HOW TO OBTAIN EIA PRODUCTS AND SERVICES

For further information on any of the following services, or for answers to energy information questions, please contact EIA's National Energy Information Center:

National Energy Information Center (NEIC)	(202) 586-8800
Energy Information Administration	(202) 586-0727 (fax)
Forrestal Building, Room 1F-048	TTY: (202) 586-1181
Washington, DC 20585	E-mail: infoctr@eia.doe.gov

Electronic Products and Services

EIA's Internet Site Services offer nearly all EIA publications. Users can view and download selected pages or entire reports, search for information, download EIA data and analysis applications, and find out about new EIA information products and services.

World Wide Web: <http://www.eia.doe.gov> Gopher: <gopher://gopher.eia.doe.gov> FTP: <ftp://ftp.eia.doe.gov>

EIA also offers a *Netserve* service for EIA press releases and other short documents. Sign up on the EIA World Wide Web site.

EIA's CD-ROM, *Energy InfoDisc*, contains most EIA publications, several databases, and an energy forecasting model. The *Energy InfoDisc*, produced quarterly, is available for a fee from STAT-USA, Department of Commerce, 1-800-STAT-USA.

The Comprehensive Oil and Gas Information Sources (COGIS), a bulletin board service, contains data files from most of EIA's oil- and gas-related reports. It is available for a fee from STAT-USA, on 1-800-STAT-USA.

EIA's Electronic Publishing System (EPUB) bulletin board contains data files, directories, and forecasts from most EIA reports. It can be accessed free of charge by dialing (202) 586-2557.

Many of EIA's data files and modeling programs are available for sale on diskette, tape, or cartridge, through either the National Technical Information Service or the Office of Scientific and Technical Information, Department of Energy. Contact NEIC for information on specific products, sources, and media, and ordering instructions.

Printed Publications

EIA directories are available free of charge from NEIC. Recent periodicals and one-time reports are available from the Government Printing Office. Older reports are available from the National Technical Information Service:

Superintendent of Documents	National Technical Information Service
U.S. Government Printing Office	U.S. Department of Commerce
P.O. Box 371954	Springfield, VA 22161
Pittsburgh, PA 15250-7954	5285 Port Royal Road
(202) 512-1800; (202)-512-2250 (fax)	(703) 487-4650; (703) 321-8547 (fax)

Released for Printing: May 29, 1997

International Petroleum Statistics Report

May 1997

Energy Information Administration
Office of Energy Markets and End Use
U.S. Department of Energy
Washington, DC 20585

This report was prepared by the Energy Information Administration, the independent statistical and analytical agency within the Department of Energy. The information contained herein should not be construed as advocating or reflecting any policy position of the Department of Energy or any other organization.

HH
DISTRIBUTION OF THIS DOCUMENT IS UNLIMITED

Preface

The International Petroleum Statistics Report is a monthly publication that provides current international oil data. This report is published for the use of Members of Congress, Federal agencies, State agencies, industry, and the general public. Publication of this report is in keeping with responsibilities given the Energy Information Administration in Public Law 95-91 (Section 205(a)(2)) that states:

"The Administrator shall be responsible for carrying out a central, comprehensive, and unified energy data and information program which will collect, evaluate, assemble, analyze and disseminate data and information ..."

The International Petroleum Statistics Report presents data on international oil production, demand, imports, and stocks. The report has four sections. Section 1 contains time series data on world oil production, and on oil demand and stocks in the Organization for Economic Cooperation and Development (OECD). This section contains annual data beginning in 1985, and monthly data for the most recent two years. Section 2 presents an oil supply/demand balance for the world. This balance is presented in quarterly intervals for the most recent two years. Section 3 presents data on oil imports by OECD countries. This section contains annual data for the most recent year, quarterly data for the most recent two quarters, and monthly data for the most recent twelve months. Section 4 presents annual time series data on world oil production and oil stocks, demand, and trade in OECD countries. World oil production and OECD demand data are for the years 1970 through 1995; OECD stocks from 1973 through 1995; and OECD trade from 1985 through 1995.

Data for the United States are developed by the Energy Information Administration's (EIA) Office of Oil and Gas. Data for other countries are derived largely from published sources, including International Energy Agency publications, the EIA International Energy Annual, and the trade press. (See sources after each section.) All data are reviewed by the International Statistics Branch of EIA. All data have been converted to units of measurement familiar to the American public. Definitions of oil production and consumption are consistent with other EIA publications.

General information about this publication may be obtained from W. Calvin Kilgore, Director, Office of Energy Markets and End Use, (202) 586-1617, and from Mark E. Rodekohr, Director, Energy Markets and Contingency Information Division, (202) 586-1130. Detailed questions and comments concerning the contents of the International Petroleum Statistics Report may be directed to Louis D. DeMouy, Chief, International Statistics Branch, (202) 586-6557; Michael J. Maloney (202) 586-9415, Patricia A. Smith (202) 586-6925, H. Vicky McLaine (202) 586-9412 or to Michael J. Grillot (202) 586-6577; Oil Market Chronology - Douglas MacIntyre (202) 586-1831.

Notes: As of December 31, 1994, Gabon withdrew its membership in the Organization of Petroleum Exporting Countries (OPEC). For consistency, Gabon is excluded in the historical series of OPEC totals.

Historical revisions reflect changes to data that were published in the International Energy Annual 1995, which is also available on the EIA Home Page (<http://www.eia.doe.gov/ia95/contenta.html>).

Oil Market Chronology -- April 1997

The following chronology lists international events of potential significance for world petroleum markets. Sources include: Dow Jones (DJ), New York Times (NYT), Reuters (REUT), U.S. Department of Energy press releases (DOE), the Wall Street Journal (WSJ), and the Washington Post (WP).

- April 1** A Shell spokesman confirms the company will declare force majeure at its Nigerian Bonny terminal due to local protests which disrupted 210,000 barrels per day of the company's oil production. Although the protests have ended and production is returning to normal, the backlog is temporarily delaying loadings by 3 days. (DJ)
- Enron begins producing natural gas from the Tapti field offshore India. Production is expected to reach 150 million cubic feet per day by the end of 1997 and continue for 25 years. (DJ)
- April 2** The U.S. Department of Energy announces plans to offer two types of interest in the sale of the government portion of the giant Elk Hills oil and gas field near Bakersfield, California: a single "operating working interest" (representing about three quarters of the government's interest) and separate "non-operating working interests" (each representing 2 percent of the government's interests). The sale, scheduled to be completed by February 10, 1998, is one of the largest divestitures of federal property in the nation's history. Current ownership is divided between the U.S. government and Chevron. (DOE)
- The Potential Gas Committee of the American Gas Association estimates that 1996 U.S. natural gas reserves had risen 6 percent from 1994 -- to 1,039 trillion cubic feet (representing about 55 times the current yearly U.S. production levels). The estimate includes: 165.1 trillion cubic feet of proven gas reserves as estimated by the U.S. Department of Energy; 190.9 trillion cubic feet of probable gas reserves from current fields; 240.7 trillion cubic feet of possible gas reserves from new fields; 309.8 trillion cubic feet of speculative gas reserves from frontier fields; 13.4 trillion cubic feet of probable coalbed-methane reserves; 36.3 trillion cubic feet of possible coalbed-methane reserves; and 82.6 trillion cubic feet of speculative coalbed-methane reserves. The committee also presents a higher estimate (1,232 trillion cubic feet) calculated using the statistically aggregated mean values for reserves rather than its traditional methodology. (DJ)
- EssoProduction Malaysia announces the start-up of production and sales from the Lawit gas field (150 miles offshore Malaysia), whose production is expected to reach about 450 million cubic feet per day upon completion of development drilling later this year. The company plans to install compression facilities in 1998 to achieve design capacity of 700 million cubic feet a day. (DJ)
- April 3** Colombia Gas System announces plans to build a \$600 million natural gas pipeline to carry Canadian natural gas to U.S. markets in the northeast. The 380-mile Millennium Pipeline would carry at least 650 million cubic feet per day beginning in early 1999. (NYT)
- TransCanada PipeLines and Northern States Power Co. announce plans to build a \$1 billion pipeline to pump natural gas from Alberta, Canada to the U.S. Midwest. The 800-mile Viking Voyageur Gas Transmission project would carry up to 1.2 billion cubic feet per day of natural gas through Minnesota, Wisconsin, and Illinois. (WSJ)
- April 7** Express Pipeline begins shipments of Canadian crude oil from Hardisty, Alberta to the Platte Pipe Line in Casper, Wyoming. The 785-mile pipeline gives Canadian producers access to U.S. markets in the Rocky Mountain and Midwest regions. Initial design capacity is 172,000 barrels per day. (DJ)
- April 8** Nigeria's military government approves the first gasoline imports since September 1996, in response to a 2-week-old fuels shortage. A dusk-to-dawn curfew in response to communal troubles near the country's Warri refinery is impeding fuel deliveries. (WP)
- Turkmenistan President Saparmurat Niyazov names Deputy Prime Minister Batyr Sardjaev as the new oil and gas minister. (REUT)

- April 9** Romanian Prime Minister Victor Ciorbea announces plans to close 10 large state companies in the next few weeks, including two oil refineries -- Petromidia Navodari in the Black Sea port of Constanza and the Darmanesti Rafinaria in Bacau. The closures are expected to reduce 1997 refining capacity by about 47 percent, to about 363,000 barrels per day. (DJ)
- April 11** China and Vietnam conclude three days of expert-level talks with no resolution over rights to potentially oil-rich waters claimed by both countries in the South China Sea. Earlier in the week, a Chinese oil rig left an offshore area between Vietnam's north coast and China's Hainan Island after completing one month of exploration and drilling. (DJ)
- April 14** Australia's minister for resources and energy, Warwick Parer, announces the release of 34 new offshore oil and gas exploration areas -- including 11 areas adjacent to the Zone of Cooperation between Australia and Indonesia in the Timor Sea and 6 areas in the Browse Basin offshore Western Australia. The minister notes that this action "is in keeping with the government's strategy to encourage more intensive exploration in Australia's vast continental shelf." (DJ)
- An Iraqi Oil Ministry official reports that Iraq expects to earn more than \$80 billion from its contract with Russia for the development of the West Qurna oil field in southern Iraq. The contract, which was initiated in March and approved by Iraq's National Assembly on April 13, calls for 560 wells which will produce 4.4 billion barrels over 23 years. According to the official, the part of the field being developed with Russia has 11.5 billion barrels in reserves and the entire West Qurna field has reserves of 38 billion barrels. The official states that production will begin "soon" (initially about 250,000 barrels per day, increasing to 600,000 barrels per day). (DJ)
- April 17** Royal Dutch/Shell Group estimates Nigeria's proven oil reserves rose to 24 billion barrels at the end of 1996 (8.3 percent higher than the 22 billion barrels estimated in 1995) and reports that Nigerian production could reach 3 million barrels per day by 2002 (and 4 million barrels per day by 2010) with an annual investment of \$4-\$6 billion (DJ)
- April 18** An annual ranking of the world's top oil companies by the Price Waterhouse World Energy Group and *Petroleum Intelligence Weekly* indicates state-owned oil companies continue to dominate the upstream sector of the world oil industry and are beginning to catch up to the major publicly traded companies in the downstream sector. Based on 1995 data, state-owned companies accounted for 17 of the top 20 companies in terms of oil reserves, 8 of the top 10 companies in terms of oil production, and 4 of the top 10 companies in terms of refining capacity. However, 4 state-owned companies (Petroleos de Venezuela S.A., Saudi Aramco, Indonesia's Pertamina, and Kuwait's KPC) increased their refining capacity by more than 1 million barrels per day in the 1993-1995 period, accounting for about half of the net global increase in refining capacity during that time. (DJ)
- April 19** A senior Iranian oil industry official reports that Iran and Russia signed three agreements on cooperation in the oil and gas industries: 1) an agreement whereby Russia's Gazprom would invest directly in joint operations in the development of Iranian gas fields, production capacity, refining, liquidation, and transport of natural gas and associated extraction industries in the Persian Gulf and other areas; 2) an agreement between a newly formed Russian consortium and the National Iranian Oil company (NIOC) for drilling in Iran's continental shelf; and 3) an agreement between NIOC and the oil company of Tatarstan for cooperation in pre-extraction and post-extraction industries. (DJ)
- April 21** Occidental Petroleum reports that Colombia's main oil pipeline (Cano Limon-Covenas) was bombed 21 times in the first quarter of 1997 (compared with a total of 45 attacks in all of 1996) and that the leftist National Liberation Army (ELN) is growing increasingly active in the region near its operations. Occidental operates the Cano Limon field in partnership with Ecopetrol (Colombia's national oil company) and Shell. As a result of the repeated attacks, Occidental plans to spend \$20 million on security in 1997, including a cooperation contract with the Colombian armed forces. (DJ)

- April 22** U.S. Secretary of State Madeline Albright announces sanctions to bar new U.S. investment in Burma (also known as Myanmar) because of the continued oppression of opposition activists by the country's military rulers. About 20 U.S. companies have direct investment or employees in Burma, and the eight largest investors are oil or mining companies: Atlantic Richfield, Baker Hughes, East Asia Gold, Halliburton, McDermott International, Newmont Mining, Texaco Inc., and Unocal. U.S. companies have a total of \$240 million in investment in Burma. Unocal, the single largest investor, is a partner in a \$1.2 billion joint venture led by Total of France to develop several offshore blocks with significant natural gas reserves. (DJ)
- April 23** Pakistan's government approves a plan to privatize 13 state-owned companies (including its electrical and natural-gas holdings) over the next 6 months. (DJ)
- April 24** Russian President Boris Yeltsin names reformist First Deputy Prime Minister Boris Nemtsov to the additional post of minister of fuel and energy. Nemtsov, who has called for radical liberalization of the energy sector, replaces Pyotr Rodionov, who resigned in March. (DJ)
- Norwegian and British authorities agree on a natural gas treaty covering the Frigg pipeline running from the North Sea to St. Fergus in northern Scotland, reopening the way for exports of Norwegian gas to the United Kingdom and Ireland. Disagreement between the two governments on the use of the pipeline had previously stopped Norway from making new gas sales. The Frigg pipeline currently transports 230 billion cubic feet of gas per year, but capacity can be boosted to 424 billion cubic feet per year. In addition, the two governments reached a framework agreement on the use of connector pipelines to facilitate the use of new oil and gas pipelines which tie installations together on both sides of the British and Norwegian gas sectors. (DJ)
- April 25** Shell Nigeria declares force majeure on loadings of Forcados crude oil, effective April 29-May 20, due to the loss of about 90,000 barrels per day from the usual daily production of 450,000-460,000 barrels per day of Forcados crude oil production. The disruption is the result of an escalation of fighting between local communities in the Warri region of Nigeria. (DJ)
- Russian President Boris Yeltsin signs a decree in support of the Caspian Pipeline Consortium (CPC). The decree gives CPC a 16-year special exemption from rules mandating it must convert foreign-exchange revenues into rubles as part of a package of support for the venture -- on condition that the company reinvest its revenues in the project. The CPC is a \$2 billion joint project of the governments of Russia, Kazakstan, and Oman and a group of private oil companies set up to build a 932-mile pipeline (planned capacity is 1.5 million barrels per day) from Kazak oilfields on the eastern shore of the Caspian Sea across southern Russia to an export terminal near the Black Sea port of Novorossisk. (DJ)
- April 28** The *Middle East Economic Survey* reports that Iraq's State Oil Marketing Organization (SOMO) is continuing to hold negotiations with international oil companies, despite the fact that the 50 sales contracts approved so far have reached the \$2 billion target for the first 180 days under the oil-for-food agreement with the United Nations. According to United Nations statistics, Iraq has sold 121.164 million barrels (averaging 673,000 barrels per day for the 6-month period ending June 7) worth a projected \$2.142 billion (including \$142 million in pipeline fees for Turkey). (DJ)
- Russian President Boris Yeltsin signs a decree ordering sweeping reforms in the country's natural gas, electric, rail and telecommunications sectors aimed at reducing rates and stimulating investment. At a news conference announcing the decree, First Deputy Prime Minister Boris Nemtsov explains that the state will retain control over these key natural monopolies and will not break up their national supply networks. With respect to natural gas, the government will retain its 40-percent equity stake in the monopoly RAO Gazprom indefinitely and work to strengthen Gazprom's international position and boost its share price. Gazprom will lose its monopoly right to develop new gas deposits (which instead will be allocated at tenders open to competitors), will offer equal access and competitive rates on its national pipeline network to all producers (giving oil and other companies the opportunity to compete in the gas business), and will be required to ensure transparency of its finances with detailed annual financial reports. (DJ)

- April 28** Turkey signs a \$12 billion agreement to boost its imports of Russian natural gas (from the current level of 212 billion cubic feet) by 18 billion cubic feet in 1997, 71 billion cubic feet in 1998, 106 billion cubic feet in 1999, and 159 billion cubic feet in 2000. By the year 2001, Turkey's total gas purchases from Russia will reach 494 billion cubic feet per year. The gas will be shipped through the existing pipeline, which will be expanded by two new joint ventures which will invest \$1.5 billion to add compressor stations and new stretches of pipe to double the capacity. (DJ)
- April 29** The U.S. Department of Energy begins soliciting public comment regarding the future of the Strategic Petroleum Reserve (SPR), which will be incorporated into a Statement of Administration Policy on the SPR to be issued in September 1997. (DJ)
- In a report to Congress, the U.S. State Department estimates that the Caspian Sea basin contains proven recoverable oil reserves of 15.6 billion barrels and possible reserves of an additional 163 billion barrels (compared with more generally used estimates of 27.5 billion barrels of proven oil reserves and an additional 40-60 billion barrels of estimated reserves). According to the report, Kazakhstan has the largest reserves in the region (10 billion barrels proven, 85 billion barrels possible), followed by Turkmenistan (1.5 billion barrels proven, 32 billion barrels possible), Azerbaijan (3.6 billion barrels proven, 27 billion barrels possible), Iran (no proven reserves, 12 billion barrels possible) and Russia (no proven reserves, 5 billion barrels possible). (WSJ)
- April 30** For the fourth year in a row, three Organization of Petroleum Exporting Countries (Iran, Iraq, and Libya) are named on the U.S. State Department's list of the top sponsors of international terrorism (other countries on the list are Cuba, North Korea, Sudan and Syria). Appearance on the list automatically triggers U.S. government sanctions, including: a ban on military sales and aid; controls over export of dual-use items that can be used for either military or civilian purposes; prohibitions on economic aid, and miscellaneous financial and other sanctions. (DJ)
- Shell Nigeria reports that four out of the five flow stations that had shut in 80,000 barrels per day of Forcados crude oil production in the Western Delta area of Nigeria since April 25 have been re-opened. The Warri River flow station is the only one that is still shut-in. (DJ)

¹/ Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1980 through July 1990 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia. In March 1997, Neutral Zone production by both Kuwait and Saudi Arabia totaled about 530 thousand barrels per day.

Notes: *OPEC=Organization of Petroleum Exporting Countries. *Monthly data are often preliminary and also may not average to the annual totals due to rounding.

Sources: See end of Section 1.

^{1/} Other is a calculated total derived from the difference between "World" and the sum of production in "Total OPEC" (Table 1.1a) and all other countries listed (Tables 1.1b and 1.1c). The total "North Sea" is not subtracted from the world total, though Norway and the United Kingdom have been subtracted.

-- = Not applicable. R=Revised data. E=Estimated. PE=Preliminary estimate. RE=Revised estimate.

Notes: *Monthly data are often preliminary and also may not average to the annual totals due to rounding. See Section 4 for historical series.

^{1/} Supply includes production of crude oil (including lease condensate), natural gas plant liquids, other hydrogen and hydrocarbons for refinery feedstocks, refinery gains, alcohol, and liquids produced from coal and other sources.

^{2/} U.S. geographical coverage is the 50 States and the District of Columbia. See Explanatory Note 1 in Appendix B.

^{3/} The term Demand is used interchangeably with the terms Consumption and Petroleum Products Supplied. See Appendix C for definition.

^{4/} Stock draws are positive numbers, stock additions are negative numbers.

^{5/} This is computed as Total Demand minus the sum of Total Supply and Total Reported Stock Draw.

Note: Sum of components may not equal total due to rounding.

1/ The data for Germany are for the unified Germany, i.e., the former East Germany and West Germany.

2/ "Other Europe" consists of Austria, Belgium, Denmark, Finland, Greece, Iceland, Ireland, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, and Turkey.

3/ U.S. geographic coverage is the 50 States and District of Columbia.

4/ "Other" consists of Australia, New Zealand, and U. S. Territories.

5/ OPEC=Organization of Petroleum Exporting Countries. See Appendix A for countries in this group.

6/ The Persian Gulf countries are all members of OPEC, except for Bahrain.

Notes: *Imports include crude oil, natural gas liquids, and refined products, and are on a direct basis. *OECD=Organization for Economic Cooperation and Development. See Appendix A for countries in this group. *Negative numbers represent net exports.

*A dash (-) indicates no trade. *Zeros (.000) indicate net imports of less than 0.0005 million barrels per day. *See Section 4 for annual data.

Sources: See end of Section 3.

^{1/} Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1970 through 1989 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia.

P=Preliminary.

Notes: •OPEC=Organization of Petroleum Exporting Countries.

¹/ Other is a calculated total derived from the difference between "World" and the sum of production in "Total OPEC" (Table 1.1a) and all other countries listed (Tables 1.1b and 1.1c). The total "North Sea" is not subtracted from the world total, though Norway and the United Kingdom have been subtracted.

-- = Not applicable. P=Preliminary. R=Revised data.

^{1/} Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1980 through July 1990 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia.

^{1/} Data through December 1990 are for the former West Germany. Beginning with January 1991, the data for Germany are for the unified Germany, i.e., the former East Germany and West Germany.

^{2/} "OECD Europe" consists of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom.

^{3/} U.S. geographic coverage is the 50 States and the District of Columbia. In the United States in January 1975, 1981, and 1983, numerous respondents were added to bulk terminal and pipeline surveys affecting subsequent stocks reported. Using the new basis, the end-of-year U.S. stocks, in million barrels, would have been 1,121 in 1974, 1,425 in 1980, and 1,461 in 1982.

^{4/} "Other" consists of Australia, New Zealand, and the U.S. Territories.

P=Preliminary. R=Revised data.

Note: Oil Stocks - See Explanatory Note 2 in Appendix B.

^{1/} Data through 1990 are for the former West Germany. Beginning with January 1991, the data for Germany are for the unified Germany, i.e., the former East Germany and West Germany.

^{2/} "OECD Europe" consists of Austria, Belgium, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom.

^{3/} U.S. geographic coverage is the 50 States and the District of Columbia.

^{4/} "Other" consists of Australia, New Zealand, and the U.S. Territories.

F=Preliminary. R=Revised data. --=Not Applicable.

Note: The term Demand is used interchangeably with Consumption and Petroleum Products Supplied. See Appendix C for definition.

Appendix A

Organizational and Geographical Definitions

Appendix A. Organizational and Geographical Definitions

International Energy Agency (IEA) countries are: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Japan, Luxembourg, Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States.

Organization for Economic Cooperation and Development (OECD) countries are: Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, South Korea, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States. Total OECD includes the United States Territories (Guam, Puerto Rico, and the U.S. Virgin Islands). Total OECD excludes data for Czech Republic, Hungary, South Korea, and Mexico which are not yet available.

OECD Europe countries are: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Poland, Portugal, Spain, Sweden, Switzerland, Turkey, and United Kingdom. OECD Europe excludes data for Czech Republic, Hungary, and Poland which are not yet available.

Organization of Petroleum Exporting Countries (OPEC) members are: Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela. As of December 31, 1992, Ecuador withdrew its membership in OPEC, and as of December 31, 1994, Gabon withdrew its membership. For consistency, Ecuador and Gabon are excluded in the historical series of OPEC totals.

Arab members of OPEC are: Algeria, Iraq, Kuwait, Libya, Qatar, Saudi Arabia and the United Arab Emirates.

Organization of Arab Petroleum Exporting Countries (OAPEC) are: Algeria, Bahrain, Egypt, Iraq, Kuwait, Libya, Neutral Zone, Qatar, Saudi Arabia, Syria, Tunisia, and the United Arab Emirates. In April 1979 Egypt was suspended from OAPEC membership. In May 1989 Egypt rejoined OAPEC. For consistency, Egypt is included in the historical series of the OAPEC totals.

Persian (Arabian) Gulf countries are: Bahrain, Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Arab Emirates.

The term "Former USSR" is being used in the International Petroleum Statistics Report as a purely geographical expression, referring to the Commonwealth of Independent States (CIS), Georgia, and the three Baltic States (Estonia, Latvia, and Lithuania).

Appendix B

Explanatory Notes

Appendix B. Explanatory Notes

Note 1: World Oil Supply

Supply includes production of crude oil (including lease condensate), natural gas plant liquids, other hydrogen and hydrocarbons for refinery feedstocks, refinery gain, alcohol, and liquids produced from coal and other sources. Beginning in 1993, U.S. data includes fuel ethanol blended into finished motor gasoline and oxygenate production from merchant MTBE plants.

Note 2: Oil Stocks

The International Energy Agency (IEA) assembles and reports total oil stock data for the member countries of the Organization for Economic Cooperation and Development (OECD). Oil stocks include crude oil (including strategic reserves), unfinished oils, natural gas plant liquids, and refined petroleum products. In its report titled Quarterly Oil Statistics and Energy Balances of OECD Countries, the IEA defines oil stocks as follows: "All non-military stocks held by importers (including all final consumers directly), refiners, Governments, major non-importing final consumers eligible under IEA/OECD commitments and by foreign entities in the following facilities: bulk terminals, refinery tanks, pipeline tankage, barges, intercoastal tankers (when port of departure and destination are in the reporting country), tankers in port (to the extent that their cargo is to be unloaded in the reporting country), and inland ship bunkers. Oil is reported regardless of the ownership of such storage facilities." IEA data exclude "oil held in pipelines, rail and truck tank cars, sea-going ships' bunkers, service stations, retail stores and tankers at sea." Also the IEA defines the United States to be the 50 States and the District of Columbia, and the U.S. Territories (Guam, Puerto Rico, and the U.S. Virgin Islands). The Energy Information Administration (EIA) does not include the United States Territories in its statistical definition of the United States. Further, the EIA includes oil in oil pipelines as part of its stock data. Tables 1.5, 1.6, 2.3, and 4.4 include oil stocks for the United States according to EIA definitions. Using IEA definitions, at the end of September 1996 United States (including territories) oil stocks totaled 1,419 million barrels.

Note 3: A Change to the Oil Balance in Section 2.

Prior to August 1992, Section 2 of the International Petroleum Statistics Report presented a balance of oil supply, demand, and stock change for the Market Economies, at quarterly time intervals. The communist countries, or Centrally Planned Economies (CPEs) were not included in the balance, mainly because good quarterly data for oil demand in these countries were not available. Net imports from the CPEs were included in the balance as part of total Market Economies supply. At present, the former Soviet Union and most of the countries of Eastern Europe are in transition from communism to market economies; because of this there are no longer good political or economic reasons to publish an oil balance only for the countries that have traditionally been market economies. Beginning with the August 1992 edition, Section 2 of the International Petroleum Statistics Report was changed from a Market Economies oil balance to a world oil balance.

The main data issues related to this change may be summarized as follows:

Supply Data. Monthly oil supply data are available for all countries of the world. These data are used to generate Tables 1.1 to 1.4; they were used to expand the Section 2 supply table (Table 2.2) to the whole world.

Demand Data. EIA has now developed quarterly figures for world oil demand, including demand in the former CPEs; these are published in Table 4 of EIA's Short-Term Energy Outlook. The procedures involved in developing quarterly world demand numbers may be summarized as follows:

Complete monthly data are available for the 24 OECD countries. Annual demand data for all countries (about 200 countries) are presented in EIA's International Energy Annual. In 1993, the OECD accounted for about three-fifths of total world demand, the 25 largest consumers outside of the OECD accounted for about one-third of the world total, and the remaining countries (about 150 countries) accounted for less than one-tenth of the total. The key problem, therefore, is to develop good figures for the 25 largest consumers outside the OECD.

Of these 25 countries, by far the largest consumer is Russia, which in 1993 accounted for about one-sixth of the demand in the group of 25. The next largest consumer is China, which in 1993 accounted for about one-seventh of the demand in the group. Thus in 1993 Russia and China accounted for one-third of the demand in the group of 25. For these 2 countries, data are available on oil production and net exports. The demand numbers shown in Section 2 are computed as production minus net exports. This is the same procedure used in the EIA Short-Term Energy Outlook, by the International Energy Agency in their Monthly Oil Market Report, and in other respected publications that deal with international oil markets. Note, however, that this method of computing demand ignores both refinery gain and stock changes.

For other major consuming countries outside of the OECD, quarterly demand data are developed based upon the latest available annual data, analytic judgment about current trends, and some seasonal adjustments. These are the same procedures used for the Short-Term Energy Outlook.

Stocks Data. Reliable stocks data are available for the OECD countries. Estimates of stocks for export and afloat, and of commercial floating stocks, are available. (See sources at the end of Section 2.)

For on-land stocks outside the OECD, there is little reliable data. Most estimates of on-land stocks outside the OECD are based on the theory that stocks are approximately equal to some number of days of demand. Demand figures (which themselves involve some degree of estimation) are then used to compute estimates of stock levels.

In the International Petroleum Statistics Report, it had been the practice for some time to estimate that on-land stocks in the traditional market economies outside of the OECD were equal to 55 days of demand. This was acceptable, mainly because the rule was used only to estimate a relatively small part of total stocks (about 16 percent).

When Section 2 was converted from a Market Economies oil balance to a world oil balance, there were important changes in the conditions that made it reasonable to estimate on-land stocks outside of the OECD using the rule of 55 days of demand. When the CPEs are included, the stocks that must be estimated are a considerably larger part of the total. In 1990, total oil demand in the former CPEs was more than 80 percent as large as demand in all of the non-OECD traditional market economies. Thus the quantity of stocks that would have to be estimated using a 55-day rule would nearly double, and the estimated components of stock levels and stock changes would become relatively large parts of the total. One consequence of this is that the statistical discrepancy (as shown in Table 2.1) would become less useful as an indicator of the overall consistency of the data. The statistical discrepancy is computed from supply, demand, and stock change. If a large part of the stock change is estimated, then the statistical discrepancy loses much of its significance.

As already noted, quarterly demands in the former Soviet Union and in China are computed as production minus net exports. This computation implicitly assumes a zero stock change. Demand in the former Soviet Union is falling. If we were to use a 55-day rule to compute stock levels, falling demand would imply falling stock levels. This would contradict the assumption of zero stock change which was used in computing demand.

In view of all this, the following approach has been adopted. Table 2.3 now shows levels of stocks for the OECD countries, levels of stocks for export and afloat, and levels of commercial floating storage. Stock changes based on these stock levels are shown in Table 2.1. At this time, no other stock levels are shown. Table 2.1 now has a single line labelled "Other Stock Draw and Statistical Discrepancy", which contains the computed values needed to make the table balance.

It may become possible in the future to obtain reliable information on certain categories of on-land stocks outside the OECD. If such data become available, they will be added to Table 2.3, and the corresponding stock change information will be added to Table 2.1.

Changes in Formats and Sign Conventions. There were several changes in Section 2 to make the International Petroleum Statistics Report more consistent with other EIA publications, especially with the Short-Term Energy Outlook. The numbers were changed from 1 decimal place to 2 decimal places. The word "consumption", as used before August 1992, was changed to "demand". The sign convention for stock changes in Table 2.1 was changed. Stock draws are now indicated by positive numbers, and stock additions are indicated by negative numbers. Table 2.1 also uses a new sign convention for the line labelled "Other Stock Draw and Statistical Discrepancy". The values in this line are now computed as Total Demand minus the sum of Total Supply and Total Reported Stock Draw. This is the reverse of the sign convention used before August 1992.

Summary. Section 2 was expanded from a Market Economies oil balance to a world oil balance. Supply data are tracked for all producing countries. Demand data are tracked for the 24 OECD countries, and for 25 large consumers outside of the OECD. Demand for the remaining countries (less than 10 percent of total demand) is estimated, for years that are not yet available in the International Energy Annual. The stock levels in these tables are based on reported data for the OECD and for stocks at sea. The line in Table 2.1 labelled "Other Stock Draw and Statistical Discrepancy" is a balancing item.

Appendix C

Glossary

Appendix C. Glossary

Alcohol. The family name of a group of organic chemical compounds composed of carbon, hydrogen, and oxygen. The molecules in the series vary in chain length and are composed of a hydrocarbon plus a hydroxyl group. Alcohol includes methanol and ethanol.

Demand (Consumption/Petroleum Products Supplied). Total petroleum products supplied is the sum of all petroleum products supplied. For each product, the amount supplied is calculated by summing production, crude oil burned directly, imports, and net withdrawals from primary stocks and subtracting exports.

Crude Oil. A mixture of hydrocarbons that existed in liquid phase in underground reservoirs and remains liquid at atmospheric pressure after passing through surface-separating facilities. Crude oil production is measured at the wellhead and includes lease condensate.

Government-Owned Stocks. Oil stocks owned by the national government and held for national security. In the United States these stocks are known as the Strategic Petroleum Reserve.

Lease Condensate. A liquid recovered from natural gas at the well or at small gas/oil separators in the field. Consists primarily of pentanes and heavier hydrocarbons (also called field condensate).

Natural Gas Plant Liquids. Products obtained from processing natural gas at natural gas processing plants, including natural gasoline plants, cycling plants, and fractionators. Products obtained include ethane, liquefied petroleum gases, (propanes, butane, propane-butane mixtures, and ethane-propane mixtures), isopentane, natural gasoline, unfractionated streams, plant condensate, and other minor quantities of finished products, such as motor gasoline, special naphthas, jet fuel, kerosene, and distillate fuel oil.

Oil Stocks. Oil stocks include crude oil (including strategic reserves), unfinished oils, natural gas plant liquids, and refined petroleum products. See Explanatory Note 2.

Other Hydrocarbons. Other materials processed at refineries. Includes coal tar derivatives, hydrogen, gilsonite, and natural gas received by the refinery for reforming into hydrogen.

Oxygenates. Any substance which, when added to gasoline, increases the amount of oxygen in that gasoline blend. They include: Fuel Ethanol, Methanol, and MTBE (Methyl tertiary butyl ether).

Petroleum Products. Petroleum products are obtained from the processing of crude oil (including lease condensate), natural gas, and other hydrocarbon compounds. Petroleum products include unfinished oils, aviation gasoline, motor gasoline, naphtha-type jet fuel, kerosene-type jet fuel, kerosene, distillate fuel oil, residual fuel oil, ethane, liquefied petroleum gases, petrochemical feedstocks, special naphthas, lubricants, paraffin wax, petroleum coke, asphalt road oil, still gas, and other miscellaneous products.

Processing Gain. The amount by which the total volume of refinery output is greater than the volume of input for given period of time. The processing gain arises when crude oil and other hydrocarbons are processed into products that are, on average, less dense than the input.

Processing Loss. The amount by which the total volume of refinery output is less than the volume of input for given period of time. The processing loss arises when crude oil and other hydrocarbons are processed into products that are, on average, more dense than the input.

Appendix D

Estimation Procedures

Appendix D. Estimation Procedures

Estimation procedures are used for demand numbers in many of the countries outside of the OECD, in cases where data from EIA's International Energy Annual are not yet available. Demand numbers for 1995 and earlier years, for all countries, may be found in EIA's International Energy Annual 1995, published in December 1996, which is the most recent published edition of the International Energy Annual. EIA's WORLD ENERGY database contains final demand data for all countries of the world for 1994, and preliminary demand data for all countries for 1995. Instructions for downloading this database may be found on EIA's home page (<http://www.eia.doe.gov/emeu/world/contents.html>). The status of the demand numbers shown in Section 2 of this current International Petroleum Statistics Report may be summarized as follows.

The OECD demand numbers are, as usual, based on the latest Quarterly Oil Statistics and Monthly Oil Statistics tapes from the International Energy Agency.

For countries outside of the OECD, the following approach is used. The numbers for 1994 and earlier years match the demand numbers in the WORLD ENERGY database on EIA's home page. Numbers for 1995 forward are the best available EIA estimates, based upon the best annual data currently available, analytic judgment about current trends, and some seasonal adjustments. These are the same numbers that appear in the international oil balance table in EIA's Short-Term Energy Outlook.

The two largest non-OECD oil consumers are the former Soviet Union and China. For these two countries, published data are available on production and net exports. Demand is computed as production minus net exports. This is the same approach used in the Short-Term Energy Outlook, by the International Energy Agency in their Monthly Oil Market Report, and in other major publications dealing with international oil data. Note, however, that because of this computation, the demand numbers for the former Soviet Union and China implicitly exclude stock draw and refinery gain.
