WRAP LOW LEVEL WASTE (LLW) GLOVEBOX OPERATIONAL TEST REPORT

KJ Leist

Waste Management Federal Services of Hanford, Richland, WA 99352
U.S. Department of Energy Contract DE-AC06-96RL13200

EDT/ECN: EDT-621922

UC: 506

Org Code: 32620

Charge Code: A2J1T

B&R Code: EW3130020

Total Pages: 438

Key Words: W-026, ATR, Drum, Diversified Metal Products, DMS, PCS

Abstract: The purpose of this test was to verify the Plant Operating Procedures related to the LLW Process Gloveboxes are accurate so operations within the gloveboxes can be performed safely and desired results obtained. And to verify the Data Management System could properly interface with the Plant Control System.

LLW GLOVEBOXES 101, 102, 104 & 105 OPERATIONAL TEST REPORT

HNF-SD-W026-OTR-015 Rev. 0

INTRODUCTION

The Low Level Waste (LLW) Process Gloveboxes are designed to:

- Receive a 55 gallon drum in an 85 gallon overpack in the Entry glovebox (GB101).
- Open and sort the waste from the 55 gallon drum, place the waste back into drum and relid in the Sorting glovebox (GB102). In addition, waste which requires further examination is transferred to the LLW RWM Glovebox via the Drath & Schraeder Bagless Transfer Port (DO-07-201) or sent to the Sample Transfer Port (STC).
- Crush the drum in the Supercompactor glovebox (GB104).
- Place the resulting puck (along with other pucks) into another 85 gallon overpack in the Exit glovebox (GB105).

The status of the waste items is tracked by the Data Management System (DMS) via the Plant Control System (PCS) barcode interface. As an item is moved from the entry glovebox to the exit glovebox, the Operator will track an items location using a barcode reader and enter any required data on the DMS console.

The Operational Test Procedure (OTP) will perform evolution's (described below) using the Plant Operating Procedures (POP) in order to verify that they are sufficient and accurate for controlled glovebox operation.

PURPOSE

The intent of this test was to satisfy two main objectives:

- a. Verify that the Plant Operating Procedures related to the LLW Process Gloveboxes are accurate so that operations within the gloveboxes can be performed safely and desired results obtained.

During the performance of the OTP, the POP's were redlined to correct errors found during testing. These corrections were incorporated into updated revisions of the POP's. The original POP's from which this OTP was conducted are included with this (Operational Test Report) OTR so the evolution to the present state of the POP's can be traced.

LLW GLOVEBOXES 101, 102, 104 & 105 OPERATIONAL TEST REPORT
HNF-SD-W026-OTR-015 Rev. 0

- b. Verify that the Data Management System (DMS) could properly interface with the Plant Control System (PCS) to control and display the data obtained during drum, sample/packet or puck movement and treatment.

When both of the above objectives are met, the LLW Process Gloveboxes would be considered ready for operation.

LLW GLOVEBOXES 101, 102, 104 & 105 OPERATIONAL TEST REPORT

HNF-SD-W026-OTR-015 Rev. 0

DESCRIPTION

The Operational Test Procedure (HNF-SD-W026-015) was started on August 8, 1997 and consisted of six main sections as described below. A complete description is included at the beginning of each Test Case under General Description.

a. LLW Glovebox Manual Operation

All three glovebox access ports (DO-101, DO-105 & DO-106) are operated in manual mode. The respective lift table is placed in manual mode and the drum is mated to the port. Then by using manual mode for the Bagless Transfer port or the maintenance menus for the Entry/Exit ports, a manual open/closed cycle is completed.

The Transfer port (DO-102) and port seal will be cycled in manual mode.

The Transfer Car, Lidder/Delidder Fixture, Drum Grabber/Tilt Unit & Sorting Table in the Sorting glovebox will be exercised in manual mode.

b. LLW Glovebox Automatic Test Case 1

Waste Processing Drum 1 will be loaded into the Entry glovebox and then sent to the Sorting glovebox via the Transfer port. The drum will be delidded, dumped on the sorting table and samples loaded in the Sample Transport Container (STC) for analysis. The remaining contents will be dumped back into the drum and relidded. The drum will be sent to the exit glovebox without being compacted and loaded into an overpack:

The Data Management System (DMS) will track the progress of the drum and samples by barcode throughout the evolution.

c. LLW Glovebox Automatic Test Case 2

Waste Processing Drum 2 will be loaded into the Entry glovebox and then sent to the Sorting glovebox via the Transfer port. The drum will be delidded, dumped on the sorting table and samples packets loaded on the transfer stand for transfer to the LLW/RWM glovebox. The remaining contents will be dumped back into the drum and relidded. The drum will be sent to the Compactor on the transfer car. After being compacted, the remaining puck is barcoded and placed in an overpack drum.

LLW GLOVEBOXES 101, 102, 104 & 105 OPERATIONAL TEST REPORT

HNF-SD-W026-OTR-015 Rev. 0

The Data Management System (DMS) will track the progress of the drum and samples by barcode throughout the evolution.

d. LLW Glovebox Automatic Test Case 3

Waste Processing Drum 3 will be loaded into the Entry glovebox and then sent to the Sorting glovebox via the Transfer port. Instead of stopping at the delid position, the transfer car will take the drum to the Compactor without opening. After being compacted, the remaining puck is barcoded and placed in an overpack drum.

The Data Management System (DMS) will track the progress of the drum and samples by barcode throughout the evolution.

e. LLW Glovebox Automatic Test Case 4

Waste Processing Drum 4 will be loaded into the Entry glovebox and then sent to the Sorting glovebox via the Transfer port. The drum will be delidded, dumped on the sorting table and samples packets loaded on the transfer stand for transfer to the LLW/RWM glovebox. The remaining contents will be dumped back into the drum and relidded. The drum will be sent to the Compactor on the transfer car. After being compacted, the remaining puck is barcoded and placed in an overpack drum.

The Data Management System (DMS) will track the progress of the drum and samples by barcode throughout the evolution.

f. LLW Glovebox Restart

The Glovebox Emergency Stop button is pushed during a port opening sequence. Equipment status is recorded for recovery.

LLW GLOVEBOXES 101, 102, 104 & 105 OPERATIONAL TEST REPORT

HNF-SD-W026-OTR-015 Rev. 0

TEST RESULTS

Exception Test Reports (ETR's) Summary

35 ETR's were written during test performance, of which 10 are DMS related. As of December 17, 1997, all ETR's have been cleared.

Additional Items

WRP1-OP-0703 (Glovebox Lift Table Operation) was not referenced and therefore not verified in this OTP.

The "Glovebox Restart" portion of the OTP lacked enough depth to really verify that the glovebox can be successfully restarted for a selection of scenarios. Only one Emergency Stop pushbutton was checked. The balance of the section was merely a status check of the equipment in the glovebox. Operation Procedure OP-0722 should be enhanced to include flow charts or the like to demonstrate a logical course of action after the status of the systems are known.

CONCLUSIONS AND RECOMMENDATIONS

- a. The STC Port can be open when the STC has been removed; no mechanical interlock exists. This can result in a loss of glovebox differential pressure and possible contamination of the STC port seal.
- b. The Bagless Transfer Port DO-07-105 operation should be incorporated into the existing PLC interface instead of through a separate controller for the following reasons:
 - The operator can only perform open and close functions when in automatic mode. Manual operation and recovery must be performed from the D&S controller.
 - There is no feed back to the operator in maintenance mode as to the position of the port components as there is for the entry/exit ports in this glovebox.
 - The controller is programmed in German, requiring outside support for program changes.
 - By eliminating the controller, the system is made simpler and therefore more reliable.

LLW GLOVEBOXES 101, 102, 104 & 105 OPERATIONAL TEST REPORT
HNFS-D-W026-OTR-015 Rev. 0

- c. Permanent bar code charts should be added to the glovebox. During the OTP barcodes were taped to a sheet of paper which in time will deteriorate and require replacement.
- d. Since all ETR's have been cleared the Operational Test Procedure can be considered passed. However, modifications to the gloveboxes have been made since the completion of the OTP and will require verification prior to operation along with any other items that have been changed or reworked.

1.0 PURPOSE

- 1.1 This procedure has been prepared to verify that the Low Level Waste (LLW) Process Glovebox line operates in accordance with system design and specifications. This procedure will also validate portions of the WRAP-1 plant operating procedures listed in Section 7.2.

2.0 SCOPE

- 2.1 This Operating Test will demonstrate operability and waste processing functions for the following system components, collectively referred to as the "LLW Gloveboxes":

LLW Entry Glovebox, (107-GB-07-101)
LLW Sorting Glovebox, (107-GB-07-102)
LLW Supercompactor Glovebox, (107-GB-07-104)
LLW Exit Glovebox, (107-GB-07-105)

- 2.2 Other interfacing systems outside the LLW Glovebox include the Internal Transport System, the Data Management System, the Plant Control System, and the Glovebox Barcode System.

- 2.3 When possible, this test will demonstrate all mechanical and control operations in manual and automatic modes. Restart of the glovebox from an emergency shutdown will also be demonstrated.

3.0 ACRONYMS

- 3.1 AGV - Automatic Guided Vehicle
3.2 DMS - Data Management System
3.3 HS - Hand Switch
3.4 OCS - Operating Control Station
3.5 OIU - Operator Interface Unit
3.6 OP - Operating Procedure
3.7 OTP - Operational Test Procedure
3.8 PCS - Plant Control System
3.9 PLC - Programmable Logic Controller
3.10 RCT - Radiological Control Technician
3.11 TD - Test Director
3.12 TE - Test Engineer
3.13 MC - Maintenance Craft

4.0 PRECAUTIONS AND LIMITATIONS

- 4.1 IF during performance of this procedure, any of the following conditions are found:

- Any equipment malfunction which could prevent fulfillment of functional requirements.
- Personnel error or procedural inadequacy which could prevent fulfillment of OTP procedural requirements.

THEN, IMMEDIATELY NOTIFY the TD and TE.

- 4.2 The TD and TE shall choose to stop work and place equipment in a safe condition based on the significance of a malfunction, error, or inadequacy.
- 4.3 Contact the TD and TE for additional instructions if changing plant conditions affect work or delays in work extending beyond (testing) shift.
- 4.4 IF any waste is generated during performance of this OTP, THEN, consult Environmental Compliance Officer for specific instructions to ensure compliance with HNF and DOE environmental standards, as applicable, for correct disposal.
- 4.5 Comply with HNF and plant/facility specific lock and tag and over-tagging procedures, as applicable.
- 4.6 Measuring and Test Equipment (M&TE), except timing devices used in the performance of this OTP, shall meet the following requirements:
- Be within its current calibration cycle as evidenced by an affixed calibration label.
 - Be capable of the desired range.
 - Have an accuracy (consistent with state-of-the-art limitations) equal to or greater than the accuracy specified in the OTP.
- 4.7 The equipment number and calibration information of M & TE used to perform this test shall be recorded on the data sheets.

- 4.8 Timing measurements shall be made with commercially available timing devices.
- 4.9 All test data readings are to be taken and recorded for each location where the capability exists (i.e. local instrument, OIU, DMS terminal).
- 4.10 All test data readings are to be taken and recorded for each location where the capability exists (i.e. local observable instrument (LOI), operators screen (OS)).

5.0 RESPONSIBILITIES

5.1 Test Director:

- Schedules and reschedules operating tests as required.
- Notifies test participants before testing begins.
- Notifies personnel prior to testing of special safety precautions and conditions during testing.
- Schedules and conducts a daily pretest meeting with test participants.
- Record Data Exceptions and support OTP notes as required on the Attachment 1, TEST EXCEPTION LOG.
- Controls overall testing process and change record authorization for this OTP.
- Responsible for conducting the test, collecting data, and ensuring compliance with all OTP requirements.
- Ensures required changes to supporting operating procedures (OPs) are initiated upon completion of OTP testing.

5.2 Test Engineer:

- Provides technical support during testing.
- Provides programming support during testing.
- Participates in pre-test meetings, as necessary.
- Conducts a pre-test system walkdown, as necessary.
- Verifies that mechanical, electrical, and control systems are functioning correctly and can support testing.

5.3 Maintenance Craft:

- Provide assistance during OTP activities.

5.4 Operations Personnel:

- Perform manipulations on Systems and Test Equipment.
- Start, stop and operate equipment related to OTP.
- Control and monitor parameters from Control Panels and Control Room.
- Inform Duty Operations Supervisor of conditions affecting plant stability or safety.

6.0 CHANGE CONTROL

- 6.1 OTP and supporting Operating Procedure (OP) administrative or editorial changes required during testing may be accommodated as redline exceptions in the test report, if these changes do not affect operating facility function, performance or safety that could compromise or influence data results. Changes to acceptance criteria, requirement changes, or changes to Cautions, Warnings, or any other safety items, and environmental instructions in the OTP or OP shall be approved by the signatories initially approving the OTP.

7.0 REFERENCES

- 7.1 The following documents were used in the preparation of, or are referenced in this procedure:

HSRCM-1, Hanford Site Radiological Control Manual

*DD 2/12/98
per [unclear] JPR
LABELO*

All copies of the OPs used for testing shall be ~~hand marked~~ with the OTP number at the top of the first page and attached to the completed OTP test package.

Use of operating procedures to support the OTP will provide validation of the procedures and minimize the amount of test paperwork generated.

- 7.3 The following procedures will be used for alarm response during OTP activities, as required:

WRP1-AR-0700, Process Area Alarm Response
WRP1-AR-1106, Process Area (Zone II) HVAC Alarm Response
WRP1-AR-1107, Glovebox HVAC Alarm Response

- 7.4 The following administrative procedures control work performed in this OTP:

HSRCM-1, Hanford Site Radiological Control Manual
HNF-CM-5-34, Section 1.9, Quality Assurance Program Plan
HNF-CM-5-34, Section 3.1.4, Lock-out, Tag-out
HNF-CM-5-36, Chapter 1.10, Safety Manual
HNF-CM-5-36, Chapter 1.11, Industrial Hygiene Manual
HNF-CM-5-36, Chapter 4-2, Quality Assurance Manual
HNF-CM-5-36, Chapter 7-5, Environmental Compliance Manual
HNF-IP-0263-WRP1, Building Emergency Plan

8.0 SAFETY

- 8.1 WARNING - In addition to construction and/or chemical, electrical, and oil contamination hazards, operators should be aware of the possibility of coming into contact with biological hazards.
- 8.2 The gloveboxes are equipped with dry chemical fire suppression systems which will discharge into the glovebox if the interior temperature at the top of the gloveboxes rises to ~190 °F.
- 8.3 Use care to minimize injury. Possible safety hazards include:
- Tripping / Slipping
 - Injuries to the hands/head
 - Automatic Guided Vehicle traffic.
- 8.4 RADIATION - CONTAMINATION CONTROL - WRAP 1 is a new facility, no radiation contamination concerns are expected during OTP activities.

9.0 QUALITY ASSURANCE

- 9.1 No Quality Assurance witness, hold points or verifications are required in this OTP.

10.0 RECORDS

- 10.1 This LLW Glovebox OTP complete with attachments shall be filed as a permanent test record.

11.0 PREREQUISITES

11.1 VERIFY barcode labels attached to glovebox:

<u>LOCATION</u>	<u>COMMAND LABELS</u>
LLW_ENTRY	END, CNCL PREV READ, CNCL OPERATION, YES, NO
LLW_RWMPRT	END, CNCL PREV READ, CNCL OPERATION, YES, NO
LLW_EXIT	END, CNCL PREV READ, CNCL OPERATION, YES, NO
LLW_PP	END, CNCL PREV READ, CNCL OPERATION, YES, NO
LLW_SORT	END, CNCL PREV READ, CNCL OPERATION, YES, NO
LLW_STORE1	END, CNCL PREV READ, CNCL OPERATION, YES, NO
LLW_STORE2	END, CNCL PREV READ, CNCL OPERATION, YES, NO

11.2 VERIFY LLW process glovebox Acceptance Test Procedure is complete and all deficiencies or exceptions arising from the ATP have been resolved and closed out, or will not affect testing.

11.3 VERIFY all open (ATP/FTP) items will not effect OTP performance:

- Quality Assurance Nonconformance Reports (NCRs)
- Construction Punch Lists
- Outstanding Engineering Change Notices (ECNs)
- Startup-originated Design Change Requests (CRs)
- Test Deficiency Reports
- Master System Punch List items

11.4 VERIFY materials are available as follows:

85 gallon Entry/Exit overpack drum with lid & barcode label OTP-LLW-OD-01.
85 gallon Entry/Exit overpack drum with lid & barcode label OTP-LLW-OD-02.
85 gallon Entry/Exit overpack drum with lid & barcode label OTP-LLW-OD-03.
85 gallon Entry/Exit overpack drum with lid & barcode label OTP-LLW-OD-04.
85 gallon Entry/Exit overpack drum with lid & barcode label OTP-LLW-OD-05.
55 gal waste drum with barcode label OTP-LLW-WP-01 attached, lid, and filled with mixed waste for sampling and packed inside OTP-LLW-OD-01.
55 gal waste drum with barcode label OTP-LLW-WP-02 attached, lid, and the following non-compliant packets inside, all packed inside OTP-LLW-OD-02: OTP6-97-000001: Aerosol can of saline solution. OTP6-97-000002: Aerosol can of saline solution in bubble wrap and tape. OTP6-97-000003: Unlabeled aerosol can wrapped with cloth and tape.
55 gal waste drum with barcode label OTP-LLW-WP-03 attached, lid, and mixed compliant waste inside all packed inside OTP-LLW-OD-03.
55 gal waste drum with barcode label OTP-LLW-WP-04 attached, lid, and the following non-compliant packets inside all packed inside OTP-LLW-OD-04: OTP6-97-000004: Lead brick wrapped-with-two-plastic bags and tape. OTP6-97-000005: Bottle of unknown solvent and bottle of oil taped together and wrapped with cloth and tape. OTP6-97-000006: Bottle of acid.
Empty 55 gal waste drum with barcode label OTP-LLW-WP-05 attached, and lid, packed inside OTP-LLW-OD-05.
55 gallon D&S transfer drum with barcode label OTP-LLWR-TD-01 attached, lid, and transfer stand inside:
55 gallon D&S transfer drum with barcode label OTP-LLWR-TD-02 attached, lid, and transfer stand inside:
2 Empty Sample Bottles (250ml)
Sample Transport Container with barcode label OTP6-97-300001
One Transfer Pig with barcode label OTP6-97-400001
VOID SPACE FILLER as required

11.5 PREREQUISITES 11.1 through 11.4 complete:

TE Initials/Date: AD, 8/8/97

NOTE

Steps 11.6 through 11.15 may be performed in any order.

- 11.6 PERFORM a pretest briefing for all personnel involved in the OTP.
- 11.7 VERIFY two way portable radio communication (when necessary) between the testing and equipment locations.
- 11.8 VERIFY the official OTP document and all photocopies that will be used during testing are the latest approved revision.
- 11.9 DETERMINE appropriate interface support (personnel/equipment) from other departments and organizations and that support is available.
- 11.10 VERIFY personnel performing this procedure are qualified in accordance with HNF-CM-5-34, Section 1.8, Training Plan, HNF-IP-1242, WRAP 1 RGD Radiation Protection Program and on-the-job training.
- 11.11 VERIFY all personnel to be involved with this OTP have completed Attachment 3, SIGNATURE RECORD.
- 11.12 VERIFY all required LLW process glovebox components are installed and operational.
- 11.13 VERIFY all permanently installed and portable instrumentation listed in the applicable operating procedures and required for testing, is within it's current calibration cycle.
- 11.14 VERIFY the DMS, PCS and OIUs for the LLW process glovebox are available and operational.
- 11.15 VERIFY process area HVAC and glovebox alarms are activated.
- 11.16 PREREQUISITES 11.6 through 11.15 complete:

TD Initials/Date: DD, 8/8/97

12.0 PROCEDURE

- 12.1 PERFORM Manual Operation test of the LLW Glovebox per Attachment 4, TEST PLAN, LLW GLOVEBOX MANUAL OPERATION.
- 12.2 PERFORM Automatic Operation test of the LLW Glovebox for Test Case 1 per Attachment 5, TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 1.
- 12.3 PERFORM Automatic Operation test of the LLW Glovebox for Test Case 2 per Attachment 6, TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 2.
- 12.4 PERFORM Automatic Operation test of the LLW Glovebox for Test Case 3 per Attachment 7, TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 3.
- 12.5 PERFORM Automatic Operation test of the LLW Glovebox for Test Case 4 per Attachment 8, TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 4.
- 12.6 PERFORM Restart test of the LLW Glovebox per Attachment 9, TEST PLAN, LLW GLOVEBOX RESTART.

13.0 ACCEPTANCE CRITERIA

13.1 Test results of each section will be considered acceptable if the following conditions are met:

13.1.1 The procedure test section was performed as written with expected results OR:

13.1.1.1 For editorial changes:

- The procedure was redlined to reflect field conditions and the section in question performed as written with expected results.
- Redline and changes shall be in accordance with Section 6, Change Control.

13.1.1.2 For changes other than editorial:

- Exceptions are documented on Attachment 2, Test Exception Report, and the Disposition Section is approved by the Test Engineer.
- Each Test Exception Report is logged in Attachment 1, Test Exception Log.
- The Test Director shall review Attachment 1, Test Exception Log, and ensure timely completion of all Disposition Actions and Retest Requirements.

SIGNATURE RECORD: By signing below, I attest that I am aware of and understand my duties and responsibilities as described in the OTP and as assigned by the TD or TE.

[illegible]

ATTACHMENT 4 - TEST PLAN, LLW GLOVEBOX MANUAL OPERATION

1.0 GENERAL DESCRIPTION

- 1.1 This test plan will verify that each manual function of the LLW glovebox components may be individually operated. These operations will be tested using procedures WRP1-OP-0719, Low Level Waste Glovebox Line Manual Operation and WRP1-OP-0715, LLW Supercompactor Operation, thereby also performing the required procedure validation for sections performed.

2.0 SAFETY

- 2.1 Reference OTP Section 8, SAFETY.

3.0 TOOLS, EQUIPMENT AND SUPPLIES

- Drum handling (manual) equipment or Pallet fork truck
- Spill Kit/Decontamination Equipment (oils/chemicals)
- Tape and rags

4.0 TEST PREREQUISITES

- 4.1 VERIFY OTP Section 11.0, PREREQUISITES are complete.
- 4.2 VERIFY PCS and DMS are ready to support testing.
- 4.3 TEST PREREQUISITES are complete and acceptable.

TD Initials/Date:

RL1 5/1/87

ATTACHMENT 4 - TEST PLAN, LLW GLOVEBOX MANUAL OPERATION

5.0 PROCEDURE

5.1 REFERENCE procedure WRP1-OP-0719, LOW LEVEL WASTE GLOVEBOX LINE
MANUAL OPERATION:

NOTE

The following sections of this procedure will be tested at a later date:

1. VII.E "MATE SINGLE DRUM TO ENTRY PORT (107-DO-07-101)"
2. VII.G "OPEN ENTRY PORT (107-DO-07-101) (SINGLE DRUM)"
3. VII.I "CLOSE ENTRY PORT (107-DO-07-101) (SINGLE DRUM)"

NOTE

Sections VII.A thru VII.L of WRP1-OP-0719 test the manual functions of the LLW Entry Glovebox (107-GB-07-101).

5.1.1 PERFORM Section VII.A, "INITIALIZE ENTRY GLOVEBOX", of
operating procedure as follows:

5.1.1.1 REDLINE procedure as needed during performance.

5.1.1.2 VERIFY results of performance are acceptable.

TD Initials/Date: JP / 8/8/97

5.1.2 PERFORM Section VII.B, "ACCESS ENTRY GLOVEBOX MAINTENANCE
MENUS", of operating procedure as follows:

5.1.2.1 REDLINE procedure as needed during performance.

5.1.2.2 VERIFY results of performance are acceptable.

TD Initials/Date: JP / 8/8/97

ATTACHMENT 4 - TEST PLAN, LLW GLOVEBOX MANUAL OPERATION

- 5.1.3 PERFORM Section VII.C, "OPERATE ENTRY GLOVEBOX HOIST (107-CR-07-101A)", of operating procedure as follows:

5.1.3.1 REDLINE procedure as needed during performance.

5.1.3.2 VERIFY results of performance are acceptable.

TD Initials/Date: RL 1 5/5/97

- 5.1.4 PERFORM Section VII.D, "MATE OVERPACK DRUM TO ENTRY PORT (107-DO-07-101)", of operating procedure as follows:

5.1.4.1 REDLINE procedure as needed during performance.

5.1.4.2 VERIFY results of performance are acceptable.

TD Initials/Date: RL 1 5/5/97

- 5.1.5 PERFORM Section VII.F, "OPEN ENTRY PORT (107-DO-07-101) (OVERPACK DRUM)", of operating procedure as follows:

5.1.5.1 REDLINE procedure as needed during performance.

5.1.5.2 VERIFY results of performance are acceptable.

TD Initials/Date: RL 1 5/5/97

- 5.1.6 PERFORM Section VII.H, "CLOSE ENTRY PORT (107-DO-07-101) (OVERPACK DRUM)", of operating procedure as follows:

5.1.6.1 REDLINE procedure as needed during performance.

5.1.6.2 VERIFY results of performance are acceptable.

TD Initials/Date: RL 1 5/5/97

ATTACHMENT 4 - TEST PLAN, LLW GLOVEBOX MANUAL OPERATION

5.1.7 PERFORM Section VII.J, "REMOVE OVERPACK DRUM FROM ENTRY PORT (107-DO-07-101)", of operating procedure as follows:

5.1.7.1 REDLINE procedure as needed during performance.

5.1.7.2 VERIFY results of performance are acceptable.

TD Initials/Date: JD 1 8/8/97

5.1.8 PERFORM Section VII.K, "OPEN TRANSFER PORT (107-DO-07-102A)", of operating procedure as follows:

5.1.8.1 REDLINE procedure as needed during performance.

5.1.8.2 VERIFY results of performance are acceptable.

TD Initials/Date: JD 1 8/8/97

5.1.9 PERFORM Section VII.L, "CLOSE TRANSFER PORT (107-GB-07-102)", of operating procedure as follows:

5.1.9.1 REDLINE procedure as needed during performance.

5.1.9.2 VERIFY results of performance are acceptable.

TD Initials/Date: JD 1 8/8/97

NOTE

Sections VIII.A thru VIII.O of WRP1-OP-0719 test the manual functions of the LLW Sorting Glovebox (107-GB-07-102).

5.1.10 PERFORM Section VIII.A, "INITIALIZE SORTING GLOVEBOX" of operating procedure as follows:

5.1.10.1 REDLINE procedure as needed during performance.

5.1.10.2 VERIFY results of performance are acceptable.

TD Initials/Date: JD 1 8/11/97

ATTACHMENT 4 - TEST PLAN, LLW GLOVEBOX MANUAL OPERATION

5.1.11 PERFORM Section VIII.B, "ACCESS SORTING GLOVEBOX MAINTENANCE MENUS", of operating procedure as follows:

5.1.11.1 REDLINE procedure as needed during performance.

5.1.11.2 VERIFY results of performance are acceptable.

TD Initials/Date: RD 15/11/97

5.1.12 PERFORM Section VIII.C, "OPERATE SORTING GLOVEBOX HOIST (107-CR-07-101C)", of operating procedure as follows:

5.1.12.1 REDLINE procedure as needed during performance.

5.1.12.2 VERIFY results of performance are acceptable.

TD Initials/Date: RD 15/11/97

5.1.13 PERFORM Section VIII.D, "OPEN/CLOSE BAGLESS TRANSFER PORT (107-DO-07-105)", of operating procedure as follows:

5.1.13.1 REDLINE procedure as needed during performance.

5.1.13.2 VERIFY results of performance are acceptable.

TD Initials/Date: RD 15/11/97

5.1.14 PERFORM Section VIII.E, "MOVE DRUM TRANSFER CAR (107-TC-07-101)", of operating procedure as follows:

5.1.14.1 REDLINE procedure as needed during performance. RD 15/11/97

VERIFY TRANSFER CAR AT DESID POSITION

5.1.14.2 VERIFY results of performance are acceptable.

5.1.15 PERFORM Section VIII.F, "MOVE OR ROTATE DRUM LID/DELID
FIXTURE (107-RT-07-101) of operating procedure as follows:

VIII.F - LOWER TIPPER *DO similar*
5.1.15.1 REDLINE procedure as needed during performance.

5.1.15.2 VERIFY results of performance are acceptable.

TD Initials/Date: *DO 12/11/97*

5.1.16 PERFORM Section VIII.G, "OPERATE LID/DELID SAW", of operating
procedure as follows:

5.1.16.1 REDLINE procedure as needed during performance.

5.1.16.2 VERIFY results of performance are acceptable.

TD Initials/Date: *DO 12/11/97*

5.1.17 PERFORM Section VIII.H, "DELID WASTE DRUM", of operating
procedure as follows:

5.1.17.1 REDLINE procedure as needed during performance.

5.1.17.2 VERIFY results of performance are acceptable.

TD Initials/Date: *DO 12/11/97*

5.1.18 PERFORM Section VIII.I, "RELID WASTE DRUM", of operating
procedure as follows:

5.1.18.1 REDLINE procedure as needed during performance.

5.1.18.2 VERIFY results of performance are acceptable.

5.1.19 PERFORM Section VIII.J, "C-CLIP AND CRIMP LID", of operating procedure as follows:

5.1.19.1 REDLINE procedure as needed during performance.

5.1.19.2 VERIFY results of performance are acceptable.

TD Initials/Date: RD 1 5/11/97

5.1.20 PERFORM Section VIII.K, "OPEN/CLOSE DRUM GRAB" of operating procedure as follows:

5.1.20.1 REDLINE procedure as needed during performance.

5.1.20.2 VERIFY results of performance are acceptable.

TD Initials/Date: RD 1 5/11/97

5.1.21 PERFORM Section VIII.L, "RAISE/LOWER/PARK DRUM TIPPER (107-DH-07-103)", of operating procedure as follows:

5.1.21.1 REDLINE procedure as needed during performance.

5.1.21.2 VERIFY results of performance are acceptable.

TD Initials/Date: RD 1 5/11/97

5.1.22 PERFORM Section VIII.M, "ROTATE DRUM TIPPER (107-DH-07-103)", of operating procedure as follows:

5.1.22.1 REDLINE procedure as needed during performance.

5.1.22.2 VERIFY results of performance are acceptable.

ATTACHMENT 4 - TEST PLAN, LLW GLOVEBOX MANUAL OPERATION

5.1.23 PERFORM Section VIII.N, "EXTEND/RETRACT SORTING TABLE (107-ST-07-101)", of operating procedure as follows:

5.1.23.1 REDLINE procedure as needed during performance.

5.1.23.2 VERIFY results of performance are acceptable.

TD Initials/Date: DD 12/11/97

5.1.24 PERFORM Section VIII.O, "RAISE/LOWER SORTING TABLE (107-ST-07-101)", of operating procedure as follows:

5.1.24.1 REDLINE procedure as needed during performance.

5.1.24.2 VERIFY results of performance are acceptable.

TD Initials/Date: DD 12/11/97

NOTE

Sections IX.A thru IX.I of WRP1-OP-0719 test the manual functions of the LLW Exit Glovebox (107-GB-07-105).

5.1.25 PERFORM Section IX.A, "INITIALIZE EXIT GLOVEBOX" of operating procedure as follows:

5.1.25.1 REDLINE procedure as needed during performance.

5.1.25.2 VERIFY results of performance are acceptable.

TD Initials/Date: DD 12/11/97

5.1.26 PERFORM Section IX.B, "ACCESS EXIT GLOVEBOX MAINTENANCE MENUS", of operating procedure as follows:

5.1.26.1 REDLINE procedure as needed during performance.

5.1.26.2 VERIFY results of performance are acceptable.

TD Initials/Date: DD 12/11/97

ATTACHMENT 4 - TEST PLAN, LLW GLOVEBOX MANUAL OPERATION

5.1.27 PERFORM Section IX.C, "OPERATE SORTING GLOVEBOX HOIST (107-CR-07-101D)", of operating procedure as follows:

5.1.27.1 REDLINE procedure as needed during performance.

5.1.27.2 VERIFY results of performance are acceptable.

TD Initials/Date: DL 18/11/97

5.1.28 PERFORM Section IX.D, "MATE DRUM TO EXIT PORT (107-DO-07-106)", of operating procedure as follows:

5.1.28.1 REDLINE procedure as needed during performance.

5.1.28.2 VERIFY results of performance are acceptable.

TD Initials/Date: DL 18/16/97

5.1.29 PERFORM Section IX.E, "OPEN EXIT PORT (107-DO-07-106)", of operating procedure as follows:

5.1.29.1 REDLINE procedure as needed during performance.

5.1.29.2 VERIFY results of performance are acceptable.

TD Initials/Date: DL 18/16/97

5.1.30 PERFORM Section IX.F, "OPERATE TRANSFER CAR CONVEYOR of operating procedure as follows:

5.1.30.1 REDLINE procedure as needed during performance.

5.1.30.2 VERIFY results of performance are acceptable.

TD Initials/Date: DL 18/11/97

ATTACHMENT 4 - TEST PLAN, LLW GLOVEBOX MANUAL OPERATION

5.1.31 PERFORM Section IX.G, "RELID OVERPACK DRUM & CLOSE EXIT PORT (107-DO-07-106)", of operating procedure as follows:

5.1.31.1 REDLINE procedure as needed during performance.

5.1.31.2 VERIFY results of performance are acceptable.

TD Initials/Date: AD 12/16/97

5.1.32 PERFORM Section IX.H, "REMOVE OVERPACK DRUM FROM EXIT PORT (107-DO-07-106)", of operating procedure as follows:

5.1.32.1 REDLINE procedure as needed during performance.

5.1.32.2 VERIFY results of performance are acceptable.

TD Initials/Date: AD 12/16/97

5.1.33 PERFORM Section IX.I, "MATE DRUM TO EXIT PORT (107-DO-07-106)", of operating procedure as follows:

5.1.33.1 REDLINE procedure as needed during performance.

5.1.33.2 VERIFY results of performance are acceptable.

TD Initials/Date: 1

5.2 REFERENCE procedure WRP1-OP-0715, LLW SUPERCOMPACTOR OPERATION:

5.2.1 PERFORM Section VII.E, "MANUAL OPERATION", of operating procedure as follows:

5.2.1.1 REDLINE procedure as needed during performance.

5.2.1.2 VERIFY results of performance are acceptable.

ATTACHMENT 5 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 1

1.0 GENERAL DESCRIPTION

John

- 1.1 Test case one will sample ~~and overpack~~ LLW Test Drum 1 without compacting. These operations will be performed using procedures WRP1-OP-0710 "Glovebox Waste Sampling," WRP1-OP-0713 "LLW Entry Glovebox Operation," WRP1-OP-0714 "Low Level Waste (LLW) Sorting Glovebox Operation," WRP1-OP-0715 "LLW Supercompactor Operation" and WRP1-OP-0716 "LLW Exit Glovebox Operation," thereby also performing the required procedure validation for sections performed. The sequence of events is as follows:
- 1.1.1 STC OTP6-97-300001 is connected to the STC port.
 - 1.1.2 Transfer drum OTP-LLWR-TD-01 is connected to the LLW glovebox RWM bagless transfer port and the port is opened.
 - 1.1.3 Transfer stand is moved to the sorting table.
 - 1.1.4 85 gallon shipping overpack OTP-LLW-OD-01, with 55 gallon LLW drum OTP-LLW-WP-01 inside, is connected to the LLW glovebox entry port and drum OTP-LLW-WP-01 is lifted into the LLW Entry glovebox.
 - 1.1.5 Drum OTP-LLW-WP-01 is checked for external contamination.
 - 1.1.6 85 gallon drum OTP-LLW-OD-01 is closed and removed from the LLW Entry port and from lift table LT-09-202A.
 - 1.1.7 Empty 85 gallon drum OTP-LLW-OD-01 (from entry port) is placed on lift table LT-09-202C (LLW Exit).
 - 1.1.8 Drum OTP-LLW-OD-01 is connected to the LLW glovebox exit port and the port is opened.
 - 1.1.9 Drum OTP-LLW-WP-01 is lifted by the LLW entry glovebox hoist, lowered through transfer port, and placed on transfer car.
 - 1.1.10 Drum OTP-LLW-WP-01 is moved to the drum tipper, the lid is removed, and the contents are dumped on the sorting table.

ATTACHMENT 5 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 1

- 1.1.11 A sample analysis request is prepared for drum OTP-LLW-WP-01. Sample 97-00001 is requested with analyses as directed by Sampling Representative. One bottle is required for each analysis.
- 1.1.12 Sample bottle barcode labels 97-00001-01L and 97-00001-02L are printed in the sample management office and the labels are placed on empty sample bottles.
- 1.1.13 Empty sample bottles 97-00001-01L and 97-00001-02L are loaded into the LLW glovebox through the Consumable Materials' port.
- 1.1.14 A soil sample is collected in sample bottles 97-00001-01L and 97-00001-02L.
- 1.1.15 Sample bottles 97-00001-01L and 97-00001-02L are placed in STC OTP6-97-300001.
- 1.1.16 STC OTP6-97-300001 is removed from the LLW STC port and placed in transfer pig OTP6-97-400001.
- 1.1.17 The waste on the sorting table is loaded back into drum OTP-LLW-WP-01, the drum is placed on the transfer car, the drum is relidged, and the transfer car with the drum is moved to the compactor.
- 1.1.18 Drum OTP-LLW-WP-01 is moved to the exit glovebox without being compacted. "Puck" bar code label OTP001 is placed on the drum and the barcode is read. The drum is then lifted by the hoist and the drum is weighed on the hoist scale. The ID and weight are sent to the DMS.
- 1.1.19 The waste drum is loaded into the overpack at the exit port.
- 1.1.20 Overpack drum OTP-LLW-OD-01 is (1) closed, (2) removed from the LLW glovebox exit port, (3) surveyed, and (4) removed from lift table LT-09-202C.

2.0 SAFETY

2.1 Reference OTP Section 8, SAFETY.

ATTACHMENT 5 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 1

3.0 TOOLS, EQUIPMENT AND SUPPLIES

- Drum handling (manual) equipment or Pallet fork truck
- Spill Kit/Decontamination Equipment (oils/chemicals)
- Tape and rags
- Other equipment, material or protective clothing (as required)

4.0 TEST PREREQUISITES

4.1 VERIFY OTP Section 11.0, PREREQUISITES are complete.

4.2 SET initial conditions as follows:

- ✓ 4.2.1 55 gallon LLW drum OTP-LLW-WP-01, in shipping overpack OTP-LLW-OD-01, is on lift table LT-09-202A.
- ✓ 4.2.2 The PCS man_op program has sent an AGVPCS AGVL message for the AGV located at AGVLLWENTR (LT-09-202A) with drum OTP-LLW-OD-01 (sets LCU conditions have been set for drum OTP-LLW-OD-01 on lift table LT-09-202A).
- ✓ 4.2.3 Empty transfer drum OTP-LLWR-TD-01 is on lift table LT-09-203A.
- ✓ 4.2.4 The PCS man_op program has sent an AGVPCS AGVL message for the AGV located at AGVLLWRWX (LT-09-203A) with drum OTP-LLWR-TD-01 (sets LCU conditions for drum OTP-LLWR-TD-01 on lift table LT-09-203A).
- ✓ 4.2.5 Empty sample transport container (STC) OTP6-97-300001 is at the LLW glovebox ready to connect to the STC port.
- 4.2.6 Transfer pig OTP6-97-400001 is located near the LLW STC port.
- ✓ 4.2.7 Sequentially numbered puck barcode labels are available in the exit glovebox.
- ✓ 4.2.8 Required sampling supplies are available in the glovebox.
- ✓ 4.2.9 Two empty unlabeled 250 ml sample bottles are in the sample management office.

ATTACHMENT 5 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 1

- ✓ 4.2.10 A user with general operator (GENOP) privileges is logged on at DMS LLW Terminal (107-TE-12-104)
- ✓ 4.2.11 A user with chemist privileges is logged on at DMS Sample Management Office Terminal (109-TE-12-107).
- ✓ 4.2.12 The sample-label barcode printer in the sample management office is loaded with blank labels and ready to print.
- ✓ 4.2.13 Test scripts have been run on the DMS server to:
 - ✓ 4.2.13.1 Initialize the DMS database.
 - ✓ 4.2.13.2 Load initial data for PINs:
PINs OTP-LLW-OD-01, OTP-LLW-OD-02,
OTP-LLW-OD-03, OTP-LLW-OD-04,
OTP-LLW-WP-01, OTP-LLW-WP-02,
OTP-LLW-WP-03, OTP-LLW-WP-04,
OTP-LLWR-TD-01, OTP-LLWR-TD-02,
OTP6-97-300001, and OTP6-97-400001.
 - ✓ 4.2.13.3 Reset screen DMSS0504 sequential sample number to zero. (The first sample number assigned by screen DMSS0504 will be OTP00001.)
 - ✓ 4.2.13.4 Print report of DMS database.

ATTACHMENT 5 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 1

4.2.14 VERIFY conditions:

- ✓ 4.2.14.1 Port 107-DO-07-101, CLOSED and LOCKED.
- ✓ 4.2.14.2 Port 107-DO-07-105, CLOSED and LOCKED.
- ✓ 4.2.14.3 Lift Table 107-LT-09-202A at AGV height.
- ✓ 4.2.14.4 Lift Table 107-LT-09-202A, MAINTENANCE/OFF/NORMAL (M/O/N) switch in NORMAL.
- ✓ 4.2.14.5 Lift Table 107-LT-09-203A at AGV height.
- ✓ 4.2.14.6 Lift Table 107-LT-09-203A, MAINTENANCE/OFF/NORMAL (M/O/N) switch in NORMAL.
- ✓ 4.2.14.7 Manipulator 107-EM-07-101 PARKED.

4.3 UPDATE PCS Tracking Table as follows:

- ✓ 4.3.1 Drum OTP-LLW-WP-01 in shipping overpack OTP-LLW-OD-01 at LT-09-202A.
- ✓ 4.3.2 Drum OTP-LLWR-TD-01 at LT-09-203A.

ATTACHMENT 5 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 1

5.0 PROCEDURE

5.1 REFERENCE procedure WRP1-OP-0710, GLOVEBOX WASTE SAMPLING:

5.1.1 PERFORM Section VII.D.1 "ATTACH STC TO GLOVEBOX", of operating procedure as required to attach empty STC-1 to glovebox:

5.1.1.1 REDLINE procedure as needed during performance.

5.1.1.2 VERIFY results of performance are acceptable.

TD Initials/Date: RD 18/12/97

5.2 REFERENCE procedure WRP1-OP-0714, LOW LEVEL WASTE (LLW) SORTING GLOVEBOX OPERATION:

5.2.1 PERFORM Section VII.A, "INITIALIZE SYSTEM", of operating procedure as follows:

5.2.1.1 REDLINE procedure as needed during performance.

5.2.1.2 VERIFY results of performance are acceptable.

TD Initials/Date: RD 18/12/97

5.2.2 PERFORM Section VII.N, "MATE DRUM TO RWM TRANSFER PORT (107-DO-07-105)", of operating procedure as follows:

5.2.2.1 REDLINE procedure as needed during performance.

5.2.2.2 VERIFY drum OTP-LLWR-TD-01 connected to port 107-DO-07-105 and port OPEN.

5.2.2.3 VERIFY results of performance are acceptable.

ATTACHMENT 6 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 2

1.0 GENERAL DESCRIPTION

1.1 Test case two will sample, compact and place in Exit Glovebox Storage LLW Test Drum 2. These operations will be performed using procedures WRP1-OP-0710 "Glovebox Waste Sampling," WRP1-OP-0713 "LLW Entry Glovebox Operation," WRP1-OP-0714 "Low Level Waste (LLW) Sorting Glovebox Operation," WRP1-OP-0706 "Packet NDE Operation," WRP1-OP-0715 "LLW Supercompactor Operation" and WRP1-OP-0716 "LLW Exit Glovebox Operation," thereby also performing the required procedure validation for sections performed. The sequence of events is as follows:

- ✓ 1.1.1 85 gallon shipping overpack OTP-LLW-OD-02, with 55 gallon LLW drum OTP-LLW-WP-02 inside, is connected to the LLW glovebox entry port and drum OTP-LLW-WP-02 is lifted into the LLW Entry glovebox
- ✓ 1.1.2 Drum OTP-LLW-WP-02 is checked for external contamination.
- 1.1.3 85 gallon drum OTP-LLW-OD-02 is closed and removed from the LLW Entry port and from lift table LT-09-202A.
- 1.1.4 Empty 85 gallon drum OTP-LLW-OD-02 (from entry port) is placed on lift table LT-09-202C (LLW Exit).
- 1.1.5 Drum OTP-LLW-OD-02 is connected to the LLW glovebox exit port and the port is opened.
- 1.1.6 Drum OTP-LLW-WP-02 is lifted by the LLW entry glovebox hoist, lowered through transfer port, and placed on transfer car.
- 1.1.7 Drum OTP-LLW-WP-02 is moved to the drum tipper, the lid is removed, and the drum contents are dumped on the sorting table.
- 1.1.8 NDE hard copy, DMS NDE comments and Sorting Glovebox Packet NDE, are used to find and identify three non-compliant packets.

ATTACHMENT 6 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 2

- 1.1.9 Packet bar code label OTP6-97-000001 is applied to the unwrapped aerosol can of saline solution, the bar code is read, the packet is placed on the transfer stand, and data is entered in the DMS.
- 1.1.10 Packet bar code label OTP6-97-000002 is applied to the aerosol can of saline solution wrapped in bubble wrap and tape, the bar code is read, the packet is placed on the transfer stand, and data is entered in the DMS.
- 1.1.11 Packet bar code label OTP6-97-000003 is applied to the unlabeled aerosol can wrapped in cloth material and secured with tape, the bar code is read, the packet is placed on the transfer stand, and data is entered in the DMS.
- 1.1.12 The waste data for the sorted drum is updated on the DMS.
- 1.1.13 The waste on the sorting table is loaded back into drum OTP-LLW-WP-02, the drum is placed on the transfer car, the drum is relidded, and the transfer car with the drum is moved to the compactor.
- 1.1.14 Drum OTP-LLW-WP-02 is compacted.
- 1.1.15 Compacted drum OTP-LLW-WP-02 is moved to the exit glovebox. Bar code label OTP002 is placed on the puck and the barcode is read. The puck is then lifted by the hoist and the puck is weighed on the hoist scale. The ID and weight are sent to the DMS.
- 1.1.16 The puck is stored at Storage Location 1.
- 1.1.17 The transfer stand is placed in transfer drum OTP-LLWR-TD-01 and the drum is closed and removed from the transfer drum port and from lift table LT-09-201F.

2.0 SAFETY

- 2.1 Reference OTP Section 8, SAFETY.

5.4.3.3 VERIFY results of performance are acceptable.

TD Initials/Date: JD / 8/2/07

5.4.4 PERFORM Section VII.E, "DELID WASTE DRUM", of operating procedure as follows:

5.4.4.1 REDLINE procedure as needed during performance.

JD 8/2/07
Move to C-Stop position to remove plastic wrap on drum

JD 8/2/07
ETR ✓
Grab pressure printed ball

ATTACHMENT 6 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 2

5.4.4.2 VERIFY delid fixture removes lid from drum
OTP-LLW-WP-02, and returns to it's "raised/parked"
position with the lid.

5.4.4.3 VERIFY results of performance are acceptable.

TD Initials/Date: JD 10/14/97

5.4.5 PERFORM Section VII.F, "EMPTY WASTE DRUM ONTO SORTING TABLE",
of operating procedure as follows:

5.4.5.1 REDLINE procedure as needed during performance.

5.4.5.2 VERIFY tipper raises to dump contents of drum
OTP-LLW-WP-02 onto sorting table, and returns to
it's "lowered" position with the empty drum.

5.4.5.3 VERIFY DMSS0312 Parent PIN is OTP-LLW-WP-02,
Sample = NO and Compliant? = NO.

5.4.5.4 VERIFY results of performance are acceptable.

5.4.6 PERFORM Section VII.G, "REMOVE NON-COMPLIANT PACKETS FROM WASTE", of operating procedure as follows:

5.4.6.1 REDLINE procedure as needed during performance.

✓ 5.4.6.2 IDENTIFY three non-compliant packages using NDE hard copy from receiving, DMS NDE comments and Packet NDE:

- 1) VIEW DMS NDE comments on DMSS0312
- 2) PERFORM WRP1-OP-0706, PACKET NDE OPERATION in it's entirety on at least one non-compliant package.

✓ 5.4.6.3 VERIFY Packet bar code label OTP6-97-000001 is applied to the unwrapped aerosol can of saline solution, the bar code is read, and the packet is placed on the transfer stand.

✓ 1) DISPLAY DMSS0312 LLW Non-Compliant Screen after the barcodes are read,

✓ 2) ENTER the following for PIN OTP6-97-000001:

Group: AC

Waste Description: AEROSOL CAN OF SALINE SOLUTION

5.4.6.4 VERIFY Packet bar code label OTP6-97-000002 is applied to the aerosol can of saline solution wrapped in bubble wrap and tape, the bar code is read, and packet is placed on the transfer stand.

✓ 1) REFRESH DMSS0312 LLW Non-Compliant Screen after the barcodes are read,

✓ 2) ENTER the following for PIN OTP6-97-000002:

Group: AC

Waste Description: AEROSOL CAN

ATTACHMENT 6 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 2

5.4.6.5 VERIFY Packet bar code label OTP6-97-000003 is applied to the unlabeled aerosol can of saline solution wrapped in cloth and tape, bar code is read, and packet is placed on transfer stand.

- ✓ 1) REFRESH DMSS0312 LLW Non-Compliant Screen after the barcodes are read,
- ✓ 2) ENTER the following for PIN OTP6-97-000003:

Group: AC

Waste Description: AEROSOL CAN

5.4.6.6 UPDATE sorted drum data in DMS:

- 1) SELECT DMSS0312 "Physcomp" screen.
 - DELETE HAZARDOUS CONSTITUENTS record
 - CHANGE CONWEB PADS volume percent to 98
 - CHANGE WATER volume percent to 2.
- 2) SELECT DMSS0312 "Chemcomp" screen.
 - DELETE the two records.

5.4.6.7 VERIFY results of performance are acceptable.

TD Initials/Date: JD / 8/13/97

5.4.7 PERFORM Section VII.H, "RETURN COMPLIANT WASTE TO WASTE DRUM", of operating procedure as follows:

5.4.7.1 REDLINE procedure as needed during performance.

5.4.7.2 VERIFY results of performance are acceptable.

TD Initials/Date: JD / 8/13/97

ATTACHMENT 6 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 2

5.4.8 PERFORM Section VII.I, "MOVE WASTE DRUM TO RELID POSITION", of operating procedure as follows:

5.4.8.1 REDLINE procedure as needed during performance.

5.4.8.2 VERIFY results of performance are acceptable.

TD Initials/Date: _____ / _____

5.4.9 PERFORM Section VII.J, "RELID WASTE DRUM", of operating procedure as follows:

5.4.9.1 REDLINE procedure as needed during performance.

5.4.9.2 VERIFY drum OTP-LLW-WP-02 is re-lidded with c-clips attached.

5.4.9.3 VERIFY results of performance are acceptable.

TD Initials/Date: DL 18/13/97

5.4.10 PERFORM Section VII.K, "TRANSFER WASTE DRUM TO SUPERCOMPACTOR", of operating procedure as follows:

5.4.10.1 REDLINE procedure as needed during performance.

5.4.10.2 PERFORM appropriate Sections of WPR1-OP-0715 to ensure Supercompactor is in Automatic and ready to receive drums.

5.4.10.3 VERIFY drum OTP-LLW-WP-02 is delivered to Supercompactor and automatically compacted.

5.4.10.4 VERIFY results of performance are acceptable.

5.6 REFERENCE procedure WRP1-OP-0714, LOW LEVEL WASTE (LLW) SORTING GLOVEBOX OPERATION:

5.6.1 PERFORM Section VII.L, "PLACE TRANSFER STAND IN RWM TRANSFER DRUM", of operating procedure as follows:

5.6.1.1 REDLINE procedure as needed during performance.

5.6.1.2 VERIFY transfer stand is placed in transfer drum OTP-LLWR-TD-01.

5.6.1.3 VERIFY results of performance are acceptable.

TD Initials/Date: DL 1 8/13/97

5.6.2 PERFORM Section VII.M, "REMOVE DRUM FROM RWM TRANSFER PORT (107-DO-07-105)", of operating procedure as follows:

5.6.2.1 REDLINE procedure as needed during performance.

5.6.2.2 VERIFY transfer drum OTP-LLWR-TD-01 is closed and removed from port.

5.6.2.3 VERIFY results of performance are acceptable.

TD Initials/Date: DL 1 8/13/97

5.7 REMOVE transfer drum OTP-LLWR-TD-01 manually from Lift Table LT-09-201F.

5.8 RUN DMS Report Script.

TD Initials/Date: DL 1 8/13/97

ATTACHMENT 7 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 3

1.0 GENERAL DESCRIPTION

- 1.1 Test case three will compact and overpack LLW Test Drum 3 without sorting. These operations will be performed using procedures WRP1-OP-0713 "LLW Entry Glovebox Operation," WRP1-OP-0714 "Low Level Waste (LLW) Sorting Glovebox Operation," WRP1-OP-0715 "LLW Supercompactor Operation" and WRP1-OP-0716 "LLW Exit Glovebox Operation," thereby also performing the required procedure validation for sections performed. The sequence of events is as follows:
 - 1.1.1 85 gallon shipping overpack OTP-LLW-OD-03, with 55 gallon LLW drum OTP-LLW-WP-03 inside, is connected to the LLW glovebox entry port and drum OTP-LLW-WP-03 is lifted into the LLW Entry glovebox.
 - 1.1.2 Drum OTP-LLW-WP-03 is checked for external contamination.
 - 1.1.3 85 gallon drum OTP-LLW-OD-03 is closed and removed from the LLW Entry port and from lift table LT-09-202A.
 - 1.1.4 Drum OTP-LLW-WP-03 is lifted by the LLW entry glovebox hoist, lowered through the transfer port, and placed on the transfer car.
 - 1.1.5 Drum OTP-LLW-WP-03 is moved to the drum tipper and the lid-band clamp is removed.
 - 1.1.6 Lid C clamps are put on drum OTP-LLW-WP-03 and the transfer car with the drum is moved to the compactor.
 - 1.1.7 Drum OTP-LLW-WP-03 is compacted.
 - 1.1.8 Compacted drum OTP-LLW-WP-03 is moved to the exit glovebox. Bar code label OTP003 is placed on the puck and the barcode is read. The puck is then lifted by the hoist and the puck is weighed on the hoist scale. The ID and weight are sent to the DMS.
 - 1.1.9 The puck is loaded into the overpack at the exit port.

5.0 PROCEDURE

5.1 REFERENCE procedure WRP1-OP-0713, LLW ENTRY GLOVEBOX OPERATION:

5.1.1 PERFORM Section VII.A, "INITIALIZE SYSTEM", of operating procedure as follows:

5.1.1.1 REDLINE procedure as needed during performance.

5.1.1.2 VERIFY results of performance are acceptable.

TD Initials/Date: RL 18/13/97

5.1.2 PERFORM Section VII.B, "DRUM ENTRY TO LLW GLOVEBOX", of operating procedure as follows:

5.1.2.1 REDLINE procedure as needed during performance.

5.1.2.2 VERIFY overpack drum OTP-LLW-OD-03 OPEN and inner drum OTP-LLW-WP-03 on hoist at "SWAB" position.

5.1.2.3 ~~VERIFY~~ DMSS0311 indicates overpack drum OTP-LLW-OD-03 and inner drum OTP-LLW-WP-03 at glovebox with message "Sorting Not Required".

5.1.2.4 VERIFY results of performance are acceptable.

TD Initials/Date: RL 18/13/97

ATTACHMENT 7 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 3

5.1.3 PERFORM Section VII.C, "CLOSE ENTRY PORT", of operating procedure as follows:

5.1.3.1 REDLINE procedure as needed during performance.

✓ 5.1.3.2 VERIFY ENTRY port is CLOSED, overpack drum OTP-LLW-OD-03 is lowered from port and checked for contamination.

✓ 5.1.3.3 SELECT "CLEAN DRUM READY FOR PICKUP" when prompted by OIU.

✓ 5.1.3.4 VERIFY overpack drum OTP-LLW-OD-03 is removed from Lift Table LT-09-202A.

5.1.3.5 VERIFY results of performance are acceptable.

TD Initials/Date: DD 15/13/97

5.1.4 PERFORM Section VII.D, "MOVE DRUM TO DRUM TRANSFER CAR", of operating procedure as follows:

5.1.4.1 REDLINE procedure as needed during performance.

✓ 5.1.4.2 VERIFY drum OTP-LLW-WP-03 is positioned over transfer port 107-DO-07-102 and lowered onto drum transfer car.

5.1.4.3 VERIFY results of performance are acceptable.

TD Initials/Date: DD 15/13/97

ATTACHMENT 7 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 3

5.2 REFERENCE procedure WRP1-OP-0714, LOW LEVEL WASTE (LLW) SORTING GLOVEBOX OPERATION:

5.2.1 PERFORM Section VII.B, "TRANSFER WASTE DRUM TO DELID POSITION", of operating procedure as follows:

- 5.2.1.1 REDLINE procedure as needed during performance.
- 5.2.1.2 VERIFY drum OTP-LLW-WP-03 at "DELID" position.
- 5.2.1.3 VERIFY results of performance are acceptable.

TD Initials/Date: DD / 8/13/97

5.2.2 PERFORM Section VII.C, "GRIP WASTE DRUM WITH DRUM TIPPER (107-DH-07-103)", of operating procedure as follows:

- 5.2.2.1 REDLINE procedure as needed during performance.
- 5.2.2.2 VERIFY plastic overbag removed from drum OTP-LLW-WP-03.
- 5.2.2.3 VERIFY drum tipper lowered and tipper grab closed around drum OTP-LLW-WP-03.
- 5.2.2.4 VERIFY results of performance are acceptable.

TD Initials/Date: DD / 8/13/97

5.2.3 PERFORM Section VII.D, "SAW WASTE DRUM CLAMP BAND", of operating procedure as follows:

- 5.2.3.1 REDLINE procedure as needed during performance.
- 5.2.3.2 VERIFY clamp band sawed, removed from drum OTP-LLW-WP-03, and placed on sorting table.
- 5.2.3.3 VERIFY results of performance are acceptable.

5.4. RUN DMS Report Script.

TD Initials/Date: el / 8/18/97

ATTACHMENT 8 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 4

1.0 GENERAL DESCRIPTION

1.1 Test Case four will treat items in Transfer Drum 2 packets and samples in STC-2 which were taken from these items. These operations will be tested using procedures WRP1-OP-0710, Glovebox Waste Sampling, WRP1-OP-0728, LLW Glovebox Operation and WRP1-OP-0711, Waste Treatment, thereby also performing the required procedure validation for sections performed. The sequence of events is as follows:

- 1.1.1 Transfer drum OTP-LLWR-TD-02 is connected to the LLW glovebox RWM bagless transfer port and the port is opened.
- 1.1.2 Transfer stand is moved to the sorting table.
- 1.1.3 85 gallon shipping overpack OTP-LLW-OD-04, with 55 gallon LLW drum OTP-LLW-WP-04 inside, is connected to the LLW glovebox entry port and drum OTP-LLW-WP-04 is lifted into the LLW Entry glovebox.
- 1.1.4 Drum OTP-LLW-WP-04 is checked for external contamination.
- 1.1.5 85 gallon drum OTP-LLW-OD-04 is closed and removed from the LLW Entry port and from lift table LT-09-202A.
- 1.1.6 Drum OTP-LLW-WP-04 is lifted by the LLW entry glovebox hoist, lowered through the transfer port, and placed on the transfer car.
- 1.1.7 Drum OTP-LLW-WP-04 is moved to the drum tipper, the lid is removed, and the drum contents are dumped on the sorting table.
- 1.1.8 The Packet X-ray, NDE hard copy, and DMS NDE comments are used to find and identify three non-compliant packets.
- 1.1.9 Packet bar code label OTP6-97-000004 is applied to the lead brick in two plastic bags wrapped with tape, the bar code is read, the packet is placed on the transfer stand, and data is entered in the DMS.

ATTACHMENT 8 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 4

- 1.1.10 Packet bar code label OTP6-97-000005 is applied to the bottle of solvent and bottle of oil wrapped together in cloth with tape, the bar code is read, the packet is placed on the transfer stand, and data is entered in the DMS.
- 1.1.11 Packet bar code label OTP6-97-000006 is applied to the bottle of acid, the bar code is read, the packet is placed on the transfer stand, and data is entered in the DMS.
- 1.1.12 The waste data for the sorted drum is updated on the DMS.
- 1.1.13 The waste on the sorting table is loaded back into drum OTP-LLW-WP-04, the drum is placed on the transfer car, the drum is relidded, and the transfer car with the drum is moved to the compactor.
- 1.1.14 Drum OTP-LLW-WP-04 is compacted.
- 1.1.15 Compacted drum OTP-LLW-WP-04 is moved to the exit glovebox. Bar code label OTP004 is placed on the puck and the barcode is read. The puck is then lifted by the hoist and the puck is weighed on the hoist scale. The ID and weight are sent to the DMS.
- 1.1.16 Puck P00004 is loaded into the overpack at the exit port.
- 1.1.17 Puck P00002 is lifted by the hoist, weighed, and placed in the overpack drum.
- 1.1.18 Filler is added to overpack drum OTP-LLW-OD-01 and the drum is prepared for loadout.
- 1.1.19 Overpack drum OTP-LLW-OD-01 is (1) closed, (2) removed from the LLW glovebox exit port, (3) surveyed, and (4) removed from lift table LT-09-202C.
- 1.1.20 The transfer stand is placed in transfer drum OTP-LLWR-TD-02 and the drum is closed and removed from the transfer drum port and from Lift Table LT-09-201F.

5.2.3 PERFORM Section VII.C, "CLOSE ENTRY PORT", of operating procedure as follows:

- 5.2.3.1 REDLINE procedure as needed during performance.
- ✓ 5.2.3.2 VERIFY ENTRY port is CLOSED, overpack drum OTP-LLW-OD-04 is lowered from port and checked for contamination.
- ✓ 5.2.3.3 SELECT "CLEAN DRUM READY FOR PICKUP" when prompted by OIU.
- ✓ 5.2.3.4 VERIFY overpack drum OTP-LLW-OD-04 is removed from Lift Table LT-09-202A.
- 5.2.3.5 VERIFY results of performance are acceptable.

TD Initials/Date: RL 8/14/97

5.2.4 PERFORM Section VII.D, "MOVE DRUM TO DRUM TRANSFER CAR", of operating procedure as follows:

- 5.2.4.1 REDLINE procedure as needed during performance.
- ✓ 5.2.4.2 VERIFY drum OTP-LLW-WP-04 is positioned over transfer port 107-DO-07-102 and lowered onto drum transfer car.
- 5.2.4.3 VERIFY results of performance are acceptable.

TD Initials/Date: RL 8/14/97

ATTACHMENT 8 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 4

5.3 REFERENCE procedure WRP1-OP-0714, LOW LEVEL WASTE (LLW) SORTING GLOVEBOX OPERATION:

TRANSFER CAR TO
C-CELL POSITION
TO REMOVE PAR
8/14/97

5.3.1 PERFORM Section VII.B, "TRANSFER WASTE DRUM TO DELID POSITION", of operating procedure as follows:

5.3.1.1 REDLINE procedure as needed during performance.

5.3.1.2 VERIFY drum OTP-LLW-WP-04 at "DELID" position.

5.3.1.3 VERIFY results of performance are acceptable.

TD Initials/Date: DL 8/14/97

5.3.2 PERFORM Section VII.C, "GRIP WASTE DRUM WITH DRUM TIPPER (107-DH-07-103)", of operating procedure as follows:

5.3.2.1 REDLINE procedure as needed during performance.

5.3.2.2 VERIFY plastic overbag removed from drum
OTP-LLW-WP-04.

5.3.2.3 VERIFY drum tipper lowered and tipper grab closed
around drum OTP-LLW-WP-04.

5.3.2.4 VERIFY results of performance are acceptable.

TD Initials/Date: DL 8/14/97

5.3.3 PERFORM Section VII.D, "SAW WASTE DRUM CLAMP BAND", of operating procedure as follows:

5.3.3.1 REDLINE procedure as needed during performance.

✓ 5.3.3.2 VERIFY clamp band sawed, removed from drum
OTP-LLW-WP-04, and placed on sorting table.

5.3.3.3 VERIFY results of performance are acceptable.

TD Initials/Date: DL 8/14/97

ATTACHMENT 8 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 4

5.3.4 PERFORM Section VII.E, "DELID WASTE DRUM", of operating procedure as follows:

5.3.4.1 REDLINE procedure as needed during performance.

✓ 5.3.4.2 VERIFY delid fixture removes lid from drum OTP-LLW-WP-04, and returns to it's "raised/parked" position with the lid.

5.3.4.3 VERIFY results of performance are acceptable.

TD Initials/Date: DD 1 8/14/97

5.3.5 PERFORM Section VII.F, "EMPTY WASTE DRUM ONTO SORTING TABLE", of operating procedure as follows:

5.3.5.1 REDLINE procedure as needed during performance.

✓ 5.3.5.2 VERIFY tipper raises to dump contents of drum OTP-LLW-WP-04 onto sorting table, and returns to it's "lowered" position with the empty drum.

✓ 5.3.5.3 VERIFY DMSS0312 Parent PIN is OTP-LLW-WP-04, Sample = NO and Compliant? = NO.

5.3.5.4 VERIFY results of performance are acceptable.

TD Initials/Date: DD 1 8/14/97

ATTACHMENT 8 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 4

5.3.6 PERFORM Section VII.G, "REMOVE NON-COMPLIANT PACKETS FROM WASTE", of operating procedure as follows:

5.3.6.1 REDLINE procedure as needed during performance.

✓ 5.3.6.2 IDENTIFY three non-compliant packages using NDE hard copy from receiving, DMS NDE comments and Packet NDE:

- 1) VIEW DMS NDE comments on DMSS0312
- 2) PERFORM WRP1-OP-0706, PACKET NDE OPERATION in it's entirety on at least one non-compliant package.

5.3.6.3 VERIFY Packet bar code label OTP6-97-000004 is applied to the lead brick in two plastic bags wrapped with tape, the bar code is read, and the packet is placed on the transfer stand:

- 1) DISPLAY DMSS0312 LLW Non-Compliant Screen after the barcodes are read,
- 2) ENTER the following for PIN OTP6-97-000004:

Group: PB

Waste Description: LEAD BRICK

5.3.6.4 VERIFY Packet bar code label OTP6-97-000005 is applied to the bottle of solvent and bottle of oil wrapped together in cloth and tape, the bar code is read, and packet is placed on the transfer stand.

- 1) REFRESH DMSS0312 LLW Non-Compliant Screen after the barcodes are read,
- 2) ENTER the following for PIN OTP6-97-000005:

Group: LQ

Waste Description: BOTTLE OF SOLVENT AND BOTTLE OF OIL

ATTACHMENT 8 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 4

5.3.6.5 VERIFY Packet bar code label OTP6-97-000006 is applied to the bottle of acid, bar code is read, and packet is placed on transfer stand.

- 1) REFRESH DMSS0312 LLW Non-Compliant Screen after the barcodes are read,
- 2) ENTER the following for PIN OTP6-97-000007:

Group: LQ

Waste Description: BOTTLE OF ACID

5.3.6.6 UPDATE sorted drum data in DMS:

- 1) SELECT DMSS0312 "Physcomp" screen.
 - DELETE HAZARDOUS CONSTITUENTS record
 - CHANGE PLASTIC/POLYURATHANE volume percent to 30
 - CHANGE CLOTH/RAGS/NYLON volume percent to 70.
- 2) SELECT DMSS0312 "Chemcomp" screen.
 - DELETE all records.

5.3.6.7 VERIFY results of performance are acceptable.

TD Initials/Date: DL 1 8/14/97

5.3.7 PERFORM Section VII.H, "RETURN COMPLIANT WASTE TO WASTE DRUM", of operating procedure as follows:

5.3.7.1 REDLINE procedure as needed during performance.

5.3.7.2 VERIFY results of performance are acceptable.

TD Initials/Date: DL 1 8/14/97

5.3.8 PERFORM Section VII.I, "MOVE WASTE DRUM TO RELID POSITION", of operating procedure as follows:

5.3.8.1 REDLINE procedure as needed during performance.

5.3.8.2 VERIFY results of performance are acceptable.

TD Initials/Date: _____ / _____

5.3.9 PERFORM Section VII.J, "RELID WASTE DRUM", of operating procedure as follows:

5.3.9.1 REDLINE procedure as needed during performance.

5.3.9.2 VERIFY drum OTP-LLW-WP-04 is re-lidded with c-clips attached.

5.3.9.3 VERIFY results of performance are acceptable.

TD Initials/Date: DD / 8/14/97

5.3.10 PERFORM Section VII.K, "TRANSFER WASTE DRUM TO SUPERCOMPACTOR", of operating procedure as follows:

5.3.10.1 REDLINE procedure as needed during performance.

✓ 5.3.10.2 PERFORM appropriate Sections of WPR1-OP-0715 to ensure Supercompactor is in Automatic and ready to receive drums.

✓ 5.3.10.3 VERIFY drum OTP-LLW-WP-04 is delivered to Supercompactor and automatically compacted.

5.3.10.4 VERIFY results of performance are acceptable.

TD Initials/Date: DD / 8/16/97

ATTACHMENT 8 - TEST PLAN, LLW GLOVEBOX AUTOMATIC TEST CASE 4

5.4 REFERENCE procedure WRP1-OP-0716, LLW EXIT GLOVEBOX OPERATION:

5.4.1 PERFORM Section VII.C, "PUCK RECEIPT AND WEIGHT MEASUREMENT", of operating procedure as follows:

5.4.1.1 REDLINE procedure as needed during performance.

✓ 5.4.1.2 VERIFY puck barcode OTP004 is placed on drum OTP-LLW-WP-04 and scanned.

✓ 5.4.1.3 VERIFY puck OTP004 is lifted and weighed on the Exit Glovebox hoist.

5.4.1.4 VERIFY results of performance are acceptable.

TD Initials/Date: DD 12/14/97

5.4.2 PERFORM Section VII.D, "MOVE PUCK FROM RECEIPT TO LOAD OUT", of operating procedure as follows:

5.4.2.1 REDLINE procedure as needed during performance.

5.4.2.2 VERIFY puck OTP004 is loaded into overpack drum OTP-LLW-OD-02 at Exit port.

5.4.2.3 VERIFY results of performance are acceptable.

ATTACHMENT 9 - TEST PLAN, LLW GLOVEBOX RESTART

1.0 GENERAL DESCRIPTION

- 1.1. This test plan provides instructions for testing restart of the LLW Glovebox. These operations will be tested using procedures WRP1-OP-0702, Restart LLW Glovebox Operation, WRP1-OP-0713 "LLW Entry Glovebox Operation," and WRP1-OP-0714 "Low Level Waste (LLW) Sorting Glovebox Operation, thereby also performing the required procedure validation for sections performed. The sequence of events is as follows:
 - 1.1.1 85 gallon shipping overpack OTP-LLW-OD-05, with 55 gallon LLW drum OTP-LLW-WP-05 inside, is connected to the LLW glovebox entry port and drum OTP-LLW-WP-05 is lifted into the LLW Entry glovebox.
 - 1.1.2 Drum OTP-LLW-WP-05 is checked for external contamination.
 - 1.1.3 85 gallon drum OTP-LLW-OD-05 is closed and removed from the LLW Entry port and from lift table LT-09-202A.
 - 1.1.4 Empty 85 gallon drum OTP-LLW-OD-05 (from entry port) is placed on lift table LT-09-202C (LLW Exit).
 - 1.1.5 Drum OTP-LLW-OD-05 is connected to the LLW glovebox exit port and the port is opened.
 - 1.1.6 Drum OTP-LLW-WP-05 is lifted by the LLW entry glovebox hoist, lowered through transfer port, and placed on transfer car.
 - 1.1.7 Drum OTP-LLW-WP-05 is moved to the delidder and sawing of the clam-band is begun.
 - 1.1.8 Prior to completion of sawing the clamp band, the LLW Emergency Stop is pressed.
 - 1.1.9 The glovebox restart procedure is used to restore the glovebox components to operational status.
 - 1.1.10 The test is terminated and all equipment removed from the gloveboxes.

ATTACHMENT 9 - TEST PLAN, LLW GLOVEBOX RESTART

2.0 SAFETY

2.1 Reference OTP Section 8, SAFETY.

3.0 TOOLS, EQUIPMENT AND SUPPLIES

- Drum handling (manual) equipment or Pallet fork truck
- Spill Kit/Decontamination Equipment (oils/chemicals)
- Tape and rags
- Other equipment, material or protective clothing (as required)

4.0 TEST PREREQUISITES

4.1 VERIFY OTP Section 11.0, PREREQUISITES are complete.

4.2 SET initial conditions as follows:

- 4.2.1 55 gallon LLW drum OTP-LLW-WP-05, in shipping overpack OTP-LLW-OD-05, is on lift table LT-09-202A.
- 4.2.2 The PCS man_op program has sent an AGVPCS AGVL message for the AGV located at AGVLLWENTR (LT-09-202A) with drum OTP-LLW-OD-05 (sets LCU conditions have been set for drum OTP-LLW-OD-05 on lift table LT-09-202A).
- 4.2.3 Empty transfer drum OTP-LLWR-TD-05 is on lift table LT-09-203A.
- 4.2.4 The PCS man_op program has sent an AGVPCS AGVL message for the AGV located at AGVLLWRWX (LT-09-203A) with drum OTP-LLWR-TD-05 (sets LCU conditions for drum OTP-LLWR-TD-05 on lift table LT-09-203A).

ATTACHMENT 9 - TEST PLAN, LLW GLOVEBOX RESTART

4.3 UPDATE PCS Tracking Table as follows:

4.3.1 Drum OTP-LLW-WP-05 in shipping overpack OTP-LLW-OD-05 at LT-09-202A.

4.3.2 Drum OTP-LLWR-TD-05 at LT-09-203A.

PCS TRACKING TABLE FOR LLW LIFT TABLES		
LIFT TABLE	Registers

LT-09-203A	N32: 47-53	N32: 58 bit 12

4.4 TEST PREREQUISITES are complete and acceptable.

TD Initials/Date: DD 15/10/97

ATTACHMENT 9 - TEST PLAN, LLW GLOVEBOX RESTART

5.0 PROCEDURE

5.1 REFERENCE procedure WRP1-OP-0713, LLW ENTRY GLOVEBOX OPERATION:

5.1.1 PERFORM Section VII.A, "INITIALIZE SYSTEM", of operating procedure as follows:

5.1.1.1 REDLINE procedure as needed during performance.

5.1.1.2 VERIFY results of performance are acceptable.

TD Initials/Date: JD 1/8/1997

5.1.2 PERFORM Section VII.B, "DRUM ENTRY TO LLW GLOVEBOX", of operating procedure as follows:

5.1.2.1 REDLINE procedure as needed during performance.

5.1.2.2 VERIFY overpack drum OTP-LLW-OD-05 OPEN and inner drum OTP-LLW-WP-05 on hoist at "SWAB" position.

*JD 1/8/1997
NOT PART
OF DMS
SETUP*

→ 5.1.2.3 VERIFY DMSS0311 indicates overpack drum OTP-LLW-OD-05 and inner drum OTP-LLW-WP-05 at glovebox with message "Sorting Required".

5.1.2.4 VERIFY results of performance are acceptable.

TD Initials/Date: JD 1/8/1997

ATTACHMENT 9 - TEST PLAN, LLW GLOVEBOX RESTART

5.1.3 PERFORM Section VII.C, "CLOSE ENTRY PORT", of operating procedure as follows:

5.1.3.1 REDLINE procedure as needed during performance.

5.1.3.2 VERIFY ENTRY port is CLOSED. overpack drum OTP-LLW-OD-05 is lowered from port and checked for contamination.

5.1.3.3 SELECT "CONTAMIN. DRUM READY FOR PICKUP" when prompted by OIU.

5.1.3.4 VERIFY overpack drum OTP-LLW-OD-05 is removed from Lift Table LT-09-202A.

5.1.3.5 VERIFY results of performance are acceptable.

TD Initials/Date: DD 12/18/97

5.1.4 MOVE overpack drum OTP-LLW-OD-05 (manually) to AGV end of Lift Table LT-09-202C at LLW Exit Port.

TD Initials/Date: DD 12/18/97

5.1.5 Run PCS man op program to send AGVPCS AGVL message for AGV at AGVLLWEXIT (LT-09-202C) with drum OTP-LLW-OD-05 (Sets LCU conditions for drum OTP-LLW-OD-05 on lift table LT-09-202C.)

TD Initials/Date: 1

DD 12/18/97

not required.

ATTACHMENT 9 - TEST PLAN, LLW GLOVEBOX RESTART

5.2 REFERENCE procedure WRP1-OP-0716, LLW EXIT GLOVEBOX OPERATION:

5.2.1 PERFORM Section VII.A, "INITIALIZE SYSTEM", of operating procedure as follows:

5.2.1.1 REDLINE procedure as needed during performance.

5.2.1.2 VERIFY results of performance are acceptable.

TD Initials/Date: DD / 8/18/97

5.2.2 PERFORM Section VII.B, "EXIT DRUM ACCESS TO LLW GLOVEBOX", of operating procedure as follows:

5.2.2.1 REDLINE procedure as needed during performance.

5.2.2.2 VERIFY overpack drum OTP-LLW-OD-05 connected to LLW Exit Port and OPEN. 2 8/18/97

5.2.2.3 VERIFY results of performance are acceptable.

TD Initials/Date: DD / 8/18/97

5.3 REFERENCE procedure WRP1-OP-0713, LLW ENTRY GLOVEBOX OPERATION:

5.3.1 PERFORM Section VII.D, "MOVE DRUM TO DRUM TRANSFER CAR", of operating procedure as follows:

5.3.1.1 REDLINE procedure as needed during performance.

5.3.1.2 VERIFY drum OTP-LLW-WP-05 is positioned over transfer port 107-DO-07-102 and lowered onto drum transfer car.

5.3.1.3 VERIFY results of performance are acceptable.

TD Initials/Date: DD / 8/18/97

5.4 REFERENCE procedure WRP1-OP-0714, LOW LEVEL WASTE (LLW) SORTING GLOVEBOX OPERATION:

5.4.1 PERFORM Section VII.B, "TRANSFER WASTE DRUM TO DELID POSITION", of operating procedure as follows:

5.4.1.1 REDLINE procedure as needed during performance.

5.4.1.2 VERIFY drum OTP-LLW-WP-05 at "DELID" position.

5.4.1.3 VERIFY results of performance are acceptable.

TD Initials/Date: DD 12/12/97

5.4.2 PERFORM Section VII.C, "GRIP WASTE DRUM WITH DRUM TIPPER (107-DH-07-103)", of operating procedure as follows:

5.4.2.1 REDLINE procedure as needed during performance.

NO PLASTIC BAG

5.4.2.2 VERIFY plastic overbag removed from drum OTP-LLW-WP-05.

5.4.2.3 VERIFY drum tipper lowered and tipper grab closed around drum OTP-LLW-WP-05.

5.4.2.4 VERIFY results of performance are acceptable.

TD Initials/Date: DD 12/12/97

NOTE

The exact point at which EMERGENCY STOP is pressed is not critical, so long as the saw has not completed the cutting sequence.

ATTACHMENT 9 - TEST PLAN, LLW GLOVEBOX RESTART

5.4.3 PERFORM Section VII.D, "SAW WASTE DRUM CLAMP BAND", of operating procedure as follows:

5.4.3.1 REDLINE procedure as needed during performance..

5.4.3.2 WHEN the saw is cutting the clamp band,
THEN, PRESS EMERGENCY STOP switch (107-HS-07-315)
on DMS console (107-TE-12-103).

TD Initials/Date: JD 1 8/14/97

5.4.3.3 VERIFY LLW Glovebox operations STOP.

TD Initials/Date: JD 1 8/14/97

5.5 REFERENCE procedure WRP1-OP-0702, Restart LLW Glovebox Operation:

5.5.1 PERFORM Section VII.A, "DETERMINE GLOVEBOX EQUIPMENT STATUS", of operating procedure as follows:

5.5.1.1 REDLINE procedure as needed during performance.

5.5.1.2 VERIFY results of performance are acceptable.

TD Initials/Date: JD 1 8/14/97

5.5.2 PERFORM Section VII.B, "RETURN ENTRY GLOVEBOX TO OPERATION", of operating procedure as follows:

5.5.2.1 REDLINE procedure as needed during performance.

5.5.2.2 VERIFY results of performance are acceptable.

TD Initials/Date: JD 1 8/14/97

ATTACHMENT 9 - TEST PLAN, LLW GLOVEBOX RESTART

5.5.3 PERFORM Section VII.C, "RETURN SORTING GLOVEBOX TO OPERATION", of operating procedure as follows:

5.5.3.1 REDLINE procedure as needed during performance.

5.5.3.2 VERIFY results of performance are acceptable.

TD Initials/Date: JD / 5/14/97

5.5.4 PERFORM Section VII.D, "RETURN EXIT GLOVEBOX TO OPERATION", of operating procedure as follows:

5.5.4.1 REDLINE procedure as needed during performance.

5.5.4.2 VERIFY results of performance are acceptable.

TD Initials/Date: JD / 5/14/97

5.6 PERFORM sections of the following procedures as required to remove drums from glovebox and ports:

WRP1-OP-0713, LLW Entry Glovebox Operation
WRP1-OP-0714, LLW Sorting Glovebox Operation
WRP1-OP-0715, LLW Supercompactor Operation
WRP1-OP-0716, LLW Exit Glovebox Operation
WRP1-OP-0719, LLW Gloveboxes Manual Operation

5.6.1 VERIFY results of performance are acceptable.

TD Initials/Date: JD / 5/18/97

5.7 REMOVE all drums (manually) from LLW glovebox lift tables.

TD Initials/Date: JD / 5/18/97

5.8 INFORM Operations Management testing is complete.

Exception :

Revision :

Date :

Specification Section : 13462

Test Witness/Author : Dunlap

Test Operator:

Responsible Company: WMH

Responsible Subcontractor :

Responsible Individual: Lane

Exception Description :

OIU-103C would indicate "system initialized" with the hoist not at the compact receipt position. The subscreen did indicate the hoist out of position (red).

Exception Disposition :

Exception Status :

9-3-97 MP Lane to investigate, resolve. 9-20-97 - Code examined. Hoist must be at compact receipt, with all three hoist position switches activated, before system is initialized. Once system is initialized, it remains so until switched back to maintenance mode. OIU also examined and OIU diagnostics screen accurately reflects hoist status. This exception is therefore closed.

LLW GLOVEBOX OTP RETEST TO CLEAR DMS EXCEPTIONS 9/29/97

ETRs To Be Cleared

- #274 Default puck height is not set on LLW Exit (315) screen.
- #276 Rescanning of drum at LLW entry results in erroneous processing.
- #277 NDE comments not displayed on LLW Sort (312) pop-up.
- (#279) Cannot process next sample bottle on 501 screen if wrong bottle is scanned. *Pop-up FRN-40657*
- #280 Drum shown on LLW Entry (311) screen after drum is shown on LLW Sort (312) screen.
- #281 When all CHEMCOMP records are deleted on LLW Sort (312) CHEMCOMP pop-up, the HDET record should be deleted and CON_PWTYP_CD should be changed from 'M' to 'R'.
- #282 At LLW ENTRY DMSCOM should not change CONEXT_USE_CD for the inner drum from 'R' to 'WV'.
- (#283) NDAISO records are not created for the puck when records are summed by the LLW Exit (315) screen.

Test Steps

1. Run WRESTORE to load database file BASE_970820.
2. Run script otp_lul.sql.
3. Run PCS Simulator with data file llw1.pcs.
4. After 6th message request sample 1 with 3 analysis.
5. After 8th message commit sample data for bottles 1 & 2.
6. Process remaining messages.
7. Run PCS Simulator with data file llw2.pcs.
8. After 4th message request sample 2 with 1 analysis.
9. Print drum barcode label OTP-LLW-OD-03 and sample bottle labels 97-00001-03L and 97-00002-01L.
10. Shut down simulator and start DMSCOM.
- ✓ 11. On LLW Exit (315) screen specify OTP-LLW-OD-01 and verify puck height is set to default (ETR #274). *Default 21. New value .5 entered*
- X 12. On LLW Exit (315) screen Sum Waste Records and verify NDAISO records are created for the puck (ETR 283).
- ✓ 13. On LLW Sort (312) screen verify NDE comments are displayed on NDE pop-up screen for OTP-LLW-WP-02 (ETR #277).
- ✓ 14. Scan bottle labels 97-00001-03L and 97-00002-01L and verify data can be entered on the Sample (501) screen for bottle 97-00002-01L after the error message is cleared for bottle 97-00001-03L (ETR #279). *Temp entered as 22.*
- ✓ 15. Delete the CHEMCOMP records on LLW Sort (312) screen CHEMCOMP pop-up screen and verify the HDET record has been deleted and CON_PWTYP_CD = 'R' for the puck (ETR #281).
- ✓ 16. On the LLW Entry (311) screen verify there is no drum at entry (#280).
- ✓ 17. Perform OTP-LLW-OD-03 barcode scan sequence twice at LLW_ENTRY and verify second message was not processed (ETR #276).
- ✓ 18. Verify CONEXT USE CD for OTP-LLW-WP-03 was not changed when the barcode was scanned at LLW_ENTRY (ETR #282).
19. Run query script otpq_llw and print database listing.

script run before scan at LLW_ENTRY

WRAP 1 PLANT OPERATING PROCEDURE

SYSTEM: PROCESS

GLOVEBOX HOUSEKEEPING

(HNF-SD-W026-OTP-015)

I. SYSTEM DESCRIPTION

This procedure provides instructions for cleanup of spills, debris and general housekeeping in WRAP-1 gloveboxes.

Glovebox housekeeping shall be performed after processing of each waste stream batch, and as needed during glovebox operations for spills or other debris buildup. This will ensure adequate, current, process knowledge to help determine possible sampling requirements & environmental compliance when disposing of cleanup residue.

II. REFERENCE DOCUMENTS / DOCUMENTED BASIS

WRP1-OP-0704, Glovebox Manipulator Operation
WRP1-OP-0705, Bagless Transfer Manual Operation

III. PRESTART CONDITIONS

All personnel performing this procedure shall be qualified in accordance with Waste Management Hanford Procedures Manual, Section 5.1, "Training and Qualification," and on-the-job training.

Verify daily radiological dose rates and contamination level for gloves have been established by Radiological Control.

Release Date 07/24/97	Print Date 08/06/97	Appr. Desig. ESQ	Document No. WRP1-OP-0701	Rev/Mod A-0	Page 1 of 7
--------------------------	------------------------	---------------------	------------------------------	----------------	----------------

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

IV. SAFETY

All potential hazards, such as lifting heavy containers or handling sharp objects present in waste containers, must be mitigated by protective equipment, procedures, and administrative controls to ensure acceptable-risk operating conditions.

All work must be performed per applicable Radiation Work Permits (RWPs).

Clean up spills immediately. Use only facility approved chemical or cleaning agents. Use materials sparingly and in accordance with MSDS information to prevent unwanted chemical reactions or formulation of new chemical compositions.

V. TOOLS AND SUPPLIES

Approved cleaning agents and supplies as required.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

VII. PROCEDURE

CAUTION

INTRODUCTION OF UNAPPROVED CLEANING AGENTS INTO GLOVEBOXES MAY RESULT IN ENVIRONMENTAL NON-COMPLIANCE, UNWANTED CHEMICAL REACTIONS OR OTHER UNDESIRABLE EFFECTS. ONLY FACILITY APPROVED CLEANING AGENTS MAY BE USED.

Note - Administrative hold steps are identified by letters in parentheses at the left margin of the procedure step. Direction given in the procedure step must be satisfied before work continues.

(M) - Operations management shall approve operation.

(R) - Radiological Control (RC) shall complete surveys or agree to permit continued operation.

A. GENERAL REQUIREMENTS

1. Sections VII.C through VII.E of this procedure may be performed repeatedly and in any order necessary to facilitate work.

WARNING

WORK THROUGH GLOVEPORTS MAY INVOLVE PLACING HANDS IN CLOSE PROXIMITY TO MOVING EQUIPMENT. CARE MUST BE TAKEN TO PREVENT INJURY.

2. IF at any time during performance of this procedure, work is to be performed through gloveports,
THEN:
 - a. CHECK status and location of moving equipment in proximity of gloveport(s) to be used.
 - b. TAKE action, including any of the following, as deemed necessary to prevent injury:
 - AVOID equipment when reaching through port(s)
 - PRESS glovebox E-Stop to stop glovebox equipment
 - CONSULT DOS when unsure

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

c. PERFORM a contamination survey of hands, arms and front of body upon exiting glove:

- (1) IF contamination is detected,
THEN, CONTACT Radiological Control Technician.

B. GLOVEBOX INSPECTION

1. CHECK, visually throughout glovebox for:
 - Loose items, spills, droppings or tailings from waste handling process.
 - Improperly stored glovebox tools and equipment.
 - Leaks from glovebox hydraulic systems.
 - Left-over agents introduced for cleaning or other purposes.
 - Foreign matter on glovebox walls, windows and/or equipment.
2. CHECK glovebox equipment (manipulators, ports, lift tables, etc) for damage, leaks, etc.
3. PERFORM glovebox cleanup as required, per Sections VII.D through VII.F of this procedure.

C. CLEANUP SOLID DEBRIS AND MATERIALS

NOTE 1 - *Glovebox manipulators are operated per WRP1-OP-0704, Glovebox Manipulator Operation.*

1. USING manipulators to the extent possible, PERFORM the following:
 - a. PICKUP and BAG small waste and debris.
 - (1) USE (with manipulators) broom, dustpan, and shovel located inside glovebox, as needed to aid cleanup.
 - b. PLACE waste in desired area for removal or processing as directed by DOS.
 - c. MOVE glovebox tools and equipment to proper glovebox storage location.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

2. IF any items cannot be accessed with manipulators,
THEN:
 - a. LOCATE gloveport(s) which provide best access to item(s),
 - b. PROCESS items through gloveports per Steps VII.C.1.a through VII.C.1.c.
3. IF other cleanup work is to be performed,
THEN, GO TO applicable section(s),
OTHERWISE, GO TO Section VII.F, Sampling and Loadout.

D. CLEANUP LIQUID AND SPILLS

NOTE - Spill kits will normally be pre-packaged in marked sample transfer canisters and stored in the Warm Maintenance Area, Room 108.

1. TRANSFER required Spill Cleanup Kit into glovebox through bagless transfer port, sample transfer port or consumable materials entry port, as needed, per applicable operating procedure(s):

- WRP1-OP-0705, Bagless Transfer Manual Operation.
- WRP1-OP-0710, Waste Sampling.

2. WORKING with manipulators and/or through gloveport(s), as required, PERFORM the following:

NOTE - Cleanup is accomplished by best suited method. The following steps are used as a guideline.

- a. PLACE dam, dike, or absorbent containment from spill kit around spill.
- b. ABSORB, using approved pads and absorbent, as required, all spilled material.
- c. PLACE used pads and absorbent into plastic bag(s).
- d. PLACE waste in desired area for removal or processing as directed by DOS.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

3. IF necessary,
THEN, WIPEDOWN spill area per Section VII.E.
4. IF other cleanup work is to be performed,
THEN, GO TO applicable section(s),
OTHERWISE, GO TO Section VII.F, Sampling and Loadout.

E. WIPEDOWN GLOVEBOX

1. TRANSFER required materials (cleaning agents, rags, pads) into glovebox through bagless transfer port, sample transfer port or consumable materials entry port, as needed, per applicable operating procedure(s):
 - WRP1-OP-0705, Bagless Transfer Manual Operation.
 - WRP1-OP-0710, Waste Sampling.
2. WORKING with manipulators and/or through gloveport(s), as required, PERFORM the following:

NOTE - Cleanup is accomplished by best suited method (i.e. cleaning agents may be poured directly on area or applied to rags or pads, then wiped over area). The following steps are used as a guideline.

- a. APPLY cleaning agent to affected area(s).
- b. SCRUB/BRUSH affected area(s).
- c. WIPE, affected area(s) and equipment with clean, dry, absorbent pads or rags.
- d. PLACE used pads, rags and other items to be disposed, into plastic bag(s).
- e. PLACE waste in desired area for removal or processing as directed by DOS.
3. IF other cleanup work is to be performed,
THEN, GO TO applicable section(s),
OTHERWISE, GO TO Section VII.F, Sampling and Loadout.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

F. SAMPLING AND LOADOUT

NOTE 1 - Once cleaned up, items are treated as if processing ordinary waste for applicable glovebox.

NOTE 2 - Sampling requirements are determined by review of process history for waste stream preceding cleanup activities.

(M)

1. DETERMINE sorting, sampling and processing requirements for waste gathered or generated during cleanup activities.
2. PERFORM sorting, sampling and processing of waste gathered or generated during cleanup activities per applicable procedures, as directed.

WRAP 1 PLANT OPERATING PROCEDURE

SYSTEM: PROCESS

RESTART LLW GLOVEBOX OPERATION

(HNF-SD-W026-OTP-015)

I. SYSTEM DESCRIPTION

This procedure provides instructions for restart of Low Level Waste (LLW) Gloveboxes after Emergency Stop, Fire Alarm, Power Outage, Equipment Failure, Low Glovebox Pressure or other abnormal shutdown.

Emergency Stop or other abnormal shutdown of the gloveboxes may leave various glovebox equipment including entry/exit ports, transfer cart, sorting table, hoists, lift tables etc. in an abnormal state (i.e., partially open/closed, tilted, seals deflated or inflated at the wrong time, etc.). Prior to restart, the condition of all glovebox equipment must be analyzed, and as required, returned to normal initialization status. Because of numerous interlocks and other safety features return of most equipment to the proper position must be accomplished manually through use of the Maintenance Mode menus on the glovebox Operator Interface Units (OIUs), Lift Table Controllers and other operator control stations.

When an OIU is in maintenance mode, most interlocks and safety features are bypassed. This allows equipment to be manipulated to a desired state to satisfy operational needs. It is also possible to damage equipment, and/or bypass safety restrictions such as glovebox containment. Caution must be exercised to prevent unwanted violation of operational safety requirements or personnel injury.

II. REFERENCE DOCUMENTS

WRP1-OP-0719, LLW Glovebox Line Manual Operation
 WRP1-OP-0713, LLW Entry Glovebox Operation.
 WRP1-OP-0714, LLW Sorting Glovebox Operation.
 WRP1-OP-0716, LLW Exit Glovebox Operation.

III. PRESTART CONDITIONS

All personnel performing this procedure shall be qualified in accordance with WHC-CM-5-34, Section 1.8, "Training Plan," and on-the-job training.

Process area Heating, Ventilation, Air Conditioning (HVAC) in OPERATION.
 Applicable light curtains in OPERATION.
 Applicable portions of plant electrical system in OPERATION.
 Compressed air system in OPERATION.

Release Date DRAFT	Print Date 08/06/97	Appr. Desig. ESQ	Document No. WRP1-OP-0702	Rev/Mod A-0	Page 1 of 17
-----------------------	------------------------	---------------------	------------------------------	----------------	-----------------

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

IV. SAFETY

Potential hazards, such as lifting heavy containers or handling sharp objects present in waste containers, must be mitigated by protective equipment, procedures, and administrative controls to ensure acceptable-risk operating conditions.

Consult with Operations Management and Industrial Hygiene, and refer to the Job Hazards Analysis (JHA), Radiological Work Permit (RWP) and Material Safety Data Sheets (MSDS) to determine required Personal Protective Equipment (PPE).

This procedure requires accessing gloveboxes through gloveports on a regular basis. Operators shall perform self survey upon exiting gloveport after each use. Radiological Control Technician (RCT) shall be contacted anytime self survey limits are exceeded.

Warning - Use care to prevent injury. Possible safety hazards include:

- Tripping/Slipping
- Injuries to the hands at glovebox ports
- Radiological Contamination
- Interference with the Automatic Guided Vehicle (AGV)

V. TOOLS AND SUPPLIES

None.

VII. PROCEDURE

NOTE - Equipment status is determined by visual observation of equipment and status indicating lights as applicable.

A. DETERMINE GLOVEBOX EQUIPMENT STATUS

1. CHECK each glovebox equipment/component listed on Attachment 1, LLW Entry Glovebox Equipment Status, and RECORD AS FOUND status as follows:
 - a. DRAW a line through non-applicable positions for each component.
 - b. IF component is at other than a defined position, THEN:
 - (1) DRAW a line through all defined positions.
 - (2) DESCRIBE As Found state in Comments section.
 - c. RECORD all other indications, conditions or supplemental information in Comments section.
2. CHECK each glovebox equipment/component listed on Attachment 2, LLW Sorting Glovebox Equipment Status, and RECORD AS FOUND status as follows:
 - a. DRAW a line through non-applicable position(s) for each component.
 - b. IF component is at other than a defined position, THEN:
 - (1) DRAW a line through all defined positions.
 - (2) DESCRIBE As Found state in Comments section.
 - c. RECORD all other indications, conditions or supplemental information in Comments section.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

3. CHECK each glovebox equipment/component listed on Attachment 3, LLW Exit Glovebox Equipment Status, and RECORD AS FOUND status as follows:
 - a. DRAW a line through non-applicable positions for each component.
 - b. IF component is at other than a defined position, THEN:
 - (1) DRAW a line through all defined positions.
 - (2) DESCRIBE As Found state in Comments section.
 - c. RECORD all other indications, conditions or supplemental information in Comments section.

B. RETURN ENTRY GLOVEBOX TO OPERATION

1. ANALYZE As Found state of glovebox to determine which equipment must be manipulated to correct operational deficiencies, as follows:
 - a. COMPARE As Found status on Attachment 1, to the following:
 - INITIALIZATION POSITION on Attachment 1.
 - Interlock information in applicable section of WRP1-OP-0719, LLW Glovebox Line Manual Operation.
 - Operational sequencing in WRP1-OP-0713, LLW Entry Glovebox Operation.
 - b. RECORD required corrections in Comments section of Attachment 1.
2. GO TO applicable section of WRP1-OP-0719 and PERFORM necessary actions to return equipment to desired status.
3. RETURN glovebox OIU to automatic operation per WRP1-OP-0719.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

C. RETURN SORTING GLOVEBOX TO OPERATION

1. **ANALYZE** As Found state of glovebox to determine which equipment must be manipulated to correct operational deficiencies, as follows:
 - a. **COMPARE** As Found status on Attachment 2, to the following:
 - **INITIALIZATION POSITION** on Attachment 2.
 - Interlock information in applicable section of WRP1-OP-0719, LLW Glovebox Line Manual Operation.
 - Operational sequencing in WRP1-OP-0714, LLW Sorting Glovebox Operation.
 - b. **RECORD** required corrections in Comments section of Attachment 2.
2. **GO TO** applicable section of WRP1-OP-0719 and **PERFORM** necessary actions to return equipment to desired status.
3. **RETURN** glovebox OIU to automatic operation per WRP1-OP-0719.

D. RETURN EXIT GLOVEBOX TO OPERATION

1. **ANALYZE** As Found state of glovebox to determine which equipment must be manipulated to correct operational deficiencies, as follows:
 - a. **COMPARE** As Found status on Attachment 3, to the following:
 - **INITIALIZATION POSITION** on Attachment 3.
 - Interlock information in applicable section of WRP1-OP-0719, LLW Glovebox Line Manual Operation.
 - Operational sequencing in WRP1-OP-0716, LLW Exit Glovebox Operation.
 - b. **RECORD** required corrections in Comments section of Attachment 3.
2. **GO TO** applicable section of WRP1-OP-0719 and **PERFORM** necessary actions to return equipment to desired status.
3. **RETURN** glovebox OIU to automatic operation per WRP1-OP-0719.

WRAP 1 PLANT OPERATING PROCEDURE

SYSTEM: PROCESS

GLOVEBOX LIFT TABLE MANUAL OPERATION

(HNF-SD-W026-OTP-015)

I. SYSTEM DESCRIPTION

This procedure provides instructions for manual operation of drum lift tables at various locations throughout the facility. Automatic operation of lift tables is described in applicable glovebox operating procedures.

II. REFERENCE DOCUMENTS

WRP1-OP-0704, Glovebox Manipulator Operation.
 WRP1-OP-0713, LLW Entry Glovebox Operation.
 WRP1-OP-0714, LLW Sorting Glovebox Operation.
 WRP1-OP-0716, LLW Exit Glovebox Operation.
 WRP1-OP-0717, LLW/RWM Process Glovebox Operation.

III. PRESTART CONDITIONS

All personnel performing this procedure shall be qualified in accordance with Waste Management Hanford Procedures Manual, Section 5.1, "Training and Qualification," and on-the-job training.

Verify daily radiological dose rates and contamination level for gloves have been established by Radiological Control.

IV. SAFETY

All potential hazards, such as lifting heavy containers or handling sharp objects present in waste containers, must be mitigated by protective equipment, procedures, and administrative controls to ensure acceptable-risk operating conditions.

Warning - In manual control (maintenance) mode there is no interlock to prevent drum over-travel. If the reverse switch is held in after the drum reaches the Automatic Guided Vehicle (AGV) end of the table and the AGV is not in place, the drum will fall to the floor. There is also no interlock to stop up-travel based on weight setpoint and no indication that lift table is at drum centering height.

Caution - Lift tables LT-09-201C, LT-09-202D, and LT-09-202E, when lowered, interfere with AGV travel near the LLW and TRU RWM glovebox lines. Before lowering these tables below AGV LOAD HEIGHT (27 [26-7/8 to 27-1/8] inches from floor to top of rollers), the operator must disable the AGV to ensure that it will not travel into the lift table area.

	TABLE 1: LIFT TABLE/CONTROL PANEL DESCRIPTIONS	10
	TABLE 2: DRUM MATING PRESSURE/CENTERING HEIGHT	11

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

VII. PROCEDURE

NOTE 1 - This procedure covers manual operation of all WRAP lift tables, therefore equipment tag numbers are not referenced in the individual steps. Tag numbers for referenced equipment are located in Table 1. When equipment is called out by name, reference to applicable equipment number is understood.

NOTE 2 - Unless otherwise stated, switches and indicators are located on the applicable Lift Table Control Panel.

CAUTION

TABLE RESPONDS QUICKLY TO PRESSURE ON CONTROL SWITCHES. A "LIGHT TOUCH" MUST BE USED ON SWITCHES WHEN JOGGING DRUM INTO POSITION. OVER-DRIVING DRUM INTO PORT COULD RESULT IN EQUIPMENT DAMAGE. DO NOT EXCEED LIFT TABLE MATING PRESSURE BY MORE THAN 50 KILOGRAMS (Reference Table 2).

WARNING

IN MANUAL CONTROL (MAINTENANCE) MODE THERE IS NO INTERLOCK TO PREVENT DRUM OVER-TRAVEL. IF THE REVERSE SWITCH IS HELD AFTER THE DRUM REACHES THE AGV END OF THE TABLE AND THE AGV IS NOT IN PLACE, THE DRUM WILL FALL TO THE FLOOR. THERE IS ALSO NO INTERLOCK TO STOP UP-TRAVEL BASED ON WEIGHT SETPOINT AND NO INDICATION THAT LIFT TABLE IS AT DRUM CENTERING HEIGHT.

A. GENERAL REQUIREMENTS

1. After placing lift table in Manual Control (Maintenance) mode per Section VII.B, VII.C, other sections of this procedure may be performed repeatedly and in any order necessary to facilitate work. Section VII.E must always be performed before returning the lift table to automatic operation.
2. WHEN positioning lift tables, operator may "jog" UP/DOWN or FORWARD/REVERSE buttons as required.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

WARNING

WORK THROUGH GLOVEPORTS MAY INVOLVE PLACING HANDS IN CLOSE PROXIMITY TO MOVING EQUIPMENT. CARE MUST BE TAKEN TO PREVENT INJURY.

3. IF at any time during performance of this procedure, work is to be performed through gloveports,
THEN:
 - a. CHECK status and location of moving equipment in proximity of gloveport(s) to be used.
 - b. TAKE action, including any of the following, as deemed necessary to prevent injury:
 - AVOID equipment when reaching through port(s)
 - PRESS glovebox E-Stop to stop glovebox equipment
 - CONSULT DOS when unsure
 - c. PERFORM a contamination survey of hands, arms and front of body upon exiting glove:
 - (1) IF contamination is detected,
THEN, CONTACT Radiological Control Technician.

B. LIFT TABLE MANUAL OPERATION

1. Place Lift Table In Manual Control (Maintenance Mode)
 - a. ENSURE glovebox manipulator is PARKED (Reference WRP1-OP-0704, Glovebox Manipulator Operation).
 - b. PLACE "MODE" (MAINT/OFF/NORMAL) switch to "MAINT".
2. Lower Drum From AGV Load Height

NOTE - Only those Lift Tables indicated by () in Table 1, need to be lowered from AGV Load Height for drum to clear port. Port clearance height is checked visually or with a tape measure when visual inspection is not possible.*

- a. LOWER lift table to DRUM CLEARANCE HEIGHT. (Reference Table 2).
- b. IF "DOWN OVERTRAVEL" light comes ON,
THEN, PRESS "UP" switch until light goes OFF.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

3. REMOVE clamp and lid, as needed, from drum per applicable procedure:

- WRP1-OP-0713, LLW Entry Glovebox Operation.
- WRP1-OP-0714, LLW Sorting Glovebox Operation.
- WRP1-OP-0716, LLW Exit Glovebox Operation.
- WRP1-OP-0717, LLW/RWM Process Glovebox Operation.

C. LIFT TABLE MANUAL OPERATION

1. Position Drum Under Port

- a. VERIFY heights of listed items, as applicable:

- (1) 55 gallon drum with lid and clamp band attached:
 - 34-5/8 (34-1/2 to 34-3/4) inches.
- (2) 85 gallon overpack drum with lid and clamp band attached:
 - 39-1/16 (38-15/16 to 39-3/16) inches.

NOTE - Only those lift tables indicated by () on Table 1, need lowered from AGV LOAD HEIGHT for drum to clear port. Port clearance height is checked visually.*

- b. IF necessary, THEN, ENSURE lift table is lowered to port clearance height.
- c. FORWARD lift table until drum is centered beneath port and DRUM UNDER PORT light is ON.

2. Lift Drum To Port

- a. ENSURE drum is properly positioned under port.
- b. ENSURE drum port is CLOSED, per applicable procedure.
- c. VERIFY the following for Entry/Exit ports:
 - Centering devices: RETRACTED.
 - HVAC seal, as applicable: DEFLATED
 - Lid Detach rod: RETRACTED.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

d. VERIFY correct drum PIN, per applicable procedure:

- WRP1-OP-0713, LLW Entry Glovebox Operation.
- WRP1-OP-0714, LLW Sorting Glovebox Operation.
- WRP1-OP-0716, LLW Exit Glovebox Operation.
- WRP1-OP-0717, LLW/RWM Process Glovebox Operation.

NOTE - *Proper drum to port mating is determined by drum to port mating pressure or drum height, depending on port type.*

e. DETERMINE correct drum to port MATING PRESSURE or DRUM CENTERING HEIGHT per Table 2.

f. RAISE drum to correct height, non-ENTRY/EXIT Port:

CAUTION

- (1) ENSURE lift table scale (on top of table control pedestal) units are set to "kg" (kilograms).
- (2) RAISE lift table until drum mates to port.
- (3) JOG UP/DOWN to correct MATING PRESSURE.

g. RAISE drum to correct height, ENTRY/EXIT Port:

- (1) RAISE lift table to DRUM CENTERING HEIGHT.
- (2) VERIFY with tape measure, lift table at DRUM CENTERING HEIGHT (Reference Table 2).
- (3) EXTEND centering clamps.
- (4) VERIFY centering clamps extended.

NOTE - *Entry/Exit port maintenance menus have a light that indicates port LID IN POSITION sensor is actuated by the drum lid.*

- (5) RAISE lift table to LID IN POSITION HEIGHT.
- (6) TURN ON port vacuum.
- (7) VERIFY vacuum generated.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

- (8) IF HVAC Seal Present:
 - (a) INFLATE HVAC seal.
 - (b) VERIFY HVAC seal inflated.
- (9) UNLOCK port.
- (10) VERIFY port unlocked.

NOTE: Entry/Exit port maintenance menus have a light that indicates when port DRUM IN POSITION sensor is activated by raising the port door ~ 1/2 inch above glovebox floor.

- (11) RAISE lift table to DRUM IN POSITION height.
 - h. JOG lift table "UP/DOWN" switches to adjust position/mating pressure as required.
 - i. OPERATE drum port per applicable procedure.
3. Lower Drum From Port
- a. ENSURE drum port is CLOSED, per applicable procedure.
 - b. PERFORM the following for Entry/Exit Ports:
 - (1) LOWER lift table to LID IN POSITION HEIGHT.
 - (2) VERIFY Port Door LOWERED.
 - (3) LOCK Port Door.
 - (4) VERIFY Port Door Locked.
 - (5) EXTEND lid detach cylinder
 - (6) LOWER lift table to DRUM CENTERING HEIGHT.
 - (7) RETRACT lid detach cylinder.
 - (8) RETRACT centering clamps.
 - (9) IF port is equipped with HVAC seal,
THEN:
 - (a) DEFLATE HVAC seal.
 - (b) VERIFY HVAC seal deflated.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

NOTE - Only those Lift Tables indicated by () in Table 1, need lowered from AGV Load Height for drum to clear port. Port clearance height is checked visually.*

- c. LOWER lift table to AGV LOAD HEIGHT (AGV LOAD HEIGHT light ON), or port clearance height, as applicable.
- d. IF DOWN OVERTRAVEL light comes ON,
THEN, PRESS UP switch until light goes OFF.
- e. REQUEST RCT survey drum.
- 4. MOVE drum to AGV end of lift table

NOTE - Only those Lift Tables indicated by () in Table 1, need lowered from AGV Load Height for drum to clear port. Port clearance height is checked visually.*

- a. IF necessary,
THEN, ENSURE lift table is lowered to port clearance height.
- b. REVERSE lift table until DRUM AT AGV END light is ON.
- c. IF drum extends past end of lift table,
THEN, FORWARD lift table until drum is at desired position.

D. RETURN LIFT TABLE TO NORMAL OPERATION

- 1. PLACE MODE switch to NORMAL.

NOTE - Only Lift Tables 107-LT-09-201A through 201F are equipped with Table Control switch.

- 2. IF equipped with TABLE CONTROL switch,
THEN, PLACE TABLE CONTROL switch to AGV.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

E. REHOME LIFT TABLE

1. IF any of the following have occurred:

- Power outage affecting lift table,
- Lift table was used in manual mode,
- Lift table rope switch was activated,

THEN, REHOME affected lift table(s) as follows:

- a. PLACE glovebox in Maintenance Mode.
- b. VERIFY lift table is EMPTY.
- c. POSITION lift table ABOVE AGV LOAD HEIGHT.
- d. IF affected lift table is marked by an (*) on Table 1, THEN, LOWER lift table BELOW AGV LOAD HEIGHT.
- e. SELECT MISCELLANEOUS EQUIPMENT MAINTENANCE MENU.

NOTE - *XX refers to last two digits in lift table tag number.*

- f. PRESS REHOME LIFT TABLE LT-09-20XX button.
- g. VERIFY lift table at AGV LOAD HEIGHT:
 - AGV LOAD HEIGHT indicator ON and/or,
 - Lift table rollers at 27 (26-7/8 to 27-1/8) inches above floor.

WRAP 1 PLANT OPERATING PROCEDURE

SYSTEM: PROCESS

GLOVEBOX MANIPULATOR (HNF-SD-W026-OTP-015)

I. SYSTEM DESCRIPTION

This procedure provides instructions for operation of Schilling Robotic Systems, Glovebox Manipulators.

Glovebox Manipulators are used for moving materials and equipment, and performing tasks inside the gloveboxes.

II. REFERENCE DOCUMENTS

None.

III. PRESTART CONDITIONS

All personnel performing this procedure shall be qualified in accordance with Waste Management Hanford Procedures Manual, Section 5.1, "Training and Qualification," and on-the-job training.

IV. SAFETY

Potential hazards, such as lifting heavy containers or handling sharp objects present in waste containers, must be mitigated by protective equipment, procedures, and administrative controls to ensure acceptable-risk operating conditions.

V. TOOLS AND SUPPLIES

None.

Release Date 07/24/97	Print Date 08/06/97	Appr. Desig. ESQ	Document No. WRP1-OP-0704	Rev/Mod A-0	Page 1 of 33

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

VII. PROCEDURE

A. GENERAL REQUIREMENTS

1. Sections VII.B through VII.I of this procedure may be performed repeatedly and in any order necessary to facilitate work.

WARNING

WORK THROUGH GLOVEPORTS MAY INVOLVE PLACING HANDS IN CLOSE PROXIMITY TO MOVING EQUIPMENT. CARE MUST BE TAKEN TO PREVENT INJURY.

2. IF at any time during performance of this procedure, work is to be performed through gloveports,
THEN:
 - a. CHECK status and location of moving equipment in proximity of gloveport(s) to be used.
 - b. TAKE action, including any of the following, as deemed necessary to prevent injury:
 - AVOID equipment when reaching through port(s)
 - PRESS glovebox E-Stop to stop glovebox equipment
 - CONSULT DOS when unsure
 - c. PERFORM a contamination survey of hands, arms and front of body upon exiting glove:
 - (1) IF contamination is detected,
THEN, CONTACT Radiological Control Technician.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

B. SYSTEM STARTUP

CAUTION

ERRATIC, UNCONTROLLED MOVEMENT OF SLAVE ARMS MAY DAMAGE EQUIPMENT.

1. IF at any time during startup or operation, slave arms move erratically or uncontrolled,
THEN immediately:
 - a. PRESS EMERGENCY STOP button on either side of carriage controller (Figure 1) IN.
 - b. TURN master control panel (Figure 2) POWER switch OFF.

NOTE - Problem which caused erratic movement must be corrected prior to restart of system.

 - c. CONTACT Duty Operation Supervisor (DOS).
 2. PERFORM pre-start checks:
 - a. INSPECT, visually, fasteners and fittings are properly connected and in good condition.
 - b. INSPECT, visually, hoses are free of cuts, nicks, kinks, and excessive sagging.
 - c. INSPECT, visually, slave arms are free of hydraulic leaks.
 3. ENSURE disconnect switch on Control & Instrumentation (C&I) enclosure for desired manipulator is set to ONE.
 4. ENSURE EMERGENCY STOP buttons on carriage controller are OUT.
 5. TURN master control panel POWER switch ON.
- NOTE - Screen briefly displays "Establishing communication with slave unit" when power is first applied.*
6. IF screen displays no readable text,
THEN, TOGGLE master control POWER switch (OFF and back ON).
 - a. IF screen remains blank,
THEN, NOTIFY DOS.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

B. SYSTEM STARTUP (Cont.)

7. IF STARTUP WITH ERRORS screen displays,
THEN, GO TO Section VII.D, STARTUP WITH SYSTEM ERRORS.

ERRORS WERE DETECTED:

LF slave not detected

RT arm not near STOW point

Keys error (0 0 0 0 0 0 0 0 0 1 0 0 0 0)

Diagnose errors before starting
hydraulics. Press the DOWN key
to view the next menu.

8. IF NORMAL STARTUP screen displays,
THEN, PROCEED as follows:

Startup Procedures:

1. Turn on hydraulics after verifying that slave arms are at the STOW IN point.
2. Turn hydraulics off if the slave arms move from their current positions.
3. Press DOWN key to exit.

4> Hydr: OFF

Hydr: OFF <8

NOTE - HPU 107-HU-07-302 is common to all manipulators and will be running already if another manipulator is operating. Another Start/Stop switch is located on the HPU Control Panel at HPU on overhead walkway.

- a. IF Hydraulic Power Unit (HPU), 107-HU-07-302 is OFF,
THEN, PRESS "START" button "I" beam behind Glovebox 102.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

B. SYSTEM STARTUP (Cont.)

NOTE - Pressing indicated function keys toggles hydraulic power to slave arms by opening and closing isolation valves. Corresponding screen flag will change to indicate state OFF/ON.

- b. PRESS the following STARTUP screen keys to enable slave arm hydraulic power:
 - "4> HYDR" - enable left slave arm
 - "8> HYDR" - enable right slave arm
- c. CHECK, HYDR indicators on display:
 - 4> HYDR: ON
 - 8> HYDR: ON
- d. PRESS DN (down) function key on master control panel.
- e. VERIFY STOW OUT menu displayed.

```

STOW OUT
----- <left<  >right> -----
1> Stow Out                               Stow Out <5
2> Stow In                               Stow In <6
3> Stop Pnt: IN                          Pnt: IN Stop <7
                                           EXIT <8
-----
After stowing out press EXIT key.
  
```

- f. PRESS "1> STOW OUT" (left arm).
- g. VERIFY left arm display (PNT), indicates OUT.
- h. PRESS "5> STOW OUT" (right arm).
- i. VERIFY right arm display (PNT), indicates OUT.
- j. PRESS "8> EXIT" (to MAIN menu).
- k. GO TO Section VII.C, NORMAL SYSTEM OPERATION.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

C. NORMAL SYSTEM OPERATION

NOTE - This section assumes dual-arm system operation. If one slave arm controller is disabled, menus and choices for only the active arm will be available.

Normal operation of the manipulator, with exception of setting different system characteristics is gained primarily from on-the-job training and experience.

The user manipulates the system via master arms on the master control panel, and arm carriages, and selects or changes desired operating characteristics as needed.

This section describes basic master arm operating functions, carriage movement, and OPERATE menu selections. The user is referenced to applicable sections for setting specific characteristics.

The master control panel display is normally left on the OPERATE menu, which provides easy access to the most common functions and allows for quick change between LEFT and RIGHT by use of LEFT/RIGHT function keys.

1. VERIFY MAIN menu displayed.

NOTE - User returns to MAIN menu as needed by pressing EXIT from other menus until MAIN menu displays.

MAIN MENU		LOCK: LOCK
-----		>right> -----
1> ROBOTICS	SETUP	<5
2> OPTIONS	DIAGNOSE	<6
3> OPERATE	SHUT DOWN	<7
4> OPERATE BOTH	Up key turns hydraulics OFF	

Press LEFT or RIGHT key to switch between LF and RT menus.		

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

C. NORMAL SYSTEM OPERATION (Cont.)

NOTE - *OPERATE selects left/right OPERATE menu depending on flag when selection is made. To select opposite OPERATE menu, Operator must return to MAIN menu. OPERATE BOTH allows operator to toggle left/right OPERATE menus using LF/RT function keys, without returning to MAIN menu.*

2. IF access to only one OPERATE menu is desired,
THEN:
 - a. PRESS LF (left) OR RT (right) function key until desired choice is flagged on MAIN menu.
 - b. PRESS "> OPERATE".
3. IF access to both LEFT and RIGHT OPERATE menus is desired,
THEN, PRESS "> OPERATE BOTH".
4. VERIFY OPERATE menu displayed.

OPERATE	FRZ: FRZ
-----	>right> -----
1> FREEZE	Wrist Md: POS
	<5
2> DRIVERS	Jaw Md: OPEN
	<6
	EXIT <8

TABLE 1 - OPERATE MENU FUNCTIONS	
SELECTION	DESCRIPTION
FREEZE	Displays menu to freeze/unfreeze individual slave arm joints.
DRIVERS	Controls slave arm hydraulics through hydraulic isolation valves.
WRIST MODE	Toggles wrist operating mode.
JAW MODE	Toggles jaw operating mode.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

C. NORMAL SYSTEM OPERATION (Cont.)

5. Master Arm Operation

NOTE - Master arms (Figure 3) are miniature replicas of left and right slave arms, with the same relative range of motion. Each slave arm joint or function has a corresponding master arm action.

- a. ACTUATE master arm action(s) (TABLE 2), as required, to manipulate corresponding slave arm:

TABLE 2 - MASTER ARM CONTROL ACTIONS	
DESIRED SLAVE ARM FUNCTION	OPERATOR ACTION ON MASTER ARM
MOVE SLAVE ARM JOINT	MOVE master arm joint corresponding to slave arm joint.
FREEZE SLAVE ARM IN PRESENT POSITION	PRESS FREEZE button on end of master arm (toggles arm freeze).
ROTATE WRIST	ROTATE master arm wrist collar.
OPEN/CLOSE JAW	SQUEEZE applicable textured jaw band on master arm.
NOTE - Changing from one menu to another automatically freezes both slave arms.	

6. Changing Slave Arm To Master Arm Correspondence

NOTE - When a slave arm is frozen, its master arm can be repositioned to a more comfortable operating position without moving the slave arm. This is useful when a task results in an awkward position for the master arm.

- a. FREEZE slave arm.
- b. REPOSITION master arm as desired.
- c. UNFREEZE slave arm.
- d. RESUME normal operation.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

C. NORMAL SYSTEM OPERATION (Cont.)

7.. Jaw Operation

NOTE - Slave arm must be unfrozen to change jaw mode.

a. SET jaws to desired mode as follows:

(1) VERIFY OPERATE menu displayed.

OPERATE	FRZ: FRZ
-----	>right> -----
1> FREEZE	Wrist Md: POS <5
2> DRIVERS	Jaw Md: OPEN <6
	EXIT <8

(2) PRESS "<6> JAW MD" to toggle modes (TABLE 3).

TABLE 3 - JAW MODES	
MODE	JAW OPERATING CHARACTERISTICS
OPEN	SQUEEZE forward band to fully CLOSE jaws. SQUEEZE aft band to fully OPEN jaws.
TOGGLE	SQUEEZE forward band to toggle jaws between OPENED and CLOSED (aft band has no effect).
LOCK	FREEZE jaws in current position until another mode is selected.
POSITION	SQUEEZE forward band to incrementally CLOSE jaws. SQUEEZE aft band to fully OPEN jaws.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

C. NORMAL SYSTEM OPERATION (Cont.)

8. Controlling Wrist Rotation

NOTE - The wrist has two modes of operation: In POSITION mode the slave arm wrist follows (direction and speed) rotation of the master arm wrist collar. Rotation is limited by master arm wrist collar to 270°.

In RATE mode, rotating the master arm wrist collar in either direction from null position causes the slave arm wrist to rotate continuously in the corresponding direction. Rate of rotation is proportional to degree of rotation of the master collar from null position. Freezing the slave arm or rotating the wrist slightly in the opposite direction will stop rotation.

a. CHANGE wrist mode as follows:

- (1) ENSURE OPERATE menu displayed.
- (2) ENSURE slave arm unfrozen.
- (3) PRESS "5> WRS MD" (toggles setting).

NOTE - Null position applies to RATE mode only. Null position is the position of the master arm wrist collar at the point where either: (1) wrist mode was changed from POSITION to RATE, or (2) slave arm was unfrozen. This means the null position could be close to one of the wrist collar mechanical stops.

b. ESTABLISH new wrist null position as follows:

- (1) FREEZE slave arm.

NOTE - NULL is normally set close to center of wrist collar mechanical range.

- (2) MOVE wrist collar to desired null position.
- (3) UNFREEZE slave arm.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

C. NORMAL SYSTEM OPERATION (Cont.)

9. Stowing Slave Arms

NOTE - Slave arms are moved to their STOWED IN, (protected) position for transport by carriages inside glovebox and to their STOWED OUT (deployed) position for working.

CAUTION

IF A SLAVE ARM IS NOT STOWED OUT WHEN A STOW COMMAND IS ISSUED, THE MESSAGE "ARM NOT NEAR STOW POINT" DISPLAYS. THE ARM THEN MOVES FIRST, TO THE STOW OUT POSITION, THEN TO THE COMMANDED POINT. BE PREPARED FOR ARM TO MOVE TO STOW OUT POSITION BEFORE IT MOVES THROUGH THE STOW/DEPLOY SEQUENCE.

ONCE STOW IN IS SELECTED, ARM MUST BE ALLOWED TO MOVE TO FULL STOW IN POSITION BEFORE EXITING APPLICABLE MENU.

- a. ENSURE stow paths are clear of obstructions which could damage or be damaged by slave arms.
- b. SELECT "Shutdown" from Main Menu.
- c. PRESS function keys (TABLE 6), as required, to STOW slave arm(s) to desired position:
 - (1) PRESS STOP to halt slave arm at next point in sequence.
 - (2) IF slave arm is being STOWED IN, THEN, PRESS STOW OUT at any point to reverse sequence.
 - (3) IF slave arm is being STOWED OUT, THEN, PRESS STOW IN at any point to reverse sequence.

TABLE 6 - STOW FUNCTION KEYS

FUNCTION KEY		FUNCTION	ACTION
LEFT ARM	RIGHT ARM		
1	5	STOW OUT	Deploys arm to Stow Out position.
2	6	STOW IN	Retracts arm to Stow In position.
3	7	STOP	Stops arm travel at next point in Stow Out/In sequence
PNT: Indicates each Stow sequence point as arm passes through it.			

WRAP 1 PLANT OPERATING PROCEDURE

(HNf-SD-W026-OTP-015)

C. NORMAL SYSTEM OPERATION (Cont.)

10. Moving Carriages

CAUTION

- CARRIAGES MAY RUN INTO OBSTRUCTIONS (CABLES, HOSES, PROCESS ITEMS OR PROCESS EQUIPMENT) INSIDE GLOVEBOX.
- CARRIAGE WILL STOP MOVING WHEN MECHANICAL STOP IS REACHED. DO NOT HOLD MOVEMENT BUTTONS AFTER CARRIAGE REACHES MECHANICAL STOP OR EQUIPMENT MAY BE DAMAGED.
- CARRIAGE MUST COME TO A COMPLETE STOP BEFORE REVERSING DIRECTIONS.
- OPERATING HORIZONTAL CARRIAGE WITH LOW HYDRAULIC PRESSURE CAN DAMAGE EQUIPMENT.

- a. PRESS and HOLD movement button(s) on carriage controller until carriage reaches desired position, THEN, RELEASE.

11. Vertical Carriage Obstructions

- a. IF vertical carriage encounters an obstruction too heavy to push aside,
THEN:
 - (1) RELEASE activated movement button.
 - (2) CHECK for obstruction(s).
 - (3) MOVE obstructions as necessary.
 - (4) RESUME normal operations.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

C. NORMAL SYSTEM OPERATION (Cont.)

12. Horizontal Carriage Obstructions

NOTE - Horizontal carriage is equipped with a torque limiter which may be tripped by any of the following; horizontal carriage hits obstacle too heavy to push aside, foreign obstacle in carriage pulley or sprocket, slave arm grasping fixed object during carriage movement, carriage at end of travel, carriage rail is bent or damaged.

HORIZ SLIP light is ON only when torque limiter trips and movement button is pressed.

- a. IF HORIZ SLIP light illuminates,
THEN:

- (1) RELEASE activated movement button.
- (2) CHECK for obstructions or other cause.

NOTE - Torque limiter may self reset when fault is cleared.

- (3) CORRECT obstructions or fault as necessary.
- (4) RESUME normal operations.

- b. IF cause of fault is not readily apparent,

OR

IF torque limiter remains tripped after fault is cleared,
THEN, RESET torque limiter as follows:

NOTE - HORIZ SLIP light will be ON when moving carriage.

- (1) MOVE carriage in opposite direction of fault until mechanical stop is encountered.
- (2) JOG (repeatedly press and release) button used to move carriage to mechanical stop, until torque limiter resets (listen for reset).
- (3) VERIFY HORIZ SLIP light remains OFF when carriage is moved in either direction.
- (4) REPEAT actions until reset.
- (5) RESUME normal operations.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

C. NORMAL SYSTEM OPERATION (Cont.)

13. Changing Individual System Operating Characteristics

a. CHANGE characteristics as follows:

- (1) GO TO Section indicated in TABLE 4.
- (2) MAKE changes as required.
- (3) RESUME normal operation.

TABLE 4 - OPERATING CHARACTERISTICS ATTACHMENTS	
SECTION	TITLE / CHARACTERISTICS
VII.E	SET SLAVE ARM CHARACTERISTICS: 1. Stowing Slave Arms 2. Set Stow Sequence 3. Freezing Entire Slave Arm 4. Freezing Individual Slave Arm Joints 5. Controlling Slave Arm Speed 6. Enabling And Disabling Slave Arm Hydraulics 7. Set Slave Arm Movement Limits
VII.F	SET JAW OPERATING CHARACTERISTICS: 1. Set Jaw Closing Speed 2. Set Jaw Offset Values
VII.G	SET DISPLAY ATTRIBUTES

D. STARTUP WITH SYSTEM ERRORS

1. DETERMINE cause of error(s) (TABLE 5).
2. TAKE applicable corrective action per TABLE 5.

ERRORS WERE DETECTED:

LF slave not detected

RT arm not near STOW point

Keys error (0 0 0 0 0 0 0 0 0 1 0 0 0 0)

Diagnose errors before starting hydraulics. Press the DOWN key to view the next menu.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

D. STARTUP WITH SYSTEM ERRORS (Cont.)

TABLE 5 - STARTUP WITH ERRORS		
ERROR MESSAGE	CAUSE	ACTION
(XX*) slave not detected	Master controller failed to establish communication with one of the slave controllers	Notify Supervision
(XX*) arm not near STOW point	Left or right slave arm not in stowed position	GO TO Step VII.D.4
Keys error (0 0 0 0 0 0 0 0 0 1 0 0 0 0)	Master controller keys and/or master arm freeze button are currently being pressed or need maintenance	GO TO Step VII.D.3
Note *: XX indicates failed channel: LF (left) or RT (right)		

3. IF a key error message is displayed,
THEN, PROCEED as follows:
 - a. IF a key or FREEZE button is actually being pressed,
THEN:
 - (1) REMOVE pressure from key or REPOSITION master arm so freeze button is released.
 - (2) SKIP to Step VII.D.4.
 - b. IF a key or freeze button is not being pressed,
THEN:
 - (1) DO NOT enable hydraulics or deploy slave arms.
 - (2) PRESS DN function key on master control panel.
 - (3) VERIFY MAIN menu displayed.
 - (4) NOTIFY DOS.
4. PRESS DN function key on master control panel.
5. VERIFY MAIN menu for right slave arm displayed.
6. PRESS "3> OPERATE".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

D. STARTUP WITH SYSTEM ERRORS (Cont.)

7. VERIFY OPERATE menu displayed.

```

4> #4: OFF                               EXIT <8
-----

```

10. PRESS "6> HYDR" (enable right slave arm hydraulics).
11. EXIT to MAIN menu,
THEN, DISPLAY OPERATE menu for left slave arm.
12. REPEAT Steps VII.D.8 through VII.D.10 (enable left slave arm hydraulics).
13. GO TO Section VII.C, NORMAL SYSTEM OPERATION.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

E. SET SLAVE ARM CHARACTERISTICS

1. Set Stow Sequence

NOTE - Stow sequence is a series of arm movements that positions the slave arm between the protected (STOW IN) position and the deployed (STOW OUT) position. The sequence may consist of 2 to 16 slave arm positions (points).

- PRESS "5> SETUP" from MAIN menu.
- VERIFY SETUP menu displayed.

SETUP	LOCK: LOCK
-----	>right> -----
1> SET LIMITS	SET JAW SPEED <5
2> SET STOW	
3> DISPLAY	
4> SET JAW OFFSET	EXIT <8
-----	-----

- PRESS "2> SET STOW".
- VERIFY SET STOW menu displayed.

SET STOW	LOCK: FRZ
-----	>right> -----
Point: 01	Last <5
	Next <6
	Teach <7
LAST STOW	
<4 Point: 16	EXIT <8
-----	-----

- DETERMINE desired number of points in stow path sequence.
- PRESS "4> POINT", until determined number is displayed.
- UNFREEZE slave arm.

NOTE - Point 01 is first point in stow path, (STOW IN position).

- VERIFY point counter indicates 01.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

E. SET SLAVE ARM CHARACTERISTICS (Cont.)

1. MOVE arm to desired position (point).

CAUTION

WHEN THE LAST POINT SPECIFIED IN SEQUENCE IS TAUGHT, POINT COUNTER DOES NOT INCREMENT. IF "7> TEACH" IS NOT PRESSED THE LAST POINT ACTUALLY TAUGHT PRIOR TO PRESSING "8> EXIT" BECOMES THE STOW OUT POINT. IT IS IMPORTANT TO TEACH DESIRED STOW OUT POINT BEFORE EXITING SET STOW MENU.

ALL POINTS MUST BE CLEAR OF GLOVEBOX WALLS & EQUIPMENT OR DAMAGE MAY OCCUR.

NOTE - Pressing "5> LAST", instead of "7> TEACH" returns to previous point. Pressing "6> NEXT", instead of "7> TEACH" skips point & increments point counter.

- j. PRESS "7> TEACH".
- k. VERIFY point counter increments to next number.
- l. REPEAT Steps VII.E.1.i through VII.E.1.k until all desired points have been programmed.
- m. PRESS "8> EXIT" (to SETUP menu).

2. Freezing Entire Slave Arm

NOTE - Changing from one menu to another automatically freezes both slave arms.

- a. CHECK slave arm status in upper right corner of menu:
 - REIN - normal unfrozen operation.
 - FRZ - arm frozen (can be unfrozen with master arm freeze button).
 - LOCK - arm frozen (cannot be unfrozen with freeze button from current menu).
- b. PRESS freeze button (toggles FRZ/REIN) on master arm.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

E. SET SLAVE ARM CHARACTERISTICS (Cont.)

3. Freezing Individual Slave Arm Joints

NOTE - Freezing individual joints not required for a given task, provides a more stable platform for the task.

- a. FREEZE slave arm.
- b. PRESS "3> OPERATE" from MAIN menu.
- c. VERIFY OPERATE menu displayed.

OPERATE		FRZ: FRZ
-----	>right>	-----
1> FREEZE		Wrist Md: POS
		<5
2> DRIVERS		Jaw Md: OPEN
		<6
		EXIT <8
-----		-----

- d. PRESS "1> FREEZE".
- e. VERIFY FREEZE menu displayed.

FREEZE		LOCK: LOCK
-----	>right>	-----
1> Ro1: FRZ		Wrs: REIN <5
2> Sho: REIN		
3> Elb: FRZ		REIN all <7
4> Yaw: REIN		EXIT <8
-----		-----

- f. CHECK status of individual joints on menu.
- g. PRESS indicated function to toggle status (FRZ/REIN) of each joint as desired ("7> REIN ALL", unfreezes all).
- h. PRESS "8> EXIT" (to OPERATE menu).

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

E. SET SLAVE ARM CHARACTERISTICS (Cont.)

4. Controlling Slave Arm Speed

NOTE - In general, speed of master arm movement controls speed of slave arm movement. System starts in FAST mode, however SLOW mode may be selected when more precise control is needed.

- a. PRESS "2> OPTIONS", from MAIN menu.
- b. VERIFY OPTIONS menu displayed.

OPTIONS	LOCK: LOCK
>right>	
1> Dyn: FAST	
	EXIT <8

- c. PRESS "1> DYNAMICS" (toggles FAST/SLOW modes).
 - d. PRESS "8> EXIT" (to MAIN menu).
5. Enabling And Disabling Slave Arm Hydraulics

CAUTION

IF COMMANDED SLAVE ARM POSITION CHANGES WHILE HYDRAULICS ARE DISABLED, SLAVE ARM MAY ABRUPTLY MOVE TO THE NEW COMMANDED POSITION WHEN HYDRAULICS ARE RE-ENABLED. (This can happen if operator disables hydraulics, freezes a slave arm, moves the master arm, unfreezes the slave arm, and then re-enables hydraulics). IT IS IMPERATIVE THAT SLAVE ARM BE FROZEN BEFORE DISABLING SLAVE ARM HYDRAULICS. HYDRAULICS MUST BE RE-ENABLED BEFORE UNFREEZING SLAVE ARM.

NOTE - Each slave arm has a hydraulic isolation valve that is either OPEN (enable hydraulic flow to slave arm actuators), or CLOSED (disable arm movement). Hydraulics are enabled as part of the startup process, but may be toggled for operation as desired.

- a. IF hydraulics are to be immediately disabled, THEN:
 - (1) FREEZE slave arm.
 - (2) PRESS UP function key on master control panel.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

E. SET SLAVE ARM CHARACTERISTICS (Cont.)

b. IF hydraulics are to be re-enabled or toggled, THEN:

- (1) PRESS "2> DRIVERS" from OPERATE menu.
- (2) VERIFY DRIVERS menu displayed.

DRIVERS	>right>	LOCK: LOCK
1> #1: OFF		#5: OFF <5
2> #2: OFF		Hydr: ON <6
3> #3: OFF		
4> #4: OFF		EXIT <8

- (3) CHECK "6> HYDR" display (ON = hyd enabled, OFF = disabled).
- (4) PRESS "6> HYDR", to toggle hydraulics as desired.
- (5) PRESS "8> EXIT" (to OPERATE menu).

6. Set Slave Arm Movement Limits

NOTE - Range of motion of each slave arm joint (except wrist) can be limited by specifying left/right or up/down position limit.

- a. PRESS "5> SETUP" from MAIN menu.
- b. VERIFY SETUP menu displayed.

SETUP	>right>	LOCK: LOCK
1> SET LIMITS		SET JAW SPEED
2> SET STOW		<5
3> DISPLAY		
4> SET JAW OFFSET		EXIT <8

- c. PRESS "1> SET LIMITS".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

E. SET SLAVE ARM CHARACTERISTICS (Cont.)

NOTE - Limits are inactive when menu is displayed.

d. VERIFY SET LIMITS menu displayed.

SET LIMITS	LOCK: FRZ
-----	>right> -----
/Count: 01	Last <5
Limit:	Next <6
ROL RETRACT	Teach <7
	EXIT <8

e. UNFREEZE slave arm.

f. VERIFY count indicates 01.

g. PRESS "6> NEXT" OR "5> LAST" to scroll through list, until desired limit (TABLE 7), indicates on display.

TABLE 7 - SLAVE ARM JOINT LIMITS		
LIMIT NUMBER	JOINT	ACTUATOR DIRECTION
01	Shoulder Roll	RETRACT
02		EXTEND
03	Shoulder Pitch	RETRACT
04		EXTEND
05	Elbow	RETRACT
06		EXTEND
07	Yaw	RETRACT
08		EXTEND

h. MOVE joint indicated on display to desired limit.

i. PRESS "7> TEACH".

j. VERIFY counter increments to next position number.

k. REPEAT Steps VII.E.6.g through VII.E.6.j until all desired limits have been set.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

E. SET SLAVE ARM CHARACTERISTICS (Cont.)

NOTE - Any joints remaining outside new limits will move to position inside limits when arm is unfrozen.

- l. MOVE arm inside new set limits.
- m. PRESS "8> EXIT" (to SETUP menu).

F. SET JAW OPERATING CHARACTERISTICS

1. Set Jaw Closing Speed

NOTE - Jaw speed increments jaw CLOSING speed when JAW MODE is set to POSITION. OPENING speed is not affected.

- a. SET jaw mode to POSITION (Reference VII.C.7).
- b. PRESS "8> EXIT" (to MAIN menu).
- c. PRESS "5> SETUP", from MAIN menu.
- d. VERIFY SETUP menu displayed.

SETUP	>right>	LOCK: LOCK
1> SET LIMITS		SET JAW SPEED <5
2> SET STOW		
3> DISPLAY		
4> SET JAW OFFSET		EXIT <8

- e. PRESS "5> SET JAW SPEED".
- f. VERIFY SET JAW SPEED menu displayed.

SET JAW SPEED	>right>	LOCK: FRZ
1> INCREMENT		
2> DECREMENT		
Value: 512		
		EXIT <8

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

F. SET JAW OPERATING CHARACTERISTICS (Cont.)

NOTE - Jaw speed is incremented in arbitrary units (counts), ranging from 128 to 2048. Higher count setting equals faster jaw closure. Each switch press changes setting by 128.

g. PRESS "1> INCREMENT" OR "2> DECREMENT", until desired setting is displayed.

h. PRESS "8> EXIT" (to MAIN menu).

2. Set Jaw Offset Values

NOTE - Jaw offset compensates for differences in servo valves to prevent jaws from drifting from a command position during operation. Once set it should not need to be changed, unless servo valve is replaced.

a. PRESS "5> SETUP", from MAIN menu.

b. VERIFY SETUP menu displayed.

SETUP	LOCK: LOCK
-----	>right> -----
1> SET LIMITS	SET JAW SPEED

- 3. PRESS "3> DISPLAY".
- 4. VERIFY DISPLAY menu displayed.

DISPLAY	LOCK: LOCK
-----	-----
	>right>
1> View Angle - UP	Save to Default <5
2> View Angle - DOWN	
3> Invert background	
4> Default	EXIT <8
-----	-----

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

G. SET DISPLAY ATTRIBUTES (Cont.)

- PRESS function key(s) (TABLE 8), for desired screen attributes.

TABLE 8 - SCREEN ATTRIBUTES	
FUNCTION	SCREEN EFFECT
1> VIEW ANGLE-UP	Repeated pressing rotates viewing angle up to desired position.
2> VIEW ANGLE-DOWN	Repeated pressing rotates viewing angle down to desired position.
3> INVERT BACKGROUND	Reverses (toggle) screen contrast.
4> DEFAULT	Revert to startup screen configuration.
5> SAVE TO DEFAULT	save current screen attributes to default.

- PRESS "8> EXIT" (to MAIN menu).

H. SYSTEM SHUTDOWN

CAUTION

SHUTTING DOWN MANIPULATOR WILL CAUSE SLAVE ARMS TO SAG UNTIL MECHANICAL STOPS ARE REACHED. HYDRAULIC OR CONTROL POWER SHOULD NOT BE TURNED OFF UNTIL ARMS ARE POSITIONED IN GLOVEBOX SO THEY WILL NOT HARM, OR BE HARMED BY OTHER OBJECTS WHEN THEY SAG.

- PRESS "7> SHUTDOWN" from MAIN menu.
- VERIFY SHUTDOWN menu displayed.

SHUTDOWN		FRZ: FRZ
1> Stow Out	<left> >right>	Stow Out <5
2> Stow In		Stow In <6
3> Stop Pnt: IN		Pnt: IN Stop <7
4> All hyd- >OFF		EXIT <8

After stow, turn off hydraulics.		

- MOVE each slave arm to a position near its STOW OUT point.
- PRESS "2> STOW IN" (left slave arm).

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

H. SYSTEM SHUTDOWN (Cont.)

5. VERIFY left slave arm STOWS IN.
6. PRESS "5> STOW IN" (right slave arm).
7. VERIFY right slave arm STOWS IN.
8. PRESS "4> ALL HYDR OFF".
9. TURN master control power switch OFF.
10. PUSH EMERGENCY STOP button on either side of carriage controller IN.
11. IF manipulator is to be electrically isolated,
THEN, SET disconnect switch on C&I enclosure to ZERO.
12. IF HPU is to be SHUT DOWN,
THEN:
 - a. REPEAT Steps VII.H.1 through VII.H.11 for each manipulator.

CAUTION

ALL MANIPULATORS MUST BE NEAR STOW OUT POINT BEFORE SHUTTING OFF HPU.
SHUTTING OFF HPU WILL DISABLE ALL MANIPULATORS.

NOTE - HPU 107-HU-07-302 is common to all manipulators.
Another Start/Stop switch is located on the HPU
Control Panel at HPU on overhead walkway.

- b. PRESS "STOP" button on "I" beam behind Glovebox 102.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

I. EMERGENCY SHUTDOWN

NOTE - Emergency Stop immediately shuts down manipulator by turning off all manipulator components that receive power from C&I enclosure (master controller, carriage controller, slave controllers, slave arms, and horiz and vertical carriages).

Hydraulic power unit (HPU) remains ON but hydraulically powered manipulator components cannot be used without electrical power as hydraulic control valves are disabled.

CAUTION

SHUTTING DOWN MANIPULATOR WILL CAUSE SLAVE ARMS TO SAG UNTIL MECHANICAL STOPS ARE REACHED. HYDRAULIC OR CONTROL POWER SHOULD NOT BE TURNED OFF UNTIL ARMS ARE POSITIONED IN GLOVEBOX SO THEY WILL NOT HARM, OR BE HARMED BY OTHER OBJECTS WHEN THEY SAG.

1. PUSH EMERGENCY STOP button on either side of carriage controller IN.

BAGLESS TRANSFER SYSTEM MANUAL OPERATION

(HNF-SD-W026-OTP-015)

I. SYSTEM DESCRIPTION

NOTE - The bagless transfer system may also be referred to as the Drath & Schrader system in some plant documentation.

This procedure provides instructions for manual operation of the Deutsche Babcock, Bagless Transfer System (200/300 liter Drum Loading Ports).

The drum loading port is normally operated in automatic mode. However, if automatic operation is interrupted (inadvertently or otherwise), it may be necessary to enter manual mode to perform drum transfers or to return unit to proper sequencing. The drum loading port should be operated in manual only if absolutely necessary because the PLC ignores all limit switch signals. Major equipment damage is possible if improper operating sequence is used.

II. REFERENCE DOCUMENTS

None.

III. PRESTART CONDITIONS

All personnel performing this procedure shall be qualified in accordance with Waste Management Hanford Procedures Manual, Section 5.1, "Training and Qualification," and on-the-job training.

Verify daily radiological dose rates and contamination level for gloves have been established by Radiological Control.

Release Date 07/25/97	Print Date 08/06/97	Appr. Desig. ESQ	Document No. WRP1-OP-0705	Rev/Mod A/0	Page 1 of 16
--------------------------	------------------------	---------------------	------------------------------	----------------	-----------------

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

IV. SAFETY

All potential hazards, such as lifting heavy containers or handling sharp objects present in waste containers, must be mitigated by protective equipment, procedures, and administrative controls to ensure acceptable-risk operating conditions.

All shall be performed per applicable Radiation Work Permits (RWPs).

Failure to follow proper port sequencing as described in this procedure may result in contamination of drum port and surrounding area.

V. TOOLS AND SUPPLIES

None.

VII. PROCEDURE

CAUTION

THE DRUM LOADING PORT SHOULD BE OPERATED IN MANUAL, ONLY IF ABSOLUTELY NECESSARY, BECAUSE THE PLC IGNORES ALL LIMIT SWITCH SIGNALS. MAJOR EQUIPMENT DAMAGE OR CONTAMINATION IS POSSIBLE IF IMPROPER OPERATING SEQUENCE IS USED.

A. GENERAL REQUIREMENTS

1. Once placed in Manual Mode per Section VII.B of this procedure, other sections of this procedure may be performed repeatedly and in any order necessary to facilitate work. However STEPS within each section MUST BE PERFORMED IN SEQUENCE.

WARNING

WORK THROUGH GLOVEPORTS MAY INVOLVE PLACING HANDS IN CLOSE PROXIMITY TO MOVING EQUIPMENT. CARE MUST BE TAKEN TO PREVENT INJURY.

2. IF at any time during performance of this procedure, work is to be performed through gloveports, THEN:
 - a. CHECK status and location of moving equipment in proximity of gloveport(s) to be used.
 - b. TAKE action, including any of the following, as deemed necessary to prevent injury:
 - AVOID equipment when reaching through port(s)
 - PRESS glovebox E-Stop to stop glovebox equipment
 - CONSULT DOS when unsure
 - c. PERFORM a contamination survey of hands, arms and front of body upon exiting glove:
 - (1) IF contamination is detected, THEN, CONTACT Radiological Control Technician.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

B. ENTER MANUAL MODE

1. OBTAIN Duty Operations Supervisor (DOS) permission to enter MANUAL mode.
2. VERIFY the following equipment is positioned so as not to interfere with port operation:
3. VERIFY manipulator will not interfere with port operation.
4. VERIFY other equipment will not interfere with port operation.
5. ACCESS, on operator panel keyboard (Attachment 1), MANUAL mode, as follows:
 - a. PRESS STOP button (not EMERGENCY STOP).
 - b. VERIFY K5 key pilot light ILLUMINATED.
 - c. PRESS K5 key.
 - d. VERIFY MAIN menu displayed.

(HNF-SD-W026-OTP-015)

7. WHEN desired,
THEN, RETURN to automatic operation as follows:
- ENSURE port CLOSED per Step VII.D.6.
 - REQUEST RCT survey the closed port and immediate area to verify no contamination.
 - PRESS K5 key.
 - VERIFY MAIN menu displayed.

DRUM PORT		
-Press button-		
Auto	Manu	Op. mode
K2	K3	K4

- PRESS K2 key.
- PRESS "START" when prompted by menu screen.

NOTE - *Port will not go into Automatic with low regulator pressure or with EMERGENCY STOP depressed.*

8. IF AUTOMATIC mode cannot be accessed,
THEN:
- VERIFY regulator for port being operated is adjusted to greater than six (6) bar.
 - VERIFY glovebox emergency stops CLEARED.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

E. FAULT RECOVERY OPERATION

NOTE - A typical fault may involve an emergency stop, a loss of power, or loss of air pressure, stopping the port during the OPENING/CLOSING sequence. In MANUAL, the operator determines where in the sequence the port stopped, manually operates the actuators to restore sequence, then CLOSES the port and returns to AUTOMATIC mode.

1. DETERMINE port status per Section VII.C.
2. EVALUATE port for fault condition relative to proper OPENING/CLOSING sequence per Tables 2 and 3.

NOTE - Manual operating sequence must follow automatic sequences shown in Tables 2 and 3 (sequences assume design drum properly positioned).

TABLE 2 - OPENING SEQUENCE	
SEQUENCE	FUNCTION
1	LID GRIPPER - HOLD
2	DOUBLE LID VERTC - UP
3	DOUBLE LID LOCK - OPEN
4	DOUBLE LID SYSTEM - OPEN

TABLE 3 - CLOSING SEQUENCE

3	DOUBLE LID VERTC - DOWN
4	LID GRIPPER - RELEASE

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

3. DETERMINE, based on observations, corrections required to return port to normal sequencing.
 - a. IF in doubt as to proper corrective actions,
THEN:
 - (1) STOP work immediately.
 - (2) CONTACT DOS and COG Engineer for assistance.
 4. CORRECT port sequencing fault using Section VII.D, as follows:
 - a. PRESS UP/DOWN arrow key, as applicable, to select desired function.
 - b. PRESS K13 / K14 key as applicable; to return corresponding actuator to proper position.
 - c. REPEAT Steps VII.E.4.a and VII.E.4.b, as required, to properly position each port actuator.
- NOTE - Once port sequence has been interrupted, the port must be completely CLOSED before it can be returned to automatic.*
5. WHEN port has been returned to correct sequencing,
THEN:
 - a. DETERMINE port condition relative to CLOSING sequence per Step VII.D.6. AND continue sequence to full CLOSED position.
 - b. RETURN to automatic mode per Step VII.D.7.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

F. FAULT ACKNOWLEDGEMENT SEQUENCE

NOTE 1 - *All faults must be acknowledged and cleared before operation can commence.*

NOTE 2 - *An unacknowledged fault exists when either the "ACK" button is illuminated, or the Control Panel screen is flashing.*

1. READ Fault message.
2. RECORD Fault message.
3. PRESS "ACK" button.
4. IF "ACK" button pilot light is ILLUMINATED,
AND screen is flashing,
THEN, REPEAT steps VII.F.1 through VII.F.3.
5. VERIFY "ACK" button pilot light is OFF.

G. RESET PORT CONTROL PANEL EMERGENCY STOP

1. TWIST EMERGENCY STOP button CLOCKWISE.
2. ACKNOWLEDGE all faults.

VII. PROCEDURE

NOTE - Packet X-Ray Control Panel for LLW Sorting Glovebox is 107-ND-07-101. labeled

TRM-107-ND-07-301

A. SYSTEM OPERATION

Packet

(107-ND-07-101)

1. INSERT X-ray Control Panel key in POWER key switch.
2. TURN POWER key switch ON.
3. SELECT packet to be X-Rayed.
4. SELECT "PACKET X-RAY MENU" on Operator Interface Unit (OIU-12-103B) {OIU-12-104B} MAIN menu (Figures 1 & 2).
5. VERIFY, PACKET X-RAY menu (Figures 3 & 4) displayed.
6. SELECT "OPEN PACKET X-RAY" on PACKET X-RAY menu.
7. VERIFY:

- OIU message: "PACKET X-RAY OPENING..."
- Packet X-Ray door OPENS.
- Packet tray EXTENDS.
- OIU message: "PACKET X-RAY OPEN".

8. PLACE selected packet in center of packet tray.

9. SELECT "CLOSE PACKET X-RAY" on PACKET X-RAY menu.

10. VERIFY:

- OIU message: "PACKET X-RAY CLOSING..."
- Packet tray RETRACTS.
- Packet X-Ray door CLOSES.
- OIU message: "PACKET X-RAY CLOSED".

11. SELECT "ENABLE PACKET X-RAY" on PACKET X-RAY menu.

NOTE - When packet X-Ray is enabled, all other glovebox actions are locked out.

12. VERIFY, OIU message: "PACKET X-RAY ENABLED".

13. DEPRESS AND HOLD X-Ray footswitch.

14. PRESS "START" button on X-RAY CONTROL PANEL (FIGURE 5).

15. VIEW image on video monitor 107-ND-07-301A.

16. ADJUST "BRIGHTNESS" control on X-RAY CONTROL PANEL (FIGURE 5) as required, for clear picture of packet being X-Rayed.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

17. WHEN inspection is complete:

a. ~~RELEASE X-Ray footswitch.~~

b. PRESS "STOP" on X-RAY CONTROL PANEL.

18. PRESS "OPEN ~~PACKET~~ X-RAY^{door}" on PACKET X-RAY menu.

19. VERIFY:

- OIU message: "PACKET X-RAY^{door} OPENING..."
- Packet X-Ray door OPENS.
- ~~Packet tray EXTENDS.~~
- OIU message: "PACKET X-RAY^{door} OPEN".

Select "Extend X-ray tray" →

20. REMOVE packet from X-Ray tray.

Select "Retract X-ray tray" →

21. PROCESS packet (compliant or non-compliant) per applicable glovebox sorting procedure.

Select "Close X-Ray Door"

22. REPEAT Steps VII.A.3 through VII.A.21, as applicable, until all non-compliant items have been removed from waste.

NOTE - X-ray will typically be turned on at beginning of shift and turned off at end of shift.

23. IF X-ray activities are complete,
THEN, TURN POWER key switch OFF.

24. REMOVE X-ray Control Panel key.

WRAP 1 PLANT OPERATING PROCEDURE

FIGURE 4: TRU, OIU-12-104B PACKET X-RAY MENU

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

FIGURE 5: X-RAY ^{PACKET} CONTROLS PANEL (107-ND-07-101)

Control panel switch/indicator functions:

POWER keylock switch	Power OFF/ON switch.
POWER indicator	Green when power ON.
X-RAY ON indicator	Amber when X-Ray ON.
START button/indicator	Enables X-Ray, Red when X-Ray ON.
STOP button/indicator	Stops X-Ray, Green when X-Ray OFF.

Control panel STATUS LEDs:

HIGH KV:	Brightness setting exceeds rating of X-Ray generator. Turns X-Rays OFF. Decrease brightness setting.
HIGH TEMP:	High temperature condition.
MA FAULT:	Brightness too low to sustain required beam current. Turns X-Rays OFF. Increase brightness setting.
DOOR OPEN:	Door OPEN. Turns X-Rays OFF.
FOOTSWITCH:	Footswitch activated.

WRAP 1 PLANT OPERATING PROCEDURE

SYSTEM: PROCESS

GLOVEBOX WASTE SAMPLING

(HNF-SD-W026-OTP-015)

I. SYSTEM DESCRIPTION

This procedure defines the approach used to sample WRAP 1 process area glovebox waste. Additional requirements will be provided if it becomes necessary to take RCRA protocol samples.

WRAP Operation's responsibility is to sample for laboratory analysis in accordance with this procedure. Sample data shall be recorded using either the Data Management System, DMS Screen DMSS0501, which is the primary method of recording data, or on Attachment 2, Lab Sample Acquisition which is available as a backup method.

The Sample/Treatment Director shall provide recommendations on the specific method to be used, primarily via DMS Screen DMSS0504. Attachment 1, Laboratory Sample Analysis Request, shall be prepared for each sample as appropriate. The Sample/Treatment Director shall also be responsible for ensuring that the data collected by Operations personnel either in DMS or on Attachment 2, Lab Sample Acquisition, is transferred to the Facility Sample Log as required.

Additionally, this procedure may also be used to collect samples that may undergo field screening within the glovebox prior to sampling for laboratory analysis.

This procedure will also provide guidance for transferring samples and other various items in and out of the gloveboxes through the use of the Sample Transfer Container (STC). This will include mounting and unmounting the container, item transfer, and all associated DMS interface requirements.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

III. PRESTART CONDITIONS

All personnel performing this procedure shall be qualified in accordance with Waste Management Hanford Procedures Manual, Section 5.1, "Training and Qualification," and on-the-job training.

IV. SAFETY

Appropriate protective clothing will be worn depending on the sampling activity involved. The clothing required will be identified on the RWP and/or during the pre-job evaluation by the Operations personnel, Operations Management, or Industrial Safety and Hygiene, as appropriate.

Anticipated radiological conditions shall be evaluated prior to starting work through the RWP and ALARA Management Worksheet (AMW), if applicable.

V. TOOLS AND SUPPLIES (As Needed)

Sampling equipment (i.e., glass tube or pipet sampler, scoop, hand auger, etc.)

Sample container(s)

Evidence tape

Tape

Cooler

Plastic sheets

Plastic bags

Camera

Other tools, supplies, or protective clothing as defined by the pre-job evaluation.

Chain of Custody Form (Hard Copy)

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

HNF-SD-W026-OTR-015, Rev. 0, Page OP-97

VII. PROCEDURE

NOTE 1 - *Administrative hold steps are identified by initials in parenthesis at the left margin of the procedure step. The direction given in the procedure step must be satisfied before work continues.*

(M) - *Operations management shall approve continued operation.*

(R) - *Radiological Control shall complete surveys or agree to permit continued operation.*

NOTE 2 - *The Sample/Treatment Director has the authority to decide whether any given quantity of waste should be Field Screened or Sampled.*

A. FIELD SCREENING IN RWM GLOVEBOXES

NOTE 1 - *A supply of bottles, dishes, and other supplies to be used in field screening will be kept in, or loaded into the RWM Glovebox as needed.*

NOTE 2 - *DMS Screen DMSS0508 (Sample Labels) is accessed from Screen DMSS0504 (Laboratory Sample Analysis Request) which can be accessed from DMSS0503 (Field Screening).*

NOTE 3 - *DMS records the sample/packet relationship.*

NOTE 4 - *This Section is used when material from a packet or collection container located at an RWM Glovebox sorting location requires field screening.*

1. VERIFY that all Prestart Conditions have been satisfied.
2. DISPLAY screen DMSS0503, Field Screening, by selecting the "Field Screening" button on the RWM Waste Repackaging DMS Screen (DMSS0322 for LLW RWM and DMSS0342 for TRU RWM).

NOTE - *Screen DMSS0503 displays a list of all packets and collection containers located at the RWM Sorting Location.*

3. SELECT PIN of item to be sampled from the list.
4. SELECT "Next Sample".

NOTE - *DMS, at this point assigns a Screening ID.*

5. CONDUCT field screening in accordance with the information provided on DMS Screen DMSS0503 and any additional guidance provided by the Sample Treatment Director.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

HNF-SD-W026-OTR-015, Rev. 0, Page 0P-98

A. FIELD SCREENING IN RWM GLOVEBOXES (Cont.)

6. ENTER results of field screening on screen DMSS0503, including the following parameters as a minimum:
 - Sampling Method
 - Volume Taken (ml)
 - Comments
 - Analysis performed
 - Results
 - Units
7. ENTER a signature password and commit the data.
8. IF Sample/Treatment Director determines a sample is required based on results of the field screening,
THEN Sampling/Treatment Director shall perform the following:
 - a. PREPARE a sample analysis request using screen DMSS0504, Laboratory Sample Analysis Request, or Attachment 1, Laboratory Sample Analysis Request.
 - b. PRINT (in Sample Management Office) the sample bottle labels using screen DMSS0508, Sample Bottle Labels.
9. IF another screening sample is required,
THEN SELECT NEXT SAMPLE button on DMSS0503 screen to re-display list of packets and collection containers at the RWM sampling location.
10. IF no other screening sample is required,
THEN return to screen DMSS0322 or DMSS0342.
11. WHEN field screening analyses are complete,
PACKAGE field screened material with the original material if possible.

NOTE: If it is necessary to package a sample separately, a new packet will be created and labeled.
12. IF sample cannot be combined with original material,
THEN perform the following:
 - a. SCAN LOCATION barcode.
 - b. SCAN original packet barcode.
 - c. LABEL new packet.
 - d. SCAN new packet(s) barcode.
 - e. SCAN END barcode.
 - f. SCAN YES barcode.
 - g. ENTER descriptions of new packets on DMSS0322 or DMSS0342 Screen.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

HNF-SD-W026-OTR-015, Rev. 0, Page 0P-99

B. PREPARING TO SAMPLE

WARNING

APPROPRIATE EYE, HAND, AND PROTECTION CLOTHING AS SPECIFIED BY THE RWP, JHA OR PRE-JOB EVALUATION SHALL BE WORN DURING SAMPLING.

NOTE 1 - The appropriate methods for sample collection, required volumes, and sample containers are determined prior to sampling and recorded in DMS or on Attachment 1, Laboratory Sample Analysis Request. Sampling is performed on the following waste matrices:

- *Sludges*
- *Soils, sand, silt, other particulates*
- *Free liquids*
- *Sorbents (stained or saturated only).*

Other matrices can be sampled if they fall under matrices identified in SW-846, specific sampling and analysis plan, waste analysis plan, or work package.

If discrepant articles or conditions are encountered that cannot be identified and resolved with resources available, contact the Operations Management for assistance.

NOTE 2 - Sampling documentation (including photographs) is collected throughout the sampling activity, as appropriate.

1. ENSURE Sample/Treatment Director has performed one of the following:
 - PREPARE Attachment 1, Laboratory Sample Analysis Request.
 - UPDATE DMS Screen DMSS0504 Laboratory Sample Analysis Request.
2. OBTAIN appropriate sampling equipment, sample container(s), camera, etc.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

HNF-SD-W026-OTR-015, Rev. 0, Page 0P-100

B. PREPARING TO SAMPLE (Cont.)

CAUTION

SAMPLE CONTAINERS MAY NOT BE OPENED PRIOR TO THEIR INTENDED USE. DOING SO MAY NEGATE THE PEDIGREE OF THE CONTAINER. DO NOT USE PREVIOUSLY OPENED CONTAINERS FOR RCRA PROTOCOL SAMPLING ACTIVITIES.

3. ENSURE empty sample containers have been maintained in a compliant manner as follows:
 - Kept under lock and key (e.g., locked storage cabinet, locked storeroom, etc.), with limited access. A custodian and alternate(s) shall be designated by Operations.
 - The outside of each case must be legibly initialed and dated by the individual opening that case. Pedigree papers for each case should be checked against the contents and any anomalies noted at that time in the logbook. Pedigree papers are kept on file.
4. ENSURE the following information is recorded in the Empty Sample Container Logbook for each sample container:
 - Custodian of container(s) being removed from secured area
 - Date removed
 - Lot number
 - Container ID number
 - Size and Type
 - Sampling location
 - Used/Not used
 - Comments (as required)
5. PRINT sample bottle barcode labels using screen DMSS0508.
6. LABEL empty sample bottle(s) with barcode label(s).

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

HNF-SD-W026-OTR-015, Rev. 0, Page 0P-101

C. LOAD EMPTY SAMPLE BOTTLES INTO GLOVEBOX

1. ENSURE sample bottle is properly labeled.
2. OPEN door on Consumable Materials Port.
3. INSERT a properly sized bottle into the Consumable Materials Port, pushing the bottle already in the Port all the way through to the interior of the glovebox.
4. INSERT another properly sized bottle into the Consumable Materials Port, pushing desired sample bottle(s) into the interior of the glovebox.

D. STC OPERATIONS

a. Attach STC to Glovebox

- (1) REMOVE STC from transfer pig (if applicable).
- (2) ENSURE port door is CLOSED and LOCKED:
 - (a) Door latch CLOSED (down).
 - (b) Port door latch locking pin dropped into locking hole.

NOTE - *During rotation, the STC is locked and sealed to the port flange, and the STC cover is unlocked from the STC and locked and sealed to the cell port.*

- (3) MATE STC flange to cell flange, with locking bayonets aligned to cell flange openings and ROTATE STC clockwise, 30°.
- (4) ENSURE STC fully engages port as follows:
 - (a) Visually CHECK mounting flanges are fully engaged.
 - (b) TIGHTEN STC with STC Tool as necessary.
- (5) PERFORM a contamination survey of Port area.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

HNF-SD-W026-OTR-015, Rev. 0, Page 0P-102

- (6) SCAN STC to glovebox location with the appropriate portable scanner as follows (reference Table 1):

- (a) LOCATION barcode on glovebox wall.
- (b) STC barcode.
- (c) END barcode on glovebox wall.
- (d) YES barcode on glovebox wall.

Table 1

GLOVEBOX	PORTABLE SCANNER I.D.	LOCATION
TRU SORTING	12-NE-300	TRU_PP
TRU RWM	12-NE-303	TRURW_PP
LLW SORTING	12-NE-310	LLW_PP
LLW RWM	12-NE-313	LLWRW_PP

- (7) VERIFY Operator Interface Unit (OIU) display on *OLU 142B* Sample Menu, "Purge Port Canister Present".

b. Open STC

NOTE - This section assumes STC is properly mated to the Glovebox per Section VII.D..a.

- (1) PULL port door latch locking pin and TURN counter-clockwise, 30°.
- (2) MOVE port door latch to OPEN (UP).
- (3) OPEN port door.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

HNF-SD-W026-OTR-015, Rev. 0, Page 0P-103

D. STC OPERATIONS (Cont.)

c. Unload STC

- (1) INSPECT glovebox sampling area for objects or conditions that could puncture, rip, cut, or could otherwise injure or harm sampling personnel.
- (2) REQUEST Radiological Control (RC) coverage to the extent indicated on Attachment 1, Laboratory Sample Analysis Request.
- (3) UNLOAD sample container, or applicable item, into the glovebox, using gloves.
 - (a) IF sample containers needing treatment are being unloaded,
THEN REFER to WRP1-OP-0717, LLW/RWM GLOVEBOX OPERATION, Section titled, "REMOVE SAMPLE BOTTLES FROM STC FOR TREATMENT".

d. Load Sample in STC

- (1) SELECT "Loadout Samples" on OIU.
- (2) SCAN barcodes as follows (reference Table 2):
 - (a) LOCATION barcode on glovebox wall.
 - (b) Sample Bottle PIN barcode.
 - (c) END barcode on glovebox wall.
 - (d) YES barcode on glovebox wall.

Table 2

GLOVEBOX	PORTABLE SCANNER I.D.	LOCATION
TRU SORTING	12-NE-300	TRU_PP
TRU RWM	12-NE-303	TRURW_PP
LLW SORTING	12-NE-310	LLW_PP
LLW RWM	12-NE-313	LLWRW_PP

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

HNF-SD-W026-OTR-015, Rev. 0, Page 0P-104

E. SAMPLING LIQUIDS

NOTE 1 - Liquids may be sampled using several methods - pipet, glass tube, etc. The determination of which method and sample containers to use is made prior to sampling and is defined on Attachment 2, Laboratory Sample Analysis Request OR in the DMS.

NOTE 2 - The sample container should be placed over the waste container to minimize potential contamination spread as much as practical.

1. SCAN barcodes as follows (reference Table 3):
 - a. LOCATION barcode on glovebox wall.
 - b. Sample Bottle PIN barcode.
 - c. IF sampling in an RWM Glovebox,
THEN SCAN packet or collection container being sampled.
 - d. END barcode on glovebox wall.
 - e. YES barcode on glovebox wall.

Table 3

GLOVEBOX	PORTABLE SCANNER I.D.	LOCATION
TRU SORTING	12-NE-300	TRU_SORT
TRU RWM	12-NE-303	TRURWSAMPL
LLW SORTING	12-NE-310	LLW_SORT
LLW RWM	12-NE-313	LLWRWSAMPL

2. OBTAIN sampling information from DMS Screen DMSS0501 or from Attachment 2, Lab Sample Acquisition.
3. ENTER Room Temperature, Sample Matrix, and Comments as appropriate per Attachment 2, Lab Sample Acquisition.
4. ENTER Signature Password.
5. SELECT Commit.
6. LOWER designated sampler into the selected waste container and obtain the sample.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

HNF-SD-W026-OTR-015, Rev. 0, Page 0P-105

E. SAMPLING LIQUIDS (Cont.)

7. CAREFULLY WITHDRAW waste sample material and ADD required volume to sample container(s), as appropriate:
 - a. IF there are phases,
THEN FILL a sample container(s) for each phase.
 - b. NOTE the order of each phase and NUMBER the vials appropriately, (e.g., 1 of 3, 2 of 3, 3 of 3).
8. SECURE cap on each container(s)
9. SEAL around cap/container with tape.
10. RETURN unused waste sample material to original container.
11. CLOSE and SECURE lid on the waste container that was sampled.
12. GO TO Section VII.G.

F. SAMPLING SEMI-SOLID/SOLID WASTE MATRICES

1. SCAN barcodes as follows (reference Table 4):
 - a. LOCATION barcode on glovebox wall.
 - b. Sample Bottle PIN barcode.
 - c. IF sampling in an RWM Glovebox,
THEN SCAN packet or collection container being sampled.
 - d. END barcode on glovebox wall.
 - e. YES barcode on glovebox wall.

Table 4

GLOVEBOX	PORTABLE SCANNER I.D.	LOCATION
TRU SORTING	12-NE-300	TRU SORT
TRU RWM	12-NE-303	TRURWSAMPL
LLW SORTING	12-NE-310	LLW SORT
LLW RWM	12-NE-313	LLWRWSAMPL

WRAP 1 PLANT OPERATING PROCEDURE

HNF-SD-W026-OTR-015, Rev. 0, Page OP-106

F. SAMPLING SEMI-SOLID/SOLID WASTE MATRICES (Cont.)

2. OBTAIN sampling information from DMS Screen DMSS0501 or from Attachment 2, Lab Sample Acquisition.
3. ENTER Room Temperature, Sample Matrix, and Comments as appropriate per DMS screen or Attachment 2, Lab Sample Acquisition.
4. ENTER Signature Password.
5. SELECT Commit.
6. DIVIDE waste surface into a sampling grid, as appropriate.

NOTE - *Each distinguishable matrix is sampled using one of the following methods:*

a. Scoop Sampler

NOTE - *This sampling technique should only be used when the material is homogenous throughout the container and a representative sample can be taken from a portion of the container.*

- (1) MIX (thoroughly) the material to be sampled using a scoop or shovel.
THEN SCOOP enough material for a representative sample.
- (2) FILL the sample container(s).
- (3) SECURE cap on each container(s).
- (4) SEAL around cap/container with tape.
- (5) RETURN unused sample material to original waste container, as appropriate.
- (6) CLOSE and SECURE the lid on sampled waste container, as applicable.
- (7) GO TO Section VII.G.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

HNF-SD-W026-OTR-015, Rev. 0, Page 0P-107

F. SAMPLING SEMI-SOLID/SOLID WASTE MATRICES (Cont.)

b. Hand Auger Sampler

NOTE - There are a wide variety of hand augers available in varying sizes for different materials. If the material will not stay in the auger, or if the sample hole will not stay open for reentry, an alternate sampling method should be chosen.

- (1) PLACE auger end at selected sampling location.
- (2) AUGER into the sample material.
- (3) WHEN the auger is full of material, THEN REMOVE the auger by PULLING and TURNING counterclockwise. Power equipment may be used as appropriate.
- (4) PLACE a bowl underneath the auger.
- (5) PUSH material from either the top or bottom of the auger into bowl using spoon or other suitable tool.
 - (a) TAP the auger with a hammer or other suitable tool, as needed to encourage material flow.
- (6) REPEAT Steps VII.F.6.b.(1) through VII.F.6.b.(5) above, the appropriate number of times in the same sampling hole to obtain sample material from the entire depth of the matrix.
- (7) IF more than one bowl is needed, THEN SUB-SAMPLE from each bowl into a single composite bowl and MIX thoroughly.
- (8) MIX (thoroughly) the material to be sampled using a scoop or shovel, THEN SCOOP enough material for a representative sample.
- (9) FILL sample container(s).
- (10) SECURE cap on each container(s).
- (11) SEAL around cap/container with tape.
- (12) RETURN unused sample material to original waste container, if appropriate.
- (13) CLOSE and SECURE lid on sampled waste container, as applicable.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

HNF-SD-W026-OTR-015, Rev. 0, Page OP-108

F. SAMPLING SEMI-SOLID/SOLID WASTE MATRICES (Cont.)

- (14) GO TO Section VII.G for instruction on completing sample preparation.

c. Snip and Wipe Method

- (1) IF the solid item being sampled is hard,
THEN WIPE item with an approved filter paper or other media in such a way as to obtain a representative sample of the whole.
- (2) IF the solid item being sampled is soft,
THEN SNIP sections of the soft item with scissors in such a way as to obtain a representative sample of the whole.
- (3) Prepare the sample per instructions obtained from the laboratory that will be performing the analysis and identified on Attachment 1, Laboratory Sample Analysis Request or DMS Screen DMSS0501.
- (4) FILL the container as appropriate.
- (5) SECURE cap on each container(s).
- (6) SEAL around cap/container with tape.
- (7) RETURN unused sample material to original waste container, as appropriate.
- (8) CLOSE and SECURE the lid on sampled waste container, as applicable.
- (9) GO TO Section VII.G for information on completion of sample preparation.

G. FINAL SAMPLE PREPARATION AND LOAD OUT

1. Sample custodian must ENSURE sample containers are sealed with evidence tape and appropriately labeled as follows:
 - Sample number
 - Date and Time
 - Requested analyses
 - Container type
 - Container number(ie. #1 of 4), as appropriate
 - Collector's initials
2. LOAD sample containers into STC for transfer.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

HNF-SD-W026-OTR-015, Rev. 0, Page 0P-109

G. FINAL SAMPLE PREPARATION AND LOAD OUT (Cont.)

NOTE - If "LOADOUT SAMPLES" is selected without a STC in place, OIU responds with "NO PURGE PORT PRESENT".

- a. SELECT "LOADOUT SAMPLES" on OIU (reference Table 5).

Table 5

GLOVEBOX	OIU I.D.
TRU SORTING	OIU-12-104B
TRU RWM	OIU-12-106B
LLW SORTING	OIU-12-103B
LLW RWM	OIU-12-105B

- b. VERIFY display "SAMPLE LOADOUT IN PROGRESS" at OIU-12-105B.
- c. SCAN sample container barcode with portable scanner as follows (reference Table 6):
- (1) LOCATION barcode on glovebox wall.
 - (2) Sample Bottle PIN barcode.
 - (3) END barcode on glovebox wall.
 - (4) YES barcode on glovebox wall.

TRU RWM	12-NE-303	TRURWSAMPL
LLW SORTING	12-NE-310	LLW_SORT
LLW RWM	12-NE-313	LLWRWSAMPL

- d. LOAD sample container into sample transfer canister.
- e. REPEAT Steps VII.G.2.c and VII.G.2.d for each sample container to be transferred.
- f. ENSURE all sample bottles in the Sample Transfer Canister are displayed on DMSS0501.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

HNF-SD-W026-OTR-015, Rev. 0, Page OP-110

G. FINAL SAMPLE PREPARATION AND LOAD OUT (Cont.)

- g. SELECT "END SAMPLE LOADOUT" on OIU.
- h. VERIFY display "SAMPLE LOADOUT COMPLETE" at OIU-12-105B.
- 3. CLOSE and DETACH STC from the glovebox.
 - a. CLOSE port door.
 - b. MOVE port door latch to CLOSED position (down).
 - c. TURN port door latch locking pin clockwise, 30° and RELEASE.
 - d. ENSURE port door latch locking pin drops into locking hole.

NOTE - During rotation, the STC cover is locked and sealed to the STC.

CAUTION

FAILURE TO SURVEY STC AND CELL FLANGE MAY RESULT IN EQUIPMENT AND/OR PERSONNEL CONTAMINATION.

- e. REQUEST Radiological Control Technician (RCT) coverage for STC removal.
- f. ROTATE STC counter-clockwise, 60° AND REMOVE from port flange.

WRAP 1 PLANT OPERATING PROCEDURE

- more*
4. VERIFY OIU displays, "NO PURGE PORT CANISTER PRESENT".
 - (R) 5. REQUEST RCT survey and appropriately release the sealed STC.\
 6. IF surface contamination is found,
THEN DECONTAMINATE the container.
 7. IF no surface contamination is detected,
THEN PLACE STC in transport PIG or cooler as required.
 8. ENSURE COC/SAR information is entered into screen DMSS0502 and the hard copy is transferred with the STC.
 9. IF COC for STC is transferred between operations personnel prior to removal from the Process Area,
THEN ENSURE COC/SAR, DMSS502 "Relinquished By" and "Relinquished To" information is entered into screen DMSS0502 OR an updated hard copy is printed.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

HNF-SD-W026-OTR-015, Rev. 0, Page 0P-112

G. FINAL SAMPLE PREPARATION AND LOAD OUT (Cont.)

10. TRANSFER STC to Sample Management Area, OR
 - a. SECURE in a locked cabinet until such time that containers will be transported to Sample Management Area.
 - b. RECORD time, date, and person placing the sample into storage in the cabinet log sheet.
11. RELINQUISH sample(s) to the sample custodian
12. ENSURE the COC/SAR "Relinquished By" and the "Relinquished To" information is entered into Screen DMSS0502 and on the hard copy form or an updated hard copy is printed.
13. PLACE STC in appropriate shipping container, cushioned as appropriate.
14. MAKE a copy of the Chain of Custody Form and Laboratory Sample Analysis Request. STORE originals in ZipLoc bag and PLACE in shipping container. DELIVER copies to STD for sample file.
15. SEAL shipping container.
16. MARK and LABEL shipping container as directed by STD.

HNF-SD-W026-OTR-015, Rev. 0, Page OP-113

H. SAMPLE ACTIVITY LOGBOOKS AND DMS

NOTE - DMS or Attachment 2, Lab Sample Acquisition, shall be used for data collection. The Sample/Treatment Director shall transfer the information to the Sample Logbook, in a timely manner as required for compliant record keeping.

1. Sample/Treatment Director ENSURE and/or RECORD the following information applicable to the samples taken, in the Sample Log book and in the DMS:

- Container Identification Number (CIN)
- Manifest Number or other tracking number (e.g., Radioactive Shipping Record)
- Sampling Location
- Date
- Time
- Volume
- Container size and type
- Sampler's name
- Recorder's signature
- Physical Characteristics (Color, Texture, Viscosity)
- Anomalies and prohibited items
- Description of overall sampling event/Comments
- Requested Analysis

2. NOTE all discrepancies in COMMENTS section of Sample Log Book.

I. SAMPLING ACTIVITIES PHOTO ALBUM

1. RECORD the following information for each photo taken and ENTER in the Sampling Activities Photo Album:

- Title of activity
- Roll number
- Picture number
- Negative number
- CIN of waste container sampled
- Date taken

J. TRANSPORT SAMPLE

1. ENSURE Radioactive Shipment Record (RSR) is completed and signed by an authorized shipper.
2. TRANSPORT sample in vehicle specified on the RSR.
3. REQUEST RCT SURVEY and RELEASE transport vehicle after delivering sample to laboratory.

(R)

SYSTEM: PROCESS

LLW ENTRY GLOVEBOX OPERATION

(HNF-SD-W026-OTP-015)

I. SYSTEM DESCRIPTION

This procedure provides instructions for operation of the Low Level Waste (LLW) Entry Glovebox.

II. REFERENCE DOCUMENTS

WRP1-OP-0703, Glovebox Lift Table Operation.

WRP1-OP-0701, Glovebox Housekeeping.

III. PRESTART CONDITIONS

All personnel performing this procedure shall be qualified in accordance with WHC-CM-5-34, Section 1.8, "Training Plan," and on-the-job training.

Process area Heating, Ventilation, Air Conditioning (HVAC) in OPERATION.

IV. SAFETY

Potential hazards, such as lifting heavy containers or handling sharp objects present in waste containers, must be mitigated by protective equipment, procedures, and administrative controls to ensure acceptable-risk operating conditions.

Consult with Operations Management and Industrial Hygiene, and refer to the Job Hazards Analysis (JHA), Radiological Work Permit (RWP) and Material Safety Data Sheets (MSDS) to determine required Personal Protective Equipment (PPE).

This procedure requires accessing gloveboxes through gloveports on a regular basis. Operators shall perform self survey upon exiting gloveport after each use. Radiological Control Technician (RCT) shall be contacted anytime self survey limits are exceeded.

Spills inside the glovebox shall be cleaned up per WRP1-OP-0701, Glovebox Housekeeping.

Release Date DRAFT	Print Date 08/06/97	Appr. Desig. ESQ	Document No. WRP1-OP-0713	Rev/Mod A-0	Page 1 of 10

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

IV. SAFETY (Continued)

Warning - Use care to prevent injury. Possible safety hazards include:

- Tripping/Slipping
- Injuries to the hands at glovebox ports
- Radiological Contamination
- Interference with the Automatic Guided Vehicle (AGV)

V. TOOLS AND SUPPLIES

None.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

VII. PROCEDURE

NOTE 1 - Administrative hold steps are identified by letters in parentheses at the left margin of the procedure step. The direction given in the procedure step must be satisfied before work continues.

(M) - Operations management shall approve operation.

(R) - Radiological Control (RC) shall complete surveys or agree to permit continued operation.

NOTE 2 - Unless otherwise specified Data Management System (DMS) actions are performed on DMS Terminal (107-TE-12-103).

NOTE 3 - Unless otherwise specified Operator Interface Unit (OIU) actions are performed on LLW Entry Glovebox OIU (OIU-12-103A).

NOTE 4 - All scanning is performed with portable scanner ~~12-NE-310 or assigned spare.~~

A. INITIALIZE SYSTEM

1. VERIFY, visually, position of Drum Transfer Car.
2. IF Drum Transfer Car is not at Transfer Port (107-D0-07-102), THEN:

NOTE - OIU-12-103B is at the LLW Sorting Glovebox.

- a. SELECT on OIU-12-103B (in order):
 - (1) "MAIN MENU" (unless already displayed).
 - (2) "TRANSFER CAR MENU".
 - (3) "ENTRY".
- b. VERIFY OIU displays "TRANSFER CAR MOVING TO ENTRY POSITION...", then displays "TRANSFER CAR AT ENTRY POSITION".

3. ENSURE AUTO/MAINTENANCE keyswitch (107-07-HS-316) on DMS Terminal is in AUTO.

(PCS) When powered up, performs system initialization check and displays results on OIU Main Menu.

4. SELECT OIU-12-103A "MAIN MENU".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

5. SELECT "DIAGNOSTICS MENU".
6. VERIFY display, "DIAGNOSTICS MENU".
7. IF OIU displays "PASS",
THEN, GO TO Section VII.B.
8. IF OIU displays "FAIL"
PERFORM the following:
 - a. NOTIFY Duty Operations Supervisor (DOS).
 - b. PLACE AUTO/MAINTENANCE keyswitch (107-07-HS-316) on DMS Terminal to "MAINTENANCE".
 - c. ENTER MAINTENANCE access password on DMS terminal.
 - d. ACCESS MAINTENANCE MENU screens as necessary to correct indicated initialization faults.
 - e. WHEN all faults have been corrected,
SELECT "MAIN MENU".
 - f. PLACE AUTO/MAINTENANCE keyswitch (107-07-HS-316) on DMS Terminal to "AUTO".

B. DRUM ENTRY TO LLW GLOVEBOX

- (M)
1. SCAN location (2Y) bar code on side of Entry Glovebox.
 2. SCAN drum (S) bar code.
 3. IF scanner displays "PIN MIS-MATCH",
THEN:
 - a. RECORD PIN displayed on barcode scanner on PIN Change Form.
 - b. SCAN Cancellation barcode.
 - c. NOTIFY DOS.
 - d. CORRECT PIN information in PCS.
 4. SCAN End (Y) barcode.
 5. SCAN Yes barcode.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

6. IF drum is overpacked.
THEN, REMOVE clamp band from overpack 85 gal (322 liter) drum as follows:

NOTE - *Manual Lift table operation is performed per WRP1-OP-0703, Glovebox Lift Table Operation.*

- a. LOWER Lift Table as required.
- b. REMOVE clamp band.
- c. RAISE Lift Table to AGV LOAD HEIGHT.
- d. RETURN Lift Table to NORMAL operation.

7. ~~IF drum is overpacked,
THEN, SELECT "OVERPACK ENTRY MENU" on OIU.
OTHERWISE, SELECT "SINGLE DRUM ENTRY MENU" on OIU.~~

- (M) 8. IF OIU displays "NO DRUM LOCATED ON LIFT TABLE",
THEN:
- a. NOTIFY Duty Operations Supervisor (DOS).
 - b. CORRECT drum deficiency as directed.
9. SELECT "START DRUM ENTRY" on OIU.
10. VERIFY OIU displays "DRUM ENTRY IN PROGRESS...".
11. WAIT until OIU displays "DRUM ENTRY COMPLETE",
THEN, SELECT "OPEN PORT" on OIU.
12. VERIFY OIU displays "PORT OPENING...".
13. VERIFY OIU displays "PORT OPEN".

WARNING

Improper operation of the hoist may cause injury or equipment damage. Failure to properly position and close or open drum lifter could result in dropped drum. Caution must be exercised if reaching through gloveports to manually position drum lifter.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

NOTE - Unless otherwise specified, hoist control activities are performed on Hoist Control (107-PC-07-001). Controls must be activated until associated indicator illuminates. Reference Attachment 1: Hoist Control Functions.

14. **PERFORM** the following with Hoist Control:

- a. **ENSURE** LIFTER jaws FULLY RAISED.
- b. **ENSURE** LIFTER jaws FULL OPEN.
- c. **ENSURE** HOIST properly positioned above 55 gal (208 liter) drum.
- d. **LOWER** HOIST over 55 gal drum.
- e. **CLOSE** LIFTER on 55 gal drum.
- f. **RAISE** HOIST (and 55 gal drum) until "RAISED LIMIT" LED ILLUMINATES.

15. **SELECT** on OIU (in order):

- a. "MAIN MENU" (unless already displayed).
- b. "TROLLEY MENU".
- c. "SWAB POSITION".

16. **VERIFY** OIU displays "TROLLEY MOVING TO SWAB POSITION..." then displays "TROLLEY AT SWAB POSITION".

C. CLOSE ENTRY PORT

1. **SELECT** on OIU (in order):

- a. "MAIN MENU" (unless already displayed).
- b. "OVERPACK ENTRY MENU".

2. **COMPARE** PIN displayed on OIU to PIN on drum inside glovebox.

Document No. WRP1-OP-0713	Print Date 08/06/97	Rev/Mod A-0	Page 6 of 10
------------------------------	------------------------	----------------	-----------------

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

3. SELECT the following at DMS terminal TE-12-103 from the DMS menu:
 - a. "Process Ops"
 - b. "LLW Glovebox"
 - c. "Drum Status at Entry"
4. VERIFY the correct outer drum PIN is displayed and the correct inner drum PIN is displayed, if overpacked.
5. NOTE whether sorting is required.
- (M) 6. IF PINs do not match,
THEN:
 - a. RECORD both PINs.
 - b. NOTIFY DOS.
 - c. ENTER PIN correction into DMS as directed.
7. SELECT "INNER DRUM ID VERIFIED" on OIU.
- (R) 8. REQUEST RCT swab 55 gal drum for contamination.
9. VIEW inside of overpack drum for debris, on video monitor 107-TM-07-331B.
- (M) 10. IF drum contains debris,
THEN, NOTIFY DOS.
11. SELECT "CLOSE PORT".
12. VERIFY OIU displays "PORT CLOSING...".
13. VERIFY OIU displays "PORT CLOSED".
14. SELECT "START DRUM EXIT".
15. VERIFY OIU displays, "DRUM EXIT IN PROGRESS".
16. VERIFY OIU displays, "DRUM EXIT COMPLETE".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

17. VERIFY lights on Lift Table Control Pedestal (107-PC-09-202A), ILLUMINATED:
 - a. AGV LOAD HEIGHT.
 - b. DRUM AT AGV END.
- (R) 18. REQUEST RCT survey drum for contamination.
19. IF drum is contaminated,
 - a. THEN, decontaminate as directed.
 - b. RESURVEY drum.
20. REINSTALL clamp band on drum as follows:

NOTE - *Manual Lift table operation is performed per WRPI-OP-0703, Glovebox Lift Table Operation.*

 - a. LOWER Lift Table as required.
 - b. REINSTALL clamp band.
 - c. RAISE Lift Table to AGV LOAD HEIGHT.
 - d. RETURN Lift Table to NORMAL operation.
21. IF drum is uncontaminated, THEN, SELECT "CLEAN DRUM READY FOR PICKUP".
22. IF drum is contaminated, THEN, SELECT "CONTAMIN. DRUM READY FOR PICKUP".
23. VERIFY OIU displays ^{CONTAMINATED} "DRUM PICKUP IN PROGRESS...".
- D. MOVE DRUM TO DRUM TRANSFER CAR ^{OK}
 1. SELECT on OIU (in order):
 - a. "MAIN MENU" (unless already displayed).
 - b. "TROLLEY MENU".
 - c. "TRANSFER PORT".
 2. VERIFY OIU displays "TROLLEY MOVING TO TRANSFER PORT...".
 3. WAIT until trolley STOPS.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

- THEN, VERIFY OIU displays "TROLLEY AT TRANSFER PORT".
4. SELECT on OIU (in order):
 - a. "MAIN MENU".
 - b. "DRUM TRANSFER MENU".
 5. ~~VERIFY OIU displays "TRANSFER CAR IN POSITION".~~
 6. SELECT "OPEN TRANSFER PORT" on OIU. ~~123 A~~
 7. VERIFY OIU displays "TRANSFER PORT OPENING...".
 8. WAIT until OIU displays "TRANSFER PORT OPEN".
 9. PERFORM the following with Hoist Control:
 - a. LOWER HOIST until drum is on transfer car AND hoist chain is slack.
 - b. OPEN LIFTER jaws.
 - c. RAISE HOIST until "RAISED LIMIT" LED ILLUMINATES.
 10. SELECT "CLOSE TRANSFER PORT" on OIU.
 11. VERIFY OIU displays "TRANSFER PORT CLOSING..." then displays "TRANSFER PORT CLOSED".
 12. SELECT "MAIN MENU".
 13. ENSURE "LLW ENTRY GLOVEBOX MAIN MENU" displayed on OIU.

WASTE RECEIVING AND PROCESSING (WRAP) PLANT OPERATING PROCEDURE

SYSTEM: PROCESS

LLW SORTING GLOVEBOX OPERATION

(HNF-SD-W026-OTP-015)

I. SYSTEM DESCRIPTION

This procedure provides instructions for operation of the Low Level Waste (LLW) Sorting Glovebox (107-GB-07-102).

II. REFERENCE DOCUMENTS

HSRCM-1, Hanford Site Radiological Control Manual
WRP1-OP-0701, Glovebox Housekeeping
WRP1-OP-0702, Restart LLW Glovebox Operation
WRP1-OP-0704, Glovebox Manipulator Operation
WRP1-OP-0705, Bagless Transfer System Manual Operation
WRP1-OP-0706, Packet NDE Operation
WRP1-OP-0710, Glovebox Waste Sampling

III. PRESTART CONDITIONS

All personnel performing this procedure shall be qualified in accordance with WHC-CM-5-34, Section 1.8, "Training Plan," and on-the-job training.

Process area Heating, Ventilation, Air Conditioning (HVAC) in OPERATION.

Drum to be sorted is on the Transfer Car in the LLW Entry Glovebox, and ready to be transferred to the Sorting Glovebox.

RWM Transfer drum is located on Lift Table 107-LT-09-203A.

No faults or off normal conditions in the LLW Sorting glovebox as identified on the Diagnostics Menu screen of LLW Sorting Glovebox Operator Interface Unit OIU-12-103B.

VII. PROCEDURE

WARNING

IN THE EVENT OF A MAJOR PROBLEM, LLW GLOVEBOXES MAY BE SHUT DOWN BY OPERATION OF EMERGENCY STOP BUTTON ON DMS CONSOLE TE-12-103. EMERGENCY STOP WILL SHUT DOWN ALL OPERATIONS IN THE GLOVEBOX LINE AND PLACE IT IN A SAFE CONDITION.

- NOTE 1 - *Administrative hold steps are identified by letters in parentheses at the left margin of the procedure step. The direction given in the procedure step must be satisfied before work continues.*
- (M) - *Operations management shall approve operation.*
- (R) - *Radiological Control (RC) shall complete surveys or agree to permit continued operation.*
- NOTE 2 - *UNLESS OTHERWISE SPECIFIED, selections and displays are on LLW Sorting Glovebox Operator Interface Unit (OIU-12-103B).*
- NOTE 3 - *Gloveports and manipulators are used as needed to perform tasks throughout this procedure. Manipulator Operation is performed per WRP1-OP-0704, Glovebox Manipulator Operation.*
- NOTE 4 - *Data Management System (DMS) actions, when specified, are performed on DMS Terminal (107-TE-12-103).*
- NOTE 5 - *Lift Table 107-LT-09-203A controls and indicators are located on Lift Table Control Pedestal 107-PC-09-203A.*
- NOTE 6 - *Hoist control activities are performed on Hoist Control (107-PC-07-003A or 003B) at operator discretion. Active controller is selected by switch on 107-PC-07-003A. Functions must be activated until associated indicator illuminates. Reference Attachment 1: Hoist Control Functions.*

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

A. INITIALIZE SYSTEM

1. ENSURE DMS AUTO/MAINTENANCE keyswitch (107-07-HS-317) set to AUTO.
2. ENSURE Lift Table MODE switch set to NORMAL.
3. REVIEW "MAIN MENU".
4. IF OIU displays "SYSTEM INITIALIZED",
THEN, GO TO desired section(s),
OTHERWISE, PERFORM the following:
 - a. NOTIFY Duty Operations Supervisor (DOS).
 - b. SELECT "DIAGNOSTICS MENU".
 - c. OBSERVE fault messages.
 - d. PLACE DMS AUTO/MAINTENANCE keyswitch to "MAINTENANCE".
 - e. ENTER Maintenance Access Password on MAINTENANCE ACCESS MENU.
 - f. ACCESS Maintenance Screens from SORTING GLOVEBOX MAINTENANCE MAIN MENU as necessary to correct indicated initialization faults.
 - g. WHEN all faults have been corrected:
 - (1) PLACE DMS AUTO/MAINTENANCE keyswitch to "AUTO".
 - (2) SELECT "MAIN MENU".
 - (3) VERIFY display "SYSTEM INITIALIZED".
 - (4) GO TO desired section(s).

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

B. TRANSFER WASTE DRUM TO DELID POSITION

1. VERIFY (visually) waste drum on Transfer Car (107-TC-07-101) at Entry port (107-DO-07-102).
2. SELECT in order, as required:
 - a. "MAIN MENU"
 - b. "TRANSFER CAR MENU".
 - c. "DELID/TIPPER".
3. VERIFY display "TRANSFER CAR MOVING TO DELID POSITION...".
4. WAIT for display "TRANSFER CAR AT DELID POSITION".

C. GRIP WASTE DRUM WITH DRUM TIPPER (107-DH-07-103)

NOTE - Overbag must be lowered around or removed from drum far enough down for unimpeded operation of drum grabber. Bag parts remaining lodged under drum will be removed later.

1. ~~IF~~ drum is enclosed in overbag.
THEN:

- a. ~~REMOVE overbag from top of drum.~~
- b. ~~PLACE loose overbag materials on sorting table.~~

2. ENSURE manipulator (107-EM-07-101) and arms PARKED.
3. SELECT in order, as required:
 - a. "MAIN MENU".
 - b. "DRUM TIPPER MENU".
 - c. "LOWER AND CLOSE GRAB".

NOTE - OIU displays "LOWER AND CLOSE GRAB IN PROGRESS..." while tipper lowers. "LOWER TIPPER" must be held until tipper reaches full down and stops.

4. SELECT "LOWER TIPPER" until tipper down travel STOPS and display indicates "LOWER AND CLOSE GRAB COMPLETE".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

D. SAW WASTE DRUM CLAMP BAND

1. ENSURE manipulator and arms PARKED.
2. SELECT in order, as required:
 - a. "MAIN MENU".
 - b. ^{SAW} ~~"LID/DELID"~~ MENU".
 - c. "MOVE TO ~~RELID~~ DELID POSITION".
3. WAIT until Delid/Relid fixture (107-RT-07-101) is at "DELID" position.

4. SELECT in order, as required:

- a. "MAIN MENU".
- b. "SAW MENU".

NOTE - In Steps VII.D.4.c and VII.D.5, "CX" & "CY" indicate desired position (C2 & C5 or C3 & C6). Positions are selected as needed to saw through clamp band without hitting clamp band bolt.

- c. "CX & CY SAW ORIENTATION".
5. ~~VERIFY~~ display "CX & CY SAW ORIENTATION READY".
6. SELECT "START SAW SEQUENCE".
7. VERIFY display "SAWING IN PROGRESS...".
8. WAIT until saw STOPS and display indicates "OPERATOR: GRAB CLAMP BAND WITH MANIPULATOR...".

CAUTION

MANIPULATORS MUST BE CLEAR OF SAW OPERATING AREA.

9. GRIP clamp band on each side of cut with manipulators.
10. SELECT "CONFIRM CLAMP BAND HELD".
11. VERIFY display "SAWING IN PROGRESS...".
12. WAIT until saw STOPS and display indicates "OPERATOR: GRAB CLAMP BAND WITH MANIPULATOR...".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

13. REMOVE clamp band pieces from drum and PLACE on sorting table.
14. PLACE manipulator and arms PARKED at POSITION 1.
15. VERIFY display "SAWING COMPLETE".
16. SELECT the following at DMS Screen DMSS0311:
 - a. "Process Ops"
 - b. "LLW Glovebox"
 - c. "Drum Status at Entry"
17. VERIFY the correct outer drum PIN is displayed and the correct inner drum PIN is displayed, if overpacked.
18. OBSERVE whether sorting is required.
19. IF drum is to be relidid without sorting, THEN, GO TO Section VII.I, MOVE TRANSFER CAR TO RELID POSITION.

E. DELID WASTE DRUM

1. SELECT in order, as required:
 - a. "MAIN MENU".
 - b. "LID/DELID MENU".
 - c. "START DELID SEQUENCE".
2. VERIFY display "DELID IN PROGRESS...".
3. WAIT for display "DELID COMPLETE".

F. EMPTY WASTE DRUM ONTO SORTING TABLE

1. ENSURE manipulator and arms are PARKED at POSITION 1.
2. SELECT in order, as required:
 - a. "MAIN MENU".
 - b. "DRUM TIPPER MENU".
 - c. "RAISE WITH GRAB CLOSED".

Paul Fortune

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

NOTE - OIU displays "RAISED WITH GRAB CLOSED IN PROGRESS..." while tipper raises. "RAISE TIPPER" must be held until tipper reaches desired position and stops.

3. RAISE drum as follows:

- a. IF overbag parts require removal,
THEN:
 - (1) SELECT "RAISE TIPPER" until drum is at desired position.
 - (2) REMOVE overbag and place on sorting table, as applicable.
- b. SELECT "RAISE TIPPER" until tipper up travel STOPS and display indicates "RAISE WITH GRAB CLOSED COMPLETE - ROTATE JOYSTICK".

NOTE - NDE X-Ray hard copies are used to prelocate non-compliant items. Drum contents should be dumped on sorting table in a controlled manner so packet position on table can be correlated with previous position in drum.

4. ROTATE drum tipper with joystick control until items begin emptying onto sorting table.
- a. USE manipulators to aid movement of items, as required.

NOTE - Monitor (107-TM-07-331A) is focused on inside of drum.

5. VERIFY on video monitor (107-TM-07-331A), all waste has been emptied onto sorting table.
6. ENSURE manipulator and arms are PARKED.
7. ROTATE drum tipper upright to display "TIPPER AT VERTICAL".
8. SELECT "LOWER WITH GRAB CLOSED".

NOTE - OIU displays "LOWER AND CLOSE GRAB IN PROGRESS..." while tipper lowers. "LOWER TIPPER" must be held until tipper reaches full down and stops.

9. SELECT "LOWER TIPPER" until tipper down travel STOPS and display indicates "LOWER WITH GRAB CLOSED COMPLETE".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

G. REMOVE NON-COMPLIANT PACKETS FROM WASTE

NOTE - Non-compliant packets are identified and located by review of drum NDE X-ray hard copies and association of packet location on sorting table to previous position in drum. Packet X-RAY is used if positive identification cannot be made visually.

1. SELECT the following at DMS terminal:
 - a. "Process Ops"
 - b. "LLW Glovebox"
 - c. "Sorting Table"
2. VERIFY the parent PIN (drum contents on sorting table).
3. REVIEW the Waste Description.
4. OBSERVE if "Sample" and/or "Compliant" are checked.
5. SELECT "NDE Comment" button on LLW Sorting Table screen to view radiographer comments on the NDE Comment screen.
6. SELECT "Return to Sorting Table Screen" when comment review complete.
7. REVIEW drum NDE hard copies as necessary to locate non-compliant packet/item.
8. IF necessary,
THEN, X-RAY packet per WRP1-OP-0706, Packet NDE Operation.
 - a. IF packet contains suspect article,
THEN, GO TO Step VII.G.9.
 - b. IF NOT,
THEN, RETURN packet to sorting table and REPEAT Step VII.G.8 for additional packets, as required.
9. ATTACH bar code to non-compliant packet.
10. SCAN attached bar code.
11. PLACE non-compliant packet on Transfer Stand.

*Scan information
sequence*

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

12. SELECT the following at DMS terminal:
 - a. "Process Ops"
 - b. "LLW Glovebox"
 - c. "Sorting Table"
13. SELECT "Non-Compliant" button on the LLW Sorting Table (DMSS0312) screen.
14. SELECT Material Group Code from the List of Values.
15. INPUT a brief Waste Description.
16. IF barcodes on additional packets are scanned while the LLW Non-Compliant screen is displayed,
THEN SELECT "Refresh" button to display the new packet information.
17. REPEAT Steps VII.G.7 through VII.G.16, as required, until all non-compliant items have been removed.
18. IF Transfer Stand is full,
THEN, PERFORM Sections VII.L through VII.O

AND

RETURN to Step VII.G.17 OR Step VII.G.19, as applicable.

19. IF waste samples are required,
THEN, PERFORM sampling per WRP1-OP-0710, Glovebox Waste Sampling.
20. SELECT the following at DMS terminal:
 - a. "Process Ops"
 - b. "LLW Glovebox"
 - c. "Sorting Table"
 - d. "Physcomp" on DMS Screen DMSS0312, LLW Sorting Table

NOTE - *The total estimated volume % of material must equal 100% and the total estimated weight cannot exceed the original drum waste weight.*

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

21. UPDATE the following information as necessary to reflect the contents left on the Sorting table after the non-complaint packet(s) are removed:
 - Material Description
 - Estimated Volume % of Material
 - Estimated Weight of Material
 22. WHEN data has been updated,
THEN perform the following:
 - a. SELECT "Return To Sorting Table Screen"
 - b. ENTER signature password.
 - c. COMMIT data.
 23. SELECT "Chemcomp" button on Screen DMSS0312, LLW Sorting Table.
- NOTE - *Either the weight or weight % can be entered. DMS will then calculate the other value.*
24. UPDATE the following information as necessary to reflect the contents left on the Sorting table after the non-complaint packet(s) are removed:
 - Hazardous Chemical Component ID
 - Hazardous Chemical Component Description
 - Estimated weight of Hazardous Chemical Component
 - Estimated weight % of Hazardous Chemical Component
 25. WHEN data has been updated,
THEN SELECT "Return To Sorting Table Screen".
 26. ENTER signature password.
 27. COMMIT data.

H. RETURN COMPLIANT WASTE TO WASTE DRUM

1. ENSURE all non-compliant items are removed from sorting table.
2. ENSURE DMS files have been updated, as required.
3. ENSURE manipulator and arms are PARKED at POSITION 2.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

4. SELECT in order, as required:
 - a. "MAIN MENU".
 - b. "SORTING TABLE MENU".
 - c. "EXTEND TABLE".
5. VERIFY display "SORTING TABLE EXTENDING".
6. WAIT for display "~~EXTEND COMPLETED~~". *TIP POSITION*
7. SELECT "ENABLE RAISE/LOWER". *Sorting Table Extended*
8. VERIFY display "RAISE/LOWER ENABLED".

CAUTION

TABLE SHOULD BE TIPPED ONLY ENOUGH TO START MATERIAL SLIDING. DUMPING MATERIAL TOO FAST COULD RESULT IN OVERFLOW OR BLOCKAGE.

NOTE - RAISE/LOWER buttons on OIU must be selected (touched) until table reaches desired angle.

9. SELECT "RAISE SORTING TABLE" until table reaches desired angle.
10. GUIDE waste into waste drum with manipulators, as necessary.

NOTE - A video camera is present which is focused on raised Sorting surface to aid in packet unloading.

11. ENSURE all remaining packets have been returned to waste drum.
- (M) 12. IF all waste cannot be placed in waste drum, THEN, NOTIFY DOS.
13. SELECT "LOWER SORTING TABLE" until table is FULL DOWN. *VERIFY DISPLAY SORTING TABLE LOWERED*
14. SELECT "DISABLE RAISE/LOWER".
15. VERIFY display "RAISE/LOWER DISABLED".
16. SELECT "RETRACT TABLE".
17. VERIFY display "SORTING TABLE RETRACTING...".
18. WAIT for display "SORTING TABLE RETRACTED".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

19. SELECT in order, as required:
 - a. "MAIN MENU".
 - b. "DRUM TIPPER MENU".
 - c. "OPEN GRAB AND PARK".
 20. VERIFY display "OPEN GRAB AND PARK IN PROGRESS...".
 21. WAIT for display "OPEN GRAB AND PARK COMPLETE".
- I. MOVE WASTE DRUM TO RELID POSITION
1. SELECT in order, as required:
 - a. "MAIN MENU".
 - b. "TRANSFER CAR MENU".
 - c. "RELID".
 2. VERIFY display "TRANSFER CAR MOVING TO RELID POSITION...".
 3. WAIT for display "TRANSFER CAR AT RELID POSITION".
- J. RELID WASTE DRUM
1. SELECT in order, as required:
 - a. "MAIN MENU".
 - b. "LID/DELID MENU".
 - c. "START RELID SEQUENCE".
 2. VERIFY display "RELID IN PROGRESS...".
 3. MONITOR display during RELID sequence.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

4. IF ~~"OPERATOR: LOAD CLIPS"~~ displays:
THEN:

NOTE - Extra C-clips are stored on shelf inside glovebox, under Consumable Entry Port, on maintenance side of glovebox.

- a. LOAD new supply of C-Clips in clip magazine.

(1) INSERT new clips through Consumable Entry Port, as required, when shelf supply is used.

- ~~b. SELECT "CONFIRM C-CLIPS LOADED".~~

5. ~~WAIT~~ for display "RELID COMPLETE".

6. VERIFY all C-Clips have been attached.

K. TRANSFER WASTE DRUM TO SUPERCOMPACTOR

1. SELECT in order, as required:

a. "MAIN MENU".

b. "TRANSFER CAR MENU".

2. SELECT "COMPACTOR TRANSFER".

3. VERIFY display "TRANSFER CAR MOVING TO COMPACT TRANSFER POSITION...".

4. WAIT for display "TRANSFER CAR AT COMPACT TRANSFER POSITION".

CAUTION

FAILURE TO PLACE SUPERCOMPACTOR IN MANUAL PRIOR SELECTING "COMPACTOR GLOVEBOX" ON OTU WILL RESULT IN AUTOMATIC COMPACTING OF DRUM.

5. IF the drum is to be moved through the Supercompactor without being compacted,
THEN GO TO WRP1-OP-0715, Section titled, "TRANSFERRING DRUM WITHOUT CRUSHING".
AND PLACE Supercompactor in MANUAL.
6. SELECT "COMPACTOR GLOVEBOX".
7. VERIFY display "TRANSFERRING DRUM TO COMPACTOR".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

8. IF OIU displays "COMPACTOR BUSY",
THEN, PERFORM one of the following:
 - a. (1) SELECT "COMPACTOR TRANSFER" (cancels transfer).
 - (2) CONFIGURE compactor to accept drum.
 - (3) REPEAT from Step VII.K.1.

OR

- b. CONFIGURE compactor to accept drum. Drum will transfer when compactor becomes available.
9. WAIT for display "DRUM TRANSFER TO COMPACTOR COMPLETE".
 10. SELECT "ENTRY"
 11. VERIFY display "TRANSFER CAR MOVING TO ENTRY POSITION...".
 12. WAIT for display "TRANSFER CAR AT ENTRY POSITION".

L. PLACE TRANSFER STAND IN RWM TRANSFER DRUM

1. SELECT in order, as required:
 - a. "MAIN MENU".
 - b. "RWM PORT MENU".
 - c. "OPEN PORT".
2. VERIFY display "PORT OPEN".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

WARNING

IMPROPER HOIST OPERATION MAY CAUSE INJURY. CAUTION MUST BE EXERCISED IF REACHING THROUGH GLOVEPORTS TO POSITION TRANSFER STAND.

CAUTION

ALLOWING TRANSFER STAND (on hoist) TO SWING INTO PORT SEALING SURFACES WHEN LOWERING INTO DRUM MAY DAMAGE PORT. USE OF ADDITIONAL OPERATOR MAY BE REQUIRED TO SAFELY GUIDE TRANSFER STAND INTO DRUM TO PREVENT DAMAGE.

3. PERFORM the following with Hoist Control:
 - a. RAISE HOIST (and puck) to "RAISED LIMIT".
 - b. MOVE TROLLEY to "PORT" position.
 - c. LOWER HOIST (and Transfer Stand) into drum.
 - d. RELEASE hook from Transfer Stand.
 - e. RAISE HOIST (and puck) to "RAISED LIMIT".
- M. REMOVE DRUM FROM RWM TRANSFER PORT (107-DO-07-105)
 1. ENSURE the following with hoist control:
 - a. Transfer Stand disengaged from Hoist.
 - b. HOIST at "RAISED LIMIT".
 2. ENSURE port sealing surfaces are free of dirt and debris.
 3. SELECT in order, as required:
 - a. "MAIN MENU".
 - b. "RWM PORT MENU".
 - c. "CLOSE PORT".
 4. VERIFY display "PORT CLOSING...".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

- (M)
5. IF port closing is disrupted,
THEN:
 - a. ACKNOWLEDGE OIU fault.
 - b. NOTIFY DOS.
 - c. CLOSE Bagless Transfer Port per WRP1-OP-0705, Bagless Transfer System Manual Operation.
 6. WAIT for display "PORT CLOSED".
 7. SELECT "START DRUM EXIT".
 8. VERIFY display "DRUM EXIT IN PROGRESS...".
 9. WAIT for display "DRUM EXIT COMPLETE".
 10. VERIFY Lift Table indicators ON:
 - "AGV LOAD HEIGHT"
 - "DRUM AT AGV END"
 - (R) 11. REQUEST RCT survey drum for contamination.
 - a. IF drum is contaminated,
THEN, decontaminate as directed.
 - b. RESURVEY drum.
 12. SELECT "DRUM READY FOR PICKUP".
 - N. MATE DRUM TO RWM ^{Access} TRANSFER PORT (107-DO-07-105)
 1. ENSURE with hoist control:
 - a. HOIST at "RAISED LIMIT"
 - b. TROLLEY at ~~"PORT"~~ MIDPOINT
 2. ENSURE ~~sorting table~~ FULLY RETRACTED and HORIZONTAL
 3. ENSURE manipulator and arms PARKED.
 4. SELECT in order, as required:
 - a. "MAIN MENU".
 - b. "RWM PORT MENU".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

- (M)
5. VERIFY display "DRUM AT LIFT TABLE".
 6. PERFORM the following:
 - a. SCAN Location (2) bar code
 - b. SCAN Drum bar code.
 - c. IF scanner displays "PIN MIS-MATCH", THEN, NOTIFY DOS.
 - d. SCAN End (X) bar code.
 7. SELECT "START DRUM ENTRY".
 8. VERIFY display "DRUM ENTRY IN PROGRESS...".
 9. WAIT for display "DRUM ENTRY COMPLETE".
 - ~~10. VERIFY Lift Table "DRUM UNDER PORT" indicator ON.~~
 11. SELECT "OPEN PORT".
 12. VERIFY display "PORT OPENING...".
 13. WAIT for display "PORT OPEN".
0. REMOVE TRANSFER STAND FROM RWM TRANSFER DRUM
1. PERFORM the following with Hoist Control:
 - a. MOVE Trolley to "PORT".
 - b. LOWER Hoist.
 - c. ATTACH hoist hook to Transfer Stand.
- NOTE - *Transfer stand position and elevation may be changed, as needed, to enhance packet loading.*
- d. RAISE HOIST as needed.
 - e. MOVE TROLLEY to desired loading position.
 - f. LOWER HOIST to desired loading position.

SYSTEM: PROCESS

LLW SUPERCOMPACTOR OPERATION

(HNF-SD-W026-OTP-015)

I. SYSTEM DESCRIPTION

This procedure provides instructions for operation of the Low Level Waste Drum Supercompactor.

The Supercompactor is used to reduce low level waste volume by compression.

II. REFERENCE DOCUMENTS

HSRCM-1, Hanford Site Radiological Control Manual

WHC-CM-5-34, Solid Waste Disposal Operations Administration

WHC-CM-5-36, SWD Internal Requirements

WHC-EP-0063, Hanford Site Solid Waste Acceptance Criteria

INET manual, MGT-SVV-429765

III. PRESTART CONDITIONS

All personnel performing this procedure shall be qualified in accordance with WHC-CM-5-34, Section 1.8, "Training Plan," and on-the-job training.

Operator has Supercompactor Operator Key, stored in Controlled key lockbox.

IV. SAFETY

All potential hazards, such as lifting heavy containers or handling sharp objects present in waste containers, must be mitigated by protective equipment, procedures, and administrative controls to ensure acceptable risk operating conditions.

Personnel shall not reach into gloveboxes when equipment is in operation.

V. TOOLS AND SUPPLIES

All tools necessary are stored in the Supercompactor glovebox.

Standard glovebox cleaning supplies.

One liter plastic bottle, for anvil liquids collection.

VII. PROCEDURE

A. SYSTEM STARTUP

NOTE - All control panel actions are performed at, and messages displayed on, Supercompactor Panelview panel, unless otherwise noted.

1. ENSURE conveyors, anvil, and compactor glovebox are free of foreign objects.
2. ENSURE mold stripping blocks are down.
3. ENSURE any equipment, tools, and supplies, in glovebox are properly stored.
4. CLOSE disconnect (##)
5. ENSURE Hydraulic Power Unit (HPU) cooling system is operating, as indicated on cooling system control panel.
6. INSERT Operator Control Key AND TURN ON TO RUN
7. PRESS PanelView POWER ON button.
8. PRESS "F21-RESET".
9. PRESS "F7-HPU OFF" IS ON
10. CHECK message is "OFF MODE - AT HOME POSITION".
 - a. IF not in HOME position, THEN PRESS "F21-GO HOME".

NOTE - Puck "spring back" needs to be considered when determining desired puck height.

Minimum puck height is 4.0 inches.

11. SET puck height:
 - a. PRESS "F17-CRUSHED PUCK HEIGHT"
 - b. ENTER desired puck height
 - c. PRESS ENTER
 - d. PRESS CANCEL.

*Assumes
HPU is on.*

*This only
operates when
HPU is on.*

WRAP 1 PLANT OPERATING PROCEDURE

(HNFDSD-W026-OTP-015)

12. CHECK ram crushing pressure setting.
 - a. IF ram crushing pressure needs reset,
THEN:
 - (1) PRESS "F18-CRUSHING PRESSURE"
 - (2) ENTER desired ram pressure
 - (3) PRESS ENTER
 - (4) PRESS CANCEL.

SAFETY OPTION KEY

WARNING

USE OF SUPERVISOR KEY BYPASSES GLOVEBOX LIGHT CURTAIN SAFETY FEATURE.

CAUTION

MAXIMUM RAM RELIEF PRESSURE SETTING IS 4200 psig.

13. CHECK ram relief pressure setting.
 - a. IF ram relief pressure needs reset,
THEN:
 - (1) CONTACT Duty Operations Supervisor
 - (2) INSERT Supervisor Control Key AND TURN ON
 - (3) PRESS "F19-RELIEF PRESSURE"
 - (4) ENTER desired ram pressure
 - (5) PRESS ENTER
 - (6) PRESS CANCEL
 - (7) TURN Supervisor Control Key OFF AND REMOVE key.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTR-015)

B. TRANSFERRING DRUM WITHOUT CRUSHING

NOTE - This section is intended for use when it is desired to pass a drum through the Supercompactor without crushing it.

NOTE - F10 may be used at any time to exit MANUAL mode.

CAUTION

FAILURE TO PLACE THE SUPERCOMPACTOR IN MANUAL PRIOR TO THE TRANSFER CAR IN THE SORTING GLOVEBOX DELIVERING THE DRUM TO THE ENTRY POSITION, WILL RESULT IN AUTOMATICALLY CRUSHING THE DRUM.

CAUTION

INTERLOCKS ARE BYPASSED IN MANUAL MODE.

In Manual mode, the F-buttons, once momentarily pressed, will cause a step to progress to its end. Re-pressing the button will pause the step.

1. CHECK message is "OFF MODE - AT HOME POSITION".
2. PRESS "F5-MANUAL".
3. ENSURE the desired drum is on input conveyor.
4. PRESS ~~AND HOLD~~ "F1-IN FWD" UNTIL drum loads into LUC.
5. PRESS ~~AND HOLD~~ "F3-LUC FWD" UNTIL puck is on output conveyor.
6. PRESS ~~AND HOLD~~ "F11-LUC REV" UNTIL LUC is fully retracted.
7. PRESS ~~AND HOLD~~ "F8-OUT FWD" UNTIL drum is at desired location.
8. PRESS "F10-OFF MODE".
9. CHECK message is "OFF MODE - AT HOME POSITION".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

C. AUTOMATIC OPERATION

NOTE - F10 may be used at any time to exit AUTO mode.

1. ENSURE message is "OFF MODE - AT HOME POSITION".
2. PRESS "F1-AUTO".
3. CHECK message is "AUTO MODE".
4. WHEN drum compacting is completed:
 - a. PRESS "F10-OFF MODE"
 - b. CHECK message is "OFF MODE - AT HOME POSITION"
 - c. SHUTDOWN supercompactor per section VII.G.

D. SEMI-AUTOMATIC OPERATION

NOTE - F10 may be used at any time to exit SEMI-AUTO mode.

1. ENSURE message is "OFF MODE - AT HOME POSITION".
2. PRESS "F3-SEMI-AUTO".
3. CHECK message is "WAITING FOR LOAD COMMAND (F1)".
4. AFTER a drum is on input conveyor, THEN:
 - a. PRESS "F1-LOAD".
 - b. CHECK drum loads into LUC.
 - c. PRESS "F3-CRUSH".
 - d. CHECK puck is stripped from mold.
 - e. PRESS "F5-PUSH".
 - f. CHECK puck moves onto outfeed conveyor.
5. REPEAT steps VII.D.3 to VII.D.4.f to crush additional drums.

HPU must
be turned on
Hit F7 HPU is OFF

Press F-7

Add Note:
If F1 is not pressed
immediately as
the drum is transferred,
it can burn up the transfer
motor.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

6. WHEN drum compacting is completed:
 - a. PRESS "F10-OFF MODE"
 - b. CHECK Panelview display is "OFF MODE - AT HOME POSITION"
 - c. SHUTDOWN supercompactor per section VII.G.

E. MANUAL OPERATION

NOTE - F10 may be used at any time to exit MANUAL mode.

CAUTION

INTERLOCKS ARE BYPASSED IN MANUAL MODE

1. CHECK message is "OFF MODE - AT HOME POSITION".
2. PRESS "F5-MANUAL".
3. AFTER a drum is on input conveyor.
 - a. PRESS AND HOLD "F1-IN FWD" UNTIL drum loads into LUC.
 - b. PRESS "F2-LASER IS OFF"
 - c. CHECK message is "LASER DETECTED".

NOTE - PanelView will display "LASER NOT DETECTED" when a drum breaks the beam. The drum is centered on the anvil when Panelview display "LASER DETECTED" returns.

NOTE - Drum can be positioned using LUC jog keys (F4-F6 and F12-14).

- d. PRESS AND HOLD "F3-LUC FWD" UNTIL drum is centered on anvil.
- e. PRESS "F2-LASER IS ON".
- f. CHECK "LASER DETECTED" is no longer displayed.

CAUTION

FAILURE TO FULLY RETRACT LUC CAN RESULT IN MOLD DAMAGING LUC.

- g. PRESS AND HOLD "F11-LUC REV" UNTIL LUC is fully retracted.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

*See
previous
note*

- h. PRESS ~~AND HOLD~~ "F17-STOP MOLD" UNTIL mold is fully lowered.
- i. PRESS ~~AND HOLD~~ "F18-STOP PISTON" UNTIL ram reaches:
 - (1) crushing pressure
 - OR
 - (2) desired puck height.
- j. PRESS "F19-STOP COMP".
- k. WAIT five seconds,
THEN PRESS "F20-STOP_STRIP".
- l. CHECK puck has stripped from mold.
- m. WHEN mold reaches height of ram,
THEN PRESS "F21-STOP RETURN".
- n. CHECK mold and ram return HOME.
- o. PRESS AND HOLD "F3-LUC FWD" UNTIL puck is on output conveyor.
- p. PRESS AND HOLD "F11-LUC REV" UNTIL LUC is fully retracted.

NOTE - "F8-OUT FWD" and "F16-OUT REV" may be used to position puck.

- q. PRESS AND HOLD "F8-OUT FWD" UNTIL puck is at desired location.
- 4. REPEAT steps VII.B.3, VII.E.3 to VII.B.7, VII.E.3.q to crush additional drums.
- 5. WHEN drum compacting is completed:
 - a. PRESS "F10-OFF MODE".
 - b. CHECK message is "OFF MODE - AT HOME POSITION".
 - c. SHUTDOWN supercompactor per section VII.G.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

F. MANUAL MOLD STRIPPING

NOTE - F10 may be used at any time to exit to the OFF mode.

1. REQUEST Duty Operations Supervisor authorization to perform manual mold stripping.
2. ENSURE mold and ram heights are greater than 12 inches.
 - a. IF mold and ram are less than 12 inches:
 - (1) PRESS "F21-RESET" to raise
 - (2) RELEASE "F21-RELEASE" WHEN mold and ram are greater than 12 inches.
3. PRESS "F10-OFF MODE".
4. PRESS "F7-HPU OFF".
5. TURN Operator Control Key OFF AND REMOVE key.

WARNING

PINCHING HAZARDS ARE PRESENT WHILE UPRIGHTING MOLD BLOCKS.
CAUTION IS NECESSARY WHILE UPRIGHTING MOLD BLOCKS.

6. UPRIGHT mold stripping blocks.
7. INSERT Operator Control Key AND TURN ON.
8. PRESS PanelView POWER ON button.
9. PRESS "F21-RESET".
10. PRESS "F19-STOP COMP"
11. PRESS "F7-HPU OFF".
12. CHECK message is "ON MODE - AT HOME POSITION".

CAUTION

INTERLOCKS ARE BYPASSED IN MANUAL MODE.

13. PRESS "F5-MANUAL".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

14. PRESS "F17-STOP MOLD".
15. PRESS "F18-STOP PISTON".
16. PRESS "F20-STOP_STRIP".
17. WHEN mold reaches height of ram,
THEN PRESS "F21-STOP RETURN".
18. CHECK puck has been stripped.
19. PRESS "F19-STOP COMP".
20. PRESS "F21-STOP RETURN".
21. CHECK mold and ram return HOME.
22. PRESS "F10-OFF MODE".
23. PRESS "F7-HPU OFF".
24. TURN Operator Control Key OFF AND REMOVE key.

WARNING

PINCHING HAZARDS ARE PRESENT WHILE UPRIGHTING MOLD BLOCKS.
CAUTION IS NECESSARY WHILE UPRIGHTING MOLD BLOCKS.

25. LOWER mold stripping blocks.
26. INSERT Operator Control Key AND TURN ON.
27. PRESS PanelView POWER ON button.
28. PRESS "F21-RESET".
29. PRESS "F7-HPU OFF".
30. CHECK message is "OFF MODE - AT HOME POSITION".

CAUTION

UPRIGHTED MOLD STRIPPING BLOCKS CAN DAMAGE LUC.

31. PRESS AND HOLD "F3-LUC FWD" UNTIL puck is on output conveyor.
32. PRESS AND HOLD "F11-LUC REV" UNTIL LUC is fully retracted.

WRAP 1 PLANT OPERATING PROCEDURE

(HNH-SD-W026-OTP-015)

NOTE - "F8-OUT FWD" and "F16-OUT REV" can be used to position puck.

33. PRESS AND HOLD "F8-OUT FWD" UNTIL puck is at desired location.
34. PRESS "F10-OFF MODE".

G. SYSTEM SHUTDOWN

1. ENSURE anvil is clear of all objects.
2. CHECK message is "OFF MODE - AT HOME POSITION".
3. CHECK LUC is fully retracted.

CAUTION

INTERLOCKS ARE BYPASSED IN MANUAL MODE

- a. IF LUC is not fully retracted,
THEN:
 - (1) PRESS "F5-MANUAL"
 - (2) PRESS AND HOLD "F11-LUC REV" UNTIL LUC is fully retracted
 - (3) PRESS "F10-OFF MODE".
4. PRESS "F7-HPU OFF".
5. TURN Operator Control Key OFF AND REMOVE key.

WARNING

PINCHING HAZARDS ARE PRESENT WHILE UPRIGHTING MOLD BLOCKS.
CAUTION IS NECESSARY WHILE UPRIGHTING MOLD BLOCKS.

6. UPRIGHT mold stripping blocks.
7. INSERT Operator Control Key AND TURN ON.
8. PRESS PanelView POWER ON button.
9. PRESS "F21-RESET".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

10. SET puck height to four inches:
 - a. PRESS "F17-CRUSHED PUCK HEIGHT"
 - b. ENTER "4.0"
 - c. PRESS ENTER
 - d. PRESS CANCEL.

CAUTION

INTERLOCKS ARE BYPASSED IN MANUAL MODE.

11. PRESS "F5-MANUAL".
12. LOWER mold:
 - a. PRESS "F17-STOP MOLD"
 - b. CHECK mold is at 4.0 inches.
- ~~13. LOWER ram:
 - a. PRESS "F18-STOP PISTON"
 - b. CHECK ram is at 4.0 inches
 - c. PRESS "F19-STOP COMP"~~
14. PRESS "F10-OFF MODE".
15. PRESS "F7-HPU OFF".
16. TURN Operator Control Key OFF AND REMOVE key.
17. RETURN Operator Control Key to controlled key lockbox.
18. PERFORM glovebox housekeeping, as required, per section VII.H.

*DON'T DO THIS!
IT COULD COLLAPSE
THE ALUMINUM BLOCKS!*

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

H. GLOVEBOX HOUSEKEEPING

CAUTION

INTRODUCTION OF UNAPPROVED CLEANING AGENTS INTO GLOVEBOXES MAY RESULT IN ENVIRONMENTAL NON-COMPLIANCE, UNWANTED CHEMICAL REACTIONS OR UNDESIRABLE EFFECTS. USE ONLY FACILITY APPROVED CLEANING AGENTS.

1. SUPERCOMPACTOR GLOVEBOX INSPECTION

- a. CHECK, visually throughout supercompactor glovebox for:
 - (1) Loose items, liquids, droppings or tailings from waste compaction
 - (2) Improperly stored glovebox tools and equipment
 - (3) Debris in the mold cleanout ports
 - (4) Debris in the anvil liquid collection ports
 - (5) Leaks from hydraulic systems
 - (6) Left-over agents introduced for cleaning or other purposes
 - (7) Material in Supercompactor base trough.
 - (8) Foreign matter on glovebox walls, windows and/or equipment.
- b. CHECK supercompactor equipment for damage, leaks, etc

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

- c. CLEAN supercompactor as required, per following sections of this procedure:

- (1) CLEANUP solids per Section VII.H.2.
- (2) CLEANUP liquids per Section VII.H.3.
- (3) WIPEDOWN glovebox per Section VII.H.4.
- (4) LOADOUT of debris/cleanup materials per Section VII.H.5.

NOTE - Radiological survey is required upon exiting gloveports after each use.

- (5) UPON exiting gloveports at any point in this procedure, **PERFORM** a self-survey.

- (a) IF self-survey limits are exceeded,
THEN CONTACT Radiological Control Technician.

2. SOLID DEBRIS REMOVAL

- a. ENSURE Supercompactor is SHUTDOWN.
- b. DETERMINE gloveport(s) which provide best access.
- c. PICKUP waste and debris items AND MOVE to glovebox sorting table.
 - (1) USE vacuum, broom, dustpan, or shovel, located inside glovebox, as necessary to aid cleanup.

NOTE - Tools may be stored in the press trough or under the conveyor.

- d. STORE glovebox tools and equipment.
- e. MOVE excess tools and equipment to glovebox sorting table.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

3. LIQUIDS CLEANUP

- a. ENSURE Supercompactor is SHUTDOWN.
- b. TRANSFER required materials into glovebox through bagless transfer port, sample transfer port or consumable entry port, as applicable.

*NOTE - Cleanup is accomplished by best suited method.
The following steps are a guideline.*

- c. PLACE dam, dike or absorbent containment from spill kit around liquid.
- d. ABSORB, using Rad-Pads and absorbent, all liquids.
- e. PLACE used absorbent and Rad-Pads into plastic bag(s).
- f. PLACE bagged items on glovebox sorting table.
- g. IF necessary,
THEN WIPEDOWN spill area per Section VII.H.4.
- h. CHECK anvil liquids collection bottle liquid level.
- i. IF anvil liquids collection bottle contains any liquid:
 - (a) INFORM Duty Operations Supervisor
 - (b) REMOVE AND CAP bottle
 - (c) INSTALL empty bottle
 - (d) DISPOSE of full bottle/liquid as directed.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

4. GLOVEBOX WIPEDOWN

- a. ENSURE Supercompactor is SHUTDOWN.
- b. TRANSFER required materials (approved cleaning agents, rags, Rad-Pads, etc.) into glovebox through bagless transfer port, sample transfer port, or consumable entry port, as applicable.

NOTE - *Cleanup is accomplished by best suited method (i.e., cleaning agents may be poured directly on area or applied to rags or pads, then wiped over area). The following steps are a guideline.*

- c. APPLY cleaning agent to affected area(s).
- d. SCRUB OR BRUSH affected area(s).
- e. WIPE, affected area(s) and equipment with clean, dry, Rad-Pads or rags.
- f. PLACE used Rad-Pads, rags and other items to be disposed, into plastic bag(s).
- g. PLACE bagged items on glovebox sorting table.

5. LOADOUT

NOTE - *Tools may be stored in the press trough or under the conveyor.*

- a. STORE Supercompactor operating/cleaning tools.
- b. REMOVE excess tools or equipment per applicable glovebox operating and/or loadout procedure.

NOTE - *Remaining cleanup items are treated as if processing waste typical of applicable glovebox.*

- c. PROCESS remaining cleanup items as directed, per applicable glovebox operating and loadout procedures.

WRAP 1 PLANT OPERATING PROCEDURE

SYSTEM: PROCESS

LLW EXIT GLOVEBOX OPERATION (HNF-SD-W026-OTP-015)

I. SYSTEM DESCRIPTION

This procedure provides instructions for operation of the Low Level Waste (LLW) Exit Glovebox.

II. REFERENCE DOCUMENTS

HSRCM-1, Hanford Site Radiological Control Manual

WHC-CM-5-34, Solid Waste Disposal Operations Administration

WHC-CM-5-36, SWD Internal Requirements

WHC-EP-0063, Hanford Site Solid Waste Acceptance Criteria

WRP1-OP-0703, Glovebox Lift Table Operation

WRP1-OP-0701, Glovebox Housekeeping

III. PRESTART CONDITIONS

All personnel performing this procedure shall be qualified in accordance with WHC-CM-5-34, Section 1.8, "Training Plan," and on-the-job training.

Process area Heating, Ventilation, Air Conditioning (HVAC) in OPERATION.

IV. SAFETY

Potential hazards, such as lifting heavy containers or handling sharp objects present in waste containers, must be mitigated by protective equipment, procedures, and administrative controls to ensure acceptable-risk operating conditions.

Consult with Operations Management and Industrial Hygiene, and refer to the Job Hazards Analysis (JHA), Radiological Work Permit (RWP) and Material Safety Data Sheets (MSDS) to determine required Personal Protective Equipment (PPE).

-----------------------	------------------------	---------------------	------------------------------	----------------	-----------------

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

IV. SAFETY (Continued)

A light curtain is used to detect access at the gloveports above the conveyor between the Supercompactor and the LLW Exit Glovebox. If the light curtain is broken all automatic operations within the glovebox will be stopped to prevent possible injury to the operator.

This procedure requires accessing gloveboxes through gloveports on a regular basis. Operators shall perform self survey upon exiting gloveport after each use. Radiological Control Technician (RCT) shall be contacted anytime self survey limits are exceeded.

Spills inside the glovebox shall be cleaned up per WRP1-OP-0701, Glovebox Housekeeping.

Warning - Use care to prevent injury. Possible safety hazards include:

- Tripping/Slipping
- Injuries to the hands at glovebox ports
- Radiological Contamination
- Interference with the Automatic Guided Vehicle (AGV)

V. TOOLS AND SUPPLIES

Ruler for measuring puck height.
Indelible Black Marker Pens (e.g. Sharpie).

VII. PROCEDURE

WARNING

IN THE EVENT OF A MAJOR PROBLEM, THE LLW GLOVEBOX LINE MAY BE SHUT DOWN BY OPERATION OF LLW PROCESS GLOVEBOX EMERGENCY STOP BUTTON ON THE DMS CONSOLE. EMERGENCY STOP WILL SHUT DOWN ALL OPERATIONS IN THE GLOVEBOX LINE AND PLACE IT IN A SAFE CONDITION. RESTART FROM EMERGENCY STOP IS PERFORMED WITH PROCEDURE WRP1-OP-0702, RESTART GLOVEBOX OPERATION.

NOTE 1 - Administrative hold steps are identified by letters in parentheses at the left margin of the procedure step. The direction given in the procedure step must be satisfied before work continues.

(M) - Operations management shall approve operation.

(R) - Radiological Control (RC) shall complete surveys or agree to permit continued operation.

NOTE 2 - Unless otherwise specified Data Management System (DMS) actions are performed on DMS Terminal (107-TE-12-103).

NOTE 3 - Unless otherwise specified Operator Interface Unit (OIU) actions are performed on OIU (OIU-12-103C).

A. INITIALIZE SYSTEM

1. ENSURE AUTO/MAINTENANCE keyswitch (107-07-HS-318) on DMS Terminal is in AUTO.
2. SELECT "DIAGNOSTICS MENU" on OIU MAIN MENU.
3. VERIFY OIU displays "DIAGNOSTICS MENU".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

4. IF DIAGNOSTIC MENU flashes "FAIL",
THEN:

NOTE - Operator uses normally available OIU screens. If necessary, DOS may access maintenance mode on OIU.

- a. IF possible,
THEN, CORRECT fault(s) indicated on OIU.
 - b. IF faults cannot be corrected,
THEN, NOTIFY Duty Operations Supervisor (DOS).
 - c. WHEN faults have been corrected,
THEN, SELECT "MAIN MENU".
 - d. REPEAT Section VII.A.
5. WHEN DIAGNOSTIC MENU flashes "PASS",
THEN, SELECT "MAIN MENU".

B. EXIT DRUM ACCESS TO LLW GLOVEBOX

1. SELECT "EXIT PORT MENU".
2. VERIFY display, "EXIT PORT MENU".
3. VERIFY display "DRUM AT LIFT TABLE". IF OIU displays "NO DRUM AT LIFT TABLE",
THEN:
 - a. NOTIFY Control Room and/or DOS.
 - b. CORRECT drum deficiency as directed.
4. SCAN the following in order with portable scanner 12-NE-310:
 - a. Location (2Y) barcode on side of glovebox.
 - b. Overpack Drum (S) barcode.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

- (M) 5. IF Scanner displays "PIN MIS-MATCH",
THEN, NOTIFY DOS.
6. SCAN "YEND" barcode on side of glovebox.
7. SCAN "YYES" barcode.
- (M) 8. IF Scanner displays "PIN MIS-MATCH",
THEN, NOTIFY DOS.
9. REMOVE clamp band from overpack drum.
10. SELECT "START DRUM ENTRY".
11. VERIFY display "DRUM ENTRY IN PROGRESS...".
12. WAIT until OIU displays "DRUM ENTRY COMPLETE",
THEN, SELECT "OPEN PORT".
13. VERIFY display "PORT OPENING...".
14. VERIFY display "PORT OPEN".
15. SELECT the following in order at DMS Terminal:
- "PROCESS OPS"
 - "LLW GLOVEBOX"
 - "EXIT GLOVEBOX"
16. VERIFY the Loadout Drum PIN.
17. VERIFY All other data fields on the screen are blank.
- C. PUCK RECEIPT AND WEIGHT MEASUREMENT
- SELECT in order:
 - ~~"MAIN MENU" (unless already displayed).~~
 - ~~"CONVEYOR MENU".~~
 - ~~"START COMPACT RECEIPT".~~
 - ~~VERIFY display "COMPACTED DRUM RECEIPT IN PROGRESS".~~
 - ~~WAIT for display "COMPACTED DRUM RECEIPT COMPLETE".~~
 - PLACE barcode on compacted puck.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

5. SCAN puck barcode.
6. MEASURE puck height.
7. RECORD measured puck height on drum with black marker.
8. SELECT in order:
 - a. "MAIN MENU" (unless already displayed).
 - b. "TROLLEY MENU".
 - c. "COMPACT RECEIPT".

WARNING

IMPROPER HOIST OPERATION MAY CAUSE INJURY OR EQUIPMENT DAMAGE. FAILURE TO PROPERLY POSITION AND CLOSE OR OPEN DRUM LIFTER COULD RESULT IN DROPPED DRUM. CAUTION MUST BE EXERCISED IF REACHING THROUGH GLOVEPORTS TO MANUALLY POSITION DRUM LIFTER.

NOTE - Unless otherwise specified hoist control activities are performed on Hoist Control (107-PC-07-004). Controls must be activated until associated indicator illuminates. Reference Attachment 1: Hoist Control Functions.

9. PERFORM the following with Hoist Control:
 - a. POSITION HOIST above puck (unless already there).
 - b. OPEN LIFTER jaws.
 - c. LOWER HOIST over puck.
 - d. CLOSE LIFTER on puck.
 - e. RAISE HOIST (and puck) until "RAISED LIMIT" LED illuminates.
10. SELECT in order:
 - a. "MAIN MENU" (unless already displayed).
 - b. "WEIGH MENU".
11. WAIT until OIU displays COMPACT DRUM WEIGHT value.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

NOTE - *Pucks are normally taken directly from receipt to load out, however at the discretion of the Operator or when overpack height or weight limitations will be exceeded, the puck is placed in storage for later retrieval (i.e. when a new overpack drum is at the exit port.)*

12. IF puck is to be moved to LOAD OUT,
THEN, GO to Section VII.D, MOVE PUCK FROM RECEIPT TO LOAD OUT.
13. IF puck is to be placed in STORAGE,
THEN:
 - a. RECORD puck weight on temporary data sheet.
 - b. GO to Section VII.E, MOVE PUCK FROM RECEIPT TO STORAGE.

D. MOVE PUCK FROM RECEIPT TO LOAD OUT

1. VERIFY measured puck height is within available drum space.
2. OBSERVE "COMPACT DRUM WEIGHT" and "CUMULATIVE WEIGHT".
3. IF either of the following are TRUE,
THEN, GO to Section VII.E, MOVE PUCK FROM RECEIPT TO STORAGE.
 - a. Puck height exceeds available drum space.

NOTE - *Documented calculation is not required. PCS gives warning message when ADD TO CUMULATIVE is selected, if weight exceeds maximum allowable.*

- b. "COMPACT DRUM WEIGHT" plus "CUMULATIVE WEIGHT" is greater than 1000 pounds.
4. SELECT "ADD TO CUMULATIVE".
5. IF OIU displays "CUMULATIVE WEIGHT EXCEEDED",
THEN, GO to Section VII.E, MOVE PUCK FROM RECEIPT TO STORAGE.
6. SELECT in order:
 - a. "MAIN MENU" (unless already displayed).
 - b. "TROLLEY MENU".
 - c. "LOAD OUT".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

7. PERFORM the following with Hoist Control:
 - a. POSITION TROLLEY (puck) above overpack drum at LOAD OUT.
 - b. LOWER HOIST (puck) into overpack drum.
 - c. OPEN LIFTER jaws.
 - d. RAISE HOIST until "RAISED LIMIT" LED illuminates.
8. GO TO Section VII.G, RECORD COMPACT DRUM (PUCK) DATA.
- E. MOVE PUCK FROM RECEIPT TO STORAGE

NOTE - *Storage Position 3 does not exist.*

1. SELECT puck storage location on TROLLEY MENU screen:
 - STORAGE POSITION 1
 - STORAGE POSITION 2
2. PERFORM the following with Hoist Control:
 - a. POSITION TROLLEY (puck) above selected storage location.
 - b. LOWER HOIST (puck) onto storage table.
 - c. OPEN LIFTER jaws.
 - d. RAISE HOIST until "RAISED LIMIT" LED illuminates.
3. IF another puck is to be placed in overpack or storage, THEN, REPEAT Sections VII.C through VII.G as applicable. OTHERWISE, GO TO Section VII.H, REMOVE OVERPACK FROM GLOVEBOX.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

F. MOVE PUCK FROM STORAGE TO LOAD OUT

1. SELECT puck with height/weight compatible to available drum space.
2. SCAN the following:
 - a. Storage Location (2Y) barcode of selected puck.
 - b. Barcode on selected puck.
 - c. "YEND" barcode on side of glovebox.
 - d. "YYES" barcode.
- (M) 3. IF OIU displays "PIN MIS-MATCH", THEN, NOTIFY DOS.
4. SELECT in order:
 - a. "MAIN MENU" (unless already displayed)
 - b. "TROLLEY MENU"
 - c. "STORAGE POSITION X" (X is position of puck to be moved)
5. PERFORM the following with Hoist Control:
 - a. OPEN LIFTER jaws.
 - b. LOWER LIFTER onto puck.
 - c. CLOSE LIFTER jaws.
 - d. RAISE HOIST until "RAISED LIMIT" LED illuminates.
6. SELECT in order:
 - a. "MAIN MENU" (unless already displayed)
 - b. "WEIGH MENU"
7. WAIT for display "COMPACT DRUM WEIGHT" value.
8. SELECT "ADD TO CUMULATIVE".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

9. IF OIU displays "CUMULATIVE WEIGHT EXCEEDED",
THEN:
 - a. PERFORM the following with Hoist Control:
 - (1) LOWER HOIST (puck) back to storage table.
 - (2) OPEN LIFTER jaws.
 - (3) RAISE HOIST until "RAISED LIMIT" LED illuminates.
 - b. SELECT another puck from storage or receipt, as applicable.
 10. SELECT on in order:
 - a. "MAIN MENU" (unless already displayed).
 - b. "TROLLEY MENU".
 - c. "LOAD OUT".
 11. VERIFY display "TROLLEY MOVING TO LOADOUT POSITION".
 12. WAIT for display "TROLLEY AT LOADOUT POSITION".
 13. PERFORM the following with Hoist Control:
 - a. POSITION TROLLEY (puck) above overpack drum at LOAD OUT.
 - b. LOWER HOIST (puck) into overpack drum.
 - c. OPEN LIFTER jaws.
 - d. RAISE HOIST until "RAISED LIMIT" LED illuminates.
 14. GO TO Section VII.G, RECORD COMPACT DRUM (PUCK) DATA.
- G. RECORD COMPACT DRUM (PUCK) DATA
1. SELECT "Refresh" on LLW Exit Glovebox screen
AND CONFIRM puck PIN is displayed.
 2. ENTER the correct height if the puck height is different than
the displayed default value.
 3. IF another puck is to be placed in overpack or storage,
THEN, REPEAT Sections VII.C through VII.G as applicable.
OTHERWISE, GO TO Section VII.H, REMOVE OVERPACK FROM GLOVEBOX.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

H. REMOVE OVERPACK FROM GLOVEBOX

1. RECORD information pertaining to the waste in the loadout drum using the LLW Exit Glovebox screen on DMS terminal TE-12-103:
 - a. ENTER signature password.
 - b. SELECT "Sum Waste Records" button.
 - c. ENTER Waste Description.
 - d. MODIFY primary waste type and hazardous waste storage category for the drum, as required.
 - e. ENTER void filler code and filler weight, as applicable.
 - f. ENTER signature password.
 - g. SELECT "Commit" button.
2. ENSURE area around port sealing surface is free of debris.
3. SELECT in order:
 - a. "MAIN MENU" (unless already displayed).
 - b. "EXIT PORT MENU".
 - c. ~~"CLOSE & RETID"~~. *CLOSE PORT*
4. VERIFY OIU displays "PORT CLOSING...".
5. WAIT for display "PORT CLOSED".
6. SELECT "START DRUM EXIT".
7. VERIFY display "DRUM EXIT IN PROGRESS...".
8. WAIT for display "DRUM EXIT COMPLETE".
9. REQUEST RCT survey drum for contamination.
 - a. IF drum is contaminated,
THEN, decontaminate as directed.
 - b. RESURVEY drum.
10. ENTER surface beta-gamma dose rate on DMS screen DMSS0315:

(R)

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

11. REINSTALL clamp band on overpack drum as follows:

NOTE - Manual Lift table operation is performed per WRP1-OP-0703, Glovebox Lift Table Operation.

- a. LOWER Lift Table as required.
 - b. REINSTALL clamp band.
 - c. RAISE Lift Table to AGV LOAD HEIGHT.
 - d. RETURN Lift Table to NORMAL operation.
12. SELECT "DRUM READY FOR PICK-UP".
13. VERIFY display "DRUM PICKUP IN PROGRESS".

WRAP 1 PLANT OPERATING PROCEDURE

SYSTEM: PROCESS

LOW LEVEL WASTE GLOVEBOX LINE MANUAL OPERATION

(HNF-SD-W026-OTP-015)

I. SYSTEM DESCRIPTION

This procedure provides instructions for manual (Operator Interface Unit (OIU) Maintenance Menu) operation of each glovebox (Entry, Sorting, Exit) in the Low Level Waste (LLW) Glovebox Line.

In Manual (Maintenance) mode automatic operations normally performed by the Plant Control System (PCS) may be individually actuated. This allows correction of interlock conflicts, time-outs or other out-of-sequence conditions which prevent the normal sequence of events from proceeding. Once prohibiting conditions are corrected, automatic operation is resumed.

Maintenance Menus of the OIU are password protected and Duty Operation Supervisor (DOS) permission is required for activation. Depending on the situation, the DOS may simply correct a single prohibiting condition and return the system to normal, or in cases of numerous problems such as might occur after an Emergency Stop or power loss, the DOS may activate the Maintenance mode and request additional assistance for the Operator (i.e., Cognizant Engineer).

This procedure addresses each OIU function individually and is not intended to govern sequence of operations. Sequence of operations, hold points and non-OIU related activities are governed by applicable glovebox operating procedures. Attachment 4, Tables 1 through 3, define interlock and permissive signals in each glovebox and reference procedure sections or other procedures which manipulate the indicated source switch for the interlock or permissive. When a function will not actuate, applicable interlocks should be verified to the proper state, then the function rechecked. If all interlocks are properly verified and a function will still not actuate, maintenance is required.

-----------------------	------------------------	------------------------	------------------------------	----------------	-----------------

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

III. PRESTART CONDITIONS

All personnel performing this procedure shall be qualified in accordance with WHC-CM-5-34, Section 1.8, "Training Plan," and on-the-job training.

Process area Heating, Ventilation, Air Conditioning (HVAC) in OPERATION.

IV. SAFETY

Potential hazards, such as lifting heavy containers or handling sharp objects present in waste containers, must be mitigated by protective equipment, procedures, and administrative controls to ensure acceptable-risk operating conditions.

Consult with Operations Management and Industrial Hygiene, and refer to the Job Hazards Analysis (JHA), Radiological Work Permit (RWP) and Material Safety Data Sheets (MSDS) to determine required Personal Protective Equipment (PPE).

This procedure requires accessing gloveboxes through gloveports on a regular basis. Operators shall perform self survey upon exiting gloveport after each use. Radiological Control Technician (RCT) shall be contacted anytime self survey limits are exceeded.

Spills inside gloveboxes shall be cleaned up per WRP1-OP-0701, Glovebox Housekeeping.

CAUTION - When an OIU is in maintenance mode, most interlocks and safety features are bypassed. It is possible to damage equipment, and/or bypass safety restrictions such as glovebox containment. Caution must be exercised to prevent unwanted violation of operational safety requirements or equipment damage.

WARNING - Use care to prevent injury. Possible safety hazards include:

- Tripping/Slipping
- Radiological Contamination
- Interference with Automatic Guided Vehicle (AGV)

WARNING - Improper operation of glovebox equipment including hoist, sorting table, manipulators, transfer car, etc. may cause injury. Caution must be exercised if reaching through gloveports while equipment is in operation.

V. TOOLS AND SUPPLIES

None.

VII. PROCEDURE (LLW ENTRY GLOVEBOX)

WARNING

IMPROPER OPERATION OF GLOVEBOX EQUIPMENT INCLUDING HOIST, SORTING TABLE, MANIPULATORS, TRANSFER CAR, ETC. MAY CAUSE INJURY. CAUTION MUST BE EXERCISED IF REACHING THROUGH GLOVEPORTS WHILE EQUIPMENT IS IN OPERATION.

CAUTION

WHEN AN OIU IS IN MAINTENANCE MODE, MOST INTERLOCKS AND SAFETY FEATURES ARE BYPASSED. IT IS POSSIBLE TO DAMAGE EQUIPMENT, AND/OR BYPASS SAFETY RESTRICTIONS SUCH AS GLOVEBOX CONTAINMENT. CAUTION MUST BE EXERCISED TO PREVENT VIOLATION OF OPERATIONAL SAFETY REQUIREMENTS OR EQUIPMENT DAMAGE.

- NOTE 1 - *In Maintenance mode, OIU selections must be selected (screen touched) until the actuated device is visually verified to have reached the desired state.*
- NOTE 2 - *Gloveports and manipulators are used as needed to perform tasks throughout this procedure. Manipulator Operation is performed per WRP1-OP-0704, Glovebox Manipulator Operation.*
- NOTE 3 - *Data Management System (DMS) actions throughout this procedure are performed on DMS Terminal (107-TE-12-103).*
- NOTE 4 - *UNLESS OTHERWISE SPECIFIED, selections and displays in Section VII are on LLW Entry Operator Interface Unit (OIU-12-103A).*
- NOTE 5 - *Lift Table 107-LT-09-202A controls and indicators in Section VII are located on Lift Table Control Pedestal 107-PC-09-202A. Manual Lift table operation is performed per WRP1-OP-0703, Glovebox Lift Table Operation.*
- NOTE 6 - *Hoist activities in Section VII are performed on Hoist Control (107-PC-07-001). Functions must be activated until associated indicator illuminates. Reference Attachment 1.*

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

A. INITIALIZE ENTRY GLOVEBOX

NOTE - Assumes Auto Initialization failed.

1. SELECT "DIAGNOSTICS MENU".

(PCS)

Displays failed parameters in red, with negative messages and passed parameters in green with positive message.

2. OBSERVE diagnostic menu messages (Reference Table VII-1 on the following page).
3. ACCESS MAINTENANCE MENU screens per applicable sections of this procedure, to reset diagnostic flags as required.
4. VERIFY desired diagnostic flags are reset by performing the following:
 - a. RETURN to "MAINTENANCE MAIN MENU".
 - b. SELECT "DIAGNOSTICS MENU".
 - c. VERIFY display "PASS".
 - d. SELECT "MAIN MENU".
 - e. VERIFY display "SYSTEM INITIALIZED".
 - f. GO TO desired section(s).

NOTE - Sections VII.C through VII.L assume Maintenance Main Menu has been accessed per Section VII.B.

B. ACCESS ENTRY GLOVEBOX MAINTENANCE MENUS

1. PLACE ~~DMS~~ ^{LCW ENTRY GLOVEBOX} keyswitch (107-07-HS-316) in "MAINTENANCE".
2. VERIFY display "MAINTENANCE ACCESS MENU".
^{AT DMS PEDestal 107-75-12-103}
3. KEY in maintenance password.
THEN, PRESS "ENTER".
4. VERIFY display "MAINTENANCE MAIN MENU".
5. SELECT desired maintenance submenu(s).
6. WHEN desired,
RETURN to Operating Menus as follows:
 - a. IF at any maintenance submenu,
THEN, PRESS "MAINT MAIN MENU".
 - b. PLACE DMS keyswitch (~~107-07-HS-316~~) to "AUTO".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

TABLE VII-1: ENTRY GLOVEBOX INITIALIZATION INTERLOCKS

INITIALIZATION MESSAGE (failed)	SIGNAL SOURCE
DO-07-101 CENTERING CLAMPS NOT RETRACTED	07-ZS-0712A/0712B
LT-09-202A M/O/N NOT IN NORMAL	07-HS-233A

DO-07-102 PORT DOOR SEAL NOT INFLATED	07-PSL-700
Messages indicate positive or opposite state if criteria passed	

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTR-015)

C. OPERATE ENTRY GLOVEBOX HOIST (107-CR-07-101A)

NOTE - *Manual hoist operation is performed the same as in Automatic Mode, except hoist control is continuously enabled.*

1. OPERATE hoist as required for glovebox tasks or maintenance.

D. MATE OVERPACK DRUM TO ENTRY PORT (107-DO-07-101)

1. REMOVE clamp band.
2. OPERATE Lift Table to position drum at "DRUM UNDER PORT".
3. SELECT in order, as required:
 - "DRUM ENTRY/EXIT PORT MAINTENANCE MENU".
 - "RETRACT CENTERING CLAMPS".
4. RAISE Lift Table to "DRUM CENTERING HEIGHT" as indicated by the local arrow labels.
5. SELECT "EXTEND CENTERING CLAMPS".
6. VERIFY display, "CENTERING CLAMPS EXTENDED".
7. RAISE Lift Table to "LID IN POSITION HEIGHT".
8. SELECT "MAINT MAIN MENU".

E. ~~MATE SINGLE DRUM TO ENTRY ^{EXIT} PORT (107-DO-07-101)~~

1. ~~POSITION 55 gal drum centering spacer.~~
2. ~~OPERATE Lift Table to position drum at "DRUM UNDER PORT".~~
3. ~~SELECT in order, as required:~~
 - ~~"DRUM ENTRY/EXIT PORT MAINTENANCE MENU".~~
 - ~~"RETRACT CENTERING CLAMPS".~~
4. ~~RAISE Lift Table to "LID IN POSITION HEIGHT".~~
5. ~~SELECT "MAINT MAIN MENU".~~

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

F. OPEN ENTRY PORT (107-DO-07-101) (OVERPACK DRUM)

1. SELECT in order as required:
 - "DRUM ENTRY/EXIT PORT MAINTENANCE MENU".
 - "TURN ON VACUUM".
 - "UNLOCK PORT".

NOTE - Steps VII.F.2, VII.F.5, IX.E.8 and VII.F.4 are performed concurrently.

2. PRESS and HOLD "OPEN VENTS" on OIU-12-103A.
3. VERIFY display "VENT SOLENOID ACTIVATED".
4. RAISE Lift Table until port door lifts ~1/2 inch.
5. RELEASE "OPEN VENTS" on OIU-12-103A.
6. SELECT "RAISE DOOR".
7. VERIFY display "DOOR RAISED".
8. SELECT "ROTATE PORT OPEN".
9. VERIFY display "PORT ROTATED OPEN".
10. SELECT "MAINT MAIN MENU".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

- G. OPEN ENTRY PORT (107-DO-07-101) (SINGLE DRUM)
1. SELECT "DRUM ENTRY/EXIT PORT MAINTENANCE MENU".
 2. PRESS and HOLD "OPEN VENTS" on OIU-12-103A.
 3. VERIFY display "VENT SOLENOID ACTIVATED".
 4. SELECT "UNLOCK PORT".
 5. VERIFY display "PORT UNLOCKED".
 6. RELEASE "OPEN VENTS" on OIU-12-103A.
 7. SELECT "RAISE DOOR".
 8. VERIFY display "DOOR RAISED".
 9. SELECT "ROTATE PORT OPEN".
 10. VERIFY display "PORT ROTATED OPEN".
 11. RAISE Lift Table until drum is at desired height.
 12. SELECT "MAINT MAIN MENU".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

- H. CLOSE ENTRY PORT (107-DO-07-101) (OVERPACK DRUM)
1. SELECT "DRUM ENTRY/EXIT PORT MAINTENANCE MENU".
 2. SELECT "ROTATE PORT CLOSED".
 3. VERIFY display "PORT ROTATED CLOSED".
 4. SELECT "LOWER DOOR".
 5. VERIFY display, "DOOR LOWERED".
 6. SELECT "TURN OFF VACUUM".
 7. VERIFY display "TURN ON VACUUM" (e.g., no VACUUM GENERATED display).
 8. SELECT "EXTEND LID DETACH".
 9. VERIFY display "EXTEND SOLENOID ACTIVATED".
 10. SELECT "RETRACT LID DETACH".
 11. VERIFY display "RETRACT SOLENOID ACTIVATED".
 12. LOWER Lift Table to "DRUM CENTERING HEIGHT" as indicated by the local arrow labels.
 13. SELECT "LOCK PORT".
 14. VERIFY display "PORT LOCKED".
 15. SELECT "MAINT MAIN MENU".
- I. CLOSE ENTRY PORT (107-DO-07-101) (SINGLE DRUM)
1. SELECT "DRUM ENTRY/EXIT PORT MAINTENANCE MENU".
 2. SELECT "ROTATE CLOSE PORT".
 3. VERIFY display "PORT ROTATED CLOSED".
 4. SELECT "LOCK PORT".
 5. VERIFY display "PORT LOCKED".
 6. SELECT "MAINT MAIN MENU".
 7. LOWER Lift Table to "AGV LOAD HEIGHT".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

- J. REMOVE OVERPACK DRUM FROM ENTRY PORT (107-DO-07-101)
1. LOWER Lift Table to "AGV LOAD HEIGHT".
 2. MOVE drum to "DRUM AT AGV END" position.
- K. OPEN TRANSFER PORT (107-DO-07-102)
1. ENSURE Entry Port (107-DO-07-101) is CLOSED & LOCKED.
 2. SELECT "DRUM TRANSFER PORT MAINTENANCE MENU".
 3. SELECT "OPEN ISOLATION VALVE".
 4. VERIFY display "~~OPEN SOLENOID ACTIVATED~~".
 5. SELECT "DEFLATE SEAL".
 6. VERIFY display "SEAL DEFLATED".
 7. SELECT "OPEN PORT".
 8. VERIFY[^] port OPEN.
 9. SELECT "MAINT MAIN MENU".
- L. CLOSE TRANSFER PORT (107-DO-07-102)
1. SELECT "DRUM TRANSFER PORT MAINTENANCE MENU".
 2. SELECT "CLOSE ISOLATION VALVE".
 3. VERIFY display "~~CLOSE SOLENOID ACTIVATED~~".
 4. SELECT "INFLATE SEAL".
 5. VERIFY display "SEAL INFLATED".
 6. SELECT "~~CLOSE PORT~~".
 7. VERIFY display "PORT CLOSED".
 8. SELECT "MAINT MAIN MENU".

WRAP 1 PLANT OPERATING PROCEDURE

VIII. PROCEDURE (LLW SORTING GLOVEBOX)

WARNING

IMPROPER OPERATION OF GLOVEBOX EQUIPMENT INCLUDING HOIST, SORTING TABLE, MANIPULATORS, TRANSFER CAR, ETC. MAY CAUSE INJURY. CAUTION MUST BE EXERCISED IF REACHING THROUGH GLOVEPORTS WHILE EQUIPMENT IS IN OPERATION.

CAUTION

WHEN AN OIU IS IN MAINTENANCE MODE, MOST INTERLOCKS AND SAFETY FEATURES ARE BYPASSED. IT IS POSSIBLE TO DAMAGE EQUIPMENT, AND/OR BYPASS SAFETY RESTRICTIONS SUCH AS GLOVEBOX CONTAINMENT. CAUTION MUST BE EXERCISED TO PREVENT UNWANTED VIOLATION OF OPERATIONAL SAFETY REQUIREMENTS OR EQUIPMENT DAMAGE.

- NOTE 1 - *In Maintenance mode, OIU selections must be selected (screen touched) until the actuated device is visually verified to have reached the desired state.*
- NOTE 2 - *Manual operation of Bagless Transfer Port 107-DO-07-105 is performed per WRP1-OP-0705, Bagless Transfer Manual Operation.*
- NOTE 3 - *UNLESS OTHERWISE SPECIFIED, selections and displays in Section VIII are on LLW Sorting Operator Interface Unit (OIU-12-103B).*
- NOTE 4 - *Lift Table 107-LT-09-203A controls and indicators in Section VIII are located on Lift Table Control Pedestal 107-PC-09-203A. Manual Lift table operation is performed per WRP1-OP-0703, Glovebox Lift Table Operation.*
- NOTE 5 - *Hoist activities in Section VIII are performed on Hoist Control (107-PC-07-003A or 003B). Active controller is selected by switch on 107-PC-07-003A. Functions must be activated until associated indicator illuminates. Reference Attachment 2.*

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

A. INITIALIZE SORTING GLOVEBOX

NOTE - Assumes Auto Initialization failed.

1. SELECT "INITIAL DIAGNOSTICS".

(PCS)

Displays failed parameters in red, with negative messages and passed parameters in green with positive message.

2. OBSERVE fault messages (Reference Table VIII-1 on the following page).
3. ACCESS MAINTENANCE MENU screens per applicable sections of this procedure, as necessary to correct indicated initialization faults.
4. WHEN all faults have been corrected:
 - a. RETURN to Operating Menus.
 - b. SELECT "MAIN MENU".
 - c. VERIFY display "SYSTEM INITIALIZED".
 - d. GO TO desired section(s).

NOTE - Sections VIII.C through VIII.O assume Maintenance Main Menu has been accessed per Section VIII.B.

B. ACCESS SORTING GLOVEBOX MAINTENANCE MENUS

1. PLACE DMS keyswitch (107-07-HS-317) to "MAINTENANCE".
2. VERIFY display "MAINTENANCE ACCESS MENU".
3. KEY in maintenance password,
THEN, PRESS "ENTER".
4. VERIFY display "SORTING GLOVEBOX MAINTENANCE MAIN MENU".
5. SELECT desired maintenance submenu(s).
6. WHEN desired,
RETURN to Operating Menus as follows:
 - a. IF at any maintenance submenu,
THEN, PRESS "MAINT MAIN MENU".
 - b. PLACE DMS keyswitch (107-07-HS-317) to "AUTO".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

C. OPERATE SORTING GLOVEBOX HOIST (107-CR-07-101C)

NOTE 1 - Manual hoist operation is performed the same as in Automatic Mode, except hoist control is continuously enabled.

NOTE 2 - Hoist 107-CR-07-101B is for maintenance and is not used during normal operation. Its' controller functions the same as others.

1. OPERATE hoist as required for glovebox tasks or maintenance.

D. OPEN/CLOSE BAGLESS TRANSFER PORT (107-DO-07-105)

1. ENSURE hoist 107-CR-07-101C is at "RAISED LIMIT".
2. ENSURE hoist 107-CR-07-101C TROLLEY is at "LOAD".
3. OPERATE port per WRP1-OP-0705, Bagless Transfer Manual Operation.

E. MOVE DRUM TRANSFER CAR (107-TC-07-101)

1. ENSURE manipulators and manipulator arms are PARKED.
2. ENSURE ladder/delidder is RAISED.
3. ENSURE drum tipper is RAISED.
4. SELECT "DRUM TRANSFER CAR AND MISCELLANEOUS EQUIPMENT MAINTENANCE MENU".
5. PERFORM on "DRUM TRANSFER CAR" submenu:
 - a. IF display "TRANSFER CAR STOP ENGAGED" is present, THEN SELECT "DISENGAGE TRANSFER CAR STOP".
 - b. SELECT one of the following until car nears destination:
 - "MOVE LEFT" (move toward entry port).
 - "MOVE RIGHT" (move toward transfer port).
 - c. WHEN the Transfer Car is in the desired position, THEN SELECT "ENGAGE TRANSFER CAR STOP".
6. SELECT "MAINT MAIN MENU".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

F. MOVE OR ROTATE DRUM LID/DELID FIXTURE (107-RT-07-101)

1. ENSURE manipulators and manipulator arms are PARKED.
2. SELECT "DRUM LID/DELID FIXTURE MAINTENANCE MENU".

NOTE - *The displays shown in parentheses below are the alternate states for the indicated buttons.*

3. SELECT on "DELID FIXTURE" submenu as required:

✓•	"RAISE FIXTURE"	(FIXTURE RAISED)
✓•	"LOWER FIXTURE"	(FIXTURE LOWERED)
✓•	"MOVE LEFT"	(FIXTURE AT DELID POSITION)
✓•	"MOVE RIGHT"	(FIXTURE AT PARK/RELID POSITION)
✓•	"ROTATE CLOCKWISE"	(ROTATING CLOCKWISE)
✓•	"ROTATE COUNTER-CW"	(ROTATING COUNTER CLOCKWISE)

4. SELECT "MAINT MAIN MENU".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

G. OPERATE LID/DELID SAW

CAUTION

MANIPULATORS MUST BE CLEAR OF SAW OPERATING AREA.

1. ENSURE manipulators and manipulator arms are PARKED.

NOTE - *Cut positions are selected as needed to saw through clamp band without hitting clamp band bolt.*

2. ROTATE lid/delid fixture to desired cut position.
3. LOWER lid/delid fixture onto drum.

CAUTION

BAND HALVES MUST BE HELD WITH MANIPULATORS AFTER FIRST CUT IS MADE.

4. IF second cut,
THEN, GRIP band halves with manipulators.
5. SELECT "DRUM LID/DELID FIXTURE MAINTENANCE MENU".

NOTE - *Steps VIII.G.6 through VIII.G.17 below are accomplished using "LID/DELID SAW" submenu.*

6. SELECT "TURN ON INERT GAS".
7. VERIFY display "INERT GAS ON".
8. SELECT "EXTEND SAW".
9. VERIFY display "SAW EXTENDED".
10. SELECT "TURN ON SAW".
11. VERIFY display "SAW ON".
12. WHEN clamp band is completely cut,
SELECT "RETRACT SAW".
13. VERIFY display "SAW RETRACTED".
14. SELECT "TURN OFF SAW".
15. VERIFY display "SAW OFF".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

16. SELECT "TURN OFF INERT GAS"
17. VERIFY display "INERT GAS OFF".
18. RAISE lid/delid fixture.
19. REPEAT Steps VIII.G.2 through VIII.G.18 for each cut.
20. SELECT "MAINT MAIN MENU".

H. DELID WASTE DRUM

1. ENSURE clamp band is cut and removed.
2. ENSURE manipulators and manipulator arms are PARKED.
3. SELECT "DRUM LID/DELID FIXTURE MAINTENANCE MENU"
4. LOWER lid/delid fixture onto drum.
5. SELECT on "LID LIFTER" submenu in order:

NOTE - Steps VIII.H.6 through VIII.H.9 below are accomplished using "LID/DELID SAW" submenu.

- ~~6. SELECT "OPEN ISOLATION VALVE".~~
- ~~7. VERIFY display "ISOLATION VALVE OPEN".~~
8. SELECT "TURN ON VACUUM".
9. VERIFY display "VACUUM GENERATED".
10. RAISE lid/delid fixture.
11. MOVE lid/delid fixture to relid/park position.
12. SELECT "MAINT MAIN MENU".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

I. RELID WASTE DRUM

1. ENSURE manipulators and manipulator arms are PARKED.

2. LOWER lid/delid fixture onto drum.

3. SELECT "DRUM LID/DELID FIXTURE MAINTENANCE MENU".

NOTE - Steps VIII.I.4 through VIII.I.8 below are accomplished using "LID LIFTER" submenu.

4. SELECT "TURN OFF VACUUM".

5. VERIFY display "~~VACUUM RELEASED~~".

6. SELECT "~~CLOSE ISOLATION VALVE~~".

7. VERIFY display "~~ISOLATION VALVE CLOSED~~".

8. RAISE lid/delid fixture.

NOTE - Step VIII.I.9 may be skipped if lid is to be c-cripped.

9. SELECT "MAINT MAIN MENU".

J. C-CLIP AND CRIMP LID

1. ENSURE manipulators and manipulator arms are PARKED.

2. ENSURE drum lid is in place.

NOTE - Extra C-clips are stored on shelf inside glovebox, under Consumable Entry Port, on front side of glovebox.

3. MANUALLY PLACE C-clip in crimping device.

4. POSITION crimping device and C-clip on drum edge.

5. CRIMP C-clip by operating lever on side of crimping device.

6. ~~ROTATE~~ to next crimp position and repeat Steps VIII.J.3 through VIII.J.5 until all desired C-clips are in place on drum lid.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

K. OPEN/CLOSE DRUM GRAB

1. ENSURE overbag is removed from drum, as applicable.
2. ENSURE manipulators PARKED in Position 1 and STOWED.
3. SELECT "SORTING TABLE/PACKET/DRUM TIPPER/DRUM GRAB MAINTENANCE MENU".
4. SELECT on "DRUM TIPPER" submenu, as required:
 - "OPEN GRAB" to release drum.
 - "CLOSE GRAB" to hold drum.
5. SELECT "MAINT MAIN MENU".

L. RAISE/LOWER/PARK DRUM TIPPER (107-DH-07-103)

1. ENSURE manipulators are in PARK POSITION #1.
2. SELECT "SORTING TABLE/PACKET/DRUM TIPPER/DRUM GRAB MAINTENANCE MENU".
3. SELECT on "DRUM TIPPER" submenu, as required:

NOTE - *Drum may be raised/lowered in intervals as necessary.
Tipper PARK is FULL UP position.*

- "RAISE TIPPER" until drum elevates to desired position.
 - "LOWER TIPPER" until drum lowers to desired position.
4. SELECT "MAINT MAIN MENU".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

M. ROTATE DRUM TIPPER (107-DH-07-103)

1. ENSURE manipulators are in PARK POSITION #1.
2. ENSURE drum tipper is raised FULL UP.
3. SELECT "SORTING TABLE/PACKET/DRUM TIPPER/DRUM GRAB MAINTENANCE MENU".

NOTE - Steps VIII.M.4 through VIII.M.8 below are performed from the "DRUM TIPPER" submenu.

-
4. SELECT "ENABLE ROTATE JOYSTICK".
 5. VERIFY display "ROTATE JOYSTICK ENABLED".
 6. ROTATE grab right OR ROTATE grab left until tipper is at desired position.
 7. SELECT "DISABLE ROTATE JOYSTICK".
 8. VERIFY "ROTATE JOYSTICK DISABLE".
 9. SELECT "MAINT MAIN MENU".

N. EXTEND/RETRACT SORTING TABLE (107-ST-07-101)

1. ENSURE manipulators are PARKED above Lid/Delid Fixture.
2. SELECT "SORTING TABLE/PACKET/DRUM TIPPER/DRUM GRAB MAINTENANCE MENU".

NOTE - Steps VIII.N.3 through VIII.N.8 below are performed from the "SORTING TABLE" sub-menu.

3. SELECT "UNLOCK TABLE".
4. VERIFY display "TABLE UNLOCKED".
5. SELECT "EXTEND TABLE" OR "RETRACT TABLE" until table is at desired position.
6. SELECT "LOCK TABLE".
7. VERIFY display "TABLE LOCKED".
8. SELECT "MAINT MAIN MENU".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

0. RAISE/LOWER SORTING TABLE (107-ST-07-101)

1. ENSURE manipulators are PARKED above Lid/Delid Fixture.
2. SELECT "SORTING TABLE/PACKET/DRUM TIPPER/DRUM GRAB MAINTENANCE MENU".

NOTE - Steps through below are performed from the "SORTING TABLE" submenu.

3. SELECT "UNLOCK TABLE".
4. VERIFY display "TABLE UNLOCKED".
5. RAISE table OR LOWER table until table is at desired position.
6. SELECT "LOCK TABLE".
7. VERIFY display "TABLE LOCKED".
8. SELECT "MAINT MAIN MENU".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

IX. PROCEDURE (LLW EXIT GLOVEBOX)

WARNING

IMPROPER OPERATION OF GLOVEBOX EQUIPMENT INCLUDING HOIST, SORTING TABLE, MANIPULATORS, TRANSFER CAR, ETC., MAY CAUSE INJURY. CAUTION MUST BE EXERCISED IF REACHING THROUGH GLOVEPORTS WHILE EQUIPMENT IS IN OPERATION.

CAUTION

WHEN AN OIU IS IN MAINTENANCE MODE, MOST INTERLOCKS AND SAFETY FEATURES ARE BYPASSED. IT IS POSSIBLE TO DAMAGE EQUIPMENT, AND/OR BYPASS SAFETY RESTRICTIONS SUCH AS GLOVEBOX CONTAINMENT. CAUTION MUST BE EXERCISED TO PREVENT UNWANTED VIOLATION OF OPERATIONAL SAFETY REQUIREMENTS OR EQUIPMENT DAMAGE.

- NOTE 1 - *In Maintenance mode, OIU selections must be selected (screen touched) until the actuated device is visually verified to have reached the desired state.*
- NOTE 2 - *UNLESS OTHERWISE SPECIFIED, selections & displays in Section IX are on LLW Exit Operator Interface Unit (OIU-12-103C).*
- NOTE 3 - *Lift Table 107-LT-09-202A controls and indicators in Section IX are located on Lift Table Control Pedestal 107-PC-09-202A. Manual Lift table operation is performed per WRP1-OP-0703, Glovebox Lift Table Operation.*
- NOTE 4 - *Hoist activities in Section IX are performed on Hoist Control (107-PC-07-004). Functions must be activated until associated indicator illuminates. Reference Attachment 3.*

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

A. INITIALIZE EXIT GLOVEBOX

NOTE - Assumes Auto Initialization failed.

1. SELECT "DIAGNOSTICS MENU".

(PCS)

Displays failed parameters in red, with negative messages and passed parameters in green with positive message.

2. OBSERVE fault messages (Reference Table IX-1).

3. ACCESS MAINTENANCE MENU screens per applicable sections of this procedure, as necessary to correct indicated initialization faults.

4. WHEN all faults have been corrected:

a. RETURN to Operating Menus.

b. SELECT "MAIN MENU".

c. VERIFY display "SYSTEM INITIALIZED".

d. GO TO desired section(s).

TABLE IX-1: EXIT GLOVEBOX INITIALIZATION INTERLOCKS

INITIALIZATION MESSAGE (failed)	SIGNAL SOURCE

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

NOTE - Sections IX.C through IX.H assume Maintenance Main Menu has been accessed per Section IX.B.

B. ACCESS EXIT GLOVEBOX MAINTENANCE MENUS

1. PLACE DMS keyswitch (107-07-HS-318) to "MAINTENANCE".
2. VERIFY display "MAINTENANCE ACCESS MENU".
3. KEY in maintenance password,
THEN, PRESS "ENTER".
4. VERIFY display "MAINTENANCE MAIN MENU".
5. SELECT desired maintenance submenu(s).
6. WHEN desired,
RETURN to Operating Menus as follows:
 - a. IF at any maintenance submenu,
THEN, PRESS "MAINT MAIN MENU".
 - b. PLACE DMS keyswitch (107-07-HS-318) to "AUTO".

C. OPERATE EXIT GLOVEBOX HOIST (107-CR-07-101D)

NOTE - Manual hoist operation is performed the same as in Automatic Mode, except hoist control is continuously enabled.

1. OPERATE hoist as required for glovebox tasks or maintenance.

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

D. MATE DRUM TO EXIT PORT (107-DO-07-106)

SELECT MAINT MODE

1. LOWER Lift Table as required.

2. REMOVE clamp band.

3. OPERATE Lift Table to position drum at "DRUM UNDER PORT"

4. ~~VERIFY EXIT CL IN MAINTENANCE MODE~~ *24 7/8*
SELECT "DRUM ENTRY/EXIT PORT MAINTENANCE MENU" *35 1/2"*

5. SELECT "RETRACT CENTERING CLAMPS".

6. VERIFY display "CENTERING CLAMPS RETRACTED".

7. RAISE Lift Table to "DRUM CENTERING HEIGHT". - *24 7/8*

8. SELECT "EXTEND CENTERING CLAMPS".

9. VERIFY display "CENTERING CLAMPS EXTENDED".

10. RAISE Lift Table to "LID IN POSITION HEIGHT". - *25 3/8**Verify "LID IN POSITION" on ofu*

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

E. OPEN EXIT PORT (107-DO-07-106)

1. SELECT "DRUM EXIT/ENTRY PORT MAINTENANCE MENU"
2. SELECT "TURN ON VACUUM".
3. VERIFY display "VACUUM GENERATED".
4. SELECT "UNLOCK PORT".
5. VERIFY display "PORT UNLOCKED".

NOTE - Steps IX.E.6 and IX.E.7 are performed concurrently.

6. PRESS and HOLD "OPEN VENTS" on OIU.
7. RAISE Lift Table until port door lifts ~1/2 inch.
8. VERIFY - "DOOR IN POSITION" ON OIU.
8. RELEASE "OPEN VENTS" on OIU.
9. SELECT "RAISE DOOR".
10. VERIFY display "DOOR RAISED".
11. SELECT "ROTATE PORT OPEN".
12. VERIFY display "PORT ROTATED OPEN".
13. VERIFY port OPEN.
14. SELECT "MAINT MAIN MENU".

*UNTIL CENTER
LIFT ON VENT
100% VENT*

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

F. OPERATE TRANSFER CAR CONVEYOR

1. SELECT "SORTING GLOVEBOX MAINTENANCE MAIN MENU".
2. SELECT "DRUM TRANSFER CAR AND MISCELLANEOUS EQUIPMENT MAINTENANCE MENU".

NOTE - *Steps IX.F.3 through IX.F.10 are performed from the "TRANSFER CAR CONVEYOR" sub-menu.*

3. SELECT "ENGAGE CONVEYOR".
4. VERIFY display "CONVEYOR ENGAGED".
5. SELECT "TURN CONVEYOR ON" (until destination is reached).
6. VERIFY display "CONVEYOR ON".
7. SELECT "TURN CONVEYOR OFF".
8. VERIFY display "CONVEYOR OFF".
9. SELECT "DISENGAGE CONVEYOR".
10. VERIFY display "CONVEYOR DISENGAGED".
11. SELECT "MAINT MAIN MENU".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

G. RELID OVERPACK DRUM & CLOSE EXIT PORT (107-DO-07-106)

1. ENSURE area around port sealing surface is free of debris.
2. SELECT "DRUM ENTRY/EXIT PORT MAINTENANCE MENU".
3. SELECT "ROTATE PORT CLOSED".
4. VERIFY display "PORT ROTATED CLOSED".
5. SELECT "LOWER DOOR".
6. VERIFY display "DOOR LOWERED".
VERIFY "DOOR IN POSITION" ON OIU.
7. SELECT "TURN OFF VACUUM".
LOWER LIFT TABLE UNTIL "LID IN POSITION" ON OIU
8. VERIFY display "TURN ON VACUUM" (i.e., "VACUUM GENERATED" is ^{ON} ~~not~~ displayed.)
ILLUMINATED
9. SELECT "EXTEND LID DETACH".
10. VERIFY display "EXTEND SOLENOID ACTIVATED".
11. SELECT "RETRACT LID DETACH".
12. VERIFY display "RETRACT SOLENOID ACTIVATED".
13. LOWER Lift Table to "DRUM CENTERING HEIGHT".
14. SELECT "LOCK PORT".
15. VERIFY display "PORT LOCKED".
16. VERIFY port CLOSED and LOCKED.
VERIFY SEAL DEFLATED
17. SELECT "MAINT MAIN MENU".

H. REMOVE OVERPACK DRUM FROM EXIT PORT (107-DO-07-106)

1. LOWER Lift Table to "DOWN OVERTRAVEL".
2. MOVE drum to "DRUM AT AGV END" position.
3. RAISE Lift Table to "AGV LOAD HEIGHT".

WRAP 1 PLANT OPERATING PROCEDURE

(HNF-SD-W026-OTP-015)

- I. MATE DRUM TO EXIT PORT (107-DO-07-106)
1. ENSURE drum clamp band is removed.
 2. OPERATE Lift Table to position drum at "DRUM UNDER PORT".
 3. SELECT "DRUM ENTRY/EXIT PORT MAINTENANCE MENU".
 4. SELECT "RETRACT CENTERING CLAMPS".
 5. VERIFY display "CENTERING CLAMPS RETRACTED".
 6. RAISE Lift Table to "DRUM CENTERING HEIGHT".
 7. SELECT "EXTEND CENTERING CLAMPS".
 8. VERIFY display "CENTERING CLAMPS EXTENDED".
 9. RAISE Lift Table to "LID IN POSITION HEIGHT".
 10. SELECT "MAINT MAIN MENU".
