OVERVIEW

The Office of Oil and Natural Gas, Resource Applications, is charged with sponsoring the commercial development of additional domestic oil and gas supplies. As part of this effort, the Office is investigating the potential of recovering additional oil and gas from abandoned oil fields.

A preliminary study was conducted of abandoned oil fields in Texas to:

- o Assess the potential resource from abandoned fields
- o Assess the barriers to reactivation of the abandoned fields
- o Provide an easily accessible and useful data source to be used as a preliminary screen for identifying fields for further technical and investment evaluations.

This study indicates that a considerable amount of petroleum may be economically recoverable at today's oil prices from reservoirs that were abandoned when prevailing prices were lower. In addition, reservoirs that were never tested or were tested and determined to be uneconomic may now prove to be economical to produce.

A major barrier to the timely production from the abandoned fields has been the lack of pertinent, readily available, and systemized information. Producers have, for some time, learned of previous exploration and production efforts in an area and gone to the State regulatory agency to determine if they might find a good prospect. Drawing on several sources, the DOE has developed a listing of believed unduplicated data in one source. The DOE hopes the general availability of these data will catalyze the private sector recovery of this unproduced resource.

DATA SOURCES

Data for Texas abandoned oil fields were primarily derived from two sources:

- 1) Texas Railroad Commission (TRRC), and
- 2) Dwight's ENERGYDATA.

For purposes of this report, abandoned oil fields are defined as those fields that had no production during 1977. Following the definition used by the Texas State regulatory agency, the Texas Railroad Commission, a "field" is defined as an individual reservoir.

The TRRC OILMASTER computer tapes were used to identify these abandoned oil fields. The tapes also provided data on formation depth, gravity of oil production, location (both district and county), discovery date, and the cumulative production of the field since its discovery.

In all, the computer tapes identified 9,211 abandoned fields, most of which had less than 250,000 barrel cumulative production. This report focuses on the 676 abandoned onshore Texas oil fields that had cumulative production of over 250,000 barrels.

The Dwight's ENERGYDATA computer tapes provided production histories for approximately two-thirds of the larger fields abandoned in 1966 and thereafter. Fields which ceased production prior to 1966 will show no production history nor abandonment date in this report.

REPORT FORMAT

Figure I presents a sample page of the data produced with numbered data elements keyed to those listed below:

- (1) Texas Railroad Commission District
- (2) Discovery date of field (reservoir)
- (3) Year of last production, if known
- (4) Field number, as designated by TRRC
- (5) Field name
- (6) Depth of field (in feet)
- (7) Gravity of oil production (in degrees API)
- (8) Cumulative production of field since discovery (in 42 gal. barrels)
- (9) County (where fields are located under more than one county only one county is listed)

Data elements 10 through 14 are provided when available.

- (10) Calendar year
- (11) Average number of flowing wells producing during year
- (12) Average number of artificial lift wells producing during year
- (13) Yearly field oil production
- (14) Average daily oil output per well, measured in barrels per well-day
- (15) Yearly field gas production

Data elements 16 through 18 provide summations at the county, district, and State level.

- (16) Number of fields and cumulative production of abandoned fields in designated county
- (17) Number of fields and cumulative production of abandoned fields in designated TRRC district
- (18) Number of fields and cumulative production of the 676 abandoned fields listed.
