CONTENTS

The High-Level Waste Storage Tank Farms/242-A Evaporator Standards/Requirements Identification Document (S/RID) Phase 1 Assessment Report is comprised of twenty functional areas. Three of the twenty functional areas were evaluated as having functional area nonapplicability. Each functional area follows as a separate chapter, either containing the S/RID Assessment Report or a justification for nonapplicability.

The twenty functional areas listed below follow as chapters.

1.0 INTRODUCTION

This report documents the results of a comprehensive requirements based assessment in twenty functional areas in response to the Defense Nuclear Facility Safety Board (DNFSB) Recommendation 90-2. The requirements evaluated are contained in the High Level Storage Tank Farms / 242-A Evaporator Standards/Requirements Identification Document (hereafter, Tank Farm S/RID). The Tank Farm S/RID is controlled as a supporting document (WHC-SD-MP-SRID-001).

The DNFSB Recommendation 90-2 requested that the Department of Energy (DOE) identify specific standards applicable to the design, construction, operation, and decommissioning of defense nuclear facilities, assess the adequacy of these standards for ensuring public health and safety, and then assess the extent to which these standards have been implemented.

The DNFSB Recommendation 90-2 is being implemented through a Tank Farms S/RID program comprised of four elements: 1) requirements development, 2) phase 1 assessment, 3) phase 2 assessment, and 4) requirements maintenance. The first element has been accomplished through the Tank Farm S/RID which is a compilation of appropriate environmental, safety, and health requirements and has been approved by U.S. Department of Energy, Richland Operations Office (RL). This report provides the second element, an assessment to identify the implementing procedures for the Tank Farm S/RID. The Phase 2 assessment provides evidence that controlled procedures are being used to implement the requirements contained within the Tank Farm S/RID. The last element, dealing with requirements management, is the implementation of periodic re-assessments and requirement changes necessitated by newly promulgated requirements or mission changes.

The summary section follows this introduction and contains information developed from the phase 1 assessment. The summary section is followed by detailed functional area reports section. There are detailed reports for the 17 functional areas that contain requirements. Three functional areas currently contain no S/RID requirements: Environmental Restoration, Decontamination & Decommissioning, and R&D/Experimental Activities (Research and Development).

The detailed functional area reports contain the following sections:

Introduction -- The introduction defines the assessment scope, identifies the assessment team, and discusses interfaces with other functional areas. Also included is a description of the assessment process used and a brief summary of the functional area S/RID requirements evaluated.

Summary -- Within the summary section is an overview of the phase 1 assessment results. Discrepant requirements, where present, were discussed in conjunction with compensatory actions taken to mitigate their ramifications. As well, WHC Policies, plans or procedures evaluated during the assessment were identified.

Detailed results -- This section describes the functional area elements evaluated, summarizes the results by element, discusses inspection methodology, and where requirement incorporation into controlled procedures is discrepant, required manual changes are discussed. For requirement discrepancies, a prioritized recovery plan is discussed.

Attachments to Functional Area Reports -- Following each functional area report are two data reports for additional information: The Requirements Status and S/RID Implementation Manual Report by Functional Area.

The Requirements Status Report identifies specific requirement document/section by functional area element. Actually, there may be as many as three status tables provided. One always included provides the incorporated requirements organized by element. If there are discrepant requirements, they are similarly organized. The last table possibly provided depicts requirements that are not applicable. It is possible that for a given functional area, it has incorporated requirements but no discrepant requirements and has non applicable requirements.

The S/RID Implementing Manuals Report by functional area highlights several important pieces of information. An Element description and an identification number are noted. An adjacent column identifies the origin of the requirement and two additional columns identify the manual and section where the requirement is implemented. This report is perhaps one of the more important ones available because it ties requirements with implementing procedures.

2.0 SUMMARY

The Phase 1 assessment evaluated 1999 requirements for the Tank Farms S/RID. The evaluation determined that 1795 requirements have been implemented in controlled procedures, 110 requirements are not applicable, and 94 requirements are discrepant, i.e., require a remedial action. Additional insight is provided later in this section for these data.

The phase 1 assessment was prepared by a team representing twenty functional areas. The Table 2.1 Functional Area List reflects the team members

20) Environmental Protection (EP)	LA Gardner	D. Alison

participating in the phase 1 assessment. On the table, the first column: "functional area" is self-explanatory and includes a two letter abbreviation, e.g., for management systems, the abbreviation is "MS". The remaining two columns are entitled FAO and FE. The FAO represents the Functional Area Owner and FE represents Functional Expert.

As noted earlier the Phase 1 assessment evaluates if the requirements identified in the Tank Farm S/RID are implemented in controlled procedures. It must be noted that the Tank Farm S/RID has evolved since the DNFSB offered recommendation 90-2.

Initial attempts to develop a family of requirements for the Tank Farms met with mixed success. The Tank Farm S/RID has undergone numerous revisions as requirement sets were evaluated, additional direction was provided, that direction was implemented, results were reviewed, and new direction developed and promulgated. Each iteration was closer to the "correct" set of Tank Farms requirements. Tank Farms today has a refined set of requirements that has received numerous reviews by Tank Farms Facility Functional Area Owners, Tank Farms Facility Experts, Westinghouse Hanford Company (WHC) Interpretative Authorities, RL Line Review, and RL Subject Matter Experts; each review leading to the approval of the Tank Farm S/RID.

Even with the extensive reviews, the Facility Experts found some requirements that were not applicable to their specific functional area. These exceptions are captured by functional area along with other statistics on Table 2.2 Functional Area Statistics. The table is comprised of six columns that summarize the evaluation results for each functional area. The first column is the functional area, the second reflects the total number of requirements contained within the functional area, and the third column indicates the number of requirements for which evidence of incorporation has been identified, i.e., the number of requirements that have been determined to be incorporated into controlled procedures. The fourth column in Table 2.2 shows the number of applicable requirements by functional area, the fifth column shows the number of requirements for which no implementing procedure has been identified. The last column completes the statistic table by indicating the number of non-applicable requirements.

There are three functional areas depicted on Table 2.2 as "na". The "na" designation is consistent with the approved Tank Farm S/RID and denotes that there are no applicable requirements from the functional area for Tank Farms at this time. The three functional areas where this applies are: Environmental Restoration, Decontamination & Decommissioning, and R&D / Experimental.

Table 2.2 Functional Area Statistics

FUNCTIONAL AREA	# of Rqmt	# Incp	# Appl	# disc	# NA

9) Occupational Safety and (OH) Health	96	82	95	13	1
20) Environmental Protection (EP)	341	254	255	1	86

Each of the discrepant requirements was prioritized with respect to the discrepancy, its risk, and danger to the public, the environment, and the worker. The results of that evaluation are captured on Table 2.3 Prioritized Assessment Discrepancies.

Table 2.3 is organized by functional area. The second column lists the total number of discrepancies by functional area. The third, fourth, and fifth column indicate at what priority the discrepancy will be remediated.

The immediate action response has been allocated for safety-related compliance actions and should be completed within two to four weeks. Prompt actions are those that are administrative in nature, but do affect the ability of WHC to

18) Nuclear Safety (NS)	0			
19) Occupational Safety and Health (OH)	13	0	10	3
20) Environmental Protection (EP)	1	0	0	1

Footnotes: ⁽¹⁾The WHC has not implemented seven accreditation requirements based on direction from RL. Accreditation is currently on indefinite hold until WHC receives additional guidance.

The immediate action response has been allocated for safety-related compliance actions and should be completed within two to four weeks. Prompt actions are those that are administrative in nature, but do affect the ability of WHC to demonstrate compliance with regulatory requirements and should be completed within 12 to 16 weeks. Routine actions are those necessary to updated forms or procedures and should be completed at the next procedure revision cycle.

Corrective actions taken to mitigate discrepant requirement implementation into controlled procedures fall into three categories. The corrective actions are those that have been addressed by procedure revision, those requirements that are scheduled to be completed at some time in the future, and lastly those discrepancies have been re-evaluated to be incorporated (not discrepant). For the last group, during the mitigation process, some

discrepancies are determined to actually be incorporated, in contrast to what was identified during the initial Phase 1 assessment effort.

Corrective actions for the discrepancies identified by this report have been documented in a supporting document: High Level Waste Storage Tank Farms/242-A Evaporator Phase 1 Assessment Corrective Action Report WHC-SD-WM-SRID-002, Rev 0. The Phase 1 assessment recovery schedule calls for short term corrective actions begin completed by August 30, 1996. Corrective actions not complete by August 30, 1996, will be combined into compliance schedule approval requests and will be submitted to RL by September 30, 1996.

3.1 Management Systems

Management Systems

1.0 INTRODUCTION

The Management Systems functional area is comprised of nine functional area elements containing requirements and includes 148 individual requirement statements. The evaluation was completed by Eric Biebesheimer reporting to Cynthia Day-Phalen, the Manager of Support Services and Business Improvements.

The nine functional area elements contained requirements and were evaluated: Management and Administration, Policy and Procedures, Issues Management, Compliance Management, Management Evaluation, Occurrence Reporting, Operational Readiness Reviews, Document and Database Control, and Lessons Learned. The assessment process evaluated whether existing manuals and documentation implemented the requirements under assessment. Individual manuals and documentation used as evidence are identified in the databases in the ERMI computer program. The manuals and documentation listed in the databases represent the evidence necessary to demonstrate the implementation status of the individual requirement.

The results of the completed assessment indicate that all but two of the Tank Farm S/RID requirements for the Management Systems Functional Area are implemented in WHC controlled Manuals, Procedures, or Documents.

2.0 SUMMARY

Within the Management Systems functional area, 148 individual requirements were evaluated. Of these, 146 were evaluated as being implemented in controlled procedures, and two were evaluated as being discrepant, i.e., not totally implemented by WHC procedures. Of the two requirements evaluated as being discrepant, neither requires immediate compensatory action nor has any impact on safety-related criteria.

The following documents were evaluated and determined to implement the Management Systems S/RID Requirements: Management Requirements and Procedures (WHC-CM-1-3), Standard Engineering Practices (WHC-CM-6-1), Corrective Action Management Manual (WHC-CM-1-4), Standard Operating Practices (WHC-CM-1-5), Work Management Manual (WHC-CM-1-8), Safety Manual (WHC-CM-1-10), Document Control and Record Management Manual (WHC-CM-3-5), Uniform Publications System (WHC-CM-3-6), Safety Analysis Manual (WHC-CM-4-46), TWRs Administrative Procedures (WHC-IP-0842, Volumes 1 & 2), Tank Farm Plant Operating Procedure (WHC-IP-0731), WHC Emergency Assignment Roster and Phone Lists (WHC-IP-0541), WHC Conduct of Operations Manual (WHC-SP-0708), and WHC Quality Assurance Manual (WHC-CM-4-2).

3.0 DETAILED RESULTS

As noted earlier, this functional area has nine elements containing requirements. Management and Administration (1.1) contains requirements dealing with policies, plans and procedures, organization, staffing, and training & qualification. Policy and Procedures (1.2) has requirements dealing with preparation, review and approval, and control & maintenance. Issues Management (1.3) has requirements dealing with issue identification, issue evaluation, root cause and corrective action analysis, and tracking & trending. Compliance Management (1.4) and Management Evaluation (1.5) have requirements dealing with various aspects of these elements' requirements. Occurrence Reporting (1.6) has requirements dealing with identification and categorization, notification and reporting, investigation, and tracking. Operational Readiness Reviews (1.7) has requirements dealing with approach and organization, plan of action, tracking and closure of findings, and documentation. Document and Database Control-Records Management (1.8) has requirements dealing with control, storage, and retention & disposal. Lessons Learned (1.9) has requirements dealing with various aspects of this elements' requirements.

Table 3.1 Management Systems S/RID Element Status contains four columns: the first shows the Functional Area sub-element numerical identifier, the second shows the sub-element description, the third, and fourth, show the

Table 3.1 Management Systems S/RID Element Status

Element Identifier	Element Description	Inc	Dis
1.1	Management and Administration	3	
1.2	Policy and Procedures	33	
1.3	Issues Management	7	
1.4	Compliance Management	4	
1.5	Management Evaluation	7	1

1.8	Doc/Database Control-Rec Mgmt	16	
1.9	Lessons Learned	2	

sub-element requirement status as being, "incorporated" (Inc) or "discrepant" (Dis) respectively. Any items marked "Dis" are discussed in paragraph 4.0 Discrepancies.

A total of 146 incorporated requirements are reflected on Table 3.1, as well as two discrepant requirements.

4.0 DISCREPANCIES

The following describes the discrepancies listed in the Table 3.1. For each discrepancy, there is a stated plan of action for resolution. In addition, the priority of the resolution action is identified. Priorities have been grouped into three categories: Immediate, prompt, or routine actions. Immediate actions are those necessary to resolve a safety-related compliance issue and would be resolved within 2-4 weeks. Prompt actions are those that are administrative in nature but do affect the ability of WHC to demonstrate compliance with regulatory requirements and would be completed within 12-16 weeks. Routine actions are those actions necessary to update forms or procedures (e.g., include new report distribution requirements) and would be completed at the next procedure revision cycle.

1) Sub-element 1.5 Management Evaluation

DOE 5480.26 Section 7.a(1)

This section requires that Performance Indicator reports be submitted at least quarterly to the field office.

Routine - To WHC-IP-0842 Volume 1 Section 2.5, add notation that "Performance Indicator Reports must be submitted at least quarterly to the field office".

2) Sub-element 1.6.2 Notification and Reporting

DOE 5480.19(920518) Chapter VI, Section C.8

This section requires that a periodic summary report of events, causes, and trends should be submitted to department heads, the facility manager, and appropriate managers.

Routine - To WHC-IP-0842 Volume 1 Section 2.4, and Volume II Section 4.6.4, add notation that "A periodic summary report of events, causes, and trends should be submitted to department heads, the facility manager, and appropriate managers".

3.2 Quality Assurance

Functional Area Title - Quality Assurance

1.0 INTRODUCTION - The Standards Requirements Identification Document (S/RID) project is a response to the Defense Nuclear Facilities Safety Board recommendation 90-2. In 1994, Title 10 of the Code of Federal Regulations, part 830.120 (10CFR830.120), "Quality Assurance", was issued for non-reactor nuclear facilities. Concurrent with the issue of 10CFR830.120 was a compliance enforcement which subjects the operator of non-reactor nuclear facilities to criminal and civil penalties for failure to comply with the code.

Therefore, for the quality assurance functional area, 10CFR830.120 is the S/RID document for TWRS and contains ten topical criteria. Each of the ten criteria contains topical criteria details. The details were evaluated to determine the level of detail to list for assessment. It was determined that the topical criteria were the proper level for identification as sub-elements and further detail breakdown as sub-subelements was not beneficial. The details are so closely interrelated that taking them out of context and listing them separately invited misinterpretation and confusion. Also, the implementing programs are typically described in the same procedures for all parts of any specific criterion and there is no benefit to listing sub-subelements. Therefore, the ten sub-elements (criteria) are the basis for the quality assurance functional area.

The assessment team was composed of two TWRS QA quality engineers from the TWRS QA assessment organization. The scope of the assessment was to review the quality assurance manuals to ensure they contained adequate quality assurance program descriptions for each of the ten criteria contained in the code. The team members individually evaluated each criterion versus the manuals and cited implementing procedures. Then, they jointly concurred with final citations for the report. The assessment process ensured that the manuals cited for each criterion covered the criterion in total.

The assessment results were given to the assessment lead (M.D. Hassebrock), a third party, for data entry into the electronic file. The assessment lead verified the data by obtaining procedure number, title, revision, and issue date from the current manuals and confirmed the subject matter content. Therefore, the electronic file data are expected to be reliable. The phase 2 assessment will provide additional data verification.

Of the ten criteria, "Independent Assessment" contains no requirements in the Tank Farm S/RID. For the Hanford site, WHC's management assigned the responsibility for "independent assessment criteria" to the Facilities Evaluation Board (FEB). The FEB is responsible to perform the independent

assessments for the Hanford site including TWRS. As a result, the Tank Farms S/RID Quality Assurance functional area contains only nine requirements.

2.0 SUMMARY - The purpose of the phase 1 assessment was to identify where the S/RID requirements were implemented in procedures or instructions. Deficiencies were to be noted, graded for significance, and evaluated for actions required to resolve the deficiencies.

For specific criteria, the specific procedures from the manuals are identified in the details sections. The manuals evaluated and cited in this report are as follows.

- WHC-CM-2-1, Procurement Manual and Procedures
- WHC-CM-4-2, Quality Assurance Manual
- WHC-CM-4-5, Quality Assurance Qualifications and Instructions
- WHC-CM-6-34, TWRS Quality Management Plan
- WHC-CM-6-50, TWRS Quality Assurance
- WHC-SP-1131, WHC Quality Assurance Implementation Plan

For the quality assurance functional area there were no deficiencies noted at the time of the assessment that are not fully covered in the implementation plan. All nine criteria are adequately implemented by the programs described in the documents evaluated and reported in this report. The phase 2 assessment will determine how well the programs are implemented in the various areas.

3.0 DETAILED RESULTS -- Each sub-element of the SRID for the quality assurance functional area is adequately described in controlled company manuals and procedures. The results at the element level are depicted on Table 3.1 QA S/RID Element Status. The table is comprised of four columns. The first column is call "Element Identifier" which identifies the element and subelement within this functional area. The second column marked "Element Description" is self explanatory. The last two columns "Inc." and "Dis." stand for incorporated and discrepant. As can be noted on the table, all requirements are incorporated.

Listed below are subelement requirement descriptions:

2.1 Quality Assurance Program -- The quality assurance program element requirement provides for a quality assurance program that describes the organizational structure, responsibilities, interfaces, and describes the management process.

2.2 Training and Qualification of Personnel -- The training and qualification personnel element requirement provides for personnel training.

2.3 Quality Improvement -- The quality improvement element requirement provides for a process to detect and prevent quality problems. Under the process, problems are identified and resolved.

2.4 Documents and Records -- The documents and records element requirement provides for preparation, review, approval, revision, storage of documents/records.

2.5 Work Processes -- The work process element requirement provides that work be accomplished to established technical standards and administrative controls, using an appropriate process.

2.6 Design -- The design element requirement provides designs developed from sound scientific and engineering principles and bases. Additionally, it provides that design interfaces be controlled and that a design-verification process be employed before the design is approved for construction.

2.7 Procurement -- The procurement element requirement ensures that procured items meet the established requirements and that it includes a supplier qualification process.

2.8 Inspection and Acceptance Testing -- The inspection and acceptance testing element requirement provides that inspection and testing follow established procedures and testing equipment be maintained and calibrated.

2.9 Management Assessment -- The management assessment element requirement provides that managers assess management processes, identify problems, and correct them.

2.10 Independent Assessment -- The independent assessment element requirement is the element criterion implemented at the site level and not assessed in this evaluation. Independent assessments are not typically completed by TWRS, rather, the Facilities Evaluation Board (FEB) performs independent assessments conducted at TWRS facilities.

SECTION 1. C MANAGEMENT
ASSESSMENTS

3.3 Configuration Management

Configuration Management

1.0 INTRODUCTION

The Configuration Management functional area is comprised of three functional area elements containing requirements and includes 51 individual requirement statements. The evaluation was completed by Richard Stickney reporting to Shafik Rifaey, the Manager of TWRS Facility Operations Design Authority. Contributions and assistance was rendered by Mel Hassabrock reporting to Jim Hagan, Manager of TWRS safety and Quality Assurance and Dan Autery reporting to Rodney Brown, Manager of Clean Control Stable (CCS)-East.

The three functional area elements contained requirements and were evaluated: Management and Administration, Technical Baseline and Change Control. The assessment process evaluated whether existing manuals and documentation implemented the requirements under assessment. Individual manuals and documentation used as evidence are identified in the databases in the ERMI computer program. The manuals and documentation listed in the databases represent the evidence necessary to demonstrate the implementation status of the individual requirement.

The results of the completed assessment indicate that all but 4 of the Tank Farm S/RID requirements for the Configuration Management Functional Area are implemented in WHC controlled Manuals, Procedures, or Documents.

2.0 SUMMARY

Within the Configuration Management functional area, 51 individual requirements were evaluated. Of these, 45 were evaluated as being implemented in controlled procedures, two were evaluated as being not applicable, and four were evaluated as being discrepant, i.e., not totally implemented by WHC procedures. Of the four requirements evaluated as being discrepant, none require immediate compensatory action nor have any impact on safety-related criteria.

The following documents were evaluated and determined to implement the Configuration Management S/RID Requirements: Guide to Good Practices for Control of Equipment and System Status (DOE-STD-1039-93), Materials Management Manual (WHC-CM-2-2), Systems Engineering Manual (WHC-IP-1117), Work Management Guide (WHC-IP-1217), Configuration Management Program Plan for Hanford Site Systems Engineering (WHC-SD-GN-CM-2001), Engineering Release System Database System Application Description (WHC-SD-GN-SWD-30004), Design Reconstitution Program Plan for Waste Tank Farms and the 242-A Evaporator of Tank Waste Remediation Systems (WHC-SD-WM-CM-009), TWRS Configuration Management Program Plan (WHC-SD-WM-CM-013), TWRS

Configuration Management Program Implementation Plan (WHC-SD-WM-CM-014), Master Equipment List - Phase I (WHC-SD-WM-CSRS-023), TWRS System Final Safety Analysis Report Identification/Facility (WHC-SD-WM-HIE-007), Maintenance Optimization Plan for Essential Equipment Reliability (WHC-SP-1179), Standard Operating Practices (WHC-CM-1-5), Work Management Manual (WHC-CM-1-8), Procurement Manual and Procedures (WHC-CM-2-1), Document Control and Record Management Manual (WHC-CM-3-5), WHC Quality Assurance Manual (WHC-CM-4-2), Quality Assurance Qualifications and Instructions (WHC-CM-4-5), Safety Analysis Manual (WHC-CM-4-46), Standard Engineering Practices (WHC-CM-6-1), Project Management (WHC-CM-6-2), TWRS QA Manual (WHC-CM-6-50), TWRS Administrative Procedures (WHC-IP-0842, Volumes 1,2,3,4,5), Engineering Practices Guidelines (WHC-IP-1026), Westinghouse Hanford Company Conduct of Operations Manual (WHC-SP-0708).

3.0. DETAILED RESULTS

As noted earlier, this functional area has three elements containing requirements. Management and Administration (3.1) contains requirements dealing with program boundary definitions, program assessment, document and database control, training, and graded approach. It should be noted that the training requirements (Sub element 3.1.4) are covered in the training functional Area. Technical Baseline (3.2) has requirements dealing with establishing the technical baseline and reconstitution of the technical baseline. Change Control(3.3) has requirements dealing with control of changes to the technical baseline.

Table 3.1 Configuration Management S/RID Element Status follows and shows each element along with its status as being "incorporated" (Inc), "discrepant" (Dis), or "not applicable" (N/A). Any items marked "Dis" are discussed in paragraph 4.0 Discrepancies.

A total of 45 incorporated requirements are reflected on Table 3.1, as well as four discrepant requirements. Two requirements were judged not applicable.

Table 3.1 Configuration Management S/RID Element Status

Element Identifier	Element Description	Inc	Dis	N/A
3.1	Management and Administration	21	4	2
3.2	Technical Baseline	15		
3.3	Change Control	9		

4.0 DISCREPANCIES

The following describes the discrepancies listed in the Table 3.1. For each discrepancy, there is a stated plan of action for resolution. In addition, the priority of the resolution action is identified. Priorities have been grouped into three categories: Immediate, prompt, or routine actions. Immediate actions are those necessary to resolve a safety-related compliance issue and would be resolved within 2-4 weeks. Prompt actions are those that are administrative in nature but do affect the ability of WHC to demonstrate compliance with regulatory requirements and would be completed within 12-16 weeks. Routine actions are those actions necessary to update forms or procedures (e.g., additional instructions, guidance, or control requirements) and would be completed at the next procedure revision cycle.

1) Sub-element 3.1.2 Program Assessment

DOE-STD-1073-93 Chapter 1, Section 1.3.5.1, Paragraph a, Sent. 1 thru 5

This section requires that Initial assessments include two vertical slice assessments, one of these on a safety system related to a principal facility hazard. Also two horizontal slice assessments are specified: one of these on change control and the other on a technical topical area.

Routine - To WHC-IP-0842 Volume 1 Section 2.10 and 6.0, add provisions to conduct the initial assessments of the nature and scope specified.

Routine - To WHC-SD-WM-CM-014 Criteria XII CM Program Assessments, add provisions to conduct the initial assessments of the nature and scope specified.

2) Sub-element 3.1.2 Program Assessment

DOE-STD-1073-93 Chapter 1, Section 1.3.5.1, Paragraph b

This section requires that post-implementation assessments be performed to determine if identified weaknesses are effective in accomplishing the CM functions.

Routine - To WHC-IP-0842 Volume 1 Section 2.10 and 6.0, add provisions to conduct post-implementation assessments to determine if corrective actions are effective for identified weaknesses.

Routine - To WHC-SD-WM-CM-014 Criteria XII CM Program Assessments, add provisions to conduct post-implementation assessments to determine if corrective actions are effective for identified weaknesses.

3) Sub-element 3.1.2 Program Assessment

DOE-STD-1073-93 Chapter 1, Section 1.3.5.1, Paragraph c

This section requires that periodic effectiveness assessments including vertical and horizontal slice assessments be conducted to measure the overall CM program effectiveness and determine if CM program controls are adequate and appropriate.

Routine - To WHC-IP-0842 Volume 1 Section 2.10 and 6.0, add provisions to conduct the periodic effectiveness assessments of the nature and scope specified.

Routine - To WHC-SD-WM-CM-014 Criteria XII CM Program Assessments, add provisions to conduct the periodic effectiveness assessments of the nature and scope specified.

4) Sub-element 3.1.3 Document And Database Control

DOE-STD-1073-93 Chapter 2, Section 2.1.3, Paragraph 7 Sentence 2

This section requires that special controls be instituted to ensure that any databases used for CM purposes is protected to prevent inadvertent or unauthorized changes of the data.

Routine - To WHC-CM-3-5 Document Control and Record Management Manual, WHC-CM-3-10 Software Practices, WHC-CM-4-2 WHC Quality Assurance Manual, WHC-CM-6-1 Standard Engineering Practices, and WHC-IP-1026 Engineering Practices Guidelines, add sections or discussions on the application, administration and control of databases that are used for CM purposes that protects data from inadvertent or unauthorized changes.

3.4 Training & Qualification

TWRS Training & Qualification

1.0 INTRODUCTION

The Training and Qualification chapter of the Tank Farm SRID is comprised of five (5) functional area elements and includes 110 individual requirement statements. The evaluation was completed by a staff member reporting to the Manager, Training and Procedures. Information was reviewed from internal procedures with outside assistance from Hanford Training Center personnel. The assessment process used reviewed departmental procedures first for verification of requirement statements. The five functional area elements evaluated were: 1) Management and Administration, 2) Administration of Training, 3) Training Categories and Subjects, 4) Training Records and Documentation, and 5) Accreditation.

2.0 SUMMARY

Within the Training & Qualification functional area, the total number of requirements evaluated was 110. Of these, 97 were evaluated as being included in existing training procedures/documents, 11 were identified as discrepant (Note: 7 of the 11 discrepant items were from the Accreditation area, which has been put on indefinite hold by DOE), and 2 items have been determined to NOT be a part of the Tank Farm Training & Qualification SRID. Of the 11 items identified as discrepant, none require immediate compensatory action or have any impact on safety-related criteria.

The following documents were evaluated and determined to include the Training & Qualification SRID criteria:

- 1 - Training Course # 350710 "Tank Farms Orientation"
- 2 - Hanford Site Radiological Control Manual
- 3 - WHC-IP-0842, "TWRS Administration Manual", Vol 1, 2, 3, 5
- 4 - WHC-IP-0971, "Emergency Measures"
- 5 - WHC-IP-1041, "Appointments of Personnel NOT Meeting Selection Criteria"
- 6 - WHC-IP-1184, "Training Program Descriptions"

3.0 DETAILED RESULTS

Table 3.1 T&Q S/RID Element Status contains four columns; the first shows the Functional Area sub-element numerical identifier, the second

Table 3.1 T&Q S/RID Element Status

4.2	Administration of Training	12	0
4.2.1	Selection and Qualification	2	0
4.2.2	Training Needs Assessment	4	0
4.2.3	Design and Development	2	0
4.2.4	Implementation	1	0
4.2.5	Evaluation	4	0
4.2.7	Training Schedules	1	0
4.2.8.1	Testing	3	1
4.2.8.2	Qualification and Requalification	10	1
4.2.10	Extension, Exceptions and Alterations	10	1
4.3.1	General Employee Training	3	0
4.3.1.1	Lockout and Tagout Training	1	0
4.3.1.2	Hazard Communication Training	3	0
4.3.2	Maintenance Training Program	4	1
4.3.3	Management and Supervisory Training	6	0
4.3.4	Operator Training	6	0
4.3.5	Continuing Training	3	0
4.3.6	Technical Support Personnel Training	9	0
4.4	Training Records and Documentation	6	0
4.5	Accreditation	0	7

shows the sub-element description, the third and fourth show the sub-element requirement status as being either "incorporated" (Inc) or "discrepant" (Dis) respectively. Any items marked "Dis" are discussed in paragraph 4.0 Discrepancies.

1 - Management and Administration

This area included the criteria for Training Program Policy and the Training Organization/Staffing. Seven (7) requirements are identified, of which, all seven (7) are incorporated.

2 - Administration of Training

This area included the criteria for Training Selection and Qualification, the Design, Development, and Implementation of training programs, Training Schedules, Testing, Initial Qualification and Requalification, and Training Extensions, Exceptions, and Alterations. Fifty-two (52) requirements are identified, of which, forty-nine (49) are incorporated, and three (3) are discrepant.

3 - Training Categories and Subjects

This area included the criteria for the different types of training programs that are administered including: General Employee, Maintenance, Operator, Manager, Technical Staff, and Continuing training. Thirty-eight (38) requirements are identified, of which thirty-five are incorporated, one (1) is discrepant, and two (2) are identified as NOT being applicable to the Tank Farm Training & Qualification SRID.

4 - Training Records and Documentation

This area included the criteria for Training Records Administration. Eight (8) requirements are identified, of which, all (6) are incorporated. Two requirements were judged as not applicable.

5 - Accreditation.

This area include the criteria for Training Program Accreditation. Seven (7) requirements are identified, of which, all seven (7) are discrepant.

4.0 DISCREPANCIES

The following describes the discrepancies listed in the Element Identifier table. For each discrepancy, there is a stated plan of action for resolution.

1) Sub-Element - 4.2.8.1 - Testing

Discrepancy: An exemption allowance/statement for examination preparers is not included in WHC-IP-0842, Vol III.

Resolution: Add exemption statement for examination preparers in WHC-IP-0842, Vol III, Section 7.3 "Conduct of Written Examinations".

Urgency: Prompt

2) Sub-Element - 4.2.8.2 - Qualification and Requalification

Discrepancy: The continuing training criteria is not listed in WHC-IP-0842, Vol III, Section 10.4 "Operations Engineer Training Program", paragraph 5.4.

Resolution: Update WHC-IP-0842, Vol III, Section 10.4 "Operations Engineer Training Program", paragraph 5.4 to include the continuing training program criteria.

Urgency: Prompt

3) Sub-Element - 4.2.10 - Extension, Exceptions, and Alterations

Discrepancy: Currently there is no language covering challenge examinations included in WHC-IP-0842, Vol III, Section 7.3 "Conduct of Written Examinations".

Resolution: Add language covering challenge examinations to WHC-IP-0842, Vol III, Section 7.3 "Conduct of Written Examinations".

Urgency: Prompt

4) Sub-Element - 4.3.2 - Maintenance Training Program

Discrepancy: A course in Root-Cause Analysis is not included in WHC-IP-0842, Vol III, Section 10.6 "Maintenance Training Program".

Resolution: Evaluate need for Root-Cause Analysis course as part of WHC-IP-0842, Vol III, Section 10.6 "Maintenance Training Program". Based on this evaluation results, add a course in Root-Cause Analysis as applicable.

Urgency: Prompt

5) Sub-Element - 4.5 - Accreditation

Discrepancy: Training & Procedures currently does not have a procedure for Accreditation.

Note: Accreditation is currently on indefinite HOLD by the DOE Washington D.C. For this reason, DOE-RL has notified Tank Farm Training & Procedures to suspend any Accreditation activity.

Resolution: Upon a final decision from DOE on the direction of Tank Farm Training and Procedures Accreditation, write an accreditation procedure as part of WHC-IP-0842, Volume III as applicable.

Urgency: Prompt (if required)

3.5 Emergency Preparedness

1.0 INTRODUCTION

The Phase 1 Assessment for the TWRS Emergency Management functional area was completed in March 1996, by David J. Rowland, TWRS Emergency Preparedness Coordinator.

The assessment was based on identified requirements in the TWRS Emergency Management S/RIDs Revision 4, dated 9-1-95. The assessment involved developing worksheets which addressed the S/RID section/subsections, requirement source, documents reviewed and whether the requirement was incorporated or discrepant.

From the worksheets the results were incorporated into the TWRS Emergency Management S/RIDs Matrix.

2.0 SUMMARY

The Phase 1 Assessment involved reviewing of WHC-IP-0971, TWRS Emergency Preparedness Program Plan. This document was developed following the first (May/June 1994)) Phase I Emergency Management S/RIDs, as a means of documenting requirements and describing how the requirements are implemented, administered and maintained for TWRS Facilities. During the time of issuance of the WHC-IP-0971 manual, and issuance of the TWRS Emergency Management S/RIDs Revision 4, a majority of original identified requirements was reduced, and new requirements added. Thus the manual was found to be discrepant in the areas involving new requirements.

The WHC-IP-0971 manual has recently undergone updating and is in the process of review and approval. In reviewing the revised WHC-IP-0971 manual the missing requirements, identified in the Phase 1 Assessment, were found to be incorporated. Estimated issuance of the revised WHC-IP-0971 manual is October 30, 1996.

The Phase 1 Assessment involved reviewing WHC and TWRS documents which by their identification and purpose, should contain the requirements. Meaning, that if the requirement was not found in this manual, no further search was made. Other WHC manuals that were reviewed are WHC-CM-4-43, Emergency Management Procedures (manual) and WHC-CM-4-40, Industrial Hygiene Manual.

The Phase 1 Assessment found 85 requirements implemented by a TWRs or WHC document, and that 25 requirements were discrepant. These discrepant items pertain to emergency response training, protective action recommendations, and event classification. Actions are taking place at this time to correct these discrepancies; i.e., development of formalized, systematic based emergency response training, and revisions to administrative documents and event classification procedures.

3.0 DETAILED RESULTS

1) Functional area element evaluated.

The Emergency Management functional area includes those requirements necessary to ensure: 1) an emergency management program is in place and functional to handle emergency events; 2) an emergency response organization has been assigned and properly trained; 3) personnel, general public, environmental and facility safety is maintained; 4) emergency plans and procedures are in place to guide emergency responders during events; 5) response actions are consistent; 6) interactions with onsite and offsite emergency response organization are maintained; 7) assessment of the program effectiveness through the process of drills and surveillances/audits.

2) Element Summaries:

- 5.1 Management and Administration. All requirements implemented in the WHC-IP-0971, TWRs Emergency Preparedness Program Plan.
- 5.2 Emergency Response Training. Three requirements are implemented in the WHC-IP-0971, TWRs Emergency Preparedness Program Plan. Six requirements are discrepant which pertain to 29CFR1910 Part 120(q), and one pertaining to DOE5500.3A, Section 11.c(11)(b)(1).
- 5.3 Planning Documents. Thirty-one requirements are implemented in WHC-IP-0971, TWRs Emergency Preparedness Program Plan. Three requirements are discrepant which pertain to 29CFR1910 Part 120 (q) (which are actually emergency response training requirements and not planning document requirements), and one pertaining to DOE5500.3A, Section 11.d.(1)(b).
- 5.4 Facilities, Equipment and Resources. Fourteen requirements are implemented; thirteen in WHC-IP-0971, TWRs Emergency Preparedness Program Plan, and one in WHC-CM-4-40, Industrial Hygiene Manual. One requirement is discrepant pertaining to 29CFR1910 Part 165 (b)(4).

- 5.5 Classification, Notification and Reporting. Sixteen requirements are implemented in WHC-IP-0971, TWR Emergency Preparedness Program Plan. Four requirements are discrepant pertaining to DOE5500.2B Section 11.a.2(a)4d and 4e, (b)7.d and 7.e, and (c)7.d and 7.e. This discrepant requirements pertain to classification criteria statements for security and transportation emergencies.

Assessment found DOE5000.3B Section 8.a(5) not applicable to the Emergency Management S/RIDs; this requirement pertain to occurrence notification which is a different process than emergency notifications. Assessment finding to remove this requirement from Tank Farms Emergency Management S/RID.

- 5.6 Event Containment and Personnel Protection. Six requirements are implemented in WHC-IP-0971, TWR Emergency Preparedness Program Plan. Three discrepant requirements pertain to DOE5500.2B Section 11.a.(2)(a), (b), and (c). One discrepant requirement pertaining to 29CFR1910 Part 120(q).
- 5.7 Recovery and Reentry. Nine requirements are implemented in WHC-IP-0971, TWR Emergency Preparedness Program Plan. Two requirements are implemented in WHC-CM-4-43, Emergency Management Procedures, Section 2.1A, 200 Area Tank Waste Recognition and Classification of Emergencies. One discrepant requirement was identified pertaining to 10CFR835 Part 1302(e).
- 5.8 Public Information. This section contains no requirements. Public information is handled at the site level by WHC and DOE-RL on the behalf of Tank Farms.
- 5.9 Coordination with Offsite Agencies. This section contains no requirements. Coordination with offsite agencies is handled at the site level by WHC and DOE-RL on behalf of Tank Farms.
- 5.10 Demonstrating, Monitoring and Improving. Four requirements are implemented in WHC-IP-0971, TWR Emergency Preparedness Program Plan. Three requirements are discrepant pertaining to DOE5500.3A, Section 11.c(12)(d), and DOE5482.1B Preamble, Section 9.a(5) and (7).

Table 3.1 EM Element Status contains four columns; the first shows the Functional Area sub-element numerical identifier, the second shows the sub-element description, the third and fourth show the sub-element requirement status as being either "incorporated" (Inc) or "discrepant" (Dis) respectively. Any items marked "Dis" are discussed in 5) below.

Table 3.1 EM Element Status

Element Identifier	Element Description	Inc.	Dis.
5.1	Management and Administration	6	
5.2	Emergency Response Training	3	7
5.3	Planning Documents	29	3
5.4	Facilities, Equipment and Resources	12	1
5.5	Classification, Notification and Reporting	14	6
5.6	Event Containment and Personnel Protection	6	4
5.7	Recovery and Reentry	11	1
5.8	Public Information	*	*
5.9	Coordination with Offsite Agencies	*	*
5.10	Demonstrating, Monitoring and Improving	4	3

* The functional area elements is done at the site level by WHC and DOE-RL on behalf of Tank Farms.

4) Overall compliance status.

Eighty-five requirements are fully implemented in either the WHC-IP-0971, TWRS Emergency Preparedness Program Plan, WHC-CM-4-43, Emergency Management Procedures, or WHC-CM-4-40, Industrial Hygiene Manual.

Twenty-five requirements were found to be discrepant, and missing from any WHC or TWRS document. The elements that have discrepant requirements are:

- 5.2 Emergency Response Training (7 discrepancies)
- 5.3 Planning Documents (3 discrepancies)
- 5.4 Facilities, Equipment and Resources (1 discrepancy)
- 5.5 Classification, Notification and Reporting (6 discrepancies)
- 5.6 Event Containment and Personnel Protection (4 discrepancies)
- 5.7 Recovery and Reentry (1 discrepancy)
- 5.10 Demonstrating, Monitoring and Improving (3 discrepancies)

5) Specific compliance status for discrepant elements:

A. Element: 5.2 Emergency Response Training

The element is administratively discrepant due to missing requirements pertaining to 29CFR1910 Part 120 (p)(7)(i); (ii); (iii)(A),(B),(C), and Part 120 (q)(ii), and DOE5500.3A, Section 11.c(11)(b)(1), in any WHC or TWRs documents.

Prompt:

Incorporate missing emergency response training requirements stated into the WHC-IP-0971 TWRs Emergency Preparedness Program Plan, "Training Section."

B. Sub-Element: 5.3.2 Emergency Plan

The sub-element is administratively discrepant due to missing requirements pertaining to 29CFR1910 Part 120 (q)(6),(8); DOE5500.3A Section 11.d(1)(b) in any WHC or TWRs documents.

Prompt

1. Incorporate missing emergency response training requirements (29CFR1910 Part (q)(6) and (8), stated into the WHC-IP-0971 TWRs Emergency Preparedness Program Plan, "Training Section."
2. Incorporate missing emergency response training requirements (DOE5500.3A Section 11.d(1)(b), stated into the WHC-IP-0971 TWRs Emergency Preparedness Program Plan, "Building Emergency Plan Requirements Section."

C. Sub-Element: 5.4.3 Communication Equipment

This sub-element was found to be discrepant due to a missing requirement: 29CFR1910 Part 165 (b)(4) in any WHC or TWRs document.

Prompt

Incorporate missing employee alarm system requirements (29CFR1910 Part 165 (b)(4) into the WHC-IP-0971, TWRs Emergency Preparedness Program Plan, "Notification and Communication Section."

D. Sub-Element: 5.5.1 Event Classification and Emergency Action Levels (EALs)

This sub-element was found to be administratively discrepant due to missing requirements for security and transportation emergency classifications/criteria, stated in DOE5500.2B Section 11.a.2(a)4d and

4e, Section 11.a.2(b)7.d and 7.e, and Section 11.a.2(c)7.d and 7.e, in any WHC or TWRs document.

Prompt

1. Incorporate missing security and transportation classification requirements statements into the WHC-IP-0971, TWRs Emergency Preparedness Program Plan, "Event Classification Section."
2. Incorporate missing security and transportation classification requirements statements into the WHC-IP-0263-TF, Tank Farms Building Emergency Plan, Section 5.0, Facility Hazards.
3. Incorporate missing security and transportation classification requirement statements into the WHC-IP-0263-242A, 242-A Evaporator Building Emergency Plan, Section 5.0, Facility Hazards.

E. Sub-Element: 5.6.1 Event Containment and Consequence Assessment

This sub-element was found to be administratively discrepant due to missing protective actions recommendation for declared emergencies (alert, site area, or general) stated in DOE 5500.2B Section 11.a(2)(a), (b) and (c), in any WHC or TWRs document.

Prompt

Incorporate missing security and transportation classification requirements statements into the WHC-IP-0971, TWRs Emergency Preparedness Program Plan, "Protective Actions Section."

F. Sub-Element: 5.6.4 Medical Response

This sub-element was found to be administrative discrepant due to the missing 29CFR1910, Part 120 (q)(9)(ii) requirement for emergency responders exposures, in any WHC or TWRs document.

Prompt

Incorporate missing security and transportation classification requirements statements into the WHC-IP-0971, TWRs Emergency Preparedness Program Plan, "Protective Actions Section."

G. Element: 5.7 Recovery and Reentry

This element was found to be administratively discrepant due to a missing requirement pertaining to emergency responders briefings and training, per 10CFR835 Part 1302(e), in any WHC or TWRS document.

Prompt

Incorporate missing emergency responders training requirements statements into the WHC-IP-0971, TWRS Emergency Preparedness Program Plan, "Protective Actions Section."

H. Sub-Element: 5.10.1 Drill and Exercise Program

This sub-element was found to be administratively discrepant due to the missing DOE5500.3A Section 11.c.(12)(d) requirement for annual participation in drills/exercises.

Prompt

Incorporate missing emergency responders training requirements statements into the WHC-IP-0971, TWRS Emergency Preparedness Program Plan, "Facility Emergency Drill Program Section."

I. Sub-Element: 5.10.4 Deficiency Identification and Correction

This sub-element was found to be administratively discrepant due the missing requirements stated in DOE5482.1B Preamble, Section 9.a(5), and Section 9.a(7), pertaining to deficiency reporting, in any WHC or TWRS document.

Prompt

Incorporate missing emergency responders training requirements statements into the WHC-IP-0971, TWRS Emergency Preparedness Program Plan, "Program Maintenance Section."

3.6 Safeguards & Security

Safeguards and Security

1.0 INTRODUCTION

The Safeguards and Security functional area is comprised of six (6) functional area elements containing requirements and includes 16 individual requirement statements. The evaluation was completed by Eric Biebesheimer, reporting to Cynthia Day-Phalen, the Manager of Support Services and Business Improvements.

The six functional area elements that contained requirements which were evaluated are: Management and Administration and Protection Program Operations, Material Control and Accountability for Special Nuclear Material, Facility Approvals Security and Nuclear Material Surveys, Information Security Program, and Evaluation of Radiological and Toxicological and Sabotage Consequences. The assessment process evaluated whether existing manuals and documentation implemented the requirements under assessment. Individual manuals and documentation used as evidence as are identified in the data bases in the ERMI computer program. The manuals and documentation listed in the data bases represent the evidence necessary to demonstrate the implementation status of the individual requirement.

The results of the completed assessment indicate that the Tank Farm S/RID requirements for the Safeguards and Security Functional Area are implemented in WHC controlled Manuals, Procedures, or Documents.

2.0 SUMMARY

Within the Safeguards and Security functional area 16 individual requirements were evaluated. Of these, all 16 were evaluated as being implemented in controlled procedures.

The following documents were evaluated and determined to implement the Safeguards and Security S/RID Requirements: Security Manual (WHC-CM-4-33), Tank Waste Remediation System Administrative Procedures (WHC-IP-0842, Volume II, Sections 3.1 [Access Control for Hazardous Facilities], Section 3.2 [Key Control for Hazardous Facilities], 3.3 [Control of Construction Contractors Within Tank Farms], and 4.9.1 [Lockout/Tagout].

3.0 DETAILED RESULTS

As noted earlier, this functional area has six elements containing requirements. Management and Administration (6.1) contains requirements dealing with policy and procedures, authority and responsibilities, and

staffing and training. Protection Program Operations (6.3) has requirements dealing with Physical Security, Security Systems, Protective Forces, Security Identification Badges and Passes, Incident Response and Managements, Transportation Security, Material Control and Accountability for Special nuclear Material (6.4) contains requirements dealing with material control and accountability plans, special nuclear material accountability systems, and material control systems.

Facility Approvals, Security and Nuclear Material Surveys (6.5) contains requirements dealing with performance evaluations to demonstrate the facilities ability to meet safeguards and security scenarios. Information Security Program (6.6) contains requirements dealing with classified matter protection and control, technical surveillance countermeasures, automated information systems security programs, unclassified computer and sensitive automated data processing systems, communications security. Evaluation of Radiological and Toxicological and Sabotage Consequences (6.9) contains requirements dealing with participation in evaluations to test aspects of this elements requirements.

Table 3.1 Safeguards and Security S/RID Element Status contains four columns: the first shows the Functional Area sub-element numerical identifier, the second shows the sub-element description, the third and fourth show the sub-element requirement status as being either "incorporated" (Inc) or "discrepant" (Dis) respectively. Any items marked "Dis" are discussed in paragraph 4.0 Discrepancies.

Table 3.1 Safeguards and Security S/RID Element Status

Element Identifier	Element Description	Inc	Dis
6.1	Management and Administration	1	0
6.3	Protection Program Operations	6	0
6.4	Material Control & Accountability for SNM	1	0
6.5	Facility Approvals, Security & Material Surveys	1	0
6.6	Information Security Program	4	0
6.9	Evaluation of Radiological, Toxicological, and Sabotage Consequences	3	0

4.0 DISCREPANCIES

There are no discrepancies for this functional area.

Were there any discrepancies, they would be discussed within this section. In addition, the priority of the resolution action is identified. Priorities have been grouped into three categories: Immediate, prompt, or routine actions. Immediate actions are those necessary to resolve a safety-related compliance issue and would be resolved within 2-4 weeks. Prompt actions are those that are administrative in nature but do affect the ability of WHC to demonstrate compliance with regulatory requirements and would be completed within 12-16 weeks. Routine actions are those actions necessary to update forms or procedures (e.g., include new report distribution requirements) and would be completed at the next procedures revision cycle.

3.7 Engineering Design

Engineering Program

1.0 INTRODUCTION

The Engineering functional area is comprised of two functional area elements that contain requirements. The two elements are comprised of 18 sub-elements, containing 43 individual requirement statements. The evaluation was managed by Shakir Zuberi, reporting to William Miller, Manager, Design Authority. Assisting in the evaluation were Warren Wilson, reporting to Thomas Varljen, Manager, TWRs Engineering Management Systems, Dale Salsman, reporting to James Thomson, Deputy Director, TWRs Engineering, and Scott Ritts, of Management Strategies, Inc.

The two functional area elements that were evaluated were 7.1, Management and Administration and 7.2, Design. The sub-elements in these two elements are identified in Table 3.1. The assessment process evaluated whether existing manuals and documentation implemented the requirements under assessment. Manuals and other documents, and their specific sections/procedures, used as evidence are identified in the databases in the ERMI computer program. The documents listed in the databases contain the evidence to demonstrate the implementation status of the individual requirement.

The results of the completed assessment indicate that all but 3 of the Tank Farm S/RID requirements for the Engineering Functional Area are implemented in WHC controlled manuals, procedures, or other documents such as supporting documents.

2.0 SUMMARY

Within the Engineering functional area, 43 individual requirements were evaluated. Of these, 40 were evaluated as being implemented in controlled directive documents, three were evaluated as being not applicable, and none were evaluated as being discrepant, i.e., not totally implemented by WHC procedures. The three requirements evaluated as being not applicable, two are paragraphs containing no assessable requirements and which should be eliminated or reformatted to clearly indicate they are for information only. The third non-applicable requirement provides no Environmental, Safety, and Health (ES&H) function and therefore shouldn't be an S/RID requirement.

The following documents were evaluated. Those that were determined to contain direction implementing Engineering S/RID Requirements are prefaced with an asterisk:

- * Company Policies and Charters (WHC-CM-1)
- * Management Requirements and Procedures (WHC-CM-1-3)
- Standard Operating Practices (WHC-CM-1-5)

- * Work Management Manual (WHC-CM-1-8)
- * Safety Manual (WHC-CM-1-10)
- * Materials Management Manual (WHC-CM-2-2)
- * Management Control System (WHC-CM-2-5)
- * Hazardous Material Packaging and Shipping (WHC-CM-2-14)
- * Training Standards (WHC-CM-2-15)
- * Budget Formulation (WHC-CM-2-17)
- * Document Control and Record Management Manual (WHC-CM-3-5)
- * Uniform Publications System (WHC-CM-3-6)
- * Software Practices (WHC-CM-3-10)
- * WHC Quality Assurance Manual (WHC-CM-4-2)
- * Safety Analysis Manual (WHC-CM-4-46)
- * Standard Engineering Practices (WHC-CM-6-1)
- * Project Management (WHC-CM-6-2)
- * Engineering Practice Guidelines (WHC-IP-1026)
- * TWRs Administrative Procedures (WHC-IP-0842, Volumes I, III, IV)
- * TWRs Systems Engineering Management Plan (WHC-SD-WM-SEMP-002, Rev 0)
- * TWRs System Engineering Manual (WHC-IP-1231)
- * TWRs Configuration Management Program Plan (CMPP) (WHC-SD-WM-CM-013)

3.0 DETAILED RESULTS

As noted earlier, this functional area has two elements containing requirements. Management and Administration (7.1) contains requirements dealing with policies and procedures, organization, staffing and training planning, scheduling, cost estimating, standards and guides, testing, construction inspection, engineering documentation, and interfaces. Design (7.2) has requirements dealing with the design process, criteria, products, review and verification, change controls, and design life.

Table 3.1 Engineering S/RID Element Status which follows indicates the status of elements and their sub-elements as being "incorporated" (Inc), "discrepant" (Dis), or "not applicable" (N/A). Sub-elements containing no requirements are not listed. A total of 43 requirements are reflected on Table 3.1, including three requirements judged not applicable, as discussed below.

Not Applicable Requirements:

Sub-element 7.1.4, Planning, DOE-GUIDE-10CFR830 Section 5.1

This paragraph states that "A work process includes all activities involved in performing defined tasks to achieve an objective. Work Processes may include such activities as planning, scheduling, accounting, project management, design, analysis, fabrication, procurement, construction, installation, testing, operation, modification, maintenance, and decommissioning. The work process is a planned mix of people, equipment, environmental conditions, supply,

management support, resources, and requirements. Any one of these elements has the potential for not allowing process goals to be met."

The quoted paragraph contains no requirements and is essentially a definition of the term "work process", with some policy information thrown in. However, since the information can be useful in interpreting the other parts of this sub-element, it should not be deleted but rather reformatted as an AUTHORS NOTE to clarify to the reader/user that it is not a requirement that needs to be implemented or assessed.

Sub-element 7.1.4. Planning, DOE-GUIDE-10CFR830 Section 5.3, Paragraph 2

This paragraph states that "Workers should be considered as prime resources concerning the various aspects of their process. They understand how the process works and how metrics can best be applied. They are first line contact with both customers and suppliers and possess first hand knowledge of the products and services being supplied to and by their process."

The quoted paragraph is basically a policy, containing no assessable requirements. The essence of the intent of the paragraph is contained in WHC-CM-1, "Company Policies and Charters", Total Quality Policy. However, since the paragraph has no requirements that can be assessed, the recommended action is to delete it in the next SRID update.

Sub-element 7.1.5. Scheduling, DOE 4700.1 Chapter III.F.9.a.(3)(2)

This item states "The accounting criteria require that contract costs and performance measurement data elements be accumulated and summarized from the bottom up as directly as possible, with out allocations."

This requirement is not directly applicable to the engineering functional area. The accounting system is passed on to the engineering function and is not unique to it. The requirements are at a higher level in the financial control area. Accounting criteria do not in themselves add to environmental, safety, nor health functions within Tank Farm Transition Projects and therefore should not be an S/RID requirement.

3.8 Construction

Construction Program

1.0 INTRODUCTION

The Construction Program functional area is comprised of two (2) functional area elements and includes 28 individual requirement statements. The evaluation was completed by Eric Biebesheimer, reporting to Cynthia Day-Phalen, the Manager of Support Services and Business Improvements.

The two functional area elements contained requirements and were evaluated: Management and Administration and Program Activities. The assessment process evaluated whether existing manuals and documentation implemented the requirements under assessment. Individual manuals and documentation used as evidence as are identified in the data bases in the ERMI computer program. The manuals and documentation listed in the data bases represent the evidence necessary to demonstrate the implementation status of the individual requirement.

The results of the completed assessment indicate that all but four of the Tank Farm S/RID requirements for the Construction Program Functional Area are implemented in WHC controlled Manuals, Procedures, or Documents.

2.0 SUMMARY

Within the Construction Program functional area 28 individual requirements were evaluated. Of these, 24 were evaluated as being implemented in controlled procedures, while four were evaluated as being discrepant, i.e., not being totally implemented by facility procedures. Of the four requirements evaluated as being discrepant, none require immediate compensatory action nor have any impact on safety-related criteria.

The following documents were evaluated and determined to implement the Construction Program S/RID Requirements: Management Control System (WHC-CM-2-5), Project Management (WHC-CM-6-2), Engineering Practice Guidelines (WHC-IP-1026 (Appendix D)), Quality Assurance Manual (WHC-CM-4-2, QI 2.1), Safety Manual (WHC-CM 1-10), and Industrial Hygiene Manual (WHC-CM-4-4).

3.0 DETAILED RESULTS

As noted earlier, this functional area has two elements containing requirements. Management and Administration (8.1) contains requirements dealing with policy and procedures, authority and responsibilities, and staffing and training. Program Activities (8.2) has requirements dealing

with scheduling, planning, cost estimating, design considerations such as constructibility, maintainability, and value engineering, material and equipment storage, contract selection, construction program controls, and construction site walkthroughs.

Table 3.1 Construction Program S/RID Element Status contains four columns: the first shows the Functional Area sub-element numerical identifier, the second shows the sub-element description, the third and fourth show the sub-element requirement status as being either "incorporated" (Inc) or "discrepant" (Dis) respectively. Any items marked "Dis" are discussed in paragraph 4.0 Discrepancies.

Table 3.1 Construction Program S/RID Element Status

Element Identifier	Element Description	Inc	Dis
8.1	Management and Administration	2	0
8.2	Program Activities	22	4

4.0 DISCREPANCIES

The following describes the discrepancies listed in the Table 3.1. For each discrepancy, there is a stated plan of action for resolution. In addition, the priority of the resolution action is identified. Priorities have been grouped into three categories: Immediate, prompt, or routine actions. Immediate actions are those necessary to resolve a safety-related compliance issue and would be resolved within 2-4 weeks. Prompt actions are those that are administrative in nature but do affect the ability of WHC to demonstrate compliance with regulatory requirements and would be completed within 12-16 weeks. Routine actions are those actions necessary to update forms or procedures (e.g., include new report distribution requirements) and would be completed at the next procedures revision cycle.

1) Sub-element 8.2.3 - Cost Estimating

DOE5700.2D Preamble, Section 8.d

This section requires that cost estimates be validated with check estimates.

Prompt - To the Project Management Manual (WHC-CM-6-2), within Appendix A, Project Data Sheets (PM-3A) item 10 Details of Cost

Estimates, add notation that cost estimates be validated with check estimates, as required by DOE 5700.2D.

DOE4700.5 Attachment 2, Section 2.a(3)(b)1

This section requires that cost estimates be prepared using appropriate estimating methodologies that are integrated with the WBS, and the DOE cost structure as specified by the DOE for all contract work and ensure that all estimates are consistent with DOE 5700.2D and in accordance with FAR 15.804, "Cost and Price Data analysis, as applicable."

Prompt - To the Project Management Manual (WHC-CM-6-2), within Appendix A, Project Data Sheets (PM-3A) item 10 Details of Cost Estimates, add reference to the documents cited in this requirement.

2) Sub-element 8.2 - Construction Program Controls

DOE1324.2A Chapter V, Attachment V-14, item 2.d

This item requires that Project Records be selected for architectural, historical, and technological significance and are offered to NARA when the file becomes inactive.

Prompt - To the Project Management Manual (WHC-CM-6-2), within Appendix A, Project Documentation Requirements (PM-12) add to Section 6.3 (Closing Files) an item to review files for information as prescribed by this requirement.

DOE6430.1A Section 0150-5, Sentences 1 thru 4

These sentences require that temporary security fencing be provided prior to construction.

Prompt - Add to Project Management (WHC-CM-6-2), Section 4.5 Construction Control, that temporary security shall be provided consistent with this requirement.

3.9 Operations

Conduct of Operations

1.0 INTRODUCTION -

A baseline phase 1/phase 2 assessment for the TWRS Conduct of Operations functional area was completed in July 1995, by the East Tank Farms/Evaporator chapter champions. These champions were Tim Bohan, Kevin Grady, Jack Blackwell, Phil Treadway, Kelsey Farrell, Pat O'Connor, Cherie Widhalm, Rebecca Raven, Tracy Horner, Brian Biddle, Anne Neuberger, Doug Hastings, Jill Raney, Jim Foster, Royal Shupe, Jeff Andrews, Glenn Hester, and Bill Erbe.

The champions used work sheets containing each requirement's exact wording, any previous assessment finding(s), and previously identified implementing procedures (from the original attempt at completing a SRIDs phase 1 assessment) as a starting point for their evaluations. They reviewed documents thought to implement each requirement and noted on the worksheets which document section(s) incorporated the requirement and which documents were discrepant. From these worksheets the implementing procedures were independently reviewed to ensure validity, prior to the phase 1 (administrative) baseline entry into the TWRS Conduct of Operations Matrix.

This phase 1 assessment baseline was re-validated during February 1996, by Cherie Widhalm and all changes due to revisions/cancellations/etc. to procedures were incorporated into the TWRS Conduct of Operations Matrix. This report provides Phase 1 assessment results. Subsequent FY96 activities include Phase 2 assessment efforts.

2.0 SUMMARY

The July 1995, phase 1 assessment pointed out a number of implementing procedure administrative discrepancies. The procedure modifications to correct these discrepancies have been taking place since that assessment, correcting the discrepancies that didn't have any mitigating actions in place first. The remaining five administrative discrepancies' corrective actions are in various stages of completion. For corrective action status details on these five refer to the Phase 1 Report Summary.

There are 220 requirements that are found to be properly implemented in at least one procedure. The majority of the procedures evaluated were either WHC control manuals or sections out of the WHC-IP-0842 manual. The TWRS Conduct of Operations Matrix lists the documents that were identified as policy documents and/or implementing procedures for each of the requirements.

3.0 DETAILED RESULTS

1) Functional area description.

The Conduct of Operations functional area includes those requirements necessary to ensure: 1) an acceptable safety level is maintained; 2) quality of operations is consistent; 3) operations are uniform; 4) procedures are in place for the control of work; and 5) assessments of the effectiveness of programs, plans, procedures, etc. occur.

- 2) The Conduct of Operations functional area used the standard format found in DOE5480.19 instead of the ES&H standard format because it covers the requirement topics in an accepted standard that both DOE and Westinghouse are currently using when assessing Conduct of Operations at Hanford. Switching to the ES&H standard format would have caused related topical requirements to be separated and placed in different subelements. DOE and Westinghouse would have had to assess the same operational areas multiple times due to this separation among the ES&H subelements.
- 3) Table 3.1 OP S/RID Element Status contains four columns: the first shows the Functional Area sub-element numerical identifier, the second shows the sub-element description, the third and fourth show the sub-element requirement status as being either "incorporated" (Inc) or "discrepant" (Dis) respectively. Any items marked Dis are discussed in 5) below.

4) Overall compliance status.

There are five elements that each have a requirement that is discrepant. These elements are 9.2 "Shift Routines and Operating Practices", 9.6 "Investigation of Abnormal Events", 9.10 "Independent Verification", 9.11 "Logkeeping", and 9.12 "Operations Turnover".

The remaining 220 requirements are fully implemented in at least one procedure as listed in the TWRS Conduct of Operations Applicability Matrix.

5) Specific compliance status for discrepant sub-elements.

- 1) Sub-element DOE5480.19, Chapter II, Section C.3, Paragraph 1, Sentence 7-9

The procedure is discrepant because there are two implementing documents (TO-020-755 and WHC-IP-0842, Vol. II, Section 4.2.1) which both give guidance on how to deal with alarm status in slightly

Table 3.1 OP S/RID Element Status

Element Identifier	Element Description	Inc	Dis
9.0	DOE 5480.19 Preamble	3	
9.1	Operations Organization and Administration	10	
9.2	Shift Routines and Operating Practices	24	1
9.3	Control Area Activities	5	
9.4	Communications	8	
9.5	Control of On-Shift Training	17	
9.6	Investigation of Abnormal Events	18	1
9.7	Notifications	5	
9.8	Control of Equipment and System Status	14	
9.9	Lockouts and Tagouts	28	
9.10	Independent Verification	11	1
9.11	Logkeeping	8	1
9.12	Operations Turnover	9	1
9.13	Operations Aspects of Facility Chemistry and Unique Processes	5	
9.14	Required Reading	6	
9.15	Timely Orders to Operators	3	
9.16	Operations Procedures	30	
9.17	Operator Aid Posting	5	
9.18	Equipment and Piping Labeling	11	

different ways. The operating procedures refer workers to the more detailed TO-020-755 procedure, so most employees use just the one procedure.

Prompt

The WHC-IP-0842, Vol. II, Section 4.2.1 procedure is currently being drafted to refer to the more detailed TO-020-755 procedure for alarm status actions.

- 2) Sub-element DOE5480.19, Chapter VI, Section C.3, Sentence 4 and 5

The procedure is discrepant because minimum investigator qualification's haven't been formally established.

Prompt

The site wide manual WHC-CM-1-5 procedure 7.1 has been drafted and sent out for review to include investigator's qualifications. This revision should be approved sometime during the first half of April 1996.

- 3) Sub-element DOE5480.19, Chapter X, Section C.3, Sentence 5

The procedure is discrepant because it is missing instructions for verifying solenoid-operated valves, removable links, and availability of control power. These instructions are discussed in the authorized worker training.

Prompt

These items have been added to subsection 5.0 in the new draft of the procedure that will be going out for review by the first part of April 1996.

- 4) Sub-element DOE5480.19, Chapter XI, Section C.7

The procedure is discrepant because it doesn't identify who/where the logbooks should be turned over to for disposal. Current practices reflect that the logbooks are being turned over to the appropriate individuals.

Prompt

The draft of this procedure that incorporates who/where the logbooks should be turned over to for disposal has been reviewed and is in the comment incorporation cycle currently. The procedure should be approved sometime during the first half of April 1996.

- 5) Sub-element DOE5480.19, Chapter XII, Section C.1.b, Paragraph 2, Sentence 3

The procedure is discrepant because the turnover sheets attached to the procedure do not provide for documentation of review of the roundsheets during shift turnover. Current practices reflect that roundsheets are generally discussed during turnover.

Prompt

A draft of this procedure is being created currently to incorporate a block for turnover sheet review on the turnover sheets attached to the procedure.

3.10 Maintenance

Maintenance

1.0 INTRODUCTION The Defense Nuclear Facilities Safety Board issued Recommendation 90-2, which recommended that the DOE 1) identify specific standards applicable to the design, construction, operation and decommissioning of defense nuclear facilities, 2) assess the adequacy of those standards for ensuring public health and safety, and 3) assess the extent of compliance for those standards which have been implemented. The WHC Codes and Standards Compliance (CSC) organization was assigned the responsibility for development and implementation of the Hanford Site response to 90-2. The Tank Farm was chosen as one of the facilities to pilot the concept of creating a Standards/ Requirements Identification Document (S/RID). The Tank Farm S/RID is comprised of seven (7) Functional Areas necessary for protecting the health and safety of the public, the workers, and the environment.

This report documents the results of the phase one assessment which determined if the requirements were incorporated within WHC/WTO management controls specified in policies, programs, and procedures. To be judged as incorporated, all parts of the requirement had to be contained within a WHC controlled document. Also, the document had to be controlled at the right level within the company for effective implementation at Tank Farms. A requirement was assessed as discrepant if one or more of the requirement's parts were not contained within a WHC controlled document, or not contained in a WHC document controlled at the right level for effective implementation at the Tank Farm.

The Maintenance Functional Area of the Tank Farm Facility S/RID identifies the requirements which, when implemented, ensure that a high level of performance will be promoted through effective incorporation and control of the organization and administration of maintenance activities. Maintenance includes activities required to monitor and maintain Tank Farms' structures, systems, and components in a manner that supports safe and efficient operations. The maintenance program must comply with the requirements of DOE and other federal agencies, state agencies, and local authorities. Industry standards and good practices were also included in the identification of functional area requirements, particularly those that supplemented or validated DOE Orders in response to the DNFSB Recommendation 90-2.

2.0 SUMMARY The principal requirements of the Maintenance Functional Area, as delineated in the S/RID applicable to Tank Farms, are found mainly in DOE Order 4330.4B. The requirements cover management controls and program requirements necessary to perform a full range of maintenance activities, including, corrective, preventive, and predictive maintenance; materials management and control; event assessment and corrective actions; control of

tools and equipment; work control processes and material condition inspections; and component, system, and structure condition inspections.

The functional area of Maintenance has 25 requirements. During the assessment process it was determined that 100% of these requirements had been incorporated.

3.0 DETAILED RESULTS In the Maintenance Functional Area of the S/RID there are seven discrete elements. Each element is stand alone with one exception. The single exception is comprised of 18 subelements. As required by the S/RID Phase 1 Assessment criteria, each element and subelement was evaluated to determine if there were working level procedures or documents that identified their requirements.

As a result of the Phase 1 Assessment, all elements and subelements identified in the Maintenance Functional Area were found to be incorporated into working level procedures and documents used to support TWRS maintenance activities.

A summary of these elements and subelements is presented in the following Compliance table. Table 3.1 Maintenance S/RID Element Status contains four columns; the first shows the Functional Area sub-element numerical identifier, the second shows the sub-element description, the third and fourth show the sub-element requirement status as being either "incorporated" (Inc) or "discrepant" (Dis) respectively. Any items marked "Dis" are discussed in paragraph 4.0 Discrepancies.

Each element/subelement was evaluated for applicability and incorporation into controlled working level procedures and documents. The detailed results of these evaluations follow.

There are no remedial actions required. Routine evaluations are required when working level procedures and documents are revised to ensure that S/RID requirements are not deleted during the revision process.

3.11 Radiation Protection

Radiation Protection

1.0 INTRODUCTION

During the months of February and March of 1996, an assessment of the S/RID requirements applicable to TWRS Radiation Protection functions was conducted. The assessment included the following divisions of TWRS Radiation Protection:

- 1) West Tank Farms
- 2) East Tank Farms
- 3) Evaporator Project
- 4) Characterization Project Organization

The function area Radiation Protection, from the Tank Farms S/RID (WHC-SD-MP-SRID-001) includes a total of 213 individual requirements. The requirements. The requirements are contained in eight major elements and a series of sub-elements. The text of the requirements are accessible through the use of the special ERMI computer program provided by a WHC sub-contractor. The ERMI program allows for the assessment team to electronically input the results of the assessment into the data bases supported by the ERMI program. The electronic files are then downloaded and delivered to the Tank Farms S/RID Co-coordinators.

The TWRS Radiation Protection S/RID assessment team was comprised of the designated facility experts: Damon "Sonny" Bracoamontes and Duane Medley. The assessment was conducted during the months of February and March 1996. The process included evaluation of existing manuals and documentation the at the teams considered relevant as evidence to justify the stat of the requirements under assessment. Individual manuals and documentation used as evidence as are identified in the data bases in the ERMI computer program. The manuals and documentation imputed to the data bases are the evidence necessary to determine the compliance status of the individual requirement. Manuals and documentation that were evaluated but not used as evidence do not appear on the databases, however, so a list of these manuals and documents is included in this report.

The results of the completed assessment indicate that the Tank Farm S/RID requirements for the Radiation Protection Functional Area are implemented in WHC controlled Manuals, Procedures, or Documents. The results verify that the recent assessment and implementation of 10 CFR 35 recently completed by TWRS remains 100% compliant.

2.0 SUMMARY

No discrepancies were discovered during the S/RID Phase 1 assessment process. All requirements are judged to be applicable and in compliance except for one requirement which exists for facilities that calibrate instruments; this item

is NA because TWRS Radiation Protection does not calibrate any instruments at this time; all instruments are calibrated by a sub-contractor (PNL).

No unsatisfactory safety related conditions exist at this time, none were any discovered during the process assessment.

Whc Policies, procedures and documents used to evaluated the compliance of the requirements include the following:

10 CFR 835	WHC-SP-1145	WHC-IP-0842
WHC-CM-4-14	WHC-CM-0718	DOE-T
WHC-CM-4-2	HSRCM-1	WHC-SD-WM-TA-177
WHC-CM-3-5	WHC-IP-0243	WHC-IP-0263

3.0 DETAILED RESULTS

All requirement evaluated are judged to be applicable and incorporated with the exception of Requirement 11.8.4; this discusses equipment maintenance and calibration. This is not applicable because Radiation Protection personnel do not calibrate instrumentation at this time.

Table 3.1 RP S/RID Element Status contains four columns; the first shows the Functional Area sub-element numerical identifier, the second shows the sub-element description, the third and fourth show the sub-element requirement status as being either "incorporated" (Inc) or "discrepant" (Dis) respectively.

Program Management (11.1) contains requirements dealing with exposure management, exposure reduction, the ALARA program, exposure controls, radiation work planning, dose tracking and tending, Radiation Program, and records management.

Monitoring and Surveys (11.2) contains requirements dealing with radiation monitoring and surveying, monitoring equipment, contamination monitoring, and dose rate surveys.

Exposures (11.3) contains requirements dealing with personnel exposure monitoring, exposure limits, dosimetry program, and calculational models.

Access limitations (11.4) contains requirements dealing with area restrictions, posting, and radiation work permits.

Storage, Labeling, and Transportation (11.5) contains requirements dealing with radioactive material movements, radionuclide control, and sealed source management.

Contamination Control (6) contains requirements dealing with

personnel contamination control, equipment and areas equipment control, decontamination control, and confinement, containment and ventilation requirements.

Protective equipment (8) contains requirements dealing with protective clothing, and equipment and maintenance and calibration.

Table 3.1 RP S/RID Element Status

Element Identifier	Element Description	Inc.	Dis.
11.1	Program Management	56	
11.2	Monitoring and Surveys	13	
11.3	Exposures	18	
11.4	Access Limitations	45	
11.5	Storage, Labeling, and Transportation	30	
11.6	Contamination Control	39	
11.8	Protective Equipment	11 ^(u)	

^(u) There are actually twelve requirements within this element. One of them is not applicable, hence there being only eleven incorporated requirements and zero discrepant requirements.

Because there are no discrepant requirements, no recovery efforts are necessary.

3.12 Fire Protection

Fire Protection

1.0 INTRODUCTION

The Construction Program functional area is comprised of five (5) functional area elements and includes 159 individual requirement statements. The evaluation was completed by Charlotte Zaconne reporting to Dick Nicklas when the assessment was done and the report was completed by Eric Biebesheimer reporting to Cynthia Day-Phalen, the Manager of Support Services and Business Improvements.

The five functional area elements contained requirements and were evaluated: Management and Administration, Fire Protection Program, Fire Hazard Analysis, Fire Prevention, and Assessments. The assessment process evaluated whether existing manuals and documentation implemented the requirements under assessment. Individual manuals and documentation used as evidence as are identified in the data bases in the ERMI computer program. The manuals and documentation listed in the data bases represent the evidence necessary to demonstrate the implementation status of the individual requirement.

The results of the completed assessment indicate that all but one of the Tank Farm S/RID requirements for the Fire Protection Functional Area are implemented in WHC controlled Manuals, Procedures, or Documents. The one remaining requirement was judged to be not applicable.

2.0 SUMMARY

Within the Fire Protection functional area, 159 individual requirements were evaluated. Of these, 156 were evaluated as being implemented in controlled procedures, while one was evaluated as being not applicable.

The following documents were evaluated and determined to implement the Fire Protection S/RID Requirements: Management Requirements and Procedures (WHC-CM-1-3), Fire Protection Program Manual (WHC-CM-4-41), Emergency Management Procedures (WHC-CM-4-43), Standard Engineering Procedures (WHC-CM-6-1), Engineering Practice Guidelines (WHC-IP-1026 (Appendix D)), Environmental Compliance (WHC-CM-7-5), TWRs Administrative Procedures (WHC-IP-0842, Volume 1, Section 4.4, Process Memos)

3.0 DETAILED RESULTS

As noted earlier, this functional area has five elements containing requirements. Management and Administration (12.1) contains requirements dealing with policy and procedures, authority and responsibilities, and staffing and training. Fire Protection Program (12.2) has requirements

dealing with fire protection suppression systems, water supply and distribution systems, passive fire protection, and life saving. Fire Hazard Analysis (12.3) has requirements dealing with various aspects of this element's requirements. Fire Prevention (12.4) has requirements dealing with design performance objectives, combustion control, electrical systems, exhaust and ventilation systems, lighting protection, seismic requirements, and safety class equipment. Assessment (12.6) has requirements dealing with fire protection investigation and reporting, control of fire protection impairments.

Table 3.1 Fire Protection S/RID Element Status follows and shows each element along with its status as being "incorporated" (INC) or "discrepant" (DIS). Any items marked "DIS" are discussed in paragraph 4.0 Discrepancies.

The number of requirements reflected in Table 3.1 totals 158 of the 159 functional area requirements. Element 12.4 contained one requirement that was judged not applicable.

Table 3.1 Fire Protection S/RID Element Status

Element Identifier	Element Description	Inc.	Dis.
12.1	Management and Administration	12	1
12.2	Fire Protection Program	91	
12.3	Fire Hazard Analysis	1	
12.4	Fire Prevention	42	1
12.6	Assessment	10	

4.0 DISCREPANCIES

The following describes the discrepancies listed in the Table 3.1. For each discrepancy, there is a stated plan for resolution. In addition, the priority of the resolution action is identified. Priorities have been grouped into three categories: Immediate, prompt, or routine actions. Immediate actions are those necessary to resolve a safety-related compliance issue and would be resolved within 2-4 weeks. Prompt actions are those that are administrative in nature but do affect the ability of WHC to demonstrate compliance with regulatory requirements and would be completed within 12-16 weeks. Routine actions are those actions

necessary to update forms or procedures (e.g., include new report distribution requirements) and would be completed at the next procedure revision cycle.

1) Sub-element 12.1 Management and Administration

DOE 5480.7A Section 9.c(4)

This section requires that minimum requirements to establish "operability" shall be developed for fire protection features such as: fire doors, fire dampers, fire detection and suppression systems, fire protection water supplies, etc.

Routine - To WHC-IP-0842 Volume 1 Section 4.4 - The operability specifications related to fire protection must be identified to specifically address limitations and/or mitigating features.

2) Sub-element 12.4 Fire Prevention

RLID 5480.7 Section 8.2.e

This section requires that Nuclear facilities and laboratories shall have interior finish materials (decorations, furnishings, and exposed wall or insulating materials) that have an Underwriters Laboratories (ASTM E-84/NFPA 255) flame spread rating of 25 or less, and smoke developed rating of 50 or less, except for acoustical materials, which shall have a smoke developed rating of 100 or less.

Routine - To WHC-IP-0842 Volume 1 Section 4.4 - The document must be expanded to identify specific limitations for interior finish.

3.13 Packaging & Transportation

PACKAGING AND TRANSPORTATION

1.0 INTRODUCTION

The Packaging and Transportation chapter (functional area) of the High Level Waste Storage Tank Farms / 242-A Evaporator Standards Requirements Identification Document (hereafter known as the Tank Farm S/RID) describes a Packaging and Transportation (P&T) program as defined through the relevant DOE Orders, regulations, industry codes/standards, industry guidance documents and, as appropriate, good industry practice. The definition of a P&T program as specified by the Tank Farm S/RID is intended to address Defense Nuclear Facilities Safety Board Recommendations 90-2 and 91-1, which call for the strengthening of DOE weapons complex activities through the identification and application of relevant regulations and standards that supplement or exceed requirements mandated by DOE Orders.

This Document is a phase 1 assessment, an evaluation that determines whether the requirements identified in the Tank Farm S/RID P&T chapter are implemented by controlled procedures or manuals.

The P&T program defined in the Tank Farm S/RID is presented in the form of program elements and sub-elements. The descriptive text specifies the programmatic controls necessary for implementation of each element and sub-element. The specific DOE Orders, regulations, industry codes/standards, guidance documents and good industry practices that serve as the basis for each element/sub-element are identified and aligned with each sub-element.

Key interface information contained in the Functional Area documents is provided for general recognition and understanding and is not considered to contain prescriptive requirements.

It is intended that this document be used as a baseline from which to compare the existing P&T program at the tank farms for determination of the level of program definition and maturity including the existence of an overall site infrastructure and clearly defined interfaces with other relevant functional areas. Additionally, the Tank Farm S/RID may be used as the basis against which future program definition and improvement efforts, including procedures development and/or revisions, can be compared to ensure consistency, completeness, and proper integration with other functional programs.

The Packaging and Transportation (P&T) program defined in the Tank Farm S/RID is described in general accordance with the Environment, Safety, and Health (ES&H) Configuration Guide, Revision 0, dated July 30, 1993, and is presented in program elements and subelements. The specific DOE Orders, regulations, industry codes/standards, guidance documents, and good industry practices that serve as the basis for each element/subelement are identified and aligned with each subelement. The Packing and Transportation (P&T) Functional Area describes the programmatic controls, activities, personnel, and programs

involved in executing P&T activities, as such activities are included in the current mission of the facility.

The Tank Farm S/RID presents requirements applicable to the High Level Waste Storage Tank Farms and related structures. Only those requirements that Tank Farms personnel are clearly responsible to satisfy are included.

The assessment was performed by a team of one from the engineering support organization for packaging and transportation of waste for Tank Farm Facilities.

Team Lead • Ilene Palfrey, Advanced Plant Engineer, Waste Shipment Engineering
• Paul Gagnon, Manager, Waste Shipment Engineering

The assessment process was conducted as follows:

1. Requirements were reviewed for content and applicability to the work scope.
2. Company manuals and facility procedures were selected based on applicability to the requirements.
3. One at a time, each manual and procedure was evaluated against each requirement listed in Section 3.0, Table I.
4. Waste Shipment Engineering is a dedicated organization providing support to the Environmental Waste Operations group who performs all packaging and transportation for Tank Farms Facilities. Process knowledge provided the backbone of the applicability assessment.
5. Consultations with technical experts were also conducted to ensure accuracy.
6. Final review and concurrence was performed by Paul Gagnon, Manager, WSE.

SCOPE

This S/RID applies to all of the packaging and transportation activities associated with the Tank Farm Facilities at the Hanford Site which includes the following:

- East Tank Farms
- West Tank Farms
- 242-A Evaporator

The near-term mission of the Tank Farms is to store, treat, and immobilize the highly radioactive Hanford Site Waste (current and future tank waste). The waste storage tanks provide for storage of high-level radioactive slurries, containing hazardous constituents. These tanks continue to receive waste periodically from various onsite generators through piping and transfer truck. Although the wastes contain transuranic components, the waste material are generally not of a sufficient concentration to be classified as transuranic per DOE 5820.2A; therefore technical requirements for TRU waste are not applicable. The majority of the P&T activities at Tank Farms is for materials that meet the definition of waste materials. Only the P&T regulations which apply to "waste" are addressed under this S/RID. The Dangerous Waste functional area addresses all other associated requirements.

The terms "onsite" and "offsite" will be used to describe shipments throughout this document. Onsite refers to any shipment made within the security boundaries of the Hanford Site. Offsite refers to shipments made over public roads and highways. It is WHC best management policy that all shipments of hazardous and/or radioactive materials are to be performed in accordance with all federal, state and that Department of Transportation (DOT) regulations will be applied whenever possible, or their equivalency will be met.

Onsite shipment activities include the shipment of hazardous waste, radioactive materials/waste and mixed waste. Radioactive materials/waste is shipped as either limited quantity or low specific activity (LSA); mixed waste is shipped as limited quantity, LSA, Type A. The potential for shipments of > Type A quantities is low and considered non-routine. These wastes are prepared and shipped to the appropriate Solid Waste Disposal Facility within the 200 Area of the Hanford Site.

All offsite shipment activities are prepared by the shipper in support of the responsible organizations: (Traffic Management) located in the 1100 Area, or Generator Services located in the 200 West Area, both located at the Hanford Site. Offsite shipments include hazardous waste collected as part of the site collection going to a variety of disposal units including incinerators and land disposal. This collection of site waste is known as the "Milkrun". Other offsite shipments include low level radioactive materials (samples, contaminated

compactible materials/equipment) to offsite laboratories, decontamination facilities, or DOE-RL contractor facilities for compaction. Compacted wastes are returned to the Hanford Site for final disposal/storage. Shipments consist of LSA or limited quantities.

The P&T functional area includes program elements that are necessary to assure that operations at DOE facilities are conducted safely, effectively, and in accordance with specified DOE requirements and selected industry codes, standards, and guidelines. The scope of the P&T functional area encompasses the programmatic controls for activities associated with onsite and offsite packaging and transportation of hazardous and radioactive materials/wastes. The basis for selecting the requirements applicable to the Tank Farms is described in the following key points:

1. Site P&T personnel are responsible for the following:
 - Program management
 - Carrier selection
 - Safety analysis
 - Package standards and certification
 - Design, fabrication, assembly, and testing for shipping containers
 - Training program content
 - Emergency planning and notification
 - Offsite shipments
2. The offsite shipments originating from Tank Farms consist of "Hazardous Waste" collected as part of the "Milkrun", and "Limited Quantity" or "Low Specific Activity" materials to the Hanford Site, 300 Area; laboratories; and DOE-RL contractors.
3. LSA shipments are exclusive use in strong, tight packages.
4. The potential for transuranic wastes is low and considered non-routine.
5. Tank Farm Facilities does not make DOT shipments by rail, air or water.
6. Tank Farm Facilities does not make DOT export shipments.
7. Tank Farm Facilities does not ship explosives, gasoline, liquid petroleum fuel, poisons or uranium hexafluoride.

The DOE requirements that govern P&T activities are primarily contained in a series of DOE Orders and in the Department of Transportation (DOT), EPA, and NRC regulations. The DOE Orders are currently being expanded to provide a more complete definition of

requirements, and are being restructured to improve their use. The Functional Area elements are discussed in Sections 13.1 through 13.4.

2.0 SUMMARY -

Phase 1 assessment results show no safety-related conditions. All applicable requirements were found to be incorporated. The following WHC policies, plans or procedures were evaluated during the conduct of the Phase 1 assessment: Preparing Waste Containers and Establishing Satellite Holding Areas (TO-100-002), Inspect, Load, and Ship Waste to the Intermediate Holding Area (TO-100-010), Hazardous Waste Packaging and Transportation (WHC-CM-02-14), and Hanford Site Solid Waste Acceptance Criteria (WHC-EP-0063).

3.0 DETAILED RESULTS

No discrepant requirements were found. Three requirements were found to be not applicable. Table I below depicts the various requirement subelements within this functional areas and their compliance status.

Table I Subelement Compliance Status Summary

Element Identifier	Element Description	Inc.	Dis.
13.2.1	Packaging	11	0
13.2.6.1	Marking Requirements	10	0
13.2.6.2	Labeling Requirements	8	0
13.2.6.3	Placarding Requirements	6	0
13.2.7.1	Waste Manifests	2	0
13.2.7.2	Shipping Papers	12	0
13.2.10	Emergency Response Information	3	0
13.2.12	Loading Operations	2	0
13.2.13	Transportation Operations	3	0
13.4.4	Personnel Protection	1	0

13.2.1 Packaging

This element includes those requirements found in 49 CFR172 Parts 12; 22; 421; 421-1; 425; 441; 442; and 443; which are necessary to ensure packaging requirements: 1) exception for shipment of waste materials; 2) shipper's responsibilities; 3) manufacturer's certification markings; 4) for limited quantity Class 7 materials which meet the definition of a Class 9 material; 5) excepted limited quantity Class 7 material that is classed other than Class 7; 6) additional requirements for excepted packages containing Class 7 materials; 8) transport requirements for low specific activity (LSA) radioactive materials; 8) radiation level limitations; 9) thermal limitations; and 10) contamination controls.

There are no discrepant requirements, therefore no compensatory measures are required.

13.2.6.1 Marking Requirements

This element includes those requirements found in 49 CFR172 Parts 300 through 336 which are necessary to ensure proper marking of containers: 1) applicability for containers of hazardous material; 2) general requirements for non-bulk packaging; 3) exemptions; 4) prohibited marking; 5) general requirements; 6) radioactive materials; 7) liquid hazardous materials in non-bulk packaging; 8) general identification number markings on panels and placards; 9) special provisions or identification numbers; and 10) display of identification numbers on transport vehicles.

There are no discrepant requirements, therefore no compensatory measures are required.

13.2.6.2 Labeling Requirements

This element includes those requirements found in 49 CFR172 Parts 400 through 407 which are necessary to ensure proper labeling of containment devices: 1) general requirements; 2) prohibited labeling; 3) additional labeling; 4) radioactive material; 5) mixed and consolidated packaging; 5) authorized label modifications; 6) placement of labels; and 7) label specifications.

There are no discrepant requirements, therefore no compensatory measures are required.

13.2.6.3 Placarding Requirements

This element includes those requirements found in 49 CFR172 Parts 500 through 516 which are necessary to ensure proper placarding requirements: 1) applicability; 2) prohibited and permissive placarding; 3) general requirements; 4) subsidiary hazards; 5) providing and affixing placards; and 6) visibility and display of placards.

There are no discrepant requirements, therefore no compensatory measures are required.

13.2.7.1 Waste Manifests

This element includes those requirements found in 49 CFR172 Part 205 which is necessary to ensure the preparation of a hazardous waste manifest in accordance with 40 CFR Part 262.

This requirement is not discrepant, therefore no compensatory measures are required.

13.2.7.2 Shipping Papers

This element includes those requirements found in 49 CFR172 Parts 101 through 204 which are necessary to ensure: 1) the identification of hazardous substances under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA); 2) the determination of proper shipping names for hazardous substances; 3) the proper shipping names for hazardous wastes; 4) proper shipping names for subsidiary hazards, generic or n.o.s. descriptions, multiple hazard materials; 5) description of hazardous material required on a shipping paper; 6) shipping paper exemptions; 7) use of "Limited Quantity" following the basic description; 8) use of "RQ" on the shipping paper; 9) the description for a shipment of radioactive material; 10) description for packages containing residues in association with the basic description; and 11) the "shipper's certification" statement.

There are no discrepant requirements, therefore no compensatory measures are required.

13.2.10 Emergency Response Information

This element includes those requirements found in 49 CFR172 Parts 600 through 604 which are necessary to ensure proper emergency response: 1) applicability and general requirements; 2) response information; and 3) response telephone number requirements.

There are no discrepant requirements, therefore no compensatory measures are required.

13.2.12 Loading Operations

This element includes those requirements found in 49 CFR172 Parts 448 and 848 which are necessary to ensure: 1) general transportation requirements; and 2) segregation of hazardous materials.

There are no discrepant requirements, therefore no compensatory measures are required.

13.2.13 Transportation Operations

This element includes those requirements found in 49 CFR172 Parts 474; 475 and which are necessary to ensure the quality control for construction of packaging.

There are no discrepant requirements, therefore no compensatory measures are required.

13.4.4 Personnel Protection

This element includes those requirements found in 49 CFR172 Parts 842(e) which are necessary to ensure the quality control requirements prior to each shipment of radioactive materials; and 3) persons in vehicles containing Class 7 (radioactive) materials.

There are no discrepant requirements, therefore no compensatory measures are required.

Movement of Hazardous Materials

3.14 Environmental Restoration

The Environmental Restoration is a functional area that has been determined to be not applicable to the Tank Farms S/RID and since it is not applicable, there is no detailed functional report.

3.15 Decontamination & Decommissioning

Decontamination & Decommissioning is a functional area that has been determined to be not applicable to the Tank Farms S/RID and since it is not applicable, there is no detailed functional report.

3.16 Waste Management

WASTE MANAGEMENT

1.0 INTRODUCTION

This assessment consisted of reviewing requirements that provide for protection of the environment from activities associated with the management of waste. The requirements were listed as Chapter 16 of the Standards/Requirements Identification Document (S/RID). Personnel [J. D. Guberski & K. A. Engelhardt] from Tank Farms Transition Project, Environmental Compliance and Support Services, performed the Phase 1 assessment. The major interface area was with the ENVIRONMENTAL PROTECTION functional area, which was assessed by the same individuals. Minor contact was made with the Transportation Organization to confirm scope of procedures. Other assessment teams were not contacted.

The assessment was performed by comparing the S/RID requirements to the primary environmental documents used within WHC, WHC-CM-7-5, "Environmental Compliance", and WHC-EP-0693, "Hanford Site Solid Waste Acceptance Criteria". The Waste Management functional area requirements, applicable to TWRS, mainly address protection of the environment from wastes stored in the single and double shell tank systems. This includes wastes generated during routine activities related to the storage, monitoring, characterization, and planned disposal of the waste or tank system equipment.

2.0 SUMMARY

This assessment indicates that the overall S/RID compliance status, for WASTE MANAGEMENT, is high. This is attributed to both the Central Waste Complex, TFTP Solid Waste Engineering, and TFTP Waste Operations personnel ensuring that requirements are contained in company procedures.

Within the Waste Management functional area 320 individual requirements were evaluated. Of these, 285 were evaluated as being implemented in controlled procedures and 27 were evaluated as being discrepant, none of which require immediate compensatory action nor have any impact on safety-related criteria. The remaining eight requirements were judged to be not applicable.

3.0 DETAILED RESULTS

The WASTE CHARACTERIZATION element [16.1] address the actions necessary to characterize radioactive and hazardous waste to ensure the proper handling, packaging, shipping, and disposal requirements are identified and implemented. Waste that is both radioactive and hazardous is also addressed. WHC-CM-7-5, "Environmental Compliance" appropriately describes

how to perform characterization, while WHC-EP-0693, Hanford Site Solid Waste Acceptance Criteria address the characterization criteria for packaging, shipment, or disposal.

The PACKAGING AND LABELING element [16.2] address the requirements to properly package and label radioactive or hazardous waste packages to ensure compliance with limits on exposure to, or discharge of, harmful or potentially harmful substances. The intent is protection of the environment, the public, and workers. WHC-CM-7-5 correctly describes what actions and information are needed to ensure compliance.

The TRANSPORTATION element [16.3] is covered in the packaging and transportation functional area. The PLANS, RECORDS, AND REPORTS element [16.4] identifies the general requirements on developing and maintaining records of the types, quantities, and form of wastes generated, treated, stored, disposed, or shipped from the facility. Routine and non-routine report requirements are also identified. The PERMITTING element [16.5] is addressed in the Environmental Protection functional area.

The WASTE ACCEPTANCE CRITERIA element [16.6] address the requirements on the acceptance, treatment, and disposal of wastes. The WASTE MINIMIZATION element [16.7] is addressed in the Environmental Protection functional area under Pollution Prevention. The WASTE TREATMENT AND DISPOSAL TECHNOLOGY element [16.8] address the requirements for treatment and disposal methods of waste, management of containers, asbestos, underground tank systems and used oil. Closure of the facility used to treat and dispose of waste is also addressed. Several requirements on the use of used oil for energy recovery and asbestos removal are not applicable to TFTP as ICF-Kaiser is responsible for these areas.

The RADIOLOGICAL PERFORMANCE ASSESSMENT element [16.9] is addressed in the Radiological functional area. The WASTE CATEGORIES element [16.10] is addressed in the Environmental Protection functional area.

Table 3.1 Waste Management S/RID Element Status contains five columns; the first shows the Functional Area sub-element numerical identifier, the second shows the sub-element description, the third, fourth, and fifth show the sub-element requirement status as being "incorporated" (Inc), "not applicable" (N/A), or "discrepant" (Dis), respectively. Any requirement marked "Dis" is discussed in Section 4.0 dealing with discrepancies.

4.0 DISCREPANCIES

The following describes the discrepancies listed in Table 3.1 For each discrepancy, there is a stated plan of action for resolution. In addition, the priority of the resolution action is identified. Priorities have been grouped into three categories: Immediate, Prompt, or Routine actions. Immediate actions are those necessary to resolve a

Table 3.1 Waste Management S/RID Element Status

Element Identifier	Element Description	Inc	N/A	Dis
16.1	Waste Characterization and Certification	80		12
16.2	Packaging and Labeling Compliance	38		6
16.4	Plans, Records and Reporting	41		
16.6	Waste Acceptance Criteria	10		
16.8	Waste Treatment and Disposal Technology	34	11	9

safety-related compliance issue and would be resolved within 2-4 weeks. Prompt actions are those that are administrative in nature but do affect the ability of WHC to demonstrate compliance with regulatory requirements and would be completed within 12-16 weeks. Routine actions are those actions necessary to update forms or procedures (e.g., include new report distribution requirements) and would be completed at the next procedure revision cycle.

For this functional area, the 27 discrepancies were discussed by the controlled procedures needing to be updated. For example, WHC-CM-6-1, Section 2.2 must be updated to incorporate nine discrepant requirements. The remaining 18 discrepancies must be incorporated into WHC-CM-7-5 at various locations.

Sub-element 16.1.3 - Mixed/Dangerous Waste

WHC-CM-7-5, Section 7.10.2.4 does not address the certification requirements nor the testing and treatment standards for residues included in 40CFR268.7. Tank Farms Waste Shipment Operations is aware of the requirement and complies with them. [7 conditions involved]

Routine - Update Section 7.6 to include requirements and update 7.10.2.4 to identify that these items are addressed in 7.6.

WHC-CM-7-5, Section 7.6.13 does not include restrictions on disposal of extremely hazardous waste. Restriction is well known to waste shipment organizations.

Routine - Update Section 7.6.13 or Table 7-1 to address restrictions.

WHC-CM-7-5. Section 7.6 does not identify when wastes may be separated or diluted per WAC 173-303-150. Nor does it address monthly summation for designation. [3 conditions involved]. Requirements are well known to those who designate waste or specify treatment methods.

Routine - Update Section 7.6 to identify that regulations address when separation or dilution of wastes can occur.

WHC-CM-7-5. Section 7.6 does not identify that special wastes have options on manifest mechanisms and accumulation periods.

Routine - Update Section 7.6 if special wastes exist or will exist at TWRS.

WHC-CM-7-5. Section 3.6 does not discuss the disposal requirements for PCB items. PCB items are stored by organizations other than tank farms. An exception is small, intact, non-leaking, light ballasts and capacitors which may be disposed of as clean items.

Routine - Update Section 3.6 to identify that disposal of PCB items is by others or identify that restrictions exist and where. [4 conditions involved]

WHC-CM-7-5. Section 3.6 does not discuss options for storage of large PCB electrical items nor large amounts of PCB liquids.

Routine - Update Section 3.6 to discuss these options if such items exist in TWRS. [2 conditions involved].

WHC-CM-6-1. Section EP 2.2 needs to be updated to address the tank integrity assessment requirements that would apply to new tanks and ancillary equipment.

Routine - Include these WAC 173-303-640 [2], [3], [7], and [10] requirements in the above manual or in the systems engineering functional requirements document for tank farm design.

3.17 R&D / Experimental Activities

R&D / Experimental Activities is a functional area that has been determined to be not applicable to the Tank Farms S/RID and since it is not applicable, there is no detailed functional report.

3.18 Nuclear Safety

Nuclear Safety

1.0 INTRODUCTION

The Nuclear Safety functional area is comprised of four (4) functional area elements containing requirements and includes 61 individual requirement statements. The evaluation was completed by Scott Ritts (Management Strategies Inc, contracted by Safety Management Systems, Larry Eppler) and Eric Biebesheimer, reporting to Cynthia Day-Phalen, the Manager of Support Services and Business Improvements.

The four functional area elements that contained requirements which were evaluated are: Safety Analysis, Technical Safety Requirements, Unreviewed Safety Questions, and Nuclear Criticality Safety. The assessment process evaluated whether existing manuals and documentation implemented the requirements under assessment. Individual manuals and documentation used as evidence as are identified in the data bases in the ERMI computer program. The manuals and documentation listed in the data bases represent the evidence necessary to demonstrate the implementation status of the individual requirement.

The results of the completed assessment indicate that the applicable Tank Farm S/RID requirements for the Nuclear Safety Functional Area are implemented in WHC controlled Manuals, Procedures, or Documents. One requirement was judged to be not applicable.

2.0 SUMMARY

Within the Nuclear Safety functional area 61 individual requirements were evaluated. Of these, 60 were evaluated as being implemented in controlled procedures. As noted above, one was determined to be not applicable.

The following documents were evaluated and determined to implement the Nuclear Safety S/RID Requirements: Fire Protection Program Manual (WHC-CM-4-41), Safety Analysis Manual (WHC-CM-4-46), Nuclear Criticality Safety Manual (WHC-CM-4-29), Tank Waste Remediation System Administrative Procedures (WHC-IP-0842, Volume I, Sections 4.5 [OSR Surveillance Procedure Manual Trending/Notification System] Volume IV, Sections 5.3 [Criticality Safety], 5.4 [Unreviewed Safety Questions], SMS-01 [Development and Control of TWRs Safety Basis], SMS-05 [Facility Hazardous Material Inventory Document], SMS-07 [Integrated Work Process for Preparing Authorization Basis and Other Selected Safety Basis Documents], SMS-09 [Identification of Safety Structures, Systems, and Components], SMS-10 [Authorization Basis Amendments and Annual Updates].

3.0 DETAILED RESULTS

As noted earlier, this functional area has four elements containing requirements. The Safety Analysis element contains requirements dealing with the safety analysis report and hazards classification. The Technical Safety Requirements element contains requirements dealing with aspects of this element's requirements. The Unreviewed Safety Question element contains requirements dealing with aspects of this element's requirements. The Nuclear Criticality Safety element contains requirements dealing with Criticality Safety Design Practices and Materials Control.

Table 3.1 Nuclear Safety S/RID Element Status contains four columns; the first shows the Functional Area sub-element numerical identifier, the second shows the sub-element description, the third and fourth show the sub-element requirement status as being either "incorporated" (Inc) or "discrepant" (Dis) respectively. Any items marked "Dis" are discussed in paragraph 4.0 Discrepancies.

Table 3.1 Nuclear Safety S/RID Element Status

Element Identifier	Element Description	Inc	Dis
18.3	Safety Analysis	26	0
18.4	Technical Safety Requirements	13	0
18.5	Unreviewed Safety Questions	14	0
18.6	Nuclear Criticality Safety	7	0

Table 3.1 depicts a total of 60 incorporated requirements. The functional area contains 61 requirements. As noted earlier, one requirement was determined to be not applicable.

4.0 DISCREPANCIES

There are no discrepancies for this functional area.

Were there any discrepancies, they would be discussed within this section. In addition, the priority of the resolution action is identified. Priorities have been grouped into three categories: Immediate, prompt, or routine actions. Immediate actions are those necessary to resolve a safety-related compliance issue and would be resolved within 2-4 weeks. Prompt actions are those that are administrative in nature but do affect the ability of WHC to demonstrate compliance with regulatory requirements and would be completed within 12-

16 weeks. Routine actions are those actions necessary to update forms or procedures (e.g., include new report distribution requirements) and would be completed at the next procedures revision cycle.

3.19 Occupational Safety and Health

TWRS Occupational Safety and Health Phase I S/RID Assessment

1.0 INTRODUCTION

This assessment consists of an evaluation of the current occupational safety and health requirements contained in Section 19 of the Tank Farm Standards/Requirements Identification Document (S/RID) against the existing WHC implementation manuals. The assessment was performed by Kristine Bowen, Scott Somers, and Elton Hewitt. Kristine is a chemical engineer working for TWRS Health and Safety. Scott is an industrial hygienist working for Northwest Instrument Systems Inc. under contract to WHC. Elton Hewitt is a certified industrial hygienist with over 20 years experience in health and safety.

The assessment process is performed in several steps. The first step consists of assembling a 'library' of WHC manuals containing the current programs for implementing occupational safety and health. The second step involves selecting an occupational safety and health requirement from the Tank Farm S/RID for evaluation. The third step involves reviewing each of the applicable manuals to determine if they contain information supporting the implementation of the requirement. The fourth step consists of determining whether the requirement has been fully implemented, based on the information reviewed. During this step, each of the major subparts of the requirement was examined to determine if they were addressed in the documentation reviewed. If, based on the review performed in step 3, not all of the parts of the requirement had been fully implemented, the requirement was judged to be "Discrepant". However, if all of the parts of the requirement were judged to be fulfilled, the requirement was judged to be "Incorporated." The last step involves entering this information into the Environmental Requirements Management Interface (ERMI) database. During this step, the information obtained in steps 3 and 4 is captured along with any discrepancies noted in the manuals being reviewed.

The requirements evaluated for occupational safety and health include those contained in the Section 19 of the Tank Farm S/RID. These requirements are contained in 29 CFR 1910 and 29 CFR 1926, the American Conference of Governmental Industrial Hygienists TLV booklet, the Federal Register (Vol. 54 No. 16 Thursday, January 26, 1989, and DOE orders 5480.8A, 5480.10, 5483.1A, and 5480.4.

2.0 SUMMARY

During this assessment, a total of 96 requirements were evaluated. These requirements were contained in six principal subsections of Section 19. Of the 96 requirements that were evaluated, 1 was found to be not applicable.

This means that, in reviewing the details of the specific requirement, it was concluded that the requirement was not applicable for Tank Farms because the equipment or agent described in the requirement does not exist in Tank Farms. This could apply to either machinery or hazardous materials.

Of the 95 requirements deemed to be applicable, 82 were judged to be incorporated and 13 were found to be discrepant. This equates to 86% incorporated.

Of the 13 requirements, 3 were judged to have a minimal impact on employee safety. This means that, though the requirement could not be found in the documentation examined, it was judged unlikely to have a significant impact on employee safety and health. However, the discrepant items do need to be addressed, and a list of the recommended manual changes has been prepared and submitted to the manual owners for revisions during their next routine manual revisions.

The remaining 10 discrepant requirements were judged to have a potentially significant impact on employee safety. A memo has been prepared and submitted to the owners of each manual where revisions were judged to be necessary. In addition, an evaluation will be performed by Operations and TWRs Safety and Health to determine the potential risk to employees from the discrepant items noted. Based on the results of this evaluation, and the feedback from the manual owners, the need for additional/interim requirements to protect employee health will be evaluated.

None of the discrepancies noted were judged to present a serious hazard to employees. As such, there was no need for immediate action on any of the items identified. On the other hand, several of the items were judged to be significant enough that the revision of the manuals found to be discrepant should be undertaken soon rather than waiting until the next manual revision. These items were identified and a memo was sent to the manual owner informing him of which manuals and programs needed to be updated, as well as the specific deficiencies identified.

A breakdown of the subelements with discrepant requirements is shown in Table 2.1 Discrepant Requirement Breakdown. The table gives the subpart element, subpart title, and the number of discrepant requirements for this subpart.

Table 2.1 Discrepant Requirement Breakdown

Subelement Number	Subelement Title	Number of Discrepant Requirements
19.3.2	Hazard Controls	7
19.3.2.3	Const. Safety and Health	6

From this Table, it can be seen that all of the discrepant S/RID requirements were in the areas of hazard controls and construction safety and health. All of the discrepancies in these two areas resulted from not having complete documentation to demonstrate compliance with applicable 29 CFR 1910 and 1926 requirements. In many cases, the discrepancy was minor, and could be corrected by a minor revision to a program in an existing manual. In other cases, a more extensive revision, or a new program, would be required. The specific discrepancies noted, and the recommended corrective actions, are discussed in detail in Section 3.0 Detailed Results.

For many of the discrepant items, programs were identified that addressed the requirement, but not all of the subparts of the requirement were fully addressed. For other programs, the requirement was addressed in a manual that has been canceled, and the new program implementing this requirement has not yet been implemented.

During this evaluation, the following manuals were found to contain information demonstrating compliance:

WHC-CM-1-3	WHC-CM-1-5	WHC-CM-4-41	WHC-CM-4-43	WHC-IP-1121
WHC-CM-1-10	WHC-CM-1-8	WHC-CM-4-46	WHC-IP-1026	
WHC-CM-4-40	WHC-CM-2-1	WHC-CM-8-7	DOE-RL-92-36	
WHC-IP-0030	WHC-CM-2-5	WHC-CM-8-9	WHC-CM-1	
WHC-CM-1-11	WHC-CM-4-2	WHC-IP-0971	WHC-SD-WM-HSP-002	

3.0 DETAILED RESULTS

A summary of the subsections examined, and the number of incorporated and discrepant items is shown in Table 3.1 OSH S/RID STATUS. The Table 3.1 contains four columns; the first shows the Functional Area sub-element numerical identifier, the second shows the sub-element description, the third, and fourth, show the sub-element requirement status as being, "incorporated" (Inc) or "discrepant" (Dis) respectively. Any items marked "Dis" are discussed in paragraph 4.0 Discrepancies. All other items in that element can be assumed to be fully incorporated.

The specific requirements found to be discrepant are discussed below. All of the discrepant items are arranged under their subelement, with the specific discrepancy(s) and associated action(s) also shown. Priorities of each action have been grouped into three categories: Immediate, prompt, or routine actions. Immediate actions are those necessary to resolve a safety-related compliance issue and would be resolved within 2-4 weeks. Prompt actions are those that are administrative in nature but do affect the ability of WHC to demonstrate compliance with regulatory requirements and would be completed within 12-16 weeks. Routine actions are those actions necessary to update forms or procedures (e.g., include new report distribution requirements) and would be completed at the next procedure revision cycle.

Table 3.1 - OSH S/RID STATUS

Element Identifier	Element Description	Inc.	Dis.
19.1.1	Program Policy	4	0
19.1.2	Occ. Saf. & Hlth Goals & Obj.	1	0
19.1.3	Requests for Exemption/Variance	3	0
19.2.1	Hazard Assessment Program	3	0
19.2.2	Hazards Reporting System	6	0
19.2.5	Occ. Saf. & Hlth. Inv. System	1	0
19.3.1	Haz. Mon., Samp. & Surveillance	1	0

19.4.3	Diagnosis and Treatment	1	0
19.5	Occ. Saf. & Hlth. Training	2	0
19.6.1	Occ. Injury & Illness Reporting	4	0
	Total Requirements	82	13

3.1 Element 19.3.2 Hazard Controls

29 CFR 1910 Subpart D - Table of Contents

All subsections of this S/RID requirement (1910.21 - 1910.32) were incorporated except 29 CFR 1910.27.

- 29 CFR 1910.27 contains requirements for fixed ladder location, design requirements, and safety.

Routine - WHC-CM-1-10 WKS-21 should be altered to include fixed and portable ladder safety requirements. Fixed ladder design should meet 29 CFR 1910.27 requirements. Safe use of fixed ladders should be added, including fall protection requirements.

29 CFR 1910 Subpart G - Table of Contents

All subsections of this S/RID requirement (1910.94 - 1910.100) were incorporated except 29 CFR 1910.94.

- 29 CFR 1910.94 covers various applications and methodologies to control the airborne hazards. The standard specifically applies to abrasive blasting and wheels, grinding/polishing/buffing operations, spray finishing, and dip tank applications.

Prompt - Section 3.6 of the WHC-CM-4-40, Industrial Hygiene Manual, addressing ventilation has not yet been written and released, though some aspects of ventilation are covered in other manual sections such as in WHC-CM-1-11, WKH-5, Confined Space.

29 CFR 1910 Subpart H - Table of Contents

All subsections of this S/RID requirement (1910.101 - 1910.120) were incorporated except 29 CFR 1910.101 and 1910.107.

- 29 CFR 1910.101 contains requirements for compressed gases, including inspection of cylinder storage areas, handling, storage, and use of compressed gases, safety relief devices, and transportation of compressed gases.

Prompt - WHC-CM-1-10, WKS-14 should be amended requiring the periodic inspection of gas cylinder storage areas and all compressed gas cylinders must have a safety relief device per 29 CFR 1910.101.

- 29 CFR 1910.107 covers the operations dealing with various kinds of spray (applications finishes, paints, chemicals, powders, etc. Specifics include electrical apparatus, ventilation, material handling, fire protection, electrostatic devices, and special application techniques (undercoating, powders, peroxides, dual components, fusions, etc.).

Prompt - A new program needs to be written for the WHC-CM-1-11 manual that covers the spray application of combustible/flammable materials.

29 CFR 1910 Subpart I - Table of Contents

All subsections of this S/RID requirement (1910.132 - 1910.140) were incorporated except 29 CFR 1910.134.

- 29 CFR 1910.134 requires a respiratory protection program that contains the following elements: permissible practice, requirements for a minimum acceptable program, selection of respirators, air quality, use of respirators, maintenance and care of respirators, and identification of gas mask canisters.

Routine - WHC-CM-1-11, WKH-15, Respiratory Protection Program, should be amended to include requirements on identification of gas mask canisters.

29 CFR 1910 Subpart J - Table of Contents

All subsections of this S/RID requirement (1910.141 - 1910.150) were incorporated except 29 CFR 1910.141.

- 29 CFR 1910.141 contains requirements that address sanitation.

Prompt - Section 4.4 in the WHC-CM-4-40, Industrial Hygiene Manual was reserved to outline the sanitation protection requirements, but it was never written or issued. It should be written and issued into an appropriate section of the WHC-CM-1-11, Industrial Hygiene Manual.

29 CFR 1910 Subpart P - Table of Contents

All subsections of this S/RID requirement (1910.241 - 1910.247) were incorporated except 29 CFR 1910.242.

- 29 CFR 1910.242 contains general requirements for hand and power tools. It states that employees are responsible for the safe condition of tools they use, and that compressed air (>30 psi) should not be used for cleaning tools and machinery.

Routine - Cleaning of equipment with compressed air (>30 psi) is not addressed. It should be added to WHC-CM-1-10, WKS-12, Hand and Portable Power Tools.

29 CFR 1910 Subpart S - Table of Contents

All subsections of this S/RID requirement (1910.301 - 1910.399) were incorporated except 29 CFR 1910.334.

- 29 CFR 1910.334 contains requirements for use of electrical equipment. This includes portable electrical equipment, electrical power and lighting circuits, test instruments and equipment, and electrical equipment near flammable materials.

Prompt - Use of electrical equipment near flammable or combustible materials should be addressed by a new program in WHC-CM-1-10.

3.2 Element 19.3.2.3 Construction Safety and Health

29 CFR 1926 Subpart C - Table of Contents

All subsections of this S/RID requirement (1926.20 - 1926.35) were incorporated except 29 CFR 1926.27 and 1926.33.

- 29 CFR 1926.27 contains requirements that address sanitation.

Prompt - Section 4.4 in the WHC-CM-4-40, Industrial Hygiene Manual was reserved to outline the sanitation protection requirements, but it was never written or issued. It should be written and issued into an appropriate section of the WHC-CM-1-11, Industrial Hygiene Manual.

- 29 CFR 1926.33 contains requirements for employee access to exposure and medical monitoring records. It outlines access to and preservation of records, OSHA access to records, access requirements with regard to trade secrets, and employers informing employees of records.

Prompt - Section 2.1, Subpart 12 of WHC-CM-4-40 should incorporate OSHA access to medical monitoring records.

29 CFR 1926 Subpart D - Table of Contents

All subsections of this S/RID requirement (1926.50 - 1926.66) were incorporated except 29 CFR 1926.51 and 1926.57.

- 29 CFR 1926.51 contains requirements that address sanitation.

Prompt - Section 4.4 in the WHC-CM-4-40, Industrial Hygiene Manual was reserved to outline the sanitation protection requirements, but it was never written or issued. It should be written and issued into an appropriate section of the WHC-CM-1-11, Industrial Hygiene Manual.

- 29 CFR 1926.57 covers various applications and methodologies to control the airborne hazards. The standard specifically applies to abrasive blasting and wheels, grinding/polishing/buffing operations, spray finishing, and dip tank applications.

Prompt - Section 3.6 of the WHC-CM-4-40, Industrial Hygiene Manual, addressing ventilation was never released, though some aspects of ventilation are covered in other manual sections such as in WHC-CM-1-11, WKH-5, Confined Space. A new ventilation section should be included in WHC-CM-1-11.

29 CFR 1926 Subpart I - Table of Contents

All subsections of this S/RID requirement (1926.300 - 1926.307) were incorporated except those listed below.

- 29 CFR 1926.301 contains requirements on the safety use of hand tools. Included in the standard are wrenches (do not use if jaws are sprung), impact tools (to be kept free from mushroom head, and wooden handled tools to be kept free from splinters and cracks).

Prompt - WHC-CM-1-10, WKS-12 should be amended to contain safety information for the use of hand tools.

- 29 CFR 1926.302 contains requirements for power operated hand tools. It includes requirements for electric power tools, pneumatic tools, hydraulic powered tools, powder actuated tools, fuel powered tools, and abrasive blast cleaning nozzles.

Routine - WHC-CM-1-10, WKS-12, Hand and Portable Power Tools, should include safety information on fuel and hydraulic powered tools.

- 29 CFR 1926.303 contains requirements for abrasive wheels and tools. It addresses the following areas: power, guarding/guard design, use, providing work rests, and tools to meet ANSI Codes B7.1-1970.

Routine - WHC-CM-1-10, WKS-12, Subsection on Abrasive Wheels and Tools should contain information on workrests, and that guard requirements are to meet 29 CFR 1926.303.

- 29 CFR 1926.304 contains requirements for woodworking tools in the following areas: disconnect switches, speeds, self-feed devices, guarding, personal protective equipment, and specific guarding requirements for tools such as rip saws, table saws, bandsaws, etc.

Routine - WHC-CM-1-10, WKS-12 should have a section added to address requirements on speeds, self-feed devices, and ANSI requirements. A statement should also be included that requirements of 29 CFR 1926.304 should be followed for specific requirements on various types of saws.

- 29 CFR 1926.307 covers requirements for mechanical power transmission apparatus. It includes specific guard and protection requirements for flywheels, cranks and connecting rods, shafting, pulleys, power transmission apparatus located in basements, belts, ropes and chains, gears/sprockets/chains, collars and couplings, clutches, and woodguards.

Prompt - WHC-CM-1-10, WKS-13, Subsection 3.1 #3 should include: consult 29 CFR 1910 parts 211 -222 and 29 CFR 1926 parts 300 - 307 for guard requirements for specific types of machinery.

29 CFR 1926 Subpart L - Table of Contents

All subsections of this S/RID requirement (1926.450 - 1926.453) were incorporated except those listed below.

- 29 CFR 1926.451 addresses the following areas for scaffolding requirements: footings, guardrails/toeboards, loads, construction materials, planking, slippery conditions, hotwork, construction requirements, and safe work practices.

Prompt - WHC-CM-1-10, WKS-22, Scaffolding should include a statement that scaffolding work shall be prohibited during high winds or stormy conditions.

- 29 CFR 1926.453 contains requirements for manually propelled mobile ladderstands and scaffolds. It includes requirements in the following areas: workloads, worklevels, wheels/casters, stairways, bracing, endframes, erection, and specifics on stairways and ladder scaffolds.

Routine - WHC-CM-1-10, WKS-21, Portable Ladders should be amended to address the requirements for ladderstands/stairways.

29 CFR 1926 Subpart M - Table of Contents

All subsections of this S/RID requirement (1926.500 - 1926.502) were incorporated except 29 CFR 1926.500.

- 29 CFR 1926.500 contains requirements for guardrails, handrails, and covers. It includes the following areas: guarding of floor openings, wall openings, and open sided floors, platforms, and runways; standard specifications for railings, handrails, and toeboards; guarding of roofs/roof edges; roof edge material storage; and training.

Prompt - WKS-18, Subsection 3.2 needs to have information added that proper guards and fall protection will be used for roofs/roofwork, and roof-edge storage of materials and equipment.

29 CFR 1926 Subpart X - Table of Contents

All subsections of this S/RID requirement (1926.1050 - 1926.1060) were incorporated except those listed below.

- 29 CFR 1926.1051 addresses the general requirements on the use (where/when) of a ladder stairway, and required fall protection. Nonpermanent stairs, when to use ladders and stairs, and keeping passageways clear and accessible are all addressed in this standard.

Routine - WKS-21, should be amended to include when ladders/stairways should be used (e.g. a break in elevation of more than 19 inches), and how many are required in specific areas per 29 CFR 1926.1051.

- 29 CFR 1926.1053 contains requirements for fixed ladder location, design requirements, and safety.

Prompt - WHC-CM-1-10 WKS-21 should be altered to include fixed and portable ladder safety requirements. Fixed ladder design should meet 29 CFR 1910.27 requirements. Safe use of fixed ladders should be added, including fall protection requirements.

3.20 Environmental Protection

ENVIRONMENTAL PROTECTION

1.0 INTRODUCTION

This assessment consisted of reviewing requirements that provide for protection of the environment. The requirements were listed as Chapter 20 of the Standards/Requirements Identification Document (S/RID). Personnel [J. D. Guberski & K. A. Engelhardt] from Tank Farms Transition Project, Environmental Compliance and Support Services, performed the Phase 1 assessment. The major interface area was with the WASTE MANAGEMENT functional area, which was assessed by the same individuals. Minor contact was made with the Emergency Planning Organization to confirm scope of procedures. Other assessment teams were not contacted.

The assessment was performed by comparing the requirements to the primary environmental documents used within WHC, WHC-CM-7-5, "Environmental Compliance", and WHC-EP-0693, "Hanford Site Solid Waste Acceptance Criteria". The Environmental Protection functional area requirements, applicable to TWRS, mainly address protection of the environment from wastes stored in the single and double shell tank systems. This includes wastes generated during routine activities related to the storage, monitoring, characterization, and planned disposal of the waste or tank system equipment.

2.0 SUMMARY

This assessment indicates that the overall S/RID compliance status, for ENVIRONMENTAL PROTECTION, is high. Some minor, non-safety related, requirements were identified as apparently not implemented. These requirements were not identified as being contained in the corporate or TWRS manuals reviewed, although the requirement is implied. It is expected that the Phase 2 review will identify lower tier documents specifically implementing these requirements. Since this may also identify upper tier documents that address the requirement, revision of WHC-CM-7-5 to include these requirements should be delayed until the Phase 2 assessment is completed. A problem identified during the review was the inclusion of a significant number of requirements that apply to regulator actions. These S/RID requirements were identified as Not Applicable since WHC can not perform these actions.

Within the Waste Management Functional area 341 individual requirements were evaluated. Of these, 254 were evaluated as being implemented in controlled procedures, while only one was determined to be discrepant, i.e., not being totally implemented by facility procedures. The requirement identified as discrepant requires no immediate compensatory

action nor have any impact on safety-related criteria. The remaining 86 requirements were judged to be not applicable.

3.0 DETAILED RESULTS

The ENVIRONMENTAL POLICY MANAGEMENT element [20.1] address the actions necessary to ensure the National Environmental Policy Act and the Washington State Environmental Policy Act are met for major actions. Both acts require that effects on the environment be considered in deciding on choices to accomplish a required or desired action. In general this element deals with actions that can only be performed by DOE or Washington State agencies. Inclusion of the requirements does inform Westinghouse personnel of the information needed by these agencies to comply with these acts. WHC-CM-7-5, "Environmental Compliance" appropriately describes how to address these acts.

The PERMITS element [20.2] address the requirements to obtain permits to ensure compliance with limits on discharge of harmful or potentially harmful substances to the air, water, or soil. The intent is protection of the environment, the public, and workers. WHC-CM-7-5 correctly describes what actions and information are needed to ensure compliance.

The ENVIRONMENTAL MONITORING, SURVEILLANCE AND INSPECTIONS element [20.3] address the actions necessary to establish a baseline of natural or external to Hanford impacts on the environment from radiological or hazardous substances. It also address those actions necessary to detect and quantify the amounts of these substances released to the environment and impacts, if any, on the environment, the public, and workers. This element includes those requirements necessary to ensure: 1) the potential for occurrence of fire is minimized; 2) on-site or off-site releases of radiological or other hazardous material as a result of fire do not threaten workers or public health and safety or the environment; and 3) incorporation of provisions for life safety and avoidance of undue hazards to workers and the public.

The ENVIRONMENTAL CONTROL STANDARDS element [20.4] identifies the general control standards to be used to prevent environmental impacts from radionuclides or hazardous substances. The requirements contained in DOE 5400.5 are implemented by PNNL. TFTP applies these requirements by use of WHC-EP-0498, "Unit Dose Calculation Methods and Summary of Facility Effluent Monitoring Plans." Also the 40 CFR 355, Part 30(e) AND WAC 173-303 requirements should be moved to the Emergency Planning element as these requirements deal with emergency situations.

The POLLUTION PREVENTION element [20.5] addresses the requirements to prevent pollution by minimizing the use of hazardous substances, preventing non-hazardous substances from becoming contaminated by

hazardous substances, and recycling whenever possible. The element requires the development of a pollution prevention plan and specifies what must be addressed in the plan.

The RECORD KEEPING, REPORTS AND NOTIFICATIONS ELEMENT [20.6] address the requirements for routine and non-routine reports to regulatory agencies on inventories of, or release of, radionuclides and hazardous substances. Requirements for records necessary to support these reports, inspections, monitoring, permits, and surveillance are also identified.

Table 3.1 Environmental Protection S/RID Status contains five columns: the first shows the Functional Area sub-element numerical identifier, the second shows the sub-element description, the third, fourth, and fifth show the sub-element requirement status as being: "incorporated" (Inc), "not applicable" (N/A), or "discrepant" (Dis) respectively. Any items marked Dis are discussed in Section 4.0 Discrepancies.

Table 3.1 Environmental Protection S/RID Status

Element Identifier	Element Description	Inc	N/A	Dis
20.1	Environmental Policy Management	4	12	
20.2	Permits	55	20	
20.3	Environmental Monitoring, Surveillance and Inspections	98	12	
20.4	Environmental Control Standards	25	23	
20.5	Pollution Prevention	6	1	
20.6	Record keeping, Reports and Notifications	66	18	1

4.0 DISCREPANCIES

The following describes the discrepancies listed in Table 3.1. For each discrepancy, there is a stated plan of action for resolution. In addition, the priority of the resolution action is identified. Priorities have been grouped into three categories: Immediate, Prompt, or Routine actions. Immediate actions are those necessary to resolve a safety-related compliance issue and would be resolved within 2-4 weeks. Prompt actions are those that are administrative in nature but do affect the ability of WHC to demonstrate compliance with regulatory requirements and would be completed within 12-16 weeks. Routine actions are those

actions necessary to update forms or procedures (e.g., include new report distribution requirements) and would be completed at the next procedure revision cycle.

Sub-element 20.6.3 Underground Storage Tanks

WAC 173-360 Section 370 requires that various petroleum underground storage tank services be provided by licensed personnel. WHC-CM-7-5 does not specify that licensed personnel be used, however contracts for these services do specify these requirements.

Routine - Incorporate requirements into WHC-CM-7-5, Section 3.7.2.2
