BIBLIOGRAPHY OF 1966 MASS SPECTROSCOPY
LITERATURE COMPILED BY A
COMPUTER METHOD

J. Capellen, H. J. Svec, and C. R. Sage

ABSTRACT

About 2800 articles of interest to mass spectroscopists are listed as a result of computer searching of 270,000 scientific articles published during 1966. The 149 papers presented at the 14th Annual Conference on Mass Spectrometry and Allied Topics, ASTM E-14, May 22-27, 1966 are also included. In addition to the bibliography, an author index and permuted title index (KWIC) are included in the report.

INTRODUCTION

During 1966 about 270,000 scientific articles were scanned by a computer system^{*} using 1966 Source Index Tapes from the Institute for Scientific Information (ISI), Philadelphia, Pennsylvania. The 1966 volume of Nuclear Science Abstracts was scanned manually for articles of general interest to mass spectroscopists. This report is composed of three sections, a Bibliography Listing, an Author Index, and a Key Word Index (KWIC). Code numbers indicating 102 categories in which articles are classified, are assigned to each article, and these numbers are cross referenced in the Author and KWIC indices. An explanation of each section follows.

^{*} See IS-1335, March 1966, Ames Laboratory of the U. S. Atomic Energy Commission.

Bibliography. The Bibliography nearly doubled in size in 1966 (~2900 articles) compared with that prepared during 1965 (~1600 articles).

This may be accounted for by the normal growth in the general scientific literature, the fact that many new authors were added to the Selective Dissemination of Information (SDI) profile now in use, and the foreign equivalents of English key words, previously not included, were also added. This bibliography is divided into 102 categories. Each category was assigned a numerical designation. A list of these numbers and their assigned topics appears prior to the bibliography listing. Each article was assigned to a specific category, although in many cases it could fit into more than one. An example of a typical entry in the bibliography is:

```
530 66 007  HOWLING DH
              POSITIVE ION CONTAMINATION ON METAL SURFACES
              JAPAN J. APPL. PHYS., 5. 170, 1966
```

The first three digit column is the category designation. The second two digit column refers to the year the article was located by the computer system. The third three digit column is the numerical placement of the article within a category. The citation includes authors, title, source and year of publication.

Author Index. The author index lists all the authors cited in the bibliography along with the code number or numbers of the articles with which they are associated. ISI shortens an author's name to eight letters if one or two initials are used and to seven letters when three initials are used. A period is used to denote such truncation. Some of

these truncated names are, however, completed in this report. The notification cards printed from the ISI tapes list only the first five authors and their initials. If more than five authors were associated with an article, those beyond five are not included in this report. Their names were, however, on the tapes and consequently matched against the author list of the profile.

References from Nuclear Science Abstracts include the full names of all authors. However, in cases where prenames were included with the abstract, only initials were transcribed. No attempt was made to incorporate the NSA abstract number in this bibliography.

KWIC Index. The KWIC Index is an alphabetical listing of key words with the title of the article "wrapped" around them. On the right side appears the code number of the article with which the key word is associated. An example of a typical section of the KWIC Index is:

COMPOSITION OF BIOGENIC CARBONATES# STABLE CARBON ISOTOPIC	375 66 008
S AND TRACE ELEMENTS IN CARBONATITES AND LIMESTONES FROM ICE	400 66 012
PIQUE DE LOXYGENE ET DU CARBONE DES LAMELLIB- RANCHES DU TER	400 66 034
ATION OF ISOBUTYLAMINE# CARBONIUM IONS. 8. QUESTION OF PROTO	530 66 008
LABELED 1-BUTYLAMINES# CARBONIUM IONS. 9. DEAMINATION OF IS	530 66 009
LEN MIT CARBONSAUKEN ZU CARBONSAURE-AZOLIDEN# UBER DEN MECHA	585 66 087
CARBONYL-DI- AZOLEN MIT CARBONSAUREN ZU CARBONSAURE-AZOLIDEN	585 66 087
DIHALIDES USING NICKEL CARBONYL A 1-STEP SYNTHESIS OF 1,4,7	585 66 023

Accordingly, if a person is interested in carbonium ions, the entry at 530 66 008 and 530 66 009 in the bibliography listing would give him the following information:

- 530 66 008 KARABATS GJ HSI N MEYERSON S
CARBONIUM IONS. 8. QUESTION OF PROTONATED CYCLOPROPANES
IN NITROUS ACID DEAMINATION OF ISOBUTYLAMINE
JACS, 88. 5649, 1966
- 530 66 009 KARABATS GJ MOUNT RA RICKTER DO
MEYERSON S
CARBONIUM IONS. 9. DEAMINATION OF ISOTOPICALLY LABELED
1-BUTYLAMINES
JACS, 88. 5651, 1966

CLASSIFICATION OF CATEGORIES

100	Adsorption, Desorption, Chemisorption
105	Amino Acids, Peptides
110	Amplifiers
115	Analysis-General
120	Analysis-Gas
125	Analysis-Nitrogen
130	Analysis-Oxygen
135	Analysis-Trace
140	Appearance Potentials, Ionization Potentials
145	Atomic Weights
150	Autoionization
155	Background Determination
160	Bond Distances
165	Bond Energies
170	Bromides

ACKNOWLEDGMENTS

The authors wish to especially thank Mrs. Paula Toms for her help in preparing this report. We also wish to thank all of the personnel of Physical and Chemistry Group VII of the Ames Laboratory for their help and criticisms and the personnel of Iowa State University Computer Center.

LIST OF SYMBOLS

For purposes of this report the symbols listed in the left column below replace the equivalent symbols listed in the right column. This substitution appears throughout the remainder of the report.
