Abstract

The following bibliography is the result of a survey, through the open literature, of publications reporting original research on the uses of compounds containing thorium or uranium as catalysts. The bibliography is divided into two sections, one for thorium containing catalysts and the other for uranium containing catalysts. Within each section an alphabetical subject index is used to arrange the literature references. The subject headings describe the general uses for the actinide containing catalysts. Literature references are listed in chronological order under each subject heading.
