INTRODUCTION

The Information Center Complex (ICC), a centrally administered group of information centers, provides information support to environmental and biomedical research groups and others within and outside Oak Ridge National Laboratory. In-house data base building and development of specialized document collections are important elements of the ongoing activities of these centers. ICC groups must be concerned with language which will adequately classify and insure retrievability of document records.

Language control problems are compounded when the complexity of modern scientific problem solving demands an interdisciplinary approach. Although there are several word lists, indexes, and thesauri specific to various scientific disciplines usually grouped as "Environmental Sciences," no single generally recognized authority can be used as a guide to the terminology of all environmental science. If biomedical terminology for the description of research on environmental effects is also needed, the problem becomes even more complex.

The building of a word list which can be used as a general guide to the environmental/biomedical sciences has been a continuing activity of the Information Center Complex. This activity resulted in the publication, under a National Science Foundation grant, of the Environmental Terminology Index (ORNL-EIS-72-22, Volumes I and II) in November 1972. The Environmental/Biomedical Terminology Index (EBTI), ORNL/EIS-98, partially funded by the Energy Research and Development Administration, is a documentation of the work performed on the word list since 1972.

Structurally, EBTI is in thesaurus format. A typical entry consists of a main term, recommendations for use (i.e., USE OF A MORE SPECIFIC TERM RECOMMENDED), a brief definition, broader terms (BT), narrower terms (NT), and related terms (RT). Levels of structure are indicated by one or more dots (...). A feature of EBTI is the acknowledgement of sources. In cases where a word block was adopted in its entirety from another source, a four-letter code which appears directly beneath the main term acknowledges this source. The key to this code appears on page xii.

Groups involved with extremely specialized subject fields will probably not find the EBTI adequate to their needs. To keep the word list within manageable limits, we decided to exclude terms which could be used to index to the lowest possible level. (For example, plant and animal names are restricted to class, order, and family.)

As a guide to those groups which find it necessary to supplement EBTI, Table 1 lists the general rules and conventions we adopted. Perfect consistency is not claimed for EBTI. Too many people supplied input into the word list over too long a period for this to be possible. However, we suggest that this guide will facilitate the development of logical word patterns which will contribute to precision in indexing and in document retrieval.

Table 1. General rules and conventions for building a terminology index

I. DESCRIPTORS

1. Choose terms according to:
 - a) relative frequency
 - b) relationship to other chosen terms
 - c) technical precision
2. Use noun form where possible.
3. Use singular form for count nouns; plural form for mass nouns.
4. Use natural word order.
5. Qualify words with multiple meanings:
 - a) modifying terms
 - b) parenthetical qualifying expressions
 - c) scope notes
6. Choose one of two true synonyms.
7. Choose one of two quasi-synonyms.
8. Avoid punctuation marks.
9. Avoid abbreviated terms.

10. Avoid extreme specificity.

11. Use multiword descriptors with restraint.

II. CROSS REFERENCES

1. Use cross references to:

- a) clarify relationships
- b) build bridges between concepts

2. Use standard concepts.

Use	USE
Use For	UF
Broader Term	BT
Narrower Term	NT
Related Term	RT

11

III. ALPHABETIZATION

1. Use letter-by-letter.

2. Ignore space between words.

CREDITS

The Environmental/Biomedical Terminology Index (EBTI) is the documentation of the effort of many different individuals and groups over a period of several years. The first effort toward a formalized word list was made by the Committee on Environmental Terminology, (COET) in 1972. The resulting publication, Environmental Terminology Index (ORNL/EIS-72-22, Volumes I and II), formed the basis for all subsequent work. The Committee's contribution cannot be overemphasized.

More recently, valuable contributions of terms and their relationships have been received from the Data Extraction and Analysis Group, the Environmental Resource Center, the Ecological Sciences Information Center, and the Energy Information Center, all of the Information Center Complex. The Data Base Management Operations Section of ICC provided data processing and computer production for this effort.

Kay L. Kannan, Computer Sciences Division at ORNL, made several modifications to the existing computer software system to meet our specific needs. She was also a continuing source of practical advice. Her help is gratefully acknowledged. Nancy S. Malthouse, Energy Division, ORNL, wrote a computer program which made it possible to take frequency counts of index terms from in-house data bases. This capability made possible rational decisions about the inclusion of peripheral terms.

Many other individuals, both within Oak Ridge National Laboratory and outside, contributed to the development of the word list. Particular thanks are due to Mr. Raymond H. Jensen, Office of Water Research and Technology, U.S. Department of Interior, for the Water Resources Thesaurus.

 REVERSE OSMOSIS
 A PROCESS BEING CONSIDERED FOR TURNING
 SEWAGE INTO POTABLE WATER. IN REVERSE
 OSMOSIS, STRONG PRESSURE IS EXERTED ON
 THE SIDE OF THE HIGHER CONCENTRATION.
 THE PRESSURE REVERSES THE NATURAL FLOW,
 FORCING MOLECULES OF PURE WATER THROUGH
 THE MEMBRANE.

SECONDARY TREATMENT
THE EFFLUENT FROM THE PRIMARY TREATMENT IS
PASSED THROUGH A THICKENED FILTER THREE TO
FIVE FEET DEEP. BACTERIA NORMALLY OCCURRING
IN SEWAGE COVER THE FILMS, MULTIPLY, AND
CONSUME MOST OF THE ORGANIC MATTER. THE
ACTIVATED SLUDGE PROCESS IS A MORE ADVANCED
FORM OF SECONDARY TREATMENT.
