRAM—EASTERN DIVISION

Firm electric service	Current rates	Provisional rates	Percent change
Rate Schedules	P-SED-F9/P-SED-FP9	P-SED-F10/P-SED-FP10	
Firm and Firm Peaking Revenue Requirement (million)	\$235.9	\$283.0	19.9
Composite Rate (mills/kWh)	24.49	29.34	19.8
Firm Capacity Rate (/kWmonth)	\$5.65	\$6.80	20.4
Firm Energy Rate (mills/kWh)	13.99	16.71	19.4
Firm Peaking Capacity Rate (/kWmonth)	\$5.10	\$6.20	21.6
Firm Peaking Energy Rate (mills/kWh) ¹	13.99	16.71	19.4

¹ Firm Peaking Energy is normally returned. This rate will be assessed in the event Firm Peaking Energy is not returned.

Western Division

The LAP rate is designed to recover the P-SMBP—WD revenue requirement for the P-SMBP and the revenue requirement for Fry-Ark. The adjustment to the LAP rate is a separate formal rate process which is documented in Rate Order No. WAPA-142. Rate Order No. WAPA-142 is scheduled to go into effect on the first day of the first full billing period after the Acting Deputy Secretary of Energy approves the rate.

Certification of Rates

Western's Administrator certified that the Provisional Rates for P-SMBP—ED firm power and firm peaking power rates are the lowest possible rates

consistent with sound business principles. The Provisional Rates were developed following administrative policies and applicable laws.

P-SMBP—ED Firm Power Rate Discussion

According to Reclamation Law, Western must establish power rates sufficient to recover operation, maintenance, purchased power and interest expenses, and repay power investment and irrigation aid.

The P-SMBP—ED firm power and firm peaking power rates must be increased due to the economic impact of the drought, increased annual expenses, increased investments, and increased

interest expense associated with deficits.

Under Rate Schedule P-SED-F10, Western will continue identifying its firm electric service revenue requirement using Base and Drought Adder rate components. The Base rate component is a revenue requirement that includes annual operation and maintenance expenses, investment repayment and associated interest, normal timing power purchases, and transmission costs. Western's normal timing power purchases are purchases due to operational constraints (e.g., management of endangered species habitat, water quality, navigation, etc.) and are not associated with the current drought. The Base component cannot be

adjusted by Western without a public process.

The Drought Adder rate component is a formula-based revenue requirement that includes costs attributable to the past and present drought conditions within the Pick-Sloan Program. The Drought Adder rate component includes costs associated with future non-timing power purchases to meet firm power contractual obligations not covered with available system generation due to the drought, previously incurred deficits due to purchased power debt that resulted from non-timing power purchases made during this drought,

and the interest associated with the previously incurred and future drought deficit. The Drought Adder rate component is designed to repay Western's drought deficit within 10 years from the time the debt was incurred, using balloon-payment methodology. For example, the drought deficit incurred by Western in 2007 will be repaid by 2017.

The annual revenue requirement calculation will continue to be summarized by the following formula: Annual Revenue Requirement = Base Revenue Requirement + Drought Adder Revenue Requirement. Under this

Provisional Rate, effective February 1, 2009, the P-SMBP—ED annual revenue requirement equals \$294.1 million and is comprised of a Base revenue requirement of \$163.5 million plus a Drought Adder revenue requirement of \$130.6 million. Both the Base and Drought Adder rate components recover portions of the firm power revenue requirement, firm peaking power, and associated 5 percent discount revenue necessary to equal the P-SMBP—ED revenue requirement. A comparison of the current and proposed rate components are listed in Table 2.

TABLE 2—SUMMARY OF P-SMBP—ED RATE COMPONENTS

	Existing rates P-SED-F9/P-SED-FP9			Provisional rates P-SED-F10/ P-SED-FP10		
	Base component	Drought adder component	Total	Base component	Drought adder component	Total
Firm Capacity Rate (/kWmonth)	\$3.65	\$2.00	\$5.65	\$3.80	\$3.00	\$6.80
Firm Energy Rate (mills/kWh)	8.93	5.06	13.99	9.27	7.44	16.71
Firm Peaking Capacity Rate (/kWmonth)	\$3.25	\$1.85	\$5.10	\$3.40	\$2.80	\$6.20
Firm Peaking Energy Rate (mills/kWh) ¹	8.93	5.06	13.99	9.27	7.44	16.71

¹ Firm peaking energy is normally returned. This will be assessed in the event firm peaking energy is not returned.

As set forth in Table 2 above, provisional Rate Schedule P-SED-F10 has a firm capacity rate of \$6.80/kWmonth and a firm energy rate of 16.71 mills/kWh. Under proposed Rate Schedule P-SED-FP10, the firm peaking capacity rate will increase to \$6.20/kWmonth, or a 21.6 percent increase. Peaking energy is either returned to Western or paid for in accordance with the terms of the contract between Western and the peaking power customer.

Continuing to identify the firm electric service revenue requirement using Base and Drought Adder rate components will assist Western in presenting the effects of the drought within the P-SMBP, demonstrating repayment of the drought related costs, and allowing Western to be more responsive to changes in drought related expenses. Western will continue to charge and bill customers firm electric service rates for energy and capacity, which are the sum of the Base and Drought Adder rate components.

Western reviews its firm electric service rates annually. Western will review the Base rate component after the annual PRS is completed, generally in the first quarter of the calendar year. If an adjustment to the Base rate component is necessary, Western will

initiate a public process pursuant to 10 CFR part 903 prior to making an adjustment.

In accordance with the original implementation of the Drought Adder rate component, Western will continue to review the Drought Adder rate component each September to determine if drought costs differ from those projected in the PRS. If drought costs differ, Western will determine if an adjustment to the Drought Adder rate component is necessary. Western will notify customers by letter each October of the planned incremental or decremental adjustment and implement the adjustment in the January billing cycle. Although decremental adjustments to the Drought Adder rate component will occur as drought costs are repaid, the adjustments cannot result in a negative Drought Adder rate component. To give customers advance notice, Western will conduct a preliminary review of the Drought Adder rate component in early summer and notify customers by letter of the estimated change to the Drought Adder rate component for the following January. Western will verify the final Drought Adder rate component adjustment by notification in the October letter to the customers. Implementing the Drought Adder rate

component adjustment on January 1 of each year will help keep the drought deficits from escalating as quickly, will lower the interest expense due to drought deficits, will demonstrate responsible deficit management, and will provide prompt drought deficit repayments.

Western's current and Provisional Rate schedules provide for a formula-based adjustment of the Drought Adder rate component of up to 2 mills/kWh. The 2 mills/kWh cap is intended to place a limit on the amount the Drought Adder formula can be adjusted relative to associated drought costs without initiating a public process to recover costs attributable to the Drought Adder formula rate for any one-year cycle.

Statement of Revenue and Related Expenses

The following Table 3 provides a summary of projected revenue and expense data for the total P-SMBP, including both the Eastern and Western Divisions, firm electric service revenue requirement through the 5-year rate approval period.

The firm power rates for both divisions have been developed with the following revenues and expenses for the P-SMBP:

TABLE 3—TOTAL P–SMBP FIRM POWER COMPARISON OF 5-YEAR RATE PERIOD (FY 2009–2013) TOTAL REVENUES AND EXPENSES

	Current rate (\$000)	Provisional rate (\$000)	Difference (\$000)
Total Revenues	2,124,002	2,417,497	293,495
Revenue Distribution			
Expenses:			
O&M	904,589	859,559	(45,030)
Purchased Power	155,654	431,180	275,526
Interest	528,272	639,356	111,084
Transmission	55,596	65,963	10,367
Total Expenses	1,644,111	1,996,058	351,947
Principal Payments:			
Capitalized Expenses (Deficits) ¹	150,549	351,517	200,968
Original Project and Additions ¹	263,052	1,546	(261,506)
Replacements ¹	3,314	2,704	(610)
Irrigation Aid	62,976	65,672	2,696
Total Principal Payments	479,891	421,439	(58,452)
Total Revenue Distribution	2,124,002	2,417,497	293,495

¹ Due to the deficit or near deficit conditions between 1999 and 2008, revenues generated in the cost evaluation period are applied toward repayment of deficits rather than repayment of project additions and replacements. All deficits are projected to be repaid by 2017.

Basis for Rate Development

The existing rates for P–SMBP—ED firm power in Rate Schedule P–SED–F9, which expire December 31, 2012, no longer provide sufficient revenues to pay all annual costs, including interest expense, and repay investment and irrigation aid within the allowable period. The adjusted rates reflect increases due to the economic impact of the drought, increased annual expenses, increased investments, and increased interest expense associated with investments and drought deficits. The Provisional Rates will provide sufficient revenue to pay all annual costs, including interest expense, and repay power investment and irrigation aid within the allowable periods. The Provisional Rates will take effect on February 1, 2009, and will remain in effect on an interim basis, pending FERC's confirmation and approval of them or substitute rates on a final basis, through December 31, 2013.

Emergency Fund Discussion

Due to continuing below-normal hydropower generation, Western may need to use the Continuing Fund (Emergency Fund) to pay for unanticipated purchase power and wheeling expenses necessary to meet its contractual obligations for the sale and delivery of power to its customers. Should Western use this funding mechanism, Western will replenish the Continuing Fund (Emergency Fund) in

accordance with law and Western's current repayment policy.²

Comments

The comments and responses below regarding the firm and firm peaking electric service rates are paraphrased for brevity when not affecting the meaning of the statement(s). Direct quotes from comment letters are used for clarification when necessary.

The issues discussed are (1) Firm Power Rate and (2) MISO Markets.

1. Firm Power Rate

Comment: Western received numerous comments from customers stating that they understand the need for the rate increases and support the concept of the Drought Adder, which provides a set window during which drought-related expenses are repaid.

Response: Western appreciates the customer support received for the rate adjustment proposal. Western continues separation of the annual revenue requirement into Base and Drought Adder components.

Comment: Many comments were received from customers that showed appreciation for Western's commitment to keep power customers informed and involved throughout this rate process. Customers were grateful for past cost-cutting measures and encouraged Western's continued vigilance in keeping controllable costs as low as possible.

² Western's Continuing Fund (Emergency Fund) Policy can be found at <http://www.wapa.gov/powerm/pdf/repaypolicy.pdf>.

Response: Western is pleased with the level of customer interest and participation in the public meetings. Under the Flood Control Act of 1944, power is to be sold at the lowest possible rates consistent with sound business principles. Western is committed to keeping controllable costs as low as possible while continuing to deliver reliable cost-based hydroelectric power and related services.

Comment: Customers state that they are looking forward to working with Western's staff on the projected Base rate adjustments as they pertain to Western's draft Strategic Plan and Western's potential involvement in changes associated with MISO and SPP.

Response: Western's goal is to work closely with our customers throughout this rate, as well as any future rate adjustments. Changes to the Base Rate are made through a public process and allow for input.

Comment: Two customers were opposed to the firm peaking rate and questioned whether it reflects the costs associated with the drought and delivery of peaking power. It was noted that the firm peaking rate is being increased at approximately the same percentage rate as the firm power rate, which the commenting customers felt may not be fair and equitable. These customers wanted additional information regarding the firm peaking contracts so the impact on the rates can be better understood and evaluated. It was understood that Western allows peaking energy to be returned. They questioned under what terms and

conditions peaking customers are allowed to return energy and whether peaking energy is allowed to be returned off-peak. Customers asked if Western makes market purchases to fulfill Western's peaking contracts. The customers asked for assurance from Western that the firm peaking rate is fairly priced based on the nature of the product and its historical and future contributions to the bottom line.

Response: Western separated the firm and firm peaking rates and developed rate designs for both firm power and firm peaking power in the FRN published November 14, 2007 (72 FR ¶ 64067). In development of this firm peaking rate design, Western analyzed historical peaking data and concluded that this rate reflects the firm peaking customer's historical usage and their impact on the drought costs. During the current rate adjustment process, Western concluded that there has not been substantial change to the firm peaking usage or power markets since the introduction of the new firm peaking rate design that would support revisiting the rate design at this time. Western believes that both the firm and firm peaking customers are being treated equitably with the current rate designs. The firm peaking rate design accurately reflects the value and restrictions of the peaking product.

Comment: One customer would like to evaluate the voltage discount and was concerned that it may be too high in light of the recent drought-related increases. The concern was that billing amounts have grown since the voltage discount was put into place and now the discount may be too much in comparison to the actual cost.

Response: Historically, Western has provided a 5-percent voltage discount as a provision to the firm power rate schedule. The purpose of the discount is to provide the discount on firm power sales to customers who receive deliveries at higher transmission voltage and relieve Western of substation delivery costs. Reclamation began, and Western continues, the 5-percent voltage discount to customers meeting the criteria. Up to this time, Western has not been formally asked to change the discount percentage and has not evaluated the impacts of such a change on the firm power customers. Western is open to discussion among our customers and exploring options regarding the 5-percent voltage discount; but until additional customers request a review or modification of this provision, Western will continue applying the discount.

Comment: One customer recognized the impacts that the extended drought

has had on the current financial status of the P-SMBP and expressed support for the proposed firm power rate increases. The customer also stated that the repayment of Federal investment through Federal power rates is taken very seriously. In the future, the Drought Adder will help to avoid a repetition of the financial impacts that are seen today.

Response: Western acknowledges the extended drought, its financial impacts, and the need for a firm power rate increase as well. The Drought Adder will allow Western to be more responsive to the changing hydrological conditions.

Comment: A customer representative acknowledged the financial challenges of this drought and made note of the difficulties Federal power customers are confronted with in fulfilling their financial responsibilities to the Federal government. They noted the good water years in the 1990s generated significant revenue surplus to P-SMBP financial requirements. Also noted was Western's administration of repayment according to repayment policies and the repayment of a significant amount of capital investment ahead of schedule. This early repayment benefitted both P-SMBP customers and the Federal government but left no financial resources to deal with drought. Thus, the current repayment practices and policies exacerbate the impacts of the natural swings in hydrology. When the drought deficit is repaid, there will still be a substantial amount of paid-ahead investments for the P-SMBP. The customer would like to work with Western to address this issue.

Response: Western acknowledges the financial impacts of the current drought and believes the ratemaking policy of identifying the Base and Drought Adder components will make the rates more responsive to hydrological changes caused by both drought and flush water years. The Drought Adder component may be adjusted annually up to 2 mills/kWh without a public process to quickly address drought impacts, and the Base Rate component can only be adjusted through a public process. This practice will lower interest expense due to drought deficits and demonstrate responsible deficit management. Western acknowledges the customer group statements regarding Western's adherence to repayment policies and the associated repayment of a significant amount of capital investment ahead of schedule in the 1990s. Prepayment is an integral part of the long-term plan for P-SMBP and has provided rate stability for consumers while meeting Federal repayment obligations. The ability to

reduce the Drought Adder rate component when normal hydrological conditions return to P-SMBP will allow appropriate recognition of repayment obligations. Western appreciates the customers' support and willingness to work with Western and will continue to discuss issues, impacts, and possible solutions with the customers.

2. MISO Markets

Comment: Western has received numerous comments concerning the issue of whether to join MISO and its Day Two Markets. The comments support a thorough review of costs and benefits to all of Western's customers before a change is made. Comments suggest that administrative costs associated with the Day Two Markets may impose a significant burden, especially on smaller customers. There were concerns that if Western joins MISO and other area transmission owners that serve the customers join SPP there could be significant cost issues associated with the delivery of Western's allocation to Preference customer loads. Comments stated that if there are benefits to participating in the Day Two Market those benefits should flow to all of Western's customers, not just those that participate in joint dispatching arrangements inside the Integrated System. Concerns are that costs associated to deliver Western's allocations to the edge of the system should be recovered as part of the total system transmission rate recovery, as it has been done in the past.

Response: This comment is not directly related to the proposed rate action. However, Western is actively addressing these issues as well as other options and evaluating them based on costs and benefits to Western's customers.

Comment: A commenter noted that MISO intends to start an ancillary service market; and when that occurs, Western has preference power customers that are served in the MISO footprint. The question was asked does Western have avoided costs due to the MISO market providing those ancillary services; specifically, are there avoided costs in Schedule 3, Regulation and Frequency Response; Schedule 5, Operating Reserves Spinning; and Schedule 6, Operating Reserves Supplemental.

Response: This comment is not directly related to the proposed rate action. Western is actively evaluating its obligations to customers in the MISO Ancillary Services Market footprint. As Western moves forward in evaluating the impacts on market participation and changes for customers, Western will

seek input from customers and will continue to keep customers informed of decisions regarding these matters.

Availability of Information

Information about this rate adjustment, including the PRS, comments, letters, memorandums, and other supporting materials that was used to develop the Provisional Rates is available for public review in the Upper Great Plains Regional Office, Western Area Power Administration, 2900 4th Avenue North, Billings, Montana.

Ratemaking Procedure Requirements

Environmental Compliance

In compliance with the National Environmental Policy Act (NEPA) of 1969, 42 U.S.C. 4321–4347; Council on Environmental Quality Regulations (40 CFR parts 1500–1508); and DOE NEPA Regulations (10 CFR part 1021), Western has determined that this action is categorically excluded from preparing of an environmental assessment or an environmental impact statement.

Determination Under Executive Order 12866

Western has an exemption from centralized regulatory review under Executive Order 12866; accordingly, no clearance of this notice by the Office of Management and Budget is required.

Submission to the Federal Energy Regulatory Commission

The Provisional Rates herein confirmed, approved, and placed into

effect, together with supporting documents, will be submitted to FERC for confirmation and final approval.

Order

In view of the foregoing and under the authority delegated to me, I confirm and approve on an interim basis, effective February 1, 2009, Rate Schedules P–SED–F10 and P–SED–FP10 for the Pick-Sloan Missouri Basin Program—Eastern Division Project of the Western Area Power Administration. These rate schedules shall remain in effect on an interim basis, pending FERC's confirmation and approval of them or substitute rates on a final basis through December 31, 2013.

Dated: January 8, 2009.

Jeffrey F. Kupfer,

Acting Deputy Secretary.

Rate Schedule P–SED–F10
(Supersedes Schedule P–SED–F9)
Effective February 1, 2009

United States Department of Energy, Western Area Power Administration

Pick-Sloan Missouri Basin Program— Eastern Division Montana, North Dakota, South Dakota, Minnesota, Iowa, Nebraska

Schedule of Rates for Firm Power Service

*(Approved Under Rate Order No.
WAPA–140)*

Effective: The first day of the first full billing period beginning on or after

February 1, 2009, through December 31, 2013.

Available: Within the marketing area served by the Eastern Division of the Pick-Sloan Missouri Basin Program.

Applicable: To the power and energy delivered to customers as firm power service.

Character: Alternating current, 60 hertz, three phase, delivered and metered at the voltages and points established by contract.

Monthly Rates

Demand Charge: \$6.80 for each kilowatt per month (kWmonth) of billing demand.

Energy Charge: 16.71 mills per kilowatthour (kWh) for all energy delivered as firm power service.

Billing Demand: The billing demand will be as defined by the power sales contract.

Charge Components

Base: A fixed revenue requirement that includes operation and maintenance expense, investments and replacements, interest on investments and replacements, normal timing purchase power costs (purchases due to operational constraints, not associated with drought), and transmission costs. The Base revenue requirement is \$163.5 million.

$$\text{Base Demand} = \frac{50\% \times \text{Base Revenue Requirement}}{\text{Firm Metered Billing Units}} = \$3.80/\text{kW month}$$

$$\text{Base Energy} = \frac{50\% \times \text{Base Revenue Requirement}}{\text{Annual Energy}} = \$9.27 \text{ mills/kWh}$$

Drought Adder: A formula-based revenue requirement that includes future purchase power expense

excluding timing purchases, previous purchase power drought deficits, and interest on the purchase power drought

deficits. For the period beginning February 1, 2009, the Drought Adder revenue requirement is \$130.6 million.

$$\text{Drought Adder Demand} = \frac{50\% \times \text{Drought Adder Revenue Requirement}}{\text{Firm Metered Billing Units}} = \$3.00/\text{kW month}$$

$$\text{Drought Adder Energy} = \frac{50\% \times \text{Drought Adder Revenue Requirement}}{\text{Annual Energy}} = \$7.44 \text{ mills/kWh}$$

Process: Any proposed change to the Base component will require a public process. The Drought Adder component may be adjusted annually using the above formula for any costs attributed to drought of less than or equal to the

equivalent of 2 mills/kWh to the Power Repayment Study (PRS) composite rate. Any planned incremental adjustment to the Drought Adder component greater than the equivalent of 2 mills/kWh to

the PRS composite rate will require a public process.

Adjustments

For Drought Adder: Adjustments pursuant to the Drought Adder

component will be documented in a revision to this rate schedule.

For Character and Conditions of Service: Customers who receive deliveries at transmission voltage may in some instances be eligible to receive a 5-percent discount on demand and energy charges when facilities are provided by the customer that results in a sufficient savings to Western to justify the discount. The determination of eligibility for receipt of the voltage discount shall be exclusively vested in Western.

For Billing of Unauthorized Overruns: For each billing period in which there is a contract violation involving an unauthorized overrun of the contractual firm power and/or energy obligations, such overrun shall be billed at 10 times the above rate.

For Power Factor: None. The customer will be required to maintain a power factor at the point of delivery between 95 percent lagging and 95 percent leading.
Rate Schedule P-SED-FP10

(Supersedes Schedule P-SED-FP9)
Effective February 1, 2009

**United States Department of Energy,
Western Area Power Administration**

**Pick-Sloan Missouri Basin Program—
Eastern Division Montana, North
Dakota, South Dakota, Minnesota,
Iowa, Nebraska;**

*Schedule of Rates for Firm Peaking
Power Service*

*(Approved Under Rate Order No.
WAPA-140)*

Effective: The first day of the first full billing period beginning on or after February 1, 2009, through December 31, 2013.

Available: Within the marketing area served by the Eastern Division of the Pick-Sloan Missouri Basin Program, to customers with generating resources enabling them to use firm peaking power service.

Applicable: To the power sold to customers as firm peaking power service.

Character: Alternating current, 60 hertz, three phase, delivered and metered at the voltages and points established by contract.

Monthly Rates

Demand Charge: \$6.20 for each kilowatt per month (kWmonth) of the effective contract rate of delivery for peaking power or the maximum amount scheduled, whichever is greater.

Energy Charge: 16.71 mills for each kilowatthour (kWh) for all energy scheduled for delivery without return.

Charge Components

Base: A fixed revenue requirement that includes operation and maintenance expense, investment and replacements, normal timing purchase power costs (purchases due to operational constraints, not associated with drought), and transmission costs. The Base peaking revenue requirement is \$14.5 million.

$$\text{Base Demand} = \frac{\text{Base Peaking Demand Revenue Requirement}}{\text{Peaking CROD Billing Units}} = \$3.40/\text{kW month}$$

Energy¹ = 9.27 mills/kWh

Drought Adder: A formula-based revenue requirement that includes future purchase power above timing

purchases, previous purchase power drought deficits, and interest on the purchase power drought deficits. For

the period beginning February 1, 2009, the Drought Adder peaking revenue requirement is \$12.0 million.

$$\text{Drought Adder Demand} = \frac{\text{Drought Adder Peaking Demand Revenue Requirement}}{\text{Peaking CROD Billing Units}} = \$2.80/\text{kW month}$$

Energy¹ = 7.44 mills/kWh

Process:

Any proposed change to the Base component will require a public process. The Drought Adder component may be adjusted annually using the above formula for any costs attributed to drought of less than or equal to the equivalent of 2 mills/kWh to the Power Repayment Study (PRS) composite rate. Any planned incremental adjustment to the Drought Adder component greater than the equivalent of 2 mills/kWh to the PRS composite rate will require a public process.

Billing Demand: The billing demand will be the greater of: (1) The highest 30-minute integrated demand measured during the month up to, but not in excess of, the delivery obligation under

the power sales contract, or (2) the contract rate of delivery.

Adjustments

For Drought Adder: Adjustments pursuant to the Drought Adder component will be documented in a revision to this rate schedule.

Billing for Unauthorized Overruns: For each billing period in which there is a contract violation involving an unauthorized overrun of the contractual obligation for peaking demand and/or energy, such overrun shall be billed at 10 times the above rate.

BILLING CODE 6450-01-P

**ENVIRONMENTAL PROTECTION
AGENCY**

[AMS-FRL-8762-9]

**California State Nonroad Engine and
Vehicle Pollution Control Standards;
Authorization of Transport
Refrigeration Unit Engine Standards,
Notice of Decision**

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of Decision for Authorization of California Transport Refrigeration Unit In-use Engine Emission Standards.

SUMMARY: EPA today, pursuant to section 209(e) of the Clean Air Act (Act), 42 U.S.C. 7543(e), is granting California its request for authorization to enforce its Airborne Toxic Control measure (ATCM) establishing in-use emission performance standards for engines in

¹ Firm peaking energy is normally returned. This rate will be assessed in the event firm peaking energy is not returned.

transport refrigeration units (TRUs) and TRU generator sets that will be phased-in commencing in December 31, 2008.

ADDRESSES: The Agency's Decision Document, containing an explanation of the Assistant Administrator's decision, as well as all documents relied upon in making that decision, including those submitted to EPA by California, are available for public inspection in EPA Air and Radiation Docket and Information Center (Air Docket). Materials relevant to this decision are contained in Docket OAR-2005-0123 at the following location: EPA Air Docket, Room 3334, 1301 Constitution Avenue, NW., Washington, DC, 20460. The EPA Docket Center Public Reading Room is open from 8 a.m. to 5:30 p.m. Monday through Friday, except on government holidays. The Air Docket telephone number is (202) 566-1742, and the facsimile number is (202) 566-1741. You may be charged a reasonable fee for photocopying docket materials, as provided in 40 CFR part 2.

Additionally, an electronic version of the public docket is available through the Federal government's electronic public docket and comment system. You may access EPA dockets at <http://www.regulations.gov>. After opening the <http://www.regulations.gov> Web site, select "Environmental Protection Agency" from the pull-down Agency list, then scroll to "Keyword or ID" and enter EPA-HQ-OAR-2005-0123 to view documents in the record of this TRU Authorization Request docket. Although a part of the official docket, the public docket does not include Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

EPA makes available an electronic copy of this Notice via the Internet on the Office of Transportation and Air Quality (OTAQ) homepage (<http://www.epa.gov/OTAQ>). Users can find this document by accessing the OTAQ homepage and looking at the path entitled "Federal Register Notices." This service is free of charge, except any cost you already incur for Internet connectivity. Users can also get the official **Federal Register** version of the Notice on the day of publication on the primary Web site: (<http://www.epa.gov/docs/fedrgstr/EPA-AIR>) Please note that due to differences between the software used to develop the documents and the software into which the documents may be downloaded, changes in format, page length, etc., may occur.

FOR FURTHER INFORMATION CONTACT: Robert M. Doyle, Attorney-Advisor, Office of Transportation and Air Quality, (64033), U.S. Environmental

Protection Agency, 1200 Pennsylvania Avenue, NW., Washington, DC 20460 (U.S. mail), 1310 L Street, NW., Washington, DC 20005 (courier mail). Telephone: (202) 343-9258, Fax: (202) 343-2804, E-Mail: doyle.robert@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Background

A. Nonroad Authorizations

Section 209(e)(1) of the Act addresses the permanent preemption of any State, or political subdivision thereof, from adopting or attempting to enforce any standard or other requirement relating to the control of emissions for certain new nonroad engines or vehicles.¹ Section 209(e)(2) of the Act requires the Administrator, after notice and opportunity for public hearing, to grant California authorization to enforce state standards for new nonroad engines or vehicles which are not listed under section 209(e)(1), subject to certain restrictions. On July 20, 1994, EPA promulgated a regulation that sets forth, among other things, the criteria, as found in section 209(e)(2), by which EPA must consider any California authorization requests for new nonroad engines or vehicle emission standards (section 209(e) rules).² This regulation, previously codified at 40 CFR Part 85, Subpart Q, and, effective December 8, 2008, codified at 40 CFR Part 1074, provides:

(a) The Administrator shall grant the authorization if California determines that its standards will be, in the aggregate, at least as protective of public health and welfare as applicable Federal standards.

(b) The authorization shall not be granted if the Administrator finds that:

(1) The determination of California is arbitrary and capricious;

(2) California does not need such California standards to meet compelling and extraordinary conditions; or

(3) California standards and accompanying enforcement procedures are not consistent with section 209.

¹ Section 209(e)(1) of the Act provides:

No State or any political subdivision thereof shall adopt or attempt to enforce any standard or other requirement relating to the control of emissions from either of the following new nonroad engines or nonroad vehicles subject to regulation under this Act—

(A) New engines which are used in construction equipment or vehicles or used in farm equipment or vehicles and which are smaller than 175 horsepower.

(B) New locomotives or new engines used in locomotives. Subsection (b) shall not apply for purposes of this paragraph.

² See 59 FR 36969 (July 20, 1994), and regulations set forth therein, 40 CFR Part 85, Subpart Q, §§ 85.1601-85.1606. EPA recently moved these regulations, without changing their substance to 40 CFR Part 1074. See 73 FR 59033, 59279 (October 8, 2008).

As stated in the preamble to the section 209(e) rule, EPA has interpreted the requirement regarding whether "California standards and accompanying enforcement procedures are not consistent with section 209" to mean that California standards and accompanying enforcement procedures must be consistent with section 209(a), section 209(e)(1), and section 209(b)(1)(C), as EPA has interpreted that subsection in the context of motor vehicle waivers.³ In order to be consistent with section 209(a), California's nonroad standards and enforcement procedures must not apply to new motor vehicles or new motor vehicle engines. Secondly, California's nonroad standards and enforcement procedures must be consistent with section 209(e)(1), which identifies the categories permanently preempted from state regulation.⁴ California's nonroad standards and enforcement procedures would be considered inconsistent with section 209 if they applied to the categories of engines or vehicles identified and preempted from State regulation in section 209(e)(1).

Finally, because California's nonroad standards and enforcement procedures must be consistent with section 209(b)(1)(C), EPA will review nonroad authorization requests under the same "consistency" criteria that are applied to motor vehicle waiver requests. Under section 209(b)(1)(C), the Administrator shall not grant California a motor vehicle waiver if he finds that California "standards and accompanying enforcement procedures are not consistent with section 202(a)" of the

³ See 59 FR 36969, 36983 (July 20, 1994).

⁴ Section 209(e)(1) of the Act has been implemented See 40 CFR Part 85, Subpart Q, §§ 85.1602, 85.1603 and, effective December 8, 2008, 40 CFR Part 1074, §§ 1074.10, 1074.12.

§ 1074.10 provides in applicable part:

(a) States are preempted from adopting or enforcing standards or other requirements relating to the control of emissions from new engines smaller than 175 horsepower that are primarily used in farm or construction equipment or vehicles, as defined in this part. For equipment that is used in applications in addition to farming or construction activities, if the equipment is primarily used as farm and/or construction equipment or vehicles (as defined in this part), it is considered farm or construction equipment or vehicles.

§ 1074.5 provides definitions of terms used in § 1074.10 and states in applicable part:

Construction equipment or vehicle means any internal combustion engine-powered machine primarily used in construction and located on commercial construction sites.

Farm Equipment or Vehicle means any internal combustion engine-powered machine primarily used in the commercial production and/or commercial harvesting of food, fiber, wood, or commercial organic products or for the processing of such products for further use on the farm.

Primarily used means used 51 percent or more.

Act. Previous decisions granting waivers of Federal preemption for motor vehicles have stated that State standards are inconsistent with section 202(a) if there is inadequate lead time to permit the development of the necessary technology giving appropriate consideration to the cost of compliance within that time period or if the Federal and State test procedures impose inconsistent certification requirements.⁵

With regard to enforcement procedures accompanying standards, EPA must grant the requested authorization unless it finds that these procedures may cause the California standards, in the aggregate, to be less protective of public health and welfare than the applicable Federal standards promulgated pursuant to section 213(a), or unless the Federal and California certification test procedures are inconsistent.⁶

Once California has received an authorization for its standards and enforcement procedures for a certain group or class of nonroad equipment engines or vehicles, it may adopt other conditions precedent to the initial retail sale, titling or registration of these engines or vehicles without the necessity of receiving an additional authorization.⁷

If California acts to amend a previously authorized standard or accompanying enforcement procedure, the amendment may be considered within the scope of a previously granted authorization provided that it does not undermine California's determination that its standards in the aggregate are as protective of public health and welfare as applicable Federal standards, does not affect the consistency with section 209 of the Act, and raises no new issues affecting EPA's previous authorization determination.⁸

⁵ To be consistent, the California certification procedures need not be identical to the Federal certification procedures. California procedures would be inconsistent, however, if manufacturers would be unable to meet both the state and the Federal requirement with the same test vehicle in the course of the same test. *See, e.g.*, 43 FR 32182 (July 25, 1978).

⁶ *See, e.g., Motor and Equipment Manufacturers Association, Inc. v. EPA*, 627 F.2d 1095, 1111-14 (D.C. Cir. 1979), *cert. denied*, 446 U.S. 952 (1980) (*MEMA I*); 43 FR 25729 (June 14, 1978). While inconsistency with section 202(a) includes technological feasibility, lead time, and cost, these aspects are typically relevant only with regard to standards. The aspect of consistency with 202(a) which is of primary applicability to enforcement procedures (especially test procedures) is test procedure consistency.

⁷ *See* 43 FR 36679, 36680 (August 18, 1978).

⁸ Decision Document, Dockets A-2000-05 to 08, entry V-B-1, p. 10.

B. CARB's Authorization Request

CARB, by letter dated March 28, 2005, requested that EPA grant California an authorization to adopt and enforce new regulations which establish in-use performance standards for diesel-fueled TRUs and TRU generator sets which operate in California, and facilities where TRUs operate. The TRU regulations are contained in an Airborne Toxic Control Measure (ATCM) adopted by CARB to reduce the general public's exposure to diesel particulate matter (PM), other toxic airborne contaminants (TACs) and air pollutants generated by TRUs and reduce near source risk at facilities where TRUs congregate. TRUs are refrigeration systems powered by internal combustion engines (almost always diesel-powered) which control the environment of temperature-sensitive products (perishable food and commodities) that are transported in semi-trailer vans, truck vans, "reefer" railcars or shipping containers. The engines in TRUs do not propel the vehicle, but are used strictly to power the refrigeration system. TRU generator sets are designed and used to provide electric power to electrically driven refrigeration units of any kind. These TRU engines are nonroad engines; they do not propel the vehicle, but are used strictly to power the refrigeration system. TRU engines vary in horsepower generally from 7 hp to 36 hp, with the most common size being 35 hp.⁹

Owners/operators of TRUs that operate in California must comply with the in-use performance standards; this applies to TRUs registered in California and outside of California, even if the in-California use is minimal. Most of the engines used in TRUs are already subject to Federal and California emission standards as new engines. New TRU engines less than 25 hp became subject to CARB standards in 1995 and EPA standards in 2000, and engines equal to or greater than 25 hp but less than 50 hp became subject to EPA standards in 1999 and to CARB standards in 2000.

These new CARB regulations will affect in-use TRU engines by requiring the in-use TRU engines to meet specific performance standards that vary by HP range, and have two levels of stringency that are phased in over time—the Low Emission TRU (LETRU) Standards, beginning in 2008, and the Ultra-Low Emission TRU (ULETRU) Performance Standard beginning in 2010. The ATCM requires owners of TRUs to meet more

stringent performance standards at 7-year intervals until the TRU meets the Ultra-Low emission performance standards, and the timing depends on the original Model Year of the engine. The TRU in-use standards correlate to the EPA Tier 4 Nonroad CI standards; the LETRU standards are the EPA Interim standards and the ULETRU standards are the EPA long-term standards.

The TRU regulations offer several ways that owners/operators can comply. The owner/operator may:

- (1) Elect to show that the existing TRU is equipped with an engine that meets the EPA Tier IV certification standard for new non-road engines;
- (2) Repower the TRU system by replacing the existing TRU engine with an engine that meets the EPA Tier IV standard for new engines;
- (3) Replace an existing TRU with a newer TRU that is equipped with an engine that meets the EPA tier IV certificate standard for new engines;
- (4) Retrofit an existing TRU engine using a CARB approved verified diesel emission control strategy (VDECS);
- (5) Use an Alternative Technology approved by CARB.¹⁰

Owners/Operators of TRU engines 25 hp and over can choose any of the compliance options listed above. Owners/Operators of TRU engines under 25 hp will need to choose either the retrofit option, or the alternative technology option to meet the ULETRU requirement. This is because currently there is no Tier-4 aligned (i.e. after treatment-forcing) EPA standard for engines under 25 hp, so there is no Tier-4 aligned engine certification compliance option available to meet the ULETRU in-use standard.¹¹

As required by the Act, EPA offered the opportunity for a public hearing and requested public comments on these new standards by publication of a **Federal Register** notice to such effect on November 21, 2005.¹² EPA received a request for a hearing from the American Trucking Association, and from the

¹⁰ CARB identifies these "Alternative technologies" as including but not limited to the use of electric standby, cryogenic temperature control systems, alternative fuel, alternative diesel fuel, fuel cell power, or any other system approved by the CARB Executive Officer to not emit diesel PM or increase public health risk while at a facility. Alternative technologies only qualify toward compliance with the ULETRU in-use performance standard requirement if they eliminate diesel operation at facilities. CARB TRU Authorization Request, Initial Statement of Reasons, Docket Entry OAR-2005-0123-0005, p. VII-7.

¹¹ CARB Request Letter and Support Document, Docket Entry OAR-2005-0123-0002, p. 6.

¹² 70 FR 70075 (November 21, 2005), Docket Entry OAR-2005-0123-0001.

Truck Rental and Leasing Association,¹³ and a hearing was held on January 23, 2006.¹⁴ In addition, EPA received written comments for the Docket of this proceeding from several commenters, including additional submissions from CARB and some of the parties who testified at the public hearing, submissions from the Owner-Operators Independent Drivers Association, the Truckload Carriers Association, the California Trucking Association, the Pacific Merchant Shipping Association, and the Agricultural and Food Transporters Conference of American Trucking Associations, and a supplemental submission from CARB responding to matters raised by some industry parties in their written comments.¹⁵ Accordingly, EPA has made this authorization decision based on the information submitted by CARB in its requests, and the information presented to the Agency at the public hearing and in the comments received after the hearing.

C. Authorization Decision

EPA received hearing testimony and written comments from industry parties who opposed the CARB request for authorization request on various grounds. After review of the information submitted by CARB and other parties to the record of this Docket, however, EPA finds that those opposing the authorization request have not met the burden of demonstrating that California's regulations do not satisfy the statutory criteria of section 209(e). For this reason, EPA is granting California authorization to enforce its TRU ATCM regulations. A full explanation of EPA's decision, including our review of comments received, is contained in our Decision Document, which may be obtained as

¹³ Letter from Glenn P. Kedzie, American Trucking Association to Robert M. Doyle, USEPA, dated January 27, 2005, Docket Entry 2005-0123-0014, and letter from Thomas James, Truck Rental and Leasing Association to Robert M. Doyle, USEPA, dated December 1, 2005, Docket entry OAR-2005-0123-0015.

¹⁴ EPA received testimony from: Michael Terris, Anthony Andreoni and Rod Hill, California Air Resources Board; Robert Digges, American Trucking Association; Corey England, C.R. England Co.; James Lyons, Sierra Research; Thomas James, Truck Rental and Leasing Association, Andrew Stopka, National Lease Company; Thomas Richichi, Beveridge & Diamond Law Firm, on behalf of the American Trucking Association, and John Kaburick, Earl L. Henderson Trucking Company and on behalf of the Truckload Carriers Association. Written statements presented at this hearing and the hearing transcript appear in the Docket as Docket Entries OAR-2005-0123-0013 and OAR-2005-0123-0017 through OAR-2005-0123-0023.

¹⁵ These comments can be found in the Docket as Docket entries OAR-2005-0123-0024 through OAR-2005-0123-0031.

explained above in the "Addresses" section of this Notice.

My decision will affect not only persons in California but also persons outside the State who would need to comply with California's TRU ATCM regulations to enter California with such engines. For this reason, I hereby determine and find that this is a final action of national applicability.

Under section 307(b)(1) of the Act, judicial review of this final action may be sought only in the United States Court of Appeals for the District of Columbia Circuit. Petitions for review must be filed by March 17, 2009. Under section 307(b)(2) of the Act, judicial review of this final action may not be obtained in subsequent enforcement proceedings.

As with past authorization decisions, this action is not a rule as defined by Executive Order 12866. Therefore, it is exempt from review by the Office of Management and Budget as required for rules and regulations by Executive Order 12866.

In addition, this action is not a rule as defined in the Regulatory Flexibility Act, 5 U.S.C. 601(2). Therefore, EPA has not prepared a supporting regulatory flexibility analysis addressing the impact of this action on small business entities.

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, does not apply because this action is not a rule, for purposes of 5 U.S.C. 804(3).

Finally, the Administrator has delegated the authority to make determinations regarding authorizations under section 209(e) of the Act to the Assistant Administrator for Air and Radiation.

Dated: January 9, 2009.

Robert J. Meyers,

Principal Deputy Assistant Administrator for Air and Radiation.

ENVIRONMENTAL PROTECTION AGENCY

[ER-FRL-8589-6]

Environmental Impact Statements and Regulations; Availability of EPA Comments

Availability of EPA comments prepared pursuant to the Environmental Review Process (ERP), under section 309 of the Clean Air Act and Section 102(2)(c) of the National Environmental Policy Act as amended. Requests for

copies of EPA comments can be directed to the Office of Federal Activities at 202-564-7146. An explanation of the ratings assigned to draft environmental impact statements (EISs) was published in FR dated April 6, 2008 (73 FR 19833).

Draft EISs

EIS No. 20080445, ERP No. D-FTA-K59008-CA, Berkeley/Albany Ferry Terminal Study, Proposing to Implement New Ferry Service between Berkeley/Albany and the San Francisco Ferry Building, Funding, San Francisco Water Transit Authority (WETA), Berkeley/Albany, CA.

Summary: EPA expressed environmental concerns about biological resource and dredging impacts. Rating EC2.

Final EISs

EIS No. 20080438, ERP No. F-FHW-K50014-CA, Doyle Drive Project, South Access to the Golden Gate Bridge, Propose to Improve Seismic, Structural, and Traffic Safety, Presidio of San Francisco, San Francisco County Transportation Authority, Marin and San Francisco Counties, CA.

Summary: EPA continues to have environmental concerns about traffic and localized air quality impacts due to the scale and duration of construction activities.

EIS No. 20080476, ERP No. F-COE-G39047-00, White River Minimum Flow Study, To Provide an Improved Minimum Flow for the Benefit of the Tail Water Fishery, White River Basin Lakes: Bull Shoal Lakes on the White River; Norfork Lake on the North Fork White River, AR.

Summary: No formal comment letter was sent to the preparing agency.

EIS No. 20080482, ERP No. F-DOE-A09800-00, PROGRAMMATIC—Designation of Energy Corridors in 11 Western States, Preferred Location of Future Oil, Gas, and Hydrogen Pipelines and Electricity Transmission and Distribution Facilities on Federal Land, AZ, CA, CO, ID, MT, NV, NM, UT, WA, and WY.

Summary: While the final Programmatic EIS provided additional information on the interagency operating procedures (IOPs) and impacts to visual resources areas, EPA continues to have environmental concerns about the potential impacts to wetlands in the designated corridors.

EIS No. 20080483, ERP No. F-FHW-D40184-MO, MO-34 Improvement,

from U.S. Routes 60/21 Intersection in Carter County to Routes 34/72 Intersection in Cape Girardeau County, Funding, U.S. Army COE Section 404 Permit, Carter, Bollinger, Reynolds, Wayne, and Cape Girardeau Counties, MO.

Summary: EPA does not object to the proposed action; however, we requested clarification on the number and length of jurisdictional streams.

EIS No. 20080490, ERP No. F-BPA-L91030-WA, Lyle Falls Fish Passage Project, To Improve Fish Passage to Habitat in the Upper Part of the Watershed, Located on the Lower Klickitat River, Klickitat County, WA.

Summary: The Final EIS adequately responded to our previous comments; therefore, EPA does not object to the preferred action.

EIS No. 20080493, ERP No. F-BLM-G65105-NM, Socorro Resource Management Plan Revision, Implementation, Socorro and Catron Counties, NM.

Summary: No formal comment letter was sent to the preparing agency.

EIS No. 20080500, ERP No. F-DHS-A10077-00, National Bio and Agro-Defense Facility, Preferred Alternative is (2) Manhattan Campus Site, Propose to Site, Construct and Operate at one of the Proposed Locations: (1) South Milledge Avenue Site, Clarke County, GA; (2) Manhattan Campus Site, Riley County, KS; (3) Flora Industrial Park Site, Madison County, MS; (4) Plum Island Site, Suffolk County, NY; (5) Umstead Research Park Site, Granville County, NC; and (6) Texas Research Park Site, Bexar and Medina Counties, TX.

Summary: No formal comment letter was sent to the preparing agency.

Dated: January 13, 2009.

Robert W. Hargrove,
Director, NEPA Compliance Division, Office of Federal Activities.

BILLING CODE 6560-50-P

FEDERAL COMMUNICATIONS COMMISSION

Notice of Public Information Collection(s) Being Reviewed by the Federal Communications Commission, Comments Requested

January 9, 2009.

SUMMARY: The Federal Communications Commission, as part of its continuing effort to reduce paperwork burden invites the general public and other Federal agencies to take this opportunity to comment on the following information collection(s), as required by the Paperwork Reduction Act (PRA) of 1995, 44 U.S.C. 3501-3520. An agency may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act (PRA) that does not display a valid control number. Comments are requested concerning (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology.

DATES: Written Paperwork Reduction Act (PRA) comments should be submitted on or before March 17, 2009. If you anticipate that you will be submitting PRA comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the FCC contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicholas A. Fraser, Office of Management and Budget, (202) 395-5887, or via fax at 202-395-5167 or via internet at Nicholas.A.Fraser@omb.eop.gov and to Judith-B.Herman@fcc.gov, Federal Communications Commission, and an e-mail to PRA@fcc.gov.

FOR FURTHER INFORMATION CONTACT: For additional information, contact Judith B. Herman at 202-418-0214 or via the Internet at Judith-B.Herman@fcc.gov.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060-0718.
Title: Part 101, Governing the Terrestrial Microwave Fixed Radio Service.

Form No.: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit entities, not-for-profit institutions, and state, local, or tribal government.

Number of Respondents: 9,500 respondents; 7,502 responses.

Estimated Time Per Response: .25–3 hours.

Frequency of Response: On occasion and every 10-years, reporting requirements, recordkeeping requirements, and third-party disclosure requirements.

Obligation to Respond: Required to obtain or retain benefits.

Total Annual Burden: 35,242 hours.

Total Annual Cost: \$553,000.

Privacy Act Impact Assessment: N/A.

Nature and Extent of Confidentiality: There is no need for confidentiality.

Needs and Uses: The Commission will submit this information collection to the Office of Management and Budget (OMB) after the 60 day comment period in order to obtain the full three year clearance from them. The Commission is requesting an extension (there are no changes to the reporting, recordkeeping and/or third party disclosure requirements). Part 101 requires various information to be filed and maintained by the respondent to determine the technical, legal and other qualifications of applications to operate a station in the public and private operational fixed services. The information is also used to determine whether the public interest convenience, and necessity are being served as required by 47 U.S.C. 309. The Commission staff also uses this information to ensure that applicants and licensees comply with ownership and transfer restrictions imposed by 47 U.S.C. 310. The information will continue to be used by the Commission staff in carrying out its duties under the Communications Act of 1934, as amended. Without this information, the Commission would not be able to carry out its statutory responsibilities.

Federal Communications Commission.

Marlene H. Dortch,

Secretary.

[FR Doc. E9–803 Filed 1–15–09; 8:45 am]

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

Notice of Public Information Collection(s) Being Reviewed by the Federal Communications Commission, Comments Requested

January 12, 2009.

SUMMARY: As part of its continuing effort to reduce paperwork burden and as required by the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3520), the Federal Communications Commission invites the general public and other Federal agencies to comment on the following information collection(s). Comments are requested concerning (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology. An agency may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act that does not display a valid OMB control number.

DATES: Written PRA comments should be submitted on or before March 17, 2009. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Submit your comments by e-mail to PRA@fcc.gov. Include in the email the OMB control number of the collection or, if there is no OMB control number, the Title shown in the **SUPPLEMENTARY INFORMATION** section below. If you are unable to submit your comments by e-mail contact the person listed below to make alternate arrangements.

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection(s) or to obtain a copy of the collection send an email to PRA@fcc.gov and include the collection's OMB control number as shown in the **SUPPLEMENTARY INFORMATION** section below (or the title of the collection if there is no OMB

control number), or call Judith B. Herman at 202–418–0214.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–0986.
Title: Competitive Carrier Line Count Report, WC Docket No. 05–337, CC Docket No. 96–45.

Form Number(s): FCC Form 525.

Type of Review: Revision of a currently approved collection.

Respondents: Business or other for profit and not-for-profit institutions.

Number of Respondents and Responses: 2,159 respondents; 5,476 responses.

Estimated Time per Response: .5–80 hours.

Frequency of Response: On occasion, quarterly, and annual reporting requirements.

Obligation to Respond: Required to obtain or retain benefits.

Total Annual Burden: 47,393 hours.

Annual Cost Burden: \$1,895,700.00.

Privacy Act Impact Assessment: No impact.

Nature and Extent of Confidentiality: The Commission is not requesting that the respondents submit confidential information to the FCC. Respondents may, however, request confidential treatment for information they believe to be confidential under 47 CFR Section 0.459 of the Commission's rules.

Needs and Uses: This collection will be submitted to OMB after the 60-day comment period as a revision to an existing collection. In April 2008, the Commission adopted an order that capped total annual competitive eligible telecommunications carrier (ETC) universal service high-cost support for each state at the level of support that competitive ETCs in that state were eligible to receive during March 2008 on an annualized basis. The Commission also adopted two limited exceptions from the application of the interim cap. First, a competitive ETC will not be subject to the interim cap to the extent it files cost data demonstrating that its costs meet the support threshold in the same manner as the incumbent local exchange carrier. Second, the Commission also created a limited exception for competitive ETCs serving tribal lands or Alaska Native regions. *High-Cost Universal Service Support; Federal-State Joint Board on Universal Service*, WC Docket No. 05–337, CC Docket No. 96–45, FCC 08–122. The Commission will not amend FCC Form 525 in order to incorporate the information requests related to the two limited exceptions to the interim cap on high-cost support. The Commission has reviewed the information collection and has revised the estimates that are detailed in the supporting statement.

Additionally, the Commission is revising the collection to incorporate the reporting requirements of OMB 3060-0793 for the self-certification as a rural carrier requirement into this collection under OMB Control Number 3060-0986. The self-certification for rural carriers is rarely filed with the Commission, therefore, its incorporation into OMB 3060-0986 will ease the Commission's administrative burden for complying with information collection requirements. Upon OMB approval of this revision, the Commission will voluntarily discontinue OMB Control Number 3060-0793 and retain this one for OMB's inventory.

Federal Communications Commission.

Marlene H. Dortch,

Secretary.

BILLING CODE 6712-01-P

FEDERAL COMMUNICATIONS COMMISSION

[DA 08-2817 and DA 09-15]

Consumer Advisory Committee

AGENCY: Federal Communications Commission

ACTION: Notice.

SUMMARY: The Commission announces the re-chartering and appointment of members to the Consumer Advisory Committee ("Committee") of the Federal Communications Commission ("Commission"). The Commission further designates the Chairperson of the Committee, and announces the date and agenda of the Committee's first meeting in calendar year 2009.

DATES: The first meeting of the re-chartered Committee will take place on January 30, 2009, 9 a.m. to 4 p.m., at the Commission's Headquarters Building, Room TW-C305, 445 12th Street, SW., Washington, DC 20554.

ADDRESSES: Federal Communications Commission, 445 12th Street, NW., Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Scott Marshall, Consumer & Governmental Affairs Bureau, (202) 418-2809 (voice), (202) 418-0179 (TTY), or e-mail scott.marshall@fcc.gov.

SUPPLEMENTARY INFORMATION: On December 30, 2008, the Commission released document DA 08-2817, which announced the re-chartering of its Consumer Advisory Committee, announced the appointment of twenty-eight (28) members to the Committee and designated the Committee's chairperson.

On January 9, 2009, the Commission released document DA 09-15, announced the agenda, date and time of the Committee's first meeting in calendar year 2009.

The Committee is organized under and will operate in accordance with the provisions of the Federal Advisory Committee Act, 5 U.S.C. App. 2 (1988). On November 17, 2008, the Committee was re-chartered for another two-year term.

The mission of the Committee is to make recommendations to the Commission regarding consumer issues within the jurisdiction of the Commission and to facilitate the participation of consumers (including people with disabilities and underserved populations, such as American Indians and persons living in rural areas) in proceedings before the Commission. Each meeting of the full Committee will be open to the public. A notice of each meeting will be published in the **Federal Register** at least fifteen (15) days in advance of the meeting. Records will be maintained of each meeting and made available for public inspection.

Functions

Digital Transition. The digital television transition will remain the principal focus of the Committee through early 2009 as the Commission continues its efforts to assist consumers in understanding and preparing for the transition which, by law, must be completed by February 17, 2009.

Other Topics. In addition to digital television, other topics to be addressed by the Committee will include, but are not limited to, the following areas:

1. Consumer protection and education (e.g., cramming, slamming, consumer friendly billing, detariffing, bundling of services, Lifeline/Linkup programs, customer service, privacy, telemarketing abuses, and outreach to underserved populations, such as Native Americans and persons living in rural areas).

2. Access by people with disabilities (e.g., telecommunications relay services, video description, closed captioning, accessible billing and access to telecommunications products and services).

3. Impact upon consumers of new and emerging technologies (e.g., availability of broadband, digital television, cable, satellite, low power FM, and the convergence of these and emerging technologies).

Appointment of Chairman and Members

The Commission appointed twenty-eight (28) members to its Consumer

Advisory Committee. Of this number, twelve (12) represent interests of consumers, minorities, and low income communities; five (5) represent disabilities communities; six (6) represent the interest of state, local, and Native American interests, and, five (5) represent industry interests. The Committee's slate is designed to be representative of the Commission's many constituencies, and the diversity selected will provide a balanced point of view as required by the Federal Advisory Committee Act. All appointments are effective immediately and shall terminate November 17, 2010 or when the Committee is terminated, whichever is earlier.

The roster as appointed by Chairman Kevin J. Martin is as follows:

Ms. Debra Berlyn, representing the Digital Television Transition Coalition is hereby appointed as chairperson of the Committee.

Other members by organization and primary representative name include:

1. AARP—Marti T. Doneghy.
2. Alaska State Department of Law—Lew Craig.
3. Alliance for Community Media—Gloria Tristani.
4. American Council of the Blind—Eric Bridges.
5. Appalachian Regional Commission—Harry L. Roesch.
6. Benton Foundation—Charles Benton.
7. Cablevision—Dodie Tschirch.
8. Call For Action—Shirley Rooker.
9. Communication Service for the Deaf—Karen Peltz Strauss.
10. Communications Workers of America—Jeffrey Rechenbach.
11. Consumer Action—Ken McEldowney.
12. Consumer Electronics Association—Jamie Hedlund.
13. Consumer Federation of America—Irene E. Leech.
14. Consumers Union—Gene Kimmelman.
15. Deaf and Hard of Hearing Consumer Advocacy Network—Claude Stout.
16. Digital Television Transition Coalition—Debra Berlyn, Chairperson.
17. Dishnetwork Corporation (formerly EchoStar Communications Corporation)—Lori Kalani.
18. Hawaii State Public Utilities Commission—John Cole.
19. Eastern Band of Cherokee Indians—Brandon Stephens.
20. Hearing Loss Association of America—Lise Hamlin.
21. League of United Latin American Citizens—Eduardo Pena, Jr.
22. National Association of Broadcasters—John L. Sander.

23. National Association of Regulatory Utility Commissioners—Nixyvette Santini.

24. National Association of State Utility Consumer Advocates—Brenda Pennington.

25. Northern VA Resource Center for Deaf and Hard of Hearing Persons—Cheryl Heppner.

26. Parents Television Council—Dan Isett.

27. Southern Growth Policies Board—Scott Doron.

28. Verizon Communications, Inc.—Richard T. Ellis.

Meeting Date and Agenda

At its January 30, 2009 meeting, the Committee will continue its consideration of digital television (DTV) transition issues. The Committee may also consider recommendations regarding broadband/universal service, closed captioning, relay services, as well as other consumer issues within the jurisdiction of the Commission. In addition, the Committee will consider administrative and procedural matters relating to its functions.

Meetings are open to the public and are broadcast on the Internet in Real Audio/Real Video format with captioning at <http://www.fcc.gov/cgb/cac>. Members of the public may address the Committee or may send written comments to: Scott Marshall, Designated Federal Officer of the Committee, at the address indicated on the first page of this document. The meeting site is accessible to people with disabilities. Meetings are sign language interpreted with real-time transcription and assistive listening devices available. Meeting agendas and handout materials are provided in accessible formats.

To request materials in accessible formats for people with disabilities (Braille, large print, electronic files, audio format), send an e-mail to fcc504@fcc.gov or call the Consumer & Governmental Affairs Bureau at 202-418-0530 (voice), 202-418-0432 (TTY).

Federal Communications Commission

Catherine W. Seidel,

Chief, Consumer & Governmental Affairs Bureau.

AGENCY: Federal Communications Commission.

ACTION: Notice.

SUMMARY: This document finds that the Administrative Law Judge exceeded his authority by setting a hearing date beyond the 60-day deadline specified in the Hearing Designation Order for issuing a recommended decision regarding the above-captioned program carriage disputes and orders that the Media Bureau will proceed to resolve these disputes without the benefit of a recommended decision from the ALJ.

ADDRESSES: Federal Communications Commission, 445 12th Street, SW., Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: For additional information on this proceeding, contact Steven Broecker, Steven.Broecker@fcc.gov, or David Konczal, David.Konczal@fcc.gov, of the Media Bureau, Policy Division, (202) 418-2120.

SUPPLEMENTARY INFORMATION: This is a summary of the Memorandum Opinion and Order, DA 08-2805, adopted and released on December 24, 2008. The full text of this document is available for public inspection and copying during regular business hours in the FCC Reference Center, Federal Communications Commission, 445 12th Street, SW., CY-A257, Washington, DC 20554. This document will also be available via ECFS (<http://www.fcc.gov/cgb/ecfs/>). (Documents will be available electronically in ASCII, Word 97, and/or Adobe Acrobat.) The complete text may be purchased from the Commission's copy contractor, 445 12th Street, SW., Room CY-B402, Washington, DC 20554. To request this

document in accessible formats (computer diskettes, large print, audio recording, and Braille), send an e-mail to fcc504@fcc.gov or call the Commission's Consumer and Governmental Affairs Bureau at (202) 418-0530 (voice), (202) 418-0432 (TTY).

Synopsis of the Order

I. Introduction

1. On October 10, 2008, the Media Bureau issued a *Memorandum Opinion and Hearing Designation Order* ("HDO") in the above captioned matters. 73 FR 65312, November 3, 2008. The HDO, among other things, referred certain program carriage disputes to an Administrative Law Judge ("ALJ") to resolve factual disputes as to whether the defendant cable operators had discriminated against the complainant video programmers in violation of the Commission's program carriage rules. 73 FR 65312, 65318, 65327, November 3, 2008. The HDO ordered the ALJ to make and return a recommended decision to the Commission within 60 days of the release date of the HDO, *i.e.*, by December 9, 2008. Unfortunately, the ALJ has not issued a recommended decision by the deadline but, instead, has set a date to begin a hearing more than three months past the HDO's deadline without indicating when a recommended decision will be released. *Herring Broadcasting, Inc. v. Time Warner Cable Inc. et al.*, Order, MB Docket No. 08-214, FCC 08M-50 (rel. Dec. 2, 2008). Maintaining that administrative delay will cause harm to the programmers, complainant Herring Broadcasting, Inc. d/b/a WealthTV ("WealthTV") filed a motion to revoke the HDO and complainant TCR Sports Broadcasting Holding, L.L.P., d/b/a Mid-Atlantic Sports Network ("MASN") filed a motion to reconsider the HDO, requesting that the Commission or the Media Bureau reclaim jurisdiction over the matters.

2. For the reasons stated below, we find the ALJ exceeded his authority by setting a hearing date beyond the HDO's 60-day deadline for issuing a recommended decision. The ALJ's limited authority to consider these matters extended through December 9, 2008. That deadline has passed, and the ALJ's delegated authority over these hearing matters has thus expired under the terms of the HDO. Accordingly, the Media Bureau will proceed to resolve the above-captioned program carriage disputes without the benefit of a recommended decision from the ALJ.

II. Background

3. Program Carriage Provisions.

Section 616 of the Communications Act of 1934, as amended (the "Communications Act"), directs the Commission to "establish regulations governing program carriage agreements and related practices between cable operators or other multichannel video programming distributors and video programming vendors." 47 U.S.C. 536. Among other things, Congress directed that the regulations:

(3) contain provisions designed to prevent a [MVPD] from engaging in conduct the effect of which is to unreasonably restrain the ability of an unaffiliated video programming vendor to compete fairly by discriminating in video programming distribution on the basis of affiliation or nonaffiliation of vendors in the selection, terms, or conditions for carriage of video programming provided by such vendors. 47 U.S.C. 536(a)(3); *see also* 47 CFR 76.1301(c).

4. The Commission adopted rules in 1993 to implement Section 616. *See* 47 CFR 76.1300–76.1302; *Second Report and Order*, 58 FR 60390, November 16, 1993. Specifically, Sections 76.1301(c) prohibits a cable operator or other MVPD from engaging in conduct that unreasonably restrains the ability of an unaffiliated programming vendor to compete fairly by discriminating against such vendor on the basis of its affiliation or nonaffiliation. 47 CFR 76.1301(c).

5. *Delegated Authority*. Under the Commission's delegation rules, the person "to which functions are delegated shall, with respect to such functions, have all the jurisdiction, powers, and authority conferred by law upon the Commission," and "any action taken pursuant to delegated authority shall have the same force and effect and shall be made, evidenced, and enforced in the same manner as actions of the Commission." 47 CFR 0.203. The Media Bureau is granted authority to administer and enforce rules and policies regarding program carriage. 47 CFR 0.61(f)(7). The procedural rules for program carriage provide that disputes are to be resolved on the basis of a complaint, answer and reply. *See* 47 CFR 76.1302(c), (d), (e). The general procedural rules set forth under Section 76.7 apply to program carriage proceedings unless specified otherwise under the program carriage rules. 47 CFR 76.1302(a). Section 76.7(g)(1) authorizes the Media Bureau to refer matters to an administrative law judge ("ALJ"):

(1) After reviewing the pleadings, and at any stage of the proceeding thereafter, the Commission staff may, in its discretion,

designate any proceeding or discrete issues arising out of any proceeding for an adjudicatory hearing before an administrative law judge. 47 CFR 76.7(g).

The Commission recognized that "resolution of Section 616 complaints [would] necessarily focus on the specific facts pertaining to each negotiation, and the manner in which certain rights were obtained, in order to determine whether a violation has, in fact, occurred." *Second Report and Order*, 58 FR 60390, 60391, November 16, 1993. The Commission anticipated that the "staff would be unable to resolve most carriage agreement complaints on the sole basis of a written record. * * *" *Second Report and Order*, 58 FR 60390, 60392, November 16, 1993. In such cases, if the staff determines that the complainant has established a *prima facie* case but that the existing record is not sufficient to resolve the complaint and grant relief, the staff can either "determine and outline the appropriate procedures for discovery, or will refer the case to an ALJ for an administrative hearing." *Second Report and Order*, 58 FR 60390, 60393–94, November 16, 1993. Thus, the decision to refer a case for resolution of factual disputes by an ALJ is discretionary.

6. *Program Carriage Complaints*. WealthTV, a video programming vendor, filed program carriage complaints against multichannel video programming distributors ("MVPDs") Time Warner Cable Inc. ("TWC"), Bright House Networks, LLC ("BHN"), Cox Communications, Inc. ("Cox"), and Comcast Corporation ("Comcast"), alleging that they violated Section 76.1301(c) of the Commission's rules by discriminating against WealthTV's programming in favor of a similarly situated video programming vendor, MOJO, which is affiliated with TWC, BHN, Cox, and Comcast. MOJO is owned by iN DEMAND L.L.C., which is owned 54.1% by Comcast iN DEMAND Holdings, Inc.; 15.6% by Cox Communications Holdings, Inc.; and 30.3% by Time Warner Entertainment-Advance/Newhouse Partnership ("TWE-A/N").

7. MASN, a regional sports network ("RSN") which owns the rights to produce and exhibit the games of the Baltimore Orioles and Washington Nationals as well as other sporting events, filed a program carriage complaint against Comcast, the nation's largest MVPD, which holds an attributable ownership interest in two RSNs, Comcast SportsNet Philadelphia ("CSN-P") and Comcast SportsNet Mid-Atlantic ("CSN-MA"), among other networks. MASN alleged that Comcast

discriminated against MASN in favor of its affiliated video programming vendors in violation of Section 76.1301(c) of the Commission's rules. 47 CFR 76.1301(c).

8. *Hearing Designation Order*. On October 10, 2008, after reviewing the pleadings and supporting documentation filed by the parties in each case, the Media Bureau released a consolidated *Memorandum Opinion and Hearing Designation Order* ("HDO"). 73 FR 65312, November 3, 2008. The HDO determined that each of the complainants had established a *prima facie* showing of discrimination by the MVPDs in violation of Section 76.1301(c) of the program carriage rules. 73 FR 65312, 65314, 65316, 65317, 65318, 65327, November 3, 2008. The HDO set forth findings of fact in support of the determinations that a *prima facie* showing had been made (73 FR 65312, 65313–14, 65314–16, 65316–17, 65317–18, November 3, 2008), and resolved other procedural issues (73 FR 65312, 65324–25 (statute of limitations), 65325 (res judicata), November 3, 2008). The HDO further found that the pleadings and supporting documentation presented factual disputes as to whether the MVPDs discriminated against the video programmers in favor of their affiliated services. 73 FR 65312, 65318, 65327, November 3, 2008. Accordingly, the HDO designated the matters for hearing before an ALJ, ordering the ALJ to make and return a recommended decision and a recommended remedy, if necessary, to the Commission within 60 days of the release date of the HDO. 73 FR 65312, 65318, 65327, November 3, 2008. The HDO stated that upon receipt of the ALJ's recommended decision and remedy, the Commission would make the requisite legal determinations as to whether the MVPDs discriminated against the complainants' programming in favor of their own programming, with the effect of unreasonably restraining the complainants' ability to compete fairly in violation of Section 76.1302(c) and, if necessary would then decide upon appropriate remedies. 73 FR 65312, 65327, November 3, 2008. Under the terms of the grant of authority under the HDO, the ALJ's recommended decision was required to be made within 60 days of the October 10, 2008 release date of the HDO, *i.e.*, by December 9, 2008. 73 FR 65312, 65327, November 3, 2008.

9. *Proceedings Before the ALJ*. On October 23, 2008, Administrative Law Judge Steinberg issued an order stating that complainants will have the burden of proof with respect to specific issues identified in the Erratum to the HDO and setting a procedural schedule

providing for the exchange of direct case exhibits, stipulations, and a list of witnesses, if any, to be called for oral testimony; a date for the commencement of the hearing; and the filing of proposed findings of fact and conclusions of law, as well as any replies thereto. *Herring Broadcasting, Inc. v. Time Warner Cable Inc. et al.*, Order, MB Docket No. 08–214, FCC 08M–44 (rel. Oct. 23, 2008). The order established December 10 as the deadline for the filing of post-hearing briefs. *Id.* The order further determined that “due to the time constraints imposed in the HDO discovery would not be practicable and WILL NOT BE PERMITTED.” *Id.* at ¶ 3 (emphasis in original).

10. On November 20, 2008, Judge Steinberg issued a second order that reversed each of these determinations. *Herring Broadcasting, Inc. v. Time Warner Cable Inc. et al.*, Memorandum Opinion and Order, MB Docket No. 08–214, FCC 08M–47 (rel. Nov. 20, 2008). In response to motions for modification and clarification of the HDO filed by the cable operators, the ALJ indicated that, rather than limit the hearing to a resolution of factual disputes that the HDO designated for hearing, the ALJ would require re-litigation of all disputes in the case and review all evidence *de novo*. *Id.* at ¶ 6. In addition, the ALJ ruled that the 60-day timeframe set forth in the HDO “cannot be achieved.” *Id.* at ¶ 7 & n. 10. The ALJ further determined that some limited discovery should be undertaken. *Id.*

11. On November 24, 2008, Chief Administrative Law Judge Richard Sippel released an order announcing that Judge Steinberg would be retiring on January 3, 2009, and that Judge Sippel would be taking control of the case. *Herring Broadcasting, Inc. v. Time Warner Cable Inc. et al.*, Order, MB Docket No. 08–214, FCC 08M–48 (rel. Nov. 24, 2008). On November 25, the parties held a status conference with Judge Sippel, where the ALJ indicated that he would not adhere to the 60-day time frame specified in the HDO and that he would not give weight to the Bureau’s findings of a *prima facie* case of discrimination in the HDO. See *Herring Broadcasting, Inc. v. Time Warner Cable Inc. et al.*, Transcript of Proceedings, MB Docket No. 08–214 (Nov. 25, 2008), at 97 (indicating the cases will be decided *de novo*); 104 (same); 141 (establishing March 17, 2009 as the date for commencement of the hearing). See also TCR’s Motion for Reconsideration of Hearing Designation Order, filed Nov. 26, 2008, at 2. Judge Sippel thereafter set a date of March 17, 2009, to begin a hearing, but did not indicate how long the hearing would

take or when his recommended decision would be released. *Herring Broadcasting, Inc. v. Time Warner Cable Inc. et al.*, Order, MB Docket No. 08–214, FCC 08M–50 (rel. Dec. 2, 2008); *Herring Broadcasting, Inc. v. Time Warner Cable Inc. et al.*, Revised Procedural and Hearing Order, MB Docket No. 08–214, FCC 08M–53 (rel. Dec. 15, 2008).

12. *Requested Relief*. On November 24, 2008, WealthTV filed a Motion for Revocation of Hearing Designation, requesting that the Media Bureau resolve the program carriage matters on the basis of the existing record since administrative delay in resolving the program carriage matter would result in irrevocable harm to the programmer. On November 26, 2008, MASN filed a Motion for Reconsideration of the Hearing Designation Order, requesting that the Commission or the Media Bureau reclaim jurisdiction over the matter. MASN contended that relief is necessary to resolve MASN’s program carriage complaint expeditiously, as the Commission and Congress intended.

13. TWC, BHN, Comcast and Cox filed oppositions to WealthTV’s Motion for Revocation, arguing that WealthTV has offered no basis for revoking the HDO and has chosen a procedurally improper means to remove the hearing from the ALJ. The cable operators request the Bureau to deny WealthTV’s Motion for Revocation. Comcast filed a similar opposition to MASN’s Motion for Reconsideration, arguing that reconsideration at this stage of the proceeding would be procedurally improper and outside the delegated authority of the Bureau. For these reasons, Comcast maintains the motion should be summarily dismissed or denied.

III. Discussion

14. For the reasons stated below, we find that the Administrative Law Judge’s limited grant of authority under the HDO to issue a recommended decision by December 9, 2008, has expired under the terms of the HDO, and the ALJ thus no longer has delegated authority to conduct hearings in the above-captioned proceedings. Accordingly, the Media Bureau will proceed to resolve the above-captioned program carriage disputes and will conduct any further discovery as may be necessary for it to resolve any factual disputes.

15. The HDO resolved procedural issues and set forth factual findings based on a review of the pleadings and supporting documentation. 73 FR 65312, 65313–14, 65314–16, 65316–17, 65317–18, 65324–25, November 3, 2008. The HDO directed the ALJ to resolve

factual disputes concerning whether the cable operators discriminated against the complainant programmers in favor of their affiliated programming service. 73 FR 65312, 65318, 65327, November 3, 2008. The HDO ordered the ALJ to issue a recommended decision within 60 days of the release date of the HDO. 73 FR 65312, 65318, 65327, November 3, 2008. The HDO was released on October 10, 2008, and under the terms of the HDO, the ALJ’s recommended decision was to be issued by December 9, 2008. The expedited deadline for issuing the recommended decision was a critical component of the HDO. As complainants point out in their requests for relief, administrative delay in resolving program carriage disputes could result in irrevocable harm to an independent programmer (*e.g.*, a competing cable operator could use Commission procedures to delay a carriage remedy and thus potentially drive a competing unaffiliated programmer out of business) and potentially deprive viewers of access to desired programming. See *Herring Broadcasting, Inc.’s Motion for Revocation of Hearing Designation*, filed Nov. 24, 2008, at 2–3 (“The HDO’s 60-day deadline reasonably and fairly took into account the harms that administrative delays can inflict, particularly on small businesses such as WealthTV. The deadline reflects congressional concern that holders of bottleneck power could utilize FCC procedures to delay a remedy, and thereby potentially drive competitors out of business”); TCR Sports Broadcasting Holding, L.L.P.’s Motion for Reconsideration of Hearing Designation Order, filed Nov. 26, 2008, at 6 (“under the [expedited deadline of] the HDO, a decision favorable to MASN would have been made well in advance of the next Major League Baseball (“MLB”) season (which begins April 6, 2009); under the ALJ’s schedule, a decision by this Commission would not be possible until well into the next MLB season, thereby depriving hundreds of thousands of consumers of an opportunity to watch the Washington National and Baltimore Orioles baseball games in those markets where Comcast has discriminatorily refused to carry MASN”); see also Supplement to *Herring Broadcasting, Inc.’s Motion for Revocation of Hearing Designation*, filed Dec. 3, 2008.

16. Unfortunately, rather than set an expedited hearing schedule consistent with the HDO deadline, the ALJ greatly expanded the designated issues for hearing, then determined that the 60-day deadline for a recommended

decision could not be achieved. *Herring Broadcasting, Inc. v. Time Warner Cable Inc. et al.*, Memorandum Opinion and Order, MB Docket No. 08–214, FCC 08M–47 (rel. Nov. 20, 2008). The ALJ did not issue a recommended decision by December 9, 2008. Indeed, the hearing in these proceedings is not even scheduled to begin until March 17, 2009, more than three months past the HDO's December 9th deadline. *Herring Broadcasting, Inc. v. Time Warner Cable Inc. et al.*, Order, MB Docket No. 08–214, FCC 08M–50 (rel. Dec. 2, 2008). The ALJ had no authority to act inconsistently with the terms of the HDO from which he derived his authority. *Tequesta Television, Inc.*, 2 FCC Rcd 41, 42 ¶ 10 (1987) (“an ALJ may not countermand a designation order issued under delegated authority as to matters already considered by the delegating authority”). Commission case law makes clear that an Administrative Law Judge has no authority to act inconsistently with the terms of a Hearing Designation Order. *Anax Broadcasting, Inc.*, 87 FCC2d 483 ¶ 11 (1981) (ALJ has no authority to dismiss an application on grounds that were considered by an operating bureau in designating the application for hearing under delegated authority); *Frank H. Yemm*, 39 RR 2d 1657, 1659 (1977) (ALJ has no authority to dismiss a show cause order issued by the Private Radio Bureau acting under delegated authority). See also *Algreg Cellular Engineering*, 9 FCC Rcd 5098 ¶ 75 (Rev. Bd. 1994) (ALJ has no authority to grant exceptors' request to confine the intervenors' participation to the Applicants where HDO accorded the intervenors full party status). Thus, by the express terms of the HDO, the ALJ's authority to issue a recommended decision in these proceedings expired after December 9, 2008. The Media Bureau will thus proceed to resolve the carriage disputes in the above-captioned matters.

17. We reject the cable operators' argument that a fair hearing could not be accomplished within the 60-day timeframe described in the HDO. The HDO defined the issues designated for hearing: Whether the cable operators discriminated against the complainant programmers in favor of their affiliated programming service. A 60-day deadline provided adequate time for the parties to present their case on this issue so that the ALJ could meet the December 9 deadline. Indeed, the ALJ's first scheduling order released October 23, 2008, established an expedited schedule more closely in line with the HDO deadline. See *Herring Broadcasting, Inc.*

v. Time Warner Cable Inc. et al., Order, MB Docket No. 08–214, FCC 08M–44 (rel. Oct. 23, 2008). It was not until the ALJ decided to disregard the facts and conclusions recited in the HDO, and instead give *de novo* consideration to all issues in the matter, that the ALJ determined that the 60-day deadline could not be achieved. See *Herring Broadcasting, Inc. v. Time Warner Cable Inc. et al.*, Memorandum Opinion and Order, MB Docket No. 08–214, FCC 08M–47 (rel. Nov. 20, 2008). We note that under the *Adelphia Merger Order*, the program carriage condition required certain program carriage disputes to be resolved through arbitration and required the arbitrator to render a decision within 45 days of a request for arbitration. See *Applications for Consent to the Assignment and/or Transfer of Control of Licenses, Adelphia Communications Corp., Assignors to Time Warner Cable, Inc. et al.*, Memorandum Opinion and Order, 21 FCC Rcd 8203, 8287–8288 Appendix B (2006). See also *TCR Sports Broadcasting, LLP v. Time Warner Cable*, Order on Review, DA 08–2441 (MB rel. Oct. 30, 2008). Moreover, a 60-day deadline is consistent with Commission precedent for deciding program carriage disputes. In another program carriage complaint proceeding involving MASN and Comcast, the Commission directed the ALJ to hold a hearing to resolve factual disputes with respect to the programmer's claims and return a recommended decision and remedy to the Commission within 45 days. See *In the Matter of TCR Sports Broadcasting Holding, L.L.P. v. Comcast Corp.*, Memorandum Opinion and Hearing Designation Order, 71 FR 47222, 47222–23, August 16, 2006. For these reasons, we believe that the 60-day deadline imposed by the Bureau under the HDO was reasonable under Commission precedent and provided sufficient time to address these matters. In any event, as reviewed above, the ALJ had no authority to expand the designated issues for hearing in this manner or extend the deadline for issuing a recommended decision.

18. We also reject the cable operators' argument that resolving disputed issues of fact is a function reserved to the ALJ, and may not be conducted by Media Bureau staff. To the contrary, the Bureau is delegated broad authority over program carriage disputes to administer and enforce rules and policies regarding program carriage. 47 CFR 0.61(f)(7). The Bureau acts under delegated authority invested with the full powers of the Commission. 47 CFR 0.203(a). Nothing in the Commission's rules requires the

Bureau to designate a program carriage dispute for hearing before an ALJ. We reject Comcast's argument that the Bureau may not reclaim jurisdiction over the proceedings because in the HDO the Bureau found there were factual disputes that it was unable to determine on the basis of the existing records. The Bureau is not confined to the existing record and has procedural tools at its disposal to have the parties supplement the existing record in order to resolve the factual disputes. See, e.g., 47 CFR 76.7(e)(1) (“The Commission may specify other procedures, such as oral argument or evidentiary hearing directed to particular aspects, as it deems appropriate”); 76.7(e)(2) (“The Commission may require the parties to submit any additional information it deems appropriate for a full, fair, and expeditious resolution of the proceeding, including copies of all contracts and documents reflecting arrangements and understandings alleged to violate the requirements set forth in the Communications Act and in this part, as well as affidavits and exhibits”); 76.7(f)(1) (“The Commission staff may in its discretion order discovery limited to the issues specified by the Commission. Such discovery may include answers to written interrogatories, depositions or document production.”). As the ALJ's authority to resolve the factual disputes and return a recommended decision has expired, the Media Bureau will proceed to resolve the factual disputes using the tools at its disposal and render a decision. Commission rules authorize the Media Bureau to refer such matters to an ALJ “in its discretion.” 47 CFR 76.7(g); see also *Second Report and Order*, 58 FR 60390, 60393–94, November 16, 1993 (contemplating resolution of factual disputes either by the staff or by referral to an ALJ, at the Bureau's discretion). Moreover, the HDO directed the ALJ to issue a recommended decision, but made clear that the Commission would render the ultimate decision, i.e., make the requisite legal determination as to whether the defendants had discriminated against the complainants' programming in favor of its own programming in violation of the program carriage rules. 73 FR 65312, 65327, November 3, 2008. Under Commission rules, the Media Bureau has broad authority to perform these functions. 47 CFR 0.61. Likewise, we reject Comcast's argument that the Bureau cannot proceed here because it is “statutorily forbidden” under Section 5(c)(1) and (8) of the Communications Act from reviewing the rulings of the

ALJ. Section 5(c)(1) and (8) of the Act describe the employees to whom the Commission may delegate review functions in cases of adjudications. 47 U.S.C. 155(c)(1), (8). These statutory provisions are inapplicable here because the Bureau is not reviewing any decision of the ALJ. Indeed, the ALJ has not issued any decision as required by the HDO so there is no ALJ *recommended* decision to review. The ALJ's authority under the HDO was limited to issuing a *recommended* decision within 60 days of the release date of the HDO. The HDO made clear that the Commission was to render the ultimate decision and nothing in the HDO divested the Commission (or the Media Bureau on delegated authority) from resolving the factual disputes and issuing a decision in the event that the ALJ failed to exercise its delegated authority under the HDO.

19. The cable operators also argue that the period for seeking reconsideration under Section 405 of the Act (47 U.S.C. 405) has passed, and that a request for revocation of the hearing designation would be an improper appeal of an interlocutory ruling. We need not address these arguments because we are neither reconsidering nor revoking the HDO. As indicated above, the grant of authority in the instant matters was limited to the ALJ issuing a recommended decision by December 10, 2008. That date having passed, the ALJ has no further authority over these matters and revocation and reconsideration are unnecessary. Thus, the petitions to revoke or reconsider the HDO are moot.

IV. Ordering Clauses

20. Accordingly, *It is ordered*, that the Hearing Designation Order for the above captioned matters has *Expired*, the proceedings set for hearing before the Administrative Law Judge are *Terminated*, and the Media Bureau will proceed to resolve the above captioned program carriage disputes.

21. *It is further ordered* that all parties to the above-captioned proceedings will be served with a copy of this Memorandum Opinion and Order by e-mail and by certified mail, return receipt requested.

22. *It is further ordered* that a copy of this Memorandum Opinion and Order or a summary thereof *shall be published* in the **Federal Register**.

Federal Communications Commission

Monica Shah Desai,
Chief, Media Bureau.

BILLING CODE 6712-01-P

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

FEDERAL RESERVE SYSTEM

FEDERAL DEPOSIT INSURANCE CORPORATION

Agency Information Collection Activities: Submission for OMB Review; Joint Comment Request

AGENCIES: Office of the Comptroller of the Currency (OCC), Treasury; Board of Governors of the Federal Reserve System (Board); and Federal Deposit Insurance Corporation (FDIC).

ACTION: Notice of information collection to be submitted to OMB for review and approval under the Paperwork Reduction Act of 1995.

SUMMARY: In accordance with the requirements of the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), the OCC, the Board, and the FDIC (the "agencies") may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number.

On September 2, 2008, the agencies, under the auspices of the Federal Financial Institutions Examination Council (FFIEC), published a notice in the **Federal Register** (73 FR 51300) requesting public comment on the extension, without revision, of the currently approved information collections, the Country Exposure Report (FFIEC 009) and the Country Exposure Information Report (FFIEC 009a). The comment period for this notice expired on November 3, 2008. No comments were received. The agencies are now submitting requests to OMB for approval of the extension, without revision, of the FFIEC 009 and FFIEC 009a reports.

DATES: Comments must be submitted on or before February 17, 2009.

ADDRESSES: Interested parties are invited to submit written comments to any or all of the agencies. All comments, which should refer to the OMB control number, will be shared among the agencies.

OCC: You should direct all written comments to: Communications Division, Office of the Comptroller of the Currency, Public Information Room, Mailstop 1-5, Attention: 1557-0100, 250 E Street, SW., Washington, DC 20219. In addition, comments may be sent by fax to 202-874-4448, or by electronic mail to regs.comments@occ.treas.gov. For

security reasons, the OCC requires that visitors make an appointment to inspect comments. You may do so by calling 202-874-5043. Upon arrival, visitors will be required to present valid government-issued photo identification and submit to security screening in order to inspect and photocopy comments.

Board: You may submit comments, identified by FFIEC 009 or FFIEC 009a, by any of the following methods:

- **Agency Web Site:** <http://www.federalreserve.gov>. Follow the instructions for submitting comments on the <http://www.federalreserve.gov/generalinfo/foia/ProposedRegs.cfm>.
- **Federal eRulemaking Portal:** <http://www.regulations.gov>. Follow the instructions for submitting comments.

- **E-mail:** regs.comments@federalreserve.gov. Include the OMB control number in the subject line of the message.

- **Fax:** 202-452-3819 or 202-452-3102.

- **Mail:** Jennifer J. Johnson, Secretary, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW., Washington, DC 20551.

All public comments are available from the Board's Web site at <http://www.federalreserve.gov/generalinfo/foia/ProposedRegs.cfm> as submitted, except as necessary for technical reasons. Accordingly, your comments will not be edited to remove any identifying or contact information. Public comments may also be viewed electronically or in paper in Room MP-500 of the Board's Martin Building (20th and C Streets, NW) between 9 a.m. and 5 p.m. on weekdays.

FDIC: You may submit written comments, which should refer to "Country Exposure Reports, 3064-0017," by any of the following methods:

- **Agency Web Site:** <http://www.fdic.gov/regulations/laws/federal/propose.html>. Follow the instructions for submitting comments on the FDIC Web site.

- **Federal eRulemaking Portal:** <http://www.regulations.gov>. Follow the instructions for submitting comments.

- **E-mail:** Comments@FDIC.gov. Include "Country Exposure Reports, 3064-0017" in the subject line of the message.

- **Mail:** Robert E. Feldman, Executive Secretary, Attention: Comments, FDIC, 550 17th Street, NW., Washington, DC 20429.

- **Hand Delivery/Courier:** Guard station at the rear of the 550 17th Street Building (located on F Street) on business days between 7 a.m. and 5 p.m.

Public Inspection: All comments received will be posted without change to <http://www.fdic.gov/regulations/laws/federal/propose/html> including any personal information provided.

Comments may be inspected at the FDIC Public Information Center, Room E-1002, 3501 Fairfax Drive, Arlington, VA 22226, between 9 a.m. and 5 p.m. on business days.

Additionally, commenters may send a copy of their comments to the OMB desk officer for the agencies by mail to the Office of Information and Regulatory Affairs, U.S. Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street, NW., Washington, DC 20503, or by fax to 202-395-6974.

FOR FURTHER INFORMATION CONTACT:

Additional information or a copy of the collection may be requested from:

OCC: Mary Gottlieb, OCC Clearance Officer, 202-874-5090, Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, 250 E Street, SW., Washington, DC 20219.

Board: Michelle Shore, Federal Reserve Board Clearance Officer, 202-452-3829, Division of Research and Statistics, Board of Governors of the Federal Reserve System, 20th and C Streets, NW., Washington, DC 20551. Telecommunications Device for the Deaf (TDD) users may call 202-263-4869.

FDIC: Herbert J. Messite, Counsel, 202-898-6834, Legal Division, Federal Deposit Insurance Corporation, 550 17th Street, NW., Washington, DC 20429.

SUPPLEMENTARY INFORMATION: Proposal to request approval from OMB of the extension for three years, without revision, of the following reports:

Report Title: Country Exposure Report and Country Exposure Information Report.

Form Number: FFIEC 009 and FFIEC 009a.

Frequency of Response: Quarterly.

Affected Public: Business or other for profit.

OCC:

OMB Number: 1557-0100.

Estimated Number of Respondents: 19 (FFIEC 009), 19 (FFIEC 009a).

Estimated Average Time per Response: 70 burden hours (FFIEC 009), 5.25 burden hours (FFIEC 009a).

Estimated Total Annual Burden: 5,320 burden hours (FFIEC 009), 399 burden hours (FFIEC 009a).

Board:

OMB Number: 7100-0035.

Estimated Number of Respondents: 28 (FFIEC 009), 15 (FFIEC 009a).

Estimated Average Time per Response: 70 burden hours (FFIEC 009), 5.25 burden hours (FFIEC 009a).

Estimated Total Annual Burden: 7,840 burden hours (FFIEC 009), 315 burden hours (FFIEC 009a).

FDIC:

OMB Number: 3064-0017.

Estimated Number of Respondents: 18 (FFIEC 009), 18 (FFIEC 009a).

Estimated Average Time per Response: 70 burden hours (FFIEC 009), 5.25 burden hours (FFIEC 009a).

Estimated Total Annual Burden: 5,040 burden hours (FFIEC 009), 378 burden hours (FFIEC 009a).

General Description of Reports

These information collections are mandatory: 12 U.S.C. 161 and 1817 (national banks), 12 U.S.C. 248(a), 1844(c), and 3906 (state member banks and bank holding companies); and 12 U.S.C. 1817 and 1820 (insured state nonmember commercial and savings banks). The FFIEC 009 information collection is given confidential treatment (5 U.S.C. 552(b)(4) and (b)(8)). The FFIEC 009a information collection is not given confidential treatment.

Abstract

The Country Exposure Report (FFIEC 009) is filed quarterly with the agencies and provides information on international claims of U.S. banks and bank holding companies that is used for supervisory and analytical purposes. The information is used to monitor country exposure of banks to determine the degree of risk in their portfolios and the possible impact on U.S. banks of adverse developments in particular countries. The Country Exposure Information Report (FFIEC 009a) is a supplement to the FFIEC 009 and provides publicly available information on material foreign country exposures (all exposures to a country in excess of 1 percent of total assets or 20 percent of capital, whichever is less) of U.S. banks and bank holding companies that file the FFIEC 009 report. As part of the Country Exposure Information Report, reporting institutions must also furnish a list of countries in which they have lending exposures above 0.75 percent of total assets or 15 percent of total capital, whichever is less.

Request for Comment

Comments are invited on:

a. Whether the information collections are necessary for the proper performance of the agencies' functions, including whether the information has practical utility;

b. The accuracy of the agencies' estimates of the burden of the information collections, including the validity of the methodology and assumptions used;

c. Ways to enhance the quality, utility, and clarity of the information to be collected;

d. Ways to minimize the burden of information collections on respondents, including through the use of automated collection techniques or other forms of information technology; and

e. Estimates of capital or start up costs and costs of operation, maintenance, and purchase of services to provide information.

Comments submitted in response to this notice will be shared among the agencies. All comments will become a matter of public record. Written comments should address the accuracy of the burden estimates and ways to minimize burden including the use of automated collection techniques or the use of other forms of information technology as well as other relevant aspects of the information collection request.

Subject: FFIEC 009 and FFIEC 009a.

Dated: December 22, 2008.

Michele Meyer,

Assistant Director, Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency.

Board of Governors of the Federal Reserve System, January 12, 2009.

Jennifer J. Johnson,

Secretary of the Board.

Dated at Washington, DC, this 19th day of December 2008.

Federal Deposit Insurance Corporation.

Robert E. Feldman,

Executive Secretary.

FEDERAL RETIREMENT THRIFT INVESTMENT BOARD

Privacy Act of 1974; System of Records

AGENCY: Federal Retirement Thrift Investment Board.

ACTION: Notice to alter a system of records.

SUMMARY: The Federal Retirement Thrift Investment Board (Agency) proposes to alter a system of records notice in its existing inventory of records subject to the Privacy Act of 1974, (5 U.S.C. 552a), as amended.

The proposed changes to FRTIB-1, Thrift Savings Plan Records, are necessary as the system location, system manager, and record access procedures have changed. These changes are also necessary in order to make clear the distinction between information available to beneficiaries and information available to someone handling a participant's estate. Finally, these changes are necessary to allow the Agency to share participant information with agency personnel and casualty assistance officers who are aiding beneficiaries, with consumer reporting agencies when necessary for the Agency to collect a debt owed to it under 5 U.S.C. 3711, and with quality control companies that are verifying documents submitted to lenders in connection with participants' commercial loan applications.

DATES: *Effective Date:* This proposed action will be effective without further notice on February 17, 2009 unless comments are received which result in a contrary determination.

ADDRESSES: Comments may be sent to Megan Graziano, Assistant General Counsel, Federal Retirement Thrift Investment Board, 1250 H Street, NW., Washington, DC 20005. The Agency's fax number is (202) 942-1676.

FOR FURTHER INFORMATION CONTACT: Megan Graziano on (202) 942-1660.

SUPPLEMENTARY INFORMATION: The Agency administers the TSP, which was

established by the Federal Employees' Retirement System Act of 1986 (FERSA), Public Law 99-335, 100 Stat. 514. The TSP provisions of FERSA are codified, as amended, largely at 5 U.S.C. 8351 and 8401-79. The TSP is a tax-deferred retirement savings plan for Federal civilian employees and members of the uniformed services. The TSP is similar to cash or deferred arrangements established for private-sector employees under section 401(k) of the Internal Revenue Code (26 U.S.C. 401(k)).

The proposed system reports, as required by 5 U.S.C. 552a(r), of the Privacy Act of 1974, as amended, were submitted to the House Committee on Government Reform, the Senate Committee on Homeland Security and Government Affairs, and the Office of Management and Budget (OMB) pursuant to paragraph 4c of Appendix I to OMB Circular No. A-130, "Federal Agency Responsibilities for Maintaining Records About Individuals," dated February 8, 1996 (February 20, 1996, 61 FR 6427).

Thomas K. Emswiler,
General Counsel, Federal Retirement Thrift Investment Board.

FRTIB-1

SYSTEM NAME:
* * * * *

SYSTEM LOCATION:
Delete the entry and replace with these two sentences: "These records are located at the office of the entity engaged by the Agency to perform record keeping services for the TSP. The current address for this record keeper is listed at <http://www.tsp.gov>."

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

Edit subpart (e) as follows:
“(e). When a participant to whom a record pertains dies, to disclose the following types of information to any potential beneficiary: Information in the participant's record which could have been properly disclosed to the participant when living (unless doing so

would constitute a clearly unwarranted invasion of privacy) and the name and relationship of any other person who claims the benefits or who is entitled to share the benefits payable.” Add the following subpart after (e) and redesignate all subparts thereafter:

“(f). When a participant to whom a record pertains dies, to disclose the following types of information to anyone handling the participant's estate: Information in the participant's record which could have been properly disclosed to the participant when living (unless doing so would constitute a clearly unwarranted invasion of privacy), the name and the relationship of any person who claims the benefits or who is entitled to share the benefits payable, and information necessary for the estate's administration (for example, post-death tax reporting).”

Add the following subparts after subpart (r):
“(s). To disclose to personnel from agency personnel/payroll offices or to casualty assistance officers when necessary to assist a beneficiary or potential beneficiary.

(t). To disclose to a consumer reporting agency when the Board is trying to collect a debt owed to the Board under the provisions of 5 U.S.C. 3711.

(u). To disclose to quality control companies when such companies are verifying documents submitted to lenders in connection with participants' commercial loan applications.”

BILLING CODE 6760-01-P

FEDERAL TRADE COMMISSION

[File No. 082 3032]

Shiva Venture Group, Inc. dba INNOVA Financial Group; Analysis of Proposed Consent Order to Aid Public Comment

AGENCY: Federal Trade Commission.

ACTION: Proposed Consent Agreement.

SUMMARY: The consent agreement in this matter settles alleged violations of federal law prohibiting unfair or deceptive acts or practices or unfair methods of competition. The attached Analysis to Aid Public Comment describes both the allegations in the draft complaint and the terms of the consent order—embodied in the consent agreement—that would settle these allegations.

DATES: Comments must be received on or before February 9, 2009.

ADDRESSES: Interested parties are invited to submit written comments. Comments should refer to “Innova Financial Group, File No. 082 3032,” to facilitate the organization of comments. A comment filed in paper form should include this reference both in the text and on the envelope, and should be mailed or delivered to the following address: Federal Trade Commission/ Office of the Secretary, Room 135-H, 600 Pennsylvania Avenue, N.W., Washington, D.C. 20580. Comments containing confidential material must be filed in paper form, must be clearly labeled “Confidential,” and must comply with Commission Rule 4.9(c). 16 CFR 4.9(c) (2005).¹ The FTC is requesting that any comment filed in paper form be sent by courier or overnight service, if possible, because U.S. postal mail in the Washington area and at the Commission is subject to delay due to heightened security precautions. Comments that do not

contain any nonpublic information may instead be filed in electronic form by following the instructions on the web-based form at (<http://secure.commentworks.com/ftc-InnovaFinancialGroup>). To ensure that the Commission consider an electronic comment, you must file it on that web-based form.

The FTC Act and other laws the Commission administers permit the collection of public comments to consider and use in this proceeding as appropriate. All timely and responsive public comments, whether filed in paper or electronic form, will be considered by the Commission, and will be available to the public on the FTC website, to the extent practicable, at www.ftc.gov. As a matter of discretion, the FTC makes every effort to remove home contact information for individuals from the public comments it receives before placing those comments on the FTC website. More information, including routine uses permitted by the Privacy Act, may be found in the FTC’s privacy policy, at (<http://www.ftc.gov/ftc/privacy.shtm>).

FOR FURTHER INFORMATION CONTACT:

Carole Reynolds, Bureau of Consumer Protection, 600 Pennsylvania Avenue, NW, Washington, D.C. 20580, (202) 326-3230.

SUPPLEMENTARY INFORMATION: Pursuant to section 6(f) of the Federal Trade Commission Act, 38 Stat. 721, 15 U.S.C. 46(f), and § 2.34 of the Commission Rules of Practice, 16 CFR 2.34, notice is hereby given that the above-captioned consent agreement containing a consent order to cease and desist, having been filed with and accepted, subject to final approval, by the Commission, has been placed on the public record for a period of thirty (30) days. The following Analysis to Aid Public Comment describes the terms of the consent agreement, and the allegations in the complaint. An electronic copy of the full text of the consent agreement package can be obtained from the FTC Home Page (for January 8, 2009), on the World Wide Web, at (<http://www.ftc.gov/os/2009/01/index.htm>). A paper copy can be obtained from the FTC Public Reference Room, Room 130-H, 600 Pennsylvania Avenue, NW, Washington, D.C. 20580, either in person or by calling (202) 326-2222.

Public comments are invited, and may be filed with the Commission in either paper or electronic form. All comments should be filed as prescribed in the **ADDRESSES** section above, and must be received on or before the date specified in the **DATES** section.

Analysis of Agreement Containing Consent Order to Aid Public Comment

The Federal Trade Commission (“FTC”) has accepted, subject to final approval, an agreement containing a consent order from Shiva Venture Group, Inc. dba Innova Financial Group (“respondent”).

The proposed consent order has been placed on the public record for thirty (30) days for the receipt of comments by interested persons. Comments received during this period will become part of the public record. After thirty (30) days, the Commission will again review the agreement and the comments received, and will decide whether it should withdraw from the agreement or make final the agreement’s proposed order.

The complaint alleges that respondent engaged in practices that violate Section 5(a) of the Federal Trade Commission Act, 15 U.S.C. § 45(a), Section 144 of the Truth in Lending Act (“TILA”), 15 U.S.C. § 1664, and Section 226.24 of Regulation Z, 12 C.F.R. § 226.24.

Section 5(a) of the FTC Act prohibits unfair or deceptive acts or practices. Respondent violated Section 5(a) of the FTC Act, because it disseminated or has caused to be disseminated home loan advertisements which offer a low monthly payment amount and/or payment rate, but fail to disclose, or fail to disclose adequately, that this monthly payment amount and/or payment rate: (1) Apply only for a limited period of time, after which they will increase; (2) do not include the amount of interest that the consumer owes each month; and (3) are less than the monthly payment amount (including interest) and/or the interest rate that the consumer owes, with the difference added to the total amount due from the consumer or total loan balance. This information would be material to consumers shopping for a mortgage loan and the failure to disclose, or failure to disclose adequately, this information is a deceptive practice.

TILA and Regulation Z require that closed-end credit advertisers who state a periodic payment amount must also provide additional information in the advertisement, including the terms of repayment; the annual percentage rate (“APR”); and if the APR may be increased after consummation, that fact. TILA and Regulation Z also require that if an advertisement states a rate of finance charge, it must state the rate as an APR. Currently, Regulation Z also requires that if the advertisement states a payment rate, it must include additional disclosures. Respondent’s advertisements failed to disclose, or failed to disclose clearly and

¹ The comment must be accompanied by an explicit request for confidential treatment, including the factual and legal basis for the request, and must identify the specific portions of the comment to be withheld from the public record. The request will be granted or denied by the Commission’s General Counsel, consistent with applicable law and the public interest. See Commission Rule 4.9(c), 16 CFR 4.9(c).

conspicuously, this information required by TILA and Regulation Z. Respondent's failure to disclose this information undermined consumers' ability to compare these offers to others in the marketplace. Through its law enforcement actions, the Commission intends to promote compliance with the disclosure requirements of TILA and Regulation Z, and to foster comparison shopping for mortgage loans.

The proposed consent order contains provisions designed to prevent respondent from violating the FTC Act or failing to make clear and conspicuous disclosures required by TILA and Regulation Z in the future. The proposed consent order requires respondent to comply with the TILA and Regulation Z, as has been amended, *see* 73 Fed. Reg. 44,522 (July 30, 2008), and as may be further amended in the future.

Part I of the proposed order prohibits respondent, in connection with closed-end credit, from advertising a monthly payment amount unless respondent discloses, clearly and conspicuously and in close proximity to those representations, as applicable, that the advertised monthly payment amount: (1) applies only for a limited period of time, after which it will increase; (2) does not include the amount of interest that the consumer owes each month; and (3) is less than the monthly payment amount (including interest) that the consumer owes, with the difference added to the total amount due from the consumer or total loan balance.

Part II of the proposed order prohibits respondent, in connection with closed-end credit, from advertising a rate lower than the rate at which interest is accruing, regardless of whether the rate is referred to as an "effective rate," a "payment rate," a "qualifying rate," or any other term, provided that this provision does not prohibit advertisement of the "annual percentage rate" or "APR." In light of respondent's deceptive use of payment rates in its advertisements, and the Federal Reserve Board's amendments to Regulation Z banning the use of such rates effective October 1, 2009, the proposed order prohibits respondent from advertising any such rate, to ensure that respondent's advertisements do not deceive consumers. *See* 73 Fed. Reg. at 44,608.

Part III of the proposed order prohibits respondent, in connection with closed-end credit, from advertising the amount of any payment, the number of payments or the period of repayment, or the amount of any finance charge, without disclosing, clearly and

conspicuously, all of the terms required by TILA and Regulation Z, including the terms of repayment; the APR; and if the APR may be increased after consummation, that fact.

Part IV of the proposed order prohibits respondent, in connection with closed-end credit, from stating a rate of finance charge without stating the rate as an APR, as required by TILA and Regulation Z.

Part V of the proposed order prohibits respondent from failing to comply in any respect with TILA or Regulation Z.

Part VI of the proposed order contains a document retention requirement, the purpose of which is to ensure compliance with the proposed order. It requires that respondent maintain all records that will demonstrate compliance with the proposed order.

Part VII of the proposed order requires respondent to distribute copies of the order to various principals, officers, directors, and managers, and all current and future employees, agents and representatives having responsibilities with respect to the subject matter of the order.

Part VIII of the proposed order requires respondent to notify the Commission of any changes in its corporate structure that might affect compliance with this order. Part IX of the proposed order requires respondent to file with the Commission one or more reports detailing compliance with the order.

Part X of the proposed order is a "sunset" provision, dictating the conditions under which the order will terminate twenty years from the date it is issued or twenty years after a complaint is filed in federal court, by either the United States or the FTC, alleging any violations of the order.

The purpose of this analysis is to facilitate public comment on the proposed order, and it is not intended to constitute an official interpretation of the agreement and proposed order or to modify in any way their terms.

By direction of the Commission.

Donald S. Clark,

Secretary.

BILLING CODE 6750-01-S

GENERAL SERVICES ADMINISTRATION

[OMB Control No. 3090-0235]

General Services Administration Acquisition Regulation; Information Collection; Price Reductions Clause

AGENCY: Office of the Chief Acquisition Officer, GSA.

ACTION: Notice of request for comments regarding a renewal to an existing OMB clearance.

SUMMARY: Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the General Services Administration has submitted to the Office of Management and Budget (OMB) a request to review and approve an extension of a currently approved information collection requirement regarding the GSAR Price Reductions Clause. A request for public comments was published at 73 FR 45772, August 6, 2008. No comments were received. The clearance currently expires on January 31, 2009.

Public comments are particularly invited on: Whether this collection of information is necessary and whether it will have practical utility; whether our estimate of the public burden of this collection of information is accurate, and based on valid assumptions and methodology; ways to enhance the quality, utility, and clarity of the information to be collected.

DATES: Submit comments on or before: February 17, 2009.

FOR FURTHER INFORMATION CONTACT: Mr. Warren Blankenship, Procurement Analyst, Contract Policy Division, at telephone (202) 501-1900 or via e-mail to warren.blankenship@gsa.gov.

ADDRESSES: Submit comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to Ms. Jasmeet Sehra, GSA Desk Officer, OMB, Room 10236, NEOB, Washington, DC 20503, and a copy to the Regulatory Secretariat (VPR), General Services Administration, Room 4041, 1800 F Street, NW., Washington, DC 20405. Please cite OMB Control No. 3090-0235, Price Reductions Clause, in all correspondence.

SUPPLEMENTARY INFORMATION:

A. Purpose

The clause at GSAR 552.238-75, Price Reductions, used in multiple award schedule contracts ensures that the Government maintains its relationship with the contractor's customer or category of customers, upon which the contract is predicated. The reason for

the burden increase as it exists now is based on current data updating the number of MAS Schedule contractors.

B. Annual Reporting Burden

Number of Respondents: 18,000.
Total Annual Responses: 36,000.
Average hours per response: 2 hours.
Total Burden Hours: 72,000.

Obtaining copies of proposals:

Requesters may obtain a copy of the information collection documents from the General Services Administration, Regulatory Secretariat (VPR), 1800 F Street, NW., Room 4041, Washington, DC 20405, telephone (202) 501-4755. Please cite OMB Control No. 3090-0235, Price Reductions Clause, in all correspondence.

Dated: January 12, 2009

Al Matera,

Director, Office of Acquisition Policy.

BILLING CODE 6820-61-S

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Meeting of the National Vaccine Advisory Committee Vaccine Safety Working Group

AGENCY: Department of Health and Human Services, Office of the Secretary, Office of Public Health and Science.

ACTION: Notice of meeting.

SUMMARY: As stipulated by the Federal Advisory Committee Act, the Department of Health and Human Services (HHS) is hereby giving notice that the National Vaccine Advisory Committee (NVAC) Vaccine Safety Working Group will hold a meeting. The meeting is open to the public. Pre-registration is required for both public attendance and comment. Audio conferencing will be available for listening only.

DATES: The meeting will be held on February 4, 2009, from 8 a.m. to 12:30 p.m.

ADDRESSES: Department of Health and Human Services; Hubert H. Humphrey Building, Room 800, 200 Independence Avenue, SW., Washington, DC 20201.

FOR FURTHER INFORMATION CONTACT: Ms. Kirsten Vannice, National Vaccine Program Office, Department of Health and Human Services, Room 443-H, Hubert H. Humphrey Building, 200 Independence Avenue, SW., Washington, DC 20201. Phone: (202) 690-5566; Fax: (202) 260-1165; e-mail: kirsten.vannice@hhs.gov.

SUPPLEMENTARY INFORMATION: Pursuant to Section 2101 of the Public Health

Service Act (42 U.S.C. Section 300aa-1), the Secretary of Health and Human Services was mandated to establish the National Vaccine Program to achieve optimal prevention of human infectious diseases through immunization and to achieve optimal prevention against adverse reactions to vaccines. The National Vaccine Advisory Committee was established to provide advice and make recommendations to the Director of the National Vaccine Program on matters related to the Program's responsibilities. The Assistant Secretary for Health serves as Director of the National Vaccine Program.

The NVAC Vaccine Safety Working Group was established to (1) undertake and coordinate a scientific review of the draft Centers for Disease Control and Prevention (CDC) Immunization Safety Office (ISO) Scientific Agenda, and (2) review the current vaccine safety system.

On February 4, 2009, the NVAC Vaccine Safety Working Group will hear and discuss the results of the community activities that occurred to obtain public input on the ISO Scientific Agenda, and a summary of the written comments solicited in a previous **Federal Register** notice from January 2, 2009 (for more information on submitting written comments, please see below). This information will inform the Working Group and the NVAC recommendations on the ISO scientific agenda.

Public attendance at the meeting is limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the contact person above at least one week prior to the meeting. Members of the public will have the opportunity to provide comments at the meeting. Public comment will be limited to five minutes per speaker. Pre-registration is required for both public attendance and comment. Individuals who would like to submit written statements to the NVAC Vaccine Safety Working Group should refer to instructions on the **Federal Register** Notice Docket ID fr02ja09-30, January 2, 2009 (Volume 74, Number 1) pages 107-108 (<http://edocket.access.gpo.gov/2009/E8-31196.htm>). Any members of the public who wish to have printed material distributed to NVAC Vaccine Safety Working Group members should submit materials to the Executive Secretary, NVAC, through the contact person listed above prior to close of business January 30, 2009. Audio-conferencing will be available for listening only. The call-in

number is as follows: 888-469-2187, Participant Passcode: 2973732.

Dated: January 13, 2009.

Bruce Gellin,

Deputy Assistant Secretary for Health Director, National Vaccine Program Office.

[FR Doc. E9-973 Filed 1-15-09; 8:45 am]

BILLING CODE 4150-44-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[30 Day-09-08AX]

Agency Forms Undergoing Paperwork Reduction Act Review

The Centers for Disease Control and Prevention (CDC) publishes a list of information collection requests under review by the Office of Management and Budget (OMB) in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these requests, call the CDC Reports Clearance Officer at (404) 639-5960 or send an e-mail to omb@cdc.gov. Send written comments to CDC Desk Officer, Office of Management and Budget, Washington, DC or by fax to (202) 395-6974. Written comments should be received within 30 days of this notice.

Proposed Project

Sexually Transmitted Disease (STD) Morbidity Surveillance—New—National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention (NCHHSTP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The CDC is responsible for the reporting and dissemination of nationally notifiable STD morbidity information for prevention and control purposes in collaboration with state and local health departments. Recent changes in sexually transmitted disease (STD) epidemiology in the United States indicate that the existing passive surveillance for STD does not include all the elements needed in order to control and prevent STDs in the U.S. Towards that end, CDC is proposing a new electronic information collection called STD Morbidity Surveillance that will include information on laboratory confirmation of syphilis infection and risk behaviors of persons infected with syphilis and other STDs. Physicians and other providers collect demographic, risk, and clinical (including laboratory) information from persons diagnosed with notifiable STDs during a clinical encounter or counseling session. The

respondents will submit the information electronically, to the state and local public health departments. Clinical specimens obtained from case-patients are submitted to private or public diagnostic laboratories with laboratory requisition forms which includes information on the provider and case-patient. A subset of the information reported to state health departments

from health care providers or laboratories is reported electronically as a case report e-record to CDC's Nationally Notifiable Disease Surveillance System on a weekly basis. CDC estimates that 57 respondents spend 20 minutes each week extracting notifiable STD surveillance information from their electronic information system. CDC staff review STD morbidity

data at varying frequencies to identify population subgroups at increased risk for STDs. The target evidence-based intervention strategies, evaluate the impact of ongoing control efforts, thus enhancing our understanding of STD transmission. There is no cost to respondents other than their time. The total estimated annual burden hours are 989.

ESTIMATED ANNUALIZED BURDEN HOURS

Types of respondent	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
State Health Departments	Electronic STD Case report	50	52	20/60
Territorial Health Agencies	Electronic STD Case report	5	52	20/60
City and county health departments	Electronic STD Case report	2	52	20/60

Dated: January 8, 2009.

Maryam I. Daneshvar,

Acting Reports Clearance Officer, Centers for Disease Control and Prevention.

Proposed Data Collections Submitted for Public Comment and Recommendations

In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the Centers for Disease Control and Prevention (CDC) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the data collection plans and instruments, call 404-639-5960 and send comments to Maryam I. Daneshvar, CDC Acting Reports Clearance Officer, 1600 Clifton Road, MS-D74, Atlanta, GA 30333 or send an e-mail to omb@cdc.gov.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the

burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Written comments should be received within 60 days of this notice.

Proposed Project

Centers for Public Health Preparedness Program Evaluation Instruments,—New—Coordinating Office for Terrorism Preparedness & Emergency Response (COTPER), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Under the Authority of Sections 301(a) and 317(k)(2) of Public Health Service Act, the Centers for Disease Control and Prevention is responsible for administering and monitoring the Centers for Public Health Preparedness (CPHP) Program. The purpose of the CPHP Program is to strengthen terrorism and emergency preparedness by linking academic expertise to state and local health agency needs. The program brings together colleges and universities with a common focus on public health preparedness to establish a national network of education and training resources. Of these institutions, 27 are accredited Schools of Public Health funded through a five-year Cooperative Agreement for years 2004–2009. This program addresses the public health goals described in “A National Strategy for Terrorism Preparedness and Response: 2003–2008 Strategic Plan”, specifically Imperative Five, a Competent and Sustainable Workforce. Critical objectives under this Imperative are to: (1) Increase the number and type of professionals that comprise a preparedness and response workforce;

(2) deliver certification and competency-based training and education; (3) recruit and retain the highest quality workforce; and (4) evaluate the impact of training to assure learning has occurred.

CDC requests OMB approval for a period of one year to collect information beginning in the summer of 2009. CDC is undertaking a summative evaluation of the CPHP Program encompassing the period of the current Cooperative Agreement. In order to complete this evaluation, CDC is proposing five data collection instruments to gather information describing the program's processes and outcomes. These are: (1) Pre-CPHP Interview Document Collection Protocol; (2) CPHP Interview Instrument; (3) CPHP National Partner Interview Instrument (4) CPHP State and Local Partner/Customer Survey Instrument; and (5) CPHP State and Local Partner/Customer Interview Instrument. Collectively, these instruments are needed in order to receive, process, aggregate, evaluate, and disseminate CPHP program information. The information will be used by CDC to document progress toward meeting established program goals and objectives; to evaluate outcomes generated by the collective work of the 27 Centers; to inform the development of a new public health preparedness education and training cooperative agreement program; and to respond to data inquiries made by CDC and other agencies of the federal government.

The Pre-CPHP Interview Document Collection Protocol will be used by CPHP grantees to guide collection and submission of existing documents. The CPHP National Partner Interview Instrument will be used to guide a

telephone interview process with key National Partners familiar with the CPHP program. The categories of questions will be similar to the CPHP Interview Instrument to gather information from the perspective of National Partners. The CPHP State and Local Partner/Customer Survey Instrument will be used to gather information from representatives of

organizations that have received training or technical assistance from the CPHP Program. It will be administered electronically with an option for paper copy administration. It is estimated that there will be one request per respondent and a total of 135 respondents with an estimated time for data collection of 30 minutes. The CPHP Partner/Customer Interview Instrument will be used to

gather more in-depth information on the same categories of questions from the Survey Instrument. It is estimated that there will be a total of 54 respondents with an estimated time for data collection of 30 minutes.

There are no costs to respondents except their time.

ESTIMATED ANNUALIZED BURDEN HOURS

Respondents	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden (in hours)
Pre-CPHP Interview Document Collection Protocol—CPHP staff ..	27	1	2	54
(2) CPHP Interview Instrument—CPHP staff	54	1	2	108
(3) CPHP National Partner Interview Instrument	10	1	2	20
(4) CPHP State and Local Partner/Customer Survey Instrument ...	135	1	30/60	68
(5) CPHP State and Local Partner/Customer Interview Instrument	54	1	30/60	27
Total				277

Dated: January 8, 2009.

Proposed Project

The Green Housing Study—New—National Center for Environmental Health (NCEH), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Green building principles and practices have been shown to reduce energy consumption, but their efficacy in reducing environmental agents such as pesticides, volatile organic compounds (VOCs), fungi, and indoor allergens is not clear. Furthermore, little research has been conducted on health impacts that might be related to green buildings, especially on a nationwide scale. Three main goals of this study are: (1) To compare levels of certain environmental chemical and biological agents in green vs. traditional, multi-family, low-income housing; (2) to ascertain differences in the health of the residents in these homes; and (3) to assess the economic impacts of the "greening" of housing-particularly those related to health. These goals will be accomplished in an ongoing building renovation program, "Mark-to-Market" (M2M), sponsored by the Department of Housing and Urban Development

(HUD). Briefly, the M2M program is a nationwide initiative that encourages owners and purchasers of affordable, multi-family properties to rehabilitate and operate their properties using sustainable green building principles. In partnership with HUD, the CDC will leverage this opportunity to collect survey and biomarker data from residents and to collect environmental measurements in their homes in order to evaluate associations between green housing and health.

This study directly supports the Healthy Homes' health protection goal of the Centers for Disease Control and Prevention (CDC). This investigation is also consistent with CDC's Health Protection Research Agenda, which calls for research to identify the major environmental causes of disease and disability and related risk factors.

Indoor allergens such as those from cockroaches, dust mites, mice, and fungi have been associated with childhood asthma. Also, VOCs and pesticides have been associated with adverse birth outcomes (e.g., low birth weight and prematurity) and delayed neurodevelopment. Given that green principles such as improvement of ventilation systems and elimination of spray pesticides can directly affect the concentrations of chemical and biological agents in air, residents in green housing should theoretically have better health outcomes (e.g., asthma, birth outcomes, and infant neurodevelopment, this in turn will lead to lower healthcare utilization and overall societal costs.

Participants will include pregnant women, mothers and children living in

HUD-subsidized housing that has either been rehabilitated in a green (e.g., case) or a traditional manner (e.g., control) from study sites across the United States. Pregnant women and children with asthma (ages 7–12 years) will donate blood samples (for assessment of allergy) and urine samples (for assessment of pesticide and VOC exposures). The children with asthma (ages 7–12 years) will be also tested for

lung function and lung inflammatory markers. Questionnaires regarding home characteristics and respiratory symptoms will be administered at 3-month intervals over a 2-year period. Of the pregnant women enrolled, neurodevelopment of their infant will be tested at ages 1 week and 6 months. Environmental sampling of the air and dust in the participants' homes will be conducted over a 2 year period (once in

the home before rehabilitation, and then at four time points after rehabilitation has been completed: Baseline, 6 months, 12 months, and 24 months). Environmental sampling includes measurements of air exchange rate, pesticides, VOCs, indoor allergens, fungi, temperature, humidity, and particulate matter.

There is no cost to respondents other than their time.

ESTIMATED ANNUALIZED BURDEN HOURS
