MASTER

1992 ACCEPTANCE PRIORITY RANKING

In accordance with the Standard Contract for Disposal of Spent Nuclear Fuel and/or High-Level Radioactive Waste (10 CFR Part 961) (Standard Contract), an annual Acceptance Priority Ranking (APR) report is issued by the Department of Energy (DOE). The APR establishes the order in which DOE allocates the projected spent nuclear fuel (SNF) acceptance capacity of the Civilian Radioactive Waste Management System (CRWMS). As required by the Standard Contract, the priority ranking is based on the date the SNF was permanently discharged, with the owners of the oldest SNF, on an industry-wide basis, given the highest priority. The phrase "date the SNF was permanently discharged" means the date the reactor went subcritical for the purpose of permanently discharging the SNF, as reported to DOE by the Purchasers* on the Nuclear Fuel Data Form, RW-859. When a complete date was not provided, the date was determined either from the Nuclear Regulatory Commission's Average Daily Unit Power Level data, or from Purchaser's comments received on the previous APR. The 1992 APR is based on SNF discharges as of December 31, 1991.

The 1992 APR is the basis for allocating projected SNF acceptance capacity to each owner in the 1992 Annual Capacity Report (ACR). The ACR applies a 10-year projected waste acceptance rate to the APR, resulting in individual capacity allocations. An allocation is a specified acceptance capacity (measured in metric tons of uranium) in a particular year for an individual Purchaser. The allocations in the ACR are the bases for Delivery Commitment Schedule (DCS) submittals by the Purchasers, which represent the next step in the SNF acceptance process outlined in the Standard Contract. The DCS provides the Purchasers with the opportunity to inform DOE of their plans for utilizing their allocations of projected SNF acceptance capacity. This information will assist DOE in meeting its contractual waste acceptance responsibilities and in developing the waste management system. During 1992, Purchasers with an allocation in the first 10 years

* Owners and generators of SNF and HLW who have entered into agreements with DOE and/or have paid fees for purchase of disposal services are referred to as "Purchasers."

following the projected commencement of CRWMS facility operations began to submit DCSs for DOE approval.

Currently, the APR includes only SNF generated by the civilian nuclear industry. Although some of the SNF listed in the 1992 APR has been reconstituted, consolidated, or otherwise canistered, it has not been separately identified since the waste form does not affect the ranking. Prior to issuing the 1991 APR, DOE provided all Purchasers with the opportunity to verify the accuracy of the information contained in the draft version of the 1991 APR. In order to avoid difficulties in subsequently implementing the waste acceptance process, and consistent with its May 15, 1991, communication to all Purchasers, revisions to future APRs will be addressed as follows. Discharges that were not identified during the comment period on the draft 1991 APR will be added to the end of the priority ranking. Such SNF will be added to the priority ranking based on the date its discharge was reported to DOE, not its actual date of permanent discharge; this date will become its ranking date. As a result, the "Discharge Date" column of the 1991 APR has been revised to "Ranking Date" to more accurately reflect the data listed in this column. In cases where the date of permanent discharge is different from the Ranking Date, this will be indicated as a footnote for purposes of identifying SNF characteristics.

Future discharges will be added to the priority ranking based on their date of permanent discharge. If SNF currently designated as temporarily discharged is redesignated as permanently discharged (without subsequent irradiation), the date of redesignation will become the Ranking Date, instead of the date of actual discharge. Reinserted assemblies, previously designated as permanently discharged, will be removed from the priority ranking. SNF that was reinserted, and, consequently, removed from the priority ranking, is identified in the Appendix. Finally, because of variations in individual utility RW-859 reporting schedules, the last year's discharges reported in the APR will be corrected, as appropriate.

1992 ACCEPTANCE PRIORITY RANKING

NOTES

* Final Delivery Schedule approval and waste acceptance will be contingent upon these Purchasers meeting their one-time fee obligations.

1 The 1992 APR does not include 0.059 MTU of waste shipped to the General Electric Vallecitos facility since specific information regarding this waste has not been made available to DOE.

2 BWR = Boiling Water Reactor; PWR = Pressurized Water Reactor; RCH = Research Reactor; HTG = High Temperature Gas

Reactor; MSC = Miscellaneous.

3 Ranking Date is the date of permanent discharge unless otherwise noted -- for purposes of redesignating temporarily discharged SNF as permanently discharged, or appending SNF that was not previously identified according to the date it is first reported.

4 ASMB = Assemblies.

5 Some Purchasers' listings in this ranking have changed from the 1991 APR due to transshipment of SNF to another storage location or transfer of SNF into dry storage. In some cases, this has resulted in slight changes in the aggregate weights (MTU) for this SNF due to independent rounding.

6 Through the PR-859 submittals, some utilities have submitted minor corrections to previously reported assembly weights. These changes will be reconciled at the time of waste acceptance.

7 Although this SNF was discharged in 1985, it was first reported to DOE in 1991 as being permanently discharged. As such, it has been assigned a ranking date of December 31, 1991 for inclusion in the APR.

8 Although this SNF was discharged in 1990, it was first reported to DOE in 1991 as being permanently discharged. As such, it has been assigned a ranking date of December 31, 1991 for inclusion in the APR.
