Methods are being developed to treat and dispose of large volumes of radioactive wastes stored in underground tanks at the U.S. Department of Energy's Hanford Site. The wastes will be partitioned into high-level waste (HLW) and low-level waste (LLW) fractions. The HLW will be vitrified into borosilicate glass and disposed of in a geologic repository, while the LLW will be immobilized in a glass matrix and will likely be disposed of by shallow burial at the Hanford Site. The wastes must be pretreated to reduce the volume of the HLW fraction, so that vitrification and disposal costs can be minimized. The current baseline process for pretreating Hanford tank sludges is to leach the sludge under caustic conditions, then remove the solubilized components of the sludge by water washing. Tests of this method have been performed with samples taken from several different tanks at Hanford. The results of these tests are presented in terms of the composition of the sludge before and after leaching. X-ray diffraction and scanning electron microscopy coupled with electron dispersive x-ray techniques have been used to identify the phases in the untreated and treated sludges.

2946 Laboratory testing of ozone oxidation of Hanford site waste. Delegard, C.H. (Westinghouse Hanford Co., Richland, WA (United States)); Stubbs, A.M.; Bolling, S.D.; Colby, S.A. pp. 720, Paper I&EC 72 of 208th ACS national meeting. American Chemical Society, Washington, DC (United States) (1994). pp. 2072 (CONF-940813--: 208. American Chemical Society national meeting, Washington, DC (United States), 21-26 Aug 1994).

Organic constituents in radioactive waste stored in underground tanks at the U.S. Department of Energy's Hanford Site provoke safety concerns arising from their low-temperature reactions with nitrate and nitrite oxidants. Destruction of the organics would eliminate both safety problems. Oxone oxidation was investigated to destroy organic species present in simulated and genuine waste from Hanford Site Tank 241-SY-101. Bench-scale tests showed high-shear mixing apparatus achieved efficient gas-to-solution mass transfer and utilization of the ozone reagent. Oxidations of nitrite (to form nitrate) and organic species were observed. The organics formed carbonate and oxalate as well as nitrate and nitrogen gas from organic nitrogen.

Formate, acetate and oxalate were present both in source waste and as reaction intermediates. Metal species oxidations also were observed directly or inferred by solubilities. Chemical precipitations of metal ions such as strontium and americium occurred as the organic species were destroyed by ozone. Reaction stoichiometries were consistent with the reduction of one oxygen atom per ozone molecule.

2947 Ion-exchange performance of crystalline silicotitanates for cesium removal from Hanford tank waste simulants. Klavetter, E.A. (Sandia National Labs., Albuquerque, NM (United States)); Brown, N.E.; Trudell, D.; Anthony, R.G.; Gu, D.; Thibaud-Erkey, C. pp. 721, Paper I&EC 77 of 208th ACS national meeting. American Chemical Society, Washington, DC (United States) (1994). pp. 2072 (CONF-940813--: 208. American Chemical Society national meeting, Washington, DC (United States), 21-26 Aug 1994).

A new class of inorganic ion exchangers, called crystalline silicotitanates (CSTs), has been prepared at Sandia National Laboratories and Texas A&M University. CSTs have high selectivity for the adsorption of Cs, Sr, and other radionuclides from highly alkaline, high-sodium supernate such as those found at the Hanford Site. The applicability of CSTs to remove Cs and other radionuclides have been assessed for treating Hanford tank wastes using continuous-flow, ion-exchange columns. This paper presents tests results which address chemical, physical, and radiological properties which are expected to be relevant for Hanford radwaste processing. Results indicate that CSTs have a large distribution coefficient ($K_d > 2000$ mL/g in NCAW simulants) for adsorbing ppm concentrations of Cs. CSTs exhibit very high K_d values ($> 20,000$ mL/g) for Cs in neutral pH solutions and K_d values of > 2000 mL/g in solutions containing 2M HNO₃. Results are presented from initial experimental efforts that describe the potential performance of the CSTs in laboratory-scale ion-exchange columns. Included are results showing the stability of the CST material in basic solutions and in radiation doses up to 10^9 rads (Si).

2948 Electrochemical treatment of alkaline nuclear wastes. Hobbs, D.T. (Westinghouse Savannah River Co., Aiken, SC (United States)). pp. 722, Paper I&EC 79 of 208th ACS national meeting. American Chemical Society, Washington, DC (United States) (1994). pp. 2072 (CONF-940813--: 208. American Chemical Society national meeting, Washington, DC (United States), 21-26 Aug 1994).

Production of nuclear materials within the DOE complex has produced large volumes of high-level waste (HLW) containing hazardous species such as nitrate, nitrite, chromium, and mercury. Some of the waste also contains large amounts of organic complexants and degradation products, which presents safety concerns due to the formation of flammable gases. It has been estimated that 250 million kilograms of sodium nitrate are stored in HLW throughout the DOE complex, primarily as alkaline wastes solutions and slurries. Processes being developed for the permanent disposal of these wastes are focused on separating the bulk of the radioactivity, primarily cesium-137 and strontium-90, into a smaller volume for incorporation into a vitrified wasteform, with the remainder being incorporated into a low-level, high-volume cement wasteform. Electrochemical treatment of the HLW is one of the candidate technologies being evaluated for the destruction of nitrate, nitrite and organic compounds as well as for the removal of radionuclides and hazardous metals from the different wastes. Previous testing has investigated the destruction of nitrate and nitrite in laboratory-scale flow reactors with non-radioactive simulated

salt solutions. Results of testing with actual waste from the Savannah River Site in flow reactors are presented.

2949 Flow sheet development for the remediation of tank SY-102 at the Hanford Nuclear Reservation. Yarbrow, S.L. (Los Alamos National Lab., NM (United States)); Punjak, W.A.; Schreiber, S.B.; Ortiz, E.M.; Jarvinen, G.D. pp. 724, Paper I&EC 85 of 208th ACS national meeting. American Chemical Society, Washington, DC (United States) (1994). pp. 2072 (CONF-940813-: 208. American Chemical Society national meeting, Washington, DC (United States), 21-26 Aug 1994).

The U.S. Department of Energy established the Tank Waste Remediation System (TWRS) to safely manage and dispose of radioactive waste stored in underground tanks at the Hanford Nuclear Reservation. A major task of TWRS is to separate tank wastes into high-level and low-level fractions. This separation is important because of the enormous costs associated with handling high-level waste and the limited repository space that is available. Due to their high activity, segregating the actinides and fission products from the bulk of the waste is required to achieve this goal. As a part of this program, personnel at the Los Alamos National Laboratory have developed and demonstrated a flow sheet to remediate tank SY-102 at the Hanford Site. This presentation documents the results of the flow sheet demonstrations performed with simulated, but radioactive, wastes using an existing glovebox line at the Los Alamos Plutonium Facility. Removal of the actinides from a high-salt, low-acid feed by ion exchange is the key unit operation. The flow sheet produces relatively low waste volumes, can be accomplished with conventional chemical processing equipment, and takes advantage of the components of the waste to increase the efficiency of the TRU elements recovery.

2950 Characterization of high-level waste saltcake stored at the Savannah River site. Hobbs, D.T. (Westinghouse Savannah River Co., Aiken, SC (United States)); Coleman, C.J. pp. 726, Paper I&EC 91 of 208th ACS national meeting. American Chemical Society, Washington, DC (United States) (1994). pp. 2072 (CONF-940813-: 208. American Chemical Society national meeting, Washington, DC (United States), 21-26 Aug 1994).

Since startup of the Savannah River Site over forty years ago, high-level waste from the processing of nuclear materials has been stored in large underground tanks. To reduce the volume of waste for storage, the alkaline solutions are evaporated and cooled resulting in the crystallization of salts. The crystallized salts are referred to as saltcake. Facilities have been constructed to permanently dispose of the waste. Saltcake will be dissolved in water, transferred to specially-modified waste tanks for chemical processing, and treated to remove radionuclides. This decontamination process is referred to as the In-Tank Precipitation process. Samples from the first tank of saltcake that will be processed have been obtained and analyzed to determine the chemical and radiochemical composition. The results and impacts on the In-Tank Precipitation process are presented.

2951 Selective chelators for actinide complexation. Huber, V.J. (New Mexico State Univ., Las Cruces, NM (United States)); Koshti, N.; Gopalan, A.S.; Jarvinen, G.D.; Smith, P.H. pp. 767, Paper I&EC 176 of 207th ACS national meeting. American Chemical Society, Washington, DC (United States) (1994). pp. 2247 (CONF-940301-: 207. spring national meeting of the American Chemical Society (ACS), San Diego, CA (United States), 13-18 Mar 1994).

The removal of actinide contamination from environmental and industrial waste waters is a complex problem because of the low levels that must be achieved. Typically the actinide concentration is low relative to potential competing metal ions. The authors are developing selective chelators and chelating polymers for removal of actinides from aqueous media. The design and synthesis of a series of hydroxamic acid chelators allows for a systematic study of the key parameters controlling metal ion selectivity. The authors have synthetically varied the cavity size, geometry and chelate denticity and have measured the binding constants for thorium(IV) and iron(III) using potentiometric titration. Through these chemical variations the authors have succeeded in preparing a system which preferentially binds thorium(IV) over iron(III). Molecular mechanics studies are in progress to determine if this technique can be used to predict the observed selectivity.

2952 Plutonium and americium separation using organophosphorus extractant absorbed onto ferromagnetic particle. Nunez, L. (Chemical Technology, Argonne, IL (United States)); Vandegrift, G.F. pp. 776-777, Paper I&EC 214 of 207th ACS national meeting. American Chemical Society, Washington, DC (United States) (1994). pp. 2247 (CONF-940301-: 207. spring national meeting of the American Chemical Society (ACS), San Diego, CA (United States), 13-18 Mar 1994).

Polymeric coated ferromagnetic particles with an absorbed layer of octyl(phenyl)-N, N-diisobutylcarbamoylmethylphosphine oxide (CMPO) diluted by tributyl phosphonate (TBP) are being evaluated for application in the separation and the recovery of low concentrations of americium and plutonium from nuclear waste solutions. Due to their chemical nature, these extractants selectively complex americium and plutonium contaminants onto the particles, which can be recovered from the solution using a magnet. Physical and chemical characterization of the extractant-absorbed particles were performed by gamma-ray and liquid scintillation counting, scanning electron microscopic (SEM) micrograph, energy disperse spectroscopy (EDS), and magnetic susceptibility measurements. Plutonium and americium separations have been performed at various nitric acid concentrations. Parameters such as absorbed layer thickness and separation abilities are studied to determine the limitations and capacity of the process. The status of the chemistry and application of the process to DOE remediation efforts for actinide decontamination are discussed.

2953 Polymer pendant ligand chemistry: A biomimetic chemistry approach to metals removal and recovery from aqueous environmental solutions. Fish, R.H. (Univ. of California, Berkeley, CA (United States)); Huang, S.; Li, W.; Albright, R.L.; Fries, W. pp. 778, Paper I&EC 218 of 207th ACS national meeting. American Chemical Society, Washington, DC (United States) (1994). pp. 2247 (CONF-940301-: 207. spring national meeting of the American Chemical Society (ACS), San Diego, CA (United States), 13-18 Mar 1994).

The use of polymer pendant ligands to selectively remove and recover metal ions from aqueous solutions will be an important remediation technique for the Department of Energy's (DOE) Environmental Management and Restoration program goals. The authors have initiated studies that will develop new polymer pendant ligands that are biomimics of known biological ligands that selectively complex metal ions. The authors present results on the synthesis of polymer

pendant sulfonated catechol (CATS) and sulfonated 3,3 and 3,4-linear catechol amide (3,3 and 3,4-LICAMS) ligands and their selective reactions with Fe^{3+} , Cu^{2+} , Zn^{2+} , Ni^{2+} , Hg^{2+} , etc. ions at various pH values. Kinetic studies for rates of metal ion removal as a function of pH and the rates of regeneration of the polymer pendant ligand site for the recovery of these metal ions is also presented.

2954 The synthesis, characterization and structure of chlorinated derivatives of the cobalt dicarbollide anion. Hurlburt, P. (Los Alamos National Lab., NM (United States)); Kinkead, S.A.; Foreman, T.M. pp. 928, Paper INOR 507 of 207th ACS national meeting. American Chemical Society, Washington, DC (United States) (1994). pp. 2247 (CONF-940301-; 207. spring national meeting of the American Chemical Society (ACS), San Diego, CA (United States), 13-18 Mar 1994).

The cobalt dicarbollide anion, $[\text{Co}(\text{C}_2\text{B}_9\text{H}_{11})_2]^-$, is unique in its ability to separate Cs^+ from other cations, an important property in the remediation of nuclear waste. Its natural resistance to radiolytic degradation is increased by chlorination of the carborane cages. The boron atoms of cobalt dicarbollide are chlorinated upon treatment with elemental chlorine or hypochlorous acid. The degree of chlorination can be controlled by varying the reaction conditions. The syntheses and characterizations of these compounds are presented.

2955 Mercury extraction by the TRUEX process solvent. I. Kinetics, extractable species, and dependence on nitric acid concentration. Herbst, R.S. (Westinghouse Idaho Nuclear Co., Inc., ID (United States)); Brewer, K.N.; Tranter, T.J.; Todd, T.A. *Solvent Extraction and Ion Exchange (United States)*; 13(3): 431-446 (May 1995).

Mercury extraction from acidic aqueous solutions by the TRUEX process solvent (0.2 M CMPO - 1.4 M TBP in *n*-dodecane) has not extensively been examined. Preliminary experiments were performed involving the extraction of Hg^{203} , added as HgCl_2 , from 0.01 to 10 M HNO_3 solutions. Mercury distribution coefficients (D_{Hg}) range between 3 and 60 from 0.01 M to 2 M HNO_3 . At higher nitric acid concentrations, i.e. 5 M HNO_3 or greater, D_{Hg} significantly decreases to values less than 1. These results indicate mercury is extracted from acidic solutions $\leq$ nearly 2 M HNO_3 and stripped with nitric acid solutions $\geq$ nearly 5 M HNO_3 . Experimental results indicate the extractable species is HgCl_2 from nitrate media, i.e., chloride must be present in the nitrate feed to extract mercury. Extractions from $\text{Hg}(\text{NO}_3)_2$ solutions indicated substantially reduced distribution ratios, typically $D_{\text{Hg}} < 1$, for the range of nitric acid concentrations examined (0.01 to 8 M HNO_3). Extraction of mercury, as HgCl_2 , by the individual components of the TRUEX solvent was also examined from 2 M HNO_3 . The diluent, *n*-dodecane, does not measurably extract mercury. With a 1.4 M TBP/*n*-dodecane solvent, D_{Hg} nearly 3.4 compared with D_{Hg} nearly 7 for the TRUEX solvent. 5 refs., 2 figs., 7 tabs.

2956 Extraction of strontium from acidic nitrate media using a modified PUREX solvent. Dietz, M.L. (Argonne National Lab., IL (United States)); Horwitz, E.P.; Rogers, R.D. *Solvent Extraction and Ion Exchange (United States)*; 13(1): 1-17 (Jan 1995). DOE Contract W-31109-ENG-38.

A new process for the extraction and recovery of strontium from acidic waste streams is described. In this process, a modification of the previously described SREX (for strontium extraction) process, strontium is extracted from acidic (≥ 2 M nitric acid) solution using a 0.2 M solution of di-*t*-butylcyclohexano-18-crown-6 in any of a variety of phase

modifier/paraffinic hydrocarbon mixtures, among them a PUREX-like diluent comprised of a 1.2 M solution of tri-*n*-butyl-phosphate in Isopar L. Tests of this process solvent on a synthetic dissolved sludge waste show that only strontium and barium are appreciably extracted by the crown ether under the experimental conditions. As expected, uranium and plutonium are extracted even in the absence of the crown ether. 17 refs., 4 figs., 4 tabs.

2957 Extraction of transuranic elements with a dihexyl-*n,n*-diethylcarbamoylmethyl phosphonate/tributyl phosphate system - Initial investigations. Rapko, B.M. (Pacific Northwest Lab., Richland, WA (United States)); Lumetta, G.J. *Solvent Extraction and Ion Exchange (United States)*; 12(5): 967-986 (Oct 1994). DOE Contract AC06-76RL01830.

An extractant system, 0.75 M DHDECMP and 1 M TBP in an aliphatic hydrocarbon diluent, was evaluated for selectively removing transuranic elements (TRUs) from acidic waste streams. The evaluation involved six parts. The results are discussed along with their consequences with respect to developing a flowsheet for processing wastes stored at the US Department of Energy's Hanford site. 28 refs., 8 figs.

2958 Uptake of metal ions by a new chelating ion-exchange resin. Part 5. The effect of solution matrix on actinides. Horwitz, E.P. (Argonne National Lab., IL (United States)); Chiarizia, R.; Alexandratos, S.D. *Solvent Extraction and Ion Exchange (United States)*; 12(4): 831-845 (Aug 1994).

The influence of commonly occurring matrix constituents on the uptake of representative actinides in the tri-, tetra-, and hexavalent oxidation states by a new chelating ion-exchange resin, called Diphonix, has been investigated. The effect of increasing concentrations of HF at three fixed HCl concentrations on the retention of U(VI), Np(IV), and Am(III) was measured. All three actinides showed strong retention in HF even up to a concentration of 1 M. The effect of sulfuric, oxalic and phosphoric acids at three fixed HNO_3 concentrations on the retention of Th(IV), U(VI), and Am(III) was also measured. Only when the concentration of the complexing acids was above 0.1 M was the retention of the actinides decreased significantly at 0.1 M HNO_3 . The effect was much less pronounced at higher HNO_3 concentrations. Sodium, calcium, aluminum and iron were selected to study the influence of cationic matrix constituents on the uptake of actinide ions by Diphonix. In the case of tetra- and hexavalent actinides (represented by Th and U, respectively) only the very highest concentrations of Fe(III) and Al(III) caused a significant decrease in the retention of the two higher valent actinides. On the other hand, Am(III) retention was significantly lowered by Al and Fe(III) concentrations above 10^{-2} M. 5 refs., 12 figs.

2959 Uptake of metal ions by a new chelating ion-exchange resin. Part 6. Calculations on the effect of complexing anions on actinides. Chiarizia, R. (Argonne National Lab., IL (United States)); Horwitz, E.P. *Solvent Extraction and Ion Exchange (United States)*; 12(4): 847-871 (Aug 1994).

A previous paper reported the effect of increasing concentrations of hydrofluoric, oxalic, sulfuric and phosphoric acids at three fixed HCl or HNO_3 concentrations on the retention of Am(III), Th(IV) or Np(IV), and U(VI) by the new chelating ion-exchange resin Diphonix. In this paper the metal uptake data have been analyzed by calculating the effect that complex formation in solution has on the overall metal uptake by

the resin. The calculations performed have allowed us to conclude that in most cases the uptake of Am(III) and U(VI) by Diphonix can be explained by assuming that only the uncomplexed metal cation is sorbed. With tetravalent actinides, on the contrary, the uptake data can only be explained if the simultaneous sorption of the uncomplexed cation and of neutral metal complexes is assumed. Indirect evidence has also been obtained on the existence of anionic fluoride complexes of Np(IV). In all other cases, with minor exceptions, the complex formation data available in the literature seem to describe accurately the behavior of the investigated systems. 13 refs., 6 figs., 4 tabs.

2960 Removal of VOCs from groundwater using membrane-assisted solvent extraction. Hutter, J.C. (Argonne National Lab., IL (United States). Chemical Technology Div.); Vandegrift, G.F.; Nunez, L.; Redfield, D.H. *AIChE Journal (American Institute of Chemical Engineers) (United States)*; 40(1): 166-177 (Jan 1994). DOE Contract W-31109-ENG-38.

A membrane-assisted solvent extraction (MASX) system coupled to a membrane-assisted distillation stripping (MADS) system for use in decontaminating groundwater is evaluated. Volatile organic compounds (VOCs) in the groundwater are extracted in the MASX unit using a sunflower oil solvent. In the MADS unit, VOCs are stripped from the sunflower oil, which is recycled to the MASX unit. Thermodynamic data for the sunflower oil-water-VOCs system were measured. The results were used along with published membrane mass-transfer data to design MASX and MADS modules.

2961 Separations of actinides, lanthanides and other metals. Smith, B.F.; Jarvinen, G.D.; Ensor, D.D. To Dept. of Energy, Washington, DC (United States). U.S. Patent 5,409,678/A. 25 Apr 1995. Filed date 11 Mar 1993. U.S. Patent Application 8-031,053. Int. Cl. C01G 1/00; C01F 1/00. [10p.] Source: Patent and Trademark Office, Box 9, Washington, DC 20232 (United States).

An organic extracting solution comprised of a bis(acylpyrazolone) or a substituted bis(acylpyrazolone) and an extraction method are disclosed useful for separating certain elements of the actinide series of the periodic table having a valence of four from one other, and also from one or more of the substances in a group consisting of hexavalent actinides, trivalent actinides, trivalent lanthanides, trivalent iron, trivalent aluminum, divalent metals, and monovalent metals and also useful for separating hexavalent actinides from one or more of the substances in a group consisting of trivalent actinides, trivalent lanthanides, trivalent iron, trivalent aluminum, divalent metals, and monovalent metals. 7 figs.

2962 Process for the extraction of strontium from acidic solutions. Horwitz, E.P.; Dietz, M.L. To Dept. of Energy, Washington, DC (United States). U.S. Patent 5,344,623/A. 6 Sep 1994. Filed date 15 Jun 1993. U.S. Patent Application 8-076,881. Int. Cl. C01F 13/00. [10p.] DOE Contract W-31109-ENG-38. Source: Patent and Trademark Office, Box 9, Washington, DC 20232 (United States).

The invention is a process for selectively extracting strontium values from aqueous nitric acid waste solutions containing these and other fission product values. The extractant solution is a macrocyclic polyether in an aliphatic hydrocarbon diluent containing a phase modifier. The process will selectively extract strontium values from nitric acid solutions which are up to 6 molar in nitric acid. 4 figs.

2963 Liquid chromatographic extraction medium. Horwitz, E.P.; Dietz, M.L. To ARCH Development Corp., Chicago, IL (United States). U.S. Patent 5,346,618/A. 13 Sep 1994. Filed date 23 Apr 1993. U.S. Patent Application 8-051,608. Int. Cl. B01D 15/08. [10p.] DOE Contract W-31109-ENG-38. Source: Patent and Trademark Office, Box 9, Washington, DC 20232 (United States).

A method and apparatus are disclosed for extracting strontium and technetium values from biological, industrial and environmental sample solutions using a chromatographic column. An extractant medium for the column is prepared by generating a solution of a diluent containing a Crown ether and dispersing the solution on a resin substrate material. The sample solution is highly acidic and is introduced directed to the chromatographic column and strontium or technetium is eluted using deionized water. 1 fig.

2964 Method for the concentration and separation of actinides from biological and environmental samples. Horwitz, E.P.; Dietz, M.L. To Arch Development Corp., Chicago, IL (United States). U.S. Patent 4,835,107/A. 30 May 1989. Filed date 21 Oct 1986. U.S. Patent Application 6-921,282. Int. Cl. G01N 33/20; G01N 30/02; B01D 11/00. [10p.] DOE Contract W-31109-ENG-38. Source: Patent and Trademark Office, Box 9, Washington, DC 20232 (United States).

A method and apparatus for the quantitative recover of actinide values from biological and environmental sample by passing appropriately prepared samples in a mineral acid solution through a separation column of a dialkyl(phenyl)-N,N-dialkylcarbamoylmethylphosphine oxide dissolved in tri-n-butyl phosphate on an inert substrate which selectively extracts the actinide values. The actinide values can be eluted either as a group or individually and their presence quantitatively detected by alpha counting. 3 figs.

2965 Method for extracting lanthanides and actinides from acid solutions by modification of Purex solvent. Horwitz, E.P.; Kalina, D.G. To Dept. of Energy, Washington, DC (United States). U.S. Patent 4,574,072/A. 4 Mar 1986. Filed date 21 May 1984. U.S. Patent Application 6-612,199. Int. Cl. B01D 11/04; C01F 17/00; C22B 59/00; C01G 56/00. [10p.] DOE Contract W-31109-ENG-38. Source: Patent and Trademark Office, Box 9, Washington, DC 20232 (United States).

A process is described for the recovery of actinide and lanthanide values from aqueous solutions with an extraction solution containing an organic extractant having the formula as shown in a diagram where ϕ is phenyl, R^1 is a straight or branched alkyl or alkoxyalkyl containing from 6 to 12 carbon atoms and R^2 is an alkyl containing from 3 to 6 carbon atoms and phase modifiers in a water-immiscible hydrocarbon diluent. The addition of the extractant to the Purex process extractant, tri-n-butylphosphate in normal paraffin hydrocarbon diluent, will permit the extraction of multivalent lanthanide and actinide values from 0.1 to 12.0 molar acid solutions. 6 figs.

2966 Process for recovering actinide values. Horwitz, E.P.; Mason, G.W. To Dept. of Energy, Washington, DC (United States). U.S. Patent 4,208,377/A. 17 Jun 1980. Filed date 25 Jul 1978. Int. Cl. C02B 1/32. [10p.] Source: Patent and Trademark Office, Box 9, Washington, DC 20232 (United States).

A process is disclosed for rendering actinide values recoverable from sodium carbonate scrub waste solutions

containing these and other values along with organic compounds resulting from the radiolytic and hydrolytic degradation of neutral organophosphorous extractants such as tri-*n* butyl phosphate (TBP) and dihexyl-N,N-diethyl carbamylmethylene phosphonate (DHDECAMP) which have been used in the reprocessing of irradiated nuclear reactor fuels. The scrub waste solution is preferably made acidic with mineral acid, to form a feed solution which is then contacted with a water-immiscible, highly polar organic extractant which selectively extracts the degradation products from the feed solution. The feed solution can then be processed to recover the actinides for storage or recycled back into the high-level waste process stream. The extractant is recycled after stripping the degradation products with a neutral sodium carbonate solution. 1 fig.

2967 (ANL/CMT/CP-83059) Technology applications for radioactive waste minimization. Devgun, J.S. Argonne National Lab., IL (United States). [1994]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-940815-61: International nuclear and hazardous waste management conference, Atlanta, GA (United States), 14-18 Aug 1994). Order Number DE94015036. Source: OSTI; NTIS; INIS; GPO Dep.

The nuclear power industry has achieved one of the most successful examples of waste minimization. The annual volume of low-level radioactive waste shipped for disposal per reactor has decreased to approximately one-fifth the volume about a decade ago. In addition, the curie content of the total waste shipped for disposal has decreased. This paper will discuss the regulatory drivers and economic factors for waste minimization and describe the application of technologies for achieving waste minimization for low-level radioactive waste with examples from the nuclear power industry.

2968 (ANL/EA/CP-84367) How technology is improving decision making for environmental restoration. Ditmars, J. Argonne National Lab., IL (United States). [1995]. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9411181-1: Earthcare conference, Toulouse (France), 8-10 Nov 1994). Order Number DE95005851. Source: OSTI; NTIS; GPO Dep.

Environmental restoration, or the cleanup of contaminants from past activities, at its core depends on a series of decisions about the nature and extent of contamination, the risk to human health and the environment, and the potential effectiveness of remediation techniques and technologies to reduce the risk to acceptable levels. The effectiveness with which these decisions are made has significant impacts on the cost and duration of the cleanup efforts. The decisions must often be made on the basis of incomplete and uncertain data. Emerging environmental information and data acquisition technologies together with appropriate strategies to support decision making are beginning to change the way environmental restoration occurs in the United States. Past environmental restoration activities too often relied on prescriptive data collection activities to generate the information

upon which decisions were to be made. Retrospective studies of such activities have shown that, while often data were gathered for the purpose of reducing the risk in decision making, little true reduction in risk was realized and large amounts of resources were consumed. Recent examination of the failures in the United States to achieve many complete cleanups despite the investment of large sums and time points to the inability to have decisions made efficiently. The solution to the problem involves both regulatory change to allow more flexibility in decision-making and the introduction of technology to improve decision making. This paper reviews the recent assessments made of the cleanup process and application of strategies and technologies to enhance decision-making for cleanup. It provides examples of the new decision approaches and the technologies that have been employed to speed up characterization and to optimize the implementation of remediation.

2969 (ANL/EA/CP-85788) Training implications of skills needed for environmental cleanup. Young, C. (Argonne National Lab., IL (United States)); Hensley, J.; Lehr, J. Argonne National Lab., IL (United States). [1995]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9409328-1: Annual meeting of the North American Association for Environmental Education, Cancun (Mexico), 23-27 Sep 1994). Order Number DE95008301. Source: OSTI; NTIS; GPO Dep.

Well-trained staff are needed to perform the diverse tasks associated with environmental cleanup. Although educational and training programs are intended to help professionals learn relevant environmental skills, these programs may or may not be teaching the most appropriate skills. This project investigated the skills needed to carry out environmental activities at a headquarters office of a federal agency. The primary skills needed for environmental cleanup activities emphasize program management, problem solving/critical thinking, and communications. Furthermore, using Bloom's taxonomy of educational objectives, most of these skills fell into the areas of "application" or "evaluation." The results of this investigation suggest that rather than focusing on discipline-specific activities, such as helping improve people's knowledge about regulatory requirements, training and education should emphasize complex problem-solving skills.

2970 (ANL/ITD/CP-83704) Laboratory/industry partnerships for environmental remediation. Beskid, N.J.; Zussman, S.K. Argonne National Lab., IL (United States). [1994]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9408160-1: Small business, USDOE contracts and remediation, Kennewick, WA (United States), 9-12 Aug 1994). Order Number DE94018393. Source: OSTI; NTIS; INIS; GPO Dep.

There are two measures of "successful" technology transfer in DOE's environmental restoration and waste management program. The first is remediation of DOE sites, and the second is commercialization of an environmental remediation process or product. The ideal case merges these two in laboratory/industry partnerships for environmental remediation. The elements to be discussed in terms of their effectiveness in aiding technology transfer include: a decision-making champion; timely and sufficient funding; well organized technology transfer function; well defined DOE and commercial markets; and industry/commercial partnering. Several case studies are presented, including the successful commercialization of a process for vitrification

of low-level radioactive waste, the commercial marketing of software for hazardous waste characterization, and the application of a monitoring technique that has won a prestigious technical award. Case studies will include: vitrification of low-level radioactive waste (GTS Duratek, Columbia, MD); borehole liner for emplacing instrumentation and sampling groundwater (Science and Engineering Associates, Inc., Santa Fe, NM); electronic cone penetrometer (Applied Research Associates, Inc., South Royalton, VT); and software for hazardous waste monitoring ConSolve, Inc. (Lexington, MA). The roles of the Department of Energy and Argonne National Laboratory in these successes will be characterized.

2971 Scientific basis for nuclear waste management XVI. Materials Research Society symposium proceedings, Volume 294. Interrante, C.G. (ed.) (Nuclear Regulatory Commission, Washington, DC (United States)); Pabalan, R.T. (ed.). 959p. Materials Research Society, Pittsburgh, PA (United States) (1993). Sponsored by USDOE, Washington, DC (United States); Nuclear Regulatory Commission, Washington, DC (United States). From 16. Materials Research Society (MRS) fall meeting; Boston, MA (United States); 30 Nov - 5 dec 1992.

One most significant aspect of this particular symposium is the focus on the scientific basis for management of nuclear waste. Engineering principles and practices are important, but this symposium focuses on the science. The extension and application of engineering "know how" to waste management problems sometimes requires a degree of understanding not normally needed to solve other engineering problems. In materials science, for example, scientific understandings important to long-term behavior may be obtained from (1) characterizations and analyses of the structure and properties of materials, (2) the recognition of advancements needed to ensure performance, and (3) improvements in methods of fabrication and processing. In addition to the materials science topics addressed here (on waste forms, engineered barrier systems, and the near-field environment), the symposium addressed various far-field topics. The proceedings are divided into the following sections: spent fuel; glass and crystalline waste forms; glass performance—mechanisms and models; cementitious materials; container alteration; microbiologically influenced corrosion; near-field interactions; natural analogues; long-term prediction for engineered barriers; performance assessment of engineered barrier systems; radionuclide chemistry and transport; and performance assessment of geological systems. Selected papers are indexed separately for inclusion in the Energy Science and Technology Database.

2972 (CONF-9304128—, pp. B.11-B.13) **The Martin Marietta Energy Systems Associated Laboratories for Excellence in Radiation Technology (ALERT).** Bogard, J.S. (Oak Ridge National Lab., TN (United States)); Casson, W.H. Sr.; Bauer, M.L.; Gregory, D.C. USDOE Assistant Secretary for Environment, Safety, and Health, Washington, DC (United States). Office of Health; USDOE Nevada Field Office, Las Vegas, NV (United States). [1993]. From Department of Energy (DOE) radiation protection conference; Las Vegas, NV (United States); 13-15 Apr 1993. In *1993 Radiation Protection Workshop: Proceedings*. 431p. Order Number DE95004507. Source: OSTI; NTIS; INIS; GPO Dep.

The excellence and uniqueness of radiation technology expertise at Oak Ridge National Laboratory (ORNL) was

recognized during a review by the DOE Oak Ridge Field Office prior to a 1990 Tiger Team review, and the Laboratory was encouraged at that time to explore ways of sharing this expertise with other DOE facilities. The subsequent evolution of DOE Laboratory Accreditation Programs, with their challenging performance requirements, and of program guidance such as that contained in the DOE Radiation Control Manual, which requires improved radiological instrument services and encourages standardization, reemphasizes the importance of sharing ORNL's extensive capabilities for supporting improved radiological safety and health programs.

2973 (CONF-9308217—) **Proceedings of Workshop on Uranium Production Environmental Restoration: An exchange between the United States and Germany.** Jacobs Engineering Group, Inc., Pasadena, CA (United States). [1993]. 441p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-91AL62350. From Workshop on uranium production environmental restoration: an exchange between the United States and Germany; Albuquerque, NM (United States); 16-20 Aug 1993. Order Number DE94008528. Source: OSTI; NTIS; INIS; GPO Dep.

Scientists, engineers, elected officials, and industry regulators from the United States and Germany met in Albuquerque, New Mexico, August 16–20, 1993, in the first joint international workshop to discuss uranium tailings remediation. Entitled "Workshop on Uranium Production Environmental Restoration: An Exchange between the US and Germany," the meeting was hosted by the US Department of Energy's (DOE) Uranium Mill Tailings Remedial Action (UMTRA) Project. The goal of the workshop was to further understanding and communication on the uranium tailings cleanup projects in the US and Germany. Many communities around the world are faced with an environmental legacy — enormous quantities of hazardous and low-level radioactive materials from the production of uranium used for energy and nuclear weapons. In 1978, the US Congress passed the Uranium Mill Tailings Radiation Control Act. Title I of the law established a program to assess the tailings at inactive uranium processing sites and provide a means for joint federal and state funding of the cleanup efforts at sites where all or substantially all of the uranium was produced for sale to a federal agency. The UMTRA Project is responsible for the cleanup of 24 sites in 10 states. Germany is facing nearly identical uranium cleanup problems and has established a cleanup project. At the workshop, participants had an opportunity to interact with a broad cross section of the environmental restoration and waste disposal community, discuss common concerns and problems, and develop a broader understanding of the issues. Abstracts are catalogued individually for the data base.

2974 (CONF-9410300—1) **Identifying, meeting, and assessing customer expectations.** Danner, T.A. Oak Ridge National Lab., TN (United States). [1995]. 26p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From 18. annual TRADE conference: customer-driven training on line management expectations; Dallas, TX (United States); 31 Oct - 2 nov 1994. Order Number DE95007365. Source: OSTI; NTIS; INIS; GPO Dep.

Includes viewgraphs.

Maintaining proficiency in carrying out mission goals is fundamental to the success of any organization. The definitive mission of the Waste Management and Remedial Action Division (WMRAD) of Oak Ridge National Laboratory (ORNL) is "to conduct waste management activities in a

compliant, publicly acceptable, technically sound, and cost-efficient manner". In order to effectively fulfill this mission, must meet or exceed several standards in respect to our customers. These include: (1) identifying current and future customer expectations; (2) managing our relationships with our customers; (3) ensuring our commitment to our customers; and (4) measuring our success in customer satisfaction. Our customers have a great variety of requirements and expectations. Many of these are in the form of local, state, and federal regulations and environmental standards. Others are brought to our attention through inquiries made to the Department of Energy (DOE). Consumer surveys have proven to be effective tools which have been used to make improvements, enhance certain program elements, and identify beneficial areas in already existing programs. In addition, national working groups, technology transfer meetings, and manager/contractor's meeting offer excellent opportunities to assess our activities.

2975 (DOE-0227-2-Rev.1) Quality Assurance Plan for Transportation Management Division Transportation Training Programs. USDOE Office of Environmental Restoration and Waste Management, Washington, DC (United States). Transportation Management Div. Oct 1994. 72p. Sponsored by USDOE, Washington, DC (United States). Order Number DE95003991. Source: OSTI; NTIS; INIS; GPO Dep.

The U.S. Department of Transportation (DOT) implemented new rules requiring minimum levels of training for certain key individuals who handle, package, transport, or otherwise prepare hazardous materials for transportation. In response to these rules, the U.S. Department of Energy (DOE), Transportation Management Division (TMD), has developed a transportation safety training program. This program supplies designed instructional methodology and course materials to provide basic levels of DOT training to personnel for whom training has become mandatory. In addition, this program provides advanced hazardous waste and radioactive material packaging and transportation training to help personnel achieve proficiency and/or certification as hazardous waste and radioactive material shippers. This training program does not include site-specific or task-specific training beyond DOT requirements.

2976 (DOE-94016533) United States Department of Energy Environmental Management Advisory Board: Public meeting. USDOE Assistant Secretary for Environmental Management, Washington, DC (United States). 15 Jul 1994. 101p. Sponsored by USDOE, Washington, DC (United States). Order Number DE94016533. Source: OSTI; NTIS; GPO Dep.

This meeting of the Environmental Management Advisory Board was held to discuss environmental concerns that everybody has and to provide a strategy for dealing with the problems. Plans for the Environmental Management Programmatic Environmental Impact Statement are presented. A report is included of the subcommittee on institutional barriers to advanced technology use. The subcommittee on environmental restoration cost effectiveness also presents a report. The status of public involvement activities is evaluated. A presentation on the status of spent fuel management is included.

2977 (DOE/EM-0140P) Environmental Education and Development Division (EM-522): Annual report, Fiscal year 1993. USDOE Assistant Secretary for Environmental Restoration and Waste Management, Washington,

DC (United States). Office of Technology Integration and Environmental Education and Development. [1993]. 52p. Sponsored by USDOE, Washington, DC (United States). Order Number DE94008620. Source: OSTI; NTIS; GPO Dep.

The Environmental Education and Development Division (EM-522) is one of three divisions within the Office of Technology Integration and Environmental Education and Development (EM-52) in Environmental Restoration and Waste Management's (EM's) Office of Technology Development (EM-50). The primary design criterion for EM-522 education activities is directly related to meeting EM's goal of environmental compliance on an accelerated basis and cleanup of the 1989 inventory of inactive sites and facilities by the year 2019. Therefore, EM-522's efforts are directed specifically toward stimulating knowledge and capabilities to achieve the goals of EM while contributing to DOE's overall goal of increasing scientific, mathematical, and technical literacy and competency. This report discusses fiscal year 1993 activities.

2978 (DOE/EM-0169P, pp. 2-7) Russian separation program. Rea, J.L. (Sandia National Lab., Albuquerque, NM (United States)). USDOE Assistant Secretary for Environmental Management, Washington, DC (United States). 1993. In *International Technology Exchange Division: 1993 Annual report*. 79p. Order Number DE94014038. Source: OSTI; NTIS; INIS; GPO Dep.

A small contract signed in FY92 with the Khlopin Radium Institute marked the beginning of the Russian Separations program. Under this contract the Khlopin Radium Institute performed laboratory and dynamic hot-cell testing using cobalt dicarbollide technology on simulated radioactive wastes similar to those found at DOE sites in the United States. The current scope of investigation has been extended to identify prospective technologies for application to other United States needs. The Khlopin Radium Institute project served as a model for three other pilot scale technology development projects. The premise of the pilot scale projects is to enable Russian scientists to demonstrate their technology in the context of DOE needs, using Russian technical expertise has proven to be a cost-effective means of screening Russian technologies.

2979 (DOE/EM-0169P, pp. 8-10) Joint Coordinating Committee on environmental restoration and waste management (JCCEM) support, technology transfer, and special projects. Edgar, D.E. (Argonne National Lab., IL (United States)). USDOE Assistant Secretary for Environmental Management, Washington, DC (United States). 1993. In *International Technology Exchange Division: 1993 Annual report*. 79p. Order Number DE94014038. Source: OSTI; NTIS; INIS; GPO Dep.

Argonne National Laboratory (ANL) assisted in identifying and evaluating foreign technologies to meet EM needs; supported the evaluation, removal, and/or revision of barriers to international technology and information transfer/exchange; facilitated the integration and coordination of U.S. government international environmental restoration and waste management activities; and enhanced U.S. industry's competitiveness in the international environmental technology market.

2980 (DOE/EM-0169P, pp. 32-35) Identification of foreign technologies. Rea, J.L. (Sandia National Lab., Albuquerque, NM (United States)). USDOE Assistant Secretary for Environmental Management, Washington, DC (United States). 1993. In *International Technology Exchange*

Division: 1993 Annual report. 79p. Order Number DE94014038. Source: OSTI; NTIS; INIS; GPO Dep.

Sandia National Laboratory (SNL) identified and evaluated foreign environmental restoration and waste management (ER/WM) technologies for application at specific problem units within the Department of Energy (DOE) Complex.

2981 (DOE/EM-0169P, pp. 46-48) **Program Integration for International Technology Exchange.** Rea, J.L. (Sandia National Lab., Albuquerque, NM (United States)). USDOE Assistant Secretary for Environmental Management, Washington, DC (United States). 1993. In *International Technology Exchange Division: 1993 Annual report.* 79p. Order Number DE94014038. Source: OSTI; NTIS; INIS; GPO Dep.

Sandia National Laboratories (SNL), Albuquerque, New Mexico, supports the International Technology Exchange Division (ITED) through the integration of all international activities conducted within the DOE's Office of Environmental Management (EM).

2982 (DOE/EM-0169P, pp. 49-53) **Central and eastern European activities.** Rea, J.L. (Sandia National Lab., Albuquerque, NM (United States)). USDOE Assistant Secretary for Environmental Management, Washington, DC (United States). 1993. In *International Technology Exchange Division: 1993 Annual report.* 79p. Order Number DE94014038. Source: OSTI; NTIS; INIS; GPO Dep.

The Florida State University/Technical University of Budapest environmental research center, Center for Hungarian/American Environmental Research, Studies and Exchanges (CHAERSE), provides a resource base for information and technologies that is used to address near- and long-term environmental problems within the Department of Energy (DOE) complex and in Central and Eastern Europe. The CHAERSE is used as a technology transfer conduit for environmental restoration and waste management (ER/WM) problems and solutions. The International Technology Exchange Division (ITED) used the CHAERSE as one source of information for the identification of international ER/WM technologies being developed in Central and Eastern Europe. This was accomplished by matching high-priority problems in that region to high-priority problems in the DOE Complex; conducting symposia, meetings and workshops with international environmental experts; and identifying innovative technologies.

2983 (DOE/EM-0169P, pp. 57) **Review of Hanford International activities.** Panther, D.G. (Westinghouse Hanford, Richland, WA (United States)). USDOE Assistant Secretary for Environmental Management, Washington, DC (United States). 1993. In *International Technology Exchange Division: 1993 Annual report.* 79p. Order Number DE94014038. Source: OSTI; NTIS; INIS; GPO Dep.

Hanford initiated a review of international activities to collect, review, and summarize information on international environmental restoration and waste management initiatives considered for use at Hanford. This effort focused on Hanford activities and accomplishments, especially international technical exchanges and/or the implementation of foreign-developed technologies.

2984 (DOE/EM-0169P, pp. 60-66) **EnviroTRADE Information system.** Harlan, C. (Sandia National Lab., Albuquerque, NM (United States)); Harrington, M.W. USDOE Assistant Secretary for Environmental Management,

Washington, DC (United States). 1993. In *International Technology Exchange Division: 1993 Annual report.* 79p. Order Number DE94014038. Source: OSTI; NTIS; INIS; GPO Dep.

Environmental Technologies for Remedial Actions Data Exchange (EnviroTRADE) is a graphical/textual information management system being developed for the cleanup program of the U.S. Department of Energy's (DOE) Weapons Complex. Its principal purpose is to provide a single, powerful, interactive database that addresses environmental restoration and waste management (ER/WM) problems and the technologies currently under development or already available to resolve them. Because the volume and complexity of the information is so large, a sophisticated Relational Database Management System (RDBMS) is employed in EnviroTRADE. EnviroTRADE will be a multi-purpose, multi-user system capable of addressing a broad range of environmental assessment and cleanup issues. An early focus for the Beta version of EnviroTRADE has been to find matches between specific environmental problems at particular sites (e.g., in terms of waste composition and form) and available and new technologies suited to solve problems. The current prototype EnviroTRADE database includes both U.S. and foreign problems and technologies. A Beta version was developed and demonstrated during FY92 and was expanded in FY93. This system was delivered to EM-523 as a stand-alone resident system for demonstration and feedback purposes. The resident system demonstrates the feasibility of this kind of multi-purpose system and also provides a test bed for refining the system architecture. As the architecture and database grow, an increasing range of possible applications is envisioned. The ability to import very large quantities of graphical, textual, and numerical information into the database is of particular importance. Since a great deal of appropriate data already exists in various electronic formats, a rapid expansion into EnviroTRADE-accessible data is possible without relying on manual entry methods.

2985 (DOE/EM-0196) **EM International, July 1994, Volume 2.** USDOE Assistant Secretary for Environmental Management, Washington, DC (United States). [1994]. 46p. Sponsored by USDOE, Washington, DC (United States). Order Number DE95001103. Source: OSTI; NTIS; INIS; GPO Dep.

The Office of Environmental Management (EM) at the Department of Energy (DOE) is seeking out and leveraging foreign technology, data, and resources in keeping with EM's mandate to protect public health and the environment through the safe and cost-effective remediation of the Department's nuclear weapons sites. EM works closely with foreign governments, industry, and universities to obtain innovative environmental technologies, scientific and engineering expertise, and operations experience that will support EM's objectives. Where appropriate, these international resources are used to manage the more urgent risks at our sites, secure a safe workplace, help build consensus on critical issues, and strengthen our technology development program. Through international agreements EM engages in cooperative exchange of information, technology, and individuals. Currently, we are managing agreements with a dozen countries in Europe, Latin America, and Asia. These agreements focus on environmental restoration, waste management, transportation of radioactive wastes, and decontamination and decommissioning. This publication contains the following articles: in situ remediation integrated program; in-situ characterization and inspection of tanks; multimedia environmental pollutant assessment system (MEPAS); LLNL wet oxidation - AEA

technology. Besides these articles, this publication covers: EU activities with Russia; technology transfer activities; and international organization activities.

2986 (DOE/MC/31388-95/C0423) **Environmental management technology demonstration and commercialization.** Jones, M.L.; Beaver, F.W.; Benson, S.A.; Steadman, E.N.; Hawthorne, S.B.; Hurley, J.P.; Ness, R.O. Jr.; Rindt, J.R. North Dakota Univ., Grand Forks, ND (United States). Energy and Environmental Research Center. [1995]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FC21-94MC31388. (CONF-9411149-6: Opportunity 95: environmental technology through small business, Morgantown, WV (United States), 16-17 Nov 1994). Order Number DE95007346. Source: OSTI; NTIS; GPO Dep.

This document contains several abstracts of talks given to 'Opportunity '95 - Environmental Technology Through Small Business.' Titles include the following: Pyrolysis of Plastic Waste; Subcritical water extraction of organic pollutants and extraction of hazardous metals from mixed solid wastes by chelation and supercritical fluid extraction; extraction and analysis of pollutant organics from contaminated solids using off-line supercritical fluid extraction and on-line SFE/IR; Stabilization of vitrified waste by enhanced crystallization and development of a protocol to predict long-term stability.

2987 (DOE/METC-95/1014) **Proceedings of Opportunity '95 - Environmental technology through small business.** Kothari, V.P. (ed.). USDOE Morgantown Energy Technology Center, WV (United States). Nov 1994. 264p. Sponsored by USDOE, Washington, DC (United States). (CONF-9411149-: Opportunity 95: environmental technology through small business, Morgantown, WV (United States), 16-17 Nov 1994). Order Number DE95000040. Source: OSTI; NTIS; INIS; GPO Dep.

The Opportunity '95-Environmental Technology Through Small Business conference was held November 16-17, 1994, at the Morgantown Energy Technology Center (METC) in Morgantown, West Virginia. The overall objective of this conference was to review the latest environmental and waste management technologies being developed under the sponsorship of the Environmental Management-Office of Technology Development (EM-OTD) Program at METC. The focus of this conference was also to address the accomplishments and barriers affecting small businesses, and lay the groundwork for future technology development initiatives and opportunities. Twenty papers were presented in three EM-OTD focus areas: mixed waste characterization, treatment and disposal (6 papers); contaminant plume containment and remediation (6 papers); and facility transitioning, decommissioning and final disposition (8 papers). In addition to the presentations, nine posters of environmental management areas were displayed. A panel discussion was also held on technology development assistance to small businesses. Selected papers are indexed separately for inclusion in the Energy Science and Technology Database.

2988 (DOE/RL-94-05) **1993 Toxic Chemical Release Inventory: Emergency Planning and Community Right-To-Know Act of 1986, Section 313.** USDOE Richland Operations Office, WA (United States). Jul 1994. 9p. Sponsored by USDOE, Washington, DC (United States). Order Number DE94018163. Source: OSTI; NTIS; GPO Dep.

Section 313 of the Emergency Planning and Community Right-To-Know-Act of 1986 (EPCRA) requires the annual

submission of toxic chemical release information to the US Environmental Protection Agency. The following document is the July 1994 submission of the Hanford site EPCRA Toxic Chemical Release Inventory (TRI) Report. Included is a Form R for chlorine, the sole chemical used in excess of the established regulatory thresholds at the Hanford Site by the US Department of Energy, Richland Operations Office and its contractors during Calendar Year 1993. Only those facilities that fall within the Standard Industrial Classification (SIC) code range of 20 through 39 are subject to mandatory reporting under EPCRA, Section 313. However, on August 3, 1993, Executive Order 12856 was signed, requiring all federal agencies and facilities to comply with pollution prevention and emergency planning and community right-to-know provisions established by Section 313 of EPCRA and Section 6607 of the Pollution Prevention Act of 1990, without restriction to the specified SIC Codes. The report format requires identification of the facility SIC Code in the TRI Report. Application of definitions and requirements provided in Title 40, Code of Federal Regulations Part 372.22 has led to the adoption of SIC Code 9999, Nonclassifiable Establishments, as the primary Hanford Site SIC Code for EPCRA regulatory assessments. The SIC Code 9999 determination is based on a broad analysis of the current mission of the Hanford Site which includes environmental and waste management, demonstration and application of advanced remediation technologies, and environmental restoration.

2989 (DOE/RL-94-39) **Strategic plan for Hanford Site Environmental Restoration Information Management.** Cowley, P.J. (and others); Beck, J.E.; Gephart, R.E. Pacific Northwest Lab., Richland, WA (United States). Jun 1994. 64p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (PNL-9429). Order Number DE94016861. Source: OSTI; NTIS; INIS; GPO Dep.

This strategic plan addresses information management for the Environmental Restoration (ER) Program at the Hanford Site. This Program leads the cleanup of the Hanford Site's soil, groundwater, buried waste, and the decontamination and decommissioning of facilities. The vision that drives this strategic plan is to ensure that quality information is available to the people who need it, when they need it, at a convenient location, in a usable form, and at an acceptable cost. Although investments are being made in managing the vast amounts of information, which include data, records and documents associated with the Hanford Site's production history and new cleanup mission, it is widely recognized that efforts to date have not accomplished the vision. Effective information management involves more than the compilation of massive amounts of electronic and non-electronic information. It also involves integrating information management into business processes that support user's needs and decisionmaking. Only then can information management complement and enable environmental restoration priorities and practices, help identify environmental restoration requirements, and enable communication within the Environmental Restoration Program and between the Program and its stakeholders. Successfully accomplishing the Hanford Site mission requires an integrated approach to information management that crosses organizational boundaries, streamlines existing systems, and builds new systems that support the needs of the future. This plan outlines that approach.

2990 (DOE/SR/18445-T1) **Infrastructure support for the Waste Management Institute at North Carolina A&T**

State University. Progress report, September 1994–January 1995. Uzochukwu, G.A. North Carolina Agricultural and Technical State Univ., Greensboro, NC (United States). 25 Jan 1995. 44p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG09-94SR18445. Order Number DE95005776. Source: OSTI; NTIS; INIS; GPO Dep.

The mission of the Waste Management Institute is two-fold: (1) to enhance awareness and understanding of waste problems and their management in our society and, (2) to provide leadership in research, instruction and outreach to improve the quality of life on a global scale and protect the environment.

2991 (EGG-M-94071) Applications for electronic documents. Beitel, G.A. Idaho National Engineering Lab., Idaho Falls, ID (United States). [1995]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. (CONF-9406297-1: 1994 annual meeting of the American Nuclear Society (ANS), Stanford, CA (United States), 19-23 Jun 1994). Order Number DE95005036. Source: OSTI; NTIS; INIS; GPO Dep.

This paper discusses the application of electronic media to documents, specifically Safety Analysis Reports (SARs), prepared for Environmental Restoration and Waste Management (ER&WM) programs being conducted for the Department of Energy (DOE) at the Idaho National Engineering Laboratory (INEL). Efforts are underway to upgrade our document system using electronic format. To satisfy external requirements (DOE, State, and Federal), ER&WM programs generate a complement of internal requirements documents including a SAR and Technical Safety Requirements along with procedures and training materials. Of interest, is the volume of information and the difficulty in handling it. A recently prepared ER&WM SAR consists of 1,000 pages of text and graphics; supporting references add 10,000 pages. Other programmatic requirements documents consist of an estimated 5,000 pages plus references.

2992 (EGG-M-94180) Controlling changes - lessons learned from waste management facilities. Johnson, B.M.; Koplow, A.S.; Stoll, F.E.; Waetje, W.D. Idaho National Engineering Lab., Idaho Falls, ID (United States). [1995]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. (CONF-9405138-3: 1994 Department of Energy configuration management workshop, Las Vegas, NV (United States), 3 May 1994). Order Number DE95005040. Source: OSTI; NTIS; INIS; GPO Dep.

This paper discusses lessons learned about change control at the Waste Reduction Operations Complex (WROC) and Waste Experimental Reduction Facility (WERF) of the Idaho National Engineering Laboratory (INEL). WROC and WERF have developed and implemented change control and an as-built drawing process and have identified structures, systems, and components (SSCS) for configuration management. The operations have also formed an Independent Review Committee to minimize costs and resources associated with changing documents. WROC and WERF perform waste management activities at the INEL. WROC activities include storage, treatment, and disposal of hazardous and mixed waste. WERF provides volume reduction of solid low-level waste through compaction, incineration, and sizing operations. WROC and WERF's efforts aim to improve change control processes that have worked inefficiently in the past.

2993 (EGG-WTD-11252) Buried Waste Integrated Demonstration Commercialization Action Plans second

quarter, FY-94. Kaupanger, R.M. EG and G Idaho, Inc., Idaho Falls, ID (United States). Jun 1994. 71p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Order Number DE95002031. Source: OSTI; NTIS; INIS; GPO Dep.

The Federal Government is extremely good at creating knowledge and developing new technology. However, our declining market share in many industries points to a weakness in our ability to successfully commercialize new discoveries. BWID assembled a team of qualified experts with expertise in technology transfer and broad-based technology knowledge to assist with this effort. Five new technologies were chosen to develop commercialization action plans. They include Dig-Face Characterization, Imaging Infrared Interferometer for Waste Characterization, Tensor Magnetic Gradiometer, Very Early Time Electromagnetic System, and Virtual Environment Generation of Buried Waste. Each plan includes a short description of the technology, a market overview, a list of potential customers, a description of competitors and the technology's competitive advantage, the status of intellectual property, the status of technology transfer, a table of action items, commercialization contacts, and program contacts.

2994 (EGG-WTD-11252-Vol.1) Buried Waste Integrated Demonstration commercialization actions plans. Volume 1. Kaupanger, R.M. (EG and G Idaho, Inc., Idaho Falls, ID (United States)); Glore, D. EG and G Idaho, Inc., Idaho Falls, ID (United States). Apr 1994. 38p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Order Number DE95002011. Source: OSTI; NTIS; INIS; GPO Dep.

The Buried Waste Integrated Demonstration (BWID) is sponsored by US Department of Energy (DOE) Office of Technology Development. BWID supports the development and demonstration of a suite of technologies that when integrated with commercially available baseline technologies form a comprehensive system for the effective and efficient remediation of buried waste throughout the DOE complex. BWID evaluates, validates, and demonstrates technologies and transfers this information throughout DOE and private industry to support DOE remediation planning and implementation activities. This report documents commercialization action plans for five technologies with near-term commercialization/implementation potential as well as provides a status of commercial and academic partners for each technology.

2995 (ES/ER/TM-56/V1) Guidelines for the creation and management of geographic data bases within a GIS environment, version 1.0. Durfee, R.C.; Land, M.L.; McCord, R.A.; Olson, R.J.; Thomas, J.K.; Tinnel, E.P.; Voorhees, L.D. Oak Ridge National Lab., TN (United States). Jul 1994. 79p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE94019214. Source: OSTI; NTIS; INIS; GPO Dep.

A Geographic Information System (GIS) provides the ability to manage and analyze all types of geographic and environmental information. It performs these functions by providing the tools necessary to capture, access, analyze, and display spatially referenced information in graphic and tabular form. Typical data elements that can be visualized in a map might include roads, buildings, topography, streams, waste areas, monitoring wells, groundwater measurements, soil sample results, landcover, and demography. The intent of this document is to provide data management and quality assurance (QA) guidelines that will aid implementors and

users of GIS technology and data bases. These guidelines should be useful in all, phases of GIS activities, including the following: (1) project planning, (2) data collection and generation, (3) data maintenance and management, (4) QA and standards, (5) project implementation, (6) spatial analysis and data interpretation, (7) data transformation and exchange, and (8) output and reporting. The daily use of desktop GIS technologies within Martin Marietta Energy Systems, Inc. (Energy Systems), is a relatively new phenomenon, but usage is increasing rapidly. Large volumes of GIS-related data are now being collected and analyzed for the U.S. Department of Energy (DOE) Oak Ridge Reservation (ORR) and its facilities. It is very important to establish and follow good data management practices for GIS. In the absence of such practices, data-related problems will overwhelm users for many years. In comparison with traditional data processing and software life-cycle management, there is limited information on GIS QA techniques, data standards and structures, configuration control, and documentation practices. This lack of information partially results from the newness of the technology and the complexity of spatial information and geographic analysis techniques as compared to typical tabular data management.

2996 (ES/ER/TM-56/V2) Guidelines for the creation and management of geographic data bases within a GIS environment, version 1.0: Volume II - appendices. Durfee, R.C.; Land, M.L.; McCord, R.A.; Olson, R.J.; Thomas, J.K.; Tinnel, E.P.; Voorhees, L.D. Oak Ridge National Lab., TN (United States). Jul 1994. 96p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE94019215. Source: OSTI; NTIS; GPO Dep.

This report is the documentation for the geographic data bases within the GIS environment. The data base is to be used in the Environmental Restoration projects being conducted throughout the United States.

2997 (ES/ER/TM-104) Federal and state regulatory requirements for decontamination and decommissioning at US Department of Energy Oak Ridge Operations Facilities. Ethier, E.L.; Houlberg, L.M.; Bock, R.E. Oak Ridge National Lab., TN (United States). Jun 1994. 83p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95002295. Source: OSTI; NTIS; INIS; GPO Dep.

The purpose of this report is to address regulatory requirements for decontamination and decommissioning (D and D) activities at the Oak Ridge Reservation and Paducah Gaseous Diffusion Plant. This report is a summary of potential federal and state regulatory requirements applicable to general D and D activities. Excerpts are presented in the text and tables from the complete set of regulatory requirements. This report should be used as a guide to the major regulatory issues related to D and D. Compliance with other federal, state, and local regulations not addressed here may be required and should be addressed carefully by project management on a site-specific basis. The report summarizes the major acts and implementing regulations (e.g., Resource and Conservation Recovery Act, Clean Air Act, and Toxic Substances Control Act) only with regard to D and D activities. Additional regulatory drivers for D and D activities may be established through negotiated agreements, such as the Federal Facility Agreement and the US Environmental Protection Agency Mixed Waste Federal Facility Compliance

Agreement; these are discussed in this report. The DOE orders and Energy Systems procedures also are summarized briefly in instances where they directly apply to D and D.

2998 (ES/ER/TM-113) Environmental Restoration Information Resource Management Program Plan. Martin Marietta Energy Systems, Inc., Oak Ridge, TN (United States). Sep 1994. 69p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95004739. Source: OSTI; NTIS; INIS; GPO Dep.

The Environmental Restoration Information Resources Management (ER IRM) Program Plan defines program requirements, organizational structures and responsibilities, and work breakdown structure and to establish an approved baseline against which overall progress of the program as well as the effectiveness of its management will be measured. This plan will guide ER IRM Program execution and define the program's essential elements. This plan will be routinely updated to incorporate key decisions and programmatic changes and will serve as the project baseline document. Environmental Restoration Waste Management Program intersite procedures and work instructions will be developed to facilitate the implementation of this plan.

2999 (ES/ER/TM-120/V1) Information Management Architecture for an Integrated Computing Environment for the Environmental Restoration Program: Volume 1, Introduction. Oak Ridge National Lab., TN (United States). Sep 1994. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95001384. Source: OSTI; NTIS; INIS; GPO Dep.

As part of the Environmental Restoration Program at Martin Marietta, IEM (Information Engineering Methodology) was developed as part of a complete and integrated approach to the progressive development and subsequent maintenance of automated data sharing systems. This approach is centered around the organization's objectives, inherent data relationships and business practices. IEM provides the Information Systems community with a tool kit of disciplined techniques supported by automated tools. It includes seven stages: Information Strategy Planning; Business Area Analysis; Business System Design; Technical Design; Construction; Transition; Production.

3000 (ES/ER/TM-120/V2) Information Management Architecture for an Integrated Computing Environment for the Environmental Restoration Program: Volume 2, Interim business systems guidance. Oak Ridge National Lab., TN (United States). Sep 1994. 44p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95001385. Source: OSTI; NTIS; INIS; GPO Dep.

As part of the Environmental Restoration Program at Martin Marietta, IEM (Information Engineering Methodology) was developed as part of a complete and integrated approach to the progressive development and subsequent maintenance of automated data sharing systems. This approach is centered around the organization's objectives, inherent data relationships, and business practices. IEM provides the Information Systems community with a tool kit of disciplined techniques supported by automated tools. It includes seven stages: Information Strategy Planning; Business Area Analysis; Business System Design; Technical Design; Construction; Transition; Production. This document focuses on the Business Systems Architecture.

3001 (ES/ER/TM-120/V3) Information management architecture for an integrated computing environment

for the Environmental Restoration Program. **Environmental Restoration Program, Volume 3, Interim technical architecture.** Oak Ridge National Lab., TN (United States). Sep 1994. 119p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95001386. Source: OSTI; NTIS; INIS; GPO Dep.

This third volume of the Information Management Architecture for an Integrated Computing Environment for the Environmental Restoration Program—the Interim Technical Architecture (TA) (referred to throughout the remainder of this document as the ER TA)—represents a key milestone in establishing a coordinated information management environment in which information initiatives can be pursued with the confidence that redundancy and inconsistencies will be held to a minimum. This architecture is intended to be used as a reference by anyone whose responsibilities include the acquisition or development of information technology for use by the ER Program. The interim ER TA provides technical guidance at three levels. At the highest level, the technical architecture provides an overall computing philosophy or direction. At this level, the guidance does not address specific technologies or products but addresses more general concepts, such as the use of open systems, modular architectures, graphical user interfaces, and architecture-based development. At the next level, the technical architecture provides specific information technology recommendations regarding a wide variety of specific technologies. These technologies include computing hardware, operating systems, communications software, database management software, application development software, and personal productivity software, among others. These recommendations range from the adoption of specific industry or Martin Marietta Energy Systems, Inc. (Energy Systems) standards to the specification of individual products. At the third level, the architecture provides guidance regarding implementation strategies for the recommended technologies that can be applied to individual projects and to the ER Program as a whole.

3002 (ES/ESH-50) Portsmouth Gaseous Diffusion Plant annual site environmental report for 1993. Horak, C.M. (ed.). Martin Marietta Energy Systems, Inc., Oak Ridge, TN (United States); Martin Marietta Energy Systems, Inc., Piketon, OH (United States). Nov 1994. 166p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400 ; AC05-76OR00001. (POEF-3050). Order Number DE95006673. Source: OSTI; NTIS; INIS; GPO Dep.

This calendar year (CY) 1993 annual report on environmental monitoring of the US Department of Energy's (DOE's) Portsmouth Gaseous Diffusion Plant (Portsmouth) and its environs consists of three separate documents: a summary pamphlet for the general public; a more detail discussion and of compliance status, data, and environmental impacts (this document); and a volume of detailed data that is available on request. The objectives of this report are to report compliance status during 1993; provide information about the plant site and plant operations; report 1993 monitoring data for the installation and its environs that may have been affected by operations on the plant site; document information on input and assumptions used in calculations; provide trend analyses (where appropriate) to indicate increases and decreases in environmental impact, and provide general information on quality assurance for the environmental monitoring program.

3003 (ES/ESH-51) Portsmouth Gaseous Diffusion Plant Annual Site Environmental Report summary for 1993. Martin Marietta Energy Systems, Inc., Oak Ridge, TN (United States); Portsmouth Gaseous Diffusion Plant, OH (United States). Nov 1994. 23p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. (POEF-3051). Order Number DE95006672. Source: OSTI; NTIS; INIS; GPO Dep.

This report contains summaries of the environmental programs at Paducah Gaseous Diffusion Plant, environmental monitoring and the results, and the impact of operations on the environment and the public for 1993. The environmental monitoring program at Paducah includes effluent monitoring and environmental surveillance. Effluent monitoring is measurement of releases as they occur. Contaminants are released through either airborne emissions or liquids discharged from the plant. These releases occur as part of normal site operations, such as cooling water discharged from the uranium enrichment cascade operations or airborne releases from ventilation systems. In the event of system failure, this monitoring provides timely warning so that corrective action can be taken before releases reach an unsafe level. Environmental surveillance tracks the dispersion of materials into the environment after they have been released. This involves the collection of samples from various media, such as water, soil, vegetation, and food crops, and the analysis of these samples for certain radionuclides, chemicals, and metals.

3004 (ES/ESH-53) Paducah Gaseous Diffusion Plant Annual Site Environmental Report for 1993. Martin Marietta Energy Systems, Inc., Oak Ridge, TN (United States); Martin Marietta Energy Systems, Paducah, KY (United States). Oct 1994. 160p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400 ; AC05-76OR00001. (KY/ERWM-18). Order Number DE95006635. Source: OSTI; NTIS; INIS; GPO Dep.

The purpose of this document is to summarize effluent monitoring and environmental surveillance results and compliance with environmental laws, regulations, and orders at the Paducah Gaseous Diffusion Plant (PGDP). Environmental monitoring at PGDP consists of two major activities: effluent monitoring and environmental surveillance. Effluent monitoring is direct measurement or the collection and analysis of samples of liquid and gaseous discharges to the environment. Environmental surveillance is direct measurement or the collection and analysis of samples of air, water, soil, foodstuff, biota, and other media. Environmental monitoring is performed to characterize and quantify contaminants, assess radiation exposures of members of the public, demonstrate compliance with applicable standards and permit requirements, and detect and assess the effects (if any) on the local environment. Multiple samples are collected throughout the year and are analyzed for radioactivity, chemical content, and various physical attributes.

3005 (ES/ESH-54) Paducah Gaseous Diffusion Plant Annual Site Environmental Report summary for 1993. Martin Marietta Energy Systems, Inc., Oak Ridge, TN (United States); Martin Marietta Energy Systems, Paducah, KY (United States). Nov 1994. 24p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400 ; AC05-76OR00001. (KY/ERWM-19). Order Number DE95006671. Source: OSTI; NTIS; INIS; GPO Dep.

This report contains summaries of the environmental programs at Paducah Gaseous Diffusion Plant, environmental monitoring and the results, and the impact of operations on

the environment and the public for 1993. The environmental monitoring program at Paducah includes effluent monitoring and environmental surveillance. Effluent monitoring is measurement of releases as they occur. Contaminants are released through either airborne emissions or liquids discharged from the plant. These releases occur as part of normal site operations, such as cooling water discharged from the uranium enrichment cascade operations or airborne releases from ventilation systems. In the event of system failure, this monitoring provides timely warning so that corrective action can be taken before releases reach an unsafe level. Environmental surveillance tracks the dispersion of materials into the environment after they have been released. This involves the collection of samples from various media, such as water, soil, vegetation, and food crops, and the analysis of these samples for certain radionuclides, chemicals, and metals.

3006 (ESTSC-000675IBMMF00) BSP. Budgets Summary Process. Johnson, D. (EG and G Idaho, Inc., Idaho Falls, ID (United States)). EG and G Idaho, Inc., Idaho Falls, ID (United States). 1 Jan 1987. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Source: ESTSC.

Description: IBM MAINFRAMES; On IBM 3090 VM/ESA, is capable oREXX (5%) NOMAD (95%); 1 Mag Tape. The VM operating system this process currently runs under has some naming conventions. FileName FileType FileMode are the three qualifiers. REXX requires that the FileType must be EXEC. NOMAD requires that the FileType must be NOMAD. The FileName is freeform; for this program, the name BUDGETS was chosen as the FileName for both the REXX and the NOMAD code. The FileMode refers to the disk - in VM this is usually the A disk.

The purpose of the BSP program is to provide an automated means of tracking budgets vs actual costs incurred for the CPRIMS (Construction Project Reporting Information Management System) project. The programs prompt for minimal information and then provides all of the desired calculations for the data base and report. Prior to this program, this was a manual process, tracking the weekly costs for the CPRIMS project. This generic process could be used for any project, not just the CPRIMS project.

3007 (FEMP-2353) Standards/requirements identification documents (S/RIDS). Beckman, W.H.; Alhadeff, N. Fernald Environmental Restoration Management Corp., Cincinnati, OH (United States). Fernald Environmental Management Project. [1994]. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-92OR21972. (CONF-9409200-1: Border environmental technology conference, Buffalo, NY (United States), 19-21 Sep 1994). Order Number DE94018444. Source: OSTI; NTIS; INIS; GPO Dep.

This paper describes the Fernald Environmental Restoration Management Corporation's (FERMCO) Standards/Requirement Identification Documents (S/RIDS) Development Program, the unique process used to implement it, and the status of the program. We will also discuss the lessons learned as the development program was implemented. The Department of Energy (DOE) established the Fernald site to produce uranium metals for the nation's defense programs in 1953. In 1989, DOE suspended production and, in 1991, the mission of the site was formally changed to one of environmental cleanup and restoration. The site was renamed the Fernald Environmental Management Project (FEMP) to reflect this change. From its

inception until November 1992, the site was managed under a Management and Operating contract. As a result in the change in mission, DOE awarded an Environmental Restoration Management Contract (ERMC), focusing on restoration. FERMCO assumed management of the site December 1, 1992. The joint DOE/FERMCO mission is to protect human health and the environment through the safe, early, and least-cost final clean-up of the site in compliance with all applicable regulations and commitments while addressing stakeholder concerns. DOE has managed nuclear facilities primarily through its oversight of Management and Operating contractors. These contractors were responsible for formulating, selecting, and administering standards controlling design, construction, operations, and maintenance. The DOE Operations Office Manager was responsible for approving individual contractor practices and the governing site standards and requirements to be met. Due to the absence of comprehensive nuclear industry standards when most DOE sites were first established, Management and Operating contractors had to apply existing non-nuclear industry standards and, in many cases, formulate new technical standards to address unique applications.

3008 (FEMP-2394) Implementing the theories: A fully integrated project control system that's implemented and works. Harris, R.E. Fernald Environmental Restoration Management Corp., Cincinnati, OH (United States). Fernald Environmental Management Project. 8 Dec 1994. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC24-92OR21972. (CONF-941246-3: 2. annual EM cost management conference, San Francisco, CA (United States), 5-9 Dec 1994). Order Number DE95004943. Source: OSTI; NTIS; INIS; GPO Dep.

Using the theories presented in DOE Orders 4700.1, 1332.1A, and Notice 4700.5 as the basis for system design, the Fernald Environmental Restoration Management Corporation (FERMCO) has developed and implemented a Project Control System (PCS) that complies with requirements and provides DOE and FERMCO management with timely performance measurement information. To this extent, the FERMCO PCS probably is similar to the systems of the majority of the contractors in the DOE complex. In fact, this facet of the FERMCO PCS generally mirrors those used on projects around the world by FERMCO's parent company, Fluor Daniel. Starting with this "platform", the vision and challenge of creating a fully integrated system commenced. An open-architecture systems approach is the factor that most greatly influenced and enabled the successful development and implementation of the Project Control System for the Fernald Environmental Management Project. All aspects of a fully integrated system were considered during the design phase. The architecture of the FERMCO system enables seamless, near real-time, transfer of data both from and to the Project Control System with all other related systems. The primary systems that provide and share data with the Project Control System include those used by the Payroll, Accounting, Procurement, and Human Resources organizations. To enable data linking with these organizations, the resource codes were designed to map many-to-one from their detailed codes to the summarized codes used in the PCS.

3009 (FEMP-2396) Integrated planning: A baseline development perspective. Clauss, L.; Chang, D. Fernald Environmental Restoration Management Corp., Cincinnati, OH (United States). 9 Dec 1994. 9p. Sponsored by USDOE,

Washington, DC (United States). DOE Contract AC24-92OR21972. (CONF-941246-6: 2. annual EM cost management conference, San Francisco, CA (United States), 5-9 Dec 1994). Order Number DE95004945. Source: OSTI; NTIS; INIS; GPO Dep.

The FEMP Baseline establishes the basis for integrating environmental activity technical requirements with their cost and schedule elements. The result is a path forward to successfully achieving the FERMCO mission. Specific to cost management, the FEMP Baseline has been incorporated into the FERMCO Project Control System (PCS) to provide a time-phased budget plan against which contractor performance is measured with an earned value management system. The result is the Performance Measurement Baseline (PMB), an important tool for keeping cost under control.

3010 (ICF-0001) Landlord Program multi-year program plan fiscal year 1995 WBS 7.5. Young, C.L. ICF Kaiser Hanford Co., Richland, WA (United States). 26 Sep 1994. 156p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-93RL12359. Order Number DE95001294. Source: OSTI; NTIS; INIS; GPO Dep.

The Landlord Program mission is to maintain, preserve, or upgrade the strategic assets of the Hanford Site to meet the overall cleanup mission. This encompasses innovative, appropriate, and cost effective general purpose infrastructure support, services, and long range strategic site planning that is the foundation for seven major Hanford programs. These programs are (1) Environmental Restoration, (2) Tank Waste Remediation System, (3) Solid/Liquid Waste Decontamination, (4) Facility Transition, (5) Spent Fuel, (6) Technology Development, and (7) the Multi-Program Laboratory. General infrastructure support consists of facilities, systems, and equipment that by design or use are not essentially dedicated to a single program mission. Facilities include laboratories, shops, warehouses, and general work space. Systems include electrical, process sewers, rail, roads, telecommunications, water, fire and emergency response, and steam supply and distribution. Funding also supports capital equipment critical to maintaining, upgrading, or operating the general infrastructure. Paramount to these objectives is compliance with all applicable laws, orders, agreements, codes, standards, best management and safety practices. The objectives for general infrastructure support are reflected in five programmatic functions, (1) Program Integration, (2) Capital Equipment, (3) Expense Funded Projects, (4) General Plant Projects, and (5) Line Items.

3011 (INEL-94/0205) Avoidable waste management costs. Hsu, K.; Burns, M.; Priebe, S.; Robinson, P. Lockheed Idaho Technologies Co., Idaho Falls, ID (United States). Jan 1995. 253p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-94ID13223. Order Number DE95008669. Source: OSTI; NTIS; INIS; GPO Dep.

This report describes the activity based costing method used to acquire variable (volume dependent or avoidable) waste management cost data for routine operations at Department of Energy (DOE) facilities. Waste volumes from environmental restoration, facility stabilization activities, and legacy waste were specifically excluded from this effort. A core team consisting of Idaho National Engineering Laboratory, Los Alamos National Laboratory, Rocky Flats Environmental Technology Site, and Oak Ridge Reservation developed and piloted the methodology, which can be used to determine avoidable waste management costs. The method developed to gather information was based on

activity based costing, which is a common industrial engineering technique. Sites submitted separate flow diagrams that showed the progression of work from activity to activity for each waste type or treatability group. Each activity on a flow diagram was described in a narrative, which detailed the scope of the activity. Labor and material costs based on a unit quantity of waste being processed were then summed to generate a total cost for that flow diagram. Cross-complex values were calculated by determining a weighted average for each waste type or treatability group based on the volume generated. This study will provide DOE and contractors with a better understanding of waste management processes and their associated costs. Other potential benefits include providing cost data for sites to perform consistent cost/benefit analysis of waste minimization and pollution prevention (WMIN/PP) options identified during pollution prevention opportunity assessments and providing a means for prioritizing and allocating limited resources for WMIN/PP.

3012 (LA-SUB-94-17) Support to LANL: Cost estimation: Final report. Los Alamos National Lab., NM (United States); ICF Kaiser Engineers, Inc., Fairfax, VA (United States). 4 Oct 1993. 152p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE94015420. Source: OSTI; NTIS; INIS; GPO Dep.

This report summarizes the activities and progress by ICF Kaiser Engineers conducted on behalf of Los Alamos National Laboratories (LANL) for the US Department of Energy, Office of Waste Management (EM-33) in the area of improving methods for Cost Estimation. This work was conducted between October 1, 1992 and September 30, 1993. ICF Kaiser Engineers supported LANL in providing the Office of Waste Management with planning and document preparation services for a Cost and Schedule Estimating Guide (Guide). The intent of the Guide was to use Activity-Based Cost (ABC) estimation as a basic method in preparing cost estimates for DOE planning and budgeting documents, including Activity Data Sheets (ADSs), which form the basis for the Five Year Plan document. Prior to the initiation of the present contract with LANL, ICF Kaiser Engineers was tasked to initiate planning efforts directed toward a Guide. This work, accomplished from June to September, 1992, included visits to eight DOE field offices and consultation with DOE Headquarters staff to determine the need for a Guide, the desired contents of a Guide, and the types of ABC estimation methods and documentation requirements that would be compatible with current or potential practices and expertise in existence at DOE field offices and their contractors.

3013 (LA-UR-94-2694) Implementation of electronic chain-of-custody, analysis requests, and data verification at Los Alamos National Laboratory. Pound, H.C.; Miglio, J.J. Los Alamos National Lab., NM (United States). [1994]. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-940985-7: American Society for Quality Control Energy and Environmental Quality Division conference, Tucson, AZ (United States), 18-21 Sep 1994). Order Number DE94018076. Source: OSTI; NTIS; GPO Dep.

To improve the efficiency of the entire environmental data collection process from sample collection to reporting to the client, Los Alamos National Laboratory is developing an automated system to carry out as much of the process as possible. The system uses "off-the-shelf" software. Our program anticipates a drastic reduction of the amount of paper generated throughout the process. The electronic system

includes spreadsheets used for field and laboratory chains-of-custody. In addition, the system is used to order analyses and to verify data for compliance.

3014 (LA-UR-94-3825) Independent Technical ("Red Team") Reviews. Thullen, P. (Los Alamos National Labs., NM (United States)); Bennett, D.R.; Kosiewicz, S.T.; Weaver, D.L. Los Alamos National Lab., NM (United States). [1995]. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-941102-35: Winter meeting of the American Nuclear Society, Washington, DC (United States), 13-18 Nov 1994). Order Number DE95003690. Source: OSTI; NTIS; INIS; GPO Dep.

Offices under the Assistant Secretary for Environmental Restoration and Waste Management (EM) in the Department of Energy (DOE) and some National Laboratories are using Independent Technical or "Red Team" Reviews to understand and improve the performance of major projects, major system acquisitions, programs and organizations. A core group formed in 1991 by Los Alamos National Laboratory and Sandia National Laboratories, has organized teams of commercial and private consultants to perform over fifteen Independent Technical Reviews (ITRs) throughout the DOE Complex. This paper discusses: review initiation, team formation, methodology, site response, and observations gathered over the past three years.

3015 (LA-UR-95-198) Two perspectives on a successful lab/industry technology transfer. MacArthur, D.W. (Los Alamos National Lab., NM (United States)); Ulbrich, R. Los Alamos National Lab., NM (United States). [1995]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-950216-74: Waste management '95, Tucson, AZ (United States), 26 Feb - 2 mar 1995). Order Number DE95006326. Source: OSTI; NTIS; INIS; GPO Dep.

Technology transfer from government laboratories to private business is of increasing concern in today's marketplace. Some prospective partners (on both sides) believe that technology transfer is a relatively simple process requiring little or no extra effort from the participants. In the authors experience this is not true and, in fact, positive results from a collaboration are directly proportional to the effort that both parties invest in the relationship. Communication, both between prospective partners before an agreement and between partners following the agreement, is essential. Neither technology nor marketing can stand by itself; it is the combination of the two that can produce a useful and available product. Laboratories and industries often have very different ways of looking at almost everything. Misunderstandings arising from these differences can short-circuit the transfer process or result in the production of a product that is unsalable. The authors will cover some of their experiences, potential problems, and their solutions. Examples discussed here is transfer of technology for long-range alpha detection developed at Los Alamos National Laboratory and transferred to Eberline Instrument Corporation.

3016 (LA-UR-95-212) Citizen advisory boards: An empirical model for choosing goals and methods. Kunsberg, P. Los Alamos National Lab., NM (United States). Dec 1994. 85p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE95006292. Source: OSTI; NTIS; INIS; GPO Dep.

This is a study of Citizen Advisory Boards (CABS) undertaken for the Department of Energy (DOE) to draw practical insights from the accumulated experience of CAB members

and agency officials who have worked with these boards over many years. Hence the main research tool is in-depth interviews of these individuals. In addition, the study relies on field observations of CABs at work, historical documentation of individual boards, and a large body of academic, professional, and government literature. The DOE is in the process of establishing Site Specific Advisory Boards (SSABs) at most of its major facilities in order to provide for community involvement in the DOE environmental restoration and environmental management programs, but these boards initiated by DOE do not yet have enough of a track-record for a study of this type. Consequently, the study focused on CABs at six other federal agencies which have had substantial experience with boards that are similar in composition and purpose to the SSABs. The study examined common problem that confront virtually every CAB in its organization and its decision-making process. For example, each board faces difficult issues in defining its goals and representational responsibilities, selection of members, selection of issues, reaching agreement on recommendations to the parent agency, getting responsive action from the parent agency, and evaluating the board's success over time. An effort was made to identify solutions or best approaches to these fundamental problems such that the recommended approach has broad application to citizen advisory boards concerned with environmental issues. The conclusions of the study are summarized in a model which incorporates the optimal approaches discovered with respect to each of the critical issues. While acknowledging that the particular circumstances of a CAB may call for individual variations, the model provides a fairly comprehensive description of recommended features of a CAB.

3017 (LBL-34468) Development of analytical and numerical models for the assessment and interpretation of hydrogeological field tests. Mironenko, V.A. (St. Petersburg Mining Inst. (Russian Federation)); Rumynin, V.G.; Konosavsky, P.K.; Pozdniakov, S.P.; Shestakov, V.M.; Roshal, A.A. Lawrence Berkeley Lab., CA (United States). Jul 1994. 94p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE95006725. Source: OSTI; NTIS; INIS; GPO Dep.

Mathematical models of the flow and tracer tests in fractured aquifers are being developed for the further study of radioactive wastes migration in round water at the Lake Area, which is associated with one of the waste disposal site in Russia. The choice of testing methods, tracer types (chemical or thermal) and the appropriate models are determined by the nature of the ongoing ground-water pollution processes and the hydrogeological features of the site under consideration. Special importance is attached to the increased density of wastes as well as to the possible redistribution of solutes both in the liquid phase and in the absorbed state (largely, on fracture surfaces). This allows for studying physical-and-chemical (hydrogeochemical) interaction parameters which are hard to obtain (considering a fractured structure of the rock mass) in laboratory. Moreover, a theoretical substantiation is being given to the field methods of studying the properties of a fractured stratum aimed at the further construction of the drainage system or the sub-surface flow barrier (cutoff wall), as well as the monitoring system that will evaluate the reliability of these ground-water protection measures. The proposed mathematical models are based on a tight combination of analytical and numerical methods, the former being preferred in solving the principal (2D axisymmetrical) class of the problems. The choice of

appropriate problems is based on the close feedback with subsequent field tests in the Lake Area. 63 refs.

3018 (LBL-36211) Development of hydrogeological modelling approaches for assessment of consequences of hazardous accidents at nuclear power plants. Rumynin, V.G. (St. Petersburg Mining Inst. (Russian Federation)); Mironenko, V.A.; Konosavsky, P.K.; Pereverzeva, S.A. Lawrence Berkeley Lab., CA (United States). Jul 1994. 44p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE95006719. Source: OSTI; NTIS; INIS; GPO Dep.

This paper introduces some modeling approaches for predicting the influence of hazardous accidents at nuclear reactors on groundwater quality. Possible pathways for radioactive releases from nuclear power plants were considered to conceptualize boundary conditions for solving the subsurface radionuclides transport problems. Some approaches to incorporate physical-and-chemical interactions into transport simulators have been developed. The hydrogeological forecasts were based on numerical and semi-analytical scale-dependent models. They have been applied to assess the possible impact of the nuclear power plants designed in Russia on groundwater reservoirs.

3019 (LBL-36212) The cascade of reservoirs of the "Mayak" Plant: Case history and the first version of a computer simulator. Mironenko, M.V. (Russian Academy of Sciences, Moscow (Russian Federation). Vernadsky Inst. of Geochemistry and Analytical Chemistry); Spasennykh, M.Yu.; Polyakov, V.B. Lawrence Berkeley Lab., CA (United States). Jul 1994. 83p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE95006727. Source: OSTI; NTIS; INIS; GPO Dep.

The improvement of the ecological conditions at waste storing reservoirs is an important task of the restoration activity at Production Association (PA) "Mayak" (South Urals). The radionuclides mostly ^{90}Sr , ^{137}Cs , and chemical pollutants deposited in the reservoir water and in the bottom sediment are very dangerous sources for the contamination of Techa River below the reservoirs and the contamination of groundwater in the surrounding formations. The spreading of radioactive contaminants has both hydrogeological and the chemical features. The thermodynamic approach used to account for physical-chemical interactions between water and the bed rocks based on Gibbs free energy minimization of multicomponent system (H-O-Ca-Mg-K-Na-S-Cl-C-Sr) permitted the authors to calculate the corresponding ionic and complex species existing in the solutions, and to characterize the processes of precipitation and dissolution. The model takes into account the input and output surface and underground water fluxes, mass exchange of the reservoir with the atmosphere, radioactive decay and water-sediment interaction including processes of the ^{90}Sr and ^{137}Cs sorption on the grains of the sediment and the radionuclide diffusion in the pore water. This model was used in the retrospective and prognosis calculations of radiation and hydrochemical regime of these reservoirs.

3020 (LBL-36385) Computer simulation of radionuclide transport through thermal convection of groundwater from borehole repositories. Malkovsky, V.I. (Russian Academy of Sciences, Moscow (Russian Federation). Inst. of Geology of Ore Deposits, Petrography, Mineralogy and Geochemistry); Pek, A.A. Lawrence Berkeley Lab., CA (United States). AC03-76SF00098. Order Number DE95006722. Source: OSTI; NTIS; INIS; GPO Dep.

Results are presented of numerical modeling of radionuclide transport by thermal convection of groundwater from a single well repository of high level waste. Because the problem possesses cylindrical symmetry, the process is described by a system of 2-D transient equations for momentum, convective heat transfer and convective mass transfer (taking into account hydrodynamic dispersion and radionuclide decay). Results of computer simulations for a selected range of system parameters were generalized by approximating analytical relationship, which can be used for safety assessment of a radioactive waste repository. The problem of the reciprocal relationship between thermoconvective transport processes and well spacing in an underground repository with a regularly spaced set of the waste-loaded wells is examined using a two-well model as an example. In this case, the transport problem becomes three-dimensional. A solution to this problem was obtained using a special system of orthogonal coordinates, which simplifies the computational algorithm and enhances accuracy. It is shown that thermoconvective transport of radionuclides in the vicinity of each well can be considered to be independent at well separations of the order of 100 m when reasonable values of other repository parameters are assumed.

3021 (LBL-36779) Tracer transport modeling of the doublet well system. Pozdniakov, S.P. (Moscow State Univ., Moscow (Russian Federation). Dept. of Geographical); Tsang, Chin-Fu. Lawrence Berkeley Lab., CA (United States). Jul 1994. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE95009376. Source: OSTI; NTIS; INIS; GPO Dep.

Steady-state flow and tracer transport between an injection well and a pumping well in a heterogeneous confined aquifer were investigated with numerical modeling. Calculation of transport was based on the advective model for heterogeneous aquifers. Dispersion was assumed to be controlled by microscale velocity variation. An effective parameter of dispersion evaluated on the breakthrough curves was defined to account for the influences of heterogeneity. Breakthrough curves were calculated by using numerical modeling of transport in a strongly heterogeneous aquifer with spatial heterogeneous transmissivity fields. The results of modeling were processed by comparison with analytical solutions of doublet systems to obtain the effective parameters. A special solution was developed for advective transport in aquifers with a layered structure. Examples of real field heterogeneity were given to show its influence on breakthrough curves and the resulting impact on the effective macroscopic parameters.

3022 (LBL-36780) Distribution and geochemistry of contaminated subsurface waters in fissured volcanogenic bed rocks of the Lake Karachai Area, Chelyabinsk, Southern Urals. Solodov, I.N. (Russian Academy of Sciences, Moscow (Russian Federation)); Belichkin, V.I.; Zotov, A.V.; Kochkin, B.T.; Drozhko, E.G.; Glagolev, A.V.; Skokov, A.N. Lawrence Berkeley Lab., CA (United States). Jun 1994. 46p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE95009377. Source: OSTI; NTIS; INIS; GPO Dep.

The present investigation is devoted to the study of the distribution and geochemistry of contaminated subsurface

waters, beneath the site of temporary storage of liquid radioactive waste known as Lake Karachai. For this purpose a method of hydrogeochemical logging (HGCL) together with standard hydrogeochemical and geophysical methods of uncased hole logging were used. The distribution of sodium nitrate brine plumes in the subsurface was determined by the physical and physico-chemical properties of these brines and by the petrochemical composition of enclosing rocks and the structural setting of the flow paths. The latter is represented by fractures and large faults in the bedrock of volcanogenic and volcanogenic-sedimentary rocks of intermediate-to-basic composition. The volcanogenic rocks are overlain in some places by a thin cover of unconsolidated sediments, i.e., by loams and relatively impermeable silts. Contaminated waters flow in accordance with the eluvium bottom relief towards local areas of natural (Mishelyak and Techa rivers) and artificial (Novogomenskii water intake) discharge of subsurface waters. The large Mishelyak fault, southwest of Lake Karachai and under fluvial sediments of the Mishelyak, is assumed to significantly influence the flow pattern of contaminated waters, diverting them from an intake of drinking water.

3023 (ORNL/M-4156) The Environmental Management Project Manager's Handbook for improved project definition. Oak Ridge National Lab., TN (United States). Feb 1995. 168p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95009041. Source: OSTI; NTIS; INIS; GPO Dep.

The United States Department of Energy (DOE) is committed to providing high quality products that satisfy customer needs and are the associated with this goal, DOE personnel must possess the knowledge, skills, and abilities to ensure successful job performance. In addition, there must be recognition that the greatest obstacle to proper project performance is inadequate project definition. Without strong project definition, DOE environmental management efforts are vulnerable to fragmented solutions, duplication of effort, and wastes resources. The primary means of ensuring environmental management projects meet cost and schedule milestones is through a structured and graded approach to project definition, which is the focus of this handbook.

3024 (ORNL/TM-12724) Quality assurance plan for Final Waste Forms project in support of the development, demonstration, testing and evaluation efforts associated with the Oak Ridge reservation's LDR/FFCA compliance. Gilliam, T.M.; Matus, C.H. Oak Ridge National Lab., TN (United States). Jul 1994. 65p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE94017591. Source: OSTI; NTIS; INIS; GPO Dep.

This quality assurance project plan specifies the data quality objectives for Phase I of the Final Waste Forms Project and defines specific measurements and processes required to achieve those objectives. Although the project is funded by the U.S. Department of Energy (DOE), the ultimate recipient of the results is the U.S. Environmental Protection Agency (EPA). Consequently, relevant quality assurance requirements from both organizations must be met. DOE emphasizes administrative structure to ensure quality; EPA's primary focus is the reproducibility of the generated data. The ten criteria of DOE Order 5700.6C are addressed in sections of this report, while the format used is that prescribed by EPA for quality assurance project plans.

3025 (ORNL/TM-12774) ELIPGRID-PC: A PC program for calculating hot spot probabilities. Davidson, J.R. Oak Ridge National Lab., TN (United States). Oct 1994. 191p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95002507. Source: OSTI; NTIS; INIS; GPO Dep.

ELIPGRID-PC, a new personal computer program has been developed to provide easy access to Singer's 1972 ELIPGRID algorithm for hot-spot detection probabilities. Three features of the program are the ability to determine: (1) the grid size required for specified conditions, (2) the smallest hot spot that can be sampled with a given probability, and (3) the approximate grid size resulting from specified conditions and sampling cost. ELIPGRID-PC also provides probability of hit versus cost data for graphing with spreadsheets or graphics software. The program has been successfully tested using Singer's published ELIPGRID results. An apparent error in the original ELIPGRID code has been uncovered and an appropriate modification incorporated into the new program.

3026 (ORNL/TM-12817, pp. 409) Automated radioactive control system of the Moscow Meson Factory's releases. Serezhnikov, S.V. (Institute for Nuclear Research of the Russian Academy of Sciences, Moscow (Russian Federation)); Stepanov, V.E. Oak Ridge National Lab., TN (United States). Oct 1994. (CONF-9410171-: 43. Franz-Pacher colloquium on geomechanics, Salzburg (Austria), 13-14 Oct 1994). In *Fourth conference on radiation protection and dosimetry: Proceedings, program, and abstracts*. 620p. Order Number DE94018560. Source: OSTI; NTIS; INIS; GPO Dep.

We have been investigating the radiation environmental effects from high current proton accelerators. Now we are creating an Automatic Radioactive Control System of the Moscow meson factory's releases (ARCS) into the atmosphere. The composition of the releases consists primarily of the short-lived radioactive gases C, N, O, O. About 10% of the releases consist of Ar and about 2% are other radionuclides. The continual sampling of the released mixture results from the pressure difference existing in the ventilation system. The mixture sampling network includes the filters, the ionization and the measuring chambers, where gamma-rays with energy of 0.511 Mev and 1.29 Mev are measured with the scintillation gamma spectrometer. Additionally, the system measures gross gamma and beta activity, the speed of the selected mixture, the speed of the released mixture, the speed and direction of the wind, the vertical gradient of the temperature and the humidity of the released mixture. The results of the measurements needed for sight and population dose model calculations are written into a database of ARCS.

3027 (PNL-9450-1) International Nuclear Waste Management Fact Book. Leigh, I.W. Pacific Northwest Lab., Richland, WA (United States). May 1994. 338p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE94018005. Source: OSTI; NTIS; INIS; GPO Dep.

International Nuclear Waste Management Fact Book has been compiled in an effort to provide current data concerning fuel cycle and waste management facilities, R&D programs, and key personnel in 24 countries, including the US, four multinational agencies and 21 nuclear societies. This publication succeeds the previously issued International Nuclear Fuel Cycle Fact Book (PNL-3594), which

appeared annually for 13 years. While the title is different, there are no substantial changes in the content.

3028 (PNL-9823) Hanford Site Environmental Report 1993. Dirkes, R.L.; Hanf, R.W.; Woodruff, R.K. (eds.). Battelle Pacific Northwest Lab., Richland, WA (United States). Jun 1994. 357p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE95000320. Source: OSTI; NTIS; INIS; GPO Dep.

The Hanford Site Environmental Report is prepared annually to summarize environmental data and information, describe environmental management performance, and demonstrate the status of compliance with environmental regulations. The report also highlights major environmental programs and efforts. The report is written to meet reporting requirements and Guidelines of the U.S. Department of Energy (DOE) and to meet the needs of the public. This summary has been written with a minimum of technical terminology. Individual sections of the report are designed to (a) describe the Hanford Site and its mission, (b) summarize the status in 1993 of compliance with environmental regulations, (c) describe the environmental programs at the Hanford Site, (d) discuss estimated radionuclide exposure to the public from 1993 Hanford activities, (e) present information on effluent monitoring and environmental surveillance, including ground-water protection and monitoring, (f) discuss activities to ensure quality. More detailed information can be found in the body of the report, the appendixes, and the cited references.

3029 (PNL-9824) Hanford Site environmental data for calendar year 1993—surface and Columbia River. Bisping, L.E. Battelle Pacific Northwest Lab., Richland, WA (United States). Jun 1994. 322p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE95000319. Source: OSTI; NTIS; INIS; GPO Dep.

Environmental monitoring at the Hanford Site, located in southeastern Washington State, is conducted by Battelle Memorial Institute, Pacific Northwest Division, as part of its contract to operate the Pacific Northwest Laboratory (PNL) for the U.S. Department of Energy. The data collected provide a historical record of radionuclide and radiation levels attributable to natural causes, worldwide fallout, and Hanford operations. Data are also collected to monitor several chemicals. Pacific Northwest Laboratory publishes an annual environmental report for the Hanford Site each calendar year. The Hanford Site Environmental Report for Calendar Year 1993 describes the Site mission and activities, general environmental features, radiological and chemical releases from operations, status of compliance with environmental regulations, status of programs to accomplish compliance, and environmental monitoring activities and results. The report includes a summary of offsite and onsite environmental monitoring data collected during 1993 by PNL's Environmental Monitoring Program. Appendix A of that report contains data summaries created from raw surface and river monitoring data. This volume contains the actual raw data used to create the summaries.

3030 (PNL-10062) Hanford Mission Plan risk-based prioritization methodologies. Hesser, W.A. (Pacific Northwest Lab., Richland, WA (United States)); Madden, M.S.; Pylon, N.M.; Butcher, J.L. Pacific Northwest Lab., Richland, WA (United States). Aug 1994. 41p. Sponsored by USDOE,

Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE94018618. Source: OSTI; NTIS; INIS; GPO Dep.

Sites across the US Department (DOE) complex recognize the critical need for a systematic method for prioritizing among their work scope activities. Here at the Hanford Site, Pacific Northwest Laboratory and Westinghouse Hanford Company (WHC) conducted preliminary research into techniques to meet this need and assist managers in making financial resource allocation decisions. This research is a subtask of the risk management task of the Hanford Mission Plan as described in the WHC Integrated Planning Work Breakdown Structure 1.8.2 Fiscal Year 1994 Work Plan. The research team investigated prioritization techniques used at other DOE sites and compared them with the Priority Planning Grid (PPG), a tool used at Hanford. The authors concluded that the PPG could be used for prioritization of resource allocation, but it needed to be revised to better reflect the Site's priorities and objectives. The revised PPG was tested with three Hanford programs, the PPG was modified, and updated procedures were prepared.

3031 (PNL-10204) A proposed framework for conducting pollution prevention design assessments (P2DAs) on U.S. Department of Energy design projects. Dorsey, J.A. Pacific Northwest Lab., Richland, WA (United States). Mar 1995. 85p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE95011334. Source: OSTI; NTIS; INIS; GPO Dep.

The purpose of this manual is to provide a framework for project managers, engineers, and designers to integrate pollution prevention principles and features into DOE design projects. The framework suggested is referred to as the pollution prevention design assessment (P2DA). The P2DA is based on DOE's method for conducting pollution prevention opportunity assessments (PPOAs) on existing waste-generating operations, but the P2DA is modified because the facility or process it assesses does not physically exist during design. Before the P2DA framework is introduced in the manual, recommendations for establishing the P2DA team and budget are provided. Specific pollution prevention requirements and opportunities for each design stage as delineated in DOE Order 4700.1 Project Management System are also discussed and a sample format for drafting a P2DA report is provided in the appendix. The scope of this manual includes not only the P2DA framework, but also a background discussion of pollution prevention and related topics; the regulatory requirements mandating design for pollution prevention; the benefits and barriers of designing for pollution prevention; and the impact that pollution prevention and related environmental avoidance concepts have had on the engineering profession.

3032 (PNL-10459) List of currently classified documents relative to Hanford Operations and of potential use in the Columbia River Comprehensive Impact Assessment, January 1, 1973–June 20, 1994. Miley, T.B.; Huesties, L.R. Pacific Northwest Lab., Richland, WA (United States). Feb 1995. 45p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE95008085. Source: OSTI; NTIS; GPO Dep.

The Columbia River Comprehensive Impact Assessment (CRCIA) Project seeks to estimate the current risk from the Columbia River resulting from past and present Hanford activities. To resolve the question of the current risk, it is necessary for the CRCIA Project to have access to any classified information that may be relevant to this study. The

purpose of this report is to present the results of the search for relevant classified information. There are two classified matter control centers operated by two prime contractors at the Hanford Site. One is operated by Pacific Northwest Laboratory (PNL) and the other is operated by Westinghouse Hanford Company (WHC). Only the WHC collection contained information relevant to a study of the Columbia River in the time frame of interest: January 1, 1973 through June 20, 1994. A list of the classified documents in the WHC collection is maintained in the WHC Classified Document Control database. The WHC Classified Document Control database was searched. The search criteria were the dates of interest and the basic keywords used for the CRCIA Project's data compendium (Eslinger et al. 1994). All Hanford-generated, Hanford-related entries that were applicable to the CRCIA Project and the dates of interest were provided. The resulting list of 477 titles comprises the Appendix of this report. The information given for each title is exactly as it appears in the database. Any inconsistencies are the result of duplicating the database.

3033 (PNL-SA-20950) A review of occupational safety and health issues relevant to the Environmental Restoration Program: Selected case histories and associated issues. Lesperance, A.M.; Siegel, M.R.; McKinney, M.C. Pacific Northwest Lab., Richland, WA (United States). Aug 1994. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-940815-109: International nuclear and hazardous waste management conference, Atlanta, GA (United States), 14-18 Aug 1994). Order Number DE95005402. Source: OSTI; NTIS; INIS; GPO Dep.

Since the 1940s, US Department of Energy (DOE) sites have been used for nuclear materials processing and production, warhead testing, and weapons research and development. These activities have resulted in extensive environmental contamination. DOE has established a goal to cleanup and restore the groundwater, soils, sediments, and surface water at its facilities across the nation. To achieve this goal, many workers will be needed to conduct the cleanup. These workers will need training and will be required to follow occupational safety and health (OSH) regulations and guidelines. Compliance with the OSH regulations and guidelines will have an anomalous influence on the schedule, money, and technology needed for environmental restoration. Therefore, one area that must be considered in the early stages of long-term planning is the impact of OSH issues on the environmental restoration process. The DOE Office of Environmental Restoration and Waste Management has requested that the Pacific Northwest Laboratory (PNL) investigate the impact of these issues on the environmental restoration process.

3034 (PNL-SA-23597) Public involvement in environmental surveillance at Hanford. Hanf, R.W. Jr.; Patton, G.W.; Woodruff, R.K.; Poston, T.M. Pacific Northwest Lab., Richland, WA (United States). Aug 1994. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-940815-94: International nuclear and hazardous waste management conference, Atlanta, GA (United States), 14-18 Aug 1994). Order Number DE94018719. Source: OSTI; NTIS; INIS; GPO Dep.

Environmental surveillance at the Hanford Site began during the mid-1940s following the construction and start-up of the nation's first plutonium production reactor. Over the past approximately 45 years, surveillance operations on and off the Site have continued, with virtually all sampling being

conducted by Hanford Site workers. Recently, the US Department of Energy Richland Operations Office directed that public involvement in Hanford environmental surveillance operations be initiated. Accordingly, three special radiological air monitoring stations were constructed offsite, near Hanford's perimeter. Each station is managed and operated by two local school teachers. These three stations are the beginning of a community-operated environmental surveillance program that will ultimately involve the public in most surveillance operations around the Site. The program was designed to stimulate interest in Hanford environmental surveillance operations, and to help the public better understand surveillance results. The program has also been used to enhance educational opportunities at local schools.

3035 (PNL-SA-23687) Hanford technology integration: A success story. Stenehjem, E.J.; Pond, D.J.; Widrig, J.E.; Deonigi, D.E. Pacific Northwest Lab., Richland, WA (United States). [1994]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-940225-125: Waste management '94: working towards a cleaner environment, Tucson, AZ (United States), 27 Feb - 3 Mar 1994). Order Number DE95001431. Source: OSTI; NTIS; INIS; GPO Dep.

This paper describes recent activities of the Richland Northwest Laboratory in the area of technology transfer. A major thrust within major DOE laboratories has been the implementation of technology transfer activities which transfer scientific knowledge, transfer technologies developed to deal with the production or conservation of energy, and transfer spinoff technologies into the private sector. Several activities which are in process or have been implemented are described in this paper.

3036 (PNL-SA-23788) The seven main steps of the DQO planning process. Goheen, S.C. Pacific Northwest Lab., Richland, WA (United States). [1994]. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE94014555. Source: OSTI; NTIS; GPO Dep.

The Data Quality Objectives (DQO) Planning Process (DQOPP) involves seven steps. Each step requires that all persons who might be able to influence that step's program before it is completed become involved. Those with such influence include representatives from: program managers, who define the overall remediation project; regulators, who set standards for the remediation; line managers, who use data to design and guide the remediation; data suppliers, who collect and analyze the samples; DQO specialists, who help to guide the technical planning in the DQOPP. At the end of each step, a document is prepared that describes the elements needed in that step. Each participant must sign the document to show concurrence. A brief description of the seven steps is presented in this document.

3037 (PNL-SA-23839) The Environmental and Molecular Sciences Laboratory project - Continuous evolution in leadership. Knutson, D.E.; McClusky, J.K. Pacific Northwest Lab., Richland, WA (United States). Oct 1994. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-941091-3: 25. Project Management Institute annual seminar and symposium, Vancouver (Canada), 17-19 Oct 1994). Order Number DE95004572. Source: OSTI; NTIS; INIS; GPO Dep.

The Environmental and Molecular Sciences Laboratory (EMSL) construction project at Pacific Northwest Laboratory (PNL) in Richland, Washington, is a \$230M Major Systems

Acquisition for the US Department of Energy (DOE). The completed laboratory will be a national user facility that provides unparalleled capabilities for scientists involved in environmental molecular science research. This project, approved for construction by the Secretary of Energy in October 1993, is underway. The United States is embarking on an environmental cleanup effort that dwarfs previous scientific enterprise. Using current best available technology, the projected costs of cleaning up the tens of thousands of toxic waste sites, including DOE sites, is estimated to exceed one trillion dollars. The present state of scientific knowledge regarding the effects of exogenous chemicals on human biology is very limited. Long term environmental research at the molecular level is needed to resolve the concerns, and form the building blocks for a structure of cost effective process improvement and regulatory reform.

3038 (PNL-SA-23947) Transparent access to distributed, heterogeneous environmental information systems. Brown, J.C.; Kissinger, B.A. Pacific Northwest Lab., Richland, WA (United States). Sep 1994. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9409293-1: 5. international conference on database and expert systems applications, Athens (Greece), 7-9 Sep 1994). Order Number DE95007268. Source: OSTI; NTIS; GPO Dep.

Quality situation assessment and decision making require access to multiple sources of data and information. The question facing today's analyst is not so much "Is the data I need to do my work available?" as "How can I get to the data I need to make an informed decision?" Insufficient accessibility to data exists for many large corporations and Government agencies. By utilizing current advances in computer technology, today's situation analysts have a wealth of information at their disposal. There are many potential solutions to the information accessibility problem using today's technology. The United States Department of Energy (USDOE) faced this situation when dealing with the problem of high level radioactive waste (HLW) tanks in the United States. The result of their efforts has been the creation of the Tank Waste Information Network System - TWINS. The TWINS solution combines many technologies to address problems in several areas such as user interfaces, transparent access to multiple data sources, and integrated data access. Data related to the HLW tank complex is currently distributed throughout several US-DOE installations. Over time, each installation has adopted its own set of standards for information management, hardware, and software platforms. These factors contribute to the complexity of accessing information in a manner that enhances the performance and decision making process of the analysts. This paper presents one approach taken by the US-DOE to resolve the problem of distributed, heterogeneous, multimedia information management through the development of multilevel architectural controls and access mechanisms for the HLW Tank complex. The information system architecture developed for the US-DOE by the TWINS effort is one that is adaptable to other problem domains and uses.

3039 (PNL-SA-24157) West Siberian basin hydrogeology - regional framework for contaminant migration from injected wastes. Foley, M.G. Battelle Pacific Northwest Lab., Richland, WA (United States). May 1994. 53p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9405185-1: International symposium on the scientific and engineering

aspects of deep injection disposal of hazardous and industrial wastes, Berkeley, CA (United States), 10-13 May 1994). Order Number DE94014494. Source: OSTI; NTIS; INIS; GPO Dep.

Nuclear fuel cycle activities of the former Soviet Union (FSU) have resulted in massive contamination of the environment in western Siberia. We are developing three-dimensional numerical models of the hydrogeology and potential contaminant migration in the West Siberian Basin. Our long-term goal at Pacific Northwest Laboratory is to help determine future environmental and human impacts given the releases that have occurred to date and the current waste management practices. In FY 1993, our objectives were to (1) refine and implement the hydrogeologic conceptual models of the regional hydrogeology of western Siberia developed in FY 1992 and develop the detailed, spatially registered digital geologic and hydrologic databases to test them, (2) calibrate the computer implementation of the conceptual models developed in FY 1992, and (3) develop general geologic and hydrologic information and preliminary hydrogeologic conceptual models relevant to the more detailed models of contaminated site hydrogeology. Calibration studies of the regional hydrogeologic computer model suggest that most precipitation entering the ground-water system moves in the near-surface part of the system and discharges to surface waters relatively near its point of infiltration. This means that wastes discharged to the surface and near-surface may not be isolated as well as previously thought, since the wastes may be carried to the surface by gradually rising ground waters.

3040 (PNL-SA-24231) Hanford Site's Integrated Risk Assessment Program: No-intervention risk assessment. Mahaffey, J.A. (and others); Dukelow, J.S. Jr.; Stenner, R.D. Pacific Northwest Lab., Richland, WA (United States). Aug 1994. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-940815-91: International nuclear and hazardous waste management conference, Atlanta, GA (United States), 14-18 Aug 1994). Order Number DE94017803. Source: OSTI; NTIS; INIS; GPO Dep.

The long-term goal of the Integrated Risk Assessment program (IRAP) is to estimate risks to workers, the public, organizations, and groups with reserved rights to Site access, the ecosystem, and natural resources to aid in managing environmental restoration and waste management at the Hanford Site. For each of these, information is needed about current risks, risks during cleanup, and endstate risks. The objective is three-fold: to determine if and when to remediate, and to what extent; to identify information unavailable but needed to make better cleanup decisions; to establish technology performance criteria for achieving desired cleanup levels; to understand costs and benefits of activities from a Site-wide perspective. The no-intervention risk assessment is the initial evaluation of public health risks conducted under IRAP. The objective is to identify types of activities that the US Department of Energy (DOE) must accomplish for closure of the Hanford Site, defined as no further DOE intervention. There are two primary conclusions from the no-intervention risk assessment. First, some maintenance and operations activities at Hanford must be continued to protect the public from grave risks. However, when large Hanford expenditures are compared to cleanup progress, funds expended for maintenance and operations must be put in proper perspective. Second, stakeholder's emphasis on public risks at Hanford, as indicated by remediation priorities, are not in line with those estimated. The

focus currently is on compliance with regulations, and on dealing with issues which are visible to stakeholders.

3041 (PNL-SA-24404) Integrated demonstrations, integrated programs, and special programs within DOE's Office of Technology Development. Peterson, M.E.; Frank, C.; Stein, S.; Steele, J. Pacific Northwest Lab., Richland, WA (United States). Aug 1994. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-940815-86: International nuclear and hazardous waste management conference, Atlanta, GA (United States), 14-18 Aug 1994). Order Number DE94017456. Source: OSTI; NTIS; INIS; GPO Dep.

This poster session presents information on integrated demonstrations, integrated programs, and special programs within the EM Office of Technology Development that will accelerate cleanup of sites within the Nuclear Weapons Complex. Presented topics include: Volatile organic compounds in soils and ground water, uranium in soils, underground storage tanks, mixed waste landfills, decontamination and decommissioning, in situ remediation, and separations technology.

3042 (PNL-SA-24419) Pacific Northwest Laboratory environmental technologies available for deployment. Slate, S.C. Pacific Northwest Lab., Richland, WA (United States). Jul 1994. 38p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE94015205. Source: OSTI; NTIS; INIS; GPO Dep.

The Department of Energy created the Office of Environmental Management (EM) to conduct a 30-year plus, multi-billion dollar program to manage the wastes and cleanup the legacy from over fifty years of nuclear material production. Across the DOE System there are thousands of sites containing millions of metric tons of buried wastes and contaminated soils and groundwater. Additionally, there are nearly 400,000 m³ of highly radioactive wastes in underground storage tanks, over 1,400 different mixed-waste streams, and thousands of contaminated surplus facilities, some exceeding 200,000 m² in size. Costs to remediate all these problems have been estimated to be as much as several hundred billion dollars. The tremendous technical challenges with some of the problems and the high costs of using existing technologies has led the Department to create the Office of Technology Development (TD) to lead an aggressive, integrated national program to develop and deploy the needed advanced, cost-effective technologies. This program is developing technologies for all major cleanup steps: assessment, characterization, retrieval, treatment, final stabilization, and disposal. Work is focused on the Department's five major problem areas: High-Level Waste Tank Remediation; Contaminant Plume Containment and Remediation; Mixed Waste Characterization, Treatment, and Disposal; Contaminated Soils and Buried Wastes Facility Transitioning, Decommissioning, and Final Disposal.

3043 (PNL-SA-24743) Information system architecture to support transparent access to distributed, heterogeneous data sources. Brown, J.C. Pacific Northwest Lab., Richland, WA (United States). Aug 1994. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-940873-4: 11. office information technology conference, Chicago, IL (United States), 23-25 Aug 1994). Order Number DE94018450. Source: OSTI; NTIS; INIS; GPO Dep.

Quality situation assessment and decision making require access to multiple sources of data and information. Insufficient accessibility to data exists for many large corporations and Government agencies. By utilizing current advances in computer technology, today's situation analyst's have a wealth of information at their disposal. There are many potential solutions to the information accessibility problem using today's technology. The United States Department of Energy (US-DOE) faced this problem when dealing with one class of problem in the US. The result of their efforts has been the creation of the Tank Waste Information Network System - TWINS. The TWINS solution combines many technologies to address problems in several areas such as User Interfaces, Transparent Access to Multiple Data Sources, and Integrated Data Access. Data related to the complex is currently distributed throughout several US-DOE installations. Over time, each installation has adopted their own set of standards as related to information management. Heterogeneous hardware and software platforms exist both across the complex and within a single installation. Standards for information management vary between US-DOE mission areas within installations. These factors contribute to the complexity of accessing information in a manner that enhances the performance and decision making process of the analysts. This paper presents one approach taken by the DOE to resolve the problem of distributed, heterogeneous, multi-media information management for the HLW Tank complex. The information system architecture developed for the DOE by the TWINS effort is one that is adaptable to other problem domains and uses.

3044 (PNL-SA-24754) Automated remedial assessment methodology software system. Whiting, M.; Wilkins, M.; Stiles, D. Pacific Northwest Lab., Richland, WA (United States). Nov 1994. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-941113-2: Conference on development and application of computer techniques to environmental studies: Envirosoft '94, San Francisco, CA (United States), 16-18 Nov 1994). Order Number DE95007287. Source: OSTI; NTIS; INIS; GPO Dep.

The Automated Remedial Analysis Methodology (ARAM) software system has been developed by the Pacific Northwest Laboratory to assist the U.S. Department of Energy (DOE) in evaluating cleanup options for over 10,000 contaminated sites across the DOE complex. The automated methodology comprises modules for decision logic diagrams, technology applicability and effectiveness rules, mass balance equations, cost and labor estimating factors and equations, and contaminant stream routing. ARAM is used to select technologies for meeting cleanup targets; determine the effectiveness of the technologies in destroying, removing, or immobilizing contaminants; decide the nature and amount of secondary waste requiring further treatment; and estimate the cost and labor involved when applying technologies.

3045 (PNL-SA-24993) Four-dimensional information visualization and analysis system. Rex, B. Pacific Northwest Lab., Richland, WA (United States). Sep 1994. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9409278-1: GVIS '94: graphics and visualization conference, Richland, WA (United States), 8 Sep 1994). Order Number DE95004935. Source: OSTI; NTIS; INIS; GPO Dep.

4DIVAS was conceived for two purposes. The first purpose was to fill the void between the current generation of

GIS and high-end, image-only visualization systems. The gap existing between these two systems can be summarized as the limitation of relational database oriented GIS to deal with time and the poor connection in visualization systems to databases of any kind. The second purpose was to permit spatio-temporal modeling and query, functionalities currently underdeveloped in the commercial arena. At the Hanford Site, there are many potential applications for such a system, especially in the monitoring and modeling of potential constituent plumes in the subsurface hydrology over time, among others. In its current form, 4DIVAS exists as a proof-of-concept functional prototype and is therefore more of a technology than a product at this time.

3046 (SAND-94-2061) Report on the Workshop on Port Selection Criteria for Shipments of Foreign Research Reactor Spent Nuclear Fuel. Massey, C.D. Sandia National Labs., Albuquerque, NM (United States). Feb 1995. 30p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. Order Number DE95011024. Source: OSTI; NTIS; INIS; GPO Dep.

This document describes the results of the Workshop on Port Selection Criteria for Shipments of Spent Nuclear Fuel. The workshop was held at the United States Merchant Marine Academy in Kings Point, New York on November 15 and 16, 1993. The workshop panel of maritime experts developed criteria for the US Department of Energy for the evaluation and selection of ports of entry for spent-fuel shipments. While recommending criteria for selecting ports, the workshop panel agreed that any port capable of handling an ocean-going vessel is capable of safely receiving spent nuclear fuel.

3047 - (SAND-94-2272C) A phased approach to cooperative environmental management R&D projects with Russian Institutes. Matalucci, R.V. (Sandia National Labs., Albuquerque, NM (United States)); Albert, T.E. Sandia National Labs., Albuquerque, NM (United States). [1994]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-9409217-1: 1. international environmental technology and business action conference, Moscow (Russian Federation), 12-16 Sep 1994). Order Number DE95000546. Source: OSTI; NTIS; INIS; GPO Dep.

An important aspect of technology exchange between the US and the Former Soviet Union (FSU) countries is the identification and implementation of cooperative projects that are mutually beneficial. The US Department of Energy (DOE) and its national laboratories have established a four-phase approach to identify and further develop Russian technologies that could contribute to solving DOE environmental management problems. Following an initial screening and identification of potential technologies, the country-to-country interaction is formally initiated in the first phase through a small-scale pilot project study. This phase consists of an evaluation of the specific technology for DOE applications, and provides an opportunity for both US and Russian scientists and engineers to validate the use of the technology for a specific DOE requirement. The successful completion of this phase establishes the basis for continuing the technology development into the second phase, which includes laboratory testing in Russia. In the third phase, the technology is laboratory tested in the US, most likely at those DOE national laboratories having the capability and greatest interest in the particular technology area. The fourth and final phase consist of a commercialization process that establishes a partnership with a US business to

finalize development of the technology and to prepare for implementation within the DOE complex. An example of this phased approach is a current high-level waste separation cooperative project between the Khlopin Radium Institute and the DOE through Sandia National Laboratories (SNL) and Science Applications International Corporation (SAIC). This effort has not only enhanced separations technology for the DOE, but has also provided an example of a working process for future cooperative projects.

3048 (SAND-94-2275C) Application of EnviroTRADE Information system for the cleanup of the former Soviet Union (FSU) site at Komarom Base, Hungary. Matalucci, R.V. (Sandia National Labs., Albuquerque, NM (United States)); Harrington, M.W.; Harlan, C.P.; Kuperberg, J.M.; Biczko, I.L. Sandia National Labs., Albuquerque, NM (United States). [1994]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-940983-3: 2. international symposium and exhibition on environmental contamination in Central and Eastern Europe, Budapest (Hungary), 20-23 Sep 1994). Order Number DE95000535. Source: OSTI; NTIS; INIS; GPO Dep.

During a NATO Advanced Research Workshop (ARW) held in Visegrad, Hungary, June 21-23, 1994, portions of contamination data from the Former Soviet Union (FSU) site at Komarom, Hungary were used to demonstrate the international EnviroTRADE Information System as a tool to assist with the identification of alternative cleanup measures for contaminated sites. The NATO ARW was organized and conducted by the joint Florida State University and the Technical University of Budapest, Center for Hungarian-American Environmental Research, Studies, and Exchanges (CHAERSE). The purpose of the workshop was to develop a strategy for the identification and selection of appropriate low-cost and innovative site remediation technologies and approaches for a typical abandoned FSU site. The EnviroTRADE information system is a graphical, photographic, and textual environmental management tool under development by the U.S. Department of Energy (USDOE) at Sandia National Laboratories (SNL) as a part of the cleanup program of the nuclear weapons complex. EnviroTRADE provides a single, powerful, multi-purpose, multi-user, multimedia, and interactive computer information system for worldwide environmental restoration and waste management (ER/WM). Graphical, photographic, and textual data from the Komarom FSU site were entered into EnviroTRADE. These data were used to make comparative evaluations of site characterization and remediation technologies that might be used to clean up primarily hydrocarbon contamination in the groundwater and soil. Available Hydrogeological and geological features, contaminated soil profiles, and topographical maps were included in the information profiles. Although EnviroTRADE is currently only partially populated (approximately 350 technologies for cleanup are included in the database), the utility of the information system to evaluate possible options for cleanup of the Komarom site has been demonstrated.

3049 (SAND-95-0570C) Benefits of Improved environmental cooperation on a joint DoD/DOE facility. Pratt, G.K. (Tetra Tech, Inc., Albuquerque, NM (United States)); Gibson, J.D. Sandia National Labs., Albuquerque, NM (United States). [1995]. 5p. Sponsored by USDOE, Washington, DC (United States); Department of Defense, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-950451-1: 21. national environmental symposium and exhibition, San Diego, CA (United States),

17-21 Apr 1995). Order Number DE95009584. Source: OSTI; NTIS; INIS; GPO Dep.

Numerous Federal facilities within the US involve multiple government agencies that face overlapping environmental concerns. This paper highlights the benefits of looking beyond the strict letter of environmental regulations that might affect a single tenant or environmental site to cooperative environmental efforts that focus on the entire facility, consistent with the missions of participating agencies. Using Kirtland Air Force Base (AFB) as a model, seven areas of Department of Defense (DoD) and Department of Energy (DOE) environmental cooperation are discussed that span technical, regulatory compliance, and administrative issues.

3050 (SAND-95-0828C) Radiological consequences of ship collisions that might occur in US ports during the shipment of foreign research reactor spent nuclear fuel to the US in break-bulk freighters. Sprung, J.L. (Sandia National Labs., Albuquerque, NM (United States)); Bepalko, S.J.; Johnson, J.D.; Massey, C.D.; Reardon, P.C.; Yoshimura, R.; Ebert, M.; Gallagher, D. Sandia National Labs., Albuquerque, NM (United States). [1995]. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-950216-132: Waste management '95, Tucson, AZ (United States), 26 Feb - 2 Mar 1995). Order Number DE95010872. Source: OSTI; NTIS; INIS; GPO Dep.

Accident source terms, source term probabilities, consequences, and risks are developed for ship collisions that might occur in US ports during the shipment of spent fuel from foreign research reactors to the United States.

3051 (UCRL-JC-115613) On Integrating modeling software for application to total-system performance assessment. Lewis, L.C. (Lawrence Livermore National Lab., CA (United States)); Wilson, M.L. Lawrence Livermore National Lab., CA (United States). May 1994. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-940815-75: International nuclear and hazardous waste management conference, Atlanta, GA (United States), 14-18 Aug 1994). Order Number DE94016361. Source: OSTI; NTIS; INIS; GPO Dep.

We examine the processes and methods used to facilitate collaboration in software development between two organizations at separate locations - Lawrence Livermore National Laboratory (LLNL) in California and Sandia National Laboratories (SNL) in New Mexico. Our software development process integrated the efforts of these two laboratories. Software developed at LLNL to model corrosion and failure of waste packages and subsequent releases of radionuclides was incorporated as a source term into SNLs computer models for fluid flow and radionuclide transport through the geosphere.

3052 (UCRL-JC-116577) International School of Innovative Technology for Cleaning the Environment, Ettore Majorana Centre for Scientific Culture: Erice, Sicily, Italy. Ragaini, R.C. Lawrence Livermore National Lab., CA (United States). Jun 1994. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-920851-98: Spectrum '92: nuclear and hazardous waste management international topical meeting, Boise, ID (United States), 23-27 Aug 1992). Order Number DE94014729. Source: OSTI; NTIS; GPO Dep.

The International School of Innovative Technology for Cleaning the Environment was founded at the Ettore Majorana Centre for Scientific Culture (EMCSC), the seat of the

World Laboratory Mediterranean Branch, in 1989. The School primarily organizes and hosts training courses and advanced study courses addressing state-of-the-art technologies to clean the environment, minimize waste generation, prevent pollution, and identify strategies to choose environmentally resilient sites and processes for new industrial installations. The School also participates in facilitating multi-national research projects for developing countries under the auspices of the World Laboratory and other sponsoring agencies.

3053 (WHC-SA-2209) Calculating cost-training bill-back at WHC. Gardner, P.R. Westinghouse Hanford Co., Richland, WA (United States). Nov 1993. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. (CONF-931188-5: 17. annual training resources and data exchange conference: integrating training requirements and expectations, Indianapolis, IN (United States), 15-17 Nov 1993). Order Number DE95003272. Source: OSTI; NTIS; INIS; GPO Dep.

Westinghouse Hanford Company, in an attempt to understand training costs and to find a make-or-buy tool for training, has constructed a Training Cost Estimator. Among the outputs of this Lotus program are projected numbers of instructor, managers, and secretarial staff, and cost per student ("tuition").

3054 (WHC-SA-2210) The Instructor-Free Training Department. Gardner, P.R. (Westinghouse Hanford Co., Richland, WA (United States)); Sanford, D.E. Westinghouse Hanford Co., Richland, WA (United States). Nov 1993. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. (CONF-931188-4: 17. annual training resources and data exchange conference: integrating training requirements and expectations, Indianapolis, IN (United States), 15-17 Nov 1993). Order Number DE95003273. Source: OSTI; NTIS; GPO Dep.

Today's skills will be obsolete in the year 2000. That workforce will require a much higher degree of technical sophistication and adaptability. Enormous demands will be made of DOE contractor training departments even as federal deficit reduction actions increasingly restrict resources and as the emergence of electronic performance support systems appear to diminish the need for training. True training will still be required but they must, and can, train better, faster, and cheaper. These goals are attainable by implementing the implications of performance-based training and by focusing on learning instead of on teaching. (Indeed, ability to learn efficiently and rapidly will be the premier talent in the next century.) Training Departments must dedicate themselves to changing performance, not to teaching classes. The best training department of the future will have no "instructors". Trainingforce 2000 will look and function much differently.

3055 (WHC-SA-2282) Public agency partnership: Hanford's history artifacts as a communications tool. Gerber, M.S. Westinghouse Hanford Co., Richland, WA (United States). Feb 1994. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. (CONF-940225-116: Waste management '94: working towards a cleaner environment, Tucson, AZ (United States), 27 Feb - 3 Mar 1994). Order Number DE94014127. Source: OSTI; NTIS; INIS; GPO Dep.

The Hanford Site in eastern Washington state currently is engaged in the largest waste cleanup in world history. In order to make informed decisions about remediation options,

the public throughout the Pacific Northwest and the nation needs to understand the wastes that are present, their sources of generation, their composition, and their behavior in the environment. The fact that Hanford operations' were conducted in secret for over four decades presents a unique public information challenge to those who currently are responsible for communicating with the public.

3056 (WHC-SA-2434) Generating custom test plans for CASE*Dictionary 5.0. Atkins, K.D. (Boeing Computer Services, Richland, WA (United States)). Westinghouse Hanford Co., Richland, WA (United States). Apr 1994. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. (CONF-9404143-2: Oracle CAS SIG spring '94 conference, Keystone, CO (United States), 23-26 Apr 1994). Order Number DE94018164. Source: OSTI; NTIS; GPO Dep.

Most database development organizations use a formal software development methodology that requires a certain amount of formal testing. The amount of formal testing that will be performed will vary from methodology to methodology and from site to site. If a very detailed formal test plan is required for each module in a system, the work involved to produce the test plan can be tedious and costly. After a system has been designed and developed using Oracle*CASE, there is much useful information in the CASE*Dictionary repository. If this information could be tied to specific test requirements, a test plan could be generated automatically, saving much time and resources. This paper shows how CASE*Dictionary can be used to store test plan information that can then be used to generate a specific test plan for each module based on its detailed data usage.

3057 (WHC-SA-2594) Measuring the strategic value of information technology investments. Conrad, K.W. (Boeing Computer Services Co., Richland, WA (United States)). Westinghouse Hanford Co., Richland, WA (United States). Aug 1994. 38p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. (CONF-940873-3: 11. office information technology conference, Chicago, IL (United States), 23-25 Aug 1994). Order Number DE94018160. Source: OSTI; NTIS; INIS; GPO Dep.

Value is often perceived differently by the proponents of new information technologies and those who allocate resources and define priorities. Such differences often become a roadblock to meeting true business needs. Project justifications regularly rely on calculated cost savings, which rarely measure the full benefit of new technologies. In fact, if cost savings provide a complete picture, then the organization is probably just automating routine clerical operations and has abandoned efforts that would provide significant strategic value. Strategic value is not limited to financial calculations, but includes quality, time and risk criteria. This paper describes approaches for measuring strategic value that can provide organizations with proven techniques to improve performance, reengineer processes, benchmark performance against other suppliers, identify outsourcing opportunities, or defend themselves from pressures to outsource. Many organizations respond to tightening budgets by cutting overhead. These measurement approaches can demonstrate how overhead is critical to organizational effectiveness and how cost savings can be found, instead, by measurably improving performance throughout the organization. Finally, the paper describes efforts underway within the Department of Energy and at the Hanford Site to implement the approaches described in this paper.

3058 (WHC-SA-2657) A pathway to academic accreditation. Seitz, M.R. Westinghouse Hanford Co., Richland, WA (United States). Sep 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. (CONF-9410190-1: 18. annual training resources and data exchange conference: meeting line management expectations, Dallas, TX (United States), 31 Oct - 2 Nov 1994). Order Number DE95001313. Source: OSTI; NTIS; GPO Dep.

The pathways to successfully accrediting programs through a partnership with a local college can be convoluted and offer many dead ends. Those pathways can be made straighter and have fewer false starts by following a plan that has worked. Accreditation of courses and programs can add credibility and prestige to a program. The process can be facilitated by following a basic plan such as the one outlined. The discussion will track the preliminary activities that form the ground work for the beginning of the accreditation process through final approval by a college's State Board of trustees or regents. On the road to approval, the packaging of courses for presentation, the formulation and composition of an advisory committee, the subsequent use of the advisors, presentation to the faculty committees, the presentation to the college's governing board of trustees or regents, and final approval by the State Board are covered. An important benefit of accreditation is the formation of a partnership with the local college. Teaming with a local college to provide an accredited certificate in a field of employee training is an excellent opportunity to establish an educational partnership within the local community that will be of benefit to the participating entities. It also represents a training/retraining opportunity in direct support of the US Department of Energy's current missions of partnership and localization. The accredited modules can be taught where appropriate by college personnel or loaned instructors from the work site. By using the company employees who are working with the topics covered in the modules, the courses are kept up-to-date.

3059 (WHC-SA-2683) Advances in technology transfer at Federal Facilities. Silva, R.R. Jr. Westinghouse Hanford Co., Richland, WA (United States). Nov 1994. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. (CONF-9411139-1: Optimizing the technology transfer function, Chicago, IL (United States), 2-4 Nov 1994). Order Number DE95001534. Source: OSTI; NTIS; INIS; GPO Dep.

The Hanford Site, located in the southeast portion of the state of Washington, is a 1450-hectare (560 square miles) reservation that was selected by the US Government in 1942 for production of the world's first nuclear weapons materials. For more than 40 years, defense production operations at Hanford generated hazardous and radioactive materials and wastes that for the most part remain there today. Environmental restoration of the Hanford Site is the primary mission of the Westinghouse Hanford Company (WHC) and it is also the thrust of the Tri-Party agreement among the US Environmental Protection Agency, the Washington State Department of Ecology and the US Department of Energy. Restoration will require treatment of about 1400 individual locations that are contaminated by chemically hazardous wastes, radioactive wastes, non-hazardous wastes and mixed hazardous and radioactive wastes. These locations include burial sites, storage facilities, obsolete buildings, settling ponds, waste cribs and large and small areas of near-surface and deep soil contamination. Burial

trenches contain an estimated 109,000 cubic meters of low-level solid wastes contaminated with hazardous chemicals and radioactive materials. Approximately 450 sites were contaminated by discharge of liquids to the ground and there are about 250 additional areas where waste materials were spilled. At one time, ditches carried water from processing plants to settling/cooling ponds and 131 cribs were used over the years to dispose of slightly radioactive liquid wastes.

3060 (WHC-SA-2723) A model for determining when an analysis contains sufficient detail to provide adequate NEPA coverage for a proposed action. Eccleston, C.H. Westinghouse Hanford Co., Richland, WA (United States). Nov 1994. 29p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE95006767. Source: OSTI; NTIS; INIS; GPO Dep.

Neither the National Environmental Policy Act (NEPA) nor its subsequent regulations provide substantive guidance for determining the Level of detail, discussion, and analysis that is sufficient to adequately cover a proposed action. Yet, decisionmakers are routinely confronted with the problem of making such determinations. Experience has shown that no two decisionmakers are likely to completely agree on the amount of discussion that is sufficient to adequately cover a proposed action. One decisionmaker may determine that a certain Level of analysis is adequate, while another may conclude the exact opposite. Achieving a consensus within the agency and among the public can be problematic. Lacking definitive guidance, decisionmakers and critics alike may point to a universe of potential factors as the basis for defending their claim that an action is or is not adequately covered. Experience indicates that assertions are often based on ambiguous opinions that can be neither proved nor disproved. Lack of definitive guidance slows the decisionmaking process and can result in project delays. Furthermore, it can also lead to inconsistencies in decisionmaking, inappropriate Levels of NEPA documentation, and increased risk of a project being challenged for inadequate coverage. A more systematic and less subjective approach for making such determinations is obviously needed. A paradigm for reducing the degree of subjectivity inherent in such decisions is presented in the following paper. The model is specifically designed to expedite the decisionmaking process by providing a systematic approach for making these determinations. In many cases, agencies may find that using this model can reduce the analysis and size of NEPA documents.

3061 (WHC-SA-2745) Lessons learned during the development and conduct of exercise Fermont. Faulk, S.M. Westinghouse Hanford Co., Richland, WA (United States). Apr 1995. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. (CONF-950430-3: 5. ANS topical meeting on emergency preparedness and response, Savannah, GA (United States), 18-21 Apr 1995). Order Number DE95004973. Source: OSTI; NTIS; INIS; GPO Dep.

On September 22-23, 1993, the DOE, Richland Operations Office (RL) in Richland, Washington conducted a major field exercise named Fremont. This exercise tested the ability of the Site emergency organization and the State and local emergency organizations in both Washington and Oregon to take the appropriate actions to mitigate a major emergency and to protect the citizens of the region. The exercise involved initial emergency activities as well as intermediate and late phase actions including relocation and

ingestion activities. A major element of the exercise was the participation of the Federal Radiological Monitoring and Assessment Center (FRMAC). This was the first major exercise that a DOE site requested a full FRMAC participation in a nonclassified environment.

3062 (WHC-SA-2753) An ugly duckling becomes a swan ...: How an organization becomes customer focused through listening. Asercion, R.E. (Boeing Computer Services Co., Richland, WA (United States)); Myer, V.J. Westinghouse Hanford Co., Richland, WA (United States). Apr 1995. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. (CONF-950464-1: 17. national industrial energy technology conference - serving industry's needs, in conjunction with the spring regional conference of the Gulf Coast Cogeneration Association, Houston, TX (United States), 4-6 Apr 1995). Order Number DE95004974. Source: OSTI; NTIS; GPO Dep.

The story we're about to tell is true and the names have not been changed to protect the innocent because BCS Richland, Inc. (BCSR), a subsidiary of the Boeing Company, is proud of its metamorphosis from the ugly duckling of computer support to the shining swan-like star of the Help Desk industry. The transformation occurred in the midst of an all but antiquated computer technology environment, rapid technology changes, low employee morale, and high amount of customer frustration. BCSR, located at the Hanford site in the southeastern corner of Washington State, provides information resource management and computer support to the Department of Energy (DOE) complex located at the site. The primary mission of DOE is environmental restoration and waste clean-up. End User Support (EUS), an organization within BCSR, is tasked with all aspects of microcomputer support, both hardware and software. EUS efficiently and effectively supports approximately 12,000 computer users across the entire 560 square mile site. With a small staff of 50 consultants and technicians, EUS provides support to a diverse customer base that includes engineers and scientists, as well as financial personnel, managers, and clerical support. But it wasn't always this way. BCSR management recognized it and empowered the EUS staff to make the necessary changes. Here's how they did it.

3063 (WHC-SD-CP-TR-006) Engineering Phase 2 and Phase 3 certification programs - PUREX deactivation. Walser, R.L. Westinghouse Hanford Co., Richland, WA (United States). 13 Dec 1994. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE95005133. Source: OSTI; NTIS; INIS; GPO Dep.

This document describes the training programs required to become a Phase 2 and Phase 3 certified engineer at PUREX during deactivation. With the change in mission, the PUREX engineering/certification training program is being revamped as discussed below. The revised program will be administered by PUREX Technical Training using existing courses and training materials. The program will comply with the requirements of the Department of Energy (DOE) order 5480.20A, "Personnel Selection, Qualification, Training, and Staffing Requirements at DOE Reactor and Non-Reactor Nuclear Facilities."

3064 (WHC-SD-GN-ISB-30001) Hanford Generic Interim Safety Basis. Lavender, J.C. Westinghouse Hanford Co., Richland, WA (United States). 9 Sep 1994. 392p. Sponsored by USDOE, Washington, DC (United

States). DOE Contract AC06-87RL10930. Order Number DE95001568. Source: OSTI; NTIS; INIS; GPO Dep.

The purpose of this document is to identify WHC programs and requirements that are an integral part of the authorization basis for nuclear facilities that are generic to all WHC-managed facilities. The purpose of these programs is to implement the DOE Orders, as WHC becomes contractually obligated to implement them. The Hanford Generic ISB focuses on the institutional controls and safety requirements identified in DOE Order 5480.23, Nuclear Safety Analysis Reports.

3065 (WHC-SD-T100-CDR-001) Conceptual design report, Hazardous Materials Management and Emergency Response (HAMMER) Training Center. Kelly, K.E. (Westinghouse Hanford Co., Richland, WA (United States)). Westinghouse Hanford Co., Richland, WA (United States); Montgomery Watson, Richland, WA (United States). 9 Nov 1994. 398p. Sponsored by USDOE, Washington, DC (United States); Department of Defense, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE95003852. Source: OSTI; NTIS; INIS; GPO Dep.

For the next 30 years, the main activities at the US Department of Energy (DOE) Hanford Site will involve the management, handling, and cleanup of toxic substances. If the DOE is to meet its high standards of safety, the thousands of workers involved in these activities will need systematic training appropriate to their tasks and the risks associated with these tasks. Furthermore, emergency response for DOE shipments is the primary responsibility of state, tribal, and local governments. A collaborative training initiative with the DOE will strengthen emergency response at the Hanford Site and within the regional communities. Local and international labor has joined the Hazardous Materials Management and Emergency Response (HAMMER) partnership, and will share in the HAMMER Training Center core programs and facilities using their own specialized trainers and training programs. The HAMMER Training Center will provide a centralized regional site dedicated to the training of hazardous material, emergency response, and fire fighting personnel.

3066 (WHC-SD-T100-FDC-001-Rev.1) Functional design criteria for the Hazardous Materials Management and Emergency Response (HAMMER) Training Center. Revision 1. Sato, P.K. Westinghouse Hanford Co., Richland, WA (United States). 10 Mar 1995. 31p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE95009096. Source: OSTI; NTIS; INIS; GPO Dep.

Within the United States, there are few hands-on training centers capable of providing integrated technical training within a practical application environment. Currently, there are no training facilities that offer both radioactive and chemical hazardous response training. There are no hands-on training centers that provide training for both hazardous material operations and emergency response that also operate as a partnership between organized labor, state agencies, tribes, and local emergency responders within the US Department of Energy (DOE) complex. Available facilities appear grossly inadequate for training the thousands of people at Hanford, and throughout the Pacific Northwest, who are required to qualify under nationally-mandated requirements. It is estimated that 4,000 workers at the Hanford Site alone need hands-on training. Throughout the Pacific Northwest, the potential target audience would be over 30,000

public sector emergency response personnel, as well as another 10,000 clean-up workers represented by organized labor. The HAMMER Training Center will be an interagency-sponsored training center. It will be designed, built, and operated to ensure that clean-up workers, fire fighters, and public sector management and emergency response personnel are trained to handle accidental spills of hazardous materials. Training will cover wastes at clean-up sites, and in jurisdictions along the transportation corridors, to effectively protect human life, property, and the environment.

3067 (WHC-SD-T100-PLN-001) Project plan, Hazardous Materials Management and Emergency Response Training Center: Project 95L-EWT-100. Borgeson, M.E. Westinghouse Hanford Co., Richland, WA (United States). 9 Nov 1994. 28p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE95003850. Source: OSTI; NTIS; INIS; GPO Dep.

The Hazardous Materials Management and Emergency Response (HAMMER) Training Center will provide for classroom lectures and hands-on practical training in realistic situations for workers and emergency responders who are tasked with handling and cleanup of toxic substances. The primary objective of the HAMMER project is to provide hands-on training and classroom facilities for hazardous material workers and emergency responders. This project will also contribute towards complying with the planning and training provisions of recent legislation. In March 1989 Title 29 Code of Federal Regulations Occupational Safety and Health Administration 1910 Rules and National Fire Protection Association Standard 472 defined professional requirements for responders to hazardous materials incidents. Two general types of training are addressed for hazardous materials: training for hazardous waste site workers and managers, and training for emergency response organizations.

3068 (WHC-SD-T100-PMP-001) Project management plan, Hazardous Materials Management and Emergency Response Training Center. Borgeson, M.E. Westinghouse Hanford Co., Richland, WA (United States). 12 Dec 1994. 24p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE95005288. Source: OSTI; NTIS; INIS; GPO Dep.

For the next 30 years, the main activities at the Hanford Site will involve the handling and cleanup of toxic substances. Thousands of workers involved in these new activities will need systematic training appropriate to their tasks and associated risks. This project is an important part of the Hanford Site mission and will enable the US Department of Energy (DOE) to meet high standards for safety. The Hazardous Materials Management and Emergency Response Training Center (HAMMER) project will construct a centralized regional training center dedicated to training hazardous materials workers and emergency responders in classrooms and with hands-on, realistic training aids representing actual field conditions. The HAMMER Training Center will provide a cost-effective, high-quality way to meet the Hanford Site training needs. The training center creates a partnership among DOE; government contractors; labor; local, state, and tribal governments; and selected institutions of higher education.

3069 (WHC-SD-T100-QAPP-001) Project T100 - Hazardous Materials Management and Emergency

Response Training Center (HAMMER). Norton, C.E. Westinghouse Hanford Co., Richland, WA (United States). 9 Nov 1994. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE95003772. Source: OSTI; NTIS; INIS; GPO Dep.

The scope of this Quality Assurance Program Plan (QAPP) is to provide a system of Quality Assurance reviews and verifications on the design and construction of the Hazardous Materials Management and Emergency Response (HAMMER) Training Center, project 95L-EWT-100 at Hanford. The reviews and verifications will be on activities associated with design, procurement, and construction of the HAMMER project which includes, but is not limited to earthwork, placement of concrete, laying of rail, drilling of wells, water and sewer line fabrication and installation, communications systems, fire protection/detection systems, line tie-ins, building and mock-up (prop) construction, electrical, instrumentation, pump and valves and special coatings.

3070 (WHC-SD-WM-CM-012) Configuration management plan for the GENII software. Rittmann, P.D. Westinghouse Hanford Co., Richland, WA (United States). 12 Dec 1994. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE95005163. Source: OSTI; NTIS (documentation only); ESTSC (complete software package), P.O. Box 1020, Oak Ridge, TN 37831-1020 (United States); INIS; GPO Dep.

The GENII program calculates doses from radionuclides released into the environment for a variety of possible exposure scenarios. The user prepares an input data file with the necessary modelling assumptions and parameters. The program reads the user's input file, computes the necessary doses and stores these results in an output file. The output file also contains a listing of the user's input and gives the title lines from the data libraries which are accessed in the course of the calculations. The purpose of this document is to provide users of the GENII software with the configuration controls which are planned for use by WHC in accordance with WHC-CM-3-10. The controls are solely for WHC employees. Non-WHC individuals are not excluded, but no promise is made or implied that they will be informed of errors or revisions to the software. The configuration controls cover the GENII software, the GENII user's guide, the list of GENII users at WHC, and the backup copies. Revisions to the software must be approved prior to distribution in accordance with this configuration management plan.

3071 (WHC-SD-WM-TR-024-Rev.1) B Plant Complex waste management training plan: Revision 1. Beam, T.G. Westinghouse Hanford Co., Richland, WA (United States). 24 Oct 1994. 55p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE95003228. Source: OSTI; NTIS; INIS; GPO Dep.

This training program is designed to comply with all applicable federal, state and US Department of Energy-Richland Operations Office training requirements. The training program complies with requirements contained within WAC 173-303-330 for the development of a written dangerous waste training program. The training program is designed to prepare personnel to manage and maintain waste treatment, storage and disposal (TSD) units, as well as generator units, in a safe, effective, efficient and environmentally sound manner. In addition to preparing employees to manage and maintain TSD and generator units under normal conditions, the training program ensures that employees are prepared to respond in a prompt and effective manner should an emergency occur. The training plan also identifies specific

individuals holding key waste management positions at B Plant Complex.

3072 (WHC-SP-1096) Planning integration FY 1995 Multi-Year Program Plan (MYPP)/Fiscal Year Work Plan (FYWP). Westinghouse Hanford Co., Richland, WA (United States). Sep 1994. 937p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE95001249. Source: OSTI; NTIS; INIS; GPO Dep.

This Multi-Year Program Plan (MYPP) for the Planning Integration Program, Work Breakdown structure (WBS) Element 1.8.2, is the primary management tool to document the technical, schedule, and cost baseline for work directed by the US Department of Energy (DOE), Richland Operations Office (RL). As an approved document, it establishes a binding agreement between RL and the performing contractors for the work to be performed. It was prepared by the Westinghouse Hanford Company (WHC) and the Pacific Northwest Laboratory (PNL). This MYPP provides a picture from fiscal year 1995 through FY 2001 for the Planning Integration Program. The MYPP provides a window of detailed information for the first three years. It also provides 'execution year' work plans. The MYPP provides summary information for the next four years, documenting the same period as the Activity Data Sheets.

3073 (WHC-SP-1098) Proposal for the International Atomic Energy Agency Training Course. McCarthy, T.L. Westinghouse Hanford Co., Richland, WA (United States). Jun 1994. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE94018162. Source: OSTI; NTIS; INIS; GPO Dep.

The Hanford Site has hosted similar activities, including both Hanford Summits I and II. The Hanford Summits were two-day televised events to discuss the commitment of the current Presidential administration to the environmental restoration of the Hanford Site. Public involvement and strategic issues established from Hanford Summit I include: Regulatory issues, training and education, economic development and partnership, and technology transfer. Hanford Summit II provided a summary of how Secretary of Energy O'Leary is proceeding on the above strategic issues. The DOE and Westinghouse School for Environmental Excellence frequently offers a six-week course for environmental professionals and workers. Approximately thirty to forty individuals attend the training course, which provides training in environmental regulation compliance. The Hanford Site has hosted two previous International Atomic Energy Agency training courses. The courses lasted two weeks and had approximately eight to ten participants. Nuclear Material Management and Neutron Monitoring were the courses hosted by the Hanford Site.

3074 (WHC-SP-1109) Budget FY 1995 site support program plan WBS 6.10.1. Wemhoff, G.M. Westinghouse Hanford Co., Richland, WA (United States). Sep 1994. 71p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE95001316. Source: OSTI; NTIS; GPO Dep.

This is the program plan of Budget for the fiscal year 1995 site support. The topics of the program plan include a general mission statement, the primary customers, major activities performed to deliver products and services, program priorities, goals and objectives, assumptions, issues and constraints, performance measures, work breakdown

structure and responsibility assignment matrix, description of activities and milestone list.

3075 (WSRC-TR-94-0328) Commercial Integration and partnering at Savannah River Site. Steele, J.R. (Westinghouse Savannah River Co., Aiken, SC (United States)); Babione, R.A.; Shikashio, L.A.; Wacaster, A.J.; Paterson, A.D. Westinghouse Savannah River Co., Aiken, SC (United States). Jun 1994. 153p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE94016694. Source: OSTI; NTIS; GPO Dep.

Savannah River Site (SRS), particularly the Savannah River Technology Center (SRTC) with the experience from the first successful Integrated Technology Demonstration, can provide an excellent foundation for meeting DOE-EM's objectives with the new DOE-EM five focus area approach. With this in mind, SRTC established an activity to pursue full commercialization of environmental technologies. This report is an assessment of the status of commercialization at SRS and provides recommendations for enhancement as well as some tools critical to implementation. A review was made of the current situation at SRS with regards to taking technology development to commercial fruition. This was done from the perspective of comparing it to known commercialization models and processes. It was found that SRTC already works through many of the steps in these processes. With integration and action-oriented efforts of the inclusion of business and market factors, SRTC could become an aggressive, successful developer of commercialized technologies. Commercial success criteria tools were developed with regards to integrating them with SRTC selection criteria to ensure that all critical factors are covered in technology commercialization project evaluations. Private investors are very clear that their interest lies in funding commercial enterprises, not merely technologies. Mobilizing private capital is critical to real job growth and long-term economic development. Also, potential industry partners were identified that are willing to be involved with SRS' technology applications and regional development efforts. As another important component to success, regional support organizations were reviewed and evaluated.

3076 The California Surveying Engineering Name Survey. Crossfield, J.K. (California State Univ., Fresno, CA (United States)); Watkins, R. pp. 67-72 of 1994 ASPRS/ACSM annual convention & exposition. Volume 2. American Society for Photogrammetry and Remote Sensing, Bethesda, MD (United States) (1994). pp. 363 (CONF-9404153-: 1994 annual convention and exposition of the American Society for Photogrammetry and Remote Sensing (ASPRS) and the American Congress on Surveying and Mapping (ACSM), Reno, NV (United States), 25-28 Apr 1994).

More than 1400 high school students from throughout California responded to the 1993 California Surveying Engineering Names Survey. The purpose of the questionnaire was to determine the general appeal of the name Surveying Engineering and 6 different synonyms for that name with respect to other engineering discipline names. Part I of this effort dealt only with descriptions of engineering careers to see if the relative order with which engineering career descriptions were placed on a page made any difference. Descriptions placed at the bottom of the page did better than descriptions placed at the top. Part II listed career names only. Surveying and its synonyms were positioned

fourth on all forms. Surveying synonyms Geographic Engineering and Geographical Engineering rated first and second and Surveying Engineering rated last against the other 4 discipline names. Part III listed names and descriptions. Again seven different surveying synonyms were used in the fourth spot on each of these questionnaires. Geomatic Engineering was the strongest surveying synonym placing third against the other four disciplines. 3 refs., 1 tab.

3077 Fully distributed parallel algorithms - molecular self-consistent field calculations. Harrison, R.J. (Pacific Northwest Lab., Richland, WA (United States)). pp. 468, Paper COMP 14 of 207th ACS national meeting. American Chemical Society, Washington, DC (United States) (1994). pp. 2247 DOE Contract AC06-76RL01830. (CONF-940301-: 207. spring national meeting of the American Chemical Society (ACS), San Diego, CA (United States), 13-18 Mar 1994).

The author discusses fundamental issues in the scaling of algorithms to massively parallel machines, with special emphasis on efficient usage of memory. He discusses the new portable tools that support multiple instruction multiple data computation with distributed data structures, with self consistent field and other ab initio electronic structure algorithms as examples. To date the most efficient parallel SCF algorithms have been based on replication within each processor of several $O(N)$ matrices (N , the number of basis functions). This limits the maximum calculation size and forces an unacceptably low ratio of processors to memory (i.e., most of your money is spent on memory, not processors). A simple and classical strip-mining algorithm suffices to achieve an efficient and scalable Fock matrix construction where all matrices are fully distributed. No redundant integrals are computed and the computation is dynamically load balanced. By strip-mining by atoms, the authors also exploit all available sparsity and pave the way for adopting more sophisticated methods for summation of the coulomb and exchange interactions.

3078 The US nuclear safety approach to upgrading the Russian and Ukrainian reactors. Baron, S. (Brookhaven National Lab., Upton, NY (United States)). pp. 49-52 of Nuclear power plant safety standards: towards international harmonization: Proceedings. Mechanical Engineering Publications Ltd., London (United Kingdom) (1993). pp. 320 (CONF-931012-: International conference on nuclear power plant safety standards: towards international harmonization, London (United Kingdom), 26-28 Oct 1993).

Brookhaven National Laboratory reporting to the Department of Energy has the technical and administrative management responsibilities for improving the operational and design safety systems of RBMK and the VVER reactors in Russia and the Ukraine. U.S. experts and industry interact with the Russian/Ukraine designers and operators to jointly develop the detailed requirements for system upgrades. When available, indigenous equipment and materials will be utilized. The construction and installation of most upgrades will be accomplished by Russia and the Ukraine with U.S. support and participation. This will maximize technology transfer, provide funds to U.S. and recipient country industry, and limit the nuclear liability of U.S. industry. (author).

3079 Partnership for Environmental Technology Education (PETE). Dickinson, P.R. (Lawrence Livermore National Lab., Livermore, CA (United States)). pp. 121-129 of Ninth annual environmental management and technology conference, West/Fall: Technical papers. Advanstar Expositions, Glen Ellyn, IL (United States) (1993). pp. 390

(CONF-9311169--: HazMat West '93: 9th annual environmental management and technology conference, Long Beach, CA (United States), 16-18 Nov 1993).

The need for broad cooperative effort directed toward the enhancement of science and mathematics education in the US has been recognized as a national priority by government, industry and the academic community alike. Within the context of this broad need, the US Department of Energy (DOE), the US Environmental Protection Agency (EPA), and the Department of Defense (DOD) have defined "needs driven" or specific interests which require increasing the numbers of qualified graduates in areas of environmental science, engineering and management, including technicians, and fostering improved public literacy in environmental science and waste management. Carefully targeted education intervention programs are required if these important goals are to be realized. The Partnership for Environmental Technology Education, a regional program which is now being extended nationally, has been developed and implemented to link the technical resources of federal laboratories and the private sector with regional community colleges to provide direct technical assistance for: development and presentation of environmental-hazardous materials and related technician curricula at the two-year degree/certificate level; and development/enhancement of environmental science and pre-engineering curricula targeting the attraction and preparation of transfer students to four-year institutions.

3080 Innovative approaches to public participation.
Conway, S. (Colorado Center for Environmental Manage-

ment, Golden, CO (United States)). pp. 1051-1054 of HMC/ Superfund '92. Hazardous Materials Control Resources Institute, Greenbelt, MD (United States) (1992). pp. 1150 (CONF-921235--: Hazardous Materials Control/Superfund '92: 13th annual conference and exhibition, Washington, DC (United States), 1-3 Dec 1992).

Effective means of assuring public involvement and regulatory compliance are a key-and frequently missing-component in hazardous waste cleanup. Recognizing this and realizing that the failure to integrate public participation and regulatory issues has impeded their own cleanups, the US Department of Energy has funded a 7-year grant to the Colorado Center for Environmental Management's Technology/Regulatory Integration Project (TRIP). The project's goal is to design and test more effective models for assuring public input and timely regulatory review to be used at DOE sites throughout the country. A particular focus of the project is to look at how these factors affect the use of innovative cleanup technologies. This paper summarizes the activities and preliminary findings of TRIP's first year. Central to developing more effective models is a series of studies of hazardous waste sites throughout the country and national issues related to cleanup. The paper documents the "lessons learned" from these studies and recommends ways to assure effective public participation in decision-making for hazardous waste cleanup.

Corporate Author Index

This index lists the corporate authors responsible for issuing the documents in this publication which are identified primarily by report number. The corporate names are entered in standardized forms as defined in ETDE/PUB-3 (Rev.1), *International Energy: Research Organizations 1988-1992*. Each entry under a corporate name includes the document title and citation number. Three items of information may appear in parentheses: (1) an abbreviation to identify the document type, such as a report; (2) the country of publication, also abbreviated; and (3) the language of the document if non-English (R;CA;In French). Author affiliations are not listed in this index.

- Implementation plan for the programmatic environmental impact statement for the Department of Energy UMTRA Ground Water Project, 94:1743 (R;US)
- Long-term surveillance plan for the Collins Ranch disposal site, Lakeview, Oregon, 94:1737 (R;US)
- Long-term surveillance plan for the Shiprock Disposal site, Shiprock, New Mexico, 94:1750 (R;US)
- Long-term surveillance plan for the Green River, Utah disposal site: Revision 1, 94:1760 (R;US)
- Mitigation and Monitoring Plan for impacted wetlands at the Gunnison UMTRA Project site, Gunnison, Colorado. Revision 1, 94:1759 (R;US)
- Modifications to the remedial action plan and site design for stabilization of the inactive Uranium Mill Tailings Site at Green River, Utah, 94:1827 (R;US)
- Proposed ground water protection strategy for the Uranium Mill Tailings Site at Green River, Utah. Final report, 94:1819 (R;US)
- Public affairs plan, 94:1803 (R;US)
- Public information plan. Version 2, 94:1755 (R;US)
- Public participation in UMTRA Project program management, 94:1717 (R;US)
- Quality assurance project plan for the UMTRA technical assistance contractor hydrochemistry facility. Final report, 94:1736 (R;US)
- Radiological audit of remedial action activities at the processing sites Mexican Hat, Utah and Monument Valley, Arizona. Audit date: May 3-7, 1993, Final report, 94:1742 (R;US)
- Radiological surveillance of Remedial Action activities at the processing site, Falls City, Texas. Final report, 94:1733 (R;US)
- Radiological surveillance of Remedial Action activities at the processing site, Ambrosia Lake, New Mexico, April 12-16, 1993. Final report, 94:1734 (R;US)
- Relationships of radon diffusion coefficient with saturated hydraulic conductivity, fines content and moisture saturation of radon/infiltration barriers for the UMTRA Project, 94:1718 (R;US)
- Remedial action plan and site design for stabilization of the Inactive Uranium Mill Tailings Site, Maybell, Colorado: Final report, Appendixes to attachment 3, 94:1741 (R;US)
- Remedial Action Plan and Site Design for Stabilization of the Inactive Uranium Mill Tailings Site, Maybell, Colorado: Remedial action selection report: Attachment 2, Geology report, Final, 94:1739 (R;US)
- Remedial action plan and site design for stabilization of the inactive Uranium Mill Tailing site Maybell, Colorado: Attachment 3, ground water hydrology report, Attachment 4, water resources protection strategy. Final report, 94:1740 (R;US)
- Remedial Action Plan and Site Design for Stabilization of the Inactive Uranium Mill Tailings Site, Maybell, Colorado: Appendixes to Attachment 3: Appendix A, Hydrological services calculations: Appendix B, Ground water quality by location, Final report, 94:1924 (R;US)
- Remedial action plan for the inactive Uranium Processing Site at Naturita, Colorado: Remedial action plan: Attachment 2, Geology report, Attachment 3, Ground water hydrology report: Working draft, 94:1793 (R;US)
- Response to the independent technical review of the UMTRA Project procedures and practices for well drilling and development, 94:1768 (R;US)
- Site observational work plan for the UMTRA Project site at Spook, Wyoming, 94:1805 (R;US)
- Site observational work plan for the UMTRA project site at Falls City, Texas, 94:1806 (R;US)
- Site observational work plan for the UMTRA project site at Shiprock, New Mexico, 94:1807 (R;US)
- Site observational work plan for the UMTRA Project site at Ambrosia Lake, New Mexico, 94:1808 (R;US)
- Site Observational Work Plan for the UMTRA project site at Ambrosia Lake, New Mexico, 94:1809 (R;US)
- Site observational work plan for the UMTRA Project site at Tuba City, Arizona, 94:1810 (R;US)
- Site observational work plan for the UMTRA Project Site at Tuba City, Arizona, 94:1811 (R;US)
- Site observational work plan for the UMTRA Project site at River-ton, Wyoming, 94:1812 (R;US)
- Site observational work plan for the UMTRA Project Site at River-ton, Wyoming. Revision 3/95, 94:1813 (R;US)
- Slope and bank erosional stability of the Canonsburg, Pennsylvania, UMTRA disposal site, 94:1823 (R;US)
- Special study for the statistical evaluation of groundwater data trends. Final report, 94:1738 (R;US)
- Status of the ground water flow model for the UMTRA Project, Shiprock, New Mexico, site, 94:1816 (R;US)
- Surface and subsurface cleanup protocol for radionuclides Gunnison, Colorado, UMTRA Project Processing Site: Revision 3, Final report, 94:1754 (R;US)
- Technical assistance contractor management plan: Surface and ground water, 94:1804 (R;US)
- The U.S. regulatory framework for long-term management of uranium mill tailings, 94:1726 (R;US)

- Interactive computer enhanced remote viewing system, 94:2317 (R;US)
- Interactive Computer-Enhanced Remote Viewing System (ICERVS): Subsystem design report - Phase 2, 94:2319 (R;US)
- Interactive Computer-Enhanced Remote Viewing System: Quarterly report number 6, April-June, 1994, 94:2320 (R;US)

Meler Associates, Inc., Kennewick, WA (United States)

- Conceptual design report, Sodium Storage Facility, Fast Flux Test Facility, Project F-031, 94:2169 (R;US)

Membrane Technology and Research, Inc., Menlo Park, CA (United States)

- Protective clothing based on permselective membrane and carbon adsorption, 94:1954 (R;US)

Midwest Research Inst., Cary, NC (United States)

- Locating and estimating air emissions from sources of cadmium and cadmium compounds. Final report, 94:2521 (R;US)

Mirage Systems, Sunnyvale, CA (United States)

- Three-dimensional subsurface imaging synthetic aperture radar, 94:2431 (R;US)

Mississippi State Univ., MS (United States). Diagnostic Instrumentation and Analysis Lab.

- Application of modern diagnostic methods to environmental improvement. Annual progress report, January-October 1994, 94:461 (R;US)

Moller Engineering Corp., Los Gatos, CA (United States)

- An assessment of KW Basin radionuclide activity when opening SNF canisters, 94:2675 (R;US)

Molten Metals Technology, Inc., Waltham, MA (United States)

- Catalytic extraction processing of contaminated scrap metal, 94:1950 (R;US)
- Quantum-catalytic extraction process application to mixed waste processing, 94:523 (R;US)

Monsanto Co., Paducah, KY (United States)

- The DuPont, Monsanto, General Electric "Lasagna" Remediation Project - joint R&D and financing, 94:525 (R;US)

Montgomery Watson, Richland, WA (United States)

- Conceptual design report, Hazardous Materials Management and Emergency Response (HAMMER) Training Center, 94:3065 (R;US)

Morrison-Knudsen Corp., Boise, ID (United States). Environmental Services Div.

- Waste management facilities cost information estimating data, 94:885 (R;US)

MSE, Inc., Butte, MT (United States)

- Applicability of slags as waste forms for hazardous waste, 94:21 (R;US)
- Comparison of glassy slag waste forms produced in laboratory crucibles and in a bench-scale plasma furnace, 94:1706 (R;US)
- Projects at the Component Development and Integration Facility: Quarterly technical progress report, 1 October-31 December 1993, 94:472 (R;US)

Projects at the Component Development and Integration Facility:
Quarterly technical progress report, January 1, 1994–March 31, 1994, 94:473 (R;US)

Projects at the Western Environmental Technology Office. Quarterly technical progress report, October 1–December 31, 1994, 94:474 (R;US)

N

National Cold Fusion Inst., Salt Lake City, UT (United States)

Guidance for establishment and implementation of field sample management programs in support of EM environmental sampling and analysis activities, 94:1931 (R;US)

National Environmental Technology Applications Center, Pittsburgh, PA (United States)

A proposed framework for establishing integrated cost and performance criteria for environmental technologies. A summary report to the U.S. Department of Energy, 94:9 (R;US)

National Research Center for Coal and Energy, Morgantown, WV (United States)

Decontamination Systems Information and Research Program: Quarterly report, October–December 1993, 94:515 (R;US)

Decontamination Systems Information and Research Program: Quarterly technical progress report, July 1–September 30, 1993, 94:516 (R;US)

Decontamination Systems Information and Research Program: Quarterly technical progress report, January 1–March 31, 1994, 94:517 (R;US)

Decontamination Systems Information and Research Program: Quarterly report, July–September 1994, 94:520 (R;US)

Decontamination Systems Information and Research Program, 94:514 (R;US)

National Research Council, Washington, DC (United States)

[Board on Radioactive Waste Managements action on progress toward objectives], 94:2419 (R;US)

Nevada Univ., Las Vegas, NV (United States). Desert Research Inst.

Evaluation of soil radioactivity data from the Nevada Test Site, 94:2437 (R;US)

New Mexico Environment Dept., Santa Fe, NM (United States)

1992 Annual performance report for Environmental Monitoring and Oversight at Department of Energy facilities in New Mexico, 94:2416 (R;US)

New Mexico State Univ., Las Cruces, NM (United States)

An assessment of Microtox™ as a biomonitoring tool for whole effluent testing for Los Alamos National Laboratory, 94:102 (R;US)

New Mexico Univ., Albuquerque, NM (United States). Dept. of Economics

A cost-effectiveness analysis of the in situ air stripping technology at the Savannah River Integrated Demonstration site: Part 1 and Part 2, 94:101 (R;US)

North Carolina Agricultural and Technical State Univ., Greensboro, NC (United States)

Infrastructure support for the Waste Management Institute at North Carolina A&T State University. Progress report, September 1994–January 1995, 94:2990 (R;US)

North Dakota Univ., Grand Forks, ND (United States). Energy and Environmental Research Center

Environmental management technology demonstration and commercialization, 94:2986 (R;US)

Nuclear Waste Documentary Project, Strawberry Plains, TN (United States)

Estimating the Cold War mortgage: The 1995 baseline environmental management report. Volume 1, 94:1943 (R;US)

O

Oak Ridge K-25 Site, TN (United States)

1993 annual report of hazardous waste activities for the Oak Ridge K-25 site, 94:631 (R;US)

MWIP: Surrogate formulations for thermal treatment of low-level mixed waste: Part 4, Wastewater treatment sludges, 94:532 (R;US)

Oak Ridge National Laboratory Technology Logic Diagram: Volume 1, Technology Evaluation: Part B, Remedial Action, 94:662 (R;US)

Oak Ridge National Laboratory Technology Logic Diagram: Volume 3, Technology evaluation data sheets: Part A, Characterization, Decontamination, 94:663 (R;US)

Oak Ridge National Laboratory Technology Logic Diagram: Volume 3, Technology evaluation data sheets: Part B, Dismantlement, Remedial action, 94:664 (R;US)

Oak Ridge National Laboratory Technology Logic Diagram: Volume 3, Technology evaluation data sheets: Part C, Robotics/automation, Waste management, 94:665 (R;US)

Off-gas recycle for long-term low temperature gas phase uranium decontamination, 94:421 (R;US)

Surrogate formulations for thermal treatment of low-level mixed waste: Part 3: Plasma hearth process testing, 94:531 (R;US)

Technical support for the Soiltech soil washing project: Interim report, 94:632 (R;US)

Y-12 Plant decontamination and decommissioning technology logic diagram for Building 9201-4. Volume 3: Technology evaluation data sheets; Part A: Characterization, dismantlement, 94:2292 (R;US)

Y-12 Plant decontamination and decommissioning technology logic diagram for Building 9201-4. Volume 3: Technology evaluation data sheets; Part B: Decontamination, robotics/automation, waste management, 94:2293 (R;US)

Oak Ridge National Lab., Grand Junction, CO (United States)

Groundwater modeling of source terms and contaminant plumes for DOE low-level waste performance assessments, 94:41 (R;US)

Oak Ridge National Lab., TN (United States)

3-D subsurface modeling within the framework of an environmental restoration information system: Prototype results using earthvision, 94:451 (R;US)

A low-temperature process for the denitration of Hanford single-shell tank, nitrate-based waste utilizing the nitrate to ammonia and ceramic (NAC) process, 94:952 (R;US)

A low-temperature process for the denitration of Hanford single-shell tank, nitrate-based waste utilizing the nitrate to ammonia and ceramic (NAC) or nitrate to ammonia and glass (NAG) process: Phase 2 report, 94:953 (R;US)

A Mobile Automated Characterization System (MACS) for indoor floor characterization, 94:2311 (R;US)

A quick telemanipulator calibration and repeatability method with applications, 94:2302 (R;US)

A review of the environmental survivability of telerobotic control sensor systems for use in nuclear waste tanks, 94:2328 (R;US)

Acoustic emission sensor radiation damage threshold experiment, 94:2396 (R;US)

Adaptation of the TCLP and SW-846 methods to radioactive mixed waste, 94:448 (R;US)

Adapting the Bruel and Kjaer Multi-gas Monitor Type 1302 to measure selected volatile organic chemicals (VOCs) in soil, 94:45 (R;US)

Addendum to the remedial investigation work plan for Bear Creek Valley Operable Unit 1 (S-3 ponds, boneyard/burnyard, oil landfarm, sanitary landfill 1, and the burial grounds, including oil retention ponds 1 and 2) at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee: Volume 1. main text, 94:538 (R;US)

Additional borehole geophysical logging at Waste Area Grouping 1 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:144 (R;US)

Advanced robotics for decontamination and dismantlement, 94:2305 (R;US)

Airborne geophysical survey of the Oak Ridge Reservation, Tennessee, 94:2472 (R;US)

Alternatives evaluation for the decontamination and decommissioning of buildings 3506 and 3515 at Oak Ridge National Laboratory, Oak Ridge, Tennessee: Environmental Restoration Program, 94:2056 (R;US)

- An experimental investigation of the thermal/fluid properties of the nitrate to ammonia and ceramic (NAC) product slurry, 94:922 (R;US)
- An expert system for enhancing compliance with hazardous materials packaging and transportation regulations, 94:2411 (R;US)
- Analysis of source term modeling for low-level radioactive waste performance assessments, 94:676 (R;US)
- Annual status report on Federal Facility Agreement compliance for the Liquid Low-Level Waste tank systems at Oak Ridge National Laboratory, 94:547 (R;US)
- Annual summary report of the Decontamination and Decommissioning Surveillance and Maintenance Program at Oak Ridge National Laboratory for period ending September 30, 1994, 94:2061 (R;US)
- Application of the selective equipment removal system to D&D tasks, 94:2307 (R;US)

Spool assembly support analysis, 94:1181 (R;US)

Stabilization void-fill encapsulation high-efficiency particulate filters, 94:261 (R;US)

Standard hydrogen monitoring system-B operation and maintenance manual, 94:1434 (R;US)

Standard-B hydrogen monitoring system acceptance test report, 94:1244 (R;US)

Standard-B Hydrogen Monitoring System, system design description, 94:1492 (R;US)

Standard-C hydrogen monitoring system acceptance test procedure, 94:1228 (R;US)

Starting up a new U.S. Department of Energy Analytical Laboratory at the Hanford site, 94:2625 (R;US)

State of work for services provided by the Waste Sampling and Characterization Facility for effluent monitoring, 94:255 (R;US)

State waste discharge permit application, 200-E chemical drain field, 94:570 (R;US)

State waste discharge permit application: 200 Area Treated Effluent Disposal Facility (Project W-049H), 94:1984 (R;US)

Statement of work for architect-engineer services, initial pretreatment module, 94:1170 (R;US)

Static internal pressure capacity of Hanford Single-Shell Waste Tanks, 94:1516 (R;US)

Statistical characterization report for Single-Shell Tank 241-T-107, 94:1520 (R;US)

Statistical characterization report for single-shell tank 241-T-111, 94:1523 (R;US)

Statistical characterization report for single-shell Tank 241-S-104, 94:1525 (R;US)

Statistical characterization report for single-shell tank 241-T-105, 94:1526 (R;US)

Statistical characterization report for Single-Shell Tank 241-T-104, 94:1530 (R;US)

Statistical evaluation of the data obtained from the K East Basin Sandfilter Backwash Pit samples, 94:2712 (R;US)

Status and progress in sludge washing: A pivotal pretreatment method, 94:1103 (R;US)

- Status of outdoor radioactive contamination at the Hanford Site, 94:2276 (R;US)
- Status of test results of electrochemical organic oxidation of a tank 241-SY-101 simulated waste, 94:1085 (R;US)
- Storage options for Long Length Contaminated Equipment (LLCE) items, 94:1391 (R;US)
- Strategy for sampling Hanford Site tank wastes for development of disposal technology, 94:1499 (R;US)
- Stress analysis of core sampler truck number 2 platform: 2,000 LBF crane lift capacity, 94:1361 (R;US)
- Stress analysis of jacks, frame and bearing connections, and drill rod for core sampler truck No. 2, 94:1369 (R;US)
- Stress analysis of portable safety platform (Core Sampler Truck), 94:1206 (R;US)
- Stress analysis of shielded receiver lifting frame for core sampler truck #2, 94:1367 (R;US)
- Strong-back safety latch, 94:1272 (R;US)
- Structural analysis and evaluation of the 241SY101 tank annulus heat-up, 94:1517 (R;US)
- Structural analysis of color video camera installation on Tank 241SY101 (2 volumes), 94:1277 (R;US)
- Structural analysis of multiport riser 5A installation on tank 241SY101, 94:1275 (R;US)
- Structural analysis of multiport flange installation of tanks 241AW101 and 241SY101. Volumes 1-3, 94:1276 (R;US)
- Structural analysis of the equipment removal system for tanks 241C106 and 241AY102, 94:1180 (R;US)
- Structural analysis of the equipment removal system for tank 241SY101, 94:1278 (R;US)
- Structural analysis: Flexible receiver yoke brace for the 241SY101 mixer pump, 94:1271 (R;US)
- Structural design and analysis of the multi-function waste tanks, 94:1078 (R;US)
- Structural evaluation of Tank 241-AN-107 internal components for caustic addition mixing operations, 94:1204 (R;US)
- Structural evaluation of the 2736Z Building for seismic loads, 94:2140 (R;US)
- Structural evaluation of thermocouple probes for 241-AZ-101 waste tank, 94:1128 (R;US)
- Structural integrity analysis of the 224U elevator mothballing, 94:2243 (R;US)
- Subsidence evaluation in 218-E-E12B, trench 38, 94:1891 (R;US)
- Subsurface barrier demonstration test strategy and performance specification, 94:1496 (R;US)
- Subsurface barrier feasibility evaluation: External review meeting report, 94:1888 (R;US)
- Summary of canister overheating incident at the Carbon Tetrachloride Expedited Response Action site, 94:753 (R;US)
- Summary of fiscal year 1994 near-infrared spectroscopy moisture sensing activities, 94:1070 (R;US)
- Summary of information on flammable gas watch list tanks, 94:1037 (R;US)
- Summary of radioactive solid waste received in the 200 Areas during calendar year 1993, 94:719 (R;US)
- Summary of remedial investigations at the 307 retention basins and 307 trenches (316-3), 300-FF-2 Operable Unit, 94:2651 (R;US)
- Summary of tank waste physical properties at the Hanford Site, 94:1049 (R;US)
- Summary report of Hanford Site well remediation and decommissioning activities for fiscal year 1994, 94:279 (R;US)
- Summary report on the design of the retained gas sampler system (retained gas sampler, extruder and extractor), 94:1366 (R;US)
- Summary status of K Basins sludge characterization, 94:311 (R;US)
- Supplemental design requirements document enhanced radioactive and mixed waste storage Phase V Project W-112, 94:831 (R;US)
- Supplemental design requirements document enhanced radioactive and mixed waste storage: Phase 5, Project W-113, 94:832 (R;US)
- Supplemental design requirements document, Multifunction Waste Tank Facility, Project W-236A. Revision 1, 94:1151 (R;US)

Personal Author Index

Authors' surnames are indexed in the form appearing in the publication cited; given names generally have been reduced to initials. For documents with multiple authors, each author name is indexed. The entry for a primary author (first author listed on an abstracted document) includes the full document title and citation number. Entries for other authors provide a cross-reference to the primary author. Also included is information on the document type, country of publication, and the document language listed in parentheses in the format (J;FR;In French and English). Accent marks are not input because of computer alphabetization. Spelling and transliteration follow standard conventions.

Subject Index

This index is arranged by subject descriptors selected from those assigned to each citation in this publication. Subject descriptors are selected from a controlled thesaurus of terms, ETDE/PUB-2(Rev.1), *International Energy: Subject Thesaurus*. In order to enhance indexing, subject descriptor entries generally consist of a pair of descriptors: a main term and a qualifier term. Each entry includes the full title (which may be followed by supplementary descriptive information in parentheses) and the citation number. Additional information given in parentheses indicates the document type (an abbreviation such as B for book), the country of publication (such as DE for Federal Republic of Germany), and the language if non-English.

See references guide users from synonymous terms to the descriptors selected for the concept. See also references indicate subject concepts that are more specific than a particular descriptor. To gain complete subject coverage, all such terms should be reviewed.

A

ABANDONED SITES

Archaeological Sites

Annual report on the U.S. Department of Energy's Cultural Resource Activities at Colorado UMTRA Project Sites for October 1993 through September 1994, 94:1817 (R;US)

Chemical Analysis

Road Transportable Analytical Laboratory (RTAL) System: Quarterly technical report, March 1993-May 1993, 94:502 (R;US)

Decontamination

The Department of Energy's Remedial Action Assessment System (RAAS): Decision support tools for performing streamlined feasibility studies, 94:2081 (R;US)

Environmental Quality

Uranium Mill Tailings Remedial Action Project 1993 Environmental Report, 94:1763 (R;US)

Human Intrusion

Marker development, 94:2412 (R;US)

Mill Tailings

Baseline risk assessment of ground water contamination at the Uranium Mill Tailings Site near Tuba City, Arizona, 94:1746 (R;US)

Radiation Monitoring

Results of the independent verification survey at the Old Beta-tron Building, Granite City, Illinois, 94:2512 (R;US)
Uranium Mill Tailings Remedial Action Project 1993 Environmental Report, 94:1763 (R;US)

Remedial Action

Abandoned Mine Waste Working Group report, 94:75 (R;US)
Analysis of cobbly soils for cobbles-to-fines corrections to radionuclide concentrations at the New Rifle, Colorado, processing site, 94:1774 (R;US)
Baseline risk assessment of ground water contamination at the Uranium Mill Tailings Site near Grand Junction, Colorado, 94:1764 (R;US)
Baseline risk assessment of ground water contamination at the inactive uriferous lignite ashing site near Belfield, North Dakota, 94:1770 (R;US)
Derivation of uranium residual radioactive material guidelines for the 4400 Piehl Road Site, Ottawa Lake, Michigan, 94:1913 (R;US)
Environmental assessment of remedial action at the Naturita Uranium Processing Site near Naturita, Colorado: Revision 4, 94:1834 (R;US)
Gunnison, Colorado subpile study report: Revision 1, 94:1767 (R;US)
Qualitative risk assessment for the 100-KR-1 source operable unit, 94:751 (R;US)

Remedial Action Plan and Site Design for Stabilization of the Inactive Uranium Mill Tailings Site, Maybell, Colorado: Remedial action selection report: Attachment 2, Geology report, Final, 94:1739 (R;US)

Surface and subsurface cleanup protocol for radionuclides Gunnison, Colorado, UMTRA Project Processing Site: Revision 3, Final report, 94:1754 (R;US)

UMTRA Project water sampling and analysis plan, Slick Rock, Colorado, 94:1797 (R;US)

UMTRA project water sampling and analysis plan, Gunnison, Colorado, 94:1778 (R;US)

UMTRA project water sampling and analysis plan, Maybell, Colorado, 94:1773 (R;US)

UMTRA project water sampling and analysis plan, Naturita, Colorado, 94:1772 (R;US)

UMTRA project water sampling and analysis plan, Salt Lake City, Utah, 94:1762 (R;US)

Security

Marker development, 94:2412 (R;US)

Wastes

Abandoned Mine Waste Working Group report, 94:75 (R;US)

ABANDONED WELLS

Hanford well custodians. Revision 1, 94:273 (R;US)

ABSORBED DOSES

URANIUM

Abundance

Analytical measurements for the actinides in Los Alamos National Lab. nuclear waste streams, 94:892 (BA;US)

Aqueous Solutions

Crown ethers as actinide extractants in acidic aqueous biphasic systems: partitioning behavior in solution and crystallographic analyses of the solid state, 94:2895 (J;CH)

Binding Energy

Binding studies of desferrioxamine-B with lanthanide and actinide ions, 94:1896 (BA;US)

Chemical Analysis

Application of diode lasers to actinide atom monitoring, 94:2898 (J;US)

Dissolution

Disposition of actinides released from high-level waste glass, 94:356 (BA;US)

Energy-Loss Spectroscopy

Electron beam microanalysis of nuclear waste glass, 94:897 (BA;US)

Extraction

Crown ethers as actinide extractants in acidic aqueous biphasic systems: partitioning behavior in solution and crystallographic analyses of the solid state, 94:2895 (J;CH)

Icp Mass Spectroscopy

Radiochemical method development, 94:2381 (R;US)

Laser Spectroscopy

In-situ monitoring of actinides and rare earth elements by electrothermal hollow cathode discharge spectrometry: Technical progress report, 94:2489 (R;US)

Materials Recovery

Process for recovering actinide values, 94:2966 (P;US)
Separations Science and Technology, Semiannual progress report, October 1991–March 1992, 94:2904 (R;US)

Phase Stability

Disposition of actinides released from high-level waste glass, 94:356 (BA;US)

Photolysis

Citrate biodegradation: Mid-year status report, [January 1994–June 1994], 94:1710 (R;US)

Radioactive Waste Processing

TRUEX processing of wastes for waste minimization and reagent recycle, 94:1699 (J;US)

Radiochemical Analysis

Faster, cheaper radioanalytical methods, 94:2382 (R;US)

Removal

Chemical decontamination of process equipment using recyclable chelating agents, 94:1949 (R;US)
Flow sheet development for the remediation of tank SY-102 at the Hanford Nuclear Reservation, 94:2949 (BA;US)
Removal of actinide elements from liquid scintillation cocktail wastes using liquid-liquid extraction and demulsification techniques, 94:399 (R;US)
Selective chelators for actinide complexation, 94:2951 (BA;US)
Soil treatment to remove uranium and related mixed radioactive heavy metal contaminants: Quarterly technical progress report, April 1, 1994–June 30, 1994, 94:494 (R;US)

Separation Processes

Citrate based "TALSPEAK" lanthanide-actinide separation process, 94:2916 (R;US)

Recent advances in the separation of actinides by liquid-liquid extraction, extraction chromatography, and ion exchange, 94:898 (BA;US)

Solubility

Disposition of actinides released from high-level waste glass, 94:356 (BA;US)

Solvent Extraction

Mercury extraction by the TRUEX process solvent. I. Kinetics, extractable species, and dependence on nitric acid concentration, 94:2955 (J;US)

Mercury extraction by the TRUEX process solvent. II. Selective partitioning of mercury from co-extracted actinides in a simulated acidic ICPP waste stream, 94:2892 (J;US)

Method for extracting lanthanides and actinides from acid solutions by modification of Purex solvent, 94:2965 (P;US)

Method for the concentration and separation of actinides from biological and environmental samples, 94:2964 (P;US)

Separations of actinides, lanthanides and other metals, 94:2961 (P;US)

Sorption

Uptake of metal ions by a new chelating ion-exchange resin. Part 5. The effect of solution matrix on actinides, 94:2958 (J;US)

Uptake of metal ions by a new chelating ion-exchange resin. Part 6. Calculations on the effect of complexing anions on actinides, 94:2959 (J;US)

ACTUATORS

Analysis of K-1 fan system for replacement of valve actuator, B Plant/Waste Encapsulation and Storage Facility, 94:2776 (R;US)

ADMINISTRATIVE PROCEDURES

ALPHA SPECTROMETERS

Radon discrimination for work place air samples, 94:2226 (R;US)

ALPHA-BEARING WASTES

Activation Analysis

Application of PINS and GNAT to the assay of 55-gal containers of radioactive waste, 94:2460 (R;US)

Cementing

In situ encapsulation bench-scale demonstration report FY-94 (for TTP-ID 142012), 94:1859 (R;US)

Certification

Implementation plan for WRAP Module 1 operational readiness review, 94:813 (R;US)
Westinghouse Hanford Company plan for certifying newly generated contact-handled transuranic waste, 94:2846 (R;US)

Classification

Batching alternatives for Phase I retrieval wastes to be processed in WRAP Module 1, 94:2758 (R;US)

Containers

Waste drum fire tests, 94:2623 (R;US)

Criticality

Criticality safety evaluation for TRU waste in storage at the RWMC, 94:2459 (R;US)

Degassing

Position paper on gas generation in the Waste Isolation Pilot Plant, 94:2408 (R;US)

Gamma Spectroscopy

Waste inspection tomography (WIT), 94:2323 (R;US)

Ground Disposal

INEL Operable Unit 7-13 containment and stabilization configuration option, 94:2466 (R;US)

In-Situ Processing

In situ encapsulation bench-scale demonstration report FY-94 (for TTP-ID 142012), 94:1859 (R;US)

Inventories

Solid waste 30-year volume summary, 94:2603 (R;US)

Monitored Retrievable Storage

Method of characterizing void volume headspace in vented transuranic waste sludge drums using limited sampling data, 94:588 (R;US)

Monitoring

National transuranic program plan, 94:2435 (R;US)

Nondestructive Analysis

Implementation plan for WRAP Module 1 operational readiness review, 94:813 (R;US)

WRAP Module 1 waste characterization plan, 94:814 (R;US)

Nondestructive Testing

WRAP Module 1 waste characterization plan, 94:814 (R;US)

Packaging

Argonne-West Waste Characterization Area for mixed TRU waste, 94:416 (R;US)

Westinghouse Hanford Company plan for certifying newly generated contact-handled transuranic waste, 94:2846 (R;US)

Packaging Rules

A history of solid waste packaging at the Hanford Site, 94:2634 (R;US)

Qualitative Chemical Analysis

Operability test procedure for TRUSAF assayer software upgrade, 94:2802 (R;US)

Radiation Accidents

Accident analysis for transuranic waste management alternatives in the U.S. Department of Energy waste management program, 94:1907 (R;US)

Radiation Monitoring

Technical assessment of TRUSAF for compliance with work place air sampling. Revision 1, 94:2745 (R;US)

Radioactive Waste Disposal

1994 Panel 1 Utilization Plan, 94:2454 (R;US)

A formal expert judgment procedure for performance assessments of the Waste Isolation Pilot Plant, 94:2563 (R;US)

Actinide Source Term Program, position paper. Revision 1, 94:2409 (R;US)

An appraisal of the 1992 preliminary performance assessment for the Waste Isolation Pilot Plant, 94:2415 (R;US)

Focused feasibility study of engineered barriers for waste management units in the 200 Areas, 94:77 (R;US)

Hazardous constituent source term. Revision 2, 94:2410 (R;US)

In situ encapsulation bench-scale demonstration report FY-94 (for TTP-ID 142012), 94:1859 (R;US)

Position paper on gas generation in the Waste Isolation Pilot Plant, 94:2408 (R;US)

Recommended strategy for the disposal of remote-handled transuranic waste, 94:2572 (R;US)

Results of detailed characterization on CH-TRU mixed waste at Argonne National Laboratory-West, 94:419 (R;US)

Waste Isolation Pilot Plant RCRA Part A permit application. Revision 4, 94:2451 (R;US)

Radioactive Waste Management

Accident analysis for transuranic waste management alternatives in the U.S. Department of Energy waste management program, 94:1907 (R;US)

HGMF of 10-L solutions. Revision 1, 94:2640 (R;US)

High level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 6, 94:1047 (R;US)

Interim report: Waste management facilities cost information for mixed low-level waste, 94:608 (R;US)

Mixed Waste Working Group report, 94:557 (R;US)

National Transuranic Program Charter, 94:2436 (R;US)

Waste management facilities cost information estimating data, 94:885 (R;US)

Radioactive Waste Processing

Actinide Source Term Program, position paper. Revision 1, 94:2409 (R;US)

Basic TRUEX process for Rocky Flats Plant, 94:2906 (R;US)

Batching alternatives for Phase I retrieval wastes to be processed in WRAP Module 1, 94:2758 (R;US)

Criticality classification of waste receiving and processing module 2A, 94:2764 (R;US)

DOE mixed waste treatment capacity analysis, 94:679 (R;US)

Implementation plan for WRAP Module 1 operational readiness review, 94:813 (R;US)

Methods for removing transuranic elements from waste solutions, 94:2907 (R;US)

Separations Science and Technology, Semiannual progress report, October 1991-March 1992, 94:2904 (R;US)

Waste receiving and processing facility module 1 data management system software project management plan, 94:2756 (R;US)

Radioactive Waste Storage

1994 Solid waste forecast container volume summary, 94:723 (R;US)

224-T TRUSAF Building upgrade, 94:2795 (R;US)

Characterization of void volume VOC concentration in vented TRU waste drums - an interim report, 94:2464 (R;US)

Criticality safety evaluation for TRU waste in storage at the RWMC, 94:2459 (R;US)

Radiological, physical, and chemical characterization of transuranic wastes stored at the Idaho National Engineering Laboratory, 94:2461 (R;US)

Radioassay

A comparison of real-time radiography results and visual characterization results with emphasis on WIPP WAC and TRAMPAC compliance issues, 94:2458 (R;US)

Remedial Action

Test plan for the remote conveyance and innovative end effector demonstration, 94:1848 (R;US)

Remote Handling

On the road to WIPP: Or remote packaging of transuranic waste, 94:2503 (R;US)

T-Rex system for operation in TRU, LLW, and hazardous zones, 94:2325 (R;US)

Removal

Physicochemical and mineralogical characterization of transuranic contaminated soils for uranium soil integrated demonstration, 94:673 (R;US)

Sampling

Hanford transuranic analytical capability, 94:1398 (R;US)

Method of characterizing void volume headspace in vented transuranic waste sludge drums using limited sampling data, 94:588 (R;US)

Separation Processes

Hanford transuranic analytical capability, 94:1398 (R;US)

Methods for removing transuranic elements from waste solutions, 94:2907 (R;US)

Single Photon Emission Computed Tomography

Waste inspection tomography (WIT), 94:2323 (R;US)

Specifications

Performance-based waste acceptance criteria preliminary baseline assumptions, 94:2417 (R;US)

Transport

An integrated systems approach to remote retrieval of buried transuranic waste using a telerobotic transport vehicle, innovative end effector, and remote excavator, 94:1858 (R;US)

Type B drum packages, 94:2114 (R;US)

Underground Disposal

45-Day deliverable for Tank 241-BX-105 Auger samples, risers 2 and 6, 94:1300 (R;US)

Correlation of theoretical calculations and experimental measurements of damage around a shaft in salt, 94:2575 (R;US)
 Corrosion assessment of dry fuel storage containers, 94:724 (R;US)
 Development of a gas-generation model for the Waste Isolation Pilot Plant, 94:2571 (R;US)
 Dynamic compaction of salt: Initial demonstration and performance testing, 94:2578 (R;US)
 Hydrologic studies for the Waste Isolation Pilot Plant, 94:2570 (R;US)
 Hydrostatic and shear consolidation tests with permeability measurements on Waste Isolation Pilot Plant crushed salt, 94:2564 (R;US)
 Results of brine flow testing and disassembly of a crushed salt/bentonite block seal at the Waste Isolation Pilot Plant, 94:2561 (R;US)
 Scenario development for the Waste Isolation Pilot Plant: Building confidence in the assessment, 94:2567 (R;US)
 Unresolved issues for the disposal of remote-handled transuranic waste in the Waste Isolation Pilot Plant, 94:2414 (R;US)

Underground Storage

Advanced conceptual design report solid waste retrieval facility, phase I, project W-113, 94:2765 (R;US)
 Corrosion assessment of dry fuel storage containers, 94:724 (R;US)
 Description of the solid waste container corrosion program at the Hanford Site, 94:2119 (R;US)
 Geophysical investigation of trench 4, Burial Ground 218-W-4C, 200 west area, 94:2652 (R;US)
 Integrated modeling and experimental programs to predict brine and gas flow at the Waste Isolation Pilot Plant, 94:2568 (R;US)

Vitrification

Arc melter demonstration baseline test results, 94:1847 (R;US)
 Baseline tests for arc melter vitrification of INEL buried wastes: Volume 1: Facility description and summary data report, 94:1845 (R;US)
 Baseline tests for arc melter vitrification of INEL buried wastes: Volume II: Baseline test data appendices, 94:1846 (R;US)
 Integration of pneumatic fracturing and in situ vitrification in the soil subsurface, 94:1877 (R;US)
 Properties of vitrified Rocky Flats TRUW with different waste loadings, 94:602 (R;US)
 Test plan for BWID Phase 2 electric arc melter vitrification tests, 94:1856 (R;US)

Waste Retrieval

Advanced conceptual design report solid waste retrieval facility, phase I, project W-113, 94:2765 (R;US)
 An integrated systems approach to remote retrieval of buried transuranic waste using a telerobotic transport vehicle, innovative end effector, and remote excavator, 94:1858 (R;US)
 Batching alternatives for Phase I retrieval wastes to be processed in WRAP Module 1, 94:2758 (R;US)
 Evaluation of the Contamination Control Unit during simulated transuranic waste retrieval, 94:2467 (R;US)
 Phase 2, Solid waste retrieval strategy, 94:2768 (R;US)
 Solid waste retrieval. Phase 1, Operational basis, 94:2766 (R;US)
 [Phase 2, Solid Waste Retrieval Trench characterizations], 94:2767 (R;US)

Waste Transportation

National transuranic program plan, 94:2435 (R;US)

ALUMINIA

See ALUMINIUM OXIDES

ALUMINIUM

Characterization and monitoring of 300 Area facility liquid waste streams: 1994 Annual report, 94:190 (R;US)
 Impact-limiting materials characterization, 94:2488 (IA;JP)
 Oxalate complexation with aluminum(III) and iron(III) at moderately elevated temperatures, 94:29 (BA;NL)
 Recovery and recycling of aluminum, copper, and precious metals from dismantled weapon components, 94:2087 (R;US)

Recovery and recycling of aluminum, copper, and precious metals from dismantled weapon components, 94:2088 (R;US)
 Separations of actinides, lanthanides and other metals, 94:2961 (P;US)
 Solubility relations for aqueous Si, Al, and Cr(III) species in concentrated electrolyte solutions: Development of accurate aqueous thermodynamic models, 94:1687 (BA;US)
 Solubility relations for aqueous Si, Al, and Cr(III) species in concentrated electrolyte solutions: Development of accurate aqueous thermodynamic models, 94:1694 (BA;US)
 Solubility relations for aqueous Si, Al, and Cr(III) species in concentrated electrolyte solutions: Development of accurate aqueous thermodynamic models, 94:1687 (BA;US)
 The nitrate to ammonia and ceramic (NAC) process: A newly developed low-temperature technology, 94:918 (RA;US)

ALUMINIUM ALLOYS

Transitioning aluminum clad spent fuels from wet to interim dry storage, 94:2862 (R;US)

ALUMINIUM IONS

Development of the indicator-photopolymer chemistries for multianalyte sensor arrays, 94:2591 (R;US)

ALUMINIUM NITRATES

Clean Salt integrated flowsheet, 94:1324 (R;US)

ALUMINIUM OXIDES

Laser ablation of Al_2O_3 ceramic in gas and plasma environments, 94:2874 (BA;US)

ALUMINUM

Transportation capabilities study of DOE-owned spent nuclear fuel, 94:2040 (R;US)
Type B drum packages, 94:2114 (R;US)

Detection

Geophysical survey for proposed borehole 199-K-106A, 100-K Area, 94:285 (R;US)

Evaluation

Needs assessment activity report, 94:2447 (R;US)

Fabrication

Fabrication options for depleted uranium components in shielded containers, 94:2400 (BA;US)
Radioactive scrap metal market study: Use of RSM by electric utility industry for spent fuel storage, 94:2282 (R;US)

Feasibility Studies

Dry storage and transportation of failed fuel, 94:2401 (BA;US)

Fire Resistance

Waste drum fire tests, 94:2623 (R;US)

Impact Tests

DOT-7A packaging test procedure, 94:2233 (R;US)
Elevated drum testing Phase 1 test plan, 94:1570 (R;US)
Extra-regulatory impact tests and analyses of the structural evaluation test unit, 94:2092 (R;US)
One-trip drum operating instruction, 94:2754 (R;US)

Industrial Radiography

Developments in radiography and tomography of waste containers at the Idaho National Engineering Laboratory, 94:1841 (R;US)

Inspection

An autonomous mobil robot to perform waste drum inspections, 94:2362 (R;US)
The Stored Waste Autonomous Mobile Inspector (SWAMI), 94:2363 (R;US)

Leak Testing

DOT-7A packaging test procedure, 94:2233 (R;US)

Loading

Assembly procedure for Shot Loading Platform, 94:1460 (R;US)

Materials Testing

An electrochemical approach to predicting corrosion performance of container materials, 94:2387 (BA;US)
Product consistency testing of three reference glasses in stainless steel and perfluoroalkoxy resin vessels, 94:2541 (R;US)

Monitoring

Optical fiber smart structures applied to secure containers, 94:2881 (BA;US)

Nondestructive Analysis

Nondestructive Examination Equipment in the Hanford Site WRAP 1 and Retrieval Project, 94:2621 (R;US)

Packaging Rules

DOT-7A Type A packaging design guide, 94:2232 (R;US)

Performance

Documentation for fiscal year 1995 annual BUSS cask SARP testing and inspections, 94:2823 (R;US)

Performance Testing

DOT-7A packaging test procedure, 94:2233 (R;US)
Documentation for initial testing and inspections of Beneficial Uses Shipping System (BUSS) Cask, 94:2821 (R;US)
Initial results from the canistered waste forms produced during the first campaign of the DWPF Startup Test Program, 94:2871 (R;US)
Test and evaluation report, U.S. Department of Transportation Specification 7A Type A radioactive material packaging, WHC Solid Sample Package (unshielded) (3M SafeSend® Reusable Super Pack Shipping System [SP-R1L Kit]), 94:2255 (R;US)
Test plan for a U.S. Department of Transportation Specification 7A Type A radioactive material packaging, WHC Liquid Sample Package (unshielded) (3M SafeSend® Reusable Super Pack Shipping System [SP-R1L Kit]), 94:2801 (R;US)

Pressure Release

Aerosol can puncture device operational test plan, 94:819 (R;US)

Radiation Protection

DOT-7A Type A packaging design guide, 94:2232 (R;US)

Remote Sensing

Using high-density magnetic and electromagnetic data for waste site characterization: A case study, 94:1884 (R;US)

Safety Analysis

Criticality assessment of TRU burial ground culverts, 94:1680 (R;US)

Safety Engineering

Packaging design criteria modified fuel spacer burial box: Revision 1, 94:2747 (R;US)

Sampling

Method of characterizing VOC concentration in vented waste drums with multiple layers of confinement using limited sampling data, 94:590 (R;US)

Seals

Friction welding method of hot isostatic press can closure for the ICPP calcine immobilization program, 94:2847 (R;US)

Shielding

Integration of numerical analysis tools for automated numerical optimization of a transportation package design, 94:2085 (R;US)
Shot loading trainer analysis, 94:1183 (R;US)

Specifications

Initial results from the canistered waste forms produced during the first campaign of the DWPF Startup Test Program, 94:2871 (R;US)
Packaging design criteria modified fuel spacer burial box: Revision 1, 94:2747 (R;US)

Spent Fuel Storage

Choices of canisters and elements for the first fuel shipment from K West Basin, 94:2705 (R;US)

Stress Analysis

Optical fiber smart structures applied to secure containers, 94:2881 (BA;US)

Surveys

Needs assessment activity report, 94:2447 (R;US)

Technology Assessment

White Paper: Multi-purpose canister (MPC) for DOE-owned spent nuclear fuel (SNF), 94:2856 (R;US)

Testing

Waste drum fire tests, 94:2623 (R;US)

Tomography

Developments in radiography and tomography of waste containers at the Idaho National Engineering Laboratory, 94:1841 (R;US)

Transport Regulations

DOT-7A Type A packaging design guide, 94:2232 (R;US)

CONTAINERS

Vents

Vents

Engineering work plan for container venting system drill press assembly troubleshooting. Revision 1, 94:1663 (R;US)

X-Ray Emission Analysis

Real-time radiography, digital radiography, and computed tomography for nonintrusive waste drum characterization, 94:1886 (R;US)

CONTAINMENT

See also CONTAINMENT BUILDINGS

CONTAINMENT SYSTEMS

340 Facility Secondary Containment and Leak Detection Project W-302 Functional Design Criteria, 94:1173 (R;US)

In Situ Remediation Integrated Program: Evaluation and assessment of containment technology, 94:50 (R;US)

CONTAINMENT BUILDINGS

Project specific quality assurance plan for Project W-178, 219-S secondary containment, 94:1136 (R;US)

Safety analysis report for the Waste Storage Facility. Revision 2, 94:2024 (R;US)

CONTAINMENT SYSTEMS

Air Flow

Water removal from a dry barrier cover system, 94:1879 (R;US)

Comparative Evaluations

W-320 pit liner vs. coating cost risk benefit analysis, 94:1179 (R;US)

Construction

Constructability report for the 200-BP-1 prototype surface barrier, 94:83 (R;US)

Demonstration of in situ-constructed horizontal soil containment barrier at Fernald, 94:1852 (R;US)

Cost Benefit Analysis

Feasibility study of tank leakage mitigation using subsurface barriers, 94:1384 (R;US)

W-320 pit liner vs. coating cost risk benefit analysis, 94:1179 (R;US)

Cost Estimation

Engineering evaluation of intrusion prevention strategies for single-shell tanks, 94:1362 (R;US)

Design

Constructability report for the 200-BP-1 prototype surface barrier, 94:83 (R;US)

Design demonstrations for Category B tank systems piping at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:554 (R;US)

Effectiveness of an effluent retention pond cover to reduce atmospheric source terms, 94:1098 (R;US)

Engineering evaluation of intrusion prevention strategies for single-shell tanks, 94:1362 (R;US)

Focused feasibility study of engineered barriers for waste management units in the 200 Areas, 94:77 (R;US)

In Situ Remediation Integrated Program, Evaluation and assessment of containment technology, 94:2522 (R;US)

Stakeholder involvement report for the Cryocell® demonstration at Hanford, 94:2076 (R;US)

The circulating air barrier: Effective prevention of liquid contaminant movement through soil, 94:56 (R;US)

Use of the time domain reflectometry in hydraulic studies of multilayered landfill covers for closure of waste landfills at Los Alamos, New Mexico, 94:1862 (R;US)

Water balance relationships in four alternative cover designs for radioactive and mixed waste landfills, 94:1865 (R;US)

Emplacement

Feasibility of permeation grouting for constructing subsurface barriers, 94:704 (R;US)

Evaluation

New barrier fluids for subsurface containment of contaminants, 94:119 (R;US)

Regulatory analysis for the use of underground barriers at the Hanford Site tank farms, 94:1108 (R;US)

Tri-Party Agreement Milestone M-45-07A; complete evaluation of subsurface barrier feasibility: Summary report, 94:1388 (R;US)

Feasibility Studies

Focused feasibility study of engineered barriers for waste management units in the 200 Areas, 94:77 (R;US)

Human Factors Engineering

The Assessment of Future Human Actions at Radioactive Waste Disposal Sites: An international perspective, 94:2569 (R;US)

Installation

A TOUGH2 equation-of-state module for the simulation of two-phase flow of air, water, and a miscible gelling liquid, 94:120 (R;US)

Location of equipment in the 105K East discharge chute for installation of isolation barriers (ref USQ 94-0041): Revision 1, 94:2777 (R;US)

Project management plan for Project W-178, 219-S secondary containment, 94:1135 (R;US)

Remediation options for a chromium contaminated landfill using cementitious grouts, 94:1714 (R;US)

Review of potential subsurface permeable barrier emplacement and monitoring technologies, 94:154 (R;US)

Title I design summary report, initial tank retrieval systems, project W-211, 94:1137 (R;US)

Moisture

Water removal from a dry barrier cover system, 94:1879 (R;US)

Performance

Experimental plan and construction guidance for Hanford Protective Barrier Test at Hill AFB, Utah, 94:156 (R;US)

Burrell, Pennsylvania, vicinity property Long-Term Surveillance Plan. Final report, 94:1729 (R;US)

Development of an auditable safety analysis in support of a radiological facility classification, 94:1923 (R;US)

Gunnison, Colorado subpile study report: Revision 1, 94:1767 (R;US)

Implementation plan for the programmatic environmental impact statement for the Department of Energy UMTRA Ground Water Project, 94:1743 (R;US)

Long-term surveillance plan for the Shiprock Disposal site, Shiprock, New Mexico, 94:1750 (R;US)

Public information plan. Version 2, 94:1755 (R;US)

Quality assurance project plan for the UMTRA technical assistance contractor hydrochemistry facility. Final report, 94:1736 (R;US)

Radiological surveillance of Remedial Action activities at the processing site, Ambrosia Lake, New Mexico, April 12–16, 1993. Final report, 94:1734 (R;US)

Radiological surveillance of Remedial Action activities at the processing site, Falls City, Texas. Final report, 94:1733 (R;US)

Site Observational Work Plan for the UMTRA project site at Ambrosia Lake, New Mexico, 94:1809 (R;US)

Site observational work plan for the UMTRA Project site at Tuba City, Arizona, 94:1810 (R;US)

UMTRA Project document control system manual, 94:1761 (R;US)

UMTRA Project water sampling and analysis plan, Slick Rock, Colorado, 94:1797 (R;US)

Uranium Mill Tailings Remedial Action Project Safety Advancement Field Effort (SAFE) Program, 94:1730 (R;US)

Uranium Mill Tailings Remedial Action Project environmental protection implementation plan, 94:1758 (R;US)

Uranium Mill Tailings Remedial Action Project surface project management plan, 94:1800 (R;US)

Uranium mill tailings remedial action project real estate management plan, 94:1815 (R;US)

Work plan for ground water elevation data recorder/monitor well installation at Grand Junction, Colorado: Revision 1, 94:1787 (R;US)

Work plan for ground water elevation data recorder/monitor well installation at Gunnison, Colorado: Revision 2, 94:1790 (R;US)

Work plan for ground water elevation data recorder/monitor well installation at the New Rifle Site, Rifle, Colorado: Revision 1, 94:1785 (R;US)

Radioactive Waste Management

Finding of no significant impact proposed remedial action at two uranium processing sites near Slick Rock, Colorado, 94:1826 (R;US)

Long-term surveillance plan for the Shiprock Disposal site, Shiprock, New Mexico, 94:1750 (R;US)
The U.S. regulatory framework for long-term management of uranium mill tailings, 94:1726 (R;US)

Remedial Action

A review and assessment of variable density ground water flow effects on plume formation at UMTRA project sites, 94:1820 (R;US)
Baseline risk assessment of ground water contamination at the Uranium Mill Tailings Site near Riverton, Wyoming, 94:1753 (R;US)
Baseline risk assessment of ground water contamination at the uranium mill tailings site near Durango, Colorado, 94:1822 (R;US)
Comment and response document for the UMTRA Project vitro processing site completion report Salt Lake City, Utah., 94:1777 (R;US)
Completion report for the UMTRA Project Vitro Processing Site. Revision 1, 94:1776 (R;US)
Contaminant distributions at typical U.S. uranium milling facilities and their effect on remedial action decisions, 94:1728 (R;US)
Economic impact study of the Uranium Mill Tailings Remedial Action Project in Colorado: Colorado State fiscal year 1994. Revision 1, 94:1821 (R;US)
Engineering solutions to the long-term stabilization and isolation of uranium mill tailings in the United States, 94:1727 (R;US)
Environmental assessment of remedial action at the Maybell uranium mill tailings site near Maybell, Colorado: Revision 2, 94:1833 (R;US)
Environmental assessment of remedial action at the Naturita uranium processing site near Naturita, Colorado: Revision 5, 94:1835 (R;US)
Environmental assessment of remedial action at the Slick Rock uranium mill tailings sites, Slick Rock, Colorado, 94:1831 (R;US)
Finding of No Significant Impact, proposed remediation of the Maybell Uranium Mill Processing Site, Maybell, Colorado, 94:1829 (R;US)
Finding of no significant impact proposed remedial action at two uranium processing sites near Slick Rock, Colorado, 94:1826 (R;US)
Implementation plan for the programmatic environmental impact statement for the Department of Energy UMTRA Ground Water Project, 94:1743 (R;US)
Limiting human exposures through the "as low as reasonably achievable" process at a Department of Energy mixed waste site, 94:1905 (R;US)
Mitigation and Monitoring Plan for impacted wetlands at the Gunnison UMTRA Project site, Gunnison, Colorado. Revision 1, 94:1759 (R;US)
Radiological audit of remedial action activities at the processing sites Mexican Hat, Utah and Monument Valley, Arizona. Audit date: May 3-7, 1993, Final report, 94:1742 (R;US)
Remedial action plan and site design for stabilization of the Inactive Uranium Mill Tailings Site, Maybell, Colorado: Final report, Appendixes to attachment 3, 94:1741 (R;US)
Site observational work plan for the UMTRA Project Site at Tuba City, Arizona, 94:1811 (R;US)
Site observational work plan for the UMTRA Project site at Ambrosia Lake, New Mexico, 94:1808 (R;US)
Special study for the statistical evaluation of groundwater data trends. Final report, 94:1738 (R;US)
Technical assistance contractor management plan: Surface and ground water, 94:1804 (R;US)
UMTRA Project document control system manual, 94:1761 (R;US)
UMTRA Project water sampling and analysis plan, Gunnison, Colorado: Revision 1, 94:1779 (R;US)
UMTRA Project: Environment, Safety, and Health Plan, 94:1824 (R;US)
UMTRA water sampling technical (peer) review. Responses to observations, comments, and recommendations submitted by

C. Warren Ankerberg (Geraghty & Miller, Inc.), 94:1745 (R;US)

UMTRA water sampling technical (peer) review: Responses to observations, comments, and recommendations submitted by Don Messinger (Roy F. Weston, Inc.), 94:1744 (R;US)
Uranium Mill Tailings Remedial Action Project Environmental Line Management Audit Action Plan. Final report. Audit, October 26, 1992-November 6, 1992, 94:1747 (R;US)
Uranium Mill Tailings Remedial Action Project surface project management plan, 94:1800 (R;US)
Uranium Mill Tailings Remedial Action Project, Surface Project Management Plan. Revision 1, 94:1801 (R;US)
Uranium mill tailings remedial action project real estate management plan, 94:1815 (R;US)
Waste minimization opportunities at the U.S. Uranium Mill Tailings Remedial Action (UMTRA) Project, Rifle, Colorado, site, 94:1715 (R;US)

Site Characterization

Baseline risk assessment of ground water contamination at the Uranium Mill Tailings Site near Riverton, Wyoming, 94:1753 (R;US)
Site observational work plan for the UMTRA Project site at Tuba City, Arizona, 94:1810 (R;US)

FEED MATERIALS PRODUCTION CENTER

Decommissioning

Configuration management at an environmental restoration DOE facility (Fernald), 94:2033 (R;US)
Decontamination and decommissioning of Plant 7 at the Fernald Facility, 94:2034 (R;US)
Risk assessment data needs for D&D of the Fernald production area, 94:2295 (J;US)

Decontamination

Configuration management at an environmental restoration DOE facility (Fernald), 94:2033 (R;US)
Decontamination and decommissioning of Plant 7 at the Fernald Facility, 94:2034 (R;US)
Risk assessment data needs for D&D of the Fernald production area, 94:2295 (J;US)
Standards/requirements identification documents (S/RIDS), 94:3007 (R;US)
Uncertainties in risk assessment at USDOE facilities, 94:1918 (R;US)

Dosimetry

Dose and risk assessment approach for the Fernald CERCLA D&D Project, 94:2036 (R;US)

Environmental Effects

Site Environmental Report, 1993, 94:2035 (R;US)

Environmental Quality

Ecological risks of DOE's programmatic environmental restoration alternatives, 94:2511 (R;US)

Land Pollution

Analytical electron microscopy characterization of uranium-contaminated soils from the Fernald Site, FY1993 report, 94:395 (R;US)
Influence of attrition scrubbing, ultrasonic treatment, and oxidant additions on uranium removal from contaminated soils, 94:1720 (R;US)

Radiation Monitoring

A compendium of results from long-range alpha detector soil surface monitoring: June 1992-May 1994, 94:98 (R;US)

Radioactive Waste Management

In situ construction of horizontal soil containment barrier at Fernald, 94:1854 (R;US)
Uranium-contaminated soils: Ultramicrotomy and electron beam analysis, 94:403 (R;US)

Radioactive Waste Processing

Development and testing of the Minimum Additive Waste Stabilization (MAWS) system for Fernald wastes. Phase 1, Final report, 94:460 (R;US)
Reductive dissolution approaches to removal of uranium from contaminated soils, 94:1864 (R;US)
Uranium removal from soils: An overview from the Uranium in Soils Integrated Demonstration program, 94:1722 (R;US)

Remedial Action

Case study: Evaluation of a scenario for the reuse of structures in the production area at Fernald, 94:1908 (R;US)
Cost Quality Management Assessment for the Fernald Environmental Management Project: Final report, 94:1927 (R;US)
Demonstration of in situ-constructed horizontal soil containment barrier at Fernald, 94:1852 (R;US)
Dose and risk assessment approach for the Fernald CERCLA D&D Project, 94:2036 (R;US)
Ensuring comparability of data generated by multiple analytical laboratories for environmental decision making at the Fernald Environmental Management Project, 94:2477 (R;US)
In situ construction of horizontal soil containment barrier at Fernald, 94:1854 (R;US)
Integrated planning: A baseline development perspective, 94:3009 (R;US)
Laser surface cleaning, 94:1955 (R;US)
Meeting the requirements for a DOE environmental restoration project. The Fernald strategy, 94:2029 (R;US)
Nuclear criticality safety program for environmental restoration projects, 94:2476 (R;US)
Physicochemical and mineralogical characterization of uranium-contaminated soils from the Fernald Integrated Demonstration Site, 94:1721 (R;US)
Standardization of equations for radiochemical calculations, 94:2478 (R;US)
Standards/requirements identification documents (S/RIDS), 94:3007 (R;US)
Uncertainties in risk assessment at USDOE facilities, 94:1918 (R;US)
Uranium soils integrated demonstration, 1993 status, 94:2475 (R;US)
Uranium soils integrated demonstration: Soil characterization project report, 94:93 (R;US)

Risk Assessment

Dose and risk assessment approach for the Fernald CERCLA D&D Project, 94:2036 (R;US)

Safety

Nuclear criticality safety program for environmental restoration projects, 94:2476 (R;US)

Site Characterization

Transport processes investigation: A necessary first step in site scale characterization plans, 94:1885 (R;US)

FERNALD PRODUCTION PLANT

See FEED MATERIALS PRODUCTION CENTER

FERRITIC STEELS

Interim storage of sodium in ferritic steel tanks at ambient temperature, 94:2171 (R;US)

FERROCYNANIDES

Action plan for response to abnormal conditions in Hanford Site radioactive waste tanks containing ferrocyanide: Revision 2, 94:1026 (R;US)
Calcination/dissolution processing of Hanford waste, 94:1691 (BA;US)
Evaluation of FTIR-based analytical methods for the analysis of Hanford Site waste, 94:1100 (R;US)
Evaluation of FTIR-based analytical methods for the analysis of simulated wastes, 94:1532 (R;US)
Ferrocyanide Safety Program: Data interpretation report for tank 241-T-107 core samples, 94:1062 (R;US)
Ferrocyanide Safety Project Dynamic X-Ray Diffraction studies of sodium nickel ferrocyanide reactions with equimolar nitrate/nitrite salts, 94:968 (R;US)
Ferrocyanide safety program: Moisture migration test in ferrocyanide simulant, 94:1063 (R;US)
Ferrocyanide safety program: Results of relative humidity experiments using ferrocyanide waste simulants, 94:1643 (R;US)
Ferrocyanide safety project task 3 ferrocyanide aging studies FY 1994 annual report, 94:2532 (R;US)
Integrated beta and gamma radiation dose calculations for the ferrocyanide waste tanks, 94:1518 (R;US)

Quarterly report on Defense Nuclear Facilities Safety Board recommendation 90-7 for the period ending September 30, 1993, 94:1030 (R;US)

Quarterly report on the Ferrocyanide Safety Program for the period ending September 30, 1994, 94:1032 (R;US)

Solubility of ferrocyanide compounds: Ferrocyanide Safety Project, Interim report FY1994, 94:986 (R;US)

Tank 241-BY-103 tank characterization plan, 94:1558 (R;US)

FERROMAGNETIC MATERIALS

Plutonium and americium separation using organophosphorus extractant absorbed onto ferromagnetic particle, 94:2952 (BA;US)

FFTF REACTOR

Advanced reactors transition fiscal year 1995 multi-year program plan WBS 7.3, 94:2178 (R;US)

Conceptual design report, Sodium Storage Facility, Fast Flux Test Facility, Project F-031, 94:2169 (R;US)

Design review report FFTF interim storage cask, 94:2170 (R;US)

FFTF horizontal sodium storage tank preliminary thermal analysis, 94:2172 (R;US)

FFTF vertical sodium storage tank preliminary thermal analysis, 94:2173 (R;US)

Fast Flux Test Facility transition project resource loaded schedule: Revision 1, 94:2177 (R;US)

Fast Flux Test Facility, Sodium Storage Facility project-specific project management plan, 94:2167 (R;US)

Fast flux test facility hazards assessment, 94:2206 (R;US)

Fast flux test facility, transition project plan, 94:2176 (R;US)

Interface agreement for the management of FFTF Spent Nuclear Fuel, 94:2183 (R;US)

Interim storage of sodium in ferritic steel tanks at ambient temperature, 94:2171 (R;US)

Preliminary safety evaluation (PSE) for Sodium Storage Facility at the Fast Flux Test Facility, 94:2175 (R;US)

Snubber reduction analysis of secondary hot leg in Fast Flux Test Facility, 94:2118 (R;US)

The Fast Flux Test Facility shutdown program plan, 94:2117 (R;US)

FIBER OPTICS

Production and preliminary testing of multianalyte imaging sensor arrays, 94:2590 (R;US)

FIBERGLASS

Test plan for qualification of the S-type fiberglass materials for use as the liquid observation well casing, 94:1595 (R;US)

FIELD OFFICES

Sealed canister liquid sampling for fuel characterization shipments, 94:2666 (R;US)

Heat Sources

Consolidated fuel decay heat calculations, 94:2659 (R;US)

Heat Transfer

Thermal analysis for determination for maximum pool temperatures for the K East and K West spent fuel storage basins, 94:1358 (R;US)

Holsts

KE Basin monorail modification for the sludge removal and packaging project, 94:2667 (R;US)

Leaks

Engineering study: 105KE to 105KW Basin fuel and sludge transfer. Final report, 94:310 (R;US)

Maintenance

Design criteria document, Maintenance Shop/Support Facility, K-Basin Essential Systems Recovery, Project W-405, 94:2216 (R;US)

Management

Configuration management compliance matrix for K Basins, 94:2214 (R;US)

Materials Handling Equipment

Design support document for the K Basins Vertical Fuel Handling Tools, 94:2671 (R;US)

Test plan for K-Basin fuel handling tools, 94:2722 (R;US)

Monitored Retrievable Storage

Test reports for K Basins vertical fuel handling tools, 94:2728 (R;US)

Pollution Abatement

Design Review Report for the 105 K-East Basin dose reduction concept, Volume 2, Review Package, 94:2221 (R;US)

Radiation Doses

Design Review Report for the 105 K-East Basin dose reduction concept, Volume 2, Review Package, 94:2221 (R;US)

Radiation Protection

Design review report for the 105 K-East Basin dose reduction concept. Volume 1, 94:2220 (R;US)

Radionuclide Migration

A systems engineering analysis to examine the economic impact for treatment of tritiated water in the Hanford KE-Basin, 94:2559 (R;US)

Remedial Action

Overview of the spent nuclear fuel project at Hanford, 94:2633 (R;US)

Retrofitting

PWR Core II blanket fuel disposition recommendation of storage option study, 94:1395 (R;US)

T Plant removal of PWR Chiller Subsystem, 94:2834 (R;US)

Risk Assessment

Basis for category B designation for K basins, 94:2217 (R;US)

Roofs

Resolution of Surveillance Report No. PAD-BDW-95-004 for suspect bolts installed in the 105 KW roof addition structure, 94:2219 (R;US)

Safety Analysis

K Basin safety analysis, 94:2696 (R;US)

OSR encapsulation basis - 100-KW, 94:2708 (R;US)

Safety assessment of discharge chute isolation barrier preparation and installation, 94:2698 (R;US)

Safety assessment of discharge chute isolation barrier preparation and installation activities. Revision 3, 94:2699 (R;US)

Seismic Isolation

Corrosion evaluation of fuel canister crusher rigging, 94:2223 (R;US)

K-Basin isolation barrier seal, 94:2673 (R;US)

Surveillance

Accelerated characterization of metal fuel stored in the Hanford K basins, 94:2628 (R;US)

Thermal Analysis

Evaluation of storing Shippingport Core II spent blanket fuel assemblies in the T Plant PWR Core II fuel pool without active cooling, 94:2695 (R;US)

Thermal analysis for determination for maximum pool temperatures for the K East and K West spent fuel storage basins, 94:1358 (R;US)

Site observational work plan for the UMTRA project site at Shiprock, New Mexico, 94:1807 (R;US)

Data Acquisition

Characterization plan for the Oak Ridge National Laboratory Area-Wide Groundwater Program, Oak Ridge, Tennessee, 94:63 (R;US)

Work plan for ground water elevation data recorder installation at Riverton, Wyoming, 94:1798 (R;US)

Decontamination

A cost-effectiveness analysis of the in situ air stripping technology at the Savannah River Integrated Demonstration site: Part 1 and Part 2, 94:101 (R;US)

Acoustically enhanced remediation of contaminated soil and ground water, 94:61 (R;US)

An efficient technique for locating and removing dense non-aqueous phase liquids in-situ, 94:355 (BA;US)

An efficient technique for locating and removing dense non-aqueous phase liquids in-situ, 94:890 (BA;US)

Baseline risk assessment of ground water contamination at the Uranium Mill Tailings Site at Grand Junction, Colorado: Revision 1, 94:1765 (R;US)

Baseline risk assessment of ground water contamination at the inactive uriferous lignite ashing site near Belfield, North Dakota. Revision 1, 94:1771 (R;US)

Bioremediation of contaminated groundwater, 94:386 (P;US)

Contaminant distributions at typical U.S. uranium milling facilities and their effect on remedial action decisions, 94:1728 (R;US)

Development of a passive-flow treatment system for ⁹⁰Sr-contaminated seep water at Waste Area Grouping 5 at Oak Ridge National Laboratory, 94:137 (R;US)

Field pilot test of surfactant-enhanced remediation of trichloroethane DNAPL in a sand aquifer, 94:371 (J;US)

Horizontal environmental wells: A summary and a survey, 94:357 (BA;US)

Idaho Operations Office: Technology summary, June 1994, 94:465 (R;US)

In situ treatment of VOCs by recirculation technologies, 94:40 (R;US)

Innovative technologies for in-situ remediation, 94:246 (R;US)

Letter report for modeling evaluation of N-Springs barrier and pump-and-treat systems. Draft A, 94:86 (R;US)

Method of degrading pollutants in soil, 94:390 (P;US)

Operations Support of Phase 2 Integrated Demonstration In Situ Bioremediation: Volume 3, Final report: Data in graphical form, Disks 1,2,3,4; Averaged data in tabular form, Disks 1,2, 94:342 (R;US)

Operations Support of Phase 2 Integrated Demonstration In Situ Bioremediation: Volume 4, Final report: Averaged data in tabular form, Disks 3,4; Averaged data in graphical form, Disks 1,2,3,4, 94:343 (R;US)

Pilot-scale treatability test plan for the 200-UP-1 groundwater Operable Unit, 94:79 (R;US)

Projects at the Western Environmental Technology Office. Quarterly technical progress report, October 1–December 31, 1994, 94:474 (R;US)

Proposed plan for interim remedial measures at the 100-DR-1 Operable Unit, Hanford Site, Richland, Washington. Draft A, 94:2002 (R;US)

GROUND WATER Decontamination

Protocol for VOC-Arid ID remediation performance characterization, 94:681 (R;US)

Removal action work plan for Corehole 8 in Waste Area Grouping 1 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:142 (R;US)

Selective chelators for actinide complexation, 94:2951 (BA;US)

Site observational work plan for the UMTRA Project site at Spook, Wyoming, 94:1805 (R;US)

Special study for the statistical evaluation of groundwater data trends. Final report, 94:1738 (R;US)

Testing of a benchscale Reverse Osmosis/Coupled Transport system for treating contaminated groundwater, 94:263 (R;US)

Treatability test plan for the 200-ZP-1 operable unit, 94:1983 (R;US)

U.S. Department of Energy Uranium Mill Tailings Remedial Action Ground Water Project: Project plan, 94:1751 (R;US)

Density

A review and assessment of variable density ground water flow effects on plume formation at UMTRA project sites, 94:1820 (R;US)

Electromagnetic Surveys

Geophysical data fusion for subsurface imaging, 94:2430 (R;US)

Environmental Impacts

Environmental consequences to water resources from alternatives of managing spent nuclear fuel at Hanford, 94:2530 (R;US)

Environmental Transport

Ranking of septic tank and drainfield sites using travel time to the groundwater table, 94:230 (R;US)

Evaluation

Some statistical aspects of background based groundwater standards at an arid hazardous waste site, 94:259 (R;US)

Flow Models

Hydrologic budget for A/M Area, Savannah River Site, 94:350 (R;US)

Status of the ground water flow model for the UMTRA Project, Shiprock, New Mexico, site, 94:1816 (R;US)

Transport processes investigation: A necessary first step in site scale characterization plans, 94:1885 (R;US)

West Siberian basin hydrogeology - regional framework for contaminant migration from injected wastes, 94:3039 (R;US)

Flowmeters

FLOW. A Computer Program for Processing In Situ Permeable Flow Sensor Data, 94:92 (CM;US)

Fluid Flow

Groundwater flow velocity measurements in a sinkhole at the Weeks Island Strategic Petroleum Reserve Facility, Louisiana, 94:238 (R;US)

Hydrogeology along the southern boundary of the Hanford Site between the Yakima and Columbia Rivers, Washington, 94:164 (R;US)

In Situ Permeable Flow Sensor installation at 100-H description of work, 94:748 (R;US)

Monitoring probe for groundwater flow, 94:388 (P;US)

Water infiltration rates in the unsaturated zone at the Idaho National Engineering Laboratory estimated from chlorine-36 and tritium profiles, and neutron logging, 94:30 (BA;NL)

Health Hazards

Baseline risk assessment of ground water contamination at the Uranium Mill Tailings Site in Lakeview, Oregon, 94:1796 (R;US)

Hydraulic Conductivity

Modelling of hydro-thermo-mechanical effects in a fracture intersecting a nuclear waste deposition hole, 94:24 (BA;US)

Hydrodynamics

Site observational work plan for the UMTRA Project site at Riverton, Wyoming, 94:1812 (R;US)

Site observational work plan for the UMTRA project site at Shiprock, New Mexico, 94:1807 (R;US)

West Siberian basin hydrogeology - regional framework for contaminant migration from injected wastes, 94:3039 (R;US)

Hydrology

Evolution of patterns of regional groundwater flow in southeastern New Mexico: Response to post-Pleistocene changes in climate, 94:2405 (R;US)

Groundwater maps of the Hanford Site, December 1993, 94:247 (R;US)

Mapping

Groundwater maps of the Hanford Site, June 1994, 94:248 (R;US)

Monitoring

Borehole completion data package for well 199-N-81, 94:274 (R;US)

Borehole data package for the 100-K area ground water wells, CY 1994, 94:276 (R;US)

Burrell, Pennsylvania, vicinity property Long-Term Surveillance Plan. Final report, 94:1729 (R;US)

Declustering and stochastic simulation of ground-water tritium concentrations at Hanford, Washington, 94:209 (R;US)

Description of work for 200-UP-1 characterization of monitoring wells: Revision 1, 94:268 (R;US)

Designing an enhanced groundwater sample collection system, 94:174 (R;US)

Environmental Sciences Division Groundwater Program Office: Annual report, 1993, 94:145 (R;US)

Estimated recharge rates at the Hanford Site, 94:182 (R;US)

Final report for SNL/NM environmental drilling project, 94:235 (R;US)

Geophysical survey for proposed boreholes, 199-K-109A, 199-K-110A, and 199-K-111A, 100K Area, 94:287 (R;US)

Groundwater monitoring plan: 200 Areas treated effluent disposal facility (Project W-049H), 94:300 (R;US)

Groundwater monitoring results for the 100-K Area fuel storage basins: January 1 to March 31, 1994, 94:292 (R;US)

Groundwater quality monitoring well installation for Lower Waste Area Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee. Environmental Restoration Program, 94:124 (R;US)

Groundwater quality monitoring well installation for Waste Area Grouping 3 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:126 (R;US)

Groundwater quality monitoring well installation for Waste Area Grouping 4 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:127 (R;US)

Groundwater quality monitoring well installation for Waste Area Grouping at Oak Ridge National Laboratory, Oak Ridge, Tennessee. Environmental Restoration Program, 94:129 (R;US)

H-Area, K-Area, and Par Pond Sewage Sludge Application Sites groundwater monitoring report: Second quarter 1994, 94:346 (R;US)

Hanford site ground water protection management plan, 94:76 (R;US)

Limited field investigation report for the 100-FR-3 operable unit, 94:1979 (R;US)

Pilot-scale treatability test plant for the 200-BP-5 operable unit. Revision 1, 94:1981 (R;US)

Quality Assurance Project Plan for the Environmental Monitoring Program in Waste Area Grouping 6 at Oak Ridge National Laboratory, Oak Ridge, Tennessee: Environmental Restoration Program, 94:540 (R;US)

Quarterly report of RCRA groundwater monitoring data for period July 1 through September 30, 1994, 94:82 (R;US)

RCRA and Operational Monitoring (ROM): Multi-Year Program Plan and Fiscal Year 95 Work Plan WBS 1.5.3, 94:333 (R;US)

Remedial investigation report on Bear Creek Valley Operable Unit 2 (rust spoil area, spoil area 1, and SY-200 yard) at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee: Volume 2. Appendixes, 94:1963 (R;US)

Remedial investigation work plan for Bear Creek Valley Operable Unit 1 (S-3 Ponds, Boneyard/Burnyard, Oil Landfarm, Sanitary Landfill I, and the Burial Grounds, including Oil Retention Ponds 1 and 2) at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee. Volume 1, Main text, 94:537 (R;US)

Summary of field operations Tijeras Arroyo Well TJA-2. Site-Wide Hydrogeologic Characterization Project, 94:236 (R;US)
 UMTRA project water sampling and analysis plan, Grand Junction, Colorado, 94:1780 (R;US)
 UMTRA project water sampling and analysis plan, Old and New Rifle, Colorado, 94:1792 (R;US)
 Work plan for ground water elevation data recorder/monitor well installation at Grand Junction, Colorado, 94:1786 (R;US)
 Work plan for ground water elevation data recorder/monitor well installation at Gunnison, Colorado: Revision 1, 94:1789 (R;US)
 Work plan for ground water elevation data recorder/monitor well installation at Gunnison, Colorado, 94:1788 (R;US)
 Work plan for ground water elevation data recorder/monitor well installation at Gunnison, Colorado: Revision 2, 94:1790 (R;US)
 Work plan for ground water elevation data recorder/monitor well installation at Grand Junction, Colorado: Revision 1, 94:1787 (R;US)
 Work plan for ground water elevation data recorder/monitor well installation at the New Rifle Site, Rifle, Colorado, 94:1784 (R;US)

Monitors

Work plan for ground water elevation data recorder/monitor well installation at the New Rifle Site, Rifle, Colorado: Revision 1, 94:1785 (R;US)

Pollution

Biodegradation of chlorinated aliphatic hydrocarbon mixtures in a single-pass packed-bed reactor, 94:910 (J;US)
 Biodegradation of chlorinated aliphatics and aromatic compounds in total-recycle expanded-bed biofilm reactors, 94:383 (J;US)
 Field measurements of soil air permeability at the Chemical Waste Landfill, 94:226 (R;US)
 Field-usable portable analyzer for chlorinated organic compounds, 94:510 (R;US)

Pollution Abatement

Proposed ground water protection strategy for the Uranium Mill Tailings Site at Green River, Utah. Final report, 94:1819 (R;US)

Quantitative Chemical Analysis

Remedial Action Plan and Site Design for Stabilization of the Inactive Uranium Mill Tailings Site, Maybell, Colorado: Appendixes to Attachment 3: Appendix A, Hydrological services calculations: Appendix B, Ground water quality by location, Final report, 94:1924 (R;US)

Radiation Monitoring

Results of the quarterly tritium survey of Fourmile Branch and its seep lines in the F- and H-Areas of SRS: September 1993, 94:345 (R;US)
 Work plan for monitor well/groundwater elevation data recorder installation at the Cheney Disposal site, Grand Junction, Colorado, 94:1814 (R;US)

Radiochemical Analysis

Data validation report for the 100-FR-3 Operable Unit, third round groundwater samples, 94:283 (R;US)
 F-Area Acid/Caustic Basin groundwater monitoring report: Second quarter 1994, 94:347 (R;US)

Radionuclide Migration

A review and assessment of variable density ground water flow effects on plume formation at UMTRA project sites, 94:1820 (R;US)
 Benchmarking of computer codes and approaches for modeling exposure scenarios, 94:485 (R;US)
 Declustering and stochastic simulation of ground-water tritium concentrations at Hanford, Washington, 94:209 (R;US)
 Development of hydrogeological modelling approaches for assessment of consequences of hazardous accidents at nuclear power plants, 94:3018 (R;US)
 Distribution and geochemistry of contaminated subsurface waters in fissured volcanogenic bed rocks of the Lake Karachai Area, Chelyabinsk, Southern Urals, 94:3022 (R;US)

Estimation of the release and migration of nickel through soils and groundwater at the Hanford Site 218-E-12B Burial Ground, 94:158 (R;US)

Geochemical factors affecting radionuclide transport through near and far fields at a Low-Level Waste Disposal Site, 94:183 (R;US)

Groundwater flux, travel time, and radionuclide transport, 94:244 (R;US)

Hanford site ground water protection management plan, 94:76 (R;US)

In situ treatment of mixed contaminants in groundwater: Review of candidate processes, 94:148 (R;US)

Land containment system: Horizontal grout barrier: A method for in situ waste management, 94:1853 (R;US)

Letter report for modeling evaluation of N-Springs barrier and pump-and-treat systems. Draft A, 94:86 (R;US)

On integrating modeling software for application to total-system performance assessment, 94:3051 (R;US)

Project management plan, N Springs expedited response action, 94:278 (R;US)

Remedial investigation work plan for the Groundwater Operable Unit at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:62 (R;US)

Site characterization plan for groundwater in Waste Area Grouping 1 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:2439 (R;US)

Site observational work plan for the UMTRA Project Site at Tuba City, Arizona, 94:1811 (R;US)

Status of outdoor radioactive contamination at the Hanford Site, 94:2276 (R;US)

Surface complexation model prediction of Np and Pu distribution coefficients, 94:32 (BA;US)

Test documentation for the GENII Software Version 1.485, 94:2260 (R;US)

The grout/glass performance assessment code system (GPACS) with verification and benchmarking, 94:2262 (R;US)

Reactivity

Mechanistic interpretation of glass reaction: Input to kinetic model development, 94:26 (BA;US)

Recharge

Estimated recharge rates at the Hanford Site, 94:182 (R;US)

Remedial Action

100-HR-3 Operable Unit focused feasibility study report, 94:1999 (R;US)

A/M Area Groundwater Corrective Action Southern Sector Remediation Technology Alternatives Evaluation, 94:339 (R;US)

Abiotic reduction of aquifer materials by dithionite: A promising in-situ remediation technology, 94:214 (R;US)

Accelerated clean-up at the Hanford Site, 94:2619 (R;US)

Adsorption study for uranium in Rocky Flats groundwater, 94:223 (R;US)

Albuquerque Operations Office, Albuquerque, New Mexico: Technology summary, 94:468 (R;US)

Baseline risk assessment of ground water contamination at the Monument Valley Uranium Mill Tailings Site, Cane Valley, Arizona: Revision 1, 94:1748 (R;US)

Bioremediation of contaminated groundwater, 94:152 (PA;US)

Characterization plan for the Oak Ridge National Laboratory Area-Wide Groundwater Program, Oak Ridge, Tennessee, 94:63 (R;US)

Chemical barriers for controlling groundwater contamination, 94:382 (J;US)

Containment of subsurface contaminants, 94:153 (PA;US)

Contaminants at DOE sites and their susceptibility to bioremediation, 94:191 (R;US)

Declustering and stochastic simulation of ground-water tritium concentrations at Hanford, Washington, 94:209 (R;US)

Distribution and geochemistry of contaminated subsurface waters in fissured volcanogenic bed rocks of the Lake Karachai Area, Chelyabinsk, Southern Urals, 94:3022 (R;US)

Dynamic Underground Stripping: In situ steam sweeping and electrical heating to remediate a deep hydrocarbon spill, 94:243 (R;US)

Enhancing the design of in situ chemical barriers with multicomponent reactive transport modeling, 94:199 (R;US)

Environmental Sciences Division Groundwater Program Office: Annual report, 1993, 94:145 (R;US)

Implementation plan for the programmatic environmental impact statement for the Department of Energy UMTRA Ground Water Project, 94:1743 (R;US)

In situ bioremediation: Cost effectiveness of a remediation technology field tested at the Savannah River, 94:114 (R;US)

In situ permeable flow sensors at the Savannah River Integrated Demonstration: Phase 2 results, 94:233 (R;US)

In situ remediation integrated program: Development of containment technology, 94:216 (R;US)

In situ remediation integrated program: Success through teamwork, 94:215 (R;US)

In situ treatment of mixed contaminants in groundwater: Review of candidate processes, 94:148 (R;US)

In-situ remediation system and method for contaminated groundwater, 94:394 (P;US)

In-well vapor stripping drilling and characterization work plan, 94:747 (R;US)

Kinetic modeling of the biological destruction of carbon tetrachloride, 94:359 (BA;US)

Laboratory and field evaluation of the gas treatment approach for insitu remediation of chromate-contaminated soils, 94:2622 (R;US)

Laboratory evaluation of the potential for in situ treatment of chromate-contaminated groundwater by chemical precipitation, 94:264 (R;US)

Method efficiency and signal quantification of bacteria for a groundwater transport experiment, 94:48 (R;US)

Monitoring remediation of trichloroethylene using a chemical fiber optic sensor: Field studies, 94:2592 (R;US)

Oak Ridge Operations Office, Oak Ridge, Tennessee, technology summary, 94:1933 (R;US)

Operations Support of Phase 2 Integrated Demonstration In Situ Bioremediation: Volume 1, Final report: Final report text data in tabular form, Disk 1, 94:340 (R;US)

Organics in soils and groundwater at non-arid sites (A-1) integrated demonstration, 94:336 (R;US)

Performance of horizontal versus vertical vapor extraction wells, 94:636 (R;US)

Polymer pendant ligand chemistry: A biomimetic chemistry approach to metals removal and recovery from aqueous environmental solutions, 94:2953 (BA;US)

Proposed plan for interim remedial measure at the 100-HR-3 Operable Unit, Hanford Site, Richland, Washington. Draft A, 94:2004 (R;US)

Quarterly report of RCRA groundwater monitoring data for period July 1 through September 30, 1994, 94:82 (R;US)

RCRA Facility investigation/corrective measures study work plan for the 100-NR-1 operable unit: Hanford Site, Richland, Washington. Draft F, 94:561 (R;US)

Remedial Action Plan and Site Design for Stabilization of the Inactive Uranium Mill Tailings Site, Maybell, Colorado: Appendixes to Attachment 3: Appendix A, Hydrological services calculations: Appendix B, Ground water quality by location, Final report, 94:1924 (R;US)

Remedial action plan and site design for stabilization of the Inactive Uranium Mill Tailings Site, Maybell, Colorado: Final report, Appendixes to attachment 3, 94:1741 (R;US)

Remedial action plan and site design for stabilization of the inactive Uranium Mill Tailing site Maybell, Colorado: Attachment 3, ground water hydrology report, Attachment 4, water resources protection strategy. Final report, 94:1740 (R;US)

Remedial investigation work plan for the Groundwater Operable Unit at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:62 (R;US)

Richland Environmental Restoration Project 1995 fiscal year work plan: Work breakdown structure 2.0, 100 Area. Volume 1, 94:580 (R;US)

Site observational work plan for the UMTRA Project Site at Riverton, Wyoming. Revision 3/95, 94:1813 (R;US)

Site observational work plan for the UMTRA Project site at Tuba City, Arizona, 94:1810 (R;US)

Synthesis of polymer pendant sulfonated catechol and linear catechol amide ligands and their selective reactions with metals ions in aqueous solution, 94:901 (BA;US)

Technology summary of the in situ bioremediation demonstration (methane biostimulation) via horizontal wells at the Savannah River Site Integrated Demonstration Project, 94:335 (R;US)

The effect of dissolved solids on the destruction of organics by ultraviolet oxidation, 94:743 (R;US)

Three-dimensional modeling of subsurface contamination: A case study from the radio frequency-heating demonstration at the Savannah River Site, 94:337 (R;US)

Tracer transport modeling of the doublet well system, 94:3021 (R;US)

Treatment tests for chromate, nitrate, and uranium removal from Hanford groundwaters, 94:360 (BA;US)

UMTRA Project water sampling and analysis plan, Belfield and Bowman, North Dakota, 94:1782 (R;US)

Use of a mathematical model for prediction of optimum feeding strategies for in situ bioremediation, 94:384 (J;US)

Risk Assessment

Baseline risk assessment of ground water contamination at the Uranium Mill Tailings Site near Green River, Utah, 94:1769 (R;US)

Baseline risk assessment of ground water contamination at the Uranium Mill Tailings Site in Lakeview, Oregon, 94:1796 (R;US)

Baseline risk assessment of ground water contamination at the Uranium Mill Tailings Site near Riverton, Wyoming, 94:1753 (R;US)

Qualitative risk assessment for the 100-HR-3 groundwater operable unit, 94:280 (R;US)

Rock-Fluid Interactions

Surface complexation model prediction of Np and Pu distribution coefficients, 94:32 (BA;US)

Sampling

Designing an enhanced groundwater sample collection system, 94:174 (R;US)

Environmental surveillance master sampling schedule, 94:185 (R;US)

Health and safety work plan for sampling colloids in Waste Area Grouping 5 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:135 (R;US)

Interim-status groundwater monitoring plan for the 216-B-63 trench, 94:269 (R;US)

Site observational work plan for the UMTRA Project Site at Tuba City, Arizona, 94:1811 (R;US)

Task summary for cone penetrating testing sounding and soil and groundwater sampling Salmon Site, Lamar County, Mississippi, 94:2438 (R;US)

UMTRA Project water sampling and analysis plan, Slick Rock, Colorado, 94:1797 (R;US)

UMTRA project water sampling and analysis plan, Gunnison, Colorado, 94:1778 (R;US)

UMTRA project water sampling and analysis plan, Maybell, Colorado, 94:1773 (R;US)

UMTRA project water sampling and analysis plan, Naturita, Colorado, 94:1772 (R;US)

UMTRA project water sampling and analysis plan, Salt Lake City, Utah, 94:1762 (R;US)

UMTRA water sampling technical (peer) review. Responses to observations, comments, and recommendations submitted by C. Warren Ankerberg (Geraghty & Miller, Inc.), 94:1745 (R;US)

Seismic Surveys

Geophysical data fusion for subsurface imaging, 94:2430 (R;US)

Solvent Properties

Thermodynamic modeling of neptunium(V) solubility in concentrated Na-CO₃-HCO₃-Cl-ClO₄-H-OH-H₂O systems, 94:229 (R;US)

Surface Contamination

Site Observational Work Plan for the UMTRA project site at Ambrosia Lake, New Mexico, 94:1809 (R;US)

Water Pollution

Borehole data package for the 100-K area ground water wells, CY 1994, 94:276 (R;US)

Estimating DNAPL composition and VOC dilution from extraction well data, 94:367 (J;US)

Geophysical survey for proposed boreholes, 199-K-109A, 199-K-110A, and 199-K-111A, 100K Area, 94:287 (R;US)

Water Pollution Abatement

Containment of subsurface contaminants, 94:387 (P;US)

Water Pollution Control

Use of engineered soils and other site modifications for low-level radioactive waste disposal, 94:491 (R;US)

Water Pollution Monitors

Groundwater quality monitoring well installation for waste area grouping 7 and solid waste storage area 1, Oak Ridge, Tennessee, 94:122 (R;US)

Water Quality

Environmental surveillance master sampling schedule, 94:185 (R;US)

Groundwater quality monitoring well installation for Upper Waste Areas Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:125 (R;US)

Groundwater quality monitoring well installation for Waste Area Grouping 17 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:130 (R;US)

Groundwater quality monitoring well installation for Waste Area Grouping 5 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:123 (R;US)

Groundwater quality monitoring well installation for Waste Area Groupings 8 and 9 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:128 (R;US)

Groundwater quality monitoring well installation for waste area grouping 7 and solid waste storage area 1, Oak Ridge, Tennessee, 94:122 (R;US)

Hanford Site ground-water monitoring for 1993, 94:163 (R;US)

Hanford well custodians. Revision 1, 94:273 (R;US)

Modifications to the remedial action plan and site design for stabilization of the inactive Uranium Mill Tailings Site at Green River, Utah, 94:1827 (R;US)

Quarterly report of RCRA groundwater monitoring data for period April 1 through June 30, 1994, 94:81 (R;US)

Remedial Action Plan and Site Design for Stabilization of the Inactive Uranium Mill Tailings Site, Maybell, Colorado: Appendixes to Attachment 3: Appendix A, Hydrological services calculations: Appendix B, Ground water quality by location, Final report, 94:1924 (R;US)

Remedial Action Plan and Site Design for Stabilization of the Inactive Uranium Mill Tailings Site, Maybell, Colorado: Remedial action selection report: Attachment 2, Geology report, Final, 94:1739 (R;US)

Seeps and springs sampling and analysis plan for the environmental monitoring plan for Waste Area Grouping 6 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:133 (R;US)

UMTRA Project Site Observational Work Plan, Mexican Hat, Utah, 94:1802 (R;US)

UMTRA project water sampling and analysis plan, Grand Junction, Colorado, 94:1780 (R;US)

UMTRA project water sampling and analysis plan, Old and New Rifle, Colorado, 94:1792 (R;US)

Water Reclamation

UMTRA Project water sampling and analysis plan, Gunnison, Colorado: Revision 1, 94:1779 (R;US)

Water Treatment

The effect of dissolved solids on the destruction of organics by ultraviolet oxidation, 94:743 (R;US)

GROUND-WATER RESERVES

100-DR-1 operable unit focused feasibility study report, 94:1996 (R;US)

105 K-West isolation barrier leak recovery plan, 94:2724 (R;US)

Data quality objectives for the initial K West fuel examinations, 94:2668 (R;US)

Design review report for the 105 K-East Basin dose reduction concept. Volume 1, 94:2220 (R;US)

Environmental assessment for the deactivation of the N reactor facilities. Draft B, 94:1925 (R;US)

Environmental modelling for the Hanford Environmental Dose Reconstruction Project, 94:2038 (RA;XA)

Environmental sampling and analysis as a safeguards tool, 94:352 (BA;XA)

FSF trace heat limit file software. Revision 1, 94:2654 (R;US)

Fire barrier evaluation of the wall between spent nuclear fuel storage basins and reactor areas, 105KE and 105KW, 94:2773 (R;US)

IXM gas sampling procedure, 94:2710 (R;US)

K-Basins isolation barriers summary report, 94:2680 (R;US)

Proposed plan for interim decision at the 100-BC-5 operable unit, Hanford Site, Richland, Washington. Draft A, 94:2008 (R;US)

Qualitative risk assessment for the 100-KR-1 source operable unit, 94:751 (R;US)

HANFORD RESERVATION

Detection and quantitative analysis of ferrocyanide and ferricyanide: FY 93 Florida State University Raman spectroscopy report, 94:1120 (R;US)

Generation and release of flammable gases in Hanford tanks: An overview, 94:1092 (R;US)

Safety Evaluation for Packaging 101-SY Hydrogen Mitigation Mixer Pump package, 94:1125 (R;US)

Stress analysis of jacks, frame and bearing connections, and drill rod for core sampler truck No. 2, 94:1369 (R;US)

Administrative Procedures

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 1, 94:1042 (R;US)

Operability test report for the 300 Area Treated Effluent Disposal Facility, 94:773 (R;US)

Air Cleaning Systems

Test report for initial test of 6266 Building filter assemblies, 94:1641 (R;US)

Air Pollution

1995 Study and evaluation of fugitive and diffuse emissions from the 200 East Area at the Hanford Site, 94:2166 (R;US)

Evaluating airborne radionuclide concentrations in the tank farms, 94:1542 (R;US)

Final report of fugitive and diffuse emissions evaluations at the Hanford Site, CY 1994, 94:2829 (R;US)

Hanford Site radionuclide national emission standards for hazardous air pollutants unregistered stack (power exhaust) source assessment, 94:2159 (R;US)

Air Pollution Monitoring

Technical description of stack 296-B-10, 94:1375 (R;US)

Alarm Systems

Sequence and batch language programs and alarm-related "C" programs for the 242-A MCS. Revision 2, 94:266 (R;US)

Aquifers

Groundwater maps of the Hanford Site, June 1994, 94:248 (R;US)

Baseline Ecology

Ecological Compliance Assessment Project: 1994 Summary report, 94:2536 (R;US)

Boreholes

Geophysical survey for proposed borehole 199-K-106A, 100-K Area, 94:285 (R;US)

Building Codes

Radiological design guide, 94:2181 (R;US)

Buildings

Attachments for fire modeling for Building 221-T, T Plant canyon deck and railroad tunnel, 94:2128 (R;US)

Load test of the 272E Building high bay roof deck and support structure, 94:2187 (R;US)

Load test of the 277W Building high bay roof deck and support structure, 94:2189 (R;US)

Phase 1 sampling and analysis plan for the 304 Concretion Facility closure activities, 94:2158 (R;US)

Chemical Analysis

Analytical services contract reform alternatives project, 94:2817 (R;US)

Chemical Effluents

1993 Toxic Chemical Release Inventory: Emergency Planning and Community Right-To-Know Act of 1986, Section 313, 94:2988 (R;US)

Chemical Wastes

Request for interim approval to operate Trench 94 of the 218-E-12B Burial Ground as a chemical waste landfill for disposal of polychlorinated biphenyl waste in submarine reactor compartments: Revision 2, 94:560 (R;US)

Selection of analytical methods for mixed waste analysis at the Hanford Site, 94:579 (R;US)

Coal Preparation Plants

State Waste Discharge Permit application: 200-E Powerhouse Ash Pit, 94:571 (R;US)

State Waste Discharge Permit application: 200-W Powerhouse Ash Pit, 94:572 (R;US)

Contamination

Dose estimates for the solid waste performance assessment, 94:2259 (R;US)

Interim remedial measure proposed plan for the 200-ZP-1 Operable Unit, Hanford, Washington. Revision 3, 94:567 (R;US)

Radioactive air emissions notice of construction for the 105N Basin Stabilization, 94:2445 (R;US)

Status of outdoor radioactive contamination at the Hanford Site, 94:2276 (R;US)

Criticality

Addendum 2 to CSER 79-002: Extension of the 150 gram fissile limit used in room 187 of PFP, 94:2743 (R;US)

Decommissioning

Backup information for data tables in the extensive separations alternative engineering data package, 94:1316 (R;US)

Strategic plan for Hanford Site Environmental Restoration Information Management, 94:2989 (R;US)

Systems engineering product description report for the Hanford Cleanup Mission: First issue, 94:2606 (R;US)

Decontamination

100-B area technical baseline report, 94:754 (R;US)

CO₂ pellet decontamination technology at Westinghouse Hanford, 94:735 (R;US)

Strategic plan for Hanford Site Environmental Restoration Information Management, 94:2989 (R;US)

Educational Facilities

Functional design criteria for the Hazardous Materials Management and Emergency Response (HAMMER) Training Center. Revision 1, 94:3066 (R;US)

Electric Utilities

Site Support Program Plan for ICF Kaiser Hanford Company, 94:2842 (R;US)

Electromagnetic Surveys

Geophysical investigation of 216-U-8 clay vitrified pipe transfer line, 200 West Area, 94:2649 (R;US)

Geophysical survey for proposed borehole 199-K-107A, 100-K Area, 94:284 (R;US)

Emergency Plans

1993 Toxic Chemical Release Inventory: Emergency Planning and Community Right-To-Know Act of 1986, Section 313, 94:2988 (R;US)

B Plant hazards assessment, 94:2200 (R;US)

Emergency response environmental sampling plan, 94:2207 (R;US)

Lessons learned during the development and conduct of exercise Fermont, 94:3061 (R;US)

T Plant hazards assessment, 94:2205 (R;US)

Energy Management

Double-shell tank ultrasonic inspection plan. Revision 1, 94:1216 (R;US)

Engineering Drawings

CDMS: CAD data set system design description: Revision 1, 94:2185 (R;US)

Environmental Impacts

Predicted impacts of future water level decline on monitoring wells using a ground-water model of the Hanford Site, 94:177 (R;US)

Richland Environmental Restoration Project 1995 fiscal year work plan: Work breakdown structure 2.0, 200/300 Area, 94:581 (R;US)

Environmental Quality

100 Area excavation treatability study data validation report, 94:755 (R;US)

Architecture synthesis basis for the Hanford Cleanup system: First issue, 94:2605 (R;US)

Ecological risks of DOE's programmatic environmental restoration alternatives, 94:2511 (R;US)

Environmental Monitoring Plan, United States Department of Energy, Richland Operations Office. Revision 1, 94:1968 (R;US)

Environmental releases for calendar year 1993, 94:721 (R;US)

Environmental surveillance master sampling schedule, 94:185 (R;US)

Hanford Site Environmental Report 1993, 94:3028 (R;US)

Hanford Site environmental data for calendar year 1993—surface and Columbia River, 94:3029 (R;US)
Public involvement in environmental surveillance at Hanford, 94:3034 (R;US)
Quarterly environmental radiological survey summary: 100, 200, 300 and 600 Areas. Fourth quarter 1994, 94:870 (R;US)
Quarterly environmental radiological survey summary: Third quarter 1994—100, 200, 300, and 600 Areas, 94:869 (R;US)
Standard Review Plan for Environmental Restoration Program Quality Management Plans: Revision 2, 94:2441 (R;US) *

Fire Fighting

Acceptance test procedure for the MO-294 Building, 94:2195 (R;US)

B-Plant canyon fire foam supply, 94:2253 (R;US)

Fire Hazards

Fire hazards analysis for W-413, West Area Tank Farm Storage and Staging Facility, 94:1201 (R;US)

Fire Prevention

Fire modeling for Building 221-T - T Plant Canyon Deck and Railroad Tunnel, 94:2127 (R;US)

Preliminary Fire Hazards Analysis for W-059, B Plant canyon ventilation upgrade, 94:2760 (R;US)

Tech assist/fire safety assessment of 100K area facilities, 94:2774 (R;US)

Fuel Cycle Centers

UO₃ Plant hazards assessment. Revision 2, 94:2198 (R;US)

Fuel Reprocessing Plants

B-Plant canyon fire foam supply. Report, 94:2256 (R;US)

PUREX facility hazards assessment, 94:2202 (R;US)

Plutonium Finishing Plant Transition Project mission analysis report, 94:2134 (R;US)

Project B610 process control configuration acceptance test procedure, 94:1105 (R;US)

Radioactive air emissions program notice of construction for the decommissioning of the 233-S Plutonium Concentration Facility Complex. Revision 1, 94:2006 (R;US)

Report of clean out and flushing of UO₃ Plant processing equipment: Revision 1, 94:2139 (R;US)

Seismic (SSE) evaluation for the 291Z stack at the Hanford Site — Addition of environmental monitoring penetrations, 94:2130 (R;US)

Structural integrity analysis of the 224U elevator mothballing, 94:2243 (R;US)

Fuel Storage Pools

Configuration management compliance matrix for K Basins, 94:2214 (R;US)

Design criteria document, Fire Protection Task, K Basin Essential Systems Recovery, Project W-405, 94:2772 (R;US)

Design criteria document, Maintenance Shop/Support Facility, K-Basin Essential Systems Recovery, Project W-405, 94:2216 (R;US)

Design support document for the K Basins Vertical Fuel Handling Tools, 94:2671 (R;US)

Engineering study: 105KE to 105KW Basin fuel and sludge transfer. Final report, 94:310 (R;US)

In situ characterization of metal fuel stored in the Hanford K Basins, 94:2631 (R;US)

Interim essential and support drawing list for K Basins, 94:2222 (R;US)

K Basin safety analysis, 94:2696 (R;US)

KE Basin monorail modification for the sludge removal and packaging project, 94:2667 (R;US)

Location of equipment in the 105K East discharge chute for installation of isolation barriers (ref USQ 94-0041): Revision 1, 94:2777 (R;US)

OSR encapsulation basis — 100-KW, 94:2708 (R;US)

Project Management Plan 105-KE Basin sludge retrieval and packaging, 94:2693 (R;US)

Resolution of Surveillance Report No. PAD-BDW-95-004 for suspect bolts installed in the 105 KW roof addition structure, 94:2219 (R;US)

Safety assessment of discharge chute isolation barrier preparation and installation activities. Revision 3, 94:2699 (R;US)

Safety assessment of discharge chute isolation barrier preparation and installation, 94:2698 (R;US)

Sealed canister liquid sampling for fuel characterization shipments, 94:2666 (R;US)

Summary status of K Basins sludge characterization, 94:311 (R;US)

Test plan for K-Basin fuel handling tools, 94:2722 (R;US)

Work plan for integrated sludge packaging demonstration, 94:2732 (R;US)

Gaseous Wastes

Final report: Fiscal Year 1993 activities for the Line Loss Study, 94:2602 (R;US)

Geochemical Surveys

Calibration of the radionuclide logging system germanium detector, 94:763 (R;US)

Geophysical Surveys

Geophysical investigation of the 216-B-3-1 ditch, Operable Unit 200-BP-11, 200 East Area, 94:293 (R;US)

Geophysical investigation of the SQ Tanks, 221-T Building, 200 West Area, 94:1109 (R;US)

Geophysical investigations in the 100 Areas: Fiscal year 1991 through December 1993, 94:2163 (R;US)

Geophysical survey for proposed boreholes, 199-K-109A, 199-K-110A, and 199-K-111A, 100K Area, 94:287 (R;US)

Geophysical surveys for proposed boreholes 299-W15-25, 26 and 27, 200 West Area, 94:761 (R;US)

Ground-penetrating radar investigations conducted in the 100 areas, Hanford Site: Fiscal Year 1992, 94:282 (R;US)

Ground Water

Groundwater monitoring plan: 200 Areas treated effluent disposal facility (Project W-049H), 94:300 (R;US)

Limited field investigation report for the 100-NR-2 Operable Unit, 94:1977 (R;US)

Pilot-scale treatability test plan for the 200-UP-1 groundwater Operable Unit, 94:79 (R;US)

Historical Aspects

A brief history of the T Plant facility at the Hanford Site: Addendum 1, 94:2104 (R;US)

Qualitative risk assessment for the 100-KR-1 source operable unit, 94:751 (R;US)

Hydrology

Declustering and stochastic simulation of ground-water tritium concentrations at Hanford, Washington, 94:209 (R;US)

Groundwater maps of the Hanford Site, December 1993, 94:247 (R;US)

Hydrogeology along the southern boundary of the Hanford Site between the Yakima and Columbia Rivers, Washington, 94:164 (R;US)

VAM3D-CG configuration management plan, 94:301 (R;US)

Indoor Air Contamination

Technical assessment of TRUSAF for compliance with work place air sampling. Revision 1, 94:2745 (R;US)

Information Systems

An ugly duckling becomes a swan . . . : How an organization becomes customer focused through listening, 94:3062 (R;US)

Configuration management plan for LABCORE Program, 94:2790 (R;US)

Liquid Effluent Monitoring Information System (LEMIS) test plans release 1.1, 94:330 (R;US)

Inspection

B Plant complex treatment, storage, and disposal units inspection plan, 94:2798 (R;US)

Hanford Facility Resource Conservation and Recovery Act Permit General Inspection Plan, 94:2101 (R;US)

Laboratories

222-S laboratory complex hazards assessment, 94:2665 (R;US)

Analytical services FY 1995 multi-year program plan fiscal year work plan, WBS 1.5.1, 94:2837 (R;US)

Hanford analytical sample projections FY 1995—FY 2000. Revision 1, 94:2820 (R;US)

LABCORE post release 1.0 development system project management plan, 94:2805 (R;US)

LIMS strategy review, 94:2814 (R;US)

HANFORD RESERVATION Laboratories

Low-level waste certification plan for the WSCF Laboratory Complex, 94:744 (R;US)
Low-level waste characterization plan for the WSCF Laboratory Complex, 94:745 (R;US)
Radioactive air emissions notice of construction for the decommissioning of the 190-D Complex, 94:2007 (R;US)
Starting up a new U.S. Department of Energy Analytical Laboratory at the Hanford site, 94:2625 (R;US)
State of work for services provided by the Waste Sampling and Characterization Facility for effluent monitoring, 94:255 (R;US)
System design description for Waste Information and Control System, 94:1489 (R;US)
The Environmental and Molecular Sciences Laboratory project - Continuous evolution in leadership, 94:3037 (R;US)
Waste analysis plan for 222-S dangerous and mixed waste storage area, 94:2250 (R;US)
Waste management plan for Hanford spent nuclear fuel characterization activities, 94:2691 (R;US)

Land Pollution

Field screening for hexavalent chromium in soil: A fast-turnaround field method based on water extraction, 94:258 (R;US)

Land Pollution Abatement

Functions and requirements for single-shell tank leakage mitigation, 94:1428 (R;US)

Land Reclamation

Transport of radioactive ions in soil by electrokinetics, 94:1892 (BA;US)

Leaks

Hanford site comprehensive site compliance evaluation report, 94:277 (R;US)

Life Support Systems

Breathing air trailer acceptance test procedure, 94:2240 (R;US)

Low-Level Radioactive Wastes

200 Area Treated Effluent Disposal Facility Quality Assurance Project Plan, 94:788 (R;US)

Maintenance

340 Facility maintenance implementation plan, 94:2277 (R;US)
Site Support Program Plan for ICF Kaiser Hanford Company, 94:2842 (R;US)

Maintenance Facilities

Design criteria document, Maintenance Shop/Support Facility, K-Basin Essential Systems Recovery, Project W-405, 94:2216 (R;US)
Quality assurance program plan for the Site Physical and Electrical Calibration Services Lab. Revision 1, 94:2184 (R;US)

Management

Hanford Site National Environmental Policy Act (NEPA) characterization: Revision 6, 94:2333 (R;US)
Public agency partnership: Hanford's history artifacts as a communications tool, 94:3055 (R;US)
Systems engineering product description report for the Hanford Cleanup Mission: First issue, 94:2606 (R;US)
Team engineering for successful reuse and mission enhancement of a former DOE Weapons Material Production Facility, 94:2120 (R;US)

Neutron Dosimetry

Site-specific calibration of the Hanford personnel neutron dosimeter, 94:2067 (RA;US)

Nonradioactive Waste Management

Hanford facility dangerous waste permit application, 616 Nonradioactive Dangerous Waste Storage Facility: Revision 2A, 94:558 (R;US)

Nuclear Facilities

CSAR 81-001 addendum 2: Use of a plexiglass contamination barrier in HC-227-T, 94:2735 (R;US)
Westinghouse Hanford Company Operational Environmental Monitoring. Annual report, CY 1993, 94:2099 (R;US)

Nuclear Materials Management

A systems engineering analysis to examine the economic impact for treatment of tritiated water in the Hanford KE-Basin, 94:2559 (R;US)
Assembly procedure for Shot Loading Platform, 94:1460 (R;US)

Configuration Management Plan for K Basins, 94:2213 (R;US)
Environmental consequences to water resources from alternatives of managing spent nuclear fuel at Hanford, 94:2530 (R;US)

Gas/liquid sampler for closed canisters in KW Basin - test report, 94:2727 (R;US)

Hazard categorization of 100K East and 100K West in-basin fuel characterization program activities. Revision 1, 94:2685 (R;US)

In situ characterization of metal fuel stored in the Hanford K Basins, 94:2631 (R;US)

Maintenance implementation plan for the plutonium finishing plant. Revision 2, 94:2264 (R;US)

Overview of the spent nuclear fuel project at Hanford, 94:2633 (R;US)

Plutonium finishing plant safeguards and security systems replacement study, 94:2126 (R;US)

Plutonium finishing plant safety systems and equipment list, 94:2148 (R;US)

Preliminary safety evaluation, Project W-059, B Plant canyon ventilation upgrade, 94:2236 (R;US)

Test plan for non-radioactive testing of vertical calciner for development of direct denitration conversion of Pu-bearing liquors to stable, storage solids, 94:2152 (R;US)

Test reports for K Basins vertical fuel handling tools, 94:2728 (R;US)

Westinghouse Hanford Company FY 1995 Materials Management Plan (MMP), 94:2274 (R;US)

Occupational Safety

Technical assessment of workplace air sampling requirements at tank farm facilities: Revision 1, 94:1118 (R;US)

Toxicologic evaluation of analytes from Tank 241-C-103, 94:996 (R;US)

Westinghouse Hanford Company health and safety performance report, First quarter calendar year 1994, 94:2263 (R;US)

Office Buildings

Acceptance test procedure for the MO-293 (1722) 10-wide mobile office, 94:2211 (R;US)

Operations Research

Liquid Effluents Program mission analysis, 94:326 (R;US)

Personnel Dosimetry

Site-specific calibration of the Hanford personnel neutron dosimeter, 94:2067 (RA;US)

Pipes

As-built design criteria: B-234 cathodic protection, C.P. wire to pipe connections, 94:1019 (R;US)

Pollution Abatement

B Plant Complex pollution prevention plan: Revision 1, 94:2249 (R;US)

Closed out tank 241-SY-101 DACS system change requests No. 101-200, 94:1257 (R;US)

Hanford Site Pollution Prevention Plan Progress report, 1993, 94:2000 (R;US)

Power Distribution Systems

Electrical distribution studies for the 200 Area tank farms, 94:1380 (R;US)

Program Management

Analytical services contract reform alternatives project, 94:2817 (R;US)

Budget FY 1995 site support program plan WBS 6.10.1, 94:3074 (R;US)

Computer software design description for the Treated Effluent Disposal Facility (TEDF), Project L-045H, Operator Training Station (OTS), 94:770 (R;US)

Computer system design description for SY-101 hydrogen mitigation test project data acquisition and control system (DACs-1). Revision 1, 94:1263 (R;US)

Engineering, Analysis and Technology FY 1995 Site Support Program Plan, 94:2839 (R;US)

Hanford Mission Plan risk-based prioritization methodologies, 94:3030 (R;US)

Measuring the strategic value of information technology investments, 94:3057 (R;US)

Planning integration FY 1995 Multi-Year Program Plan (MYPP)/Fiscal Year Work Plan (FYWP), 94:3072 (R;US)
Project L-070, "300 Area process sewer piping system upgrade" Project Management Plan, 94:781 (R;US)
Quality assurance FY 1995 site support program plan WBS 6.7.2.5, 94:2268 (R;US)
RCRA and Operational Monitoring (ROM): Multi-Year Program Plan and Fiscal Year 95 Work Plan WBS 1.5.3, 94:333 (R;US)
Site Maintenance Plan: Part 2, Site Maintenance Action Plan for FY 1994, 94:2267 (R;US)
Site Support Program Plan for ICF Kaiser Hanford Company, 94:2841 (R;US)
Site Support Program Plan for ICF Kaiser Hanford Company, 94:2843 (R;US)
Site Support Program Plan for ICF Kaiser Hanford Company, 94:2844 (R;US)
Site Support Program Plan for ICF Kaiser Hanford Company, 94:2842 (R;US)
Standard Review Plan for Environmental Restoration Program Quality Management Plans: Revision 2, 94:2441 (R;US)
Transition projects FY 1995 Multi-Year Program Plan (MYPP)/Fiscal Year Work Plan (FYWP) WBS 1.3.1 and 7.1: Volume 4, 94:2845 (R;US)
Transition projects FY 1995 Multi-Year Program Plan (MYPP)/Fiscal Year Work Plan (FYWP) WBS 1.3.1 and 7.1: Volume 2, 94:2272 (R;US)
Transition projects FY 1995 multi-year program plan/fiscal year work plan WBS 1.3.1. and 7.1, 94:2273 (R;US)
Transition projects FY 1995 multi-year program/fiscal year work plan WBS 1.3.1. and 7.1, 94:2271 (R;US)

Public Information

Public agency partnership: Hanford's history artifacts as a communications tool, 94:3055 (R;US)

Purex Process

PUREX/UO₃ facilities deactivation lessons learned history, 94:2275 (R;US)
UO₃ building hazard classification - deactivated state, 94:2132 (R;US)

Quality Assurance

Assessment report for Hanford analytical services quality assurance plan, 94:2611 (R;US)
Hanford analytical services quality assurance plan. Revision 1, 94:575 (R;US)

Quality Control

Environmental surveillance master sampling schedule, 94:185 (R;US)

Radiation Monitoring

LIMS strategy review, 94:2814 (R;US)
Quarterly environmental radiological survey summary: 100, 200, 300 and 600 Areas. Fourth quarter 1994, 94:870 (R;US)
Radiological control FY 1995 site support program plan WBS 6.7.2.4, 94:2840 (R;US)
Technical assessment of compliance with work place air sampling requirements at T Plant. Revision No. 1, 94:2744 (R;US)
Technical assessment of workplace air sampling requirements at tank farm facilities: Revision 1, 94:1118 (R;US)

Radiation Protection

Dose estimates for the solid waste performance assessment, 94:2259 (R;US)
Hanford Generic Interim Safety Basis, 94:3064 (R;US)
Minimum release survey requirements, 94:2656 (R;US)

Radioactive Effluents

200 Area Treated Effluent Disposal Facility Quality Assurance Project Plan, 94:788 (R;US)
Site characterization for the W-049H Project, 94:2645 (R;US)

Radioactive Waste Disposal

200 Area Treated Effluent Disposal Facility Quality Assurance Project Plan, 94:788 (R;US)
241-AP waste storage tanks: Supplemental gravity load analysis: Volume 1, 94:1207 (R;US)
A history of solid waste packaging at the Hanford Site, 94:2634 (R;US)

A quality control program for waste disposal vault closure, 94:2113 (R;US)
Acceptance test procedure: RMW Land Disposal Facility Project W-025, 94:802 (R;US)
Clean salt disposition options, 94:2934 (R;US)
Construction quality assurance report, 94:808 (R;US)
Cradle modification for hydraulic ram, 94:1280 (R;US)
Definitive design report: Design report project W-025, Radioactive Mixed Waste (RMW) Land Disposal Facility NON-DRAG-OFF. Revision 1, Volume 1 and 2, 94:806 (R;US)
Dose rate calculations for the removal of the mixer pump from Tank 101 SY, 94:1538 (R;US)
Engineering task plan for the AZ-101 remote visual inspection of internal suspended fixtures and welds, 94:1131 (R;US)
Estimation of natural ground water recharge for the performance assessment of a low-level waste disposal facility at the Hanford Site, 94:188 (R;US)
Hanford's Radioactive Mixed Waste Disposal Facility, 94:738 (R;US)
Leachate storage transport tanker loadout piping, 94:811 (R;US)
Limited field investigation report for the 100-BC-2 Operable Unit, 94:1985 (R;US)
Limited field investigation report for the 100-HR-2 Operable Unit, 94:1991 (R;US)
Mitigation of hydrogen by oxidation using nitrous oxide and noble metal catalysts, 94:1642 (R;US)
Site characterization for the W-049H Project, 94:2645 (R;US)
Solid waste management history of the Hanford Site, 94:725 (R;US)
Tank characterization report for single-shell tank 241-C-109, 94:1376 (R;US)
Tank vapor mitigation requirements for Hanford Tank Farms, 94:1174 (R;US)
Test plan 241-C-103 natural breathing characteristics evaluation using the ultra sensitive flowmeter, 94:1598 (R;US)

Public participation in the evaluation of innovative environmental cleanup technology, 94:213 (R;US)
Qualitative risk assessment for 100-DR-1 source operable unit, 94:2646 (R;US)
Qualitative risk assessment for the 100-KR-1 source operable unit, 94:751 (R;US)
Quality assurance FY 1995 site support program plan WBS 6.7.2.5, 94:2268 (R;US)

HANFORD RESERVATION
Remedial Action

RCRA facility investigation/corrective measures study work plan for the 100-NR-2 operable unit, Hanford Site, Richland, Washington. Draft E, 94:565 (R;US)

RCRA facility investigation/corrective measures study work plan for the 100-NR-2 operable unit, Hanford Site, Richland, Washington. Draft D, 94:564 (R;US)

RCRA facility investigation/corrective measures study work plan for the 200-UP-2 Operable Unit, Hanford Site, Richland, Washington, 94:563 (R;US)

RCRA permitting strategies for innovative technologies demonstrations, 94:2556 (R;US)

Remedial investigation and feasibility study report for the environmental restoration disposal facility, 94:1982 (R;US)

Remedial investigation/feasibility study work plan for the 100-KR-4 operable unit, Hanford Site, Richland, Washington, 94:14 (R;US)

Review of Hanford international activities, 94:2983 (RA;US)

Richland Environmental Restoration Project 1995 fiscal year work plan: Work breakdown structure 2.0, program management, 94:582 (R;US)

Richland Environmental Restoration Project, 1995 fiscal year work plan: Work breakdown structure 2.0. Revision 2, 94:566 (R;US)

Risk evaluation of remedial alternatives for the Hanford Site, 94:1972 (R;US)

Site Maintenance Plan: Part 2, Site Maintenance Action Plan for FY 1994, 94:2267 (R;US)

Summary of remedial investigations at the 307 retention basins and 307 trenches (316-3), 300-FF-2 Operable Unit, 94:2651 (R;US)

Summary report of Hanford Site well remediation and decommissioning activities for fiscal year 1994, 94:279 (R;US)

Systems Engineering functions and requirements for the Hanford Cleanup mission: First issue, 94:2599 (R;US)

Systems engineering functions and requirements for the Hanford cleanup mission: First issue: Addendum 3, Draft, 94:2601 (R;US)

Systems engineering functions and requirements for the Hanford cleanup mission: First issue, Addendum 2, 94:2600 (R;US)

Systems engineering product breakdown structure for the Hanford Cleanup Mission: First issue, 94:2610 (R;US)

Tank Waste Remediation System Projects Document Control Plan, 94:1467 (R;US)

Transport of radioactive ions in soil by electrokinetics, 94:1874 (R;US)

Treatability test plan for the 200-ZP-1 operable unit, 94:1983 (R;US)

U.S. Department of Energy, Richland Operations Office Environmental Protection Implementation Plan, November 9, 1994 to November 9, 1995, 94:2011 (R;US)

VOC-Arid Integrated Demonstration guide to preparation of demonstration documents, 94:252 (R;US)

Waste and decontamination services FY 94 Multi-Year Program Plan Phase II WBS No. 1.2.3, 94:871 (R;US)

Waste simulant development for evaluation of LLW melter system technology, 94:862 (R;US)

Risk Assessment

B Plant complex treatment, storage, and disposal units inspection plan, 94:2798 (R;US)

Hanford Site's Integrated Risk Assessment Program: No-intervention risk assessment, 94:3040 (R;US)

Tech assist/fire safety assessment of 100K area facilities, 94:2774 (R;US)

Safeguards

Fire hazards analysis for the uranium oxide (UO₃) facility, 94:2797 (R;US)

T Plant hazards assessment, 94:2205 (R;US)

Safety

Plutonium finishing plant safeguards and security systems replacement study, 94:2126 (R;US)

Safety Analysis

Overheads, Safety Analysis and Engineering FY 1995 Site Support Program Plan WBS 6.3.5, 94:2270 (R;US)

Safety Standards

High level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 6, 94:1047 (R;US)

Sampling

Rotary mode core sampling service trailer acceptance test plan, 94:2783 (R;US)

Sanitary Landfills

1994 Characterization report for the state approved land disposal site, 94:267 (R;US)

Security

Security Transition Program Office; progress report, 94:2009 (R;US)

Sedimentary Basins

Statistical evaluation of the data obtained from the K East Basin Sandfilter Backwash Pit samples, 94:2712 (R;US)

Seismic Surveys

High resolution seismic reflection test at the DOE Hanford Site, 94:2123 (R;US)

Integrated test plan for a shallow high resolution compressional seismic reflection demonstration, 94:764 (R;US)

Site Characterization

200-BP-11 operable unit and 216-B-3 main pond work/closure plan, Hanford Site, Richland, Washington. Volume 1: Field investigation and sampling strategy, 94:1973 (R;US)

200-UP-2 operable unit radiological surveys, 94:752 (R;US)

Borehole data package for the 100-K area ground water wells, CY 1994, 94:276 (R;US)

Concrete characterization for the 300 Area Solvent Evaporator Closure Site, 94:2165 (R;US)

Definitive design report: Design report project W-025, Radioactive Mixed Waste (RMW) Land Disposal Facility NON-DRAG-OFF. Revision 1, Volume 1 and 2, 94:806 (R;US)

Geophysical investigation for proposed flow meter installation holes, 100H Area, 94:288 (R;US)

Geophysical investigation of burn pit, 128-H-1, 100-H Area, 94:2162 (R;US)

Geophysical investigation of the SQ Tanks, 221-T Building, 200 West Area, 94:1109 (R;US)

Geophysical surveys for proposed boreholes 299-W15-25, 26 and 27, 200 West Area, 94:761 (R;US)

Groundwater maps of the Hanford Site, June 1994, 94:248 (R;US)

Hanford site waste tank characterization, 94:1094 (R;US)

Historical records of radioactive contamination in biota at the 200 Areas of the Hanford Site, 94:2102 (R;US)

In Situ Permeable Flow Sensor installation at 100-H description of work, 94:748 (R;US)

In situ radiological characterization to support a test excavation at a liquid waste disposal site, 94:732 (R;US)

Interim-status groundwater monitoring plan for the 216-B-63 trench, 94:269 (R;US)

Interpretation and modeling of a subsurface injection test, 200 East Area, Hanford, Washington, 94:218 (R;US)

Sampling and analysis plan for RCRA closure activities at 200 West Ash Pit Demolition Site, 94:2157 (R;US)

Sampling and analysis plan for RCRA closure activities at 218-E-8 Borrow Pit Demolition Site, 94:2156 (R;US)

Seismic design spectra 200 West and East Areas DOE Hanford Site, Washington, 94:1163 (R;US)

Site characterization for the W-049H Project, 94:2645 (R;US)

Some statistical aspects of background based groundwater standards at an arid hazardous waste site, 94:259 (R;US)

Summary and evaluation of hydraulic property data available for the Hanford Site upper basalt confined aquifer system, 94:169 (R;US)

Supporting Document for the SW Quadrant Historical Tank Content Estimate for SX-Tank Farm, 94:1336 (R;US)

Supporting document for the North East Quadrant Historical Tank Content Estimate Report for BX-Tank Farm, 94:1332 (R;US)

Soils

Description of work vadose drilling at the 1301-N and 1325-N facilities, 100-NR-1 operable unit, 94:85 (R;US)
 Interpretation and modeling of a subsurface injection test, 200 East Area, Hanford, Washington, 94:218 (R;US)
 Limited field investigation report for the 100-HR-2 Operable Unit, 94:1991 (R;US)
 Proposed Plan for Interim Remedial Measures at the 100-BC-1 Operable Unit, 94:2001 (R;US)
 Sampling and analysis plan for RCRA closure activities at 200 West Ash Pit Demolition Site, 94:2157 (R;US)
 Sampling and analysis plan for RCRA closure activities at 218-E-8 Borrow Pit Demolition Site, 94:2156 (R;US)

Spent Fuel Storage

An assessment of KW Basin radionuclide activity when opening SNF canisters, 94:2675 (R;US)
 CSER 79-028, Addendum 2: Security bar addition to pedestal storage racks in Room 3 in 2736-Z Building, 94:2740 (R;US)
 CSER 94-014: Storage of metal-fuel loaded EBR-II casks in concrete vault on PFP grounds, 94:2739 (R;US)
 Criticality safety evaluation report for MKIA fuel pertaining to consolidating fuel storage, 94:2663 (R;US)
 Data quality objectives for gas and liquid samples from sealed K Basin canisters, 94:2670 (R;US)
 Design criteria document, Fire Protection Task, K Basin Essential Systems Recovery, Project W-405, 94:2772 (R;US)
 Gas and liquid sampling for closed canisters in the K-West Basin, 94:2679 (R;US)
 Hanford Spent Nuclear Fuel Project: Recommended path forward: Volume 2: Alternatives and path forward evaluation, 94:2614 (R;US)
 Hanford spent nuclear fuel project recommended path forward, volume III: Alternatives and path forward evaluation supporting documentation, 94:2615 (R;US)
 K Basin sludge retrieval flocculant and material compatibility evaluation, 94:2677 (R;US)
 K Basins fuel encapsulation and storage hazard categorization, 94:2684 (R;US)
 Options for disposition of KE-basin water, 94:792 (R;US)
 Preliminary Hazards Analysis of K-Basin Fuel Encapsulation and Storage, 94:2690 (R;US)
 Project Management Plan 105-KE Basin sludge retrieval and packaging, 94:2693 (R;US)
 Sludge measurement results for 105 KE basin, 94:2775 (R;US)
 Slug bucket lifting yoke analysis, 94:2129 (R;US)
 Special case waste hazard categorization. Revision 1, 94:2769 (R;US)
 Spent nuclear fuel sampling strategy, 94:2704 (R;US)
 Spent nuclear fuels project: FY 1995 multi-year program plan, WBS #1.4, 94:2836 (R;US)
 Test plan for K Basin Sludge Canister and Floor Sampling Device, 94:2725 (R;US)
 Testing of isolation barrier sealing surfaces, 94:307 (R;US)
 Transportation impact analysis for shipment of irradiated N-reactor fuel and associated materials, 94:2074 (R;US)
 Unreviewed safety question evaluation of 100 K West fuel canister gas and liquid sampling, 94:2707 (R;US)
 Unreviewed safety question evaluation of 100K East and 100K West in-basin fuel characterization program activities, 94:2706 (R;US)
 Work plan for development of K-Basin fuel handling tools, 94:2733 (R;US)

Spent Fuels

Spent Nuclear Fuel Project technical baseline document. Fiscal year 1995: Volume 1, Baseline description, 94:2703 (R;US)
 Spent nuclear fuel project integrated schedule plan, 94:2689 (R;US)

Stack Disposal

291-B-1 stack monitoring and sampling system annual system assessment report, 94:2824 (R;US)
 Final report on fiscal year 1994 activities for the line loss study, 94:2617 (R;US)

Steam Generation Plants

State Waste Discharge Permit application: 200-E Powerhouse Ash Pit, 94:571 (R;US)
 State Waste Discharge Permit application: 200-W Powerhouse Ash Pit, 94:572 (R;US)

Storage Facilities

1/12-Scale scoping experiments to characterize double-shell tank slurry uniformity: Test plan, 94:957 (R;US)
 101-SY waste sample speed of sound/rheology testing for sonic probe program, 94:1323 (R;US)
 241-SY-101 air lance removal lessons learned, 94:1432 (R;US)
 340 Waste Handling Facility comparison with 40 CFR 61, Subpart H, and other referenced guidelines for stack 340-NT-EX. Revision 1, 94:2596 (R;US)
 616 Nonradioactive Dangerous Waste Storage Facility - Essential/support drawing list: Revision 2, 94:860 (R;US)
 Acceptance test procedure for Project W-280, 94:1172 (R;US)
 Acceptance test report for 241-AW process air system, 94:1240 (R;US)
 Acceptance/operational test procedure 241-AN-107 Video Camera System, 94:1442 (R;US)
 Action plan for response to excessive temperature in high heat source waste tank 241-C-106 at the Hanford site: Revision 1, 94:1028 (R;US)
 Analysis of BY-106 pump pit cover plate, 94:1279 (R;US)
 B Plant Complex generator dangerous waste storage areas inspection plan: Revision 1, 94:2806 (R;US)
 Clean Salt integrated flowsheet, 94:1324 (R;US)
 Computer system requirements specification for 101-SY hydrogen mitigation test project data acquisition and control system (DACS-1), 94:1266 (R;US)
 Configuration management plan for waste tank farms and the 242-A evaporator of tank waste remediation system, 94:1254 (R;US)
 DACS upgrade acceptance test report, 94:1246 (R;US)
 Decision analysis for continuous cover gas monitoring of Ferrocyanide Watch List tanks, 94:1041 (R;US)
 Descriptions and diagrams of the primary and annulus ventilation systems of the double-shell tank farms as of January 1988, 94:1508 (R;US)
 Design basis and requirements for 241-SY modular exhaustor mechanical installation, 94:1289 (R;US)
 Design review plan for Multi-Function Waste Tank Facility (Project W-236A), 94:1148 (R;US)
 Development and testing of single-shell tank waste retrieval technologies: Milestone M-45-01 summary report, 94:1066 (R;US)
 Development of a multi-functional scarifier dislodger with an integral pneumatic conveyance retrieval system for single-shell tank remediation. FY93 summary report, 94:958 (R;US)
 Double shell tanks emergency pumping plan, 94:1217 (R;US)
 Elevated drum testing Phase 1 test plan, 94:1570 (R;US)
 Engineering drawing field verification program: Revision 3, 94:1652 (R;US)
 Engineering task plan for BX/BY compressor upgrade, 94:1401 (R;US)
 Enhanced sludge washing evaluation plan, 94:1064 (R;US)
 Enraf Series 854 advanced technology gauge (ATG) acceptance test procedure. Revision 2, 94:1223 (R;US)
 Extensive separations (CLEAN) processing strategy compared to TRUEX strategy and sludge wash ion exchange, 94:1059 (R;US)
 Factory Acceptance Test Procedure Westinghouse 100 ton Hydraulic Trailer, 94:1234 (R;US)
 Feasibility study of tank leakage mitigation using subsurface barriers, 94:1384 (R;US)
 Functions and requirements for Project W-236B, Initial Pretreatment Module: Revision 1, 94:1169 (R;US)
 Functions and requirements for tank farm restoration and safe operations, Project W-314. Revision 3, 94:1175 (R;US)
 GMS/DACS interface acceptance test report, 94:1250 (R;US)

Global modeling of Hanford tank waste pretreatment alternatives within a total cleanup system using ASPEN PLUS™, 94:1082 (R;US)

Hanford Tank Farm interim storage phase probabilistic risk assessment outline, 94:934 (R;US)

Hydraulic impact end effector final test report: Automation and robotics section, ER/WM-AT Program, 94:2350 (R;US)

Hydrothermal processing of Hanford tank wastes: Process modeling and control, 94:944 (R;US)

Hydrothermal processing of inorganic components of Hanford tank sludge, 94:945 (R;US)

In situ sampling device development engineering task plan, 94:1402 (R;US)

Interim data quality objectives for waste pretreatment and vitrification: Revision 1, 94:1318 (R;US)

Kaiser Engineers Hanford internal position paper – Project W-236A, Multi-function Waste Tank Facility – Peer reviews of selected activities, 94:1154 (R;US)

Management plan – Multi-Function Waste Tank Facility. Revision 1, 94:1147 (R;US)

Mission analysis report for single-shell tank leakage mitigation, 94:1433 (R;US)

Multi-Function Waste Tank Facility thermal hydraulic analysis for Title II design, 94:1140 (R;US)

Operational test procedure for Bldg 241-A-701 air compressor, 94:2252 (R;US)

Parametric design using IGRIP, 94:2338 (R;US)

Pilot-scale production of grout with simulated double-shell slurry feed: Final report, 94:680 (R;US)

Position paper – Continuous air monitor (CAM) acquisition recommendation (Multi-Function Waste Tank Facility), 94:1161 (R;US)

Position paper – Tank heat loading. Revision 1, 94:1159 (R;US)

Position paper – Tank temperature element location (Multi-Function Waste Tank Facility), 94:1160 (R;US)

Position paper – Tank ventilation system design air flow rates, 94:1156 (R;US)

Position paper – Waste storage tank heat removal, 94:1153 (R;US)

Position paper, need for additional waste storage capacity and recommended path forward for project W-236a, Multi-function Waste Tank Facility, 94:1141 (R;US)

Preliminary design requirements document (DRD) for Project W-236B, "Initial Pretreatment Module", 94:1166 (R;US)

Preliminary flowsheet: Ion exchange for separation of cesium from Hanford tank waste using resorcinol-formaldehyde resin, 94:1519 (R;US)

Preliminary safety equipment list for Tank 241-C-106 Manipulator Retrieval System, Project W-340, 94:1196 (R;US)

Preliminary safety evaluation, Project W-059, B Plant canyon ventilation upgrade, 94:2236 (R;US)

Preliminary time-phased TWRS process model results, 94:1541 (R;US)

Project W-151 development work plan for: Tank AZ-101 riser mapping tool and data acquisition system, 94:1134 (R;US)

Project W-236A, work plan for preparation of a design requirements document, 94:1165 (R;US)

Radionuclide logging of Tank 216-T-106, borehole 299-W10-196, 94:291 (R;US)

Raman spectroscopy peer review report, 94:1057 (R;US)

Recommendation on changing interfaces of W-058 and W-236A, 94:1152 (R;US)

Regulatory analysis for the use of underground barriers at the Hanford Site tank farms, 94:1108 (R;US)

Report on data requirements and hardware selection for in-situ ball viscometer, 94:173 (R;US)

SY tank farm ventilation inlet filters and inlet stack acceptance for beneficial use, 94:1202 (R;US)

Safety equipment list for 241-C-106 waste retrieval, Project W-320: Revision 1, 94:1494 (R;US)

Sludge pretreatment chemistry evaluation: Enhanced sludge washing separation factors, 94:1001 (R;US)

Software quality assurance plan for viscometer, 94:1465 (R;US)

Software quality assurance plan for void fraction instrument, 94:1466 (R;US)

Soil load above Hanford waste storage tanks (2 volumes), 94:1533 (R;US)

Solid waste retrieval. Phase 1, Operational basis, 94:2766 (R;US)

Statistical characterization report for single-shell tank 241-T-105, 94:1526 (R;US)

Statistical characterization report for single-shell tank 241-T-111, 94:1523 (R;US)

Strategy for sampling Hanford Site tank wastes for development of disposal technology, 94:1499 (R;US)

TWRS Systems Engineering Working Plan, 94:1660 (R;US)

TWRS baseline system description, 94:1529 (R;US)

TWRS system drawings and field verification, 94:1418 (R;US)

Tank characterization reference guide, 94:1522 (R;US)

TMACS Test Procedure TP010: Integration summary. Revision 5, 94:1636 (R;US)

Tank 241-AX-104 tank characterization plan, 94:1562 (R;US)

Testing of organic waste surrogate materials in support of the Hanford organic tank program: Final report, 94:1072 (R;US)

The development of surface barriers at the Hanford Site, 94:260 (R;US)

Training plan for the 1164 <90-day non-radioactive hazardous waste storage building, 94:2105 (R;US)

Wellfield strategy and recommendations for the 200 West Area carbon tetrachloride expedited response action, 94:1890 (R;US)

Waste Processing

300 Area treated effluent disposal facility sampling schedule. Revision 1, 94:779 (R;US)

A review of technology for verification of waste removal from Hanford Underground Storage Tanks (WHC Issue 30), 94:2345 (R;US)

Project Management Plan (PMP), W-364, 209E septic system upgrade, 200 East Area, 94:836 (R;US)

Status of test results of electrochemical organic oxidation of a tank 241-SY-101 simulated waste, 94:1085 (R;US)

Water content of dried INFARM2 top simulant. Letter report, Revision 1, 94:2533 (R;US)

Waste Processing Plants

Tank waste remediation system high-level waste feed processability assessment report, 94:1673 (R;US)

Waste Retrieval

MWFT path forward engineering analysis technical Task 3.8, Retrieval sequence, 94:1146 (R;US)

Underground tank assessment using Hanford's light-duty utility arm system, 94:1701 (J;US)

Waste Storage

Summary of information on flammable gas watch list tanks, 94:1037 (R;US)

Tank characterization report for single-shell Tank B-201, 94:977 (R;US)

Task E container corrosion studies: Annual report: Revision 1, 94:251 (R;US)

Waste tank vapor project: Vapor space characterization of waste tank 241-BY-104: Results from samples collected on June 24, 1994, 94:178 (R;US)

Waste Water

300 Area treated effluent disposal facility sampling schedule, 94:778 (R;US)

State waste discharge permit application, 200-E chemical drain field, 94:570 (R;US)

Water Pollution

Aquifer testing data package for 1993 200-UP-1 Groundwater Operable Unit, 94:275 (R;US)

Data validation report for the 100-HR-3 Operable Unit first quarter 1994 groundwater sampling data, 94:290 (R;US)

Ground water impact assessment report for the 216-B-3 Pond system, 94:254 (R;US)

Limited field investigation report for the 100-BC-5 Operable Unit, 94:78 (R;US)

Limited field investigation report for the 100-NR-2 Operable Unit, Hanford Site, Richland, Washington, 94:1976 (R;US)

Qualitative risk assessment for the 100-KR-4 groundwater operable unit, 94:281 (R;US)

Research of documents pertaining to waste migration from leaking single-shell tanks, 94:1471 (R;US)

Water Pollution Abatement

The circulating air barrier: Effective prevention of liquid contaminant movement through soil, 94:56 (R;US)

Water Pollution Control

Manipulation of natural subsurface processes: Field research and validation: Interim report, 94:168 (R;US)

Water Quality

Hanford Site Environmental Report 1993, 94:3028 (R;US)

Hanford Site environmental data for calendar year 1993—surface and Columbia River, 94:3029 (R;US)

Hanford Site ground-water monitoring for 1993, 94:163 (R;US)

Quarterly report of RCRA groundwater monitoring data for period April 1 through June 30, 1994, 94:81 (R;US)

Water Treatment

Options for disposition of KE-basin water, 94:792 (R;US)

The effect of dissolved solids on the destruction of organics by ultraviolet oxidation, 94:743 (R;US)

Water Treatment Plants

200 Area Liquid Effluent Facilities — Quality assurance program plan, 94:787 (R;US)

200 Area Treated Effluent Disposal Facility operational test specification. Revision 2, 94:791 (R;US)

300 Area TEDF DOE order compliance applicability assessment, 94:776 (R;US)

300 Area Treated Effluent Disposal Facility computer software release cover sheet and revision record, 94:771 (R;US)

300 Area Treated Effluent Disposal Facility essential material specifications basis, 94:780 (R;US)

300 Area Treated Effluent Disposal Facility permit reopener run plan, 94:785 (R;US)

Computer software configuration management plan for 200 East/West Liquid Effluent Facilities, 94:783 (R;US)

Conceptual design report, 200 Area sanitary sewer system: Project 96L-EWL-116, 94:782 (R;US)

Functional design criteria for Project W-252, Phase II Liquid Effluent Treatment and Disposal: Revision 1, 94:323 (R;US)

Project W-049H collection system Acceptance Test Procedure, 94:314 (R;US)

Project W-049H instrument and control Acceptance Test Procedure, 94:315 (R;US)

Readiness plan, Hanford 300 Area Treated Effluent Disposal Facility: Revision 1, 94:777 (R;US)

Safety evaluation — Spent water treatment system components inventory release, 94:2709 (R;US)

Verification of best available technology for the 300 Area Treated Effluent Disposal Facility (310 Facility), 94:772 (R;US)

W-007H B Plant Process Condensate Treatment Facility. Revision 3, 94:800 (R;US)

Water Utilities

Site Support Program Plan for ICF Kaiser Hanford Company, 94:2842 (R;US)

HASTELLOY X

Sludge stabilization boat material test plan, 94:2153 (R;US)

HAZARDOUS MATERIALS

See also TOXIC MATERIALS

Absorption

Distributions of 15 elements on 58 absorbers from simulated Hanford Double-Shell Slurry Feed (DSSF), 94:932 (R;US)

Air Transport

Baseline requirements of the proposed action for the Transportation Management Division routing models, 94:2071 (R;US)

Calorimetry

Testing of organic waste surrogate materials in support of the Hanford organic tank program: Final report, 94:1072 (R;US)

Certification

Implementation plan for WRAP Module 1 operational readiness review, 94:813 (R;US)

Chemical Analysis

242-A Evaporator waste analysis plan: Revision 4, 94:2796 (R;US)

Chemical Composition

Development of chemical profiles for U.S. Department of Energy low-level mixed wastes, 94:2 (R;US)

Chemical Properties

Quantities and characteristics of the contact-handled low-level mixed waste streams for the DOE complex, 94:599 (R;US)

Waste Receiving and Processing, Module 2A, feed specification: Revision 1, 94:823 (R;US)

Combustion

Removal of CO₂ in closed loop off-gas treatment systems, 94:398 (R;US)

Containment

Barriers and post closure monitoring: Final report, 94:100 (R;US)

In Situ Remediation Integrated Program: Evaluation and assessment of containment technology, 94:50 (R;US)

In situ remediation: Developing containment technologies, 94:211 (R;US)

Data Processing

Progress on integrating environmental restoration data into mixed waste updates, 94:408 (R;US)

Decontamination

Decontamination Systems Information and Research Program, 94:514 (R;US)

Development of major process improvements for decontamination of large, complex, highly radioactive mixed waste items at the Hanford Site T Plant, 94:2632 (R;US)

Independent Technical ("Red Team") Reviews, 94:3014 (R;US)

Ecological Concentration

Remedial Investigation Work Plan for Chestnut Ridge Operable Unit 1 (Chestnut Ridge Security Pits) at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee, 94:1958 (R;US)

Environmental Effects

Remedial investigation report on Chestnut Ridge Operable Unit 2 (filled coal ash pond/Upper McCoy Branch) at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee: Volume 2: Appendixes, 94:1960 (R;US)

Environmental Impacts

FY 1995 remedial investigation work plan for Waste Area Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:1964 (R;US)

Environmental Transport

Efficient analysis using custom interactive visualization tools at a Superfund site, 94:2891 (BA;US)

Evaluation

B Plant complex hazardous, mixed and low level waste certification plan, 94:768 (R;US)

Tank 241-AX-104 tank characterization plan, 94:1562 (R;US)

Excavation

Plan for the testing of radiation measurement instrumentation intended for use at an excavation site, 94:2483 (R;US)

Extraction

Environmental management technology demonstration and commercialization, 94:2986 (R;US)

Gamma Spectroscopy

Waste inspection tomography (WIT), 94:2323 (R;US)

Ground Disposal

1994 Report on Hanford Site land disposal restrictions for mixed waste, 94:569 (R;US)

FY 1995 Remedial Investigation Work Plan for Waste Area Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:1965 (R;US)

SEAMIST™ in-situ instrumentation and vapor sampling system applications in the Sandia Mixed Waste Landfill Integrated Demonstration Program, 94:228 (R;US)

Site characterization plan for groundwater in Waste Area Grouping 1 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:2439 (R;US)

Surface water sampling and analysis plan for environmental monitoring in Waste Area Grouping 6 at Oak Ridge National Laboratory, Oak Ridge, Tennessee: Environmental Restoration Program, 94:134 (R;US)

H Codes

Hazardous waste database: Waste management policy implications for the US Department of Energy's Environmental Restoration and Waste Management Programmatic Environmental Impact Statement, 94:1 (R;US)

Health Hazards

Chemical hygiene plan, 94:1791 (R;US)
Impacts on health and safety from transfer/consolidation of nuclear materials and hazardous chemicals, 94:2079 (R;US)

Hydrolysis

A portable system for the treatment of water-reactive mixed waste, 94:650 (R;US)

Information Systems

Hazardous materials management using a Cradle-to-Grave Tracking and Information System (CGTIS), 94:2583 (R;US)
System requirements specification for waste information and control system, 94:1468 (R;US)

Inventories

Quantities and characteristics of the contact-handled low-level mixed waste streams for the DOE complex, 94:599 (R;US)

Land Transport

Performance-oriented packaging: A guide to identifying, procuring, and using: Procurement and use of packaging using HM-181 regulations, 94:576 (R;US)

Laser Spectroscopy

In-situ monitoring of actinides and rare earth elements by electrothermal hollow cathode discharge spectrometry: Technical progress report, 94:2489 (R;US)

Liquid Wastes

Liquid effluent/Hanford Environmental compliance FY 1995 Multi-Year Program Plan/Fiscal Year Work Plan, WBS 1.2.2.1 and 1.2.2.2, 94:332 (R;US)

Measuring Methods

A DOE manual: DOE methods for evaluating environmental and waste management samples, 94:687 (R;US)

Minimization

Process simulation and uncertainty analysis of plasma arc mixed waste treatment, 94:443 (R;US)

Mitigation

Hanford Site Pollution Prevention Plan Progress report, 1993, 94:2000 (R;US)

Monitoring

Limited field investigation report for the 100-NR-2 Operable Unit, Hanford Site, Richland, Washington, 94:1976 (R;US)
Portable sensor for hazardous waste, 94:524 (R;US)
Westinghouse Hanford Company Operational Environmental Monitoring. Annual report, CY 1993, 94:2099 (R;US)

Nondestructive Analysis

Implementation plan for WRAP Module 1 operational readiness review, 94:813 (R;US)
WRAP Module 1 waste characterization plan, 94:814 (R;US)

Nondestructive Testing

WRAP Module 1 waste characterization plan, 94:814 (R;US)

Oxidation

Dual shell reactor vessel: A pressure-balanced system for high pressure and temperature reactions, 94:685 (R;US)
Evaluation of pretreatment processes for supercritical water oxidation, 94:614 (R;US)
Evaluation of tubular reactor designs for supercritical water oxidation of U.S. Department of Energy mixed waste, 94:629 (R;US)
Supercritical water oxidation test bed effluent treatment study, 94:617 (R;US)

Packaging

Effects of mixed waste simulants on transportation packaging plastic components, 94:708 (R;US)
Expert systems for the transportation of hazardous and radioactive materials, 94:2398 (R;US)
Mixed waste chemical compatibility with packaging components, 94:705 (R;US)
Performance-oriented packaging: A guide to identifying, procuring, and using: Procurement and use of packaging using HM-181 regulations, 94:576 (R;US)

Packaging Rules

An expert system for enhancing compliance with hazardous materials packaging and transportation regulations, 94:2411 (R;US)

Physical Properties

Quantities and characteristics of the contact-handled low-level mixed waste streams for the DOE complex, 94:599 (R;US)
Waste Receiving and Processing, Module 2A, feed specification: Revision 1, 94:823 (R;US)

Plasma Heating

Argonne-West facility requirements for a radioactive waste treatment demonstration, 94:420 (R;US)

Pollution Abatement

B Plant Complex pollution prevention plan: Revision 1, 94:2249 (R;US)
Guide for preparing and maintaining generator group pollution prevention program documentation. Revision 2, 94:2248 (R;US)
Planning document for the Advanced Landfill Cover Demonstration, 94:1868 (R;US)

Pyrolysis

Prospects for pyrolysis technologies in managing municipal, industrial, and DOE cleanup wastes, 94:422 (R;US)

Radioactive Waste Disposal

Proposed waste form performance criteria and testing methods for low-level mixed waste, 94:535 (R;US)
Quality Assurance Project Plan for the Environmental Monitoring Program in Waste Area Grouping 6 at Oak Ridge National Laboratory, Oak Ridge, Tennessee: Environmental Restoration Program, 94:540 (R;US)

Radioactive Waste Management

Mixed Waste Integrated Program Quality Assurance requirements plan, 94:534 (R;US)
Mixed Waste Working Group report, 94:557 (R;US)
Mixed waste certification plan for the Lawrence Berkeley Laboratory Hazardous Waste Handling Facility. Revision 1, 94:653 (R;US)
Operational readiness review for the Waste Experimental Reduction Facility: Final report, 94:610 (R;US)

Radioactive Waste Processing

Development and status of the AL Mixed Waste Treatment Plan or I love that mobile unit of mine, 94:649 (R;US)
Development of treatment technologies of the processing of U.S. Department of Energy mixed waste, 94:438 (R;US)
Electromagnetic mixed waste processing system for asbestos decontamination, 94:513 (R;US)
Implementation plan for WRAP Module 1 operational readiness review, 94:813 (R;US)
Quantum-catalytic extraction process application to mixed waste processing, 94:523 (R;US)
The modeling of contaminant flow during proposed treatment of U.S. Department of Energy low-level radioactive mixed wastes, 94:409 (R;US)
Washing techniques as an alternative to incineration, 94:457 (R;US)

Radioactivity

Development of radiological profiles for U.S. Department of Energy low-level mixed wastes, 94:3 (R;US)

Rail Transport

Baseline requirements of the proposed action for the Transportation Management Division routing models, 94:2071 (R;US)

Remedial Action

Decontamination Systems Information and Research Program: Quarterly report, October–December 1993, 94:515 (R;US)
Innovative approaches to public participation, 94:3080 (BA;US)
The Western Environmental Technology Office (WETO) Butte, Montana, 94:1935 (R;US)

Remote Handling

Optimal trajectories for flexible-link manipulator slewing using recursive quadratic programming: Experimental verification, 94:2347 (R;US)
Robotics and remote systems for hazardous environments, 94:2365 (B;US)

Risk Assessment

- 222-S laboratory complex hazards assessment, 94:2665 (R;US)
- An introductory guide to uncertainty analysis in environmental and health risk assessment. Environmental Restoration Program, 94:2028 (R;US)
- Ecological risks of DOE's programmatic environmental restoration alternatives, 94:2511 (R;US)
- Hazardous waste database: Waste management policy implications for the US Department of Energy's Environmental Restoration and Waste Management Programmatic Environmental Impact Statement, 94:1 (R;US)
- Hazards assessment for the Hazardous Waste Storage Facility, 94:612 (R;US)
- Hazards assessment for the INEL Landfill Complex, 94:1843 (R;US)
- Level 3 baseline risk evaluation for Building 3506 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:2053 (R;US)
- Limited field investigation report for the 100-DR-1 Operable Unit, 94:1971 (R;US)
- Qualitative risk assessment for 100-DR-1 source operable unit, 94:2646 (R;US)
- Qualitative risk assessment for the 100-KR-4 groundwater operable unit, 94:281 (R;US)

Road Transport

- Baseline requirements of the proposed action for the Transportation Management Division routing models, 94:2071 (R;US)

Sampling

- Data requirements for the Ferrocyanide Safety Issue developed through the data quality objectives process, 94:1317 (R;US)
- Sampling and analysis plan for ORNL filter press cake waste from the Liquid and Gaseous Waste Operations Department, 94:2514 (R;US)

Simulation

- Surrogate formulations for thermal treatment of low-level mixed waste: Part 3: Plasma hearth process testing, 94:531 (R;US)

Single Photon Emission Computed Tomography

- Waste inspection tomography (WIT), 94:2323 (R;US)

Solidification

- Chemically bonded phosphate ceramics for low-level mixed waste stabilization, 94:413 (R;US)
- Final waste forms project: Performance criteria for phase I treatability studies, 94:2513 (R;US)
- Low-temperature-setting phosphate ceramics for low-level mixed waste stabilization, 94:414 (R;US)

Stabilization

- Final waste forms project: Performance criteria for phase I treatability studies, 94:2513 (R;US)

Supercritical Gas Extraction

- Containment removal from solid waste by supercritical carbon dioxide, 94:706 (R;US)
- The use of supercritical carbon dioxide for contaminant removal from solid waste, 94:707 (R;US)

Testing

- Road Transportable Analytical Laboratory (RTAL) System: Quarterly technical report, March 1993–May 1993, 94:502 (R;US)

Thermal Gravimetric Analysis

- Testing of organic waste surrogate materials in support of the Hanford organic tank program: Final report, 94:1072 (R;US)

Transport

- Expert systems for the transportation of hazardous and radioactive materials, 94:2398 (R;US)
- Initial estimates of samples and residues requiring transport arising from the US Department of Energy's analytical services program, 94:441 (R;US)
- Performance-oriented packaging: A guide to identifying and designing: Identifying and designing hazardous materials packaging for compliance with post HM-181 DOT Regulations, 94:577 (R;US)
- Quality Assurance Plan for Transportation Management Division Transportation Training Programs, 94:2975 (R;US)

Transport Regulations

- An expert system for enhancing compliance with hazardous materials packaging and transportation regulations, 94:2411 (R;US)
- Quality Assurance Plan for Transportation Management Division Transportation Training Programs, 94:2975 (R;US)

Underground Disposal

- 100-HR-2 Operable Unit Focused Feasibility study report, 94:1997 (R;US)
- 118-B-1 Excavation Treatability Test Plan. Revision 1, 94:1988 (R;US)
- 118-B-1 excavation treatability test plan, 94:1987 (R;US)
- Addendum to the remedial investigation work plan for Bear Creek Valley Operable Unit 1 (S-3 ponds, boneyard/burnyard, oil landfarm, sanitary landfill I, and the burial grounds, including oil retention ponds 1 and 2) at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee: Volume 1. main text, 94:538 (R;US)
- The modeling process and model validation, 94:912 (J;US)

Underground Storage

- Closure certification report for the Bear Creek burial grounds B area and walk-in pits at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee, 94:2290 (R;US)
- Hazardous waste dislodging and conveyance: The confined sluicing method, 94:972 (R;US)
- The circulating air barrier: Effective prevention of liquid contaminant movement through soil, 94:56 (R;US)

Vitrification

- Arc melter demonstration baseline test results, 94:1847 (R;US)
- Development of a Transportable Vitrification System for Mixed Waste, 94:879 (R;US)
- Environmental management technology demonstration and commercialization, 94:2986 (R;US)
- Los Alamos National Laboratory simulated sludge vitrification demonstration, 94:882 (R;US)
- Preliminary hazards analysis – vitrification process, 94:2434 (R;US)
- Removal of CO₂ in closed loop off-gas treatment systems, 94:398 (R;US)
- Review of the Vortec soil remediation demonstration program, 94:511 (R;US)
- Vitrification of hazardous and radioactive wastes, 94:876 (R;US)
- Vitrification of high sulfate wastes, 94:696 (R;US)
- Vitrification: Destroying and immobilizing hazardous wastes, 94:691 (R;US)

Waste Disposal

- Minimizing risk associated with shallow burial of waste in semi-arid ecosystems: Erosion and vegetation dynamics, 94:888 (BA;US)
- Process Waste Assessment for the Plotting and Digitizing Support Laboratory, 94:2089 (R;US)
- Remedial Investigation Work Plan for Chestnut Ridge Operable Unit 1 (Chestnut Ridge Security Pits) at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee, 94:1958 (R;US)
- Remedial investigation report on Bear Creek Valley Operable Unit 2 (Rust Spoil Area, Spoil Area 1, and SY-200 Yard) at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee. Volume 1, Main text, 94:1961 (R;US)

Waste Management

- Assessment of technologies for hazardous waste site remediation: Non-treatment technologies and pilot scale facility implementation – monitoring technology: Final report, 94:518 (R;US)
- Conceptual design report, Hazardous Materials Management and Emergency Response (HAMMER) Training Center, 94:3065 (R;US)

- 45-Day deliverable for Tank 241-BX-105 Auger samples, risers 2 and 6, 94:1300 (R;US)
- Calcination
- Chemistry of application of calcination/dissolution to the Hanford tank waste inventory, 94:2931 (R;US)

HIGH-LEVEL RADIOACTIVE WASTES

Chemical Analysis

Chemical Analysis

A chemical model for the major electrolyte components of the Hanford waste tanks. The binary electrolytes in the system: $\text{Na-NO}_3\text{-NO}_2\text{-SO}_4\text{-CO}_3\text{-F-PO}_4\text{-OH-Al(OH)}_3\text{-H}_2\text{O}$, 94:1009 (R;US)

Analysis and characterization of double shell tank 241-AP-108, 94:1293 (R;US)

Analysis of radioactive waste samples by ion chromatography-ICP/MS, 94:1015 (R;US)

Analysis report for 241-BY-104 Auger samples, 94:1511 (R;US)

Comparative study of Total Organic Carbon (TOC) methods for high-level mixed waste, 94:2549 (R;US)

Determination of total cyanide in Hanford Site high-level wastes, 94:2624 (R;US)

Evaluation of FTIR-based analytical methods for the analysis of Hanford Site waste, 94:1100 (R;US)

Sample Exchange Evaluation (SEE) Report - Phase II, 94:1534 (R;US)

Supporting document for the SW Quadrant Historical Tank Content Estimate for U-Tank Farm, 94:1337 (R;US)

Supporting document for the north east quadrant historical tank content estimate report for AX-tank farm, 94:1330 (R;US)

Supporting document for the north east quadrant historical tank content estimate report for C-Tank Farm, 94:1334 (R;US)

Tank 241-AN-102 tank characterization plan, 94:1549 (R;US)

Tank 241-AP-107 tank characterization plan, 94:1589 (R;US)

Tank 241-AX-102 tank characterization plan, 94:1555 (R;US)

Tank 241-BY-105 tank characterization plan, 94:1551 (R;US)

Tank 241-BY-106 tank characterization plan, 94:1550 (R;US)

Tank 241-C-101 tank characterization plan, 94:1587 (R;US)

Tank 241-U-111 tank characterization plan, 94:1564 (R;US)

Tank 241-U-201 tank characterization plan, 94:1608 (R;US)

Tank 241-U-202 tank characterization plan, 94:1609 (R;US)

Tank 241-U-204 tank characterization plan, 94:1611 (R;US)

The solubilities of significant organic compounds in HLW tank supernate solutions, 94:1093 (R;US)

Chemical Composition

CPAC optical moisture monitoring: Characterization of composition and physical effects on moisture determination Task 2A report, 94:1373 (R;US)

Characterization of high-level waste saltcake stored at the Savannah River site, 94:2950 (BA;US)

Characterization of uranium, plutonium, neptunium, and americium in HLW supernate for LLW certification, 94:2872 (R;US)

Tank characterization report for double-shell Tank 241-AP-107, 94:1348 (R;US)

Tank characterization report for double-shell Tank 241-AW-102, 94:1349 (R;US)

Tank characterization report for double-shell Tank 241-AW-105, 94:1350 (R;US)

Compiled Data

Supporting document for the SW Quadrant Historical Tank Content Estimate for U-Tank Farm, 94:1337 (R;US)

Supporting document for the north east quadrant historical tank content estimate report for AX-tank farm, 94:1330 (R;US)

Supporting document for the north east quadrant historical tank content estimate report for C-Tank Farm, 94:1334 (R;US)

Cooling

Action plan for response to excessive temperature in high heat source waste tank 241-C-106 at the Hanford site: Revision 1, 94:1028 (R;US)

Criticality

Nuclear criticality safety analysis summary report: The S-area defense waste processing facility, 94:2867 (R;US)

Nuclear criticality safety evaluation of the passage of decontaminated salt solution from the ITP filters into tank 50H for interim storage, 94:2941 (R;US)

Data Acquisition

System configuration management plan for 101-SY Hydrogen Mitigation Test Project Mini-Data Acquisition and Control System of Tank Waste Remediation System, 94:1261 (R;US)

Data Analysis

Statistical characterization report for Single-Shell Tank 241-T-107, 94:1520 (R;US)

Decontamination

Decontamination system study for the Tank Waste Retrieval System, 94:929 (R;US)

Development of major process improvements for decontamination of large, complex, highly radioactive mixed waste items at the Hanford Site T Plant, 94:2632 (R;US)

Distributions of 12 elements on 64 absorbers from simulated Hanford Neutralized Current Acid Waste (NCAW), 94:933 (R;US)

Degassing

The effects of heating and dilution on the rheological and physical properties of Tank 241-SY-101 waste, 94:997 (R;US)

Diffusion

Apparent and simple diffusion coefficients in compacted bentonite, 94:2390 (BA;US)

Dilution

The effects of heating and dilution on the rheological and physical properties of Tank 241-SY-101 waste, 94:997 (R;US)

Dissolution

Chemistry of application of calcination/dissolution to the Hanford tank waste inventory, 94:2931 (R;US)

Electromagnetic Isotope Separation

Effect of gamma-ray radiation on the separation efficiencies of coated magnetic microparticles, 94:1700 (J;US)

Environmental Transport

Feasibility study of tank leakage mitigation using subsurface barriers. Revision 1, 94:1385 (R;US)

Evaluation

Application of a CdTe gamma-ray spectrometer to remote characterization of high-level radioactive waste tanks, 94:1075 (R;US)

Evaporation

Evaporation analysis for Tank SX-104, 94:1338 (R;US)

Gamma Detection

Criticality assessment of TRU burial ground culverts, 94:1680 (R;US)

Gaseous Wastes

Results of gas monitoring of double-shell flammable gas watch list tanks, 94:1539 (R;US)

Tank 241-T-107 tank characterization plan, 94:1596 (R;US)

Ground Disposal

Criticality assessment of TRU burial ground culverts, 94:1680 (R;US)

Heating

The effects of heating and dilution on the rheological and physical properties of Tank 241-SY-101 waste, 94:997 (R;US)

Hot Pressing

Conceptual design for remote handling methods using the HIP process in the Calcine Immobilization Program, 94:2853 (R;US)

Mechanical Properties

241-TX acoustic monitoring 114TX tank waste, 94:1574 (R;US)

Minimization

Disposal of defense spent fuel and HLW from the Idaho Chemical Processing Plant, 94:2393 (BA;US)

Mixing

Engineering test plan for Tank 241-SY-101 in situ viscometer, 94:1553 (R;US)

Level maintenance for Tank 101-SY mitigation-by-mixing test, 94:1621 (R;US)

Mitigation of tank 241-SY-101 by pump mixing: Results of full-scale testing, 94:966 (R;US)

Reliability analysis and design guidelines for the 101SY VDTT vent header flow and dome/vent header pressure measurement trip circuitry. Final draft, 94:935 (R;US)

Tank waste remediation system high-level waste feed processability assessment report, 94:1673 (R;US)

Moisture

CPAC optical moisture monitoring: Characterization of composition and physical effects on moisture determination Task 2A report, 94:1373 (R;US)

Monitored Retrieval Storage

Evaluation of AY/AZ tank farm ventilation system during aging waste retrieval operations, 94:1509 (R;US)
T-Farm complex alarm upgrades, 94:1290 (R;US)

Monitoring

45-Day safety screen results for Tank 241-C-103, Cores 63 and 66, 94:1312 (R;US)
CPAC optical moisture monitoring: Characterization of composition and physical effects on moisture determination Task 2A report, 94:1373 (R;US)
Level maintenance for Tank 101-SY mitigation-by-mixing test, 94:1621 (R;US)
Quarterly report on the Ferrocyanide Safety Program for the period ending September 30, 1994, 94:1032 (R;US)
Tank 241-TX-105 tank characterization plan, 94:1594 (R;US)
Tank SY-101 void fraction instrument functional design criteria, 94:1422 (R;US)

Packaging

Comparison of elastic and inelastic analysis and test results for the defense high level waste shipping cask, 94:2389 (BA;US)
Conceptual design and development of high-activity radioactive liquid packaging (summary), 94:2630 (R;US)
Thermal performance of a depleted uranium shielded storage, transportation, and disposal package, 94:2399 (BA;US)

Packaging Rules

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 5, 94:1046 (R;US)

Particle Size

CPAC optical moisture monitoring: Characterization of composition and physical effects on moisture determination Task 2A report, 94:1373 (R;US)

Physical Properties

The effects of heating and dilution on the rheological and physical properties of Tank 241-SY-101 waste, 94:997 (R;US)

Quantitative Chemical Analysis

Analysis report for 241-BY-104 auger samples, 94:1510 (R;US)
Criticality safety evaluation report for the 100 KE Basin sandfilter backwash pit, 94:2662 (R;US)
TBP and diluent mass balances in the PUREX Plant at Hanford, 1955-1991, 94:1073 (R;US)
Tank 241-AX-102 tank characterization plan, 94:1554 (R;US)
Tank characterization report for Single-Shell Tank 241-C-110, 94:1352 (R;US)

Radiation Doses

Integrated beta and gamma radiation dose calculations for the ferrocyanide waste tanks, 94:1518 (R;US)

Radioactive Waste Disposal

A Monte Carlo procedure for the construction of complementary cumulative distribution functions for comparison with the EPA release limits for radioactive waste disposal, 94:2574 (R;US)
ANL Technical Support Program for DOE Environmental Restoration and Waste Management: Annual report, October 1992-September 1993, 94:19 (R;US)
An electrochemical approach to predicting corrosion performance of container materials, 94:2387 (BA;US)
Analysis report for 241-BY-104 auger samples, 94:1510 (R;US)
Computer simulation of radionuclide transport through thermal convection of groundwater from borehole repositories, 94:3020 (R;US)
Hanford Strategic Analysis Study. Volume 5, Appendixes, 94:18 (R;US)
Hanford Strategic Analysis Study. Volumes 1 and 2, 94:17 (R;US)
Hanford Strategic Analysis Study. Volumes 3 and 4, 94:2098 (R;US)
High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 2, 94:1043 (R;US)

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 4, 94:1045 (R;US)
Project management plan for Project W-320, Tank 241-C-106 sluicing, 94:1185 (R;US)
Property/composition relationships for Hanford high-level waste glasses melting at 115°C volume 1: Chapters 1-11, 94:2537 (R;US)
Property/composition relationships for Hanford high-level waste glasses melting at 1150°C volume 2: Chapters 12-16 and appendices A-K, 94:2538 (R;US)
TWRS tank waste pretreatment process development hot test siting report, 94:1504 (R;US)
Tank waste remediation system integrated technology plan. Revision 2, 94:1839 (R;US)
Tank waste remediation system multi-year work plan, 94:1668 (R;US)
Tank waste remediation system multi-year work plan, 94:1669 (R;US)
Tank waste remediation system multi-year work plan, 94:1667 (R;US)
Tank waste remediation system multi-year work plan, 94:1671 (R;US)
Tank waste remediation system multi-year work plan, 94:1670 (R;US)
Waste Isolation Pilot Plant RCRA Part A permit application. Revision 4, 94:2451 (R;US)
Waste Tank Vapor Project: Tank vapor database development, 94:983 (R;US)
Waste glass weathering, 94:34 (BA;US)

Radioactive Waste Management

Design basis and requirements for 241-SY Modular Exhauster concrete pad and retaining wall, 94:1288 (R;US)
High level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 6, 94:1047 (R;US)
High-level waste issues and resolutions document, 94:2852 (R;US)
Pacific Northwest Laboratory environmental technologies available for deployment, 94:3042 (R;US)
Russian separation program, 94:2978 (RA;US)

Radioactive Waste Processing

Applicability of slags as waste forms for hazardous waste, 94:21 (R;US)
Backup information for data tables in the extensive separations alternative engineering data package, 94:1316 (R;US)
Calcination/dissolution processing of Hanford waste, 94:1691 (BA;US)
Characterization of high-level waste saltcake stored at the Savannah River site, 94:2950 (BA;US)
Clean Salt integrated flowsheet, 94:1324 (R;US)
Composition of simulants used in the evaluation of electrochemical processes for the treatment of high-level wastes, 94:2942 (R;US)
Computer simulation of laboratory leaching and washing of tank waste sludges, 94:1389 (R;US)
Destruction of organics in Hanford tank wastes using high temperature aqueous systems, 94:1689 (BA;US)
Distributions of 15 elements on 58 absorbers from simulated Hanford Double-Shell Slurry Feed (DSSF), 94:932 (R;US)
Effect of gamma-ray radiation on the separation efficiencies of coated magnetic microparticles, 94:1700 (J;US)
Electrochemical treatment of alkaline nuclear wastes, 94:2948 (BA;US)
Extensive separations (CLEAN) processing strategy compared to TRUEX strategy and sludge wash ion exchange, 94:1059 (R;US)
Flow sheet development for the remediation of tank SY-102 at the Hanford Nuclear Reservation, 94:2949 (BA;US)
Functions and requirements for a cesium demonstration unit, 94:1168 (R;US)
ICPP radioactive liquid and calcine waste technologies evaluation: Interim report, 94:2854 (R;US)

HIGH-LEVEL RADIOACTIVE WASTES

Radioactive Waste Processing

Idaho Chemical Processing Plant spent fuel and waste management technology development program plan: 1994 Update, 94:2859 (R;US)

Long term decontamination at the Hanford Site: A case study, 94:2121 (R;US)

Low temperature hydrothermal destruction of organics in Hanford tank wastes, 94:1690 (BA;US)

Models for liquidus temperature of nuclear waste glasses, 94:2558 (R;US)

Processing of spent salt from the molten salt oxidation of hazardous and radioactive wastes, 94:2879 (BA;US)

Project Specific Quality Assurance Plan (QAPP), 94:1186 (R;US)

Project management plan for Project W-320, Tank 241-C-106 sluicing, 94:1185 (R;US)

Pyrochemical salt scrub, 94:889 (BA;US)

Radionuclide separations for the reduction of high-level waste volume, 94:2925 (R;US)

Retrieval of underground storage tank wastes: The Hanford challenge, 94:1084 (R;US)

Russian separation program, 94:2978 (RA;US)

Sludge washing, 94:1171 (R;US)

Tank waste remediation system high-level waste feed processability assessment report, 94:1673 (R;US)

Tank waste remediation system integrated technology plan. Revision 2, 94:1839 (R;US)

Waste glass weathering, 94:34 (BA;US)

Year-end report for UST: Cesium extraction testing project DOE/DT&E TTP No. SR1-03-20-01, 94:1681 (R;US)

Radioactive Waste Storage

Acceptance test procedure, 241-SY-101 Flexible Receiver System, Phase III testing, 94:1227 (R;US)

Analysis of radioactive waste samples by ion chromatography-ICP/MS, 94:1015 (R;US)

Application of a CdTe gamma-ray spectrometer to remote characterization of high-level radioactive waste tanks, 94:1075 (R;US)

Closed out tank 241-SY-101 DACS system change requests No. 101-200, 94:1257 (R;US)

Comparative study of Total Organic Carbon (TOC) methods for high-level mixed waste, 94:2549 (R;US)

Decontamination and dismantlement of the Argonne National Laboratory-East Map Tube Facility, 94:1916 (R;US)

Depleted uranium concrete container feasibility study, 94:600 (R;US)

Disposition of actinides released from high-level waste glass, 94:356 (BA;US)

Dose rate analysis for Tank 101 AZ (Project W151), 94:1133 (R;US)

Double shell tank waste analysis plan, 94:1419 (R;US)

Effects of S/V on secondary phase formation on waste glasses, 94:1894 (BA;US)

Electrical classification for the single shell flammable gas watch list tanks, 94:1429 (R;US)

Engineering task plan for Enraf Nonius densitometer assembly design, 94:1409 (R;US)

Evaporation analysis for Tank SX-104, 94:1338 (R;US)

Feasibility study of tank leakage mitigation using subsurface barriers. Revision 1, 94:1385 (R;US)

Hanford site waste tank characterization, 94:1094 (R;US)

ICPP radioactive liquid and calcine waste technologies evaluation: Interim report, 94:2854 (R;US)

Idaho Chemical Processing Plant spent fuel and waste management technology development program plan: 1994 Update, 94:2859 (R;US)

Implementation of seismic design and evaluation guidelines for the Department of Energy high-level waste storage tanks and appurtenances, 94:1077 (R;US)

LDUA engineering development plan, 94:1123 (R;US)

Loss/gain on ignition testing for HC-21C, 94:2151 (R;US)

M.A. Streicher findings regarding high-level waste tank corrosion issues, 94:1501 (R;US)

Maximum surface level and temperature histories for Hanford waste tanks, 94:1514 (R;US)

Program plan for the resolution of tank vapor issues, 94:1035 (R;US)

Progress in resolving Hanford Site high-level waste tank safety issues, 94:1099 (R;US)

Project Specific Quality Assurance Plan (QAPP), 94:1186 (R;US)

Qualification test for the flexible receiver. Revision 2, 94:1190 (R;US)

Radiation effects issues related to US DOE site remediation and nuclear waste storage, 94:1014 (R;US)

Recommended test program to determine crack growth rate in double-shell tank materials, 94:1413 (R;US)

Results of gas monitoring of double-shell flammable gas watch list tanks, 94:1539 (R;US)

Risk-based systems analysis of emerging high-level waste tank remediation technologies: Volume 2: Final report, 94:1055 (R;US)

Risk-based systems analysis of emerging high-level waste tank remediation technologies: Volume 1: Executive summary, 94:1054 (R;US)

Sample Exchange Evaluation (SEE) Report - Phase II, 94:1534 (R;US)

Seismic design spectra 200 West and East Areas DOE Hanford Site, Washington, 94:1163 (R;US)

Single-shell tank leak emergency pumping guide. Revision 5, 94:1215 (R;US)

Static internal pressure capacity of Hanford Single-Shell Waste Tanks, 94:1516 (R;US)

Structural analysis of the equipment removal system for tanks 241C106 and 241AY102, 94:1180 (R;US)

Structural evaluation of thermocouple probes for 241-AZ-101 waste tank, 94:1128 (R;US)

System design description for SY-101 hydrogen mitigation test project data acquisition and control system (DACS-1), 94:1488 (R;US)

Tank 241-C-105 tank characterization plan, 94:1568 (R;US)

Tank 241-T-107 tank characterization plan, 94:1596 (R;US)

Tank 241-TX-118 tank characterization plan, 94:1561 (R;US)

Tank 241-U-105 tank characterization plan, 94:1592 (R;US)

Tank characterization report for single-shell tank 241-C-109, 94:1376 (R;US)

Tritium emissions from 200 East Area Double-Shell Tanks, 94:1327 (R;US)

Wet/dry sounding reel tape. Final report, 94:2873 (R;US)

Radiochemical Analysis

45-Day deliverable for Tank 241-BX-105 Auger samples, risers 2 and 6, 94:1300 (R;US)

Analytical characterization of high-level mixed wastes using multiple sample preparation treatments, 94:1005 (R;US)

Characterization of high-level waste saltcake stored at the Savannah River Site, 94:2937 (R;US)

Research and development support of the Hanford site tank waste remediation system, 94:1002 (R;US)

Tank 241-AP-106 tank characterization plan, 94:1580 (R;US)

Remedial Action

Laboratory testing in-tank sludge washing, summary letter report, 94:987 (R;US)

Permitting plan for Project W-340, Tank 241-C-106 manipulator retrieval arm, 94:1197 (R;US)

Phase report 1C, TA-21 operable unit RCRA Facility Investigation, Outfalls Investigation, 94:2499 (R;US)

Tank 241-C-101 tank characterization plan, 94:1587 (R;US)

Tank 241-T-111 tank characterization plan, 94:1545 (R;US)

Tank characterization report for Single-Shell Tank T-102, 94:978 (R;US)

Remote Handling

305 Building K basin mockup facility functions and requirements, 94:2682 (R;US)

Removal

Finite element modelling of an evacuated canister for removal of molten radioactive glass, 94:1006 (R;US)

Retrieval Systems

Evaluation of AY/AZ tank farm ventilation system during aging waste retrieval operations, 94:1509 (R;US)

Rheology

Engineering test plan for Tank 241-SY-101 in situ viscometer, 94:1553 (R;US)

Engineering test plan for Tank 241-SY-101 in situ viscometer. Revision 1, 94:1552 (R;US)

SY101 in situ viscometer instrument system design description, 94:1487 (R;US)

The effects of heating and dilution on the rheological and physical properties of Tank 241-SY-101 waste, 94:997 (R;US)

Risk Assessment

Criticality safety evaluation report for the 100 KE Basin sandfilter backwash pit, 94:2662 (R;US)

Road Transport

Comparison of elastic and inelastic analysis and test results for the defense high level waste shipping cask, 94:2389 (BA;US)

Safety Engineering

Mitigation of tank 241-SY-101 by pump mixing: Results of full-scale testing, 94:966 (R;US)

Sampling

Analysis and characterization of double shell tank 241-AP-108, 94:1293 (R;US)

Analysis report for 241-BY-104 Auger samples, 94:1511 (R;US)

Analysis report for 241-BY-104 auger samples, 94:1510 (R;US)

Double shell tank waste analysis plan, 94:1419 (R;US)

HAZWOPER work plan and site safety and health plan for the Alpha characterization project at the solid waste storage area 4 bathtubbing trench at Oak Ridge National Laboratory, 94:2060 (R;US)

Rotary Mode Core Sample System availability improvement, 94:1377 (R;US)

Statistical characterization report for Single-Shell Tank 241-T-107, 94:1520 (R;US)

Tank 241-AN-102 tank characterization plan, 94:1549 (R;US)

Tank 241-AP-107 tank characterization plan, 94:1589 (R;US)

Tank 241-AX-102 tank characterization plan, 94:1555 (R;US)

Tank 241-AX-102 tank characterization plan, 94:1554 (R;US)

Tank 241-BY-105 tank characterization plan, 94:1551 (R;US)

Tank 241-BY-106 tank characterization plan, 94:1550 (R;US)

Tank 241-C-101 tank characterization plan, 94:1587 (R;US)

Tank 241-C-102 tank characterization plan, 94:1546 (R;US)

Tank 241-C-105 tank characterization plan, 94:1568 (R;US)

Tank 241-U-111 tank characterization plan, 94:1564 (R;US)

Tank 241-U-201 tank characterization plan, 94:1608 (R;US)

Tank 241-U-202 tank characterization plan, 94:1609 (R;US)

Tank 241-U-204 tank characterization plan, 94:1611 (R;US)

Tank characterization report for Single-Shell Tank 241-C-110, 94:1352 (R;US)

Tank characterization report for Single-Shell Tank 241-T-107, 94:1363 (R;US)

Tank characterization report for Single-Shell Tank B-111, 94:976 (R;US)

Tank characterization report for Single-Shell Tank T-102, 94:978 (R;US)

Separation Processes

Actinide separation of high level waste using solvent extractants on magnetic microparticles, 94:1685 (BA;US)

Chemistry of proposed calcination/dissolution processing of Hanford Site tank wastes, 94:2932 (R;US)

Distributions of 14 elements on 63 absorbers from three simulant solutions (acid-dissolved sludge, acidified supernate, and alkaline supernate) for Hanford HLW Tank 102-SY, 94:931 (R;US)

Enhanced sludge washing evaluation plan, 94:1064 (R;US)

Functions and requirements for Project W-236B, Initial Pretreatment Module: Revision 1, 94:1169 (R;US)

Preliminary design requirements document (DRD) for Project W-236B, "Initial Pretreatment Module", 94:1166 (R;US)

Radionuclide separations for the reduction of high-level waste volume, 94:2925 (R;US)

Washing and caustic leaching of Hanford tank sludges, 94:2945 (BA;US)

Sludges

Computer simulation of laboratory leaching and washing of tank waste sludges, 94:1389 (R;US)

Solidification

Interface phenomena in Synroc, a titanate-based nuclear waste ceramic, 94:2880 (BA;NL)

Stability

Tank characterization report for Single-Shell Tank 241-T-107, 94:1363 (R;US)

Storage Facilities

Results of falling barrier analyses, 94:2701 (R;US)

Tanks

Acceptance test procedure for tank bottom thermocouples on Tank 241-SY-101. Revision 2, 94:1222 (R;US)

Dose rate analysis for Tank 101 AZ (Project W151), 94:1133 (R;US)

Evaporation analysis for Tank SX-104, 94:1338 (R;US)

Tank characterization report for single-shell tank 241-C-109, 94:1376 (R;US)

Thermal Conductivity

Thermal conductivity analytical development, 94:1292 (R;US)

Thermal Gravimetric Analysis

45-Day deliverable for Tank 241-BX-105 Auger samples, risers 2 and 6, 94:1300 (R;US)

Underground Disposal

Constitutive representation of damage development and healing in WIPP salt, 94:2576 (R;US)

Corrosion control of the Hanford Site waste transfer system, 94:1102 (R;US)

Drift emplaced waste package thermal response, 94:2391 (BA;US)

Effects of radionuclide decay on waste glass behavior: A critical review, 94:2368 (R;US)

Groundwater flux, travel time, and radionuclide transport, 94:244 (R;US)

Hanford prototype surface barrier status report: FY 1994, 94:181 (R;US)

Integrated approach to hazardous and radioactive waste remediation, 94:589 (R;US)

Phase report 1C, TA-21 operable unit RCRA Facility Investigation, Outfalls Investigation, 94:2499 (R;US)

Phenomenological studies of two-phase flow processes for nuclear waste isolation, 94:117 (R;US)

The Assessment of Future Human Actions at Radioactive Waste Disposal Sites: An international perspective, 94:2569 (R;US)

Underground Storage

241-TX acoustic monitoring 114TX tank waste, 94:1574 (R;US)

A chemical model for the major electrolyte components of the Hanford waste tanks. The binary electrolytes in the system: $\text{Na-NO}_3\text{-NO}_2\text{-SO}_4\text{-CO}_3\text{-F-PO}_4\text{-OH-Al(OH)}_4\text{-H}_2\text{O}$, 94:1009 (R;US)

A summary description of the flammable gas tank safety program, 94:1483 (R;US)

A survey of existing and emerging technologies for external detection of liquid leaks at the Hanford Site, 94:994 (R;US)

Acceptance/operational test report 103-SY and 101-SY tank camera purge system and 103-SY video camera system, 94:1447 (R;US)

Alternative concepts for treatment and disposal of Hanford site high-level waste in tanks, 94:1503 (R;US)

Cesium uptake capacity of simulated ferrocyanide tank waste. Interim report FY 1994, Ferrocyanide Safety Project, 94:988 (R;US)

Characterization of high-level waste saltcake stored at the Savannah River Site, 94:2937 (R;US)

Engineering test plan for Tank 241-SY-101 in situ viscometer, 94:1553 (R;US)

Evaluation of AY/AZ tank farm ventilation system during aging waste retrieval operations, 94:1509 (R;US)

Ferrocyanide Safety Project: Comparison of actual and simulated ferrocyanide waste properties, 94:993 (R;US)

HIGH-LEVEL RADIOACTIVE WASTES

Underground Storage

Generation and release of flammable gases in Hanford tanks: An overview, 94:1092 (R;US)

Hanford double shell tank corrosion monitoring instrument trees, 94:1089 (R;US)

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 7, Revision 1, 94:1048 (R;US)

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 1, 94:1042 (R;US)

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), 94:1044 (R;US)

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 5, 94:1046 (R;US)

High-level waste tank remediation technology integration summary: Revision 1, 94:1039 (R;US)

Level maintenance for Tank 101-SY mitigation-by-mixing test, 94:1621 (R;US)

MWTF jumper connector integral seal block development and leak testing, 94:1645 (R;US)

Material selection for Multi-Function Waste Tank Facility tanks, 94:1088 (R;US)

Mini-DACS acceptance test report, 94:1248 (R;US)

National standard and code compliance for electrical equipment installed in hazardous locations for the void fraction instrument, 94:1273 (R;US)

Operability test procedure [Tank] 241-SY-101 equipment removal system, 94:1444 (R;US)

Performance and risk assessment of subsurface barriers for single-shell tank waste retrieval, 94:1095 (R;US)

Project management plan for Project W-320, Tank 241-C-106 sluicing, 94:1185 (R;US)

Reliability analysis and design guidelines for the 101SY VDTT vent header flow and dome/vent header pressure measurement trip circuitry. Final draft, 94:935 (R;US)

SY101 in situ viscometer instrument system design description, 94:1487 (R;US)

Safety evaluation of interim stabilization of non-stabilized single-shell watch list tanks, 94:1528 (R;US)

Safety evaluation of interim stabilization of non-stabilized single-shell watch list tanks, 94:1527 (R;US)

Sludge washing, 94:1171 (R;US)

Specialized video systems for use in underground storage tanks, 94:1677 (R;US)

System configuration management plan for 101-SY Hydrogen Mitigation Test Project Mini-Data Acquisition and Control System of Tank Waste Remediation System, 94:1261 (R;US)

T-Farm complex alarm upgrades, 94:1290 (R;US)

Tank 241-AN-102 tank characterization plan, 94:1549 (R;US)

Tank Waste Remediation System decisions and risk assessment, 94:1058 (R;US)

Tank selection for Light Duty Utility Arm (LDUA) system hot testing in a single shell tank, 94:1394 (R;US)

Tank waste remediation system integrated technology plan. Revision 2, 94:1839 (R;US)

Waste tank 241-C-106 comprehensive cooling design summary report, 94:1474 (R;US)

Viscosity

Engineering test plan for Tank 241-SY-101 in situ viscometer, 94:1553 (R;US)

SY101 in situ viscometer instrument system design description, 94:1487 (R;US)

Vitrification

Backup information for data tables in the extensive separations alternative engineering data package, 94:1316 (R;US)

Colloid formation during the corrosion of SRL 200 glass, 94:1893 (BA;US)

Development of high-waste loaded high-level nuclear waste glasses for high-temperature melter, 94:2545 (R;US)

Development of the high-level waste high-temperature melter feed preparation flowsheet for vitrification process testing, 94:2813 (R;US)

Disposal of vitrified waste in an unsaturated environment, 94:25 (BA;US)

Disposition of actinides released from high-level waste glass, 94:356 (BA;US)

Effects of S/V on secondary phase formation on waste glasses, 94:1894 (BA;US)

Effects of S/V on secondary phase formation on waste glasses, 94:1704 (R;US)

Evaluation of the potential for gas pressurization and free liquid accumulation in a WVDP canister, 94:2523 (R;US)

High Level Waste plant operation and maintenance concepts. Final report, March 27, 1995, 94:1399 (R;US)

High-level waste borosilicate glass a compendium of corrosion characteristics: Volume 1, 94:924 (R;US)

High-level waste borosilicate glass: A compendium of corrosion characteristics: Volume 3, 94:926 (R;US)

High-level waste borosilicate glass: A compendium of corrosion characteristics: Volume 2, 94:925 (R;US)

High-level waste melter alternatives assessment report, 94:1071 (R;US)

Initial results from the canistered waste forms produced during the first campaign of the DWPF Startup Test Program, 94:2871 (R;US)

Laboratory development of sludge washing and alkaline leaching processes: Test plan for FY 1994, 94:2919 (R;US)

Laboratory studies for estimation of melting rate in nuclear waste glass melters, 94:2544 (R;US)

Maximization of waste loading for a vitrified Hanford high-activity simulated waste, 94:2546 (R;US)

Models for liquidus temperature of nuclear waste glasses, 94:2558 (R;US)

Multipurpose optimization models for high level waste vitrification, 94:1004 (R;US)

Operational feasibility of the vitrification of an organic ion exchange resin, 94:887 (BA;US)

Product consistency testing of three reference glasses in stainless steel and perfluoroalkoxy resin vessels, 94:2541 (R;US)

Property/composition relationships for Hanford high-level waste glasses melting at 1150°C volume 2: Chapters 12-16 and appendices A-K, 94:2538 (R;US)

Property/composition relationships for Hanford high-level waste glasses melting at 115°C volume 1: Chapters 1-11, 94:2537 (R;US)

Rocky Flats Plant precipitate sludge surrogate vitrification demonstration: Technical Task Plan, 94:881 (R;US)

Russian separation program, 94:2978 (RA;US)

TWRS tank waste pretreatment process development hot test siting report, 94:1504 (R;US)

Tank Waste Remediation System tank waste pretreatment and vitrification process development testing requirements assessment, 94:1500 (R;US)

Tank waste remediation system high-level waste feed processability assessment report, 94:1673 (R;US)

Tank waste remediation system high-level waste vitrification system development and testing requirements, 94:1469 (R;US)

Testing and development strategy for the tank waste remediation system, 94:1497 (R;US)

Tests of Cs-137 removal from DWPF samples prior to analysis, 94:2861 (R;US)

The effect of vitrification technology on waste loading, 94:690 (R;US)

Thermal performance of a depleted uranium shielded storage, transportation, and disposal package, 94:2399 (BA;US)

Towards optimization of nuclear waste glass: Constraints, property models, and waste loading, 94:2543 (R;US)

Vitrification of hazardous and radioactive wastes, 94:876 (R;US)

Washing and alkaline leaching of Hanford tank sludges: A status report, 94:2920 (R;US)

Waste glass weathering, 94:34 (BA;US)

Washing
Laboratory testing in-tank sludge washing, summary letter report, 94:987 (R;US)

Waste Processing
Laboratory testing in-tank sludge washing, summary letter report, 94:987 (R;US)

Recent advances in the separation of actinides by liquid-liquid extraction, extraction chromatography, and ion exchange, 94:898 (BA;US)

Testing and development strategy for the tank waste remediation system, 94:1497 (R;US)

Waste Retrieval
Performance and risk assessment of subsurface barriers for single-shell tank waste retrieval, 94:1095 (R;US)

Waste Transportation
Depleted uranium concrete container feasibility study, 94:600 (R;US)

Extra-regulatory impact tests and analyses of the structural evaluation test unit, 94:2092 (R;US)

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 5, 94:1046 (R;US)

Waste-Rock Interactions
Apparent and simple diffusion coefficients in compacted bentonite, 94:2390 (BA;US)

HIGH-PURITY GE DETECTORS
Calibration of the radionuclide logging system germanium detector, 94:763 (R;US)

HNPf REACTOR
Description of the US Geological Survey's slug-test and borehole geophysical-logging work at the Hallam Nuclear Facility. July to November 1994, 94:7 (R;US)

HOISTS
KE Basin monorail modification for the sludge removal and packaging project, 94:2667 (R;US)

PFP up-right lift UL-20/26 manlifts, 94:2147 (R;US)

Structural integrity analysis of the 224U elevator mothballing, 94:2243 (R;US)

HOT CELLS
Investigation of remote sensing scale up for hot cell waste tank applications. CPAC optical moisture monitoring, 94:1374 (R;US)

Shielding analysis of the IEM cell offset adapter plate, 94:2179 (R;US)

Chemical Composition

Development of chemical profiles for U.S. Department of Energy low-level mixed wastes, 94:2 (R;US)

MWIP: Surrogate formulations for thermal treatment of low-level mixed waste: Part 4, Wastewater treatment sludges, 94:532 (R;US)

Surrogate formulations for thermal treatment of low-level mixed waste, Part II: Selected mixed waste treatment project waste streams, 94:530 (R;US)

Chemical Properties

Waste Receiving and Processing, Module 2A, feed specification: Revision 1, 94:823 (R;US)

Classification

Characterization of low level mixed waste at Los Alamos National Laboratory, 94:648 (R;US)

Combustion

Environmental Assessment Idaho National Engineering Laboratory, low-level and mixed waste processing, 94:462 (R;US)

Compiled Data

Radiological, physical, and chemical characterization of low-level alpha contaminated wastes stored at the Idaho National Engineering Laboratory, 94:606 (R;US)

Containers

Waste drum fire tests, 94:2623 (R;US)

Data Base Management

Preliminary analysis of the ORNL Liquid Low-Level Waste system, 94:666 (R;US)

Denitration

A low-temperature process for the denitration of Hanford single-shell tank, nitrate-based waste utilizing the nitrate to ammonia and ceramic (NAC) process, 94:952 (R;US)

A low-temperature process for the denitration of Hanford single-shell tank, nitrate-based waste utilizing the nitrate to ammonia and ceramic (NAC) or nitrate to ammonia and glass (NAG) process: Phase 2 report, 94:953 (R;US)

An experimental investigation of the thermal/fluid properties of the nitrate to ammonia and ceramic (NAC) product slurry, 94:922 (R;US)

Detoxification

Tank waste processing analysis: Database development, tank-by-tank processing requirements, and examples of pre-treatment sequences and schedules as applied to Hanford Double-Shell Tank Supernatant Waste - FY 1993, 94:984 (R;US)

Dissolution

Chemistry of application of calcination/dissolution to the Hanford tank waste inventory, 94:2931 (R;US)

Electrochemistry

Mediated electrochemical oxidation as an alternative to incineration for mixed wastes, 94:718 (R;US)

Encapsulation

CEL Working procedures for WRAP 2A formulation development test, 94:827 (R;US)

Multiple encapsulation of LANL waste using polymers. Final report, 94:639 (R;US)

Environmental Exposure Pathway

The grout/glass performance assessment code system (GPACS) with verification and benchmarking, 94:2262 (R;US)

Environmental Policy

Overview of commercial low-level radioactive waste disposal in the United States, 94:592 (R;US)

Environmental Transport

Field lysimeter studies for performance evaluation of grouted Hanford defense wastes, 94:170 (R;US)

Results after nine years of field testing low-level radioactive waste forms using lysimeters, 94:622 (R;US)

Evaluation

Low level mixed waste thermal treatment technical basis report, 94:833 (R;US)

Waste Inspection Tomography (WIT), 94:526 (RA;US)

Waste sampling and characterization facility (WSCF), 94:872 (R;US)

Evaporation

183-H Basin Mixed Waste Analysis and Testing Report, 94:826 (R;US)

Concentration of Melton Valley Storage Tank surrogates with a wiped film evaporator, 94:670 (R;US)

Gamma Spectroscopy

Waste inspection tomography (WIT), 94:2323 (R;US)

Ground Disposal

Buried waste integrated demonstration FY 94 deployment plan, 94:615 (R;US)

FY 1995 Remedial Investigation Work Plan for Waste Area Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:1965 (R;US)

Geochemical factors affecting radionuclide transport through near and far fields at a Low-Level Waste Disposal Site, 94:183 (R;US)

Proposed plan for the Environmental Restoration Disposal Facility (ERDF) at the Hanford Site, Richland, Washington. Revision 1, 94:1989 (R;US)

Remedial investigation and feasibility study report for the Environmental Restoration Disposal Facility, 94:2444 (R;US)

Results after nine years of field testing low-level radioactive waste forms using lysimeters, 94:622 (R;US)

Site characterization plan for groundwater in Waste Area Grouping 1 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:2439 (R;US)

Surface water sampling and analysis plan for environmental monitoring in Waste Area Grouping 6 at Oak Ridge National Laboratory, Oak Ridge, Tennessee: Environmental Restoration Program, 94:134 (R;US)

Grouting

G3 model of gas and liquid migration from grout containing radioactive waste, 94:739 (R;US)

Performance assessment of grouted double-shell tank waste disposal at Hanford. Revision 1, 94:1325 (R;US)

Heat Treatments

Low level mixed waste thermal treatment technical basis report, 94:833 (R;US)

Inventories

Level trend analysis summary report for Oak Ridge National Laboratory inactive liquid low-level waste tanks, 94:656 (R;US)

Solid waste 30-year volume summary, 94:2603 (R;US)

Land Transport

Environmental Assessment Idaho National Engineering Laboratory, low-level and mixed waste processing, 94:462 (R;US)

Leaching

Field lysimeter studies for performance evaluation of grouted Hanford defense wastes, 94:170 (R;US)

LLBG mixed waste disposal facility leachate sampling and analysis plan, 94:844 (R;US)

Use of the time domain reflectometry in hydraulic studies of multilayered landfill covers for closure of waste landfills at Los Alamos, New Mexico, 94:1862 (R;US)

Materials Handling

Design assessment for Melton Valley liquid low-level waste collection and transfer system upgrade project at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:541 (R;US)

Measuring Methods

A DOE manual: DOE methods for evaluating environmental and waste management samples, 94:687 (R;US)

Minimization

Significant volume reduction of tank waste by selective crystallization: 1994 Annual report, 94:2935 (R;US)

Mixing

Phase III (full scale) agitated mixing test plan, 94:828 (R;US)

Monitoring

Cost-effectiveness analysis of the SEAMIST™ membrane system technology, 94:115 (R;US)

Nondestructive Analysis

Implementation plan for WRAP Module 1 operational readiness review, 94:813 (R;US)

WRAP Module 1 waste characterization plan, 94:814 (R;US)

Nondestructive Testing

WRAP Module 1 waste characterization plan, 94:814 (R;US)

Oxidation

Mediated electrochemical oxidation of mixed wastes, 94:429 (RA;US)

Packaging

An innovative approach to solid Low Level Radioactive Waste processing and disposal, 94:415 (R;US)

Packaging Rules

A history of solid waste packaging at the Hanford Site, 94:2634 (R;US)

Physical Properties

183-H Basin Mixed Waste Analysis and Testing Report, 94:826 (R;US)

Radiological, physical, and chemical characterization of low-level alpha contaminated wastes stored at the Idaho National Engineering Laboratory, 94:606 (R;US)

Waste Receiving and Processing, Module 2A, feed specification: Revision 1, 94:823 (R;US)

Pipelines

Risk evaluation of embedded, single-walled liquid low-level waste piping at Oak Ridge National Laboratory: ESD Publication 4315, 94:553 (R;US)

Public Policy

Recycling of radioactively contaminated materials: Public policy issues, 94:1904 (R;US)

Pulse Combustion

Steam reforming of DOE complex waste simulants, 94:2582 (R;US)

Radiation Doses

Performance assessment of grouted double-shell tank waste disposal at Hanford. Revision 1, 94:1325 (R;US)

Radioactive Waste Disposal

1993 State-by-state assessment of low-level radioactive wastes received at commercial disposal sites, 94:489 (R;US)

A preliminary parametric performance assessment for the disposal of alpha-contaminated mixed low-level waste stored at the Idaho National Engineering Laboratory, 94:1857 (R;US)

A process for establishing a financial assurance plan for LLW disposal facilities, 94:480 (R;US)

Benchmarking of computer codes and approaches for modeling exposure scenarios, 94:485 (R;US)

LOW-LEVEL RADIOACTIVE WASTES

Radioactive Waste Disposal

DOE's performance evaluation project for mixed low-level waste disposal, 94:709 (R;US)

DOE's planning process for mixed low-level waste disposal, 94:713 (R;US)

Directions in low-level radioactive waste management: A brief history of commercial low-level radioactive waste disposal, 94:477 (R;US)

Environmental Assessment Idaho National Engineering Laboratory, low-level and mixed waste processing, 94:462 (R;US)

Estimation of natural ground water recharge for the performance assessment of a low-level waste disposal facility at the Hanford Site, 94:188 (R;US)

Field lysimeter studies for performance evaluation of grouted Hanford defense wastes, 94:170 (R;US)

Focused feasibility study of engineered barriers for waste management units in the 200 Areas, 94:77 (R;US)

G3 model of gas and liquid migration from grout containing radioactive waste, 94:739 (R;US)

LLBG mixed waste disposal facility leachate sampling and analysis plan, 94:844 (R;US)

Liquid return from gas pressurization of grouted waste, 94:2620 (R;US)

Low level tank waste disposal study, 94:839 (R;US)

Mediated electrochemical oxidation as an alternative to incineration for mixed wastes, 94:718 (R;US)

Minimizing risk associated with shallow burial of waste in semi-arid ecosystems: Erosion and vegetation dynamics, 94:888 (BA;US)

Mixed Waste Integrated Program emerging technology development, 94:444 (R;US)

Mixed waste integrated program: Logic diagram, 94:630 (R;US)

Overview of commercial low-level radioactive waste disposal in the United States, 94:592 (R;US)

Performance assessment experience at Oak Ridge National Laboratory, 94:454 (R;US)

Performance assessment task team progress report, 94:481 (R;US)

Performance of cement-based seal-system components in a waste-disposal environment, 94:2406 (R;US)

Project report for the commercial disposal of mixed low-level waste debris, 94:611 (R;US)

Proposed waste form performance criteria and testing methods for low-level mixed waste, 94:535 (R;US)

Proposed waste form performance criteria and testing methods for low-level mixed waste, 94:424 (R;US)

Quality Assurance Project Plan for the Environmental Monitoring Program in Waste Area Grouping 6 at Oak Ridge National Laboratory, Oak Ridge, Tennessee: Environmental Restoration Program, 94:540 (R;US)

Radioactive Waste Management Complex low-level waste radiological performance assessment, 94:607 (R;US)

Radiological criteria for remedial actions at radioactively contaminated sites. Environmental Restoration Program, 94:619 (R;US)

Results of the quarterly tritium survey of Fourmile Branch and its seep lines in the F- and H-Areas of SRS: September 1993, 94:345 (R;US)

Summary of expenditures of rebates from the low-level radioactive waste surcharge escrow account for calendar year 1993: Report to Congress, 94:466 (R;US)

TWRS tank waste pretreatment process development hot test siting report, 94:1504 (R;US)

Use of engineered soils and other site modifications for low-level radioactive waste disposal, 94:491 (R;US)

Use of the time domain reflectometry in hydraulic studies of multilayered landfill covers for closure of waste landfills at Los Alamos, New Mexico, 94:1862 (R;US)

Zink rotary kiln seal: Cam followers. Revision 1, 94:2289 (R;US)

Radioactive Waste Management

High level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 6, 94:1047 (R;US)

Immobilized low-level waste disposal options configuration study, 94:863 (R;US)

Interim report: Waste management facilities cost information for mixed low-level waste, 94:608 (R;US)

Laboratory/industry partnerships for environmental remediation, 94:2970 (R;US)

Low-level waste certification plan for the Lawrence Berkeley Laboratory Hazardous Waste Handling Facility. Revision 1, 94:652 (R;US)

Mixed Waste Working Group report, 94:557 (R;US)

Multipurpose storage/transport/disposal packages for DOE nuclear low-level wastes: An emerging need and a regulatory challenge, 94:703 (R;US)

Operational readiness review for the Waste Experimental Reduction Facility: Final report, 94:610 (R;US)

Preliminary analysis of the ORNL Liquid Low-Level Waste system, 94:666 (R;US)

Technology applications for radioactive waste minimization, 94:2967 (R;US)

Waste management facilities cost information estimating data, 94:885 (R;US)

Radioactive Waste Processing

Application of DOE prescribed guides to the evaluation of Hanford's Mixed Low Level Solid Waste Treatment Options, 94:822 (R;US)

Assessing mixed waste treatment technologies, 94:445 (R;US)

C-018H LERF filtration test plan: Revision 1, 94:2125 (R;US)

Comparison of TCLP and long-term PCT performance on low-level mixed waste glasses, 94:875 (R;US)

Concentrator E-F11 water test, 94:2808 (R;US)

DOE mixed waste treatment capacity analysis, 94:679 (R;US)

Department of Energy treatment capabilities for greater-than-Class C low-level radioactive waste, 94:487 (R;US)

Design/installation and structural integrity assessment under the Federal Facility Agreement for Bethel Valley Low-Level Waste Collection and Transfer System upgrade for Building 2026 (High Radiation Level Analytical Laboratory) and Building 2099 (Monitoring and Control Station) at Oak Ridge National Laboratory, 94:548 (R;US)

Development of methodology to evaluate microbially influenced degradation of cement-solidified low-level radioactive waste forms, 94:440 (BA;US)

Development of treatment technologies of the processing of U.S. Department of Energy mixed waste, 94:438 (R;US)

Engineering design and test plan for demonstrating DETOX treatment of mixed wastes, 94:499 (R;US)

Environmental Assessment Idaho National Engineering Laboratory, low-level and mixed waste processing, 94:462 (R;US)

Extensive separations (CLEAN) processing strategy compared to TRUEX strategy and sludge wash ion exchange, 94:1059 (R;US)

Glassy slag: A complementary waste form to homogeneous glass for the implementation of MAWS in treating DOE low level/mixed wastes, 94:1707 (R;US)

Hazard characterization report for the 200 Area Effluent Treatment Facility. Revision 1, 94:2124 (R;US)

Implementation plan for WRAP Module 1 operational readiness review, 94:813 (R;US)

Integrated thermal treatment system study: Phase 1 results: Appendix B, Flow sheets and material balances: Volume 2, 94:597 (R;US)

Integrated thermal treatment system study: Phase 1 results: Volume 1, 94:596 (R;US)

LLW solidification in cement: Effect of dilution, 94:740 (R;US)

Laboratory development of methods for centralized treatment of liquid low-level waste at Oak Ridge National Laboratory, 94:671 (R;US)

Long term decontamination at the Hanford Site: A case study, 94:2121 (R;US)

Low level mixed waste thermal treatment technical basis report, 94:833 (R;US)

Mediated electrochemical oxidation as an alternative to incineration for mixed wastes, 94:718 (R;US)

Mixed Waste Integrated Program emerging technology development, 94:444 (R;US)
Mixed waste integrated program: Logic diagram, 94:630 (R;US)
Operating cost guidelines for benchmarking DOE thermal treatment systems for low-level mixed waste, 94:672 (R;US)
Preliminary low-level waste feed definition guidance - LLW pretreatment interface, 94:852 (R;US)
Project management plan for Project 93L-EWW-087, "222-S radioactive liquid waste line replacement", 94:2763 (R;US)
Risk assessments of innovative technologies for treatment of mixed waste, 94:909 (J;US)
Separation of technetium from nuclear waste stream simulants. Final report, 94:2498 (R;US)
Stabilization of low-level mixed waste in chemically bonded phosphate ceramics, 94:412 (R;US)
Statement of work for architect-engineer services, initial pretreatment module, 94:1170 (R;US)
Strontium removal from caustic carbonate waste solutions using carrier coprecipitation, 94:2912 (R;US)
Technical area status report for second-stage destruction and offgas treatment, 94:529 (R;US)
Technical information report: Plasma melter operation, reliability, and maintenance analysis, 94:867 (R;US)
Test plan for glass melter system technologies for vitrification of high-sodium content low-level radioactive liquid waste, Project No. RDD-43288, 94:1651 (R;US)
The modeling of contaminant flow during proposed treatment of U.S. Department of Energy low-level radioactive mixed wastes, 94:409 (R;US)
Viscosity-based high temperature waste form compositions, 94:593 (R;US)
Vitrification Studies with DOE Low-Level Mixed Waste Wastewater Treatment Sludges, 94:878 (R;US)
Washing techniques as an alternative to incineration, 94:457 (R;US)
Waste receiving and processing facility module 1 data management system software project management plan, 94:2756 (R;US)

Radioactive Waste Storage

1994 Solid waste forecast container volume summary, 94:723 (R;US)
Design demonstrations for category B tank systems at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:555 (R;US)
Design/Installation and Structural Integrity Assessment of Bethel Valley Low-Level Waste collection and transfer system upgrade for Building 3092 (central off-gas scrubber facility) at Oak Ridge National Laboratory, 94:1838 (R;US)
Design/installation and structural integrity assessment under the Federal Facility Agreement for Bethel Valley low-level waste collection and transfer system upgrade for Building 2026 (High Radiation Level Analytical Laboratory) and Building 2099 (Monitoring and Control Station) at Oak Ridge National Laboratory, 94:549 (R;US)
Design/installation and structural integrity assessment under the Federal Facility Agreement for Bethel Valley Low-Level Waste Collection and Transfer System upgrade for Building 2026 (High Radiation Level Analytical Laboratory) and Building 2099 (Monitoring and Control Station) at Oak Ridge National Laboratory, 94:548 (R;US)
Functional design criteria radioactive liquid waste line replacement, Project W-087. Revision 3, 94:2762 (R;US)
Implementation Plan for Liquid Low-Level Radioactive Waste tank systems at Oak Ridge National Laboratory under the Federal Facility Agreement, Oak Ridge, Tennessee, 94:544 (R;US)
Implementation plan for Liquid Low-Level Radioactive Waste Tank Systems at Oak Ridge National Laboratory under the Federal Facility Agreement, Oak Ridge, Tennessee, 94:543 (R;US)

Selection of liquid-level monitoring method for the Oak Ridge National Laboratory inactive liquid low-level waste tanks, remedial investigation/feasibility study, 94:660 (R;US)
Surveillance and maintenance plan for the inactive liquid low-level waste tanks at Oak Ridge National Laboratory, 94:659 (R;US)
Tank 241-C-105 tank characterization plan, 94:1568 (R;US)
Waste Inspection Tomography (WIT), 94:526 (RA;US)

Radioactivity

Development of radiological profiles for U.S. Department of Energy low-level mixed wastes, 94:3 (R;US)

Radiochemical Analysis

PUREX low-level waste radionuclide characterization, 94:2637 (R;US)
Radiological, physical, and chemical characterization of low-level alpha contaminated wastes stored at the Idaho National Engineering Laboratory, 94:606 (R;US)

Radiolysis

Progress report for the enhancement of Radcalc: Isotope database, gamma absorption fractions, and G(H₂) values, 94:795 (R;US)

Radiometric Analysis

Qualification of radionuclide inventory based on measured dose rates, 94:733 (R;US)

Recycling

Recycling of radioactively contaminated materials: Public policy issues, 94:1904 (R;US)

Remedial Action

The Formerly Utilized Sites Remedial Action Program (FUSRAP): Building stakeholder partnerships to achieve effective cleanup, 94:1944 (R;US)

Sampling

Quality assurance program plan for low-level waste at the WSCF Laboratory, 94:746 (R;US)
Tank 241-C-105 tank characterization plan, 94:1568 (R;US)

Separation Processes

Chemistry of proposed calcination/dissolution processing of Hanford Site tank wastes, 94:2932 (R;US)
Enhanced sludge washing evaluation plan, 94:1064 (R;US)
Functions and requirements for Project W-236B, Initial Pretreatment Module: Revision 1, 94:1169 (R;US)
Preliminary design requirements document (DRD) for Project W-236B, "Initial Pretreatment Module", 94:1166 (R;US)

Single Photon Emission Computed Tomography

Waste inspection tomography (WIT), 94:2323 (R;US)

Sintering

An experimental investigation of the thermal/fluid properties of the nitrate to ammonia and ceramic (NAC) product slurry, 94:922 (R;US)

Solidification

Chemically bonded phosphate ceramics for low-level mixed waste stabilization, 94:413 (R;US)
Development of methodology to evaluate microbially influenced degradation of cement-solidified low-level radioactive waste forms, 94:440 (BA;US)
Low-temperature-setting phosphate ceramics for low-level mixed waste stabilization, 94:414 (R;US)
Microstructural aspects of zeolite formation in alkali activated cements containing high levels of fly ash, 94:741 (R;US)
Mixed waste solidification testing on thermosetting polymer and cement based waste forms in support of Hanford's WRAP Module 2A Facility, 94:726 (R;US)
Pilot-scale production of grout with simulated double-shell slurry feed: Final report, 94:680 (R;US)

Stack Disposal

Real-Time Monitoring of Alpha Emissions. Final report, FY 1994, 94:647 (R;US)

Statistical Data

1993 State-by-state assessment of low-level radioactive wastes received at commercial disposal sites, 94:489 (R;US)

Storage Facilities

Design/Installation and Structural Integrity assessment of Bethel Valley Low-Level Waste Collection and Transfer System

LOW-LEVEL RADIOACTIVE WASTES Storage Facilities

upgrade for Building 2649 (Transported Waste Receiving Facility) at Oak Ridge National Laboratory, 94:550 (R;US)
Waste sampling and characterization facility (WSCF), 94:872 (R;US)

Tanks

Annual status report on Federal Facility Agreement compliance for the Liquid Low-Level Waste tank systems at Oak Ridge National Laboratory, 94:547 (R;US)
Design/Installation and Structural Integrity Assessment of Bethel Valley Low-Level Waste collection and transfer system upgrade for Building 3092 (central off-gas scrubber facility) at Oak Ridge National Laboratory, 94:1838 (R;US)
Implementation Plan for Liquid Low-Level Radioactive Waste tank systems at Oak Ridge National Laboratory under the Federal Facility Agreement, Oak Ridge, Tennessee, 94:544 (R;US)
Implementation plan for Liquid Low-Level Radioactive Waste Tank Systems at Oak Ridge National Laboratory under the Federal Facility Agreement, Oak Ridge, Tennessee, 94:543 (R;US)
Surveillance and maintenance plan for the inactive liquid low-level waste tanks at Oak Ridge National Laboratory, 94:659 (R;US)

Tomography

Waste Inspection Tomography (WIT), 94:526 (RA;US)

Transport

Design assessment for Melton Valley liquid low-level waste collection and transfer system upgrade project at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:541 (R;US)
Functional design criteria radioactive liquid waste line replacement, Project W-087. Revision 3, 94:2762 (R;US)

Underground Disposal

A sensitivity study of an evaluation of alternatives for disposal of INEL low-level waste and low-level mixed waste, 94:587 (R;US)
Burial grounds safety equipment list, 94:858 (R;US)
Fire hazard analysis for the Westinghouse Hanford Company managed low-level mixed waste Trench 31 and 34, 94:845 (R;US)
Groundwater modeling of source terms and contaminant plumes for DOE low-level waste performance assessments, 94:41 (R;US)
Integrated approach to hazardous and radioactive waste remediation, 94:589 (R;US)
Readiness assessment plan for the Radioactive Mixed Waste Land Disposal Facility (Trench 31), 94:807 (R;US)
The PRISM concept, 94:1725 (R;US)
Water balance relationships in four alternative cover designs for radioactive and mixed waste landfills, 94:1865 (R;US)

Underground Storage

Description of the solid waste container corrosion program at the Hanford Site, 94:2119 (R;US)
Design demonstrations for Category B tank systems piping at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:554 (R;US)
Detailed Leak Detection Test Plan and schedule for the Oak Ridge National Laboratory liquid low-level waste active pipelines, 94:539 (R;US)
Integration of remediation strategy with waste management capabilities and regulatory drivers for radioactive waste storage tanks at the Oak Ridge National Laboratory, 94:456 (R;US)
Low-level waste vitrification plant environmental permitting plan, 94:849 (R;US)
Preliminary low-level waste feed definition guidance - LLW pretreatment interface, 94:852 (R;US)
Tank 241-TY-104 Tank characterization plan, 94:1602 (R;US)
Tank characterization report for Double-Shell Tank 241-AW-106, 94:1351 (R;US)
Tank waste processing analysis: Database development, tank-by-tank processing requirements, and examples of pretreatment sequences and schedules as applied to Hanford Double-Shell Tank Supernatant Waste - FY 1993, 94:984 (R;US)

Vitrification

An evaluation of glass-crystal composites for the disposal of nuclear and hazardous waste materials, 94:402 (R;US)
Demonstration of vitrification of surrogate F006 waste-water treatment sludges, 94:886 (BA;US)
Evaluation of plasma melter technology for verification of high-sodium content low-level radioactive liquid wastes: Demonstration test No. 4 preliminary test report, 94:866 (R;US)
Hanford low-level vitrification melter testing - Master list of data submittals, 94:846 (R;US)
Immobilized low-level waste disposal options configuration study, 94:863 (R;US)
Laboratory scale vitrification of low-level radioactive nitrate salts and soils from the Idaho National Engineering Laboratory, 94:613 (R;US)
Los Alamos National Laboratory simulated sludge vitrification demonstration, 94:882 (R;US)
Low level tank waste disposal study, 94:839 (R;US)
Low-Level Waste Vitrification Plant Project contracting strategy decision analysis report, 94:840 (R;US)
Low-level waste program technical strategy, 94:1455 (R;US)
Low-level waste vitrification plant environmental permitting plan, 94:849 (R;US)
MWIP: Surrogate formulations for thermal treatment of low-level mixed waste: Part 4, Wastewater treatment sludges, 94:532 (R;US)
Minimum additive waste stabilization (MAWS), 94:397 (R;US)
Preliminary low-level waste feed definition guidance - LLW pretreatment interface, 94:852 (R;US)
Radiological implications of contact maintenance: Impacts on facility design, 94:2819 (R;US)
Selection of melter systems for the DOE/Industrial Center for Waste Vitrification Research, 94:883 (R;US)
TWRS tank waste pretreatment process development hot test siting report, 94:1504 (R;US)
Tank Waste Remediation System tank waste pretreatment and vitrification process development testing requirements assessment, 94:1500 (R;US)
Technical information report: Plasma melter operation, reliability, and maintenance analysis, 94:867 (R;US)
Test plan for evaluation of plasma melter technology for vitrification of high-sodium content low-level radioactive liquid wastes, 94:865 (R;US)
Test plan for glass melter system technologies for vitrification of high-sodium content low-level radioactive liquid waste, Project No. RDD-43288, 94:1651 (R;US)
Testing and development strategy for the tank waste remediation system, 94:1497 (R;US)
The effect of vitrification technology on waste loading, 94:690 (R;US)
Towards optimization of nuclear waste glass: Constraints, property models, and waste loading, 94:2543 (R;US)
Vitrification and waste glass compositional limits, 94:697 (R;US)
Vitrification of high sulfate wastes, 94:696 (R;US)
Vitrification of low-level and mixed wastes, 94:411 (R;US)

Waste Forms

Results after nine years of field testing low-level radioactive waste forms using lysimeters, 94:622 (R;US)

Waste Management

Process waste assessment for the Radiography Laboratory, 94:710 (R;US)

Waste Processing

Bioprocessing of concentrated mixed hazardous industrial waste, 94:891 (BA;US)
Testing and development strategy for the tank waste remediation system, 94:1497 (R;US)

Waste Retrieval

Status and progress in sludge washing: A pivotal pretreatment method, 94:1103 (R;US)

Waste Transportation

Transportation impact analysis for the shipment of Low Specific Activity Nitric Acid, 94:2231 (R;US)

LWGR TYPE REACTORS

See also N-REACTOR

The US nuclear safety approach to upgrading the Russian and Ukrainian reactors, 94:3078 (BA;GB)

LYSIMETERS

Field lysimeter studies for performance evaluation of grouted Hanford defense wastes, 94:170 (R;US)

M**M CODES**

Computer code input for thermal hydraulic analysis of Multi-Function Waste Tank Facility Title II design, 94:1142 (R;US)

Simulating the Upper Barren Zone and the Ore Zone tests performed with the EMC logging tool, 94:107 (R;US)

MACHINE PARTS

Geophysical investigation of the "Thimble," 100-H Area, 94:2160 (R;US)

Public information plan. Version 2, 94:1755 (R;US)

Quality assurance project plan for the UMTRA technical assistance contractor hydrochemistry facility. Final report, 94:1736 (R;US)

Radiological surveillance of Remedial Action activities at the processing site, Ambrosia Lake, New Mexico, April 12-16, 1993. Final report, 94:1734 (R;US)

Radiological surveillance of Remedial Action activities at the processing site, Falls City, Texas. Final report, 94:1733 (R;US)

Remedial action plan and site design for stabilization of the inactive Uranium Mill Tailing site Maybell, Colorado: Attachment 3, ground water hydrology report, Attachment 4, water resources protection strategy. Final report, 94:1740 (R;US)

Technical assistance contractor management plan: Surface and ground water, 94:1804 (R;US)

U.S. Department of Energy Uranium Mill Tailings Remedial Action Ground Water Project: Project plan, 94:1751 (R;US)

UMTRA Project Administrative Files Collection Records Management Program, 94:1828 (R;US)

UMTRA Project Office quality assurance program plan. Revision 6, 94:1757 (R;US)

UMTRA Project Site Observational Work Plan, Mexican Hat, Utah, 94:1802 (R;US)

MILL TAILINGS Remedial Action

- UMTRA project office federal employee occupational safety and health program plan: Revision 1, 94:1766 (R;US)
- UMTRA technical assistance contractor quality assurance program plan, 94:1749 (R;US)
- Uranium Mill Tailings Remedial Action Project 1993 Environmental Report, 94:1763 (R;US)
- Uranium Mill Tailings Remedial Action Project Safety Advancement Field Effort (SAFE) Program, 94:1730 (R;US)
- Uranium Mill Tailings Remedial Action Project environmental protection implementation plan, 94:1758 (R;US)
- Work plan for ground water elevation data recorder installation at Riverton, Wyoming, 94:1798 (R;US)
- Work plan for ground water elevation data recorder/monitor well installation at the New Rifle Site, Rifle, Colorado: Revision 1, 94:1785 (R;US)
- Work plan for ground water elevation data recorder/monitor well installation at Grand Junction, Colorado: Revision 1, 94:1787 (R;US)
- Work plan for ground water elevation data recorder/monitor well installation at Gunnison, Colorado: Revision 2, 94:1790 (R;US)

Removal

- Completion report for the UMTRA Project Vitro Processing Site. Revision 1, 94:1776 (R;US)
- Environmental assessment of remedial action at the Maybell uranium mill tailings site near Maybell, Colorado: Revision 2, 94:1833 (R;US)
- Environmental assessment of remedial action at the Naturita uranium processing site near Naturita, Colorado: Revision 5, 94:1835 (R;US)

Risk Assessment

- Baseline risk assessment of ground water contamination at the uranium mill tailings site near Falls City, Texas: Revision 1, 94:1752 (R;US)
- Baseline risk assessment of ground water contamination at the uranium mill tailings site near Canonsburg, Pennsylvania, 94:1799 (R;US)

Safety Analysis

- Development of an auditable safety analysis in support of a radiological facility classification, 94:1923 (R;US)

Stabilization

- Modifications to the remedial action plan and site design for stabilization of the inactive Uranium Mill Tailings Site at Green River, Utah, 94:1827 (R;US)
- Remedial Action Plan and Site Design for Stabilization of the Inactive Uranium Mill Tailings Site, Maybell, Colorado: Appendixes to Attachment 3: Appendix A, Hydrological services calculations: Appendix B, Ground water quality by location, Final report, 94:1924 (R;US)
- Remedial action plan for the inactive Uranium Processing Site at Naturita, Colorado: Remedial action plan: Attachment 2, Geology report, Attachment 3, Ground water hydrology report: Working draft, 94:1793 (R;US)

Waste Management

- Engineering solutions to the long-term stabilization and isolation of uranium mill tailings in the United States, 94:1727 (R;US)

MILROW EVENT

- See UNDERGROUND EXPLOSIONS

MINE-MOUTH GENERATING PLANTS

- See FOSSIL-FUEL POWER PLANTS

MINERAL WASTES

Operations Support of Phase 2 Integrated Demonstration In Situ Bioremediation: Volume 1, Final report: Final report text data in tabular form, Disk 1, 94:340 (R;US)

Operations Support of Phase 2 Integrated Demonstration In Situ Bioremediation: Volume 3, Final report: Data in graphical form, Disks 1,2,3,4; Averaged data in tabular form, Disks 1,2, 94:342 (R;US)

Operations Support of Phase 2 Integrated Demonstration In Situ Bioremediation: Volume 4, Final report: Averaged data in tabular form, Disks 3,4; Averaged data in graphical form, Disks 1,2,3,4, 94:343 (R;US)

Operations Support of Phase 2 Integrated Demonstration In Situ Bioremediation: Volume 2, Final report: Data in tabular form, Disks 2,3,4, 94:341 (R;US)

Calcination
Calcination/dissolution processing of Hanford waste, 94:1691 (BA;US)

Chemical Analysis
100 Area excavation treatability study data validation report, 94:755 (R;US)

Assessment of technologies for hazardous waste site remediation: Non-treatment technologies and pilot scale facility implementation – monitoring technology: Final report, 94:518 (R;US)

Characterization of organic air emissions from the Certification and Segregation Building and Air Support Weather Shield II at the Radioactive Waste Management Complex, 94:2043 (R;US)

Concrete samples for organic samples, data package and 222-S validation summary report. Addendum 1A, 94:2246 (R;US)

Quality assurance/quality control summary report for Phase 1 of the Clinch River remedial investigation. Environmental Restoration Program, 94:131 (R;US)

Chemical Composition
Estimating DNAPL composition and VOC dilution from extraction well data, 94:367 (J;US)

Chemical Reaction Kinetics
Destruction of organics in Hanford tank wastes using high temperature aqueous systems, 94:1689 (BA;US)

Chemical Reactions
A summary description of the flammable gas tank safety program, 94:1483 (R;US)

Tank 241-TY-101 Tank Characterization Plan, 94:1600 (R;US)

Dechlorination
Decontamination Systems Information and Research Program: Quarterly technical progress report for period, April 1–June 30, 1994, 94:519 (R;US)

Decomposition
Electrochemical treatment of alkaline nuclear wastes, 94:2948 (BA;US)

Laboratory testing of ozone oxidation of Hanford site waste, 94:2946 (BA;US)

Organic destruction to enhance the separation of strontium in radioactive wastes, 94:1684 (BA;US)

Detection
Dual-gas tracers for subsurface characterization and NAPL detection, 94:221 (R;US)

Ecological Concentration
Characterization of voic volume VOC concentration in vented TRU waste drums. Final report, 94:2044 (R;US)

Erase—an integrated system for treating organic-contaminated sites, 94:202 (R;US)

Environmental Transport
Soil pore-gas sampling by photoacoustic radiometry, 94:646 (R;US)

Technical management plan for sample generation, analysis, and data review for Phase 2 of the Clinch River Environmental Restoration Program, 94:657 (R;US)

Extraction
Separation science and technology. Semiannual progress report, April 1992–September 1992, 94:2905 (R;US)

Gas Chromatography
Triple sorbent thermal desorption/gas chromatography/mass spectrometry determination of vapor phase organic contaminants, 94:39 (R;US)

Hydrolysis
Organic destruction to enhance the separation of strontium in radioactive wastes, 94:698 (R;US)

In-Situ Processing
Laboratory test plan in-well vapor stripping system, 94:295 (R;US)

Mass Spectroscopy
Development of a method for the direct purge analysis of volatile organics in water, 94:365 (BA;US)

Triple sorbent thermal desorption/gas chromatography/mass spectrometry determination of vapor phase organic contaminants, 94:39 (R;US)

Mass Transfer
Dual-gas tracers for subsurface characterization and NAPL detection, 94:221 (R;US)

Materials Recovery
Process for recovering actinide values, 94:2966 (P;US)

Measuring Methods
Estimating DNAPL composition and VOC dilution from extraction well data, 94:367 (J;US)

Mixing
Visual Observations of Mixing Quality in a Prototype Canyon Tank, 94:1683 (R;US)

Monitoring
Organic carbon in Hanford single-shell tank waste, 94:961 (R;US)

Performance specifications for technology development: Application for characterization of volatile organic compounds in the environment, 94:2383 (R;US)

Oxidation
Design requirements for the supercritical water oxidation test bed, 94:616 (R;US)

Electrochemical organic destruction in support of Hanford tank waste pretreatment, 94:1869 (R;US)

In situ peroxidation of TCE contaminated soil, 94:428 (R;US)

Status of test results of electrochemical organic oxidation of a tank 241-SY-101 simulated waste, 94:1085 (R;US)

The effect of dissolved solids on the destruction of organics by ultraviolet oxidation, 94:743 (R;US)

Photolysis
The effect of dissolved solids on the destruction of organics by ultraviolet oxidation, 94:743 (R;US)

Pyrolysis
Destruction of organics in Hanford tank wastes using high temperature aqueous systems, 94:1689 (BA;US)

Low temperature hydrothermal destruction of organics in Hanford tank wastes, 94:1690 (BA;US)

Quantitative Chemical Analysis
Cost and quality effectiveness of objective-based and statistically-based quality control for volatile organic compounds analyses of gases, 94:591 (R;US)

Measurement error and spatial variability effects on characterization of volatile organics in the subsurface, 94:368 (J;US)

Removal
Decontamination Systems Information and Research Program: Quarterly report, July–September 1994, 94:520 (R;US)

- Data and records management plan for the White Wing Scrap Yard (Waste Area Grouping 11) geophysical survey at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:658 (R;US)
- Design assessment for Melton Valley liquid low-level waste collection and transfer system upgrade project at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:541 (R;US)
- Design/installation and structural integrity assessment of Bethel Valley Low-Level Waste Collection and transfer system upgrade for Building 2649 (Transported Waste Receiving Facility) at Oak Ridge National Laboratory, 94:551 (R;US)
- Design/installation and structural integrity assessment of Bethel Valley low-level waste collection and transfer system upgrade for Building 3092 (Central Off-Gas Scrubber Facility) at Oak Ridge National Laboratory, 94:552 (R;US)
- Design/installation and structural integrity assessment under the Federal Facility Agreement for Bethel Valley Low-Level Waste Collection and Transfer System upgrade for Building 2026 (High Radiation Level Analytical Laboratory) and Building 2099 (Monitoring and Control Station) at Oak Ridge National Laboratory, 94:548 (R;US)
- Treatability study work plan for in situ vitrification of seepage pit 1 in Waste Area Grouping 7 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:536 (R;US)

Radioactive Waste Management

- Annual status report on Federal Facility Agreement compliance for the Liquid Low-Level Waste tank systems at Oak Ridge National Laboratory, 94:547 (R;US)
- Comparison of methods for developing contaminant-particle size distributions for suspended sediment, 94:42 (R;US)
- Computer simulation of mobilization and mixing of kaolin with submerged liquid jets in 25,000-gallon horizontal cylindrical tanks, 94:1000 (R;US)
- Design demonstrations for Category B tank systems piping at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:554 (R;US)
- Detailed Leak Detection Test Plan and schedule for the Oak Ridge National Laboratory liquid low-level waste active pipelines, 94:539 (R;US)
- Identifying, meeting, and assessing customer expectations, 94:2974 (R;US)
- Implementation Plan for Liquid Low-Level Radioactive Waste tank systems at Oak Ridge National Laboratory under the Federal Facility Agreement, Oak Ridge, Tennessee, 94:544 (R;US)
- Preliminary analysis of the ORNL Liquid Low-Level Waste system, 94:666 (R;US)
- Quality Assurance Project Plan for the Environmental Monitoring Program in Waste Area Grouping 6 at Oak Ridge National Laboratory, Oak Ridge, Tennessee: Environmental Restoration Program, 94:540 (R;US)
- Surveillance and maintenance plan for the inactive liquid low-level waste tanks at Oak Ridge National Laboratory, 94:659 (R;US)
- Treatment of radioactive wastes from DOE underground storage tanks, 94:2913 (R;US)

Radioactive Waste Processing

- Concentration of Melton Valley Storage Tank surrogates with a wiped film evaporator, 94:670 (R;US)
- Department of Energy treatment capabilities for greater-than-Class C low-level radioactive waste, 94:487 (R;US)
- Mercury removal from solid mixed waste, 94:449 (R;US)
- Treatment of radioactive wastes from DOE underground storage tanks, 94:2913 (R;US)

Radioactive Waste Storage

- Design demonstrations for category B tank systems at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:555 (R;US)
- Design/installation and structural integrity assessment under the Federal Facility Agreement for Bethel Valley low-level waste collection and transfer system upgrade for Building 2026 (High Radiation Level Analytical Laboratory) and Building 2099 (Monitoring and Control Station) at Oak Ridge National Laboratory, 94:549 (R;US)
- Leak testing plan for the Oak Ridge National Laboratory liquid low-level waste systems (active tanks): Revision 2. Volume 1: Regulatory background and plan approach; Volume 2: Methods, protocols, and schedules; Volume 3: Evaluation of the ORNL/LT-823DP differential pressure leak detection method; Appendix to Revision 2: DOE/EPA/TDEC correspondence, 94:661 (R;US)
- Level trend analysis summary report for Oak Ridge National Laboratory inactive liquid low-level waste tanks, 94:656 (R;US)
- Selection of liquid-level monitoring method for the Oak Ridge National Laboratory inactive liquid low-level waste tanks, remedial investigation/feasibility study, 94:660 (R;US)
- Technology study of Gunite tank sludge mobilization at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:950 (R;US)

Radiological Personnel

- The Martin Marietta Energy Systems Associated Laboratories for Excellence in Radiation Technology (ALERT), 94:2972 (R;US)

Remedial Action

- DOE Oak Ridge Environmental Restoration Program, technical support contractor. Monthly project status report, February 1995, 94:1966 (R;US)
- Environmental Restoration Program waste minimization and pollution prevention self-assessment, 94:620 (R;US)
- FY 1994 annual summary report of the surveillance and maintenance activities for the Oak Ridge National Laboratory Environmental Restoration Program, 94:2062 (R;US)
- FY 1995 remedial investigation work plan for Waste Area Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:1964 (R;US)
- Health and safety plan for the Environmental Restoration Program at Oak Ridge National Laboratory, 94:2057 (R;US)
- Identifying, meeting, and assessing customer expectations, 94:2974 (R;US)
- Level 3 baseline risk evaluation for Building 3506 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:2053 (R;US)
- Oak Ridge National Laboratory Technology Logic Diagram: Volume 1, Technology Evaluation: Part B, Remedial Action, 94:662 (R;US)
- Oak Ridge National Laboratory Technology Logic Diagram: Volume 3, Technology evaluation data sheets: Part A, Characterization, Decontamination, 94:663 (R;US)
- Program Management Plan for the Martin Marietta Energy Systems, Inc., Oak Ridge National Laboratory Site Environmental Restoration Program, 94:2055 (R;US)
- Removal action work plan for Corehole 8 in Waste Area Grouping 1 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:142 (R;US)
- Third annual environmental restoration monitoring and assessment report for FY 1994 of the Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:546 (R;US)
- Waste Management and Remedial Action Division programs and facilities report, 94:655 (R;US)
- Waste management plan for the remedial investigation of Waste Area Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:2058 (R;US)

Site Characterization

- Data management implementation plan for the site characterization of the Waste Area Grouping 1 Groundwater Operable Unit at Oak Ridge National Laboratory, 94:139 (R;US)

Development of in situ vitrification for remediation of ORNL contaminated soils, 94:1872 (R;US)

Site characterization plan for groundwater in Waste Area Grouping 1 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:2439 (R;US)

Storage Facilities

Fluid dynamic studies for a simulated Melton Valley Storage Tank slurry, 94:955 (R;US)

Underground Disposal

Subsurface stormflow modeling with sensitivity analysis using a Latin-hypercube sampling technique, 94:149 (R;US)

Waste Management

Environmental Restoration Program waste minimization and pollution prevention self-assessment, 94:620 (R;US)

Waste Management and Remedial Action Division programs and facilities report, 94:655 (R;US)

Water Pollution

Sampling and analysis plan for the site characterization of the waste area Grouping 1 groundwater operable unit at Oak Ridge National Laboratory, 94:141 (R;US)

Water Pollution Control

Development of a passive-flow treatment system for ⁹⁰Sr-contaminated seep water at Waste Area Grouping 5 at Oak Ridge National Laboratory, 94:137 (R;US)

Water Quality

Groundwater quality monitoring well installation for Upper Waste Areas Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:125 (R;US)

Groundwater quality monitoring well installation for Waste Area Grouping 17 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:130 (R;US)

Groundwater quality monitoring well installation for Waste Area Grouping 5 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:123 (R;US)

Groundwater quality monitoring well installation for Waste Area Groupings 8 and 9 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:128 (R;US)

Seeps and springs sampling and analysis plan for the environmental monitoring plan for Waste Area Grouping 6 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:133 (R;US)

Water Wells

Groundwater quality monitoring well installation for Waste Area Grouping 3 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:126 (R;US)

Groundwater quality monitoring well installation for Waste Area Grouping 4 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:127 (R;US)

Watersheds

Hydrologic data summary for the White Oak Creek watershed at Oak Ridge National Laboratory, Oak Ridge, Tennessee (January–December 1993), 94:140 (R;US)

OXALATES

Investigation of the uranyl/oxalate co-contaminant system sorbed on a Wyoming smectite, 94:362 (BA;US)

Oxalate complexation with aluminum(III) and iron(III) at moderately elevated temperatures, 94:29 (BA;NL)

OXOPROPANE

Acceptance test procedure for Project W-049H, 94:313 (R;US)

Performance assessment of grouted double-shell tank waste disposal at Hanford. Revision 1, 94:1325 (R;US)

Phase III (full scale) agitated mixing test plan, 94:828 (R;US)

Tank Waste Remediation System tank waste pretreatment and vitrification process development testing requirements assessment, 94:1500 (R;US)

Tank waste remediation system high-level waste vitrification system development and testing requirements, 94:1469 (R;US)

Permit Applications

Corrective action management unit application for the Environmental Restoration Disposal Facility, 94:573 (R;US)

Physical Protection

Hanford prototype surface barrier status report: FY 1994, 94:181 (R;US)

Pilot Plants

SWEPP gamma-ray spectrometer system software user's guide, 94:604 (R;US)

Pipelines

Description of work for 216-U-1 and 216-U-2 stainless steel pipeline integrity testing, 94:2155 (R;US)

Leachate storage transport tanker loadout piping, 94:812 (R;US)

Planning

Interim report: Waste management facilities cost information for mixed low-level waste, 94:608 (R;US)

Waste management facilities cost information estimating data, 94:885 (R;US)

Pollution Regulations

Compliance matrix for the Mixed Waste Disposal Facilities, Trenches 31 and 34, burial ground 218-W-5. Revision 1, 94:855 (R;US)

Ponds

Operational test report for LERF Basin 242AL-44 integrity test, 94:321 (R;US)

Program Management

Treated Effluent Disposal Facility (TEDF) Operator Training Station (OTS) System Configuration Management Plan, 94:769 (R;US)

Quality Assurance

Quality Assurance Project Plan, W-026. Revision 1, 94:816 (R;US)

Radiation Accidents

Project W-026, Waste Receiving and Processing (WRAP) Facility Module 1: Maximum possible fire loss (MPFL) decontamination and cleanup estimates: Revision 1, 94:2757 (R;US)

T Plant hazards assessment, 94:2205 (R;US)

Radiation Doses

Letter report for skyshine abatement assessment, 94:2012 (R;US)

Radiation Monitoring

Environmental surveillance for EG&G Idaho Waste Management facilities at the Idaho National Engineering Laboratory: 1993 annual report, 94:585 (R;US).

Operability test procedure for the 340-NT-EX stack upgrades -- Project W337, 94:2771 (R;US)

Radiation Protection

Letter report for skyshine abatement assessment. Draft A, 94:2013 (R;US)

Radiometric Surveys

Environmental analysis of Lower Pueblo/Lower Los Alamos Canyon, Los Alamos, New Mexico, 94:2049 (R;US)

Radionuclide Migration

Performance assessment methodology as applied to the Greater Confinement Disposal site: Preliminary results of the third performance iteration, 94:2577 (R;US)

The effect of fuel type in unsaturated spent fuel tests, 94:37 (BA;US)

Raw Materials

Waste Receiving and Processing, Module 2A, feed specification: Revision 1, 94:823 (R;US)

Regulations

Summary of expenditures of rebates from the low-level radioactive waste surcharge escrow account for calendar year 1993: Report to Congress, 94:466 (R;US)

Remedial Action

Additional borehole geophysical logging at Waste Area Grouping 1 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:144 (R;US)

Calcination/dissolution testing for Hanford Site tank wastes, 94:2933 (R;US)

Decontamination system study for the Tank Waste Retrieval System, 94:929 (R;US)

Design/Installation and Structural Integrity Assessment of Bethel Valley Low-Level Waste Collection and transfer system upgrade for Building 2649 (Transported Waste Receiving Facility) at Oak Ridge National Laboratory, 94:551 (R;US)

Environmental analysis of Lower Pueblo/Lower Los Alamos Canyon, Los Alamos, New Mexico, 94:2049 (R;US)

Hydrostratigraphy and recharge distributions from direct measurements of hydraulic conductivity using the UFA™ method, 94:157 (R;US)

In-situ containment and stabilization of buried waste: Annual report FY 1994, 94:1711 (R;US)

Integrated test plan ResonantSonic drilling system technology demonstration-1995, at the Hanford Site: Revision 1, 94:297 (R;US)

Interactive Computer-Enhanced Remote Viewing System: Quarterly report number 6, April-June, 1994, 94:2320 (R;US)

Letter report for skyshine abatement assessment, 94:2012 (R;US)

Maintenance study for W-340 Waste Retrieval System, 94:928 (R;US)

Proposed plan for interim remedial measures at the 100-HR-1 Operable Unit, Hanford Site, Richland, Washington. Draft A, 94:2003 (R;US)

Riser configuration, Tank 241-A-105, light duty utility arm, 94:1359 (R;US)

Surface radiological investigations at the 0816 Site, Waste Area Grouping 13, Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:2510 (R;US)

Test plan for core sampling drill bit temperature monitor, 94:1575 (R;US)

The cascade of reservoirs of the "Mayak" Plant: Case history and the first version of a computer simulator, 94:3019 (R;US)

Treatability study work plan for in situ vitrification of seepage pit 1 in Waste Area Grouping 7 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:536 (R;US)

Waste Calcining Facility remote inspection report, 94:2283 (R;US)

Risk Assessment

Computational framework and database for accident analyses of Waste Management alternatives in the US Department of Energy Waste Management Program, 94:1910 (R;US)

Performance assessment methodology as applied to the Greater Confinement Disposal site: Preliminary results of the third performance iteration, 94:2577 (R;US)

T Plant hazards assessment, 94:2205 (R;US)

Use of a scenario-development procedure to identify potentially disruptive scenarios, Greater Confinement Disposal facility, Area 5, Nevada Test Site, 94:2579 (R;US)

Safety

Burial grounds safety equipment list, 94:858 (R;US)

Safety Analysis

232Z Building seismic assessments, 94:2245 (R;US)

Criticality classification of waste receiving and processing module 2A, 94:2764 (R;US)

Criticality safety evaluation for TRU waste in storage at the RWMC, 94:2459 (R;US)

Interim safety basis compliance matrix for Trenches 31 and 34, 94:810 (R;US)

Preliminary hazards analysis -- vitrification process, 94:2434 (R;US)

Preliminary safety analysis report for the Waste Characterization Facility, 94:2484 (R;US)

Readiness Assessment Plan, Hanford 200 areas treated effluent disposal facilities, 94:320 (R;US)

Seismic evaluation of Tank 241C106 in support of retrieval activities, 94:1177 (R;US)

Safety Engineering

Combustion and fuel loading characteristics of Hanford Site transuranic solid waste, 94:2794 (R;US)

Safety Standards

Supplemental design requirements document solid waste operations complex, 94:834 (R;US)

Samplers

Core sampling system spare parts assessment, 94:1379 (R;US)

Operability test procedure for 211BA flow proportional sampler, 94:1440 (R;US)

Stress analysis of portable safety platform (Core Sampler Truck), 94:1206 (R;US)

Video Graphic Recorder (VGR) calibration, 94:1253 (R;US)

Sampling

Compatibility Grab Sampling and Analysis Plan, 94:2826 (R;US)

Tank 241-BX-106: Tank characterization plan, 94:1560 (R;US)

Tank 241-C-101: Tank characterization plan. Revision 1, 94:1588 (R;US)

Tank 241-C-201: Tank characterization plan, 94:1604 (R;US)

Tank 241-C-202: Tank characterization plan, 94:1605 (R;US)

Tank 241-C-203: Tank characterization plan, 94:1606 (R;US)

Tank 241-SX-113 Tank Characterization Plan, 94:1616 (R;US)

Test plan for K Basin Sludge Canister and Floor Sampling Device, 94:2725 (R;US)

Scrubbers

Design/installation and structural integrity assessment of Bethel Valley low-level waste collection and transfer system upgrade

RADIOACTIVE WASTE FACILITIES

Scrubbers

for Building 3092 (Central Off-Gas Scrubber Facility) at Oak Ridge National Laboratory, 94:552 (R;US)

Seismic Effects

232Z Building seismic assessments, 94:2245 (R;US)
Seismic evaluation of Tank 241C106 in support of retrieval activities, 94:1177 (R;US)

Site Approvals

Solid waste management complex site development plan, 94:830 (R;US)

Site Characterization

100-BC-2 limited field investigation report, 94:1986 (R;US)
A new ground-penetrating radar system for remote-site characterization, 94:196 (R;US)
Additional borehole geophysical logging at Waste Area Grouping 1 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:144 (R;US)
Geophysical investigation of the "Thimble," 100-H Area, 94:2160 (R;US)
Geophysical investigation of trench 4, Burial Ground 218-W-4C, 200 west area, 94:2652 (R;US)
High performance ground penetrating radar survey of TA-49/Area 2. Final report, 94:2494 (R;US)
Hydrostratigraphy and recharge distributions from direct measurements of hydraulic conductivity using the UFA™ method, 94:157 (R;US)
Integrated test plan ResonantSonic drilling system technology demonstration-1995, at the Hanford Site: Revision 1, 94:297 (R;US)
Performance assessment methodology as applied to the Greater Confinement Disposal site: Preliminary results of the third performance iteration, 94:2577 (R;US)
Remedial investigation and feasibility study report for the environmental restoration disposal facility, 94:1982 (R;US)
Riser configuration, Tank 241-A-105, light duty utility arm, 94:1359 (R;US)
Surface radiological investigations at the 0816 Site, Waste Area Grouping 13, Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:2510 (R;US)

Site Selection

DOE's planning process for mixed low-level waste disposal, 94:713 (R;US)

Source Terms

Analysis of source term modeling for low-level radioactive waste performance assessments, 94:676 (R;US)
Source term development for the 300 Area Treated Effluent Disposal Facility, 94:734 (R;US)

Specifications

200 Area treated effluent disposal facility operational test specification, 94:789 (R;US)
Construction quality assurance report, 94:808 (R;US)

Stability

Ferrocyanide safety project task 3 ferrocyanide aging studies FY 1994 annual report, 94:2532 (R;US)

Stacks

Technical description of Stack 296-B-5, 94:1372 (R;US)

Start-Up

Implementation plan for WRAP Module 1 operational readiness review, 94:813 (R;US)
Readiness Assessment Plan, Hanford 200 areas treated effluent disposal facilities, 94:320 (R;US)

Stress Analysis

Wind and seismic analysis for liquid-level gauge support, 94:1270 (R;US)

Stress Corrosion

Nitrate stress corrosion crack growth rate in plain carbon steels, 94:1400 (R;US)

Surveillance

Surveillance Analysis Computer System (SACS): Software requirements specification (SRS). Revision 2, 94:2792 (R;US)

Switches

BCP selector valves and limit switches, 94:798 (R;US)

Switching Circuits

Seismic qualification of a switch box, 94:1370 (R;US)

Systems Analysis

Advances in the study of far-field phenomena affecting repository performance, 94:2386 (BA;US)
Controlling changes - lessons learned from waste management facilities, 94:2992 (R;US)

Tanks

242-A Evaporator Condensate Tank (TK-C-100) tie down evaluation, 94:2238 (R;US)
Design/installation and structural integrity assessment under the Federal Facility Agreement for Bethel Valley Low-Level Waste Collection and Transfer System upgrade for Building 2026 (High Radiation Level Analytical Laboratory) and Building 2099 (Monitoring and Control Station) at Oak Ridge National Laboratory, 94:548 (R;US)

Technology Assessment

Performance assessment of grouted double-shell tank waste disposal at Hanford. Revision 1, 94:1325 (R;US)

Thermal Analysis

Drift emplaced waste package thermal response, 94:2391 (BA;US)

Tools

Aerosol can puncture device operational test plan, 94:819 (R;US)

Valves

BCP selector valves and limit switches, 94:798 (R;US)

Ventilation Systems

241-SY modular exhauster pad analysis, 94:1213 (R;US)

Waste Retrieval

Bibliography of documents pertaining to retrieval of waste from Hanford single-shell tanks, 94:1396 (R;US)
K Basin sludge retrieval assay evaluation, 94:2676 (R;US)

Water Influx

A simulation study of infiltration into surficial sediments at the Subsurface Disposal Area, Idaho National Engineering Laboratory, 94:90 (R;US)

Water Requirements

Engineering work plan for implementing the Process Condensate Recycle Project at the 242-A evaporator, 94:1665 (R;US)

Water Treatment

W-007H B Plant Process Condensate Treatment Facility. Revision 3, 94:800 (R;US)

Working Conditions

Technical assessment of workplace air sampling requirements at tank farm facilities. Revision 2, 94:1119 (R;US)

RADIOACTIVE WASTE MANAGEMENT

242-A evaporator quality assurance project plan: Revision 1, 94:1463 (R;US)

Quality Control

222-S laboratory quality assurance plan, 94:2638 (R;US)

Recommendations

Application of DOE prescribed guides to the evaluation of Hanford's Mixed Low Level Solid Waste Treatment Options, 94:822 (R;US)

Records Management

Waste receiving and processing facility module 1 data management system software project management plan, 94:2756 (R;US)

Regulations

Final waste forms project: Performance criteria for phase I treatability studies, 94:2513 (R;US)

Remote Control

Buried waste integrated demonstration human engineered control station. Final report, 94:2326 (R;US)

Remote Handling Equipment

Conceptual design for remote handling methods using the HIP process in the Calcine Immobilization Program, 94:2853 (R;US)

Research Programs

1994 Panel 1 Utilization Plan, 94:2454 (R;US)

Overview of the efficient separations and processing integrated program (ESPIP), 94:2882 (BA;US)

Projects at the Component Development and Integration Facility: Quarterly technical progress report, 1 October-31 December 1993, 94:472 (R;US)

Tank waste treatment science, 94:1692 (BA;US)

Risk Assessment

Insights on radiological risks of US Department of Energy radioactive waste management alternatives in the Environmental Management Programmatic Environmental Impact Statement, 94:1903 (R;US)

Safety Analysis

Dual shell pressure balanced reactor vessel: Final project report, 94:682 (R;US)

Nuclear criticality safety analysis summary report: The S-area defense waste processing facility, 94:2867 (R;US)

Safety evaluation of interim stabilization of non-stabilized single-shell watch list tanks, 94:1527 (R;US)

Safety Engineering

Tank 241-AP-106 tank characterization plan: Revision 1, 94:1581 (R;US)

Schedules

Underground storage tank - Integrated Demonstration Technical Task Plan master schedule, 94:1027 (R;US)

Separation Processes

Separation science and technology. Semiannual progress report, April 1992-September 1992, 94:2905 (R;US)

Simulation

Composition of simulants used in the evaluation of electrochemical processes for the treatment of high-level wastes, 94:2942 (R;US)

Computer simulation of laboratory leaching and washing of tank waste sludges, 94:1389 (R;US)

Waste simulant development for evaluation of LLW melter system technology, 94:862 (R;US)

Solidification

LLW solidification in cement: Effect of dilution, 94:740 (R;US)

Microwave waste processing technology overview, 94:702 (R;US)

Specifications

Criteria for cesium capsules to be shipped as special form radioactive material, 94:2791 (R;US)

Systems Analysis

Process simulation and uncertainty analysis of plasma arc mixed waste treatment, 94:443 (R;US)

TEAM. Technology Evaluation and Analysis Methodology Systems Analysis, 94:2474 (CM;US)

US Department of Energy Mixed Waste Integrated Program performance systems analysis, 94:425 (R;US)

T Codes

TEAM. Technology Evaluation and Analysis Methodology Systems Analysis, 94:2474 (CM;US)

Technology Assessment

Best available technology for the Los Alamos National Laboratory Radioactive Liquid Waste Treatment Facility, 94:2501 (R;US)

Development of treatment technologies for the processing of US Department of Energy mixed waste, 94:433 (RA;US)

Disposal of defense spent fuel and HLW from the Idaho Chemical Processing Plant, 94:2393 (BA;US)

Distributions of 15 elements on 58 absorbers from simulated Hanford Double-Shell Slurry Feed (DSSF), 94:932 (R;US)

Hydrothermal Oxidation Hazardous Waste Pilot Plant Test Bed, 94:621 (R;US)

Review of the Vortec soil remediation demonstration program, 94:527 (RA;US)

Treatment technology analysis for mixed waste containers and debris, 94:533 (R;US)

Vitrification

Analysis of waste-vitrification process samples: Improvements in sample preparation and analysis methods, 94:2490 (R;US)

Development and testing of the Minimum Additive Waste Stabilization (MAWS) system for Fernald wastes. Phase 1, Final report, 94:460 (R;US)

RADIOACTIVE WASTE PROCESSING

Vitrification

Evaluation of plasma melter technology for verification of high-sodium content low-level radioactive liquid wastes: Demonstration test No. 4 preliminary test report, 94:866 (R;US)

High Level Waste plant operation and maintenance concepts. Final report, March 27, 1995, 94:1399 (R;US)

Technical information report: Plasma melter operation, reliability, and maintenance analysis, 94:867 (R;US)

Test plan for glass melter system technologies for vitrification of high-sodium content low-level radioactive liquid waste, Project No. RDD-43288, 94:1651 (R;US)

W Codes

The modeling of contaminant flow during proposed treatment of U.S. Department of Energy low-level radioactive mixed wastes, 94:409 (R;US)

a Codes

Mixed Waste Treatment Project: Computer simulations of integrated flowsheets, 94:716 (R;US)

RADIOACTIVE WASTE STORAGE

See also MONITORED RETRIEVABLE STORAGE

Tank 241-C-204 Tank Characterization Plan, 94:1607 (R;US)

Alarm Systems

Instructions for 104-SX liquid level measurement field tests, 94:1622 (R;US)

Appropriate Technology

Assembly procedure for column cutting platform, 94:1459 (R;US)

Auxiliary Systems

241-U-701 new compressor building and instrument air piping analyses, 94:2242 (R;US)

Certification

Westinghouse Hanford Company plan for certifying newly generated contact-handled transuranic waste, 94:2846 (R;US)

Chemical Analysis

216-Day report for Tank 241-C-111, cores 58 and 59, 94:1303 (R;US)

Chemical Reactions

Synthetic waste chemical mechanism studies, 94:2612 (R;US)

Containers

1994 Solid waste forecast container volume summary, 94:723 (R;US)

White Paper: Multi-purpose canister (MPC) for DOE-owned spent nuclear fuel (SNF), 94:2856 (R;US)

Coverings

Control of Eolian soil erosion from waste site surface barriers, 94:1873 (R;US)

Criticality

CSER 94-004: Criticality safety of double-shell waste storage tanks, 94:1116 (R;US)

CSER 94-09: Implications of the heat anomaly in Tank 106-C to criticality safety, 94:1117 (R;US)

Criticality safety evaluation report for K Basin filter cartridges, 94:2218 (R;US)

Estimation of plutonium in Hanford Site waste tanks based on historical records, 94:1060 (R;US)

Data Acquisition

MIT upgrade acceptance test procedure, 94:1233 (R;US)

System verification and validation plan for SY-101 Hydrogen Mitigation Test Project Data Acquisition and Control System (DACS-1), 94:1267 (R;US)

TMACS Test Procedure TP007: System administration, 94:1632 (R;US)

TMACS Test Procedure TP008: SACS Interface: Revision 5, 94:1633 (R;US)

TMACS Test Procedure TP011: Panalarm Interface, 94:1638 (R;US)

Data Acquisition Systems

FY95 software project management plan: TMACS, CASS computer systems, 94:2812 (R;US)

TMACS test procedure TP012: Panalarm software bridge, 94:1639 (R;US)

Data Base Management

Acceptance test plan for the Waste Information Control System, 94:2778 (R;US)

Information system architecture to support transparent access to distributed, heterogeneous data sources, 94:3043 (R;US)

Operability test procedure for the Waste Information and Control System, 94:1441 (R;US)

PFP MICON maintenance manual, 94:2135 (R;US)

Decision Tree Analysis

A Value of Information approach to data quality objectives for the Hanford high-level waste tanks, 94:1018 (R;US)

Design

Position paper - peer review and design verification of selected activities, 94:1162 (R;US)

Engineered Safety Systems

K West basin isolation barrier leak rate test, 94:305 (R;US)

Equipment

Caustic addition system operability test procedure, 94:1443 (R;US)

The Multi-Function Waste Tank Facility (MWTF) surplus equipment report, 94:1150 (R;US)

Evaluation

Tank characterization report for single-shell tank 241-C-109, 94:1376 (R;US)

Feasibility Studies

Concept study: Use of grout vaults for disposal of long-length contaminated equipment, 94:1386 (R;US)

Hanford spent nuclear fuel project recommended path forward, volume III: Alternatives and path forward evaluation supporting documentation, 94:2615 (R;US)

Fire Hazards

Fire hazards analysis, east tank farm storage and staging facility, 94:1200 (R;US)

Flowsheets

HLW system plan - revision 2, 94:930 (R;US)

Historical Aspects

A history of solid waste packaging at the Hanford Site, 94:2634 (R;US)

Supporting Document for the SW Quadrant Historical Tank Content Estimate for SX-Tank Farm, 94:1336 (R;US)

Supporting document for the North East Quadrant Historical Tank Content Estimate Report for BX-Tank Farm, 94:1332 (R;US)

Supporting document for the SW Quadrant Historical Tank Content Estimate for U-Tank Farm, 94:1337 (R;US)

Supporting document for the north east quadrant historical tank content estimate report for AX-tank farm, 94:1330 (R;US)

Supporting document for the north east quadrant historical tank content estimate report for C-Tank Farm, 94:1334 (R;US)

Information Retrieval

Operability test procedure for the Waste Information and Control System, 94:1441 (R;US)

Inspection

Subsurface barrier verification technologies, informal report, 94:1712 (R;US)

Inventories

Acceptance test plan for the Waste Information Control System, 94:2778 (R;US)

Manuals

Tank characterization reference guide, 94:1522 (R;US)

Materials Handling Equipment

LDUA engineering development plan, 94:1123 (R;US)

Light Duty Utility Arm interface control document plan, 94:2360 (R;US)

Stress analysis of shielded receiver lifting frame for core sampler truck #2, 94:1367 (R;US)

Structural analysis of multipoint riser 5A installation on tank 241SY101, 94:1275 (R;US)

Mathematical Models

Evaporation analysis for Tank SX-104, 94:1338 (R;US)

Mitigation

Operational and maintenance manual, 100 ton hydraulic trailer, 94:1435 (R;US)

Mixers

Mixer pump long term operations plan for Tank 241-SY-101 mitigation, 94:1456 (R;US)

Mixing

Computer simulation of mobilization and mixing of kaolin with submerged liquid jets in 25,000-gallon horizontal cylindrical tanks, 94:1000 (R;US)

Monitoring

Acceptance test procedure for the ultra high pressure bore head for use in the self-installing liquid observation well, 94:1239 (R;US)

Acceptance test report for tank bottom thermocouples on Tank 241-SY-101, 94:1243 (R;US)

B Plant low level waste system integrity assessment plan, 94:868 (R;US)

Chemical compatibility of tank wastes in 241-C-106, 241-AY-101, and 241-AY-102, 94:1382 (R;US)

Criticality safety evaluation report for K Basin filter cartridges, 94:2218 (R;US)

Engineering study - installation of new risers in Single-Shell Tanks, 94:1383 (R;US)

Historical Tank Content Estimate for the Northwest Quadrant of the Hanford 200 East Area, 94:1341 (R;US)

Historical Tank Content Estimate for the Southwest Quadrant of the Hanford 200 West Area, 94:1343 (R;US)

MIT upgrade acceptance test procedure, 94:1233 (R;US)

Optical fiber smart structures applied to secure containers, 94:2881 (BA;US)

PFP MICON maintenance manual, 94:2135 (R;US)

Project W-340 long reach arm retrieval system balance of plant instrumentation workshop engineering study, 94:1195 (R;US)

Results from annual testing of ARECO cesium capsules from 1990-1994, 94:1307 (R;US)

Safety evaluation for packaging transfer of 101-AZ thermocouples, 94:2234 (R;US)

Single shell tank waste characterization for Tank 241-BX-101, 94:1296 (R;US)

Standard-C hydrogen monitoring system acceptance test procedure, 94:1228 (R;US)

Summary report on the design of the retained gas sampler system (retained gas sampler, extruder and extractor), 94:1366 (R;US)

System verification and validation plan for SY-101 Hydrogen Mitigation Test Project Data Acquisition and Control System (DACS-1), 94:1267 (R;US)

TMACS Test Procedure TP001: Alarm Management, 94:1623 (R;US)

TMACS Test Procedure TP002: Trending, 94:1626 (R;US)

TMACS Test Procedure TP005: Sensor configuration, logging, and data conversion, 94:1631 (R;US)

TMACS Test Procedure TP009: Acromag Driver, 94:1634 (R;US)

Tank characterization for Double-Shell Tank 241-AP-102, 94:1344 (R;US)

Tank characterization report for Double-Shell Tank 241-AP-106, 94:1347 (R;US)

Theory of operation for the ball rheometer, 94:180 (R;US)

Planning

1994 Solid waste forecast container volume summary, 94:723 (R;US)

HLW system plan - revision 2, 94:930 (R;US)

Program Management

Multi-function Waste Tank Facility Qualification and Training Plan, Project W-236A, 94:1164 (R;US)

Project management plan for Project W-320, Tank 241-C-106 sluicing: Revision 2, 94:1184 (R;US)

Tank 241-A-104 tank characterization plan, 94:1563 (R;US)

Quality Assurance

Project quality assurance plant: Sodium storage facility, project F-031, 94:2168 (R;US)

Radiation Protection

Potential radiological exposure rates resulting from hypothetical dome failure at Tank W-10, 94:951 (R;US)

Remedial Action

Risk-based systems analysis for emerging technologies: Applications of a technology risk assessment model to public decision making, 94:1017 (R;US)

Supplemental design requirements document, Multifunction Waste Tank Facility, Project W-236A. Revision 1, 94:1151 (R;US)

Remote Handling Equipment

Conceptual design for remote handling methods using the HIP process in the Calcine Immobilization Program, 94:2853 (R;US)

Remote Viewing Equipment

Acceptance/operational test procedure 101-AW tank camera purge system and 101-AW video camera system, 94:1438 (R;US)

Risk Assessment

B Plant complex treatment, storage, and disposal units inspection plan, 94:2798 (R;US)

Compilation of formal comments on the tank farms interim hazard and accident analyses, 94:1493 (R;US)

Consequence assessment for the high-level waste tanks probabilistic risk assessment, 94:947 (R;US)

Fire hazards analysis, east tank farm storage and staging facility, 94:1200 (R;US)

Hazard communication program, 94:1454 (R;US)

Insights on radiological risks of US Department of Energy radioactive waste management alternatives in the Environmental Management Programmatic Environmental Impact Statement, 94:1903 (R;US)

Summary report on the design of the retained gas sampler system (retained gas sampler, extruder and extractor), 94:1366 (R;US)

Tank 241-BY-112 Characterization Plan, 94:1584 (R;US)

Robots

The Stored Waste Autonomous Mobile Inspector (SWAMI), 94:2363 (R;US)

S Codes

The Sort on Radioactive Waste Type model: A method to sort single-shell tanks into characteristic groups: Revision 1, 94:964 (R;US)

Safety

Acceptance test procedure for the MO-294 Building, 94:2195 (R;US)

Gas distribution effects on waste properties: Viscosities of bubbly slurries, 94:166 (R;US)

Mechanisms of gas bubble retention, 94:167 (R;US)

Some theories of dissolved gas release from Tank 241-SY-101, 94:974 (R;US)

Standard-C hydrogen monitoring system acceptance test procedure, 94:1228 (R;US)

Surveillance and maintenance plan for the inactive liquid low-level waste tanks at Oak Ridge National Laboratory, 94:659 (R;US)

Tank 241-C-103 tank characterization plan, 94:1547 (R;US)

Safety Analysis

45-Day safety screening for Tank 241-C-103 push mode sample, riser 2, 94:1304 (R;US)

A Value of Information approach to data quality objectives for the Hanford high-level waste tanks, 94:1018 (R;US)

Assessment of the potential for ammonium nitrate formation and reaction in Tank 241-SY-101, 94:971 (R;US)

CSER 91-003, Addendum 1: Criticality Safety Evaluation Report for postponed retrieval of three container sequences in the burial ground, 94:2737 (R;US)

CSER 94-09: Implications of the heat anomaly in Tank 106-C to criticality safety, 94:1117 (R;US)

Characterization of the corrosion behavior of the carbon steel liner in Hanford Site single-shell tanks, 94:1051 (R;US)

Compilation of formal comments on the tank farms interim hazard and accident analyses, 94:1493 (R;US)

Data requirements for the Ferrocyanide Safety Issue developed through the data quality objectives process, 94:1317 (R;US)

RADIOACTIVE WASTE STORAGE Safety Analysis

Decision analysis for continuous cover gas monitoring of Ferrocyanide Watch List tanks, 94:1041 (R;US)
Double shell tank waste analysis plan, 94:1419 (R;US)
Ferrocyanide safety program: An assessment of the possibility of ferrocyanide sludge dryout, 94:1068 (R;US)
Functional design criteria for SY-101 hydrogen mitigation test project Data Acquisition and Control System (DACS-1), 94:1421 (R;US)
Hazard assessments of double-shell flammable gas tanks, 94:1479 (R;US)
Maximum surface level and temperature histories for Hanford waste tanks, 94:1514 (R;US)
New challenges in the safety analysis of DOE's high-level waste tanks, 94:942 (R;US)
Preliminary safety evaluation for 241-C-106 waste retrieval, project W-320, 94:1461 (R;US)
Safety analysis report for the Waste Storage Facility. Revision 2, 94:2024 (R;US)
Safety evaluation for packaging transfer of 101-AZ thermocouples, 94:2234 (R;US)
Solubility of ferrocyanide compounds: Ferrocyanide Safety Project, Interim report FY1994, 94:986 (R;US)
Special case waste hazard categorization. Revision 1, 94:2769 (R;US)

Safety Engineering

241-BY-106 sampling test plan, 94:1599 (R;US)
45 Day safety screen results for Tank 241-C-108 - Augers 94-012, 94-014 and 94-015, 94:1306 (R;US)
Acceptance test report for the Westinghouse 100 ton hydraulic trailer, 94:1252 (R;US)
Acquisition and reduction of data obtained from Tank 101-SY in-situ ball rheometer, 94:171 (R;US)
Application of infrared imaging in ferrocyanide tanks, 94:1644 (R;US)
Assessment of alternative mitigation concepts for Hanford flammable gas tanks, 94:979 (R;US)
Characterization of Hanford tank wastes containing ferrocyanides, 94:1003 (R;US)
Closed out Tank 241-SY-101 DACS system change request #1-100, 94:1256 (R;US)
Computer system requirements specification for 101-SY hydrogen mitigation test project data acquisition and control system (DACS-1), 94:1266 (R;US)
Criteria for temperature monitoring in ferrocyanide waste tanks at the Hanford Site, 94:1050 (R;US)
DACS upgrade acceptance test procedure, 94:1225 (R;US)
Electrochemical characterization of grouted radioactive waste, 94:257 (R;US)
Engineering task plan for Tanks 241-AN-103, 104, 105 color video camera systems, 94:1406 (R;US)
Engineering task plan for flammable gas atmosphere mobile color video camera systems, 94:1412 (R;US)
Engineering task plan for tank farm ventilation strategy document preparation and maintenance, 94:1404 (R;US)
Evaluation of FTIR-based analytical methods for the analysis of Hanford Site waste, 94:1100 (R;US)
Ferrocyanide safety program: Thermal analysis of ferrocyanide Watch List tanks, Group II, 94:1061 (R;US)
High-heat tank safety issue resolution program plan. Revision 2, 94:1034 (R;US)
Hydrogen recombiner catalyst test supporting data, 94:2828 (R;US)
Level maintenance for Tank 101-SY mitigation-by-mixing test. Revision 2, 94:1620 (R;US)
Level trend analysis summary report for Oak Ridge National Laboratory inactive liquid low-level waste tanks, 94:656 (R;US)
Miscellaneous component design for Tank 241SY101 pump removal, 94:1281 (R;US)
Mitigation of the most hazardous tank at the Hanford Site, 94:1079 (R;US)
Multiport riser and flange assemblies acceptance test report, 94:1247 (R;US)

Operational experience in mitigating flammable gas releases from Hanford Site Tank 241-SY-101, 94:1096 (R;US)
Organic Tanks Safety Program: Waste aging studies, 94:989 (R;US)
Progress in resolving Hanford Site high-level waste tank safety issues, 94:1099 (R;US)
Quarterly report on the ferrocyanide safety program for the period ending December 31, 1994, 94:1033 (R;US)
RGA-5 process gas analyzer test report, 94:1640 (R;US)
Spare mitigation/retrieval mixer pump: Functional design criteria. Revision 1, 94:1424 (R;US)
Spare mitigation/retrieval mixer pumps, 94:1423 (R;US)
Standard-B Hydrogen Monitoring System, system design description, 94:1492 (R;US)
Standard-B hydrogen monitoring system acceptance test report, 94:1244 (R;US)
Structural analysis: Flexible receiver yoke brace for the 241SY101 mixer pump, 94:1271 (R;US)
Tank 241-AW-101 tank characterization plan, 94:1557 (R;US)
Tank 241-B-103 tank characterization plan, 94:1565 (R;US)
Tank 241-BY-108 tank characterization plan, 94:1578 (R;US)
Tank 241-BY-111 tank characterization plan, 94:1583 (R;US)
Tank 241-SY-103 auger samples, risers 7A, 14B and 22A, 94:1299 (R;US)
Tank 241-T-111 characterization report, 94:1065 (R;US)
Tank 244A tank characterization plan, 94:1576 (R;US)
The effects of heating and dilution on the rheological and physical properties of Tank 241-SY-101 waste, 94:997 (R;US)
The family of standard hydrogen monitoring system computer software design description: Revision 2, 94:1262 (R;US)
Waste behavior analysis for tank 241-SY-103, 94:1531 (R;US)
Waste tank characterization sampling limits, 94:1524 (R;US)
Work plan, AP-102 mixer pump removal and pump replacement, 94:1658 (R;US)

Safety Standards

324 Radiochemical engineering cells and high level vault tanks mixed waste compliance status, 94:998 (R;US)

Sampling

45-Day safety screen results for single shell tank 241-AP-106, liquid grab samples, riser 1, 30° and 150° in conjunction with evaporator campaign 95-1, 94:1302 (R;US)
Criteria for core sampling bit temperature monitor, 94:1260 (R;US)
Operability test report for 211BA flow proportional sampler, 94:2254 (R;US)
Retained gas sampler interim safety assessment, 94:948 (R;US)
Rotary mode core sampling service trailer Acceptance Test Plan, 94:2784 (R;US)
Tank 241-BY-110 tank characterization plan, 94:1582 (R;US)
Tank 241-BY-112 Characterization Plan, 94:1584 (R;US)
Tank characterization 40-day crust burn for double shell Tank 241-AW-101, 94:1310 (R;US)

Site Characterization

HAZWOPER work plan and site safety and health plan for the Alpha characterization project at the solid waste storage area 4 bathtubbing trench at Oak Ridge National Laboratory, 94:2060 (R;US)

Site Selection

Uranium mill tailings remedial action project real estate management plan, 94:1815 (R;US)

Specifications

Characterization of uranium, plutonium, neptunium, and americium in HLW supernate for LLW certification, 94:2872 (R;US)
Waste analysis plan for 222-S dangerous and mixed waste storage area, 94:2250 (R;US)

Storage Facilities

Supplemental design requirements document, Multifunction Waste Tank Facility, Project W-236A. Revision 1, 94:1151 (R;US)

Surveillance

Accelerated characterization of metal fuel stored in the Hanford K basins, 94:2628 (R;US)

Acceptance/operational test procedure 103-SY tank camera purge control system, 94:1439 (R;US)
FY95 software project management plan: TMACS, CASS computer systems, 94:2812 (R;US)
System design description 241-SY-101 color video camera, 94:1491 (R;US)

T Codes

TMACS test procedure TP001: Alarm management: Revision 6, 94:1624 (R;US)
TMACS test procedure TP003: Graphics: Revision 5, 94:1627 (R;US)
TMACS test procedure TP003: Graphics: Revision 6 (Tank Monitor And Control System), 94:1628 (R;US)
TMACS test procedure TP004: Reporting: Revision 4 (Tank Monitor And Control System), 94:1629 (R;US)
TMACS test procedure TP005: Sensor configuration, logging, and data conversion: Revision 4 (Tank Monitor and Control System), 94:1630 (R;US)
TMACS test procedure TP009: Acromag driver: Revision 5, 94:1635 (R;US)
TMACS test procedure TP010: Integration summary: Revision 6, 94:1637 (R;US)

Tanks

The Sort on Radioactive Waste Type Model: A method to sort single-shell tanks into characteristics groups, 94:1878 (R;US)

Temperature Monitoring

Action plan for response to excessive temperatures in Hanford Site High-Heat Waste Tank 241-C-106. Revision 2, 94:1029 (R;US)

Thermal Analysis

Computer code input for thermal hydraulic analysis of Multi-Function Waste Tank Facility Title II design, 94:1142 (R;US)
Evaluation of storing Shippingport Core II spent blanket fuel assemblies in the T Plant PWR Core II fuel pool without active cooling, 94:2695 (R;US)

Void Fraction

Void Fraction Instrument operation and maintenance manual, 94:2251 (R;US)

Waste Retrieval

MWFT path forward engineering analysis technical Task 3.8, Retrieval sequence, 94:1146 (R;US)
Project specific quality assurance plan, W-151, Tank 241-AZ-101 waste retrieval system. Revision 2, 94:1132 (R;US)
Test bed control center design concept for Tank Waste Retrieval Manipulator Systems, 94:2312 (R;US)

Weight Measurement

Weight/balance portable test equipment, 94:805 (R;US)

RADIOACTIVE WASTES

See also ALPHA-BEARING WASTES
CALCINED WASTES
HIGH-LEVEL RADIOACTIVE WASTES
LOW-LEVEL RADIOACTIVE WASTES
RADIOACTIVE EFFLUENTS

Air Transport

Baseline requirements of the proposed action for the Transportation Management Division routing models, 94:2071 (R;US)

Alkaline Hydrolysis

The solubility of $\text{Cr}(\text{OH})_3(\text{am})$ in concentrated NaOH and NaOH- NaNO_3 solutions, 94:1010 (R;US)

Bench-Scale Experiments

Treatment of radioactive wastes from DOE underground storage tanks, 94:2913 (R;US)

Calcination

Calcination/dissolution testing for Hanford Site tank wastes, 94:2933 (R;US)
Chemistry of proposed calcination/dissolution processing of Hanford Site tank wastes, 94:2932 (R;US)
Preliminary flowsheet for plasma arc calcination of selected Hanford tank waste, 94:1513 (R;US)

Chemical Analysis

242-A Evaporator waste analysis plan: Revision 4, 94:2796 (R;US)

45 Day safety screen results for Tank 241-C-108 - Augers 94-012, 94-014 and 94-015, 94:1306 (R;US)

45-Day Safety Screen results for Tank 241-TY-104, Auger Samples, 95-AUG-008 and 95-AUG-009, 94:1314 (R;US)

45-Day safety screening report for grab samples from Tank 241-AP-107, 94:1311 (R;US)

Adaptation of the TCLP and SW-846 methods to radioactive mixed waste, 94:448 (R;US)

Analysis of radioactive mixed hazardous waste using derivatization gas chromatography/mass spectrometry, liquid chromatography, and liquid chromatography/mass spectrometry, 94:1013 (R;US)

Characterization of Hanford tank wastes containing ferrocyanides, 94:1003 (R;US)

Estimates of laboratory accuracy and precision on Hanford waste tank samples, 94:1214 (R;US)

Evaluation of FTIR-based analytical methods for the analysis of simulated wastes, 94:1532 (R;US)

Fiscal year 1995 work scope for the 222-S, WSCF, 325, and Litco Laboratories, 94:2804 (R;US)

Flammable gas safety program: Analytical methods development: FY 1994 progress report, 94:981 (R;US)

High resolution fiber optic interferometer: FY94 final report, 94:2491 (R;US)

Historical tank content estimate for the northwest quadrant of the Hanford 200 West Area, 94:1342 (R;US)

Interim data quality objectives for waste pretreatment and vitrification: Revision 1, 94:1318 (R;US)

Low-level waste characterization plan for the WSCF Laboratory Complex, 94:745 (R;US)

Preliminary safety analysis report for the Waste Characterization Facility, 94:2484 (R;US)

Selection of analytical methods for mixed waste analysis at the Hanford Site, 94:579 (R;US)

Tank 241-B-103 tank characterization plan, 94:1565 (R;US)

Tank 241-B-112 tank characterization plan, 94:1603 (R;US)

Tank 241-BY-111 tank characterization plan, 94:1583 (R;US)

Tank 241-C-103 tank characterization plan, 94:1547 (R;US)

Tank 241-C-103 tank characterization plan. Revision 1, 94:1548 (R;US)

Tank 241-C-105 tank characterization plan. Revision 1, 94:1569 (R;US)

Tank 241-C-107 tank characterization plan, 94:1593 (R;US)

Tank 241-U-103 tank characterization plan, 94:1591 (R;US)

WRAP Module 1 sampling and analysis plan, 94:815 (R;US)

Waste tank characterization sampling limits, 94:1524 (R;US)

Chemical Composition

Development of a chemical model for Hanford tank wastes: $\text{Na}^+ \text{NO}_3^- \text{NO}_2^- \text{SO}_4^{2-} \text{CO}_3^{2-} \text{F}^- \text{PO}_4^{3-} \text{OH}^- \text{Al}(\text{OH})_3 \text{H}_2\text{O}$ system, 94:1693 (BA;US)

Number of core samples: Mean concentrations and confidence intervals, 94:1537 (R;US)

Statistical characterization report for single-shell Tank 241-S-104, 94:1525 (R;US)

Statistical characterization report for single-shell tank 241-T-105, 94:1526 (R;US)

Statistical characterization report for single-shell tank 241-T-111, 94:1523 (R;US)

Supporting Document for the SW Quadrant Historical Tank Content Estimate for SX-Tank Farm, 94:1336 (R;US)

Supporting document for the North East Quadrant Historical Tank Content Estimate Report for BX-Tank Farm, 94:1332 (R;US)

Supporting document for the historical tank content estimate for A Tank Farm, 94:1329 (R;US)

Supporting document for the historical tank content estimate for B Tank Farm, 94:1331 (R;US)

Supporting document for the historical tank content estimate for BY Tank Farm, 94:1333 (R;US)

Supporting document for the historical tank content estimate for S tank farm, 94:1335 (R;US)

Tank 241-AP-106 tank characterization plan: Revision 1, 94:1581 (R;US)

RADIOACTIVE WASTES

Chemical Composition

Tank 241-AZ-101 tank characterization plan, 94:1586 (R;US)
Tank 241-AZ-102 tank characterization plan, 94:1556 (R;US)
Tank 241-BX-109 tank characterization plan, 94:1618 (R;US)
Tank 241-BY-108 tank characterization plan, 94:1578 (R;US)
Tank 241-T-111 characterization report, 94:1065 (R;US)
Tank characterization report for single-shell Tank 241-B-110, 94:1353 (R;US)
Tank characterization report for single-shell Tank 241-T-105, 94:1354 (R;US)
Waste tank vapor project: Vapor characterization of Tank 241-C-103: Data report for OVS samples collected from Sample Job 7b, Parts I and II, received 5/18/94 and 5/24/94, 94:162 (R;US)

Chemical Properties

45-Day safety screen results for Tank 241-AX-102, augers 95-AUG-006 and 95-AUG-007, 94:1313 (R;US)
45-Day safety screen results for Tank 241-TY-106, auger samples 95-AUG-010 and 95-AUG-011, 94:1315 (R;US)
A summary report on the search for current technologies and developers to develop depth profiling/physical parameter end effectors, 94:1121 (R;US)
Hanford tank sludges: Investigation of physical and chemical properties using transmission electron microscopy, 94:1695 (BA;US)
Quantities and characteristics of the contact-handled low-level mixed waste streams for the DOE complex, 94:599 (R;US)
Single shell tank waste characterization for Tank 241-BX-108, 94:1298 (R;US)
Tank 241-AW-101 tank characterization plan, 94:1557 (R;US)
Tank 241-B-104 tank characterization plan, 94:1619 (R;US)
Tank 241-SY-103 auger samples, risers 7A, 14B and 22A, 94:1299 (R;US)
Tank waste treatment science, 94:1692 (BA;US)

Chemical Reactions

Development of a chemical model for Hanford tank wastes: $\text{Na}^+ \text{NO}_3^- \text{NO}_2^- \text{SO}_4^{2-} \text{CO}_3^{2-} \text{F}^- \text{PO}_4^{3-} \text{OH}^- \text{Al}(\text{OH})_4^- \text{H}_2\text{O}$ system, 94:1693 (BA;US)
Noble metal catalyzed hydrogen generation from formic acid in nitrite-containing simulated nuclear waste media, 94:1008 (R;US)

Classification

Case study and presentation of the DOE treatability group concept for low-level and mixed waste streams, 94:625 (R;US)
Criticality classification of enhanced radioactive and mixed waste storage, 94:829 (R;US)

Cleaning

Optimal trajectories for flexible-link manipulator slewing using recursive quadratic programming: Experimental verification, 94:2347 (R;US)

Combustion

A chemical basis for the partitioning of radionuclides in incinerator operation, 94:693 (R;US)

Compatibility

95-1 Campaign evaporator boildown results, 94:1297 (R;US)
Chemical compatibility of tank wastes in 241-C-106, 241-AY-101, and 241-AY-102, 94:1382 (R;US)
Tank 241-AP-106 tank characterization plan: Revision 1, 94:1581 (R;US)
Tank 244A tank characterization plan, 94:1576 (R;US)

Computerized Tomography

Characterization of waste drums using nonintrusive active and passive computed tomography, 94:1887 (R;US)

Containers

Assembly procedure for column cutting platform, 94:1459 (R;US)
Quality Assurance Project Plan for the Gas Generation Testing Program at the INEL, 94:2485 (R;US)

Containment

340 Facility Secondary Containment and Leak Detection Project W-302 Functional Design Criteria, 94:1173 (R;US)
Decision support system to select cover systems, 94:1866 (R;US)

In situ construction of horizontal soil containment barrier at Fernald, 94:1854 (R;US)
In situ remediation: Developing containment technologies, 94:211 (R;US)
New barrier fluids for subsurface containment of contaminants, 94:119 (R;US)
Prototype Hanford Surface Barrier: Design basis document, 94:2385 (R;US)

Criticality

Criticality classification of enhanced radioactive and mixed waste storage, 94:829 (R;US)

Cutting

Remote automatic control scheme for plasma arc cutting of contaminated waste, 94:2298 (J;US)

Data Acquisition

Light Duty Utility Arm System applications for tank waste remediation, 94:1101 (R;US)

Decomposition

Organic Tanks Safety Program: Waste aging studies, 94:989 (R;US)

Decontamination

Testing and evaluation of eight decontamination chemicals, 94:2286 (R;US)
Waste container fabrication from recycled DOE metal, 94:2032 (R;US)
Waste generation forecast for DOE-ORO's Environmental Restoration OR-1 Project: FY 1995-FY 2002, September 1994 revision, 94:2471 (R;US)

Degassing

101-SY waste sample speed of sound/rheology testing for sonic probe program, 94:1323 (R;US)
Grout gas generation test plan, 94:1543 (R;US)
Work plan, AP-102 mixer pump removal and pump replacement, 94:1658 (R;US)

Density

Acquisition and reduction of data obtained from Tank 101-SY in situ ball rheometer, 94:171 (R;US)

Detoxification

Bioprocessing scenarios for mixed hazardous waste, 94:432 (RA;US)

Dilution

An assessment of the dilution required to mitigate Hanford tank 241-SY-101, 94:2923 (R;US)

Dissolution

Calcination/dissolution testing for Hanford Site tank wastes, 94:2933 (R;US)
Chemistry of proposed calcination/dissolution processing of Hanford Site tank wastes, 94:2932 (R;US)

Drill Cores

Test plan for slow speed core sampling envelope test, 94:1572 (R;US)

Dryout

Preliminary analysis of tank 241-C-106 dryout due to large postulated leak and vaporization, 94:1069 (R;US)

Encapsulation

Concept study: Use of grout vaults for disposal of long-length contaminated equipment, 94:1386 (R;US)
Polymer systems testing: Final report, 94:638 (R;US)
Results from annual testing of ARECO cesium capsules from 1990-1994, 94:1307 (R;US)
Work plan for testing silicone impression material and fixture on pool cell capsule, 94:2833 (R;US)

Environmental Impacts

FY 1995 remedial investigation work plan for Waste Area Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:1964 (R;US)

Environmental Transport

Characterization plan for Hanford spent nuclear fuel, 94:2535 (R;US)
Research of documents pertaining to waste migration from leaking single-shell tanks, 94:1471 (R;US)
Slope and bank erosional stability of the Canonsburg, Pennsylvania, UMTRA disposal site, 94:1823 (R;US)

The role of plants on isolation barrier systems, 94:203 (R;US)
Evaluation
B Plant complex hazardous, mixed and low level waste certification plan, 94:768 (R;US)

Evaporation
Achievement of process control, safety, and regulatory compliance in a mixed waste evaporator system at the Hanford Site using data quality objectives, 94:742 (R;US)
Uncertainties in the measured quantities of water leaving waste Tank 241-C-106 via the ventilation system, 94:1364 (R;US)

Flammability
Acquisition and reduction of data obtained from tank 101-SY in-situ ball rheometer, 94:172 (R;US)

Fluid Flow
Fluid dynamic demonstrations for waste retrieval and treatment, 94:954 (R;US)

Fluidized-Bed Combustion
Status of the fluidized bed unit, 94:700 (R;US)

Forecasting
Thirty-Year Solid Waste Generation Forecast by Treatability Group, 94:2869 (R;US)
Thirty-Year Solid Waste Generation Maximum and Minimum Forecast for SRS, 94:2870 (R;US)
Waste generation forecast for DOE-ORO's Environmental Restoration OR-1 Project: FY 1995-FY 2002, September 1994 revision, 94:2471 (R;US)

Gaseous Wastes
Characterization of void volume VOC concentration in vented TRU waste drums. Final report, 94:2044 (R;US)
Quality Assurance Project Plan for the Gas Generation Testing Program at the INEL, 94:2485 (R;US)
Vapor space characterization of Waste Tank 241-C-103: Inorganic results from sample Job 7B (May 12-25, 1994), 94:991 (R;US)

Gases
Grout gas generation test plan, 94:1543 (R;US)

Ground Disposal
118-B-1 excavation treatability test procedures, 94:765 (R;US)
1994 Report on Hanford Site land disposal restrictions for mixed waste, 94:569 (R;US)
200-BP-11 operable unit and 216-B-3 main pond work/closure plan, Hanford Site, Richland, Washington. Volume 1: Field investigation and sampling strategy, 94:1973 (R;US)
Experimental plan and construction guidance for Hanford Protective Barrier Test at Hill AFB, Utah, 94:156 (R;US)
In situ construction of horizontal soil containment barrier at Fernald, 94:1854 (R;US)
Interim-status groundwater monitoring plan for the 216-B-63 trench, 94:269 (R;US)
MAC Version 3.1, MBA Version 1.2 acceptance test summary report, 94:2212 (R;US)
SEAMIST™ in-situ instrumentation and vapor sampling system applications in the Sandia Mixed Waste Landfill Integrated Demonstration Program, 94:228 (R;US)
Using high-density magnetic and electromagnetic data for waste site characterization: A case study, 94:1884 (R;US)

Grouting
Grout Facilities standby plan, 94:1498 (R;US)

Heat Treatments
Hydrothermal processing of Hanford tank wastes: Process modeling and control, 94:944 (R;US)

Hydraulic Fracturing
Hydraulic impact end effector final test report: Automation and robotics section, ER/WM-AT Program, 94:2350 (R;US)

Hydrogen Production
Hydrogen production in the K-Basin ion exchange columns, modules and cartridge filters, 94:2700 (R;US)

Hydrolysis
A portable system for the treatment of water-reactive mixed waste, 94:650 (R;US)

Hydrothermal Alteration
Hydrothermal Oxidation Hazardous Waste Pilot Plant Test Bed, 94:621 (R;US)

In-Situ Processing
Development of in situ vitrification for remediation of ORNL contaminated soils, 94:1872 (R;US)
Treatability study work plan for in situ vitrification of seepage pit 1 in Waste Area Grouping 7 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:536 (R;US)

Information
Interface control document between PFP Transition Project and Solid Waste Disposal Division, 94:2258 (R;US)
Tank farms essential and support drawing plan. Revision 6, 94:1450 (R;US)

Information Needs
Report on data requirements and hardware selection for in-situ ball viscometer, 94:173 (R;US)

Information Systems
System requirements specification for waste information and control system, 94:1468 (R;US)

Infrared Thermography
Application of infrared imaging in ferrocyanide tanks, 94:1644 (R;US)

Inspection
An autonomous mobil robot to perform waste drum inspections, 94:2362 (R;US)
Development of the stored waste autonomous mobile inspector (SWAMI II), 94:2364 (R;US)

Inventories
Quantities and characteristics of the contact-handled low-level mixed waste streams for the DOE complex, 94:599 (R;US)
Radioactive scrap metal (RSM) inventory & tracking system and prototype RSM field survey, 94:2285 (R;US)
Summary of radioactive solid waste received in the 200 Areas during calendar year 1993, 94:719 (R;US)

Land Transport
Foam insulated transfer line test report, 94:2827 (R;US)
Rollover analysis of rotary mode core sampler truck No. 2, 94:1368 (R;US)

Laser Spectroscopy
Assessment of argon ion laser dispersive Raman spectroscopy for hot cell applications, 94:1472 (R;US)

Leaching
Special waste-form lysimeters - arid: 1984-1992 data summary and preliminary interpretation, 94:678 (R;US)

Material Substitution
Composition, preparation, and gas generation results from simulated wastes of Tank 241-SY-101, 94:973 (R;US)

Materials Handling
Acceptance test procedure, 241-SY-101 flexible receiver system, Phase II testing, 94:1226 (R;US)
Double shell tanks emergency pumping plan, 94:1217 (R;US)

Materials Handling Equipment
K-Basins debris removal equipment - test plan, 94:2723 (R;US)

Melting
Radioactive waste material melter apparatus, 94:2367 (P;US)

Minimization
Feasibility study and concepts for use of compact process units to treat Hanford tank wastes, 94:2329 (R;US)
Waste Minimization Measurement and Progress Reporting, 94:2589 (R;US)

Mixing
Jet mixer pump testing in Hanford Tank 241-SY-101, 94:1012 (R;US)
Mixer pump long term operations plan for Tank 241-SY-101 mitigation, 94:1456 (R;US)
Title I design summary report, initial tank retrieval systems, project W-211, 94:1137 (R;US)
Visual Observations of Mixing Quality in a Prototype Canyon Tank, 94:1683 (R;US)

Moisture
Effect of atmospheric humidity on CPAC optical moisture prediction models - interim report, 94:1365 (R;US)

RADIOACTIVE WASTES

Molecular Models

Molecular Models

Solubility relations for aqueous Si, Al, and Cr(III) species in concentrated electrolyte solutions: Development of accurate aqueous thermodynamic models, 94:1694 (BA;US)

Monitored Retrievable Storage

Method of characterizing void volume headspace in vented transuranic waste sludge drums using limited sampling data, 94:588 (R;US)

Monitoring

Control system design for robotic underground storage tank inspection systems, 94:2355 (R;US)

Developments in radiography and tomography of waste containers at the Idaho National Engineering Laboratory, 94:1841 (R;US)

Engineering scale mixing system tests for MWTF title II design, 94:1139 (R;US)

Process test evaluation report, 241-C-105, 94:1462 (R;US)

Richland Environmental Restoration Project 1995 fiscal year work plan: Work breakdown structure 2.0, 200/300 Area, 94:581 (R;US)

Tank 241-TY-106 Tank Characterization Plan, 94:1612 (R;US)

Tank Farm Instrumentation and Data Acquisition/Management Upgrade Plan. Revision 5, 94:1654 (R;US)

Tank Waste Remediation System Tank Waste Analysis Plan. FY 1995, 94:1457 (R;US)

Tank characterization report for double-shell tank 241-AP-105, 94:1346 (R;US)

Vendors search for viscosity sensors for in situ tank waste characterization, 94:1122 (R;US)

Westinghouse Hanford Company Operational Environmental Monitoring. Annual report, CY 1993, 94:2099 (R;US)

Wet season reconnaissance report on Seeps and Springs in Waste Area Grouping 6 at Oak Ridge National Laboratory. Environmental Restoration Program, 94:143 (R;US)

Nondestructive Analysis

Multimodality characterization of nuclear waste drums using emerging techniques for nondestructive examination and assay, 94:2395 (RA;US)

NDA: A new day for American assay, 94:2878 (BA;US)

SWEPP Gamma-Ray Spectrometer System software design description, 94:603 (R;US)

Nondestructive Testing

Test procedure for boxed waste assay system, 94:817 (R;US)

Oxidation

Evaluation of pretreatment processes for supercritical water oxidation, 94:614 (R;US)

Evaluation of tubular reactor designs for supercritical water oxidation of U.S. Department of Energy mixed waste, 94:629 (R;US)

Hydrothermal Oxidation Hazardous Waste Pilot Plant Test Bed, 94:621 (R;US)

Supercritical water oxidation test bed effluent treatment study, 94:617 (R;US)

Packaging

Mixed waste chemical compatibility with packaging components, 94:705 (R;US)

Packaging design criteria, transfer and disposal of 102-AP mixer pump, 94:2749 (R;US)

Safety evaluation for packaging transfer of 101-AZ thermocouples, 94:2234 (R;US)

Transport characteristics across drum filter vents and polymer bags, 94:2463 (R;US)

Waste tank sample transport, 94:1091 (R;US)

Physical Properties

A summary report on the search for current technologies and developers to develop depth profiling/physical parameter end effectors, 94:1121 (R;US)

Characterization of Hanford tank wastes containing ferrocyanides, 94:1003 (R;US)

Hanford tank sludges: Investigation of physical and chemical properties using transmission electron microscopy, 94:1695 (BA;US)

Quantities and characteristics of the contact-handled low-level mixed waste streams for the DOE complex, 94:599 (R;US)

Summary of tank waste physical properties at the Hanford Site, 94:1049 (R;US)

Tank 241-B-104 tank characterization plan, 94:1619 (R;US)

Radioassay

Comparison of shuffler and differential die-away technique instruments for the assay of fissile materials in 55-gallon waste drums, 94:1898 (J;US)
SWEPP gamma-ray spectrometer system software user's guide, 94:604 (R;US)

Radiochemical Analysis

Analyses and characterization of double shell tank, 94:1294 (R;US)
Tank 241-A-104 tank characterization plan, 94:1563 (R;US)
Tank 241-AP-107 tank characterization plan. Revision 1, 94:1590 (R;US)

Radiolysis

Models for recurrent gas release event behavior in hazardous waste tanks, 94:204 (R;US)
Organic Tanks Safety Program: Waste aging studies, 94:989 (R;US)

Radiometric Analysis

Test procedure for boxed waste assay system, 94:817 (R;US)

Rail Transport

Baseline requirements of the proposed action for the Transportation Management Division routing models, 94:2071 (R;US)

Raman Spectroscopy

Assessment of argon ion laser dispersive Raman spectroscopy for hot cell applications, 94:1472 (R;US)
Conceptual design of a Raman probe for inclusion in the in-tank cone penetrometer, 94:1023 (R;US)
Raman spectroscopy peer review report, 94:1057 (R;US)

Records Management

Acceptance test plan for the Waste Information Control System, 94:2778 (R;US)

Test specifications for the waste information and control system, 94:2831 (R;US)

Tracking mixed waste from environmental restoration through waste management for the Federal Facility Compliance Act, 94:405 (R;US)

Remedial Action

Buried waste integrated demonstration human engineered control station. Final report, 94:2326 (R;US)
Decontamination Systems Information and Research Program: Quarterly report, October-December 1993, 94:515 (R;US)
Engineering work plan for design requirements document, Project W-058/028, 94:1127 (R;US)
Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring. Final report, September 1992-August 1994, 94:509 (R;US)
Public affairs plan, 94:1803 (R;US)
Richland Environmental Restoration Project 1995 fiscal year work plan: Work breakdown structure 2.0, 200/300 Area, 94:581 (R;US)
Technology development activities supporting tank waste remediation, 94:960 (R;US)
The standard laboratory module approach to automation of the chemical laboratory, 94:2299 (RA;US)
Use of a mathematical model for prediction of optimum feeding strategies for in situ bioremediation, 94:384 (J;US)
WAG 2 remedial investigation and site investigation site-specific work plan/health and safety checklist for the sediment transport modeling task, 94:132 (R;US)

Remote Handling

Advanced robotics handling and controls applied to Mixed Waste characterization, segregation and treatment, 94:2352 (R;US)
Development of the stored waste autonomous mobile inspector (SWAMI II), 94:2364 (R;US)
Environment reconstruction for robot navigation, 94:2334 (R;US)
One-trip drum operating instruction, 94:2754 (R;US)
Overview of robotics for Mixed Waste Operations, 94:2361 (R;US)
Project W-340 long reach arm retrieval system balance of plant instrumentation workshop engineering study, 94:1195 (R;US)
Project W320 heel jet secondary catch mechanism lateral load test - test report, 94:1192 (R;US)
Remote automated material handling of radioactive waste containers, 94:2353 (R;US)
Sensor-based interior modeling, 94:2314 (R;US)

Removal

Technology study of Gunite tank sludge mobilization at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:950 (R;US)

Retrieval Systems

Decision and systems analysis for underground storage tank waste retrieval systems and tank waste remediation system, 94:1022 (R;US)

Rheology

Acquisition and reduction of data obtained from Tank 101-SY in-situ ball rheometer, 94:171 (R;US)
Acquisition and reduction of data obtained from tank 101-SY in-situ ball rheometer, 94:172 (R;US)
Software quality assurance plan for viscometer, 94:1465 (R;US)

Risk Assessment

Level 3 baseline risk evaluation for Building 3506 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:2053 (R;US)
Risk assessment data needs for D&D of the Fernald production area, 94:2295 (J;US)

Road Transport

Baseline requirements of the proposed action for the Transportation Management Division routing models, 94:2071 (R;US)
Cesium return program lessons learned FY 1994, 94:2116 (R;US)

Sample Preparation

Adaptation of the TCLP and SW-846 methods to radioactive mixed waste, 94:448 (R;US)

Sampling

200 Area TEDF interface control document, 94:319 (R;US)

RADIOACTIVE WASTES Sampling

- 241-BY-106 sampling test plan, 94:1599 (R;US)
- 45-Day safety screening for Tank 241-B-102 auger samples, riser 1, 94:1301 (R;US)
- 45-Day safety screening for Tank 241-C-103 push mode sample, riser 2, 94:1304 (R;US)
- Data requirements for the Ferrocyanide Safety Issue developed through the data quality objectives process, 94:1317 (R;US)
- Further investigation of core sampling recovery history, 94:1477 (R;US)
- Initial estimates of samples and residues requiring transport arising from the US Department of Energy's analytical services program, 94:441 (R;US)
- Interim data quality objectives for waste pretreatment and vitrification: Revision 1, 94:1318 (R;US)
- Method of characterizing void volume headspace in vented transuranic waste sludge drums using limited sampling data, 94:588 (R;US)
- Nitrogen chiller acceptance test procedure, 94:1238 (R;US)
- Number of core samples: Mean concentrations and confidence intervals, 94:1537 (R;US)
- Safety analysis for push-mode and rotary-mode core sampling, 94:1481 (R;US)
- Sampler bias - Phase 1, 94:1378 (R;US)
- Sampling and analysis plan for ORNL filter press cake waste from the Liquid and Gaseous Waste Operations Department, 94:2514 (R;US)
- Strategy for sampling Hanford Site tank wastes for development of disposal technology, 94:1499 (R;US)
- Tank 241-A-104 tank characterization plan, 94:1563 (R;US)
- Tank 241-AZ-101 tank characterization plan, 94:1586 (R;US)
- Tank 241-AZ-102 tank characterization plan, 94:1556 (R;US)
- Tank 241-B-103 tank characterization plan, 94:1565 (R;US)
- Tank 241-B-112 tank characterization plan, 94:1603 (R;US)
- Tank 241-BY-111 tank characterization plan, 94:1583 (R;US)
- Tank 241-C-103 tank characterization plan, 94:1547 (R;US)
- Tank 241-C-103 tank characterization plan. Revision 1, 94:1548 (R;US)
- Tank 241-C-107 tank characterization plan, 94:1593 (R;US)
- Tank 241-U-103 tank characterization plan, 94:1591 (R;US)
- Test plan for slow speed core sampling envelope test, 94:1572 (R;US)
- Test report - Prototype core sampler, 94:1647 (R;US)
- Test report for slow rotation core sampling test, 94:1648 (R;US)
- The standard laboratory module approach to automation of the chemical laboratory, 94:2299 (R;US)
- WRAP Module 1 sampling and analysis plan, 94:815 (R;US)

Separation Processes

- Development program for magnetically assisted chemical separation: Evaluation of cesium removal from Hanford tank supernatant, 94:2908 (R;US)
- Pertechnetate partitioning in polyethylene glycol-based aqueous biphasic systems: Applications from nuclear medicine to nuclear waste, 94:1696 (BA;US)
- Polyethylene glycol-based aqueous biphasic systems: Inexpensive, nontoxic alternatives for Hanford tank remediation, 94:1686 (BA;US)
- Salt splitting of sodium-dominated radioactive waste using ceramic membranes, 94:2550 (R;US)
- Sludge technology assessment, 94:396 (R;US)

Simulation

- Surrogate formulations for thermal treatment of low-level mixed waste: Part 3: Plasma hearth process testing, 94:531 (R;US)
- The partitioning behavior of TcO_4^- and I^- in polyethylene glycol-based aqueous biphasic systems prepared from simulated liquid radioactive Hanford tank wastes, 94:1697 (BA;US)

Sludges

- Functions and requirements for 105-KE Basin sludge retrieval and packaging, 94:2681 (R;US)
- Test procedure for use of the shear vane in tanks 103-SY, 103-AN, and 103-AW, 94:1505 (R;US)

Solidification

- Final waste forms project: Performance criteria for phase I treatability studies, 94:2513 (R;US)

Solvent Extraction

- Plutonium and americium separation using organophosphorus extractant absorbed onto ferromagnetic particles, 94:2909 (R;US)
- TRUEX processing of wastes for waste minimization and reagent recycle, 94:1699 (J;US)

Spatial Distribution

- Mixed waste trench loading placement instructions, 94:842 (R;US)

Stabilization

- Final waste forms project: Performance criteria for phase I treatability studies, 94:2513 (R;US)

Storage

- Inventory of Tank Farm equipment stored or abandoned above-ground, 94:1420 (R;US)

Temperature Control

- High-heat tank safety issue resolution program plan. Revision 2, 94:1034 (R;US)

Temperature Measurement

- An assessment of the potential for a steam bump in Hanford Waste Tank 241-C-106, 94:1360 (R;US)

Testing

- Road Transportable Analytical Laboratory (RTAL) System: Quarterly technical report, March 1993-May 1993, 94:502 (R;US)
- Vault 102 cemented waste solidification testing system. Final report, 94:2810 (R;US)

Thermal Analysis

- Characterization of Hanford tank wastes containing ferrocyanides, 94:1003 (R;US)

Transport

- Engineering study: 105KE to 105KW Basin fuel and sludge transfer. Final report, 94:310 (R;US)
- Safety evaluation for packaging transfer of 101-AZ thermocouples, 94:2234 (R;US)

Underground Disposal

- 100-HR-2 Operable Unit Focused Feasibility study report, 94:1997 (R;US)
- 118-B-1 Excavation Treatability Test Plan. Revision 1, 94:1988 (R;US)
- 118-B-1 excavation treatability test plan, 94:1987 (R;US)
- Buried waste integrated demonstration human engineered control station. Final report, 94:2326 (R;US)
- Gas cylinder disposal pit remediation waste minimization and management, 94:712 (R;US)
- Hanford Permanent Isolation Barrier Program: Asphalt technology development, 94:210 (R;US)
- Input shaping methods for telerobotic operation of flexible, long-reach manipulators, 94:2300 (R;US)
- Land containment system: Horizontal grout barrier: A method for in situ waste management, 94:1853 (R;US)
- Mixed waste trench loading placement instructions, 94:842 (R;US)
- New barrier fluids for subsurface containment of contaminants, 94:119 (R;US)
- Reduction of nitrate and nitrite salts under hydrothermal conditions, 94:946 (R;US)
- Remedial investigation and feasibility study report for the environmental restoration disposal facility, 94:1982 (R;US)
- Results of drip tests on sludge-based and actinide-doped glasses, 94:1705 (R;US)
- Test procedure for use of the shear vane in tanks 103-SY, 103-AN, and 103-AW, 94:1505 (R;US)
- The modeling process and model validation, 94:912 (J;US)
- Three-dimensional subsurface imaging synthetic aperture radar, 94:2431 (R;US)
- Transparent access to distributed, heterogeneous environmental information systems, 94:3038 (R;US)
- Work plan for monitor well/groundwater elevation data recorder installation at the Cheney Disposal site, Grand Junction, Colorado, 94:1814 (R;US)

Underground Storage

101-SY Dome pressure issues surrounding mitigation pump decontamination during removal, 94:1397 (R;US)

241-AP waste storage tanks: Supplemental gravity load analysis: Volume 1, 94:1207 (R;US)

241-AP waste storage tanks: Supplemental gravity load analysis: Volume 2, 94:1208 (R;US)

241-AV/AZ waste storage tanks: Supplemental gravity load analysis: Volume 2, 94:1210 (R;US)

Acceptance Test Report for 241-U compressed air system, 94:1242 (R;US)

Acceptance test procedure for the 241-SY-101 flexible receiver gamma detector system, 94:1231 (R;US)

Acquisition and reduction of data obtained from tank 101-SY in-situ ball rheometer, 94:172 (R;US)

Advanced conceptual design report. Phase II. Liquid effluent treatment and disposal Project W-252, 94:322 (R;US)

Ammonia in simulated Hanford double-shell tank wastes: Solubility and effects on surface tension, 94:992 (R;US)

An assessment of the dilution required to mitigate Hanford tank 241-SY-101, 94:2923 (R;US)

An assessment of the potential for a steam bump in Hanford Waste Tank 241-C-106, 94:1360 (R;US)

Aqueous samples from B-Plant, Tank 9-1, 94:1305 (R;US)

Closed out tank 241-SY-101 DACS system change requests No. 201-300, 94:1258 (R;US)

Closure certification report for the Bear Creek burial grounds B area and walk-in pits at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee, 94:2290 (R;US)

Continuous control databases for the 242A MCS, 94:265 (R;US)

Control system design for robotic underground storage tank inspection systems, 94:2355 (R;US)

Decision and systems analysis for underground storage tank waste retrieval systems and tank waste remediation system, 94:1022 (R;US)

Development program for magnetically assisted chemical separation: Evaluation of cesium removal from Hanford tank supernatant, 94:2908 (R;US)

Distribution and geochemistry of contaminated subsurface waters in fissured volcanogenic bed rocks of the Lake Karachai Area, Chelyabinsk, Southern Urals, 94:3022 (R;US)

Engineering task plan and status of 241-S-106 Enraf level gauge wire break, 94:1407 (R;US)

Experimental data and analysis to support the design of an ion-exchange process for the treatment of Hanford tank waste supernatant liquids, 94:2921 (R;US)

Feasibility study and concepts for use of compact process units to treat Hanford tank wastes, 94:2329 (R;US)

First generation long-reach manipulator for retrieval of waste from Hanford single-shell tanks, 94:2354 (R;US)

Functions and requirements for single-shell tank leakage mitigation, 94:1428 (R;US)

Geophysical investigation of the SQ Tanks, 221-T Building, 200 West Area, 94:1109 (R;US)

Historical tank content estimate for the northwest quadrant of the Hanford 200 West Area, 94:1342 (R;US)

Jet mixer pump testing in Hanford Tank 241-SY-101, 94:1012 (R;US)

Light Duty Utility Arm System applications for tank waste remediation, 94:1101 (R;US)

Low temperature hydrothermal destruction of organics in Hanford tank wastes, 94:1016 (R;US)

Operability Test Report for 241-T compressed air system and heat pump, 94:1445 (R;US)

Organic carbon in Hanford single-shell tank waste, 94:961 (R;US)

Organic decontamination by ion exchange, 94:1393 (R;US)

Plant Acquisition Plan: Multi-function Waste Tank Facility. Revision 2, 94:1149 (R;US)

Position paper - tank inlet air temperatures, 94:1155 (R;US)

Public values related to decisions in the Tank Waste Remediation System Program, 94:980 (R;US)

Safety basis for the 241-AN-107 mixer pump installation and caustic addition, 94:1430 (R;US)

Safety evaluation for the interim stabilization of Tank 241-C-103, 94:1482 (R;US)

Safety issue resolution strategy plan for inactive miscellaneous underground storage tanks, 94:1052 (R;US)

Selection of ENRAF gauge wire material compatible with the Hanford waste tank environment, 94:1475 (R;US)

Software acceptance test report for Tank 101-SY void fraction instrument, 94:1245 (R;US)

Soil Sampling Plan for the transuranic storage area soil overburden and final report: Soil overburden sampling at the RWMC transuranic storage area, 94:2486 (R;US)

TWRS corrosion monitoring program plan, 94:1449 (R;US)

Tank 241-BY-103 Tank Characterization Plan. Revision 1, 94:1559 (R;US)

Tank 241-BY-112 Characterization Plan, 94:1584 (R;US)

Tank 241-C-103 tank characterization plan. Revision 1, 94:1548 (R;US)

Tank 241-C-105 tank characterization plan. Revision 1, 94:1569 (R;US)

Tank 241-SX-103 tank characterization plan, 94:1613 (R;US)

Tank 241-SX-106 tank characterization plan, 94:1614 (R;US)

Tank 241-TY-101 Tank Characterization Plan, 94:1600 (R;US)

Tank 241-U-103 tank characterization plan, 94:1591 (R;US)

Tank characterization report for single-shell tank 241-S-104, 94:1355 (R;US)

Tank characterization report for single-shell tank 241-T-104, 94:1356 (R;US)

Tank farm health and safety plan. Revision 2, 94:1431 (R;US)

Tank farm surveillance and waste status summary report for May 1994, 94:1025 (R;US)

Technology study of Gunite tank sludge mobilization at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:950 (R;US)

Test report for run-in acceptance testing of hydrogen mitigation test pump-2, 94:1115 (R;US)

The circulating air barrier: Effective prevention of liquid contaminant movement through soil, 94:56 (R;US)

Title I design summary report, initial tank retrieval systems, project W-211, 94:1137 (R;US)

Underground storage tank - Integrated Demonstration Technical Task Plan master schedule, 94:1027 (R;US)

Vapor sampling and analysis plan, 94:1617 (R;US)

Void fraction system computer software design description, 94:1265 (R;US)

Washing and caustic leaching of Hanford tank sludges, 94:2926 (R;US)

Waste Tank Organic Safety Program: Analytical methods development: Progress report, FY 1994, 94:982 (R;US)

Waste dislodging and conveyance testing summary and conclusions to date, 94:975 (R;US)

Vacuum Distillation

95-1 Campaign evaporator boildown results, 94:1297 (R;US)

Viscosity

Acquisition and reduction of data obtained from tank 101-SY in-situ ball rheometer, 94:172 (R;US)

An assessment of the dilution required to mitigate Hanford tank 241-SY-101, 94:2923 (R;US)

Vitrification

Applications of Atomistic Simulation to Radioactive and Hazardous Waste Glass Formulation Development, 94:2866 (R;US)

Creating a proper safety culture at the Hanford Site low- and high-level waste vitrification plant projects, 94:2627 (R;US)

Development of a Transportable Vitrification System for Mixed Waste, 94:879 (R;US)

Development of in situ vitrification for remediation of ORNL contaminated soils, 94:1872 (R;US)

Effects of glass surface area-to-solution volume ratio (S/V) on glass dissolution: Part one: Relationship between S/V and leachate pH, 94:1708 (R;US)

RADIOACTIVE WASTES

Vitrification

Experimental data and analysis to support the design of an ion-exchange process for the treatment of Hanford tank waste supernatant liquids, 94:2921 (R;US)

Feasibility study for the processing of Hanford Site cesium and strontium isotopic sources in the Hanford Waste Vitrification Plant, 94:720 (R;US)

Off-gassing induced tracer release from molten basalt pools, 94:1844 (R;US)

Preliminary hazards analysis - vitrification process, 94:2434 (R;US)

Release of HWVP design media, 94:2658 (R;US)

Sensors for monitoring waste glass quality, 94:677 (PA;US)

Tank Waste Remediation System Projects Document Control Plan, 94:1467 (R;US)

The role of frit in nuclear waste vitrification, 94:2547 (R;US)

Treatability study work plan for in situ vitrification of seepage pit 1 in Waste Area Grouping 7 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:536 (R;US)

Vitrification development for sludge and ash mixed wastes, 94:689 (R;US)

Vitrification: Destroying and immobilizing hazardous wastes, 94:691 (R;US)

XRF in waste glass analysis and vitrification process control, Part 1: Sample preparation and measurement precision, 94:893 (BA;US)

Void Fraction

Software quality assurance plan for void fraction instrument, 94:1466 (R;US)

Volume

Estimation and characterization of decontamination and decommissioning solid waste expected from the Plutonium Finishing Plant, 94:2100 (R;US)

Waste Processing

ASPEN computer simulations of the mixed waste treatment project baseline flowsheet, 94:717 (R;US)

DOE Waste Treatability Group Guidance, 94:493 (R;US)

Development of simulated contamination (SIMCON) and miscellaneous decontamination scoping tests, 94:2281 (R;US)

Waste Retrieval

Feasibility study of tank leakage mitigation using subsurface barriers, 94:1384 (R;US)

Hydraulic impact end effector final test report: Automation and robotics section, ER/WM-AT Program, 94:2350 (R;US)

Implications of access hole size on tank waste retrieval system design and cost, 94:2330 (R;US)

Parametric design using IGRIP, 94:2338 (R;US)

Project W-340 tank 241-C-106 manipulator system closeout summary, 94:1194 (R;US)

Summary of tank waste physical properties at the Hanford Site, 94:1049 (R;US)

Technical task plan for Acquire Commercial Technology for Retrieval, 94:1218 (R;US)

Underground storage tank - Integrated Demonstration Technical Task Plan master schedule, 94:1027 (R;US)

Waste dislodging and conveyance testing summary and conclusions to date, 94:975 (R;US)

Waste Transportation

Acceptance test procedure, 241-SY-101 flexible receiver system, Phase II testing, 94:1226 (R;US)

Integration of numerical analysis tools for automated numerical optimization of a transportation package design, 94:2085 (R;US)

Packaging design criteria modified fuel spacer burial box: Revision 1, 94:2747 (R;US)

Waste Management Facilities Cost Information for transportation of radioactive and hazardous materials. Revision 1, 94:2025 (R;US)

Waste tank sample transport, 94:1091 (R;US)

Wet Oxidation Processes

Development of a novel wet oxidation process for hazardous and mixed wastes, 94:500 (R;US)

X-Ray Radiography

Nondestructive examination development and demonstration plan, 94:818 (R;US)

RADIOCHEMICAL ANALYSIS

Analyses and Characterization of 242-A Evaporator Slurry, Campaign 94-1, 94:1295 (R;US)

Radiochemistry methods in DOE methods for evaluating environmental and waste management samples, 94:688 (R;US)

Standardization of equations for radiochemical calculations, 94:2478 (R;US)

RADIOCOLLOIDS

A preliminary investigation of the existence of radiocolloids in leachate from the NRC field lysimeter investigations, 94:378 (J;US)

RADIOGRAPHS

200-BP-11 operable unit and 216-B-3 main pond work/closure plan, Hanford Site, Richland, Washington. Volume 1: Field investigation and sampling strategy, 94:1973 (R;US)

Design demonstrations for Category B tank systems piping at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:554 (R;US)

Liquid Effluent Monitoring Information System (LEMIS) System Construction, 94:2815 (R;US)

Meeting the requirements for a DOE environmental restoration project. The Fernald strategy, 94:2029 (R;US)

PUREX/UO₃ facilities deactivation lessons learned history, 94:2275 (R;US)

The Formerly Utilized Sites Remedial Action Program (FUSRAP): Building stakeholder partnerships to achieve effective cleanup, 94:1944 (R;US)

REINFORCED CONCRETE

Heat transfer within a concrete slab with a finite microwave heating source, 94:1897 (J;GB)

Permeability and microstructure of plain and polypropylene fiber reinforced grouts, 94:1901 (J;US)

SY farm fence relocation, 94:1284 (R;US)

Temperature and pore pressure distribution in a concrete slab during the microwave decontamination process, 94:1922 (R;US)

RELEASE (FISSION PRODUCT)

See FISSION PRODUCT RELEASE

REMEDIAL ACTION

Additives

Innocuous oil as an additive for reductive reactions involving zero valence iron, 94:207 (R;US)

Administrative Procedures

Citizen advisory boards: An empirical model for choosing goals and methods, 94:3016 (R;US)

Comment and response document for the long-term surveillance plan for the Shiprock, New Mexico, disposal site, 94:1794 (R;US)

Engineering work plan for design requirements document, Project W-058/028, 94:1127 (R;US)

Program Management Plan for the Martin Marietta Energy Systems, Inc., Oak Ridge National Laboratory Site Environmental Restoration Program, 94:2055 (R;US)

Air Pollution Monitoring

Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring: Quarterly report, 1 October–31 December 1993, 94:506 (R;US)

Air Pollution Monitors

Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring. Quarterly report, January 1, 1994–March 31, 1994, 94:507 (R;US)

Appropriate Technology

Environmental Restoration Program technology baseline plan, 94:15 (R;US)

Final report for SNL/NM environmental drilling project, 94:235 (R;US)

Hanford Strategic Analysis Study. Volumes 1 and 2, 94:17 (R;US)

The DuPont, Monsanto, General Electric "Lasagna" Remediation Project - joint R&D and financing, 94:525 (R;US)

Audits

Radiological audit of remedial action activities at the processing sites Mexican Hat, Utah and Monument Valley, Arizona. Audit date: May 3–7, 1993, Final report, 94:1742 (R;US)

Radiological surveillance of Remedial Action activities at the processing site, Ambrosia Lake, New Mexico, April 12–16, 1993. Final report, 94:1734 (R;US)

Automation

Integrated Computer-Enhanced Remote Viewing System: Quarterly report No. 6, January 1994–March 1994, 94:2318 (R;US)

Baseline Ecology

Baseline risk assessment of ground water contamination at the Uranium Mill Tailings Site at Grand Junction, Colorado: Revision 1, 94:1765 (R;US)

Baseline risk assessment of ground water contamination at the inactive uriferous lignite ashing site near Belfield, North Dakota. Revision 1, 94:1771 (R;US)

Communications

Laboratory interface in support of Environmental Restoration Programs, 94:439 (R;US)

Compacting

Subsidence evaluation in 218-E-E12B, trench 38, 94:1891 (R;US)

Computer-Aided Design

Optimizing multiphase aquifer remediation using ITOUGH2, 94:121 (R;US)

Computerized Simulation

Three-dimensional modeling of subsurface contamination: A case study from the radio frequency-heating demonstration at the Savannah River Site, 94:337 (R;US)

Contract Management

Richland Environmental Restoration Project 1995 fiscal year work plan: Work breakdown structure 2.0, program management, 94:582 (R;US)

UMTRA Project Office quality assurance program plan. Revision 6, 94:1757 (R;US)

UMTRA technical assistance contractor quality assurance program plan, 94:1749 (R;US)

Cost

Cost Quality Management Assessment for the Fernald Environmental Management Project: Final report, 94:1927 (R;US)

Uranium Mill Tailings Remedial Action Project Environmental Line Management Audit Action Plan. Final report. Audit, October 26, 1992–November 6, 1992, 94:1747 (R;US)

Cost Estimation

Estimating the Cold War mortgage: The 1995 Baseline Environmental Management report. Executive summary, March 1995, 94:1942 (R;US)

Data Base Management

Ensuring comparability of data generated by multiple analytical laboratories for environmental decision making at the Fernald Environmental Management Project, 94:2477 (R;US)

Environmental restoration and remediation technical data management plan, 94:2442 (R;US)

Information management architecture for an integrated computing environment for the Environmental Restoration Program. Environmental Restoration Program, Volume 3, Interim technical architecture, 94:3001 (R;US)

Decision Making

2727-S Nonradioactive Dangerous Waste Storage Facility clean closure evaluation report, 94:757 (R;US)

Automated remedial assessment methodology software system, 94:3044 (R;US)

Buried Waste Integrated Demonstration stakeholder involvement model, 94:1849 (R;US)

Citizen advisory boards: An empirical model for choosing goals and methods, 94:3016 (R;US)

How technology is improving decision making for environmental restoration, 94:2968 (R;US)

Innovative approaches to public participation, 94:3080 (BA;US)

Plan for increasing public participation in cleanup decisions for the Los Alamos National Laboratory, 94:2052 (R;US)

Predicting environmental restoration activities through static simulation, 94:2553 (R;US)
Qualitative risk assessment for 100-DR-1 source operable unit, 94:2646 (R;US)
Systems engineering functions and requirements for the Hanford cleanup mission: First issue: Addendum 3, Draft, 94:2601 (R;US)
The Department of Energy's Remedial Action Assessment System (RAAS): Decision support tools for performing streamlined feasibility studies, 94:2081 (R;US)

Demonstration Programs

Buried Waste Integrated Demonstration Technology Preparedness and Status Report Guidance, 94:2465 (R;US)
Cone penetrometer testing at the Hanford Site: Final performance evaluation report, 94:253 (R;US)
In situ remediation: Developing containment technologies, 94:211 (R;US)
In-well vapor stripping drilling and characterization work plan, 94:747 (R;US)
Oakland Operations Office, Oakland, California: Technology summary, 94:1937 (R;US)
Physicochemical and mineralogical characterization of transuranic contaminated soils for uranium soil integrated demonstration, 94:673 (R;US)
Review of the Vortec soil remediation demonstration program, 94:511 (R;US)
Uranium soils integrated demonstration, 1993 status, 94:2475 (R;US)
Uranium soils integrated demonstration: Soil characterization project report, 94:93 (R;US)
Waste Contaminants at Military Bases Working Group report, 94:72 (R;US)

Documentation

Comment and response document for the long-term surveillance plan for the Shiprock, New Mexico, disposal site, 94:1794 (R;US)
UMTRA Project Administrative Files Collection Records Management Program, 94:1828 (R;US)
UMTRA water sampling technical (peer) review: Responses to observations, comments, and recommendations submitted by Don Messinger (Roy F. Weston, Inc.), 94:1744 (R;US)

Drilling Equipment

Phase I Resonant Sonic CRADA report, 94:299 (R;US)

Economic Impact

Economic impact study of the Uranium Mill Tailings Remedial Action Project in Colorado: Colorado State fiscal year 1994. Revision 1, 94:1821 (R;US)

Education

The US Department of Energy's Student Video Program, 94:2914 (R;US)
Training implications of skills needed for environmental cleanup, 94:2969 (R;US)

Electrodynamics

In situ electrokinetic control of moisture and nutrients in unsaturated soils, 94:232 (R;US)

Energy Policy

Comments and responses on the Remedial Action Plan and site design for stabilization of the Inactive Uranium Mill Tailings Site, Grand Junction, Colorado. Revision 1, 94:1731 (R;US)

Engineering

Systems engineering product breakdown structure for the Hanford Cleanup Mission: First issue, 94:2610 (R;US)

Environmental Effects

UMTRA project office federal employee occupational safety and health program plan: Revision 1, 94:1766 (R;US)

Environmental Impacts

Environmental assessment of remedial action at the Naturita Uranium Processing Site near Naturita, Colorado: Revision 4, 94:1834 (R;US)
Evaluation of impacts and mitigation assessments for the UMTRA Project: Gunnison and Durango pilot studies: Final report, 94:1825 (R;US)

Finding of No Significant Impact, proposed remediation of the Maybell Uranium Mill Processing Site, Maybell, Colorado, 94:1829 (R;US)

Environmental Policy

Health and safety plan for the Environmental Restoration Program at Oak Ridge National Laboratory, 94:2057 (R;US)

Evaluation

Comment and response document for the long-term surveillance plan and the completion report for the Lowman, Idaho, disposal site, 94:1830 (R;US)
Environmental analysis of Lower Pueblo/Lower Los Alamos Canyon, Los Alamos, New Mexico, 94:2049 (R;US)
Hanford site comprehensive site compliance evaluation report, 94:277 (R;US)
In Situ Remediation Integrated Program: Evaluation and assessment of containment technology, 94:50 (R;US)

Feasibility Studies

100-BC-1 Operable Unit focused feasibility study, 94:1994 (R;US)
100-HR-2 Operable Unit Focused Feasibility study report, 94:1997 (R;US)
100-HR-3 Operable Unit focused feasibility study report, 94:1999 (R;US)
100-KR-1 Operable Unit focused feasibility study report, 94:1998 (R;US)
100-KR-4 Operable Unit focused feasibility study report, 94:1990 (R;US)
118-B-1 Excavation Treatability Test Plan. Revision 1, 94:1988 (R;US)
118-B-1 excavation treatability test plan, 94:1987 (R;US)
Demonstration testing and evaluation of in situ soil heating. Health and safety plan (Revision 2), 94:70 (R;US)
Demonstration testing and evaluation of in situ soil heating. Treatability study work plan (Revision 2), 94:69 (R;US)
In situ peroxidation of TCE contaminated soil, 94:428 (R;US)
Letter report for modeling evaluation of N-Springs barrier and pump-and-treat systems. Draft A, 94:86 (R;US)
RCRA Facility investigation/corrective measures study work plan for the 100-NR-1 operable unit: Hanford Site, Richland, Washington. Draft F, 94:561 (R;US)
Remedial investigation/feasibility study report for lower Watts Bar Reservoir Operable Unit, 94:64 (R;US)
Remedial investigation and feasibility study report for the Environmental Restoration Disposal Facility, 94:2444 (R;US)
Richland Environmental Restoration Project 1995 fiscal year work plan: Work breakdown structure 2.0, 100 Area. Volume 1, 94:580 (R;US)
Site observational work plan for the UMTRA project site at Falls City, Texas, 94:1806 (R;US)
The Department of Energy's Remedial Action Assessment System (RAAS): Decision support tools for performing streamlined feasibility studies, 94:2081 (R;US)

Financing

The DuPont, Monsanto, General Electric "Lasagna" Remediation Project - joint R&D and financing, 94:525 (R;US)

Flowsheets

An analysis of the New Technical Strategy Flowsheet applied to the watch list tanks, 94:943 (R;US)

Functional Analysis

Systems engineering functions and requirements for the Hanford cleanup mission: First issue, Addendum 2, 94:2600 (R;US)

Health Hazards

UMTRA project office federal employee occupational safety and health program plan: Revision 1, 94:1766 (R;US)

Historical Aspects

A review of occupational safety and health issues relevant to the Environmental Restoration Program: Selected case histories and associated issues, 94:3033 (R;US)

Implementation

U.S. Department of Energy, Richland Operations Office Environmental Protection Implementation Plan, November 9, 1994 to November 9, 1995, 94:2011 (R;US)

REMEDIAL ACTION

Safety

Safety

Mitigation action plan for the Environmental Restoration Disposal Facility, 94:2019 (R;US)
Uranium Mill Tailings Remedial Action Project Safety Advancement Field Effort (SAFE) Program, 94:1730 (R;US)

Safety Analysis

233-S plutonium concentration facility hazards assessment, 94:2208 (R;US)
Test plan for FY-94 digface characterization field experiments, 94:1851 (R;US)

Safety Engineering

UMTRA project office federal employee occupational safety and health program plan: Revision 1, 94:1766 (R;US)

Safety Standards

Demonstration testing and evaluation of in situ soil heating. Health and safety plan (Revision 2), 94:70 (R;US)

Schedules

Environmental support FY 1995 multi-year program plan/fiscal year work plan WBS 1.5.2/7.4.11, 94:2269 (R;US)
Richland Environmental Restoration Project 1995 fiscal year work plan: Work breakdown structure 2.0, 1100 Area, 94:583 (R;US)
Uranium Mill Tailings Remedial Action Project Environmental Line Management Audit Action Plan. Final report. Audit, October 26, 1992–November 6, 1992, 94:1747 (R;US)

Site Characterization

Environmental assessment of remedial action at the slick rock Uranium Mill Tailings sites Slick Rock, Colorado, 94:1832 (R;US)
Limited field investigation for the 100-FR-1 Operable Unit, 94:1978 (R;US)
Limited field investigation report for the 100-NR-1 Operable Unit, 94:1974 (R;US)
Quality assurance project plan for the UMTRA technical assistance contractor hydrochemistry facility. Final report, 94:1736 (R;US)
Remedial investigation report on Bear Creek Valley Operable Unit 2 (rust spoil area, spoil area 1, and SY-200 yard) at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee: Volume 2. Appendixes, 94:1963 (R;US)
Sandia National Laboratories site-wide hydrogeologic characterization project calendar year 1992 annual report, 94:225 (R;US)
Site observational work plan for the UMTRA Project site at Riverton, Wyoming, 94:1812 (R;US)
Site observational work plan for the UMTRA project site at Shiprock, New Mexico, 94:1807 (R;US)

Standards

A proposed methodology for evaluating low-level radioactively-contaminated soil, 94:874 (R;US)

Standards Document

Standards/requirements identification documents (S/RIDS), 94:3007 (R;US)

Statistical Models

Geostatistical applications in environmental remediation, 94:2473 (R;US)

Surveillance

Radiological surveillance of Remedial Action activities at the processing site, Falls City, Texas. Final report, 94:1733 (R;US)

Systems Analysis

Risk-based systems analysis of emerging high-level waste tank remediation technologies: Volume 1: Executive summary, 94:1054 (R;US)
Risk-based systems analysis of emerging high-level waste tank remediation technologies: Volume 2: Final report, 94:1055 (R;US)

Task Scheduling

Richland Environmental Restoration Project 1995 fiscal year work plan: Work breakdown structure 2.0, 100 Area. Volume 1, 94:580 (R;US)

Technology Assessment

A cost-effectiveness analysis of the in situ air stripping technology at the Savannah River Integrated Demonstration site: Part 1 and Part 2, 94:101 (R;US)
A proposed framework for establishing integrated cost and performance criteria for environmental technologies. A summary report to the U.S. Department of Energy, 94:9 (R;US)
A/M Area Groundwater Corrective Action Southern Sector Remediation Technology Alternatives Evaluation, 94:339 (R;US)
Decontamination Systems Information and Research Program: Quarterly technical progress report, January 1–March 31, 1994, 94:517 (R;US)
Hanford Strategic Analysis Study. Volume 5, Appendixes, 94:18 (R;US)
Hanford Strategic Analysis Study. Volumes 3 and 4, 94:2098 (R;US)
How technology is improving decision making for environmental restoration, 94:2968 (R;US)
Identification of foreign technologies, 94:2980 (R;US)
Innovative technologies for in-situ remediation, 94:246 (R;US)
Oak Ridge National Laboratory Technology Logic Diagram: Volume 1, Technology Evaluation: Part B, Remedial Action, 94:662 (R;US)
Oak Ridge National Laboratory Technology Logic Diagram: Volume 3, Technology evaluation data sheets: Part B, Dismantlement, Remedial action, 94:664 (R;US)
Organics in soils and groundwater at non-arid sites (A-1) integrated demonstration, 94:336 (R;US)
Pacific Northwest Laboratory environmental technologies available for deployment, 94:3042 (R;US)
Summary performance assessment of in situ remediation technologies demonstrated at Savannah River, 94:2493 (R;US)
Technology study of Gunitite tank sludge mobilization at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:950 (R;US)
Transport of radioactive ions in soil by electrokinetics, 94:1874 (R;US)

Technology Transfer

EM International, July 1994, Volume 2, 94:2985 (R;US)

Training

International School of Innovative Technology for Cleaning the Environment, Ettore Majorana Centre for Scientific Culture: Erice, Sicily, Italy, 94:3052 (R;US)
Training implications of skills needed for environmental cleanup, 94:2969 (R;US)
Waste Management Education and Research Consortium (WERC), National Environmental Design. Topical report, 94:521 (R;US)

Waste Management

Waste management plan for the remedial investigation of Waste Area Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:2058 (R;US)

Wastes

Summary of available waste forecast data for the Environmental Restoration Program at the Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:2509 (R;US)

Wells

Casing pull tests for directionally drilled environmental wells, 94:234 (R;US)

REMOTE HANDLING EQUIPMENT

See also MANIPULATORS

First generation long-reach manipulator for retrieval of waste from Hanford single-shell tanks, 94:2354 (R;US)
Identification of single-shell tank in-tank hardware obstructions to retrieval at Hanford Site Tank Farms, 94:1083 (R;US)

Cancellation

Project W-340 tank 241-C-106 manipulator system closeout summary, 94:1194 (R;US)

Certification

Qualification testing for the flexible receiver, 94:1191 (R;US)

Computerized Control Systems

Input shaping methods for telerobotic operation of flexible, long-reach manipulators, 94:2300 (R;US)

Optimal trajectories for flexible-link manipulator slewing using recursive quadratic programming: Experimental verification, 94:2347 (R;US)

Computerized Simulation

PUREX irradiated fuel recovery simulation, 94:2356 (R;US)

Control Equipment

Usability testing of the human-machine interface for the Light Duty Utility Arm System, 94:2359 (R;US)

Control Systems

Telerobotic operation of structurally flexible, long-reach manipulators, 94:2301 (R;US)

Data Acquisition Systems

Usability testing of the human-machine interface for the Light Duty Utility Arm System, 94:2359 (R;US)

Decontamination

Storage options for Long Length Contaminated Equipment (LLCE) items, 94:1391 (R;US)

Demonstration Programs

Explosive ordinance disposal technology demonstration using the telerobotic small emplacement excavator, 94:2331 (R;US)

Design

A variable geometry truss manipulator for positioning large payloads, 94:2340 (R;US)

Conceptual design for remote handling methods using the HIP process in the Calcine Immobilization Program, 94:2853 (R;US)

Finite element modelling of an evacuated canister for removal of molten radioactive glass, 94:1006 (R;US)

One-trip drum operating instruction, 94:2754 (R;US)

Project W320 heel jet secondary catch mechanism lateral load test - test report, 94:1192 (R;US)

Qualification test for the flexible receiver. Revision 2, 94:1190 (R;US)

Research on robotics by principal investigators of the Robotics Technology Development Program, 94:2344 (R;US)

TWRS LDUA utilization study report, 94:1339 (R;US)

Test procedure forms for sludge retrieval and packaging, 94:2228 (R;US)

Feasibility Studies

Buried waste integrated demonstration human engineered control station. Final report, 94:2326 (R;US)

Sensor-based interior modeling, 94:2314 (R;US)

Human Factors Engineering

Buried waste integrated demonstration human engineered control station. Final report, 94:2326 (R;US)

Man-Machine Systems

Usability testing of the human-machine interface for the Light Duty Utility Arm System, 94:2359 (R;US)

Mechanical Tests

Project W320 52-inch diameter equipment container load test: Test report, 94:1193 (R;US)

Performance

CSEER 94-011: Use of glovebags for demister draining operations, 94:2736 (R;US)

Test reports for K Basins vertical fuel handling tools, 94:2728 (R;US)

Radioactive Waste Storage

Storage options for Long Length Contaminated Equipment (LLCE) items, 94:1391 (R;US)

Remote Control

Overview of robotics for Mixed Waste Operations, 94:2361 (R;US)

Safety

Qualification test for the flexible receiver. Revision 2, 94:1190 (R;US)

Shielding

Shielding analysis of the IEM cell offset adapter plate, 94:2179 (R;US)

Specifications

Acceptance Test Procedure for the Link Belt Hook Position Monitor System, 94:2782 (R;US)

Design criteria for the light duty utility arm system end effectors, 94:2358 (R;US)

Gas and liquid sampling for closed canisters in the K-West Basin, 94:2679 (R;US)

Technology Assessment

Advanced robotic technologies for transfer at Sandia National Laboratories, 94:2348 (R;US)

Application of the selective equipment removal system to D&D tasks, 94:2307 (R;US)

Project W-340 tank 241-C-106 manipulator system closeout summary, 94:1194 (R;US)

Technology Transfer

Advanced robotic technologies for transfer at Sandia National Laboratories, 94:2348 (R;US)

Testing

Project W-320 Heel Jet Secondary Catch Mechanism lateral load test, 94:1187 (R;US)

Qualification test for the Flexible Receiver: Revision 1, 94:1189 (R;US)

Test plan for qualification testing of the 241-SY-101 Flexible Receiver System, 94:1567 (R;US)

Uses

Robotics and remote systems for hazardous environments, 94:2365 (B;US)

Waste Retrieval

A variable geometry truss manipulator for positioning large payloads, 94:2340 (R;US)

Research on robotics by principal investigators of the Robotics Technology Development Program, 94:2344 (R;US)

REMOTE SENSING

Investigation of remote sensing scale up for hot cell waste tank applications. CPAC optical moisture monitoring, 94:1374 (R;US)

REMOTE VIEWING EQUIPMENT

Acceptance/operational test procedure 101-AW tank camera purge system and 101-AW video camera system, 94:1438 (R;US)

Acceptance/operational test procedure 101-SY tank camera purge system and in tank color camera video imaging system, 94:1437 (R;US)

Acceptance/operational test procedure 241-AN-107 Video Camera System, 94:1442 (R;US)

Engineering task plan for Tanks 241-AN-103, 104, 105 color video camera systems, 94:1406 (R;US)

Imaging through obscurations for sluicing operations in the waste storage tanks, 94:2529 (R;US)

Integrated Computer-Enhanced Remote Viewing System: Quarterly report No. 6, January 1994-March 1994, 94:2318 (R;US)

Interactive Computer-Enhanced Remote Viewing System: Quarterly report number 6, April-June, 1994, 94:2320 (R;US)

Interactive computer enhanced remote viewing system, 94:2317 (R;US)

Requirements and design concept for a facility mapping system, 94:2306 (R;US)

Structural analysis of color video camera installation on Tank 241SY101 (2 volumes), 94:1277 (R;US)

Tank selection for Light Duty Utility Arm (LDUA) system hot testing in a single shell tank, 94:1394 (R;US)

Waste Calcining Facility remote inspection report, 94:2283 (R;US)

Physical Properties

Summary status of K Basins sludge characterization, 94:311 (R;US)

Quantitative Chemical Analysis

Criticality safety evaluation report for the 100 KE Basin sandfilter backwash pit, 94:2662 (R;US)

Demonstration of vitrification of surrogate F006 waste-water treatment sludges, 94:886 (BA;US)

Radioactive Waste Management

Cold test data for equipment acceptance into 105-KE Basin, 94:2726 (R;US)

Sludge technology assessment, 94:396 (R;US)

Radioactive Waste Processing

Heat exchanger bypass test procedure, 94:2145 (R;US)

Hydrothermal processing of inorganic components of Hanford tank sludge, 94:945 (R;US)

Laboratory development of sludge washing and alkaline leaching processes: Test plan for FY 1994, 94:2919 (R;US)

Schedule for final disposition of contaminated K-East basin water, 94:2688 (R;US)

Sludge Treatment and Extraction Technology Development: Results of FY 1993 studies, 94:2918 (R;US)

Washing and caustic leaching of Hanford tank sludges, 94:2945 (BA;US)

Radioactive Waste Storage

W-320 pit liner vs. coating cost risk benefit analysis, 94:1179 (R;US)

Radioactivity

Potential radiological exposure rates resulting from hypothetical dome failure at Tank W-10, 94:951 (R;US)

Radiochemical Analysis

In situ chemical characterization of waste sludges using FTIR-based fiber optic sensors, 94:727 (R;US)

Removal

Functions and requirements for 105-KE Basin sludge retrieval and packaging, 94:2681 (R;US)

K Basin spent fuel sludge treatment alternatives study. Volume 1, Regulatory options, 94:2539 (R;US)

Technology study of Gunite tank sludge mobilization at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:950 (R;US)

Rheology

Ferrocyanide safety program: Moisture migration test in ferrocyanide simulant, 94:1063 (R;US)

Sampling

Loss/gain on ignition testing for HC-21C, 94:2151 (R;US)

Sludge measurement results for 105 KE basin, 94:2775 (R;US)

Test procedures for WRAP 2A treatability study, 94:825 (R;US)

Shear Properties

Test procedure for use of the shear vane in tanks 103-SY, 103-AN, and 103-AW, 94:1505 (R;US)

Stability

Sludge stabilization operability test report, 94:1106 (R;US)

Stabilization

Maintenance implementation plan for the plutonium finishing plant. Revision 2, 94:2264 (R;US)

Sludge stabilization campaign blend plan. Revision 1, 94:2149 (R;US)

Transmission Electron Microscopy

Hanford tank sludges: Investigation of physical and chemical properties using transmission electron microscopy, 94:1695 (BA;US)

Vitrification

Demonstration of vitrification of surrogate F006 waste-water treatment sludges, 94:886 (BA;US)

Los Alamos National Laboratory simulated sludge vitrification demonstration, 94:882 (R;US)

MWIP: Surrogate formulations for thermal treatment of low-level mixed waste: Part 4, Wastewater treatment sludges, 94:532 (R;US)

Microwave vitrification of Rocky Flats hydroxide precipitation sludge, Building 774. Progress report, 94:701 (R;US)

Vitrification Studies with DOE Low-Level Mixed Waste Wastewater Treatment Sludges, 94:878 (R;US)

Washing

Enhanced sludge washing evaluation plan, 94:1064 (R;US)

Sludge pretreatment chemistry evaluation: Enhanced sludge washing separation factors, 94:1001 (R;US)

Sludge washing, 94:1171 (R;US)

Status and progress in sludge washing: A pivotal pretreatment method, 94:1103 (R;US)

Washing and alkaline leaching of Hanford tank sludges: A status report, 94:2920 (R;US)

Waste Management

Test procedure forms for sludge retrieval and packaging, 94:2228 (R;US)

Waste Retrieval

Test plan, sludge retrieval, sludge packaging, 94:2717 (R;US)

SLUGS (FUEL)

See FUEL RODS

SLURRIES

1/12-Scale scoping experiments to characterize double-shell tank slurry uniformity: Test plan, 94:957 (R;US)

An experimental investigation of the thermal/fluid properties of the nitrate to ammonia and ceramic (NAC) product slurry, 94:922 (R;US)

Analyses and Characterization of 242-A Evaporator Slurry, Campaign 94-1, 94:1295 (R;US)

Analytical services: 222-S characterization of 242-A Evaporator Slurry, Campaign 94-1. Addendum 1A, 94:2793 (R;US)

Fluid dynamic demonstrations for waste retrieval and treatment, 94:954 (R;US)

Gas distribution effects on waste properties: Viscosities of bubbly slurries, 94:166 (R;US)

Performance evaluation of corrosion probes in simulated WVNS tank 8D-2 waste: WVNS tank farm process support, 94:967 (R;US)

SLURRY PIPELINES

Fluid dynamic studies for a simulated Melton Valley Storage Tank slurry, 94:955 (R;US)

Functional design criteria for Project W-058, replacement of cross-site transfer system: Revision 2, 94:1126 (R;US)

SMECTITE

Investigation of the uranyl/oxalate co-contaminant system sorbed on a Wyoming smectite, 94:362 (BA;US)

Optical spectroscopic studies of the sorption of UO_2^{2+} species on a reference smectite, 94:372 (J;US)

SMELTERS

Selection of melter systems for the DOE/Industrial Center for Waste Vitrification Research, 94:883 (R;US)

SNAKE RIVER PLAIN

Straddle-packer determination of the vertical distribution of hydraulic properties in the Snake River Plain Aquifer at well USGS-44, Idaho Chemical Processing Plant, INEL, 94:53 (R;US)

SNAP 4 REACTOR

See SNAP REACTORS

SNAP BATTERIES

SNAP and AI Fuel Summary Report, 94:2857 (R;US)

SNAP REACTORS

SNAP and AI Fuel Summary Report, 94:2857 (R;US)

SODIUM

A portable system for the treatment of water-reactive mixed waste, 94:650 (R;US)

Characterization and monitoring of 300 Area facility liquid waste streams: 1994 Annual report, 94:190 (R;US)

Conceptual design report, Sodium Storage Facility, Fast Flux Test Facility, Project F-031, 94:2169 (R;US)

FFTF horizontal sodium storage tank preliminary thermal analysis, 94:2172 (R;US)

FFTF vertical sodium storage tank preliminary thermal analysis, 94:2173 (R;US)

Fast Flux Test Facility, Sodium Storage Facility project-specific project management plan, 94:2167 (R;US)

Interim storage of sodium in ferritic steel tanks at ambient temperature, 94:2171 (R;US)

Preliminary safety evaluation (PSE) for Sodium Storage Facility at the Fast Flux Test Facility, 94:2175 (R;US)

SODIUM CHLORIDES

Bounding flow and transport analysis of proposed 105A mock-up tank tracer test, 94:1521 (R;US)

SODIUM CITRATES

See SODIUM COMPOUNDS

SODIUM COMPOUNDS

See also SODIUM CHLORIDES
SODIUM HYDROXIDES
SODIUM NITRATES
SODIUM PHOSPHATES
TIRON

Salt splitting of sodium-dominated radioactive waste using ceramic membranes, 94:2550 (R;US)

SODIUM HYDROXIDES

300 Area Treated Effluent Disposal Facility essential material specifications basis, 94:780 (R;US)

The solubility of $\text{Cr}(\text{OH})_3(\text{am})$ in concentrated NaOH and NaOH- NaNO_3 solutions, 94:1010 (R;US)

SODIUM LAURYL SULFATES

See SODIUM COMPOUNDS

SODIUM NITRATES

Clean Salt integrated flowsheet, 94:1324 (R;US)

Ferrocyanide Safety Project Dynamic X-Ray Diffraction studies of sodium nickel ferrocyanide reactions with equimolar nitrate/nitrite salts, 94:968 (R;US)

Significant volume reduction of tank waste by selective crystallization: 1994 Annual report, 94:2935 (R;US)

The solubility of $\text{Cr}(\text{OH})_3(\text{am})$ in concentrated NaOH and NaOH- NaNO_3 solutions, 94:1010 (R;US)

SODIUM PHOSPHATES

Low-temperature-setting phosphate ceramics for low-level mixed waste stabilization, 94:414 (R;US)

SODIUM PHOSPHIDES

See SODIUM COMPOUNDS

SOIL CHEMISTRY

Cost-effectiveness analysis of the SEAMIST™ membrane system technology, 94:115 (R;US)

SOIL-STRUCTURE INTERACTIONS

SASSI system software configuration, 94:2180 (R;US)

SOILING

See SURFACE CONTAMINATION

SOILS

Alpha Detection

Alpha detection for characterization of D&D sites, 94:111 (R;US)

Beta Detection

Real-time, in situ detection of ^{90}Sr and ^{238}U in soils via scintillating-fiber-sensor technology, 94:201 (R;US)

Chemical Analysis

200-BP-11 operable unit and 216-B-3 main pond work/closure plan, Hanford Site, Richland, Washington. Volume 1: Field investigation and sampling strategy, 94:1973 (R;US)

Analysis of cobbly soils for cobbles-to-fines corrections to radionuclide concentrations at the New Rifle, Colorado, processing site, 94:1774 (R;US)

Assessing data quality for a federal environmental restoration project: Rationalizing the requirements of multiple clients, 94:2594 (R;US)

Closure report for underground storage tank 161-R1U1 and its associated underground piping, 94:1020 (R;US)

Closure report for underground storage tanks 321-11U1, 321-11U2, and 321-11U3 and associated underground piping, 94:1021 (R;US)

Demonstration testing and evaluation of in situ heating of soil, 94:71 (R;US)

Determining uranium speciation in Fernald soils by molecular spectroscopic methods: FY 1993 progress report, 94:96 (R;US)

Gunnison, Colorado subpile study report: Revision 1, 94:1767 (R;US)

High explosive spot test analyses of samples from Operable Unit (OU) 1111, 94:634 (R;US)

Limited field investigation report for the 100-NR-2 Operable Unit, 94:1977 (R;US)

Los Alamos National Laboratory Environmental Restoration Project quarterly technical report, April-June 1994, 94:645 (R;US)

Phase 1 sampling and analysis plan for the 304 Concretion Facility closure activities, 94:2158 (R;US)

Preliminary characterization of the 100 area at Argonne National Laboratory, 94:410 (R;US)

Cleaning

Hydrogen peroxide treatment of TCE contaminated soil, 94:31 (R;US)

Sequential anaerobic-aerobic degradation of indigenous PCBs in a contaminated soil matrix, 94:43 (R;US)

Two practical incineration-alternative prototype demonstrations for TSCA and RCRA wastes, 94:644 (R;US)

Compacting

Soil weight (lb/ft^3) at Hanford waste storage locations (2 volumes), 94:1495 (R;US)

Contamination

3-D subsurface modeling within the framework of an environmental restoration information system: Prototype results using earthvision, 94:451 (R;US)

300-FF-1 Operable Unit physical separation of soils pilot plant study, 94:760 (R;US)

300-FF-1 operable unit remedial investigation phase II report: Physical separation of soils treatability study, 94:1980 (R;US)

618-10 Burial Ground USRADS radiological surveys, 94:2647 (R;US)

618-11 Burial Ground USRADS radiological surveys, 94:2648 (R;US)

An assessment of high-energy explosives and metal contamination in soil at TA-67 (12), L-Site, and TA-14, Q-Site, 94:633 (R;US)

Analytical electron microscopy characterization of uranium-contaminated soils from the Fernald Site, FY1993 report, 94:395 (R;US)

Characterization of uranium- and plutonium-contaminated soils by electron microscopy, 94:401 (R;US)

Characterization studies of actinide contamination on Johnston Atoll, 94:2373 (R;US)

Characterization, Monitoring, and Sensor Technology Integrated Program (CMST-IP): Technology summary, 94:2420 (R;US)

Citrate biodegradation: Mid-year status report, [January 1994-June 1994], 94:1710 (R;US)

Derivation of residual radioactive material guidelines for uranium in soil at the Former Associate Aircraft Tool and Manufacturing Company Site, Fairfield, Ohio, 94:1915 (R;US)

Description of work vadose drilling at the 1301-N and 1325-N facilities, 100-NR-1 operable unit, 94:85 (R;US)

Descriptions of representative contaminated sites and facilities within the DOE complex, 94:2073 (R;US)

Development of in situ vitrification for remediation of ORNL contaminated soils, 94:1872 (R;US)

Dust resuspension from soil in a semi-arid environment at the Nevada Test Site, 94:2296 (J;US)

Environmental Measurement-While-Drilling system for real-time field screening of contaminants, 94:1882 (R;US)

Erase—an integrated system for treating organic-contaminated sites, 94:202 (R;US)

Estimation of the effective distribution coefficient from the solubility constant, 94:406 (R;US)

Evaluation of impacts and mitigation assessments for the UMTRA Project: Gunnison and Durango pilot studies: Final report, 94:1825 (R;US)

FY 1995 Remedial Investigation Work Plan for Waste Area Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:1965 (R;US)

Field-usable portable analyzer for chlorinated organic compounds, 94:528 (R;US)

Functions and requirements for single-shell tank leakage mitigation, 94:1428 (R;US)

Gas cylinder disposal pit remediation waste minimization and management, 94:712 (R;US)

Gunnison, Colorado subpile study report: Revision 1, 94:1767 (R;US)

High explosive spot test analyses of samples from Operable Unit (OU) 1111, 94:634 (R;US)

Improving revegetation success: Evaluation of several soil treatments, 94:1889 (R;US)

In situ construction of horizontal soil containment barrier at Fernald, 94:1854 (R;US)

In situ peroxidation of TCE contaminated soil, 94:428 (R;US)

In situ soil remediation using electrokinetics, 94:198 (R;US)

In-situ monitoring of actinides and rare earth elements by electrothermal hollow cathode discharge spectrometry: Technical progress report, 94:2489 (R;US)

Integration of pneumatic fracturing and in situ vitrification in the soil subsurface, 94:1877 (R;US)

La-oxides as tracers for PuO_2 to simulate contaminated aerosol behavior, 94:2469 (R;US)

Microscopic characterization of radionuclide contaminated soils to assist remediation efforts, 94:400 (R;US)

Preliminary characterization of the 100 area at Argonne National Laboratory, 94:410 (R;US)

Projects at the Component Development and Integration Facility: Quarterly technical progress report, January 1, 1994-March 31, 1994, 94:473 (R;US)

Proposed Plan for Interim Remedial Measures at the 100-BC-1 Operable Unit, 94:2001 (R;US)

Proposed plan for interim remedial measures at the 100-HR-2 Operable Unit. Draft A, 94:2014 (R;US)
 Real-time, in situ detection of ^{90}Sr and ^{238}U in soils via scintillating-fiber-sensor technology, 94:201 (R;US)
 Remediation of contaminated subsurface materials by a metal-reducing bacterium, 94:220 (R;US)
 Review of the Vortec soil remediation demonstration program, 94:527 (RA;US)
 Road Transportable Analytical Laboratory (RTAL) system, 94:501 (R;US)
 Selective, high-energy beta scintillation sensor for real-time, in situ characterization of uranium-238 and strontium-90, 94:200 (R;US)
 Site observational work plan for the UMTRA Project Site at Tuba City, Arizona, 94:1811 (R;US)
 Six-phase soil heating accelerates VOC extraction from clay soil, 94:206 (R;US)
 Soil Sampling Plan for the transuranic storage area soil overburden and final report: Soil overburden sampling at the RWMC transuranic storage area, 94:2486 (R;US)
 Summary report of a workshop on phytoremediation research needs, 94:469 (R;US)
 Task summary for cone penetrating testing sounding and soil and groundwater sampling Salmon Site, Lamar County, Mississippi, 94:2438 (R;US)
 Technologic transition to demonstration plan - in situ remediation by the gas treatment approach, 94:298 (R;US)
 Uranium in Soils Integrated Demonstration: Technology summary, March 1994, 94:464 (R;US)
 Uranium-contaminated soils: Ultramicrotomy and electron beam analysis, 94:403 (R;US)
 Use of mass spectrometric methods for field screening of VOC's, 94:699 (R;US)
 Vapor phase VOC transport in physically-mixed clay soils, 94:35 (R;US)

Corrosive Effects

Task E container corrosion studies: Annual report: Revision 1, 94:251 (R;US)

Coverings

Control of Eolian soil erosion from waste site surface barriers, 94:1873 (R;US)

Decontamination

100 Area soil washing: Bench scale tests on 116-F-4 pluto crib soil, 94:2650 (R;US)
 A Sandia National Laboratories decontamination and demolition success story, 94:2086 (R;US)
 A cost-effectiveness analysis of the in situ air stripping technology at the Savannah River Integrated Demonstration site: Part 1 and Part 2, 94:101 (R;US)
 Acoustically enhanced remediation of contaminated soil and ground water, 94:61 (R;US)
 Apparatus for in situ heating and vitrification, 94:2901 (P;US)
 Baseline risk assessment of ground water contamination at the inactive uriferous lignite ashing site near Belfield, North Dakota. Revision 1, 94:1771 (R;US)
 Bioremediation of contaminated groundwater, 94:386 (P;US)
 Chemotactic selection of pollutant degrading soil bacteria, 94:393 (P;US)
 Contaminant distributions at typical U.S. uranium milling facilities and their effect on remedial action decisions, 94:1728 (R;US)
 Decontamination Systems Information and Research Program: Quarterly report, July-September 1994, 94:520 (R;US)
 Decontamination Systems Information and Research Program: Quarterly technical progress report for period, April 1-June 30, 1994, 94:519 (R;US)
 Demonstration testing and evaluation of in situ soil heating. Health and safety plan (Revision 2), 94:70 (R;US)
 Demonstration testing and evaluation of in situ soil heating. Treatability study work plan (Revision 2), 94:69 (R;US)
 Demonstration testing and evaluation of in situ soil heating: Revision 1, Demonstration system design, 94:68 (R;US)
 Field test of six-phase soil heating at the Savannah River Site, 94:197 (R;US)

Idaho Operations Office: Technology summary, June 1994, 94:465 (R;US)
 In situ treatment of VOCs by recirculation technologies, 94:40 (R;US)
 Influence of attrition scrubbing, ultrasonic treatment, and oxidant additions on uranium removal from contaminated soils, 94:1720 (R;US)
 Innovative technologies for in-situ remediation, 94:246 (R;US)
 Laboratory evaluation of the hydrogen sulfide gas treatment approach for remediation of chromate-, uranium(VI)-, and nitrate-contaminated soils, 94:249 (R;US)
 Method of degrading pollutants in soil, 94:390 (P;US)
 Physicochemical and mineralogical characterization of transuranic contaminated soils for uranium soil integrated demonstration, 94:673 (R;US)
 Physicochemical and mineralogical characterization of uranium-contaminated soils from the Fernald Integrated Demonstration Site, 94:1721 (R;US)
 Prediction of single-component NAPL behavior for the TEVES Project using T2VOC, 94:714 (R;US)
 Projects at the Western Environmental Technology Office. Quarterly technical progress report, October 1-December 31, 1994, 94:474 (R;US)
 Proposed plan for interim remedial measures at the 100-DR-1 Operable Unit, Hanford Site, Richland, Washington. Draft A, 94:2002 (R;US)
 Proposed plan for interim remedial measures at the 100-HR-1 Operable Unit, Hanford Site, Richland, Washington. Draft A, 94:2003 (R;US)
 Protocol for VOC-Arid ID remediation performance characterization, 94:681 (R;US)
 Reductive dissolution approaches to removal of uranium from contaminated soils, 94:1864 (R;US)
 Reductive dissolution of uranium(VI) and iron(III) oxyhydroxides by dithionite and tiron, 94:1895 (BA;US)
 Results from the preliminary conveyor evaluation of the high-energy beta scintillation sensor at the Fernald Soil Decontamination Pilot Plant, 94:159 (R;US)
 Review of the Vortec soil remediation demonstration program, 94:511 (R;US)
 Surrogate testing for the pilot VAC*TRAX™ unit, 94:496 (R;US)
 Technology information profile: Long-Range Alpha Detector (LRAD), 94:108 (R;US)
 The effect of media composition on EDTA degradation by *Agrobacterium* sp., 94:380 (J;US)
 Uranium recovery from contaminated soil, 94:899 (BA;US)
 Uranium soils integrated demonstration, 1993 status, 94:2475 (R;US)
 Uranium soils integrated demonstration: Soil characterization project report, 94:93 (R;US)
 VAC*TRAX vacuum thermal desorption, 94:497 (R;US)
 Volatilization of cesium-137 from soil with chloride amendments during heating and vitrification, 94:2896 (J;US)

Degassing

Demonstration and evaluation of the pulsed ultraviolet-irradiation gas-treatment system, Savannah River Site, 94:23 (R;US)
 Passive vapor extraction feasibility study, 94:758 (R;US)

Devolatilization

Demonstration testing and evaluation of in situ heating of soil, 94:71 (R;US)
 Dual-gas tracers for subsurface characterization and NAPL detection, 94:221 (R;US)

Diffusion Barriers

In situ construction of horizontal soil containment barrier at Fernald, 94:1854 (R;US)

Drainage

The role of vegetation in barriers and the prediction of soil water dynamics, 94:376 (J;US)

Electric Currents

Transport of radioactive ions in soil by electrokinetics, 94:1874 (R;US)

Electric Heating

- Demonstration testing and evaluation of in situ soil heating: Treatability study work plan, Revision 1, 94:67 (R;US)
- Heating of solid earthen material, measuring moisture and resistivity, 94:391 (P;US)

Erosion

- Minimizing risk associated with shallow burial of waste in semi-arid ecosystems: Erosion and vegetation dynamics, 94:888 (BA;US)
- Slope and bank erosional stability of the Canonsburg, Pennsylvania, UMTRA disposal site, 94:1823 (R;US)

Erosion Control

- Control of Eolian soil erosion from waste site surface barriers, 94:1873 (R;US)

Fracturing

- Integration of pneumatic fracturing and in situ vitrification in the soil subsurface, 94:1877 (R;US)

Gamma Detection

- Field demonstrations of passive detectors for screening of alpha contaminated soils, 94:1723 (R;US)

Ground Cover

- The role of vegetation in barriers and the prediction of soil water dynamics, 94:376 (J;US)

Ground Disposal

- Off-gassing induced tracer release from molten basalt pools, 94:1844 (R;US)

Grouting

- In situ construction of horizontal soil containment barrier at Fernald, 94:1854 (R;US)
- In-situ containment and stabilization of buried waste: Annual report FY 1994, 94:1711 (R;US)

Heat Treatments

- Dynamic metal vaporization and binding during thermal treatment of metal-containing soil, 94:894 (BA;US)

Heating

- Demonstration testing and evaluation of in situ heating of soil, 94:71 (R;US)
- Demonstration testing and evaluation of in situ soil heating. Health and safety plan (Revision 2), 94:70 (R;US)
- Demonstration testing and evaluation of in situ soil heating. Treatability study work plan (Revision 2), 94:69 (R;US)
- Demonstration testing and evaluation of in situ soil heating: Revision 1, Demonstration system design, 94:68 (R;US)
- Erase—an integrated system for treating organic-contaminated sites, 94:202 (R;US)
- Six-phase soil heating accelerates VOC extraction from clay soil, 94:206 (R;US)
- Thermal enhanced vapor extraction systems: Design, application and performance prediction including contaminant behavior, 94:227 (R;US)
- Volatilization of cesium-137 from soil with chloride amendments during heating and vitrification, 94:2896 (J;US)

Hydraulic Conductivity

- A simulation study of infiltration into surficial sediments at the Subsurface Disposal Area, Idaho National Engineering Laboratory, 94:90 (R;US)
- Hydrostratigraphy and recharge distributions from direct measurements of hydraulic conductivity using the UFA™ method, 94:157 (R;US)
- Laboratory analysis of soil hydraulic properties of CDBM 2 and CDBM 3 samples, 94:103 (R;US)
- Subsurface stormflow modeling with sensitivity analysis using a Latin-hypercube sampling technique, 94:149 (R;US)

In-Situ Processing

- Application of in situ vitrification in the soil subsurface: Engineering-scale testing, 94:1871 (R;US)
- Demonstration of in situ-constructed horizontal soil containment barrier at Fernald, 94:1852 (R;US)
- Demonstration testing and evaluation of in situ soil heating: Treatability study work plan, Revision 1, 94:67 (R;US)
- Depth enhancement techniques for the in situ vitrification process, 94:1876 (R;US)

Land Pollution Control

- Vapor phase VOC transport in physically-mixed clay soils, 94:35 (R;US)

Laser Spectroscopy

- RCRA materials analysis by laser-induced breakdown spectroscopy: Detection limits in soils, 94:2502 (R;US)

Leaching

- Soil treatment to remove uranium and related mixed radioactive heavy metal contaminants: Quarterly technical progress report, April 1, 1994–June 30, 1994, 94:494 (R;US)

Microscopy

- Microscopic characterization of radionuclide contaminated soils to assist remediation efforts, 94:400 (R;US)

Moisture

- Biointrusion test plan for the Permanent Isolation Surface Barrier Prototype, 94:155 (R;US)
- Calibration of neutron moisture gauges and their ability to spatially determine soil water content in environmental studies, 94:97 (R;US)
- Comparison of neutron probe and time domain reflectometry techniques of soil moisture analysis, 94:1863 (R;US)
- The role of vegetation in barriers and the prediction of soil water dynamics, 94:376 (J;US)
- Use of the time domain reflectometry in hydraulic studies of multilayered landfill covers for closure of waste landfills at Los Alamos, New Mexico, 94:1862 (R;US)

Monitoring

- Remedial investigation report on Bear Creek Valley Operable Unit 2 (rust spoil area, spoil area 1, and SY-200 yard) at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee: Volume 2. Appendixes, 94:1963 (R;US)
- Remedial investigation work plan for Bear Creek Valley Operable Unit 1 (S-3 Ponds, Boneyard/Burnyard, Oil Landfarm, Sanitary Landfill I, and the Burial Grounds, including Oil Retention Ponds 1 and 2) at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee. Volume 1, Main text, 94:537 (R;US)

Permeability

- Field measurements of soil air permeability at the Chemical Waste Landfill, 94:226 (R;US)

Physical Properties

- Control of Eolian soil erosion from waste site surface barriers, 94:1873 (R;US)
- Laboratory analysis of soil hydraulic properties of CDBM 2 and CDBM 3 samples, 94:103 (R;US)
- Soil weight (lb/ft³) at Hanford waste storage locations (2 volumes), 94:1495 (R;US)

Plasma Heating

- The PRISM concept, 94:1725 (R;US)

Pollution

- Bioluminescent reporter bacteria detect contaminants in soil samples, 94:379 (J;US)
- Field-usable portable analyzer for chlorinated organic compounds, 94:510 (R;US)
- Physical and mathematical modeling of toluene diffusion and biodegradation in unsaturated sandy soil, 94:361 (BA;US)

Quantitative Chemical Analysis

- An assessment of high-energy explosives and metal contamination in soil at TA-67 (12), L-Site, and TA-14, Q-Site, 94:633 (R;US)

Radiation Monitoring

- Evaluation of soil radioactivity data from the Nevada Test Site, 94:2437 (R;US)
- Technology information profile: Long-Range Alpha Detector (LRAD), 94:108 (R;US)

Radiochemical Analysis

- Manual for implementing residual radioactive material guidelines using RESRAD, Version 5.0, 94:1911 (R;US)
- Radiochemical method development, 94:2381 (R;US)

Radioecological Concentration

Acceptance criteria for interim dry storage of aluminum-clad fuels, 94:2863 (R;US)

Evaluation of degradation during interim dry storage of aluminum-clad fuels, 94:2864 (R;US)

Overview of the spent nuclear fuel project at Hanford, 94:2633 (R;US)

Transitioning aluminum clad spent fuels from wet to interim dry storage, 94:2862 (R;US)

Encapsulation

Gas and liquid sampling for closed canisters in KW Basin - Work Plan, 94:2734 (R;US)

K Basins fuel encapsulation and storage hazard categorization, 94:2684 (R;US)

Environmental Impacts

Preliminary Hanford technical input for the Department of Energy programmatic spent nuclear fuel management and Idaho National Engineering Laboratory environmental restoration and waste management programs environmental impact statement, 94:2616 (R;US)

Inventories

Integrated spent nuclear fuel database system, 94:2481 (R;US)

Leaching

Behavior of spent fuel under unsaturated conditions, 94:2375 (R;US)

The effect of fuel type in unsaturated spent fuel tests, 94:37 (BA;US)

Management

Spent Nuclear Fuel Project technical baseline document. Fiscal year 1995: Volume 1, Baseline description, 94:2703 (R;US)

Spent nuclear fuel project integrated schedule plan, 94:2689 (R;US)

Maritime Transport

Radiological consequences of ship collisions that might occur in US ports during the shipment of foreign research reactor spent nuclear fuel to the US in break-bulk freighters, 94:3050 (R;US)

Report on the Workshop on Port Selection Criteria for Shipments of Foreign Research Reactor Spent Nuclear Fuel, 94:3046 (R;US)

Materials Handling

Hazards classification determination for PUREX fuel transfer to K-Basins, 94:2636 (R;US)

OSR encapsulation basis - 100-KW, 94:2708 (R;US)

Packaging

Hanford Spent Nuclear Fuel Project: Recommended path forward: Volume 2: Alternatives and path forward evaluation, 94:2614 (R;US)

Safety Evaluation for Packaging for the N Reactor/single pass reactor fuel characterization shipments, 94:2750 (R;US)

Performance Testing

Rationale for determining spent fuel acquisitions for repository testing, 94:2402 (BA;US)

Pyrochemical Reprocessing

Pyrochemical processing of DOE spent nuclear fuel, 94:2378 (R;US)

Pyrochemical recovery of actinide elements from spent light water reactor fuel, 94:2876 (BA;US)

Radiation Doses

Consolidated fuel shielding calculations, 94:2664 (R;US)

Radioactive Waste Disposal

105-KE Basin Pilot Run design plan, 94:2730 (R;US)

A concept to combine DOE waste minimization goals with commercial utility needs for a universal container system for spent nuclear fuel storage, transportation, and disposal, 94:2392 (BA;US)

Conditioning of spent nuclear fuel for permanent disposal, 94:2376 (R;US)

Durability testing of the high-capacity GA-4/GA-9 trailer, 94:2394 (BA;US)

Pyroprocessing oxide spent nuclear fuels for efficient disposal, 94:2377 (R;US)

Rationale for determining spent fuel acquisitions for repository testing, 94:2402 (BA;US)

White Paper: Multi-purpose canister (MPC) for DOE-owned spent nuclear fuel (SNF), 94:2856 (R;US)

Radioactive Waste Management

NEPA implementation: The Department of Energy's program to manage spent nuclear fuel, 94:2542 (R;US)

Spent Nuclear Fuel Project technical baseline document. Volumes 1-4, FY 1994, 94:2702 (R;US)

Radioactive Waste Processing

Idaho Chemical Processing Plant spent fuel and waste management technology development program plan: 1994 Update, 94:2859 (R;US)

Pyroprocessing oxide spent nuclear fuels for efficient disposal, 94:2377 (R;US)

Radioactive Waste Storage

105-KE basin pilot run relocation, 94:2687 (R;US)

Acceptance criteria for interim dry storage of aluminum-clad fuels, 94:2863 (R;US)

Evaluation of degradation during interim dry storage of aluminum-clad fuels, 94:2864 (R;US)

Gas liquid sampling for closed canisters in KW Basin: Test plan, 94:2718 (R;US)

Idaho Chemical Processing Plant spent fuel and waste management technology development program plan: 1994 Update, 94:2859 (R;US)

White Paper: Multi-purpose canister (MPC) for DOE-owned spent nuclear fuel (SNF), 94:2856 (R;US)

Remedial Action

Spent nuclear fuel project mission analysis report, 94:2608 (R;US)

Remote Handling

Test reports for K Basins vertical fuel handling tools, 94:2728 (R;US)

Reprocessing

Disposal of defense spent fuel and HLW from the Idaho Chemical Processing Plant, 94:2393 (BA;US)

Dramatic change at T Plant, 94:2103 (R;US)

Road Transport

Durability testing of the high-capacity GA-4/GA-9 trailer, 94:2394 (BA;US)

Sampling

An assessment of KW Basin radionuclide activity when opening SNF canisters, 94:2675 (R;US)

SPENT FUELS

Sampling

Gas and liquid sampling for closed canisters in the K-West Basin, 94:2679 (R;US)
Sampling and Analysis Plan for canister liquid and gas sampling at 105-KW fuel storage basin, 94:2692 (R;US)
Spent nuclear fuel sampling strategy, 94:2704 (R;US)

Separation Processes

Conditioning of spent nuclear fuel for permanent disposal, 94:2376 (R;US)

Spent Fuel Storage

A systems engineering analysis to examine the economic impact for treatment of tritiated water in the Hanford KE-Basin, 94:2559 (R;US)
Comparison of dry and wet methods to store spent nuclear fuel, 94:2849 (R;US)
Gas/liquid sampler for closed canisters in KW Basin - test report, 94:2727 (R;US)
In situ characterization of metal fuel stored in the Hanford K Basins, 94:2631 (R;US)
Radioactive scrap metal market study: Use of RSM by electric utility industry for spent fuel storage, 94:2282 (R;US)
Sampling and Analysis Plan for canister liquid and gas sampling at 105-KW fuel storage basin, 94:2692 (R;US)
Waste Management and Remedial Action Division programs and facilities report, 94:655 (R;US)

Stabilization

Hanford Spent Nuclear Fuel Project recommended path forward, 94:2613 (R;US)
Hanford Spent Nuclear Fuel Project: Recommended path forward: Volume 2: Alternatives and path forward evaluation, 94:2614 (R;US)
Overview of the spent nuclear fuel project at Hanford, 94:2633 (R;US)

Transport

Engineering study: 105KE to 105KW Basin fuel and sludge transfer. Final report, 94:310 (R;US)
Hanford Spent Nuclear Fuel Project: Recommended path forward: Volume 2: Alternatives and path forward evaluation, 94:2614 (R;US)

Waste Disposal

Waste Management and Remedial Action Division programs and facilities report, 94:655 (R;US)

Waste Forms

The effect of fuel type in unsaturated spent fuel tests, 94:37 (BA;US)

Waste Processing

Hanford Spent Nuclear Fuel Project recommended path forward, 94:2613 (R;US)

Waste Retrieval

K Basin sludge retrieval assay evaluation, 94:2676 (R;US)

Waste Transportation

A concept to combine DOE waste minimization goals with commercial utility needs for a universal container system for spent nuclear fuel storage, transportation, and disposal, 94:2392 (BA;US)

Transportation capabilities study of DOE-owned spent nuclear fuel, 94:2040 (R;US)

Transportation impact analysis for shipment of irradiated N-reactor fuel and associated materials, 94:2074 (R;US)

SPENT LIQUORS

Test plan for non-radioactive testing of vertical calciner for development of direct denitration conversion of Pu-bearing liquors to stable, storage solids, 94:2152 (R;US)

SPIN-OFF

See TECHNOLOGY TRANSFER

SPOIL BANKS

Baseline risk assessment of ground water contamination at the Uranium Mill Tailings Site at Grand Junction, Colorado: Revision 1, 94:1765 (R;US)

Baseline risk assessment of ground water contamination at the inactive uriferous lignite ashing site near Belfield, North Dakota. Revision 1, 94:1771 (R;US)

Site observational work plan for the UMTRA Project site at Spook, Wyoming, 94:1805 (R;US)

SPRAY COATING

Magnetically controlled deposition of metals using gas plasma. Quarterly progress report, July 1994-September 1994, 94:476 (R;US)

SPRINGS (WATER)

See WATER SPRINGS

STABILITY

Sludge stabilization operability test report, 94:1106 (R;US)

STACK DISPOSAL

Real-Time Monitoring of Alpha Emissions. Final report, FY 1994, 94:647 (R;US)

STACKS

296-B-5 Stack monitoring and sampling system annual system assessment report, 94:2825 (R;US)

Acceptance test procedure for the 340-NT-EX stack upgrades. Project W-337, 94:2770 (R;US)

SY tank farm ventilation inlet filters and inlet stack acceptance for beneficial use, 94:1202 (R;US)

Seismic (SSE) evaluation for the 291Z stack at the Hanford Site - Addition of environmental monitoring penetrations, 94:2130 (R;US)

Seismic qualification of ventilation stack, 94:2108 (R;US)

Technical description of Stack 296-B-5, 94:1372 (R;US)

STAINLESS STEEL-18-4-1

See STAINLESS STEELS

STAINLESS STEEL-19-9DL

See STAINLESS STEELS

STAINLESS STEEL-310

Sludge stabilization boat material test plan, 94:2153 (R;US)

STAINLESS STEELS

Corrosion evaluation of fuel canister crusher rigging, 94:2223 (R;US)

M.A. Streicher findings regarding high-level waste tank corrosion issues, 94:1501 (R;US)

Refining technology for the recycling of stainless steel radioactive scrap metals, FY 94 bi-annual report, 94:2284 (R;US)

STATIONARY POLLUTANT SOURCES

Detection of emission sources using passive-remote Fourier transform infrared spectroscopy, 94:2371 (R;US)

STATISTICAL MODELS

Geostatistical applications in environmental remediation, 94:2473 (R;US)

STEAM GENERATION PLANTS

State Waste Discharge Permit application: 200-E Powerhouse Ash Pit, 94:571 (R;US)

State Waste Discharge Permit application: 200-W Powerhouse Ash Pit, 94:572 (R;US)

STORAGE FACILITIES
Supplemental design requirements document, Multifunction Waste Tank Facility, Project W-236A. Revision 1, 94:1151 (R;US)

Administrative Procedures
High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 1, 94:1042 (R;US)

Air Samplers
In situ sampling device development engineering task plan, 94:1402 (R;US)

Auxiliary Systems
Operability test procedure for 244-U DCRT. Revision 1, 94:1113 (R;US)

Compressors
Work plan for upgrading the 241-A-701 compressed air system and motor control center. Revision 1, 94:1656 (R;US)

Computerized Control Systems
Computer system requirements specification for 101-SY hydrogen mitigation test project data acquisition and control system (DACS-1), 94:1266 (R;US)
DACS upgrade acceptance test report, 94:1246 (R;US)

Containment
Regulatory analysis for the use of underground barriers at the Hanford Site tank farms, 94:1108 (R;US)

Containment Systems
Performance and risk assessment of subsurface barriers for single-shell tank waste retrieval, 94:1095 (R;US)

Control Rooms
Work plan for upgrading the 241-A-701 compressed air system and motor control center. Revision 1, 94:1656 (R;US)

Cooling Systems
Multi-Function Waste Tank Facility thermal hydraulic analysis for Title II design, 94:1140 (R;US)

Data Acquisition Systems
Computer system requirements specification for 101-SY hydrogen mitigation test project data acquisition and control system (DACS-1), 94:1266 (R;US)
DACS upgrade acceptance test report, 94:1246 (R;US)
GMS/DACS interface acceptance test report, 94:1250 (R;US)
Work plan for transition of SY-101 hydrogen mitigation test project data acquisition and control system (DACS-1), 94:1657 (R;US)

Decommissioning
309 Building transition plan, 94:2230 (R;US)
INEL integrated spent nuclear fuel consolidation task team report, 94:2855 (R;US)

Design
Conceptual design report, Sodium Storage Facility, Fast Flux Test Facility, Project F-031, 94:2169 (R;US)
Design review plan for Multi-Function Waste Tank Facility (Project W-236A), 94:1148 (R;US)
Evaluation of degradation during interim dry storage of aluminum-clad fuels, 94:2864 (R;US)
Fast Flux Test Facility, Sodium Storage Facility project-specific project management plan, 94:2167 (R;US)

Kaiser Engineers Hanford internal position paper – Project W-236A, Multi-function Waste Tank Facility – Peer reviews of selected activities, 94:1154 (R;US)
Project W-236A, work plan for preparation of a design requirements document, 94:1165 (R;US)

Emergency Plans
Action plan for response to excessive temperature in high heat source waste tank 241-C-106 at the Hanford site: Revision 1, 94:1028 (R;US)
Double shell tanks emergency pumping plan, 94:1217 (R;US)
Solid Waste Burial Grounds/Central Waste Complex hazards assessment, 94:2201 (R;US)
Tank farms hazards assessment, 94:2204 (R;US)

Engineering Drawings
616 Nonradioactive Dangerous Waste Storage Facility – Essential/support drawing list: Revision 2, 94:860 (R;US)
Engineering drawing field verification program: Revision 3, 94:1652 (R;US)

Environmental Impacts
High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 7. Revision 1, 94:1048 (R;US)

Equipment Interfaces
Recommendation on changing interfaces of W-058 and W-236A, 94:1152 (R;US)

Evaluation
Hanford Site existing irradiated fuel storage facilities description, 94:2711 (R;US)
Kaiser Engineers Hanford internal position paper – Project W-236A, Multi-function Waste Tank Facility – Peer reviews of selected activities, 94:1154 (R;US)

Failure Mode Analysis
Risk assessment of CST-7 proposed waste treatment and storage facilities Volume I: Limited-scope probabilistic risk assessment (PRA) of proposed CST-7 waste treatment & storage facilities. Volume II: Preliminary hazards analysis of proposed CST-7 waste storage & treatment facilities, 94:643 (R;US)

Fault Tree Analysis
Risk assessment of CST-7 proposed waste treatment and storage facilities Volume I: Limited-scope probabilistic risk assessment (PRA) of proposed CST-7 waste treatment & storage facilities. Volume II: Preliminary hazards analysis of proposed CST-7 waste storage & treatment facilities, 94:643 (R;US)

Gamma Logging
Radionuclide logging of Tank 216-T-106, borehole 299-W10-196, 94:291 (R;US)

Gas Analysis
Quarterly report on the ferrocyanide safety program for the period ending December 31, 1994, 94:1033 (R;US)

Gas Compressors
Acceptance test report for 241-AW process air system, 94:1240 (R;US)

Grouting
Innovative grout/retrieval demonstration final report, 94:1855 (R;US)

Health Hazards
Tank farm health and safety plan. Revision 2, 94:1431 (R;US)

Inspection
B Plant Complex generator dangerous waste storage areas inspection plan: Revision 1, 94:2806 (R;US)

Leaks
Mission analysis report for single-shell tank leakage mitigation, 94:1433 (R;US)
Radionuclide logging of Tank 216-T-106, borehole 299-W10-196, 94:291 (R;US)

Level Indicators
Test plan for Enraf Series 854 level gauge testing in Tank 241-S-106, 94:1571 (R;US)

Lighting Systems
Acceptance test procedure for Project W-280, 94:1172 (R;US)

STORAGE FACILITIES

Maintenance

Maintenance

- High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), 94:1044 (R;US)
- Operability Test Report for 241-T compressed air system and heat pump, 94:1445 (R;US)
- Waste sampling and characterization facility (WSCF), 94:872 (R;US)

Management

- Configuration Management Plan for K Basins, 94:2213 (R;US)

Manuals

- Tank characterization reference guide, 94:1522 (R;US)

Material Balance

- Material balance software for 242A Evaporator and tank farms. Revision 2, 94:1269 (R;US)

Materials Handling Equipment

- Project W-151 development work plan for: Tank AZ-101 riser mapping tool and data acquisition system, 94:1134 (R;US)

Measuring Instruments

- Software quality assurance plan for void fraction instrument, 94:1466 (R;US)

Mechanical Tests

- Results of falling barrier analyses, 94:2701 (R;US)

Mixing

- Jet mixing long horizontal storage tanks, 94:674 (R;US)

Monitoring

- Acceptance/operational test procedure 241-AN-107 Video Camera System, 94:1442 (R;US)
- Engineering task plan for BX/BY compressor upgrade, 94:1401 (R;US)
- Gas/liquid sampler for closed canisters in KW Basin - test report, 94:2727 (R;US)

Occupational Safety

- High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 7. Revision 1, 94:1048 (R;US)

On-Line Measurement Systems

- Position paper - Tank temperature element location (Multi-Function Waste Tank Facility), 94:1160 (R;US)

Permit Applications

- Hanford facility dangerous waste permit application, 616 Nonradioactive Dangerous Waste Storage Facility: Revision 2A, 94:558 (R;US)

Planning

- Configuration Management Plan for K Basins, 94:2213 (R;US)
- Management plan - Multi-Function Waste Tank Facility. Revision 1, 94:1147 (R;US)

Pneumatic Controllers

- Operational test procedure for Bldg 241-A-701 air compressor, 94:2252 (R;US)

Pumps

- Analysis of BY-106 pump pit cover plate, 94:1279 (R;US)
- Factory Acceptance Test Procedure Westinghouse 100 ton Hydraulic Trailer, 94:1234 (R;US)
- Operability test procedure [Tank] 241-SY-101 equipment removal system, 94:1444 (R;US)

Radiation Doses

- Central waste complex Dose Equivalent Curie estimate for packages not included in building inventory, 94:1536 (R;US)

Radiation Monitoring

- 340 Waste Handling Facility comparison with 40 CFR 61, Subpart H, and other referenced guidelines for stack 340-NT-EX. Revision 1, 94:2596 (R;US)
- Evaluating airborne radionuclide concentrations in the tank farms, 94:1542 (R;US)
- OTP for 244-U radiation monitoring system. Revision 1, 94:1114 (R;US)
- Position paper - Continuous air monitor (CAM) acquisition recommendation (Multi-Function Waste Tank Facility), 94:1161 (R;US)

Radioactive Waste Management

- High level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 6, 94:1047 (R;US)
- High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 1, 94:1042 (R;US)
- High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 2, 94:1043 (R;US)
- High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 4, 94:1045 (R;US)

Remedial Action

- An integrated systems approach to remote retrieval of buried transuranic waste using a telerobotic transport vehicle, innovative end effector, and remote excavator, 94:1858 (R;US)
- Clean Salt integrated flowsheet, 94:1324 (R;US)
- Configuration management plan for waste tank farms and the 242-A evaporator of tank waste remediation system, 94:1254 (R;US)
- Design and experimental evaluation of flexible manipulator control algorithms, 94:2310 (R;US)
- Development and testing of single-shell tank waste retrieval technologies: Milestone M-45-01 summary report, 94:1066 (R;US)
- Development of a multi-functional scarifier dislodger with an integral pneumatic conveyance retrieval system for single-shell tank remediation. FY93 summary report, 94:958 (R;US)
- Enhanced sludge washing evaluation plan, 94:1064 (R;US)
- Extensive separations (CLEAN) processing strategy compared to TRUEX strategy and sludge wash ion exchange, 94:1059 (R;US)
- Feasibility study of tank leakage mitigation using subsurface barriers, 94:1384 (R;US)
- Functions and requirements for Project W-236B, Initial Pretreatment Module: Revision 1, 94:1169 (R;US)
- Functions and requirements for tank farm restoration and safe operations, Project W-314. Revision 3, 94:1175 (R;US)
- Gas/liquid sampler for closed canisters in KW Basin - test report, 94:2727 (R;US)
- Global modeling of Hanford tank waste pretreatment alternatives within a total cleanup system using ASPEN PLUS™, 94:1082 (R;US)
- Hanford Tank Farm interim storage phase probabilistic risk assessment outline, 94:934 (R;US)
- Hydraulic impact end effector final test report: Automation and robotics section, ER/WM-AT Program, 94:2350 (R;US)
- Hydrothermal processing of Hanford tank wastes: Process modeling and control, 94:944 (R;US)
- Hydrothermal processing of inorganic components of Hanford tank sludge, 94:945 (R;US)
- Imaging through obscurations for sluicing operations in the waste storage tanks, 94:2529 (R;US)
- Innovative grout/retrieval demonstration final report, 94:1855 (R;US)
- Interim data quality objectives for waste pretreatment and vitrification: Revision 1, 94:1318 (R;US)
- Mission analysis report for single-shell tank leakage mitigation, 94:1433 (R;US)
- Parametric design using IGRIP, 94:2338 (R;US)
- Performance and risk assessment of subsurface barriers for single-shell tank waste retrieval, 94:1095 (R;US)
- Pilot-scale production of grout with simulated double-shell slurry feed: Final report, 94:680 (R;US)
- Position paper, need for additional waste storage capacity and recommended path forward for project W-236a, Multi-function Waste Tank Facility, 94:1141 (R;US)
- Preliminary design requirements document (DRD) for Project W-236B, "Initial Pretreatment Module", 94:1166 (R;US)
- Preliminary flowsheet: Ion exchange for separation of cesium from Hanford tank waste using resorcinol-formaldehyde resin, 94:1519 (R;US)

Preliminary time-phased TWRS process model results, 94:1541 (R;US)

Raman spectroscopy peer review report, 94:1057 (R;US)

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), 94:1044 (R;US)

Seismic Effects

Kaiser Engineers Hanford internal position paper - Project W-236A, Multi-function Waste Tank Facility - Peer reviews of selected activities, 94:1154 (R;US)

Site Selection

INEL storage facility for sealed sources from the commercial sector, 94:492 (R;US)

Specifications

Design criteria tank farm storage and staging facility: Revision 1, 94:1198 (R;US)

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), 94:1044 (R;US)

Stacks

SY tank farm ventilation inlet filters and inlet stack acceptance for beneficial use, 94:1202 (R;US)

Standards

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 1, 94:1042 (R;US)

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 2, 94:1043 (R;US)

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 4, 94:1045 (R;US)

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 5, 94:1046 (R;US)

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 7. Revision 1, 94:1048 (R;US)

Static Loads

Soil load above Hanford waste storage tanks (2 volumes), 94:1533 (R;US)

Temperature Control

Position paper - Tank heat loading. Revision 1, 94:1159 (R;US)

Position paper - Waste storage tank heat removal, 94:1153 (R;US)

Temperature Monitoring

Quarterly report on the ferrocyanide safety program for the period ending December 31, 1994, 94:1033 (R;US)

Thermal Analysis

FFTF horizontal sodium storage tank preliminary thermal analysis, 94:2172 (R;US)

FFTF vertical sodium storage tank preliminary thermal analysis, 94:2173 (R;US)

Ventilation

SY tank farm ventilation inlet filters and inlet stack acceptance for beneficial use, 94:1202 (R;US)

Ventilation Systems

Descriptions and diagrams of the primary and annulus ventilation systems of the double-shell tank farms as of January 1988, 94:1508 (R;US)

Design basis and requirements for 241-SY modular exhaust mechanical installation, 94:1289 (R;US)

Position paper - Tank heat loading. Revision 1, 94:1159 (R;US)

Position paper - Tank ventilation system design air flow rates, 94:1156 (R;US)

Position paper - Waste storage tank heat removal, 94:1153 (R;US)

Work plan for new SY tank farm exhaust, on-site fabrication activities, 94:1664 (R;US)

Viscosimeters

Software quality assurance plan for viscometer, 94:1465 (R;US)

Waste Retrieval

1/12-Scale scoping experiments to characterize double-shell tank slurry uniformity: Test plan, 94:957 (R;US)

STORAGE FACILITIES

Waste Retrieval

Design and experimental evaluation of flexible manipulator control algorithms, 94:2310 (R;US)

Development and testing of single-shell tank waste retrieval technologies: Milestone M-45-01 summary report, 94:1066 (R;US)

Innovative grout/retrieval demonstration final report, 94:1855 (R;US)

Large-scale demonstration test plan for digface data acquisition system, 94:628 (R;US)

Preliminary fire hazards analysis for W-211, Initial Tank Retrieval Systems, 94:1138 (R;US)

Preliminary safety equipment list for Tank 241-C-106 Manipulator Retrieval System, Project W-340, 94:1196 (R;US)

Risk and cost tradeoffs for remote retrieval of buried waste, 94:623 (R;US)

Safety equipment list for 241-C-106 waste retrieval, Project W-320: Revision 1, 94:1494 (R;US)

Simulation analysis of control strategies for a tank waste retrieval manipulator system, 94:2308 (R;US)

STRAIN GAGES

Development and evaluation of measurement devices used to support testing of radioactive material transportation packages, 94:2048 (IA;JP)

STRATEGIC PETROLEUM RESERVE

Groundwater flow velocity measurements in a sinkhole at the Weeks Island Strategic Petroleum Reserve Facility, Louisiana, 94:238 (R;US)

STREAMS

Geomorphic stability field reconnaissance site visit, Canonsburg, Pennsylvania, December 1992. Final report, 94:1732 (R;US)

Results of the quarterly tritium survey of Fourmile Branch and its seep lines in the F- and H-Areas of SRS: September 1993. Revision 1, 94:344 (R;US)

Slope and bank erosional stability of the Canonsburg, Pennsylvania, UMTRA disposal site, 94:1823 (R;US)

Streamflow, specific-conductance, and temperature data for Bayou and Little Bayou Creeks near Paducah, Kentucky, August 15 and 16, 1989, 94:66 (R;US)

STRESS ANALYSIS

Analysis of lifting beam and redesigned lifting lugs for 241-AZ-01A decant pump, 94:1285 (R;US)

Integration of numerical analysis tools for automated numerical optimization of a transportation package design, 94:2085 (R;US)

Stress analysis of jacks, frame and bearing connections, and drill rod for core sampler truck No. 2, 94:1369 (R;US)

STRONTIUM

Cobalt dicarbollide containing polymer resins for cesium and strontium uptake, 94:2500 (R;US)

Extraction of strontium from acidic nitrate media using a modified PUREX solvent, 94:2956 (J;US)

Faster, cheaper radioanalytical methods, 94:2382 (R;US)

High-capacity, selective solid sequestrants for innovative chemical separation: Inorganic ion exchange approach, 94:2929 (R;US)

Isomer effects on the complexation of metal ions by crown ethers, 94:2887 (BA;US)

Liquid chromatographic extraction medium, 94:2963 (P;US)

Organic destruction to enhance the separation of strontium in radioactive wastes, 94:698 (R;US)

Organic destruction to enhance the separation of strontium in radioactive wastes, 94:1684 (BA;US)

Process for the extraction of strontium from acidic solutions, 94:2962 (P;US)

Radiochemical method development, 94:2381 (R;US)

Review and assessment of technologies for the separation of strontium from alkaline and acidic media, 94:959 (R;US)

Utilization of dicarbollides and crown ethers for the aqueous biphasic extraction of radionuclides from salt solutions, 94:1698 (BA;US)

Waste treatment process for removal of contaminants from aqueous, mixed-waste solutions using sequential chemical

treatment and crossflow microfiltration, followed by dewatering, 94:913 (P;US)

STRONTIUM 90

Beta Detection

Scintillating-fiber technology for the detection of strontium-90 and uranium-238, 94:195 (R;US)

Coprecipitation

Strontium removal from caustic carbonate waste solutions using carrier coprecipitation, 94:2912 (R;US)

Detection

Direct measurement of strontium-90 and uranium-238 in soils on a real-time basis: 1994 summary report, 94:186 (R;US)

Environmental Transport

Letter report for modeling evaluation of N-Springs barrier and pump-and-treat systems. Draft A, 94:86 (R;US)

The cascade of reservoirs of the "Mayak" Plant: Case history and the first version of a computer simulator, 94:3019 (R;US)

Extraction

Web technology in the separation of strontium and cesium from INEL-ICPP radioactive acid waste (WM-185), 94:2922 (R;US)

Materials Recovery

Project management plan, N Springs expedited response action, 94:278 (R;US)

Radiation Monitoring

1995 Study and evaluation of fugitive and diffuse emissions from the 200 East Area at the Hanford Site, 94:2166 (R;US)

Selective, high-energy beta scintillation sensor for real-time, in situ characterization of uranium-238 and strontium-90, 94:200 (R;US)

Radioecological Concentration

A preliminary investigation of the existence of radiocolloids in leachate from the NRC field lysimeter investigations, 94:378 (J;US)

Removal

100-BC-5 operable unit focused feasibility study report. Draft A, 94:1992 (R;US)

Bench-scale treatability studies for simulated incinerator scrubber blowdown containing radioactive cesium and strontium, 94:2917 (R;US)

Cobalt dicarbollide containing polymer resins for cesium and strontium uptake, 94:2888 (BA;US)

Development of a passive-flow treatment system for ⁹⁰Sr-contaminated seep water at Waste Area Grouping 5 at Oak Ridge National Laboratory, 94:137 (R;US)

Electrochemical treatment of alkaline nuclear wastes, 94:2948 (BA;US)

Removal action work plan for Corehole 8 in Waste Area Grouping 1 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 94:142 (R;US)

Soil treatment to remove uranium and related mixed radioactive heavy metal contaminants. Seventh quarterly technical progress report, July 1, 1994–September 30, 1994, 94:495 (R;US)

Risk Assessment

Limited field investigation report for the 100-BC-5 Operable Unit, 94:78 (R;US)

Separation Processes

Laboratory development of methods for centralized treatment of liquid low-level waste at Oak Ridge National Laboratory, 94:671 (R;US)

Transport

Documentation for first annual testing and inspections of Beneficial Uses Shipping System (BUSS) Cask, 94:2822 (R;US)

Documentation for fiscal year 1995 annual BUSS cask SARP testing and inspections, 94:2823 (R;US)

Documentation for initial testing and inspections of Beneficial Uses Shipping System (BUSS) Cask, 94:2821 (R;US)

STRUCTURAL BEAMS

Shot loading platform analysis, 94:1182 (R;US)

Spool assembly support analysis, 94:1181 (R;US)

Waste Tank Vapor Project: Enhancements to the PNL SUMMATM analytical laboratory tank organic vapor support task, 94:179 (R;US)

Gases

Integral TRU measurements in Hanford waste tanks using gas analysis, 94:1081 (R;US)

SY Tank Farm ventilation isolation option risk assessment report, 94:1036 (R;US)

Gaskets

MWTF jumper connector integral seal block development and leak testing, 94:1645 (R;US)

Grouting

Description of the grout system dynamic simulation, 94:1076 (R;US)

TANKS

Heat Pumps

Heat Pumps

Acceptance Test Report for 241-U compressed air system, 94:1242 (R;US)

Historical Aspects

The Sort on Radioactive Waste Type model: A method to sort single-shell tanks into characteristic groups, 94:963 (R;US)

Hot Spots

Cesium uptake capacity of simulated ferrocyanide tank waste. Interim report FY 1994, Ferrocyanide Safety Project, 94:988 (R;US)

Hydraulics

Multi-Function Waste Tank Facility thermal hydraulic analysis for Title II design, 94:1140 (R;US)

Identification Systems

TMACS I/O termination point listing. Revision 1, 94:1515 (R;US)

Images

Historical tank content estimate for the northwest quadrant of the Hanford 200 West Area, 94:1342 (R;US)

In-Service Inspection

Inspection system performance test procedure, 94:1235 (R;US)

Induction Logging

Liquid Observation Well (LOW) Functional Design, 94:1426 (R;US)

Information

Tank farms essential and support drawing plan. Revision 6, 94:1450 (R;US)

Inspection

Acceptance Test Report for 241-U compressed air system, 94:1242 (R;US)

Analysis of the flexible receiver lifting yoke and blast shield assembly. Tank 241SY101, 94:1274 (R;US)

Control system design for robotic underground storage tank inspection systems, 94:2355 (R;US)

Design criteria for the light duty utility arm system end effectors, 94:2358 (R;US)

Development of a High Level Waste Tank Inspection System, 94:1679 (R;US)

Engineering study - installation of new risers in Single-Shell Tanks, 94:1383 (R;US)

Inventory of Tank Farm equipment stored or abandoned above-ground, 94:1420 (R;US)

Light Duty Utility Arm System applications for tank waste remediation, 94:1101 (R;US)

Single Shell Tank Waste Characterization Project for Tank B-110, Core 9 - data package and PNL validation summary report, 94:324 (R;US)

Underground tank assessment using Hanford's light-duty utility arm system, 94:1701 (J;US)

Installation

Design/Installation and Structural Integrity assessment of Bethel Valley Low-Level Waste Collection and Transfer System upgrade for Building 2649 (Transported Waste Receiving Facility) at Oak Ridge National Laboratory, 94:550 (R;US)

Design/installation and structural integrity assessment under the Federal Facility Agreement for Bethel Valley Low-Level Waste Collection and Transfer System upgrade for Building 2026 (High Radiation Level Analytical Laboratory) and Building 2099 (Monitoring and Control Station) at Oak Ridge National Laboratory, 94:548 (R;US)

Inventories

Statistical characterization report for Single-Shell Tank 241-T-104, 94:1530 (R;US)

Supporting document for the historical tank content estimate for A Tank Farm, 94:1329 (R;US)

Supporting document for the historical tank content estimate for B Tank Farm, 94:1331 (R;US)

Supporting document for the historical tank content estimate for BY Tank Farm, 94:1333 (R;US)

Supporting document for the historical tank content estimate for S tank farm, 94:1335 (R;US)

Tank Farm surveillance and waste status summary report for February 1994, 94:1024 (R;US)

Leak Detectors

Selection of ENRAF gauge wire material compatible with the Hanford waste tank environment, 94:1475 (R;US)

Leak Testing

Acceptance test procedure, 241-SY-101 Flexible Receiver System, Phase III testing, 94:1227 (R;US)

Annual status report on Federal Facility Agreement compliance for the Liquid Low-Level Waste tank systems at Oak Ridge National Laboratory, 94:547 (R;US)

Detailed Leak Detection Test Plan and schedule for the Oak Ridge National Laboratory liquid low-level waste active pipelines, 94:539 (R;US)

Implementation plan for Liquid Low-Level Radioactive Waste Tank Systems at Oak Ridge National Laboratory under the Federal Facility Agreement, Oak Ridge, Tennessee, 94:543 (R;US)

Leak testing plan for the Oak Ridge National Laboratory liquid low-level waste systems (active tanks): Revision 2. Volume 1: Regulatory background and plan approach; Volume 2: Methods, protocols, and schedules; Volume 3: Evaluation of the ORNL/LT-823DP differential pressure leak detection method; Appendix to Revision 2: DOE/EPA/TDEC correspondence, 94:661 (R;US)

New methods for determination of interstitial liquid levels in Hanford waste tanks, 94:1097 (R;US)

Selection of liquid-level monitoring method for the Oak Ridge National Laboratory inactive liquid low-level waste tanks, remedial investigation/feasibility study, 94:660 (R;US)

Technical bases for leak detection surveillance of waste storage tanks. Revision 1, 94:1512 (R;US)

Leaks

Feasibility study of tank leakage mitigation using subsurface barriers. Revision 1, 94:1385 (R;US)

Laboratory evaluation of performance and durability of polymer grouts for subsurface hydraulic/diffusion barriers. Informal report, October 1993-May 1994, 94:1713 (R;US)

Operational test report for WESF diesel generator diesel tank installation, 94:1448 (R;US)

Preliminary analysis of tank 241-C-106 dryout due to large postulated leak and vaporization, 94:1069 (R;US)

Single-shell tank leak emergency pumping guide. Revision 5, 94:1215 (R;US)

Subsurface barrier demonstration test strategy and performance specification, 94:1496 (R;US)

Level Indicators

TMACS Test Procedure TP007: System administration, 94:1632 (R;US)

TMACS Test Procedure TP008: SACS Interface: Revision 5, 94:1633 (R;US)

TMACS Test Procedure TP011: Panalarm Interface, 94:1638 (R;US)

Test plan for Enraf Series 854 level gauge wire testing, 94:1573 (R;US)

Wet/dry sounding reel tape. Final report, 94:2873 (R;US)

Levels

Evaluation of pressure transducers to measure surface level in the waste storage tanks, 94:2526 (R;US)

Level maintenance for Tank 101-SY mitigation-by-mixing test. Revision 2, 94:1620 (R;US)

Level trend analysis summary report for Oak Ridge National Laboratory inactive liquid low-level waste tanks, 94:656 (R;US)

Maximum surface level and temperature histories for Hanford waste tanks, 94:1514 (R;US)

New methods for determination of interstitial liquid levels in Hanford waste tanks, 94:1097 (R;US)

Test plan for the selection of the ENRAF gauge wire material, 94:1585 (R;US)

Wind and seismic analysis for liquid-level gauge support, 94:1270 (R;US)

Liners

Characterization of the corrosion behavior of the carbon steel liner in Hanford Site single-shell tanks, 94:1051 (R;US)

Load Analysis

Accelerated safety analyses - structural analyses Phase I - structural sensitivity evaluation of single- and double-shell waste storage tanks, 94:1480 (R;US)

Maintenance

Acceptance Test Report for 241-U compressed air system, 94:1242 (R;US)

Life-cycle cost analysis 200-West Weather Enclosure: Multi-function Waste Tank Facility, 94:1143 (R;US)

MWTF jumper connector integral seal block development and leak testing, 94:1645 (R;US)

Reliability analysis and design guidelines for the 101SY VDDT vent header flow and dome/vent header pressure measurement trip circuitry. Final draft, 94:935 (R;US)

Surveillance and maintenance plan for the inactive liquid low-level waste tanks at Oak Ridge National Laboratory, 94:659 (R;US)

Test report for run-in acceptance testing of hydrogen mitigation test pump-2, 94:1115 (R;US)

Waste tank 241-C-106 comprehensive cooling design summary report, 94:1474 (R;US)

Management

Engineering management of Underground Storage Tank up-grades and installations, 94:914 (R;US)

Materials

Material selection for Multi-Function Waste Tank Facility tanks, 94:1144 (R;US)

Mechanical Properties

241-AP waste storage tanks: Supplemental gravity load analysis: Volume 1, 94:1207 (R;US)

Interim storage of sodium in ferritic steel tanks at ambient temperature, 94:2171 (R;US)

Mixing

Jet mixing long horizontal storage tanks, 94:674 (R;US)

Modifications

Dose rate analysis for Tank 101 AZ (Project W151), 94:1133 (R;US)

Recommendation for sanitary waste water system replacement, 222-S, 94:837 (R;US)

Reliability analysis and design guidelines for the 101SY VDDT vent header flow and dome/vent header pressure measurement trip circuitry. Final draft, 94:935 (R;US)

Monitoring

101-SY Dome pressure issues surrounding mitigation pump decontamination during removal, 94:1397 (R;US)

Acceptance test procedure for the 241-SY-101 flexible receiver gamma detector system, 94:1231 (R;US)

Acceptance test report for tank bottom thermocouples on Tank 241-SY-101, 94:1243 (R;US)

Acquisition and reduction of data obtained from tank 101-SY in-situ ball rheometer, 94:172 (R;US)

An assessment of the dilution required to mitigate Hanford tank 241-SY-101, 94:2923 (R;US)

Analysis and characterization of double shell tank 241-AP-108, 94:1293 (R;US)

B Plant low level waste system integrity assessment plan, 94:868 (R;US)

Chemical compatibility of tank wastes in 241-C-106, 241-AY-101, and 241-AY-102, 94:1382 (R;US)

Closed out tank 241-SY-101 DACS system change requests No. 201-300, 94:1258 (R;US)

Computer code input for thermal hydraulic analysis of Multi-Function Waste Tank Facility Title II design, 94:1142 (R;US)

Computer system requirements specification for 101-SY hydrogen mitigation test project data acquisition and control system (DACs-1), 94:1266 (R;US)

DACS upgrade acceptance test procedure, 94:1225 (R;US)

Engineering study - installation of new risers in Single-Shell Tanks, 94:1383 (R;US)

Engineering task plan and status of 241-S-106 Enraf level gauge wire break, 94:1407 (R;US)

Engineering task plan for flammable gas atmosphere mobile color video camera systems, 94:1412 (R;US)

Engineering test plan for Tank 241-SY-101 in situ viscometer, 94:1553 (R;US)

Engineering test plan for Tank 241-SY-101 in situ viscometer. Revision 1, 94:1552 (R;US)

Evaluation of AY/AZ tank farm ventilation system during aging waste retrieval operations, 94:1509 (R;US)

Functional design criteria for SY-101 hydrogen mitigation test project Data Acquisition and Control System (DACs-1), 94:1421 (R;US)

Hanford double shell tank corrosion monitoring instrument trees, 94:1089 (R;US)

High-level waste storage tank farms/242-A evaporator Standards/Requirements Identification Document (S/RID), Volume 5, 94:1046 (R;US)

Historical Tank Content Estimate for the Northwest Quadrant of the Hanford 200 East Area, 94:1341 (R;US)

Historical Tank Content Estimate for the Southwest Quadrant of the Hanford 200 West Area, 94:1343 (R;US)

Identification of single-shell tank in-tank hardware obstructions to retrieval at Hanford Site Tank Farms, 94:1083 (R;US)

Input shaping methods for telerobotic operation of flexible, long-reach manipulators, 94:2300 (R;US)

Jet mixer pump testing in Hanford Tank 241-SY-101, 94:1012 (R;US)

Light Duty Utility Arm System applications for tank waste remediation, 94:1101 (R;US)

MIT upgrade acceptance test procedure, 94:1232 (R;US)

Operability test procedure for the TK-900 effluent monitoring station, 94:327 (R;US)

Organic carbon in Hanford single-shell tank waste, 94:961 (R;US)

Project W-340 long reach arm retrieval system balance of plant instrumentation workshop engineering study, 94:1195 (R;US)

Project management plan for Project W-320, Tank 241-C-106 sluicing, 94:1185 (R;US)

SY101 in situ viscometer instrument system design description, 94:1487 (R;US)

Safety evaluation for packaging transfer of 101-AZ thermocouples, 94:2234 (R;US)

Safety evaluation for the interim stabilization of Tank 241-C-103, 94:1482 (R;US)

Selection of ENRAF gauge wire material compatible with the Hanford waste tank environment, 94:1475 (R;US)

System verification and validation plan for SY-101 Hydrogen Mitigation Test Project Data Acquisition and Control System (DACs-1), 94:1267 (R;US)

TMACS I/O termination point listing. Revision 1, 94:1515 (R;US)

TMACS Test Procedure TP001: Alarm Management, 94:1623 (R;US)

TMACS Test Procedure TP002: Trending, 94:1626 (R;US)

Tank 241-U-111 tank characterization plan, 94:1564 (R;US)

Tank 241-U-201 tank characterization plan, 94:1608 (R;US)

Tank 241-U-202 tank characterization plan, 94:1609 (R;US)

Tank 241-U-204 tank characterization plan, 94:1611 (R;US)

Tank characterization report for Double-Shell Tank 241-AP-103, 94:1345 (R;US)

Tank characterization report for Single-Shell Tank B-111, 94:976 (R;US)

Tank farm health and safety plan. Revision 2, 94:1431 (R;US)

Tank waste remediation system high-level waste feed processability assessment report, 94:1673 (R;US)

Tank waste remediation system integrated technology plan. Revision 2, 94:1839 (R;US)

Tank waste remediation system multi-year work plan, 94:1669 (R;US)

Tank waste remediation system multi-year work plan, 94:1670 (R;US)

Tank waste remediation system multi-year work plan, 94:1667 (R;US)

Tank waste remediation system multi-year work plan, 94:1668 (R;US)

Tank waste remediation system multi-year work plan, 94:1671 (R;US)

Telepresence and virtual environment applications on the light duty utility arm system, 94:2357 (R;US)

Test Procedure - pumping system for caustic addition project, 94:1506 (R;US)

Test plan for qualification of the S-type fiberglass materials for use as the liquid observation well casing, 94:1595 (R;US)

Testing and development strategy for the tank waste remediation system, 94:1497 (R;US)

Title I design summary report, initial tank retrieval systems, project W-211, 94:1137 (R;US)

Tracking control of the hydraulically actuated flexible manipulator, 94:2313 (R;US)

Waste tank 241-C-106 comprehensive cooling design summary report, 94:1474 (R;US)

Remote Handling Equipment

Design criteria for the light duty utility arm system end effectors, 94:2358 (R;US)

Qualification test for the flexible receiver. Revision 2, 94:1190 (R;US)

Remote Sensing

Investigation of remote sensing scale up for hot cell waste tank applications. CPAC optical moisture monitoring, 94:1374 (R;US)

Remote Viewing Equipment

Conceptual design analyses for Hanford Site deployable remote spectroscopy systems, 94:1502 (R;US)

Structural analysis of color video camera installation on Tank 241SY101 (2 volumes), 94:1277 (R;US)

Tank selection for Light Duty Utility Arm (LDUA) system hot testing in a single shell tank, 94:1394 (R;US)

Removal

Geophysical investigation of the SQ Tanks, 221-T Building, 200 West Area, 94:1109 (R;US)

Implementation plan for Liquid Low-Level Radioactive Waste Tank Systems at Oak Ridge National Laboratory under the Federal Facility Agreement, Oak Ridge, Tennessee, 94:543 (R;US)

Response Functions

Tank 241C106 structural evaluation in support of Project W320 retrieval, 94:1178 (R;US)

Retrieval Systems

Waste dislodging and conveyance testing summary and conclusions to date, 94:975 (R;US)

Safety

Ferrocyanide Safety Program: Data interpretation report for tank 241-T-107 core samples, 94:1062 (R;US)
Ferrocyanide safety program: Results of relative humidity experiments using ferrocyanide waste simulants, 94:1643 (R;US)
Low temperature hydrothermal destruction of organics in Hanford tank wastes, 94:1016 (R;US)
Project management plan for Project W-320, Tank 241-C-106 sluicing: Revision 2, 94:1184 (R;US)
Quarterly report on Defense Nuclear Facilities Safety Board recommendation 90-7 for the period ending September 30, 1993, 94:1030 (R;US)
Tank 241-A-104 tank characterization plan, 94:1563 (R;US)

Safety Analysis

Accelerated safety analyses - structural analyses Phase I - structural sensitivity evaluation of single- and double-shell waste storage tanks, 94:1480 (R;US)
CSER 94-09: Implications of the heat anomaly in Tank 106-C to criticality safety, 94:1117 (R;US)
Composition, preparation, and gas generation results from simulated wastes of Tank 241-SY-101, 94:973 (R;US)
Design/installation and structural integrity assessment under the Federal Facility Agreement for Bethel Valley Low-Level Waste Collection and Transfer System upgrade for Building 2026 (High Radiation Level Analytical Laboratory) and Building 2099 (Monitoring and Control Station) at Oak Ridge National Laboratory, 94:548 (R;US)
Electrical classification for the single shell flammable gas watch list tanks, 94:1429 (R;US)
Engineering test plan for Tank 241-SY-101 in situ viscometer, 94:1553 (R;US)
In tank processing safety analysis program summary report. Revision 2, 94:1682 (R;US)
Organic analysis of the headspace in Hanford waste tanks, 94:1688 (BA;US)
Safety evaluation for adding water to tank 101-SY, 94:1478 (R;US)
Safety evaluation for the interim stabilization of Tank 241-C-103, 94:1482 (R;US)
Safety evaluation of interim stabilization of non-stabilized single-shell watch list tanks, 94:1528 (R;US)
Seismic evaluation of Tank 241C106 in support of retrieval activities, 94:1177 (R;US)
Summary report on the design of the retained gas sampler system (retained gas sampler, extruder and extractor), 94:1366 (R;US)
Tank 241-C-105 tank characterization plan, 94:1568 (R;US)
Tank characterization report for Single-Shell Tank 241-BX-107, 94:1040 (R;US)

Safety Engineering

Multi-Function Waste Tank Facility thermal hydraulic analysis for Title II design, 94:1140 (R;US)

Safety Standards

Tank 241-C-105 tank characterization plan. Revision 1, 94:1569 (R;US)

Sampling

45-Day safety screening for Tank 241-B-102 auger samples, riser 1, 94:1301 (R;US)
Acceptance test procedure for core sample trucks, 94:1236 (R;US)
Core sample truck improvement test report, 94:864 (R;US)
Criteria for core sampling bit temperature monitor, 94:1260 (R;US)
Gas and liquid sampling for closed canisters in K-West basins - functional design criteria, 94:2678 (R;US)
Gas characterization system functional design criteria, 94:1425 (R;US)
In situ sampling device development engineering task plan, 94:1402 (R;US)
Number of core samples: Mean concentrations and confidence intervals, 94:1537 (R;US)
RMCS exhaustor data logger configuration, 94:1473 (R;US)
Sample storage/disposal study, 94:1392 (R;US)

Statistical characterization report for Single-Shell Tank 241-T-107, 94:1520 (R;US)
Tank 241-AW-101 tank characterization plan, 94:1557 (R;US)
Tank 241-AX-102 tank characterization plan, 94:1554 (R;US)
Tank 241-AX-104 tank characterization plan, 94:1562 (R;US)
Tank 241-BX-104 tank characterization plan, 94:1597 (R;US)
Tank 241-BY-107 tank characterization plan, 94:1577 (R;US)
Tank 241-BY-110 tank characterization plan, 94:1582 (R;US)
Tank 241-C-105 tank characterization plan. Revision 1, 94:1569 (R;US)
Tank ER 311 tank characterization plan, 94:1579 (R;US)
Tank characterization report for Double-Shell Tank 241-AP-103, 94:1345 (R;US)
Tank characterization report for Single-Shell Tank 241-C-110, 94:1352 (R;US)
Tank characterization report for Single-Shell Tank 241-T-107, 94:1363 (R;US)
Tank characterization report for Single-Shell Tank B-111, 94:976 (R;US)
Tank characterization report for Single-Shell Tank T-102, 94:978 (R;US)
Test report for slow rotation core sampling test, 94:1648 (R;US)
Vapor sampling and analysis plan, 94:1617 (R;US)
Waste behavior analysis for tank 241-SY-103, 94:1531 (R;US)
Waste tank vapor project: Vapor space characterization of waste tank 241-BY-104: Results from samples collected on June 24, 1994, 94:178 (R;US)

Scaling

Engineering scale mixing system tests for MWTF title II design, 94:1139 (R;US)

Seismic Effects

242-A Evaporator Condensate Tank (TK-C-100) tie down evaluation, 94:2238 (R;US)
Dynamic modeling and response of rigid embedded cylinders, 94:917 (R;US)
Implementation of seismic design and evaluation guidelines for the Department of Energy high-level waste storage tanks and appurtenances, 94:1077 (R;US)
Seismic design spectra 200 West and East Areas DOE Hanford Site, Washington, 94:1163 (R;US)
Seismic evaluation of Tank 241C106 in support of retrieval activities, 94:1177 (R;US)

Service Life

CSER 91-003, Addendum 1: Criticality Safety Evaluation Report for postponed retrieval of three container sequences in the burial ground, 94:2737 (R;US)

Soil-Structure Interactions

Soil weight (lb/ft³) at Hanford waste storage locations (2 volumes), 94:1495 (R;US)

Sorting

The Sort on Radioactive Waste Type Model: A method to sort single-shell tanks into characteristics groups, 94:1878 (R;US)

Specifications

W-025, Acceptance Test Report, 94:803 (R;US)

Stability

Tank characterization report for Single-Shell Tank 241-T-107, 94:1363 (R;US)

Stabilization

Safety evaluation for the interim stabilization of Tank 241-C-103, 94:1482 (R;US)
Safety evaluation of interim stabilization of non-stabilized single-shell watch list tanks, 94:1528 (R;US)

Stress Analysis

Static internal pressure capacity of Hanford Single-Shell Waste Tanks, 94:1516 (R;US)
Structural analysis and evaluation of the 241SY101 tank annulus heat-up, 94:1517 (R;US)

Stresses

241-AP waste storage tanks: Supplemental gravity load analysis: Volume 2, 94:1208 (R;US)
241-AV/AZ waste storage tanks: Supplemental gravity load analysis: Volume 2, 94:1210 (R;US)

Structural Models

Accelerated safety analyses - structural analyses Phase I - structural sensitivity evaluation of single- and double-shell waste storage tanks, 94:1480 (R;US)
 Tank 241C106 structural evaluation in support of Project W320 retrieval, 94:1178 (R;US)

Surface Cleaning

Hazardous waste dislodging and conveyance: The confined sluicing method, 94:972 (R;US)
 Waste dislodging and conveyance testing summary and conclusions to date, 94:975 (R;US)

Surveillance

Acceptance/operational test procedure 103-SY tank camera purge control system, 94:1439 (R;US)
 Acceptance/operational test report 103-SY and 101-SY tank camera purge system and 103-SY video camera system, 94:1447 (R;US)
 FY95 software project management plan: TMACS, CASS computer systems, 94:2812 (R;US)
 System design description 241-SY-101 color video camera, 94:1491 (R;US)
 TMACS Test Procedure TP001: Alarm Management, 94:1623 (R;US)
 Tank farm instrumentation and data acquisition/management upgrade plan, 94:1653 (R;US)

Temperature Control

High-heat tank safety issue resolution program plan. Revision 2, 94:1034 (R;US)
 Position paper - tank inlet air temperatures, 94:1155 (R;US)
 Uncertainties in the measured quantities of water leaving waste Tank 241-C-106 via the ventilation system, 94:1364 (R;US)

Temperature Distribution

Computational analysis of coupled fluid, heat, and mass transport in ferrocyanide single-shell tanks: FY 1994 interim report. Ferrocyanide Tank Safety Project, 94:990 (R;US)

Temperature Measurement

Historical trends in tank 241-SY-103 waste temperatures, 94:969 (R;US)
 Maximum surface level and temperature histories for Hanford waste tanks, 94:1514 (R;US)

Temperature Monitoring

Criteria for temperature monitoring in ferrocyanide waste tanks at the Hanford Site, 94:1050 (R;US)
 Historical tank content estimate for the northwest quadrant of the Hanford 200 West Area, 94:1342 (R;US)

Testing

241-AZ/AZ waste storage tanks: Supplemental gravity load analysis: Volume 1, 94:1209 (R;US)
 Operational test report for WESF diesel generator diesel tank installation, 94:1448 (R;US)

Thermal Analysis

CSEER 94-09: Implications of the heat anomaly in Tank 106-C to criticality safety, 94:1117 (R;US)
 Evaluation of heat sources in high-heat single shell tanks, 94:325 (R;US)
 Ferrocyanide safety program: Thermal analysis of ferrocyanide Watch List tanks, Group II, 94:1061 (R;US)
 Infrared scanning of Hanford waste tank S-110 and interpretation of surface temperature variation, 94:1674 (R;US)
 Multi-Function Waste Tank Facility thermal hydraulic analysis for Title II design, 94:1140 (R;US)
 Preliminary analysis of tank 241-C-106 dryout due to large postulated leak and vaporization, 94:1069 (R;US)

Thermal Stresses

An assessment of the potential for a steam bump in Hanford Waste Tank 241-C-106, 94:1360 (R;US)

Thermocouples

Structural evaluation of thermocouple probes for 241-AZ-101 waste tank, 94:1128 (R;US)

Ultrasonic Testing

Data management plan for the ultrasonic inspection of the double-shell tanks, 94:1308 (R;US)
 Inspection system performance test procedure, 94:1235 (R;US)

Performance testing of a system for remote ultrasonic examination of the Hanford double-shell waste storage tanks, 94:1104 (R;US)

Underground Disposal

Analysis report for 241-BY-104 auger samples, 94:1510 (R;US)

Underground Storage

Mini-DACS acceptance test report, 94:1248 (R;US)
 Underground tank assessment using Hanford's light-duty utility arm system, 94:1701 (J;US)

Ventilation

Design basis and requirements for 241-SY Modular Exhauster concrete pad and retaining wall, 94:1288 (R;US)
 Engineering task plan for the vapor monitor installation into 241-C-103 tank, 94:1403 (R;US)

Ventilation Systems

101-SY Dome pressure issues surrounding mitigation pump decontamination during removal, 94:1397 (R;US)
 241-SX Fan driver sheave replacement, 94:1650 (R;US)
 Engineering task plan for tank farm ventilation strategy document preparation and maintenance, 94:1404 (R;US)
 Evaluation of AZ/AZ tank farm ventilation system during aging waste retrieval operations, 94:1509 (R;US)
 Position paper - primary ventilation system configuration, 94:1157 (R;US)
 Position paper - tank inlet air temperatures, 94:1155 (R;US)
 Tritium emissions from 200 East Area Double-Shell Tanks, 94:1327 (R;US)

Void Fraction

Void fraction instrument acceptance test procedure, 94:2779 (R;US)
 Void fraction instrument acceptance test procedure, 94:1251 (R;US)
 Void fraction instrument software, Version 1.1., acceptance test procedure, 94:1237 (R;US)

Waste Management

Potential gas releases from the bottom sludge layer, 94:1011 (R;US)

Waste Retrieval

Development of a multi-functional scarifier dislodger with an integral pneumatic conveyance retrieval system for single-shell tank remediation. FY93 summary report, 94:958 (R;US)
 Maintenance study for W-340 Waste Retrieval System, 94:928 (R;US)
 Parametric design using IGRIP, 94:2338 (R;US)
 Spare mitigation/retrieval mixer pumps, 94:1423 (R;US)

Waste Storage

Evaluation of pressure transducers to measure surface level in the waste storage tanks, 94:2526 (R;US)
 Summary of information on flammable gas watch list tanks, 94:1037 (R;US)
 Tank characterization report for Single-Shell Tank 241-BX-107, 94:1040 (R;US)

Water Influx

Engineering evaluation of intrusion prevention strategies for single-shell tanks, 94:1362 (R;US)

TANTALUM BASE ALLOYS

Tantalum-base materials for molten plutonium containment, 94:2294 (BA;US)

TBP

Direct detection of tributyl phosphate adsorbed on surfaces of environmental interest by static SIMS, 94:2889 (BA;US)
 Evaluation of pretreatment processes for supercritical water oxidation, 94:614 (R;US)
 Plutonium and americium separation using organophosphorus extractant absorbed onto ferromagnetic particle, 94:2952 (BA;US)
 Sequestration of the tributyl phosphate complex of europium nitrate in the clay hectorite. A ³¹P NMR study, 94:369 (J;US)

TECHNETATES

Innocuous oil as an additive for reductive reactions involving zero valence iron, 94:207 (R;US)

TECHNETIUM

- Advanced technologies for decontamination and conversion of scrap metals, 94:1836 (R;US)
- An investigation of the applicability of the new Reillex™-HPQ anion exchange resin system for technetium/rhenium and uranium in the Hanford waste tanks. Milestone 4 final report, 94:2915 (R;US)
- Aquifer testing data package for 1993 200-UP-1 Groundwater Operable Unit, 94:275 (R;US)
- Liquid chromatographic extraction medium, 94:2963 (P;US)
- Separation of technetium from nuclear waste stream simulants. Final report, 94:2498 (R;US)
- Testing of a benchscale Reverse Osmosis/Coupled Transport system for treating contaminated groundwater, 94:263 (R;US)
- The design of metal ion specific extractants for use in polyethylene glycol-based aqueous biphasic systems, 94:2883 (BA;US)

TECHNETIUM 99

- Faster, cheaper radioanalytical methods, 94:2382 (R;US)
- Pertechnetate partitioning in polyethylene glycol-based aqueous biphasic systems: Applications from nuclear medicine to nuclear waste, 94:1696 (BA;US)
- Polyethylene glycol-based aqueous biphasic systems: Inexpensive, nontoxic alternatives for Hanford tank remediation, 94:1686 (BA;US)
- Radiochemical method development, 94:2381 (R;US)
- Simple method for technetium removal from aqueous solutions, 94:904 (J;US)
- The partitioning behavior of TcO_4^- and I^- in polyethylene glycol-based aqueous biphasic systems prepared from simulated liquid radioactive Hanford tank wastes, 94:1697 (BA;US)

TECHNETIUM IONS

- The partitioning behavior of TcO_4^- and I^- in polyethylene glycol-based aqueous biphasic systems prepared from simulated liquid radioactive Hanford tank wastes, 94:1697 (BA;US)

TECHNICAL INFORMATION CENTER

VAPORS

Chemical Analysis

Tank 241-C-111 headspace gas and vapor sample results - August 1993 samples, 94:1566 (R;US)
Tank 241-SX-103 tank characterization plan, 94:1613 (R;US)
Tank 241-SX-106 tank characterization plan, 94:1614 (R;US)
Tank 241-T-111 tank characterization plan, 94:1545 (R;US)
Tank 241-TY-103 Tank Characterization Plan, 94:1601 (R;US)
Tank 241-U-103 tank characterization plan, 94:1591 (R;US)
Tank 241-U-111 tank characterization plan, 94:1564 (R;US)

Chemical Composition

Tank 241-TX-118 tank characterization plan, 94:1561 (R;US)

Confinement

Design basis and requirements for 241-SY Modular Exhauster concrete pad and retaining wall, 94:1288 (R;US)

Diffusion

Inadequacy of commonly used risk assessment guidance for determining whether solvent-contaminated soils can affect groundwater at arid sites, 94:385 (J;US)

Extraction

Prediction of single-component NAPL behavior for the TEVES Project using T2VOC, 94:714 (R;US)
Vapor phase VOC transport in physically-mixed clay soils, 94:35 (R;US)

Flammability

Engineering work plan for tank 241-C-103 vapor phase characterization (ECN 613188). Revision 1, 94:1655 (R;US)
Organic analysis of the headspace in Hanford waste tanks, 94:1688 (BA;US)
Vapor sampling and analysis plan, 94:1617 (R;US)

Health Hazards

Program plan for the resolution of tank vapor issues, 94:1035 (R;US)

Mitigation

Level maintenance for Tank 101-SY mitigation-by-mixing test, 94:1621 (R;US)
Tank vapor mitigation requirements for Hanford Tank Farms, 94:1174 (R;US)

Monitoring

Closed out tank 241-SY-101 DACS system change requests No. 201-300, 94:1258 (R;US)
Tank 241-C-111 headspace gas and vapor sample results - August 1993 samples, 94:1566 (R;US)

Quantitative Chemical Analysis

Organic analysis of the headspace in Hanford waste tanks, 94:1688 (BA;US)

Radiochemical Analysis

Program plan for the resolution of tank vapor issues, 94:1035 (R;US)

Remedial Action

Tank 241-BX-104 tank characterization plan, 94:1597 (R;US)

Sampling

SEAMIST™ in-situ instrumentation and vapor sampling system applications in the Sandia Mixed Waste Landfill Integrated Demonstration Program, 94:228 (R;US)
Tank 241-BX-104 tank characterization plan, 94:1597 (R;US)
Tank 241-C-111 headspace gas and vapor sample results - August 1993 samples, 94:1566 (R;US)
Tank 241-SX-103 tank characterization plan, 94:1613 (R;US)

Tank 241-SX-106 tank characterization plan, 94:1614 (R;US)
 Tank 241-T-111 tank characterization plan, 94:1545 (R;US)
 Tank 241-TX-105 tank characterization plan, 94:1594 (R;US)
 Tank 241-TX-118 tank characterization plan, 94:1561 (R;US)
 Tank 241-TY-103 Tank Characterization Plan, 94:1601 (R;US)
 Tank 241-U-103 tank characterization plan, 94:1591 (R;US)
 Tank 241-U-111 tank characterization plan, 94:1564 (R;US)

Toxicity
 Engineering work plan for tank 241-C-103 vapor phase characterization (ECN 613188). Revision 1, 94:1655 (R;US)
 Organic analysis of the headspace in Hanford waste tanks, 94:1688 (BA;US)

Vapor Separators
 Tank vapor mitigation requirements for Hanford Tank Farms, 94:1174 (R;US)

VOID FRACTION
 Software acceptance test report for Tank 101-SY void fraction instrument, 94:1245 (R;US)
 Void Fraction Instrument operation and maintenance manual, 94:2251 (R;US)

VOLATILE MATTER
Acoustic Monitoring
 Above-ground and in situ field screening of VOCs using Portable Acoustic Wave Sensor (PAWS) systems, 94:2573 (R;US)
Air Pollution Monitoring
 Novel mass spectrometric instrument for gaseous and particulate characterization and monitoring. Quarterly report, January 1, 1994-March 31, 1994, 94:507 (R;US)
Biodegradation
 A batch reactor for monitoring process dynamics during biodegradation of volatile organics, 94:374 (J;US)
 Heating of solid earthen material, measuring moisture and resistivity, 94:391 (P;US)
Chemical Analysis
 Triple sorbent thermal desorption/gas chromatography/mass spectrometry determination of vapor phase organic contaminants, 94:39 (R;US)
 Use of mass spectrometric methods for field screening of VOC's, 94:699 (R;US)
Detection
 Dual-gas tracers for subsurface characterization and NAPL detection, 94:221 (R;US)
Ecological Concentration
 Characterization of void volume VOC concentration in vented TRU waste drums. Final report, 94:2044 (R;US)
 Characterization of void volume VOC concentration in vented TRU waste drums - an interim report, 94:2464 (R;US)

VOLATILE MATTER Ecological Concentration

Six-phase soil heating accelerates VOC extraction from clay soil, 94:206 (R;US)

Environmental Transport

Hazardous constituent source term. Revision 2, 94:2410 (R;US)

Extraction

Separation science and technology. Semiannual progress report, April 1992–September 1992, 94:2905 (R;US)

Gas Analysis

Method of characterizing VOC concentration in vented waste drums with multiple layers of confinement using limited sampling data, 94:590 (R;US)

Mass Spectroscopy

Development of a method for the direct purge analysis of volatile organics in water, 94:365 (BA;US)

Use of mass spectrometric methods for field screening of VOC's, 94:699 (R;US)

Mass Transfer

Dual-gas tracers for subsurface characterization and NAPL detection, 94:221 (R;US)

Transport characteristics across drum filter vents and polymer bags, 94:2463 (R;US)

Materials Recovery

Demonstration testing and evaluation of in situ soil heating: Treatability study work plan, Revision 1, 94:67 (R;US)

Membrane Transport

Removal of VOCs from groundwater using membrane-assisted solvent extraction, 94:2960 (J;US)

Monitoring

Cost-effectiveness analysis of the SEAMIST™ membrane system technology, 94:115 (R;US)

Quantitative Chemical Analysis

Cost and quality effectiveness of objective-based and statistically-based quality control for volatile organic compounds analyses of gases, 94:591 (R;US)

Measurement error and spatial variability effects on characterization of volatile organics in the subsurface, 94:368 (J;US)

Removal

Demonstration testing and evaluation of in situ heating of soil, 94:71 (R;US)

Dual-gas tracers for subsurface characterization and NAPL detection, 94:221 (R;US)

In-situ remediation system and method for contaminated groundwater, 94:394 (P;US)

Organic sponges for cost-effective CVOC abatement. Final report, September 1992–April 1994, 94:57 (R;US)

Treatability of TCE-contaminated clay soils at the Rinsewater Impoundment, Michoud Assembly Facility, 94:151 (R;US)

Sampling

Practical reporting times for environmental samples, 94:906 (J;US)

Solvent Extraction

Removal of VOCs from groundwater using membrane-assisted solvent extraction, 94:2960 (J;US)

Spatial Distribution

Measurement error and spatial variability effects on characterization of volatile organics in the subsurface, 94:368 (J;US)

VRAIN REACTOR

Disposal options for burner ash from spent graphite fuel: Final study report November 1993, 94:2858 (R;US)

W

WALLS

Report Number Index

The report number index consists of the alphanumeric identifiers assigned to report literature as well as patent and conference literature cited in this publication. Entries provide the abstract number; the source(s) of availability of the document; the GPO file prefix for GPO depository library documents; the order number for OSTI and NTIS report ordering purposes; and, if the document was distributed under the DOE distribution program, the category number is shown for paper copy (PC), microfiche (MF), or no distribution (ND). These categories are included to assist DOE librarians in responding to requests for reports in their collections. The index also lists secondary numbers, with the corresponding abstract numbers and cross-references to other identifying numbers.

<i>Report Number</i>	<i>Abstract Number</i>	<i>Source of Availability</i>	<i>GPO Dep.</i>	<i>Order Number</i>	<i>Distribution Category</i>

How To Order from the Availability Sources

TO OBTAIN A REPORT

Report literature, usually identified by an alphanumeric identifier at the beginning of a citation, is available from the sources listed in the citation (see example of element 2 on page iii). Often the sources are listed as abbreviations. Corresponding addresses are provided at right from which documents with these abbreviations may be ordered. When "OSTI" is given, **DOE and DOE contractors may order these documents from OSTI**. (However, check with your library or information organization which may require that orders go through them to OSTI.) OSTI prices are based on total pages unless special pricing applies. The public should order from NTIS or from one of the other agencies listed in the citation. NTIS price codes may continue to appear in some records. To expedite processing, an order form is provided in the back of this publication.

NOTE: The order numbers provide quicker access for report ordering. Use the order number where possible.

- GPO** Superintendent of Documents
Government Printing Office
Washington, DC 20402
(202) 512-1002
Fax: (202) 512-1428
- GPO Dep.** Available for inspection or interlibrary loan at Government Printing Office regional depository libraries.
- INIS** *Available only in microfiche.*
INIS Clearinghouse
International Atomic Energy Agency
P.O. Box 100, A-1400
Vienna, Austria
Fax: 43-1-21607
- NTIS** U.S. Department of Commerce
Technology Administration
National Technical Information Service
Springfield, VA 22161
(703) 487-4650
Fax: (703) 321-8547
- OSTI** U.S. Department of Energy
Office of Scientific and Technical Information
P.O. Box 62
Oak Ridge, TN 37831
(423) 576-8401
Fax: (423) 576-2865
E-mail: reports@adonis.osti.gov
