ENGINEERING CHANGE NOTICE CONTINUATION SHEET

Page 3 of 3

ECN 647695

Date 8/3/98

Move *H-2-70695 sheet 3 from Support to Essential for the 204-AR Essential Drawing List and add the words "Essential" to the drawing.

Move H-2-55086/2-4, H-2-56142/3-4 and H-2-56146/2 from Essential to Support for AY Farm and remove the words "Essential" from the drawing.

Move *H-2-68335/1 to the AY Farm Essential List from the Support List and add the words "Essential" to the drawing.

Add *H-2-90370/1 to the Essential Drawing List for AY Farm and add the word "Essential" to the drawing.

Move H-2-92966/3, *H-2-64405/1, *H-2-64406/1 & *H-2-64419/1-2 to the AY Farm Essential Drawing List from the Support List and add the words "Essential" to drawing.

Remove the drawing H-2-46789/2 from the AY Farm Support List.

Remove Drawing H-2-90488 sheet 6 from the 241-Ap Essential List. This drawing was superseded by H-14-20803 sheet 5

Remove drawings H-2-~~83500~~^{85300 PS 8-10-98} sheets 21, 22, and 23 from the 241-A, AX Essential list

Add drawings H-14-030009 sheets 7, 8, and 9 to the 241-A, AX Essential list.

Remove drawing H-2-818571 sheet 1 from the 241-AY Essential list.

Asterisks(*) have been added to designate Controlled Print File Drawings.

Note to Document Control Station: Please ensure that drawing numbers preceded by * are added or deleted from the 13E or 13W Control Print File Database and MO-281 and 272-AW files.

EAST AND WEST AREA TANK FARM SUPPORT DRAWING LIST IN SEQUENTIAL ORDER	48

1.0 PURPOSE

The purpose of this document is to define criteria for selecting Essential Drawings, Support Drawings, and Controlled Print File (CPF) drawings and documents for facilities that are part of East and West Tank Farms. Also, the drawings and documents that meet the criteria are compiled separate listings.

The Essential Drawing list and the Support Drawing list establish a priority for updating technical baseline drawings. The CPF drawings, denoted by an asterisk (*), defines the drawings and documents that Operations is required to maintain per the TWRS Administration Manual (Reference 1.) The Routing Boards in Buildings 272-WA and 272-AW are not part of the CPF.

2.0 BACKGROUND AND DISCUSSION

Historically, Tank Farms configuration control has been maintained by using Standard Engineering Practices and the Job Control System. The Standard Engineering Practices (References 2 and 3) control the release and revision process for drawings and engineering supporting documents. Virtually all field modifications are reflected on Engineering Change Notices (ECN) to engineering drawings. The Job Control System (Reference 4) governs the conduct and execution of field work. These two administratively controlled processes are the cornerstones of the system to maintain continuity between the Tank Farm drawings and the actual Tank Farm configuration.

Pending revisions to the Standard Engineering Practices will define Essential Drawings and Support Drawings as noted in the "Criteria" section of this document. Only a few of the approximately 20,000 engineering drawings available are needed for daily referral for safe operation of TWRS facilities. Because of the relative importance of those few crucial drawings, there are more stringent updating and as-building requirements for them than for General Plant Drawings. HNF-PRO-242, Engineering Drawing Requirements requires a work-completed ECN to be incorporated into Essential Drawings within 30 days after the ECN is signed as work-complete. Work-completed ECNs for Support Drawings are required to be incorporated within 90 days after the accumulation of six work-completed ECNs. The only real affect of designating a drawing as an Essential or Support drawing is to provide a pre-established priority for incorporating ECNs into the drawing. Even though EP-1.3 provides a requirement for ECN incorporation, competing priorities, time, and budget constraints inhibit the timely incorporation of work-completed ECNs into the master drawings. It should be noted that the Cognizant Engineer has the authority to request as-building and updating of any drawing at any time.

Until the work-completed ECNs are incorporated in the drawings, and are "as-built," it can be difficult and time consuming to determine the actual field configuration from the drawings and outstanding ECNs. To avoid this potential problem, a CPF procedure (Reference 1) was developed. The purpose of the CPF procedure is to provide and maintain a select set of drawings and documents that reflect real-time plant configuration. The CPF is designed to be a useful source of information to Operations and Engineering personnel for determining Lock and Tag actions, and for investigating and formulating response plans to emergencies. In order to maintain real-time agreement between the drawings and field conditions, the CPF drawings will be red-lined within one working day of completion of field work on an ECN. Likewise, documents will be red-lined within one working day of release of an ECN to modify the document.

Some drawings were added and deleted during the document review process in order to align the lists with the recently developed criteria guidelines. The CPF drawings are annotated in the Essential Drawing List by an asterisk (*).

3.0 DEFINITIONS

ESSENTIAL DRAWINGS Those engineering drawings identified by the facility staff as necessary to directly support the safe operation of the facility. (per HNF-PRO-242)

SUPPORT DRAWINGS Those engineering drawings identified by the facility staff that further describe the design details of equipment used by the support staff. (per HNF-PRO-242)

Controlled Print File drawings A controlled subset of the structure, system, and component Essential Drawings that reflect the real-time configuration of TWRS facilities. The CPF drawings are considered necessary for the safe and efficient operation of the facility.

Controlled Print File configuration support documents Documents considered relevant and necessary for real-time plant configuration management, such as the Tank Dome Concentrated Load Records and the Riser Configuration Document for Single-Shell Tanks. (Reference 1)

GENERAL DRAWINGS Those engineering drawings identified by the facility staff that are not Essential or Support Drawings, or are not frequently used in the operation or maintenance of the facility.

ROUTING BOARDS Graphic displays in Buildings 272 AW and 272 WA that illustrate the process piping routes and valving to and from the underground waste tanks in the 200 East and 200 West Areas. The displays include pump pits, diversion boxes, and catch tanks. The displays are kept under lock and key. Shift Operations is responsible to maintain the displays in real-time agreement with field configuration.

4.0 DOCUMENT SELECTION CRITERIA

Selection criteria are intended to serve as guides for the Cognizant Engineer and Design Authorities to determine whether a drawing or document belongs in the category. The guidelines must be applied with considerable judgement. The challenge is to assign the fewest number of drawings and documents as necessary to the categories, and to continually apply resources to keep those drawings and documents as-built. The assignment of drawings and documents to the various categories is made via release of and revisions to this Supporting Document.

4.1 Guidelines for Essential Drawings

Essential Drawings for East and West Tank Farms should meet at least one of the following selection criteria. The drawings:

1. Are essential to the safe operation and understanding of facility process and support systems. Loss of drawing integrity results in an increased potential for process misroutings and false process parameter indication,
2. Are accurate ready-references used by Facility Operations personnel to determine responses to upset conditions (especially those drawings called out by emergency or alarm response procedures),
3. Are used to demonstrate compliance with Federal, State, and DOE required laws, rules, and regulations,
4. May increase the potential for failure of emergency notification and alarm systems if loss of drawing integrity occurs,
5. Are used (especially in the case of electrical or high pressure fluid systems) to determine proper boundary isolation for personnel protection while working on de-energized systems,
6. Depict and identify instrumentation required by the authorization basis,
7. Or, are referred to weekly or more often by Operations or Engineering.

Drawings should be removed from Essential Drawing status if the drawing is voided, superseded by another drawing, or represent a system that no longer exists or has been inactivated.

In general, the types of drawings which should be considered for designation as Essential Drawings are listed below. Only those drawings that meet one or more of the seven criteria above should actually be designated as Essential Drawings.

Process Systems

- Process and Instrument Diagrams
- Instrument and Engineering Flow Diagrams
- Elementary/Schematic Drawings
- One-Line Diagrams
- Process Flow Sheets

Electrical System

- One-Line Diagrams
- Panel Schedules
- Power and Lighting Diagrams

Effluent Monitoring Systems

- Process and Instrument Diagrams

HVAC System

- One-Line Diagrams
- Elementary/Schematic Diagrams
- Process and Instrument Diagrams

Steam System

- Steam Distribution Drawings
- Process and Instrument Diagrams

Fire Protection System

- Detector Scheme Drawings
- Elementary/Schematic Diagrams
- RFAR Control Scheme Diagrams

Air/Water Distribution System

- High Pressure Process and Instrument Diagrams

Communication/Alarm Systems (Criticality, Evacuation, etc)

- Elementary Diagrams
- One-Line Diagrams
- Detector Scheme Diagrams

4.2 Guidelines for Support Drawings

Support drawings are those engineering drawings identified by the facility staff that further describe the design details of structures, systems, or components shown on Essential Drawings, or are frequently used by the support staff. Support Drawings for West Tank Farms are those drawings that meet criteria similar to the criteria for Essential Drawings, but to a lesser degree. Support Drawings are normally referred to less than monthly. Assignment to this category is based purely on the Cognizant Engineer's judgement.

4.3 Guidelines for Controlled Print File

The CPF contains technical documents and a subset of the Essential Drawings that are deemed crucial to the safe and efficient operation of Tank Farms.

4.3.1 Guidelines for Controlled Print File Drawings

Drawings included in the CPF for Tank Farms are those Essential Drawings that meet at least one of the following selection criteria:

- are electrical one-line diagrams,
- are electrical system panel board schedules,
- are electrical control ladder logic diagrams,
- are piping and instrument diagrams,
- or, are referred to several times a week by Operations or Engineering.
- describe field configuration, (e.g., Riser Configuration Document)
- describe or define the technical basis for decisions, (e.g., Tank Dome Concentrated Load Records)
- or, are referred to weekly or more often by Operations or Engineering.

4.4 Guidelines for General Plant Drawings

Any drawing not listed as an Essential or Support Drawing is considered a General Plant Drawing by default. There are no limits or priority established for incorporating work-completed ECNs on General Plant Drawings.
