DOE/OR/22012--79

STANDARD REPORT FORM

STATIC RENEWAL TESTS USING ANODONTA IMBECILLIS (FRESHWATER MUSSELS)

Test Title: Anodonta imbecillis QA Test 1, Clinch River - Environmental Restoration Program (CR-ERP)

Principle Investigator: Damien J. Simbeck

Starting Date: July 21, 1993

Ending Date: July 30, 1993

1.0 EXECUTIVE SUMMARY

Toxicity testing of split whole sediment samples using juvenile freshwater mussels (Anodonta imbecillis) was conducted by TVA and CR-ERP personnel as part of the CR-ERP biomonitoring study of Clinch River sediments to provide a quality assurance mechanism for test organism quality and overall performance of the test. [1] In addition, testing included procedures comparing daily renewal versus non-renewal of test sediments.

Testing of sediment samples collected July 15 from Poplar Creek Miles 6.0 and 5.1 was conducted from July 21-30, 1993. Results from this test showed no toxicity (survival effects) to fresh-water mussels during a 9-day exposure to the sediments. Side by side testing of sediments with daily sediment renewal and no sediment renewal showed no differences between methods. This may be due to the absence of toxicity in both samples and may not reflect true differences between the two methods for toxic sediment.

2.0 SAMPLE COLLECTION/TREATMENTS

2.1 Test Sample Identification (Chemical/Effluent/Elutriate, etc.): The samples used for biomonitoring were whole sediments collected from Poplar Creek Miles 6.0 and 5.1.

2.2 Control and/or Dilution Sediment: Poplar Creek Mile (PCM) 6.0.

2.3 Sample Dates and Times: July 15, 1993

2.4 Sampling Method: Samples were collected by TVA Field Engineering personnel. An Eckman dredge was used to obtain the upper fine sediments (5-10 cm) at each location. Sediment samples from numerous dredge collections were composited in a large container, then split into two samples. One set of samples was sent to TVA's Aquatic Research Laboratory (ARL) at the Browns Ferry Nuclear Plant site near Athens, Alabama, and the other to ORNL for comparative testing.

DISCLAIMER

2.5 Sample Storage/Handling: All samples were stored in a refrigerator at 4°C ± 1°C prior to and during the test.

2.6 Sample Transport: All samples were placed in coolers on ice and shipped to ARL by TVA mail.

2.7 Sample Pretreatment: Samples were mixed thoroughly on July 20 with a stainless steel spoon. Sufficient 50 percent sample (V:V from each station) was prepared to last throughout the testing period. Eight crystallizing dishes per treatment were set up by adding 25 mL of sediment and 100 mL moderately hard water to each dish. The dishes were placed in the test incubator 24-hr prior to test initiation to allow settling and temperature equilibration.

2.7.1 Renewed Sediment Test: Samples were mixed each day. Four crystallizing dishes per treatment were set up each day, 24-hr prior to renewal. The dishes were placed in the test incubator to allow settling and temperature equilibration.

2.7.2 Non-renewed Sediment Test: No additional pretreatment was needed following the initial set-up on July 20.

2.8 Test Treatments: Three treatments, PCM 6.0 (Control), PCM 5.1-100% and PCM 5.1-50% (diluted with PCM 6.0 sediment), were tested using two procedures. One series had daily sediment renewal while the other series had no sediment renewal throughout the test. 100 µm filtered non-toxic sediment (approximately 800 mg/L dry weight) from the same source used for culture maintenance was also included as a laboratory reference. Moderately hard reconstituted water served as overlying water for all sediment treatments.

3.0 TEST ORGANISMS/CULTURING CONDITIONS

3.1 Species: Anodonta imbecillis, freshwater mussel

3.2 Source: In vitro culture, July 5 and 6-July 12 and 13, 1993, TVA Aquatic Research Laboratory. The gravid adult from which glochidia were extracted was obtained from Taylor's Catfish ponds, Town Creek, Alabama, on June 22, 1993. Adults were maintained in a 40-L aquarium with approximately 5 L non-toxic sediment from Taylor's ponds and 20 L Tennessee River water. Water was changed at least once per week with bloomed phytoplankton water and sediment was changed monthly.

3.3 Culture medium: Mussel culture medium used to transform larvae (glochidia) into juveniles consisted of a 2:1 mixture of cell culture medium (MEM) and 0.22 µm filtered catfish plasma. Antibiotics and antimycotics were added in small concentrations to prevent bacterial and fungal contamination. [3]

3.4 Temperature of Culture: 24°C ± 1°C

3.5 Culture water: After transformation of larval mussels, the free-living juveniles were placed in 100 µm filtered TR water with bloomed indigenous algae (phytoplankton). Non-toxic sediment (100 µm filtered) were added to provide additional food and substrate for healthy growth of the juvenile mussels. [4]

3.6 Temperature of Culture: 24°C ± 1°C

3.7 General Maintenance: Cultures were maintained in 1000-mL Nalgene® trays in 24-h dark incubators for 6-10 days after transformation. Cultures were fed 10 mL/L bloomed phytoplankton concentrate daily. Water and sediment were changed a minimum of once every two days. Health and survival of the culture were checked by microscopic examination of animals when culture water was changed.

3.8 Food Preparation:

3.8.1 Phytoplankton preparation: Phytoplankton was bloomed in 20-L glass aquaria 4-7 days (until dark green). Blooms were initiated by adding concentrated solids from ARL channel water to filtered (100 µm) TR water. Algal nutrients used for Selenastrum cultures were added (1 mL/L) to boost algal blooms. [5] Blooms were centrifuged to concentrate the algal cells into a dark green suspension, obtaining about 0.5 L per aquarium. Prepared phytoplankton concentrate was refrigerated until used.

3.8.2 YCT and Selenastrum preparation: YCT is made according to methods modified from EPA/600/4-89/001 with tropical fish food substituted for trout chow and alfalfa substituted for Cerophyll. [6] The alga Selenastrum capricornutum concentrated to 30 x 10^6 cells/mL is also fed as part of the test diet.

3.9 Sediment preparation: Whole, non-toxic sediment from Taylor's Catfish ponds, Town Creek, Alabama, was filtered through a 100-µm nylon mesh filter. Filtered sediment was stored at 4°C until used.

4.0 TEST METHODS

4.1 Mussels, Anodonta imbecillis, Survival Test, TVA Test Method, SOP-22, solid phase protocol. [5]

4.2 Modification/Deviations to SOP-22:

4.2.1 Mussels were fed 3 mL/L YCT and 3mL/L Selenastrum daily instead of concentrated phytoplankton.

4.2.2 Sediment was placed into dishes 24 hr before use and placed in the incubator to allow settling and temperature equilibration.

4.3 Date/Time Test Initiated: July 21, 1993/0900 CDT

4.4 Date/Time Test Terminated: July 30, 1993/0935 CDT

4.5 Age of test organisms: 8-9 days old

4.6 Test Chamber: 50 mm-diameter glass cylinder (75 mm tall) with 100-µm nylon mesh bottom, placed in 250-mL crystallizing dish

4.7 Volume per Chamber: 100 mL water, 25 mL sediment

4.8 Number of organisms per replicate: 10

4.9 Number of Replicates per Treatment: 4

4.10 Dilution Sediment: PCM 6.0

4.11 Test Control: PCM 6.0

4.12 Overlying Water: Moderately hard synthetic water

4.13 Test Temperature: 24°C ± 1

4.14 Photoperiod: 24-h dark

4.15 Renewal Period: 24-h

4.16 Renewal Method

4.16.1 Renewed Sediment Test: Each test cylinder was removed from its crystallizing dish and placed in a petri dish containing moderately hard reconstituted water for microscopic examination. The cylinder was then placed into a crystallizing dish which had been set up the previous day (See Section 2.7.1). Overlying water (60 mL/replicate) was then saved for chemical analyses.

4.16.2 Non-renewed Sediment Test: Following removal of 60 mL of the overlying water for chemical analyses, each test cylinder was placed in a petri dish for microscopic examination. After examination, the cylinder was returned to the same crystallizing dish, and 60 mL fresh water was poured into the test vessel through the test cylinder.

4.17 Feeding Regime During Test: Following renewal, 0.45 mL each of YCT and Selenastrum were added to each test chamber.

4.18 Physical and Chemical Parameters Measured: Parameters measured daily ("initial") on fresh test solutions included only temperature. Parameters measured daily ("initial") on overlying and reference waters (following addition of silt and algae) were temperature (temperature adjusted to equal "final" temperature before renewal), DO, pH, conductivity, alkalinity and hardness.

"Final" measurements of temperature, DO, pH, conductivity, alkalinity, hardness and total ammonia were measured in a combination of overlying waters (60 mL/replicate/day) from all replicates per treatment following renewal. The test solutions (50 mL) were preserved with 1:4 H_2SO_4 and refrigerated until sent to TVA's Environmental Chemistry Laboratory in Chattanooga, Tennessee, for analysis using the automated alkaline phenate methodology.

4.19 Test Endpoint Determination:

4.19.1 Survival: Test animals were counted as dead when microscopic examination revealed valves gaped open and no observable internal movement or an empty shell.

4.20 Statistics: Revised statistical procedures contained in the fourth edition of EPA's acute toxicity methods require a decision process for testing statistical assumptions before selecting a specific statistical test to determine toxicity endpoints. [7] The decision process followed for testing survival effects is shown in Section 6.2.1. Statistical significance of results was determined following procedures for comparing single treatments versus control. Based on tests for normally distributed data and homogeneous variances, the statistical test used for endpoint determination was the T-Test.

5.0 QUALITY ASSURANCE

5.1 Toxicity Test Methods: All phases of the study including, but not limited to, sample collection, handling and storage; glassware preparation; test organism culturing/acquisition and acclimation; test organism handling during test; and maintaining appropriate test conditions were conducted according to the protocol as described in this report, the ARL Quality Assurance Plan and SOP Manual, and EPA/600/4-89/001. [5][7] Any known deviations were noted during the study and are reported herein.

5.2 Physical and Chemical Methods

5.2.1 Reagents, Titrants, Buffers, etc.: All chemicals were certified products used before expiration dates (where applicable). All ARL chemicals are recorded in a bound Laboratory Chemical Logbook and specific chemicals used were documented on a chemical record sheet contained in the study notebook.

5.2.2 Instruments: All identification, service, and calibration information pertaining to ARL laboratory instruments is contained in bound Laboratory Instrument Logbooks and specific instruments used were documented on an instrument record sheet, along with daily calibration record sheets, contained in the study notebook.

5.2.3 Temperature was measured using mercury thermometers. The instrument was standardized and inspected with readings made according to TVA procedure DS-42.11. [2]

5.2.4 Dissolved oxygen was measured using a YSI Model 57 oxygen meter. The instrument was standardized (using the Winkler method) and readings were taken according to TVA procedures DS-43.6 and DS-42.4, respectively. [2]

5.2.5 The pH was measured using an Orion Model SA250 meter equipped with an Orion Ross combination electrode. The instrument was standardized and readings were made according to TVA procedures DS-43.7 and DS-42.8, respectively. [2]

5.2.6 Conductance was measured using a YSI Model 32 SCT meter. The instrument was standardized and readings were taken according to TVA procedures DS-43.3 and DS-42.3, respectively. [2]

5.2.7 Alkalinity was measured by titration of 100 mL samples with 0.02 N H_2SO_4 to an end point of 4.5 according to TVA procedure DS-42.1. [2]

5.2.8 Hardness was determined by titration of 50 mL samples with EDTA to a colorimetric endpoint using an indicator (Instructions provided by Reagent Manufacturer [Calgon]), Schwarzenbach Method.

5.2.9 Total residual chlorine was determined using the DPD Titrimetric Method according to TVA procedure DS-42.9, Rev. 0. [2]

6.0 RESULTS

6.1 Summary of Results: Nine day exposure of juvenile freshwater mussels, Anodonta imbecillis, to whole sediments from Poplar Creek showed no toxicity at PCM 6.0 (100 percent) or PCM 5.1 (100 percent and 50 percent). Side by side testing of sediments with daily sediment renewal and no sediment renewal showed no differences between methods.

6.2 Results, Survival Data:

S-Significant based on T-Test

6.3 Water chemistry summary for Anodonta imbecillis, Whole Sediment QA Test 1, CR-ERP, July 21-30, 1993.

6.3.1 Test Temperature: 23.9°C (23.2°-24.6°C)

6.3.2 See: Appendix A Water Chemistry Mean Values and Ranges for Anodonta imbecillis, Whole Sediment QA Test 1, CR-ERP, July 21-30, 1993.

7.0 CONCLUSION

Testing of sediment samples collected July 15 from Poplar Creek Miles 6.0 and 5.1 was conducted from July 21-30, 1993. Results from this test showed no toxicity (survival effects) to fresh-water mussels during a 9-day exposure to the sediments. Side by side testing of sediments with daily sediment renewal and no sediment renewal showed no differences between methods. This may be due to the absence of toxicity in both samples and may not reflect true differences between the two methods for toxic sediment.

AMMONIA ANALYSIS REQUEST AND RESULTS

TVA 991 (ACD-4-82)

REQUEST FOR AND REPORT OF ANALYSIS

Date submitted 7-26-93 Laboratory No.

Date wanted

Date reported Charge to account No. 4210-011200-85555

GENERAL DESCRIPTION: Ammonia (CR-ERP test samples) from 7-22-93

Consignor's Number	Specific Description for Each Sample P. 1
RO water	pH = 5.8 @ 24°C 50 ml sample preserved w/ 0.2 mL 1:4 H_2SO_4
Taylor's Silt	pH = 8.1 " "
PCM 6.0-A	pH = 7.6 " "
PCM 5.1 100-A	pH = 7.7 " "
PCM 5.1 50-A	pH = 7.7 " "
PCM 6.0-C	pH = 7.6 " "
PCM 5.1 100-C	pH = 7.7 " "
PCM 5.1 50-C	pH = 7.7 " "
Remarks, method, etc.: Same as Vital Signs samples	

ANALYZE FOR

00610	Ammonia Nitrogen	0.96	mg/L
00619	Calc UnIon NH3 in Water	0.039	mg NH3/L
NH3NH4'W	Calc NH3+NH4-NH3 Water	1.2	mg NH3/L
00630	Nitrate-Nitrite Nitrogen	0.74	mg/L

TVA Environmental Chemistry — Chattanooga, Tennessee
08/19/93 — FINAL DATA REPORT — 12:59
Page 1

S'INFO	: PCM 5.1 50-A	SAMPLE	: 93/08372
S'CMT	: CR-ERP	LOGDATE	: 930803
S'TYPE	: WATER	DUEDATE	: 08/10/93
ACT'NUMB	: 4210-011200-85555,7.LOHAR	P'LEAD	: @LOH

Lab Sample Number :93/08372 Project Leader :Larry O. Hill

Sample ID Information :PCM 5.1 50-A
Sample comments :CR-ERP
Sample type/matrix :WATER
Sample collected by :D.J.S.
Sample collection date :930730
Sample login date :930803 Sample received by lab :930803
Sample account number :4210-011200-85555,7.LOHARLDJS
Laboratory comments :ARL:PH=7.6; TEMP=24

Alt. IDC	Analysis Performed	result	units
00610	Ammonia Nitrogen	0.59	mg/L
00619	Calc UnIon NH3 in Water	0.019	mg NH3/L
NH3NH4'W	Calc NH3+NH4-NH3 Water	0.72	mg NH3/L
00630	Nitrate-Nitrite Nitrogen	0.58	mg/L

S'INFO	: PCM 6.0-C	SAMPLE	: 93/08373
