बे आरो गसिबो

My name is Kindwn Mushahary, District- Kokrajhar, Post Office- Choraikhola and my viillage is Bwigriguri

I am 24 years old

heard about floods in your village, how do these floods happen? since how many years has it happened?

floods come every year, we have to suffer every year because our Bwigriguri village is surrounded by river like Sri Lanka, because it is difficult to escape at night when flood water comes, there is no bridge and can't cross by boat at this flood water

domestic animals are swept away by flood water

some people lost their wealth and their rice

some people suffer a lot because they are handicapped like me, and all are poor

people have to runaway from home with their stuff because of the flood

it becomes very difficult for us and since we have fewer facilities we have even difficulties with small water and such kind of flood makes it more difficult for us, everybody losses their domestic animals

Normally how many times do floods occur in a year?

Normally it happens 2/3 times a year, it happens frequently when the river is bigger, we have to run away from home 2/3 times a year

If we have to run way 2/3 times in a year, we have more and more lost and become poorer and poorer

Many houses and farms get damaged in the flood.

If we have to say, everyone suffers losses and our villagers are already poor, and with these frequent floods we suffer more losses and becomes more difficult, the wall of the house gets damaged and if we have to repair it again and again, it becomes more difficult for us.

Do floods come more frequently in comparison to previous years?

to say it's more than in previous years, during our childhood time we saw less happened and when we were children when we were 10/13 years we would not have to go to the relief camp and when we turned 16/17 years then we had to go to relief camps every year

Does this flood happens whenever it rains or does it come when the water level of a river rises?

Normally when we say flood, when rain continues for 2/3 days, we have to run away from home, rainwater from the upside comes down downwards and create more floods.

the village is surrounded by river from every side and the level of the land is very low, so the water stays for long flood water stays for a day.

what should be done to prevent this flood?

if we want to prevent this flood

previous BTC government tried to divert the river towards the eastern side of our village.

if it diverts, it won't directly be flooded into our village, it won't pressure on our village and there will be no soil erosion

most of the people's land will be eroded by this flood

to prevent this, it would be good for our village if it digs more previous digging site

we don't want to say that

does this flood happen every year or once in a few years?

not after many years, 2/3 times in a year, I have already said it before

2/3 times when it rains

do many crops get damaged by this flood?

yes everything get damage, someone's paddy and whatever is there at home

goats, cows and chickens, and when it flooded there won't be any place to stay for domestic animals

chickens and pigs always get lost

did the government take any measures for this flood?

right now we have not known about any measures from the government

once came, but we don't think that such measures are taken and we have not heard anything.

whether they will take it later or not, we don't know yet

Do you think that this flood is happening more because of climate change?

we think so and

it may happened like that

does erosion is happening more in the village?

yes soil erosion is happening, that side of village land is eroded, it reaches near our village and bamboo also eroded

there is a land of Boro Adabari Village near our village, but that land is half gone, and our land is also got eroded

that's all
