Charge Code: E30732

B&R Code: YN0100000

Total Pages: 115

Key Words: Natural Phenomena Hazard, NPH, Existing Hanford Facilities, Database, Prioritization, DOE Order 5480.28

Abstract: This document describes the development of a database of DOE and/or leased Hanford Site Facilities. The completed database will consist of structure/facility parameters essential to the prioritization of these structures for natural phenomena hazard vulnerability in compliance with DOE Order 5480.28, Natural Phenomena Hazards Mitigation. The prioritization process will be based upon the structure/facility vulnerability to natural phenomena hazards. The ACCESS based database, "Hanford Facilities Site Database", is generated from current Hanford Site information and databases.

HANFORD FACILITIES DATABASE

J. L. Hayenga and C. H. Dohrer

September 1996

EXECUTIVE SUMMARY

Department of Energy (DOE) Order 5480.28, Natural Phenomena Hazard Mitigation, transmitted to Westinghouse Hanford Company (WHC) for compliance includes stringent new natural phenomena hazard (NPH) criteria for evaluating the vulnerability of existing DOE facilities to NPH. Within the order is the requirement to develop a prioritized database of existing facilities/structures (DOE owned or leased) for future NPH evaluation and potential upgrade. The database is to include a listing of all structures/buildings within the above category and will identify parameters necessary for the review and prioritization of the structures/buildings based upon NPH vulnerability. This document describes the development of the format and includes some completed fields of the database.

Original planning identified the "Facilities Information Management System (FIMS)" database as a potential source for establishment of the database. FIMS is not operational for the Hanford Site at this time. The "Richland Property System (RLPS)" and "FacilitiesCORE" databases are the primary sources used to generate the building and structure database.

The generated database, "Hanford Facilities Site Database (HFSD)" is the result of the integration of the RLPS and Facilities Core database essential data into one site wide repository to enable the initiation of the evaluation of the structure/building vulnerability to NPH. The prioritization values will also be entered into the HFSD. As FIMS becomes accessible to the Hanford Site, the data from HFSD could also be used to update key FIMS data fields and provide the basis for the final Hanford Site report of the NPH evaluations of the Hanford Site structures.

HANFORD FACILITIES DATABASE

1.0 INTRODUCTION

The U. S. Department of Energy Order 5480.28, "Natural Phenomena Hazards Mitigation," establishes requirements to assess existing Hanford structures and determine their NPH vulnerability. An initial step in the assessment is to inventory the Hanford Site buildings and structures together with specific structural and mission data. With this data, the buildings and structures will be prioritized based upon their susceptibility to NPH effects. This document identifies the source, scope, and quality of data utilized to develop the database. The developed database will also be used to document the results of the NPH assessments and prioritization.

1.1 OBJECTIVE

The objective of this report is to document the process utilized to identify and inventory Hanford structures. A secondary objective is the development of information to be used in the NPH assessment and prioritization processes. The information within this database may be integrated into the FIMS database for final reporting, if required.

1.2 SCOPE

The inventory of structures is limited to those for which DOE has assigned management responsibility to WHC, ICF/KH and BCSR. The facilities include government owned, commercially leased and General Services Administration (GSA) leased facilities. The Federal Building, although a GSA leased facility is not included in this inventory. All other facilities on the Hanford Site will be the responsibility of other DOE contractors.

DOE Order 5480.28 is the source for the database requirement. The current format is designed only to document the results of the Prioritization Phase of order implementation. Additional data will be required to support the follow-on phases including the Evaluation and Upgrade Phases. Appendix A defines the current data entry screens.

1.3 INVENTORY COMPLETENESS

The HFSD is developed from two on-site databases, RLPS¹ and FacilitiesCORE². RLPS is the repository for property data at the Hanford Site. Responsibility as well as accounting, location, historical and other descriptive information is recorded for each asset on the site. Attachment B, "Definitions and Sources Data," displays the fields available in the database. The RLPS was used to initiate the inventory listing. FacilitiesCORE and other on-site databases were used to provide supplementary information and cross-checks on the RLPS data. The operating procedures for RLPS and FacilitiesCORE are provided in References 1 and 2, respectively.

The HFSD inventory listing included as Appendix D was generated in-total from the referenced databases. To date there have been no specific efforts to inventory the list of structures other than the normal inventory and control efforts. The RLPS database is verified on a predetermined basis. This date is included in the database as the "Last Inventoried" date. Field surveys will be required to collect additional data and complete the database.

In some cases the "Facility Number" relates to only a part of the facility. For example, a covered loading-dock built after the main structure may have a separate facility identification number. These structures were not identified separately from the main facility. A comparison of original source data and HFSD may not match due to these type of cited inconsistencies. Additionally, the inventory of Hanford Site facilities is in a state of continual change. There is a continuing process of transferring facilities to other governmental agencies or to another contractors. Also there is a continuing process of demolition. Appendix F is the current list of facilities to be demolished.

1.4 TYPES OF STRUCTURES INCLUDED IN INVENTORY

The database includes only buildings and structures which are described as any structure with four walls, roof and floor that is intended to house people, store material or shelter a process. Therefore tanks, wells, bridges, electrical substations, roads or rail tracks (railroads) are not included.

Also buildings which are contained within the fence lines of a tank farm compound are excluded from the database. These structures are usually less than 10 square meters under roof and are typically used as compressor sheds, pump houses, etc.

2.0 INVENTORY DATABASE

Microsoft AccessTM is the database management software used to develop the Hanford Facilities Site Database. The HFSD is primarily a repository for assembling the data for the Assessment and Prioritization Phases of DOE Order 5480.28 implementation. This initial database system was not constructed to current internal standards for software control. HFSD currently resides on an HLAN server. It is protected by account number and password security at the server level. Typical database services like backup, security, etc. are provided for HFSD as a normal HLAN function. Additional administrative controls will be applied to the database depending on future requirements and implementation.

2.1 RELATIONSHIP TO EXISTING HANFORD DATABASES

The source data for HFSD was assembled from several databases, see Appendix B. RLPS tracks all property assigned to WHC and its subcontractors ICF/KH and BCSR. Within this database are a vast number of records that do not equate to either a facility/structure or a physical quantity. The record coding has left some ambiguity as to the nature of an item being tracked. A significant portion of the activity in assembling HFSD was the "weeding out" of records that did not equate to a facility/structure. This initial database, HFSD, does represent the best available list of Hanford Site facilities. The initial source of data load scripts were retained with the database to allow the source data to be reloaded at some future date, if required. All database entries, during the future phases of order implementation, will be verified.

2.2 DATA ENTRY, REPORTS

Appendix A presents a data entry screen which has been developed to allow the system to be updated with additional data required for NPH assessment and prioritization. An initial draft report has been generated (Appendix D) to list the current inventory of structures and available data.

EXPANDED DEFINITION AND METHODOLOGY

RLPS Building Table

The RLPS "Building Table" is a check table that is used to validate property locations. It contains all possible facility locations where individual DOE owned assets may be located both on and off the Hanford Site.

The initial download of 2,407 entries was reduced to 947 entries by the following process of elimination to remove entries that we do not want on the completed file.

Blank lines and off-site locations were eliminated by deleting for Area<100B, Area>RCHN, Area>700&<KENN, Area=MSC,OS,PTL,&QSO. Result = 1941 records.

Other contractor assets were eliminated by deleting for Cont=ERC, Cont=D, Custorg=D, Custorg=B. Result = 1531 records.

Generic property locations were eliminated by deleting for Bldg=N, P, S, R, W, >8, <M, and buildings within Tank Farms were removed by deleting for Bldg=241. Result = 1384 records.

Balance of assets eliminated were deleted by examination of names, IE tanks, cribs, burial grounds, pads, vaults, pits, etc and deleting the entries accordingly. Result = 947 records.

Those records not displaying a Property number (Fxxxxxx, FAxxxxx, or MOxxxxx) were researched and property record number was added to facilitate entering information from other property record fields. There are 35 records where a property record number was not located but the asset appeared to be existing buildings or facilities that should be researched further.

Two fields from the RLPS Building Table require caveats. The CONT and PRMNGR fields are currently being reconciled. These fields correspond to the LEVEL2 and ORGNAME fields that are derived from the organization code assigned by property record. While the majority of these fields do agree it should be noted that when they do not agree the custodial organization code is the authority for asset responsibility. A third field "ASSET" is included for reference and cross-check only. Note that the code for buildings is 501, but a few without this code were included because other information indicated that it could be a building.

HFCR204R

HFCR204R is a Soft Reporting table that contains all Hanford Site Facility numbers that are used to identify facilities for filing engineering data. The 3,503 numbers on this file include facilities that are proposed or demolished, numbers for facilities where the project has been canceled, and numbers to collect system or generic drawings.

This file provided the "Hanford Official Name" (FCNAME) to expand on the description of the facility. The file also provided the "Gross Square Feet" (FCSIZE) for comparison to other record size data IE the PRSIZE. It should be noted that the FCSIZE is initially input to the facility core database before design and that size may be subsequently reduced without notification to the system so any major difference between the FCSIZE & PRSIZE fields warrants further investigation.

RLPS RECORDS

Selected fields from the property record system were added to the database by matching the property record numbers. The selected fields were contained within a download of data pertaining to Fxxxxxx, FAxxxxx, or MOxxxxx property numbered assets totaling 19,286 records.

HFCR203A

HFCR203A is a Soft Reporting table that displays the Administrator and Manager names for WHC controlled facilities. The manager name added to the database from this file is typically the manager delegated to address the day to day facility activities.

HPCR442R

HPCR442R is a Soft Reporting table that lists WHC level 2 organization codes, with the corresponding manager and organization names. This file was used to add the LEVEL2 and ORGNAME fields based on the CUSTORG assignment in the RLPS property record system.

HFCR208R

HPCR442R is the Soft Reporting "Occupied Building Table". The table was reduced to the "unique" 454 buildings which show any Occupant on the table. A "yes" is entered in the OCC? field where a building number match occurred.

Appendix C
Data Structure

Table 1 Building Identifiers

<u>Building Identifier</u>	<u>General Description</u>
W	Wood Buildings of all types
S1	Steel moment resisting frames
S2	Braced steel frames
S3	Light metal buildings
S4	Steel frames with cast-in-place concrete shear walls
C1	Concrete moment resisting frames
C2	Concrete shear wall buildings
C3/S5	Concrete or steel frame buildings with unreinforced masonry infill walls
PC1	Tilt-up buildings
PC2	Precast concrete frame buildings
RM	Reinforced masonry
URM	Unreinforced masonry

Table 2 Essential Building Codes

Essential Code	Description
Life Safety	Life Safety
FUNCT	Buildings which must remain functional because they are required to support response to earthquake emergencies
OPER	Buildings which must remain operational after an earthquake to maintain critical functions.
HAZ	Building hoising hazardous materials which if released would create unacceptable risk.
VULVAL	Buildings housing vulnerable populations or having extremely valuable contents
None	

Table 3 Exemptions

Exemption Code	Description
A	Buildings Classified for agricultural use, or intended only for incidental human occupancy, or occupied by persons for a total of less than 2 hours a day
B	Detached one- and two-family dwellings that are located in areas having a governing acceleration coefficient less than 0.15
C	Special structure including, but not limited to: Bridges, transmission towers, industrial towers and equipment, piers and wharves, and hydraulic structures
D	One-story buildings of steel light frame or wood construction with areas less than 280 m ²
E	Fully-rehabilitated buildings which comply with the ICSSC RP4 seismic safety standards in all four compliance categories
F	Post-benchmark buildings as defined in Table 1 of ICSSC RP4 which also comply with the nonstructural, geologic/site, and adjacency compliance categories
G	Pre-benchmark buildings which have been shown by evaluation to be life-safe in all four compliance categories
H	Buildings constructed for the Federal government whose detailed design was done after the date of the adoption of Executive Order 12699 and that were designed and constructed in accordance with the ICSSC Guidelines and Procedures for Implementation of the Executive Order on Seismic Safety of New Building Construction [ICSSC 1992]
I	Leased buildings identified in Section 1.3.2 (of ICSSC RP4) as exempt
J	Federally permitted or regulated privately owned building on Federal Land

Table 4 Occupancy Class
