Iraq: Reconstruction Assistance

Updated July 22, 2008

Iraq: Reconstruction Assistance

Summary

A large-scale assistance program has been undertaken by the United States in Iraq since mid-2003. To date, nearly $49 billion has been appropriated for Iraq reconstruction. Most recently, in June 2008, Congress approved over $4 billion for Iraq reconstruction in an FY2008/2009 supplemental appropriations bill, H.R. 2642.

Contributions pledged by other donors at the October 2003 Madrid donor conference and in subsequent meetings have amounted to roughly $16 billion in grants and loans.

On June 28, 2004, the entity implementing assistance programs, the Coalition Provisional Authority (CPA), dissolved, and sovereignty was returned to Iraq. U.N. Security Council Resolution 1546 of June 8, 2004, returned control of assets held in the Development Fund for Iraq to the government of Iraq. U.S. economic assistance is now provided through the U.S. embassy, while security aid is chiefly managed by the Pentagon.

A significant number of reconstruction activities on the ground are completed or ongoing, but security concerns have slowed progress and added considerable expense to these efforts. Reconstruction programs have included the training and equipping of Iraqi security forces; construction of road, sanitation, electric power, oil production, and other infrastructure; and a range of programs to offer expert advice to the Iraqi government, establish business centers, provide school books and vaccinations, finance village development projects, and promote civil society, etc.

Reconstruction priorities have changed over time. Allocations within the Iraq Relief and Reconstruction Fund (IRRF), the main U.S. assistance account in the first few years, mirrored shifting events on the ground. However, funds shifted to security and democratization in the period from 2004 to 2006 meant fewer funds available for electric power and water projects. At this time, most large-scale infrastructure programs are no longer funded; however, many small-scale, targeted community-level infrastructure efforts are funded under the Commander’s Emergency Response Program (CERP) and the Economic Support Fund (ESF). The key emphases of the aid program are the training of Iraqi forces and programs assisting the development of Iraqi governing capacities and supporting the work of the Provincial Reconstruction Teams (PRTs).

The report will be updated as events warrant. For discussion of the Iraq political situation, see CRS Report RL31339, Iraq: Post-Saddam Governance and Security, by Kenneth Katzman.
Iraq: Reconstruction Assistance

Most Recent Developments

On July 16, 2008, the House State/Foreign Operations Subcommittee approved its FY2009 bill. It provides no funding for Iraq. On July 17, the Senate Appropriations Committee reported S. 3288 (S.Rept.110-425), its version of the FY2009 State/Foreign Operations bill, recommending $75 million in ESF and $25 million in INCLE funds for Iraq, $275 below the combined request for these accounts.

In June 2008, Congress approved H.R. 2642 (P.L. 110-252, signed June 30, 2008), an FY2008 and FY2009 emergency supplemental appropriations bill, providing $4.2 billion in Iraq reconstruction assistance.

Introduction

Following years of authoritarian rule and economic sanctions, the United States and the international community agreed in the spring of 2003 that efforts should be made to rehabilitate economic infrastructure and introduce representative government to post-war Iraq, among other objectives. To meet these ends, a large-scale assistance program has been undertaken by the United States in Iraq. This program, funded through a mix of appropriations accounts, is undergoing increased scrutiny in the 110th Congress. This report describes recent developments in this assistance effort and key issues of potential interest to Congress.

Funding for Reconstruction

Several “spigots” have been available to fund Iraq reconstruction during the period from 2003 to the present. U.S. foreign aid appropriations for Iraq have been

---

3 The only formal estimate of the possible cost of Iraq reconstruction amounted to $55 billion over the four years from 2003 through 2007. This figure was the sum total of an October 2003 World Bank and U.N. Development Group needs assessment of 14 sectors of the Iraqi government and economy — $36 billion — combined with a $19.4 billion Coalition Provisional Authority (CPA) projection for security, oil, and other sectors not (continued...)
provided mostly in annual emergency supplemental bills beginning in FY2003. International donors have also made aid contributions. Iraqi funds, largely derived from oil export profits, have been employed to cover the “normal” operating costs of the Iraqi government, and, when sufficient amounts are available, have been used to address reconstruction needs. Additionally, the reduction or rescheduling of Iraqi debt repayments has made further resources available. These sources of reconstruction funding are discussed below.

U.S. Assistance

Over the years, U.S. assistance to Iraq has been provided through multiple appropriations accounts (see Table 1 for funding levels). In the first several years of the U.S. effort in Iraq, the bulk of U.S. assistance was provided through a specially created Iraq Relief and Reconstruction Fund (IRRF), placed under the direct control of the President, supporting aid efforts in a wide range of sectors, including water and sanitation, electricity, oil production, training and equipping of Iraqi security forces, education, democracy, and rule of law. The Fund, established in the April 2003 FY2003 Emergency Supplemental (P.L. 108-11, H.R. 1559/H.Rept. 108-76) and replenished in the November 2003 FY2004 Emergency Supplemental (P.L. 108-106, H.R. 3289/H.Rept. 108-337), eventually totaled nearly $21 billion.

A new DOD account, the Iraq Security Forces Fund (ISFF), supporting the training and equipping of Iraqi security forces, was set up under the May 2005 FY2005 emergency supplemental (P.L. 109-13, H.R. 1268/H.Rept. 109-72). Previously, most security training funds had been provided out of the IRRF. Policy responsibility for the IRRF, originally delegated to the CPA (under DOD authority), had, since the end of the occupation in June 2004, belonged to the State Department as a result of a Presidential directive (NSPD 36, May 11, 2004), which, nonetheless, continued to give DOD the main role in directing security aid. Putting funding for security assistance entirely under DOD, however, was a sharp departure from historic practice. Under most military assistance programs — Foreign Military Financing (FMF) and the International Military Education and Training Program (IMET) — State makes broad policy and DOD implements the programs. The conference report on the supplemental adopted the President’s formula for the new account but required that the Iraq Security Forces Fund be made available “with the concurrence of the Secretary of State.”

Another DOD account, the Commander’s Emergency Response Program (CERP), has provided immediate reconstruction and humanitarian assistance at the local level to support the work of U.S. military commanders. More recently, a Business Task Force, attempting to rehabilitate state-owned enterprises to stimulate the Iraqi economy and increase employment, has been funded out of the DOD Iraq Freedom Fund account.

3 (...continued) covered by the Bank/U.N. assessment. These amounts, calculated in mid-2003, did not take into account the significant costs of instability and security needs that have emerged since then. See [http://web.worldbank.org/WSITE/EXTERNAL/COUNTRIES/MENAEXT/IRAQEXTN/0,,contentMDK:20206752~pagePK:141137~piPK:141127~theSitePK:313105,00.html].
By FY2006, the Economic Support Fund (ESF) account had replaced the IRRF as the main spigot of U.S. economic aid, provided in support of a wide variety of economic development and governance efforts, but not funding the large-scale infrastructure programs or the security forces training that characterized much of the IRRF. ESF, in particular, is a key component of the so-called “surge” initiative, announced in January 2007. It largely funds the programs implemented by the Provincial Reconstruction Teams (PRTs), such as improvements to community infrastructure, job training, vocational education, and micro-loans, and supports programs at the national level, including Ministerial capacity development, agriculture and private sector reform, and strengthening of the judicial process and democratization efforts. Under the FY2007 Supplemental (P.L. 110-28), all ESF, including previously unobligated funds, was withheld until the President certified in reports to be submitted before July 15 and September 15, 2007, that the government of Iraq had made progress in 18 benchmarks, including whether it enacted the hydrocarbon law, taken specific steps toward provincial and local elections, reformed de-Baathification laws, and begun expenditure of the promised $10 billion Iraqi funds for reconstruction. The benchmark certification requirements could be waived by the President. The reports were submitted as required, and the President released $1.7 billion in ESF through waivers issued on July 12 and September 28, 2007.

In addition to ESF, the International Narcotics and Law Enforcement account (INCLE) has supported “rule of law” efforts, the Democracy Fund supports a range of democratization and civil society efforts, and the Treasury Department Technical Assistance program offers experts on financial issues to the government of Iraq. More recently, humanitarian refugee and displaced persons concerns have been addressed by increased funding for the Migration and Refugee (MRA) and International Disaster Assistance (IDA) accounts.

Most funding for Iraq reconstruction has been appropriated under emergency supplemental appropriations legislation, because it is “off-budget” and does not compete with other aid priorities in the regular aid bill. Efforts to “regularize” the economic assistance program for Iraq by requesting funds in the traditional annual foreign operations appropriations bill have met with limited success. The first such effort, in 2005 for the FY2006 foreign operations bill (P.L. 109-102, H.R. 3057), saw only $60.4 million (after rescission) provided of a $414 million request, because some Members felt that sufficient funds remained unobligated in the IRRF — at the time, $3-$5 billion — from which the Administration could draw to pay for continuing reconstruction. Iraq programs received an allocation of only $176.3 million of an $734 million FY2007 regular foreign operations request as a consequence of the continuing appropriations resolution (H.R. 5631/P.L. 109-289 Division B, as amended by H.J.Res. 20, P.L. 110-5, on February 15, 2007), which only set funding levels for major aid accounts. In December 2007, Congress rejected almost all of the regular FY2008 request for Iraq (see below).

**Sources:** State Department FY2009 Foreign Operations Congressional Budget Justification; SIGIR Report to Congress, January 30, 2008; and CRS calculations.

**Note:** The 150 account encompasses International Affairs spending and is mostly appropriated in the State/Foreign Operations bill. The 050 account is Defense appropriations. This table does not contain agency operational costs, including CPA and State Department, except where these are embedded in the larger reconstruction accounts. The SIGIR estimates these costs to date at an additional $3.0 billion.

- **a.** Transfer from ESF.
- **b.** Transfer from ISFF to reimburse Army for previous Iraqi training expenses.
- **c.** The appropriation includes an unspecified amount for Iraq. If there was a specific request, assumes request level will be met.
- **d.** State Department rescinded $76 million in 2008.
**FY2008 Consolidated Appropriations.** On February 5, 2007, the Administration sent to Congress two budget requests for Iraq reconstruction funding. First, it requested $391.8 million in regular FY2008 State/Foreign Operations appropriations — mostly $298 million in ESF and $75.8 million in INCLE. Second, the Administration issued a request for an FY2008 “Global War on Terror” emergency supplemental. The emergency request for Iraq reconstruction, as later revised on October 22, 2007, totaled $4.9 billion, including $3 billion under the ISFF, $1.2 billion in combined Afghanistan/Iraq CERP funds, $797 million in ESF, and $159 million in INCLE.

Both House (H.Rept. 110-197) and Senate-approved (S.Rept. 110-128) versions of the regular FY2008 State/Foreign Operations appropriations (H.R. 2764) rejected most economic (as opposed to security) aid to Iraq. These views were carried into the final version of H.R. 2764, which became the vehicle for the omnibus Consolidated Appropriations Act (P.L. 110-161, signed into law on December 26, 2007). The act included regular FY2008 funding as well as a first tranche of the FY2008 emergency supplemental appropriations. With a few discrete exceptions, Congress, in section 699K, specifically rejected almost all regular or supplemental economic assistance to Iraq provided under the State/Foreign Operations part of the bill (Division J). It approved efforts to fund humanitarian demining ($16 million in regular NADR funds) and assist refugees and internally displaced persons (allocated to date from the larger supplemental MRA and IDA accounts are $149.5 million and $80 million, respectively), provided $5 million (before imposition of a .81% across-the-board rescission) in ESF for the Marla Ruzicka War Victims Fund and $10 million (pre-rescission) in ESF for the rescue of Iraqi scholars.

Congress did provide a significant portion of the Administration emergency supplemental request made for Defense appropriations. It appropriated half ($1.5 billion) of the request for the Iraq Security Forces Fund and nearly half of the total CERP request (of which $370 million has been allocated to Iraq).

In the end, the Consolidated Appropriations Act provides about 40% of the total $5.3 billion combined FY2008 regular and emergency Iraq reconstruction request. More than 88% of the total appropriation is DOD assistance. U.S. funding for PRT operations and programs and a wide range of other economic aid programs were left to rely on previously appropriated funds.

**2nd FY2008 and FY2009 Supplemental Appropriations.** Outstanding from the FY2008 supplemental request was roughly $2.9 billion in Iraq reconstruction assistance, of which $986 million was for foreign operations economic assistance. The outstanding FY2008 foreign operations request was for three accounts — $797 million in ESF, $159 million in INCLE, and $30 million in MRA. The outstanding DOD request — nearly $2.0 billion — was for the training and equipping of Iraqi security forces ($1.5 billion under the ISFF), for development programs delivered under the CERP (Iraq could expect at least half of the $719 million still outstanding for both Iraq and Afghanistan), and for the Task Force to Improve Business and Stability Operations in Iraq ($100 million under the Iraq Freedom Fund account).
On May 2, 2008, the Administration issued a request for FY2009 emergency supplemental funding. The request included $398.8 million for foreign operations reconstruction — $212.8 million in ESF, $141 million in MRA, and $45 million in IDA accounts. The DOD appropriations reconstruction request included $2 billion for the ISFF, $1.7 billion for the CERP in Iraq and Afghanistan, of which at least half would go to Iraq, and $50 million for the Business Task Force. Both DOD and Foreign Operations portions of the FY2009 emergency request were considered by Congress at the same time as the FY2008 supplemental.

Outstanding FY2008 supplemental funds included operational costs (not counted in the reconstruction aid total or the table) for staffing and administering reconstruction programs: $679 million for PRTs. The new FY2009 supplemental request included funding for PRT operations (an unspecified portion of a total $921 million Embassy/PRT request), $23.6 million for USAID operational expenses, and $15 million for the Special Inspector General for Iraq Reconstruction (SIGIR).

The final version of the FY2008/FY2009 supplemental appropriations bill, H.R. 2642 (P.L. 110-252, signed June 30, 2008), approved by the House on June 19 and by the Senate on June 26, 2008, provided $4.2 billion in Iraq reconstruction assistance, compared to a combined Administration request of $4.9 billion. (For a full discussion of House and Senate action on the supplemental, see CRS Report RL34451, Second FY2008 Supplemental Appropriations for Military Operations, International Affairs, and Other Purposes.)

On the Foreign Operations side, Congress provided a total FY2008/2009 supplemental appropriation of about $907 million, compared to the request of $1.4 billion. Of this amount, $526.5 million is ESF funding. Judging by the allocations made by the Appropriations Committees for the ESF, there will be a shift in the direction of the economic aid program favoring more local-level assistance programs. Of this amount, at least $414 million would be targeted to provincial and local community activities, rather than programs supporting the national government. PRT programs would get $174 million. Related community-based programs, the Community Stabilization Program (CSP) and the Community Action Program (CAP), would receive $132.5 million and $107.5 million respectively. The bill withholds half of the (CSP) appropriation until the State Department certifies that USAID is implementing the Inspector General’s recommendations addressing concerns about a possible misuse of funds.

Provincial economic growth, including microcredit and agriculture, would get $25 million. The only significant national-level effort, the National Capacity Development program, would receive $70 million, a cut of $178 million from the request. Another request for a nationally-based effort, $70 million for the provision of infrastructure security protection, was cut entirely. The proposed enterprise fund would also not be funded. The bill withholds the $10 million approved for funding infrastructure maintenance (cut by $124 million) until the Department of State certifies that Iraq has entered into and begun to implement an asset transfer agreement, including an Iraqi agreement to maintain U.S.-funded infrastructure.
Democracy assistance, requested under ESF, is being provided under the Democracy Fund account at $75 million, and is expected to be implemented through the National Endowment for Democracy (NED) and other NGOs. The FY2008 INCLE Iraq program funding, at $85 million, was cut substantially, by $74 million, from the request, and no prison construction funding was included. The bill releases no more than 40% of rule of law (INCLE) funding until the State Department reports that an anti-corruption strategy has been developed and is being implemented by the Iraq government.

The legislation withholds all PRT operating expenses and program funds until the State Department reports on a strategy for winding down and closing out the PRTs, on the costs of the PRT program, expenses, security, and any Iraq contribution, and on the future costs and placement of U.S. consulates in Iraq.

Because operational funds for the PRTs are blended with those of the Embassy and USAID operating expenses are provided for both Iraq and Afghanistan, it is not possible to say with certainty whether the full request was met by the legislation. The bill does provide the SIGIR with $2.5 million and $36.5 million for FY2008 and FY2009, respectively.

Reflecting recent indications that Members of both parties desired to see the Iraqi government pay a greater share of the costs of reconstruction, H.R. 2642 contains a measure that would require most reconstruction funds to be matched by Iraqi obligations on a dollar-for-dollar basis. The exceptions are for democracy and human rights programs, the USAID Community Action Program and other NGO-assisted programs, humanitarian demining, refugee and displaced persons assistance. The Secretary of State must submit a report by end of September 2008 with amounts obligated and expended by the government of Iraq. It is not clear from the bill language whether the match would have to be made project-by-project or whether total Iraqi funding for reconstruction in general would suffice to permit continued U.S. assistance at the same level. If the latter, the provision might not affect U.S. funding significantly as, in the past year, Iraqi obligations for security and economic reconstruction have approached the U.S. contribution and will likely surpass it in 2008.

FY2009 Regular Appropriations Request and Congressional Action.
On February 4, 2008, the Administration submitted its FY2009 regular appropriations request, providing $397 million for Iraq reconstruction under foreign operations and, as is usually the case, making no request under the regular DOD appropriations. Of the requested amount, $300 million is for ESF, $75 million for INCLE (rule of law), and $20 million for NADR (mostly demining).

On July 16, 2008, the House State/Foreign Operations Subcommittee approved its FY2009 bill. It provides no funding for Iraq. On July 17, the full Senate Appropriations Committee reported S. 3288 (S.Rept. 110-425), its version of the FY2009 State/Foreign Operations bill, recommending $75 million in ESF and $25 million in INCLE funds for Iraq, $275 below the combined request for these accounts. A recommended NADR account amount for Iraq was not specified.
Oil Revenue, Corruption, and the Iraqi Capital Budget

Prior to the war, the Administration had expected that Iraq’s oil reserves would help it “shoulder much of the burden for [its] own reconstruction.” Although they have been insufficient in view of Iraq’s enormous needs, oil revenues have been an important element in reconstruction funding. The May 22, 2003, U.N. Resolution 1483 which ended sanctions permitted the occupying coalition to use oil reserves for more long-term reconstruction purposes. The resolution shifted responsibility for oil profits and their disbursal from the U.N. to the United States and its allies by establishing a Development Fund for Iraq (DFI) held by the Central Bank of Iraq and into which oil profits and other Iraqi assets would be deposited.  

During the occupation, DFI funds available to the CPA — $20.7 billion by June 28, 2004 — were used to support a wide range of reconstruction activities, including the currency exchange program, oil and electricity infrastructure repair, purchase of firefighting equipment, the Iraqi operating budget, and the Oil for Food Program’s monthly food baskets, responsibility for which was transferred from the U.N. to the CPA in November 2003. Under Security Council Resolution 1546, adopted on June 8, 2004, the transitional government of sovereign Iraq obtained control over use of DFI funds, which continue to be replenished with oil revenue.

Oil production accounted for more than 94% of the Iraqi government revenue in 2007. Recognizing the importance of oil revenue to Iraq reconstruction, more than $2.5 billion of total U.S. reconstruction funding has been devoted to efforts to restore and expand oil production infrastructure. Oil exporting resumed in mid-June 2003, but oil production was slowed by sabotage and corruption, and the CPA target of 2.8-2.0 by end of 2004 was not met. In September 2004, rates of production reached a peak of 2.67 million barrels/day compared with an estimated pre-war rate of 2.5 million barrels/day (MBD), but rates fell after that and for much of the past few years stood at around 2.0 MBD. Production grew during 2007, and, by late in the year stood at 2.4 MBD. Although pipeline disruptions have periodically cut the rate, in early July 2008, the rate was 2.55 MBD. The Iraqi government goal for 2008 is 2.2 MBD.  

Payment for operating budget expenses and a variety of government social programs has limited the amount of oil revenue left for reconstruction. Fuel and food subsidies as well as support for state-owned enterprises have accounted for as much as $11 billion annually. Because these practices divert funds from needed

---

5 On March 20, 2003, President Bush issued an executive order confiscating non-diplomatic Iraqi assets held in the United States, an estimated $1.74 billion worth available for reconstruction purposes. Another $927 million in assets located by the United States in Iraq were also used for these purposes. In addition, foreign governments were reported to hold an estimated $3.7 billion in seized or frozen assets, of which $847 million had been deposited in the DFI by June 28, 2004. Security Council Resolution 1511 urged member states to deposit seized assets in the DFI.

reconstruction, Administration officials since 2003 have repeatedly pressured the Iraqi government to face the need to address the subsidy issue. As part of its agreement with the IMF pursuant to a debt reduction with the Paris Club, Iraq in mid-December 2005 began to take steps to end its subsidy of gasoline, increasing the price of fuel from 5 cents to roughly $1.06 a gallon. Fuel subsidies, reportedly, have been mostly eliminated. In response to rising commodity prices, the government of Iraq announced that in 2008 the monthly food rations would be halved and recipient numbers reduced.

Iraqi Corruption. A further concern regarding the amount of oil income available for reconstruction is the extent of corruption and mismanagement in the Iraqi government. A 2006 audit of the DFI undertaken on behalf of the International Advisory and Monitoring Board (IAMB) found that controls over export earnings were ineffective and funds improperly accounted for by government staff. The Comptroller General of the GAO has also suggested that there is “massive corruption” in the Oil Ministry, and the head of Iraq’s Commission on Public Integrity estimates that corruption has cost the government up to $18 billion. Iraq ranks third from the bottom on Transparency International’s corruption index.

A variety of U.S. assistance programs attempt to address the corruption issue. Among these are provision of staff training and equipment to the Commission on Public Integrity, the key national anti-corruption organization, similar assistance to each Ministry Inspector General office, and most rule of law efforts that seek to strengthen the judicial system. In the past, the SIGIR has found fault with management of the Embassy anti-corruption effort — only 2 of 12 recommendations made by the SIGIR in July 2006 had been fully implemented a year later. However, in a January 2008 report, the SIGIR noted that the Embassy had taken steps to implement all its concerns, and an April 2008 report found progress encouraging. On March 11, 2008, the U.S. Embassy announced the appointment of Ambassador Lawrence Benedict as Coordinator for Anti-Corruption Initiatives.

Iraqi Capital Budget. As the U.S. economic assistance program has dwindled in size, the importance of Iraqi-owned funds available for large-scale infrastructure has increased significantly. However, Iraqi ministries have had

---

10 SIGIR, U.S. Anticorruption Efforts in Iraq: Sustained Management Commitment is a Key to Success, 08-008, January 24, 2008; SIGIR, Progress Made in Implementing Revised Management Plan, 08-016, April 24, 2008.
difficulty spending their budget for capital projects such as roads, schools, and oil production. According to U.S. officials, only about 23% of the 2006 capital budget of about $6.2 billion was spent in that year, and only 3% of a $3.5 billion capital budget available to the Oil Ministry was spent in 2006. Funds not spent in 2006 were being utilized in 2007, delaying expenditure of 2007 capital funds. Among the reasons offered for this situation has been a rapid turnover in personnel, security concerns, lack of skills in contracting and managing projects, and a fear by government employees of being accused of corrupt practices. The latter concern led the Finance Minister in January 2008 to call for the abolition of the Commission on Public Integrity, a key public watchdog group.11

Complementing the Administration’s new strategy for Iraq, the Iraqi government approved a 2007 budget containing $10.1 billion for capital investment, of which $2.1 billion was expected to go to provincial governments. The 2007 Iraq budget also included $2.4 billion for investments in oil production and another $3 billion for the construction of new oil refineries to reduce oil product imports. The Iraqi government has approved a $48.6 billion budget for 2008, $13.4 billion of which is to be spent on capital projects. Further, because of rising revenue, an additional $5 billion will be added to the capital budget in the near future.12

Both U.S. Embassy and PRT assistance are partly aimed at helping ministries and local government, respectively, to develop the capacity to efficiently utilize these Iraqi-owned resources (See “Capacity Development” section below). According to U.S. officials, the government of Iraq has taken significant steps in 2007 to execute its capital budget, including formation of a senior-level task force, establishment of new procedures such as revised procurement regulations, and additional training.

The allocation and expenditure of the Iraqi capital budget was one of the 18 benchmarks assessed under section 1314 of the FY2007 Supplemental. In September 2007, the Administration found progress on this factor to be satisfactory. In January 2008, however, the GAO found the data on which the Administration based its reports of 2007 improvements in budget execution to be subject to dispute, and indicated that actual expenditures may be significantly lower than reported. The State Department disputed the GAO view.13

There appears to be confusion in the presentation and definition of data by various agencies, which more recent data has done little to alleviate. According to a June 2008 DOD report to Congress, the Ministry of Finance claims Iraq had spent or committed 72% of its 2007 capital budget through the end of the year. Three months earlier, DOD reported that a 55% (page vi) budget execution rate (as of

November 2007) was “more than double” the 2006 rate. A June 2008 GAO report says that total capital spending rose from 23% in 2006 to 28% in 2007. The March DOD report (page 9) noted that 45% was “spent” through October 2007.14

Despite the discrepancies in data, it is likely that improvements have been made in Iraq’s ability to utilize its resources, especially in view of the significant annual growth in the budget that must be executed. Further, it is clear that the Iraqi budget for items that parallel U.S. funding for both security and economic reconstruction activities has grown to surpass the U.S. contribution. If Iraqi capacities are better addressed and corruption restrained, obligations and/or expenditures could match or exceed it in the near future.

**Iraqi Debt**

At the time of the invasion, Iraq’s debt, both public and private, was estimated at $125 billion. Current total debt is estimated at $74 billion.15

Since 2003, the United States has argued that any new Iraqi government should not be burdened with debts associated with the policies of its previous ruler and has supported a near total forgiveness of debt. Some large holders of Iraqi debt — France, Germany, and Russia for instance — were more inclined to reschedule debt than to forgive it, arguing that, as an oil rich country, Iraq could afford someday to pay its debts.16

Several steps led to a partial resolution of the debt issue. A series of meetings in early 2004 between the President’s personal envoy for Iraq debt reduction, former Secretary of State James Baker III, and the leaders of debt-holding countries led to statements of support, but no firm commitment, for varying levels of relief. By September 2004, Iraq had both assumed sovereignty and cleared its overdue financial obligations to the IMF, making it easier for Iraq to negotiate an agreement with private and government creditors. Further, Congress authorized $360 million (P.L. 108-309) to cover the costs of cancelling the roughly $4 billion Iraqi debt obligation owed the United States. These factors culminated in an agreement by the 19 Paris Club government creditors on November 20, 2004, to write off roughly $32 billion in Iraqi debt, 80% of what it owed to this group.

In addition to Paris Club creditors, Iraq has borne about $69 billion in other bilateral debt (mostly to Gulf States countries) and more than $21 billion in commercial debt. Of the latter, most claims have been resolved. In May 2007, four

---

nations offered to forgive nearly $21 billion of Iraqi bilateral debt as part of their participation in the International Compact with Iraq. Negotiations with Saudi Arabia to forgive 80% of Iraq’s estimated $15 billion debt reportedly broke down in September. In July 2008, the United Arab Emirates forgave all $3.6 billion in Iraqi debt.

**Other Donors**

To date, more than 40 non-U.S. donors have offered about $15.9 billion in economic reconstruction funds to Iraq. Of this reconstruction assistance, grant aid promised by other donors totals about $5.1 billion. These include $1.6 billion by Japan, $832 million by the United Kingdom, $214 million by Spain, $920 million by the European Commission, $200 million by South Korea, and $350 million by Italy. Much of the grant assistance has been provided as a contribution to the IRFFI (see below). Of the nearly $11 billion offered in loans, about $3.2 billion have been provided, including by Japan ($2.1 billion), the World Bank ($399 million), and the IMF ($744 million).

Japan and Britain have been notably active in providing bilateral assistance. Japan, the second largest donor after the United States, has already spent most of the grant aid it pledged and has developed projects for use of $2.1 billion of a $3.5 billion concessional loan pledge. Among other things, it has provided significant funding for electrical power station rehabilitation, water treatment units and tankers, medical equipment, and firetrucks and police vehicles. The loan is funding port and power plant rehabilitation and irrigation improvements. Britain has offered considerable technical assistance and related support for improvements in the justice system, governance, and economic policy.

Among multilateral contributions, the IMF provided an Emergency Post-conflict Assistance package in 2004 and continues to offer a roughly $744 million Standby Arrangement on which Iraq can draw, but has yet to do so. The World Bank has allocated $399 million of a $500 million concessional loan program, including a $100 million education project, $135 million road project, and $124 million electric power project.

---

18 Department of State, Weekly Status Report, July 8, 2008, p. 22.

**Iraq Trust Fund.** During much of the U.S. occupation, donors had been reluctant to contribute to reconstruction because they had no say in where the funds were to be allocated.  

To deal with this concern, a multi-donor trust fund, the International Reconstruction Fund Facility for Iraq (IRFFI), was established on December 11, 2003. The Facility has two windows, one run by the Bank (the World Bank Iraq Trust Fund) and one by the United Nations (UNDG Iraq Trust Fund). As of November 2007, 25 donors had deposited about $1.8 billion in the Facility. Among other activities, the World Bank Fund ($494 million committed) has financed textbooks, school rehabilitation, and water and sanitation infrastructure, and has provided hundreds of Iraqi civil servants with management training. The UNDG Fund ($1.3 billion committed) is supporting a wide range of projects, most to be implemented by the Iraqi government.

**United Nations.** Despite the devastating bombing of its Baghdad compound in 2003, the U.N. has played a major role in Iraq reconstruction. The U.N. has been largely responsible for providing assistance and guidance to promote the democratization of Iraq, including support to the transitional government and the Iraqi Electoral Commission. U.N. envoy Lakhdar Brahimi helped negotiate the transition to sovereignty, and a U.N. team headed by Carina Perelli assisted the implementation of elections for the National Assembly, successfully held on January 30, 2005. With U.N. assistance the electoral law was drafted, thousands of registrars were trained, 540 registration centers were set up around the country, millions of ballots were printed, 5,300 voting centers established, and thousands of poll watchers trained. Subsequently, the U.N. helped with the constitution-writing process, the constitutional referendum, and the December 2005 parliamentary election. The U.N. is expected to assist in organizing provincial elections scheduled for autumn 2008. With Trust Fund support, the development organizations within the United Nations are actively working on dozens of projects. U.N. Security Council Resolution 1770, approved August 10, 2007, extended the U.N. Mission for Iraq (UNAMI) another year and called on the U.N. to expand its role in assisting Iraq. The number of U.N. international staff in Iraq itself has grown significantly in the past year; in December 2007 there were 250-300, as well as about 500-600 local staff.

**International Compact for Iraq.** In response to a continuing U.S. effort to encourage greater levels of donor contributions, the U.N. and Iraq, on July 27, 2006, launched an International Compact with Iraq. Under this initiative, participating donor countries have pledged funds and, in return, Iraq has promised a five-year program of specific reforms and actions leading to long-term economic and political development. The Compact was finalized at a donor meeting held in Egypt on May 3, 2007, attended by more than 60 countries. Roughly $700 million in non-U.S. grant

---

and loans commitments (included in the above donor totals) and $21 billion in debt relief are estimated to be associated with the Compact.24

**U.S. Assistance Policy and Program Structure**

On June 28, 2004, the Coalition Provisional Authority (CPA), the agency established to temporarily rule Iraq and implement reconstruction programs, was dissolved as Iraq regained its sovereignty. At that time, broad responsibility for assistance programs moved from the Secretary of Defense to the Secretary of State.25 At the Department of State, the Senior Advisor and Coordinator for Iraq is David Satterfield. In Iraq, the United States provides assistance and, to the extent possible, policy guidance to the Iraqi government through its U.S. embassy. Ryan Crocker is the Ambassador. The embassy employs about 1,000 U.S. direct hire staff.

On May 15, 2007, President Bush chose Lieutenant General Douglas Lute to serve as his so-called “war czar” in the capacity of Assistant to the President and Deputy National Security Advisor. He is expected to coordinate and manage the implementation of the new strategy in Iraq, including assistance program activities.

By executive order (13431), on May 15, 2007, an Iraq Transition Assistance Office (ITAO) was established in the embassy, supplanting some of the functions of the Iraq Reconstruction Management Office (IRMO) that had, itself, supplanted CPA efforts in setting requirements and priorities for the aid program. The Embassy’s Office of Provincial Affairs is in charge of the PRTs.

The Project and Contracting Office (PCO), formerly the CPA’s Program Management Office (PMO), is run by the Army Corps of Engineers, Gulf Region Division (GRD), headed by Brig. Gen. Jeffrey J. Dorko.26 The GRD-PCO has been chiefly responsible for the more than $10 billion in FY2004-funded IRRF programs dedicated to infrastructure construction, as well as follow-on sustainability efforts. The GRD/PCO coordinates, manages and monitors contracting and expenditures in six sectors — transport and communications; electricity; buildings/health; security/justice; public works/water resources; and oil. Although in the Department of the Army, it reports to the Department of State as well as to the Department of the Defense.

Overall responsibility for management of U.S. military activity in Iraq belongs to Gen. Petreaus, soon to be replaced by General Odierno, as commander of the multinational forces in Iraq. He also serves as principal military adviser to the U.S.

---

25 According to National Security Presidential Directive (NSPD) of May 11, 2004. It made the Secretary of State responsible for “continuous supervision and general direction of all assistance for Iraq.”

26 The PCO and IRMO were established by the May 11, 2004 NSPD. See GRD-PCO website at [http://www.rebuilding-iraq.net].
ambassador. With the policy guidance of the ambassador, Lt. General James Dubik is the officer immediately in charge of overseeing the training and support of all Iraqi security forces. Although the State Department had assumed control of technical assistance provided to the different Iraq ministries, in October 2005 it ceded responsibility to DOD for the two ministries most closely involved in security matters — Interior and Defense. Among reasons given for this switch are that DOD has greater resources at its disposal and that State has had difficulty filling advisor positions in these ministries, the latter point disputed by some. In most other countries, State has responsibility for training police forces.27

A third major U.S. actor in the implementation of the aid program is the U.S. Agency for International Development (USAID). Responsible for more than $5.2 billion of assistance to date, USAID manages a wide range of economic, social, and political development programs. Its programs have included a multi-faceted, large-scale construction project and most activities related to public health, agricultural development, basic and higher education, civil society, local governance, democratization, and policy reform.

The post of CPA Inspector General, created under the FY2004 Emergency Supplemental legislation (P.L. 108-106), was redesignated the Special Inspector General for Iraq Reconstruction (SIGIR) by the FY2005 DOD Authorization (P.L. 108-375). Special Inspector General Stuart Bowen, Jr., reports to both the Secretary of Defense and State. The SIGIR office has about 60 employees examining a range of issues, including the extent and use of competition in contracting; efficient and effective contract management practices; and charges of criminal misconduct. The SIGIR issued his first report to Congress regarding his audits and investigations on March 30, 2004, and has reported quarterly since then.28

The SIGIR’s scope of authority originally encompassed only the IRRF, although the SIGIR has responded to specific congressional and executive branch requests to audit other account programs. The FY2007 Defense Authorization made all FY2006 reconstruction appropriations, regardless of account, subject to SIGIR jurisdiction as though they were under the IRRF. The FY2008 Defense Authorization (H.R. 4986, P.L. 110-181), signed into law on January 28, 2008, broadens the authority of the SIGIR to include all reconstruction programs from all accounts and all years.

U.S. Reconstruction Assistance

Among the key policy objectives laid out by the Bush Administration is the economic and political reconstruction of Iraq. Discussion and debate have been ongoing regarding the strategy to reach these ends utilizing reconstruction aid funds and the effectiveness of aid implementation.

28 See [http://www.sigir.mil/] for reports and audits.

Reconstruction Priorities

Reconstruction priorities have changed over time. Allocations within the Iraq Relief and Reconstruction Fund (IRRF), the main U.S. assistance account in the first few years, mirrored shifting events on the ground. For example, in November 2003, when the CPA decided to accelerate the hand-over of sovereignty, it immediately revised the allocation of FY2004 IRRF appropriations that had been legislatively mandated only weeks previously in order to increase substantially the democratization effort — from $100 million to $458 million. After the State Department took charge in June 2004, the new U.S. Embassy country team reallocated FY2004 IRRF resources, emphasizing security needs, increased oil production, greater employment, and democracy as the highest priorities, at the expense of many large-scale economic infrastructure projects — in particular water and sanitation and electricity — that were viewed as too slow and dependent on an improved security situation to have an immediate impact. Although these and later reallocations were pragmatic responses to new events on the ground, their cumulative impact was to divert funds from previously planned programs. As a result, water and sanitation projects were cut by half (from $4.3 billion to $2.1 billion), and electric power programs lost a quarter of their original funding (from $5.6 to $4.2 billion).

Current Priorities. As of the end of September 2006, IRRF funds were no longer available for obligation, and the large-scale infrastructure programs which chiefly characterized IRRF efforts are no longer funded by the United States (although targeted neighborhood-oriented infrastructure projects and sustainment of
completed projects continue). The major elements of current assistance are as follows:

- **Military-Security Assistance.** More than four-fifths of total FY2008 regular and supplemental reconstruction appropriations are applied to the training and equipping of Iraqi security forces. This effort is funded entirely from the ISFF.

Economic-social-democratization assistance is funded mostly with Economic Support Fund (ESF) assistance, categorized under three “tracks”:

- **Security Track.** Under the security track are assistance programs most closely associated with the Administration’s new strategy for Iraq, largely programs supporting work of the Provincial Reconstruction Teams (PRTs). There are 25 PRTs, including 13 embedded with combat battalions (ePRTs) in strategic locations. These work with Iraqi local leaders to identify economic and political development projects that can be implemented with U.S. financing (see PRT section below for details).

- **Economic Track.** This track encompasses assistance to help Iraqis operate, maintain, and sustain U.S.-funded infrastructure projects (see sustainability section below for discussion).

- **Political Track.** Under the political track are a range of efforts to support governance, democratization, and rule of law programs at all levels of government in Iraq, including helping Iraqi ministries improve their ability to operate and helping local governments administer their provinces and municipalities.

Finally, there has been increasing attention paid to humanitarian needs.

- **Humanitarian Aid.** The Migration and Refugee Assistance (MRA) and International Disaster Assistance (IDA) accounts address the problems of a refugee and internally displaced persons population amounting to more than 4.4 million.

Security, sustainability, PRTs, governance, and humanitarian needs constituted the key features of the Administration budget reconstruction aid requests for FY2008 and FY2009. However, up until its consideration of emergency supplemental legislation in May 2008, Congress had funded only the security and humanitarian aspects in FY2008.

---

29 According to the SIGIR, most of the “unobligated” FY2003 IRRF funds were used to reimburse the Department of State for reconstruction costs incurred prior to the appropriation. SIGIR, *Report to Congress*, October 31, 2007, p. 61. According to the Department of State, $402 million of the remaining “un-obligated” FY2004 IRRF funds are considered “expired” and can only be used for claims and adjustments related to existing IRRF-funded contracts. 2207 *Report to Congress*, October 2007, p. 1.
Reconstruction Programs and Issues

**Status.** Reconstruction programs have shown mixed results to date. There are many positive outputs, such as schools rehabilitated, vaccinations provided, and so on. However, in the critical sectors of electric power and oil production, outputs have been less than originally envisioned. (In the past eight months, there have been noteworthy improvements in both of these sectors.) Moreover, the impact of U.S. projects on Iraq is hard to estimate, and the extent to which they and other-donor contributions meet the total needs of Iraq has not been fully assessed. Although mismanagement and corruption play a large role in diminishing returns from reconstruction efforts, it has been the lack of stability and the effects of the insurgency that have most affected the course of reconstruction to date.

A brief review of assistance sectors:30

- **Security and Justice.** More than 1,200 facilities — police stations, border forts, fire stations, courts, etc. — have been completed. About 478,524 police and military security forces have been trained and equipped. Security responsibility for 10 of the 18 provinces has now been transferred to Iraqi military control (and an 11th is anticipated soon). However, sectarian divisions, inadequate logistics capabilities, and insufficient numbers of Iraqi officers and other problems keep the Iraqi Army and the Ministries of Defense and Interior dependent on U.S. support. U.S. assistance is providing salaries for the tribal Awakening movement’s so-called Sons of Iraq (formerly Concerned Local Citizens) volunteer security force.31

- **Healthcare.** The focus of this sector, mostly funded from the IRRF, has been to rehabilitate and equip facilities, train health care providers, and provide medical services such as immunizations. Nonetheless, according to a July 2007 Oxfam International report, 90 percent of Iraq’s 180 hospitals lack basic medical and surgical supplies. Many construction projects experienced considerable delays, and contracts won by U.S. firms had to be revoked and re-awarded to Iraqis, including 12 of 20 refurbished hospitals. Only 91 of a planned 142 new clinics will be completed with U.S. funding. Further, the Basrah Children’s Hospital has had significant cost overruns. A new Amara surgical hospital is being funded with ESF funds. The ability to open new facilities has been hindered by the...
lack of doctors; since 2003, the number of doctors has fallen from 24,000 to 14,000.32

- **Transportation.** Key results in this sector are the restoration of the deepwater port at Umm Qasr, and repairs on 96 of 98 railway stations, as well as two international and three regional airports. Although the airports and seaport have shown considerable activity, only a tiny percentage of Iraqi trains run because of security concerns, but numbers have been improving in recent months. The SIGIR notes that road repairs, mostly village roads, are only targeting a very small percentage of total road and bridge work required (for example, only 8 repaired bridges of 1,156 in poor condition or destroyed) and have been delayed by security problems.

- **Democracy.** Local governance has been strengthened through establishment of councils and community associations. More than 6,000 grassroots projects have been conducted through USAID grants provided to more than 1,450 community action groups. Voter education, training of election monitors, and related activities contributed to three successful elections in 2005. Technical experts provide advice to government agencies regarding adoption of possible budgetary and management reforms. Halting progress has been made on achieving national reconciliation, including amending the Iraqi constitution, and holding long-promised local elections.

- **Education, Agriculture and Private Sector Development.** About 6,716 schools have been rehabilitated and 60,000 teachers trained. Irrigation systems were rehabilitated, 68 veterinary clinics reconstructed, and 83,500 date palm offshoots planted. Agricultural extension agents are being trained and agribusiness supported. Bank credit officers have been trained, and credit is provided to micro and small business. Efforts to reinvigorate state-owned factories have met with some success in recent months (see discussion below).

- **Refugees and IDPs.** Of the 4.6 million Iraqis who have fled their homes due to sectarian violence, roughly half are refugees in other countries and half are internally displaced people (IDPs). Most U.S. assistance in this sector is channeled through the U.N. High Commission for Refugees (UNHCR), the International Red Cross, and other agencies. More than $500 million has been allocated to date.33

---

Electricity. U.S.-funded projects have added 2,120 megawatts (MW) to Iraq’s generating capacity. Before the war, electric power was 4,500 MW and, until recently, capacity fell well below this level despite an early goal of reaching 6,000 MW. However, by the third quarter of 2007, it had increased to around 4,550 MW, a post-war record. In Baghdad, Iraqis receive fewer hours of electricity than before the war (averaging about 12 hours in early July); elsewhere they receive more than previously (about 12 hours). In addition to the impact of insurgent activity, other challenges to the growth of electrical power are the rising demand for electricity, a lack of centralized monitoring and control systems, poorly maintained infrastructure, and a shortage of fuels to operate power plants. The GAO estimates that an infrastructure investment of $27 billion is required to meet demand.34

Oil. Although the original U.S. goal was 2.8-3.0 MBD by end of 2004, oil production remained stagnant and well below the pre-war level of 2.5 million barrels/day for some years. However, by late October 2007 the level had risen to 2.4 MBD, where, with occasional lapses due to pipeline disruptions, it has remained. It is currently at 2.5 MBD. According to the SIGIR, poor infrastructure, corruption, and difficulty maintaining and operating U.S.-funded projects join the destruction caused by the insurgency as major challenges. As the IRRF projects end, only relatively small-scale CERP activities in this sector are active.

Water and Sanitation. Water and sanitation sector assistance has provided clean water to 6.7 million people and sanitation to 5.1 million. However, according to the aforementioned Oxfam report, the number of Iraqis without access to clean water has risen since 2003 from 50 percent to 70 percent and 80 percent lack sanitation. CERP funds now play the main role in U.S. water assistance.35

Infrastructure Sustainability and Asset Transfer. As large-scale construction projects — power plants, water and sanitation systems, oil facilities, etc. — have been completed, there has been concern regarding the ability of Iraqis to maintain and fund their operations once they are handed-over to Iraqi authorities. This concern has grown following SIGIR “sustainment reviews” that suggested projects transferred to Iraqi control are not being adequately maintained. For instance, a July 2007 assessment found that two Baghdad region power station units that had been rehabilitated with U.S. funds were not operational, largely because of insufficiently maintained equipment.36

35 Ibid., Oxfam, p. 3.
36 SIGIR, Report to Congress, April 30, 2007, p. 147; SIGIR, Report to Congress, July 30, (continued...)
To insure long-term sustainability, the U.S. effort — the so-called “economic track” now led by the Army Corps of Engineers — has focused on capacity development — providing training to the appropriate personnel in the labor force who will operate and maintain facilities and insuring sufficient funds are available for repairs and equipment replacement following project completion. At the Ministry level, the United States is assisting development of policies and laws conducive to efficient use and maintenance of infrastructure.

In addition, the United States is providing significant assistance to support the physical protection of important infrastructure, in particular electricity and oil facilities. Efforts to secure infrastructure include the use of biometrics, construction of security perimeters, lighting and communications improvements, establishment of exclusion zones for pipelines, and enhancements to the forward operating bases used by the Iraqi army to protect infrastructure.\(^\text{37}\)

The long-term responsibility for sustainability, however, lies with the Iraqi government. Although a “principal objective” of the U.S. infrastructure construction program has always been the “swift transition of the reconstruction effort to Iraqi management and control,” the SIGIR found in July 2007 that the Iraqi government had not accepted any U.S. project transfers since July 2006. As of May 31, 2007, 2,363 projects valued at $5.3 billion awaited transfer. According to the SIGIR, the U.S. government in some cases has continued to fund maintenance of projects pending acceptance by Iraq.\(^\text{38}\) A SIGIR report in April 2008 found that only limited progress had been made in establishing an asset transfer process, and that current planning included only IRRF projects and excluded more than $2 billion in ESF, ISFF, and CERP projects.\(^\text{39}\)

**Capacity Development.** Much effort and assistance has gone into improving the capabilities of government ministries, including equipping and training personnel at all levels of service, and situating U.S. advisers in every ministry. Ministry officials and staff, however, remain deficient in knowledge of modern administrative systems and management practices. The current focus is on improving budget execution and service delivery, considered by many to be essential elements of an effective Iraqi government. As noted earlier, both the national Government of Iraq and provincial governments have had difficulty implementing capital budgets. U.S. programs, including institution of 18 Provincial Procurement Assistance Teams, several Procurement Assistance Centers (two in Baghdad and one in Erbil), and a range of training programs in public administration, appear to have led to

\(^{36}\) (…continued)

\(^{39}\) SIGIR, *Transferring Reconstruction Projects to the Government of Iraq*, 08-017, April 2008.
improvement over the previous year’s performance in this regard, although the extent of that improvement has been subject to some dispute (see “Oil Revenue and Iraqi Capital Budget” section).

In the past two years, the SIGIR has highlighted problems with U.S. implementation and coordination of capacity development programs, pointing out that, as there is no single organization responsible for the reconstruction effort, the capacity building program has gone without an integrated plan providing coordination and priorities to the multiple organizations responsible for it, points reiterated in an October 2007 GAO report on the effort. Perhaps responding to the SIGIR’s concerns, in early 2007, the newly appointed Coordinator for Economic Transition began leading an Embassy Budget Execution Initiative. This initiative encompasses an interagency task force to coordinate U.S. activities, including those of USAID and the U.S. senior consultants assigned to each ministry. The GAO report suggests that this and parallel efforts have not yet resolved coordination issues and that only now are U.S. officials beginning to develop a capacity development strategy.

**Provincial Reconstruction Teams (PRTs).** In an effort to expand outreach to the provinces and strengthen local government, the U.S. Embassy, in mid-2005, began establishing Provincial Reconstruction Teams (PRTs). There are two types of PRTs in Iraq — the original PRTs and embedded PRTs. In each case, the military provides protection to U.S. civilian officials and development specialists, allowing them access to parts of Iraq that otherwise would not be possible. The PRTs are now a major purveyor of U.S. reconstruction aid — responsible for over $1 billion in FY2006 and FY2007 ESF funds — and a key element in the President’s new strategy for Iraq.

The first PRTs were made up of Embassy, PCO, USAID, military, and other U.S. agency staff, between 35 and 100 members in each, with the State Department as leader. There are currently 14 of these PRTs. Three are British, Italian, and South Korean-led, respectively.

Embedded PRTs — called ePRTs — are structured differently than their predecessors. They are *embedded* in Brigade Combat Teams with the Brigade Commander acting as leader. Most have 8 to 12 personnel. They were created as

---

42 There are also currently four Provincial Support Teams (PSTs), much smaller teams that reside on a military forward operating base and provide advice to provincial officials as needed. These are being converted to PRTs or blended into existing PRTs.

part of the January 2007 surge strategy, which also saw an increase in U.S. forces. In essence, the strategy envisions that, as U.S. and Iraqi military forces work to clear and hold an area, ePRT staff will work with local Iraqis to further stabilize the area by drawing on all available spigots of U.S. and Iraqi government funding to create jobs and meet other basic needs. They play a major role in reconciling tribal, municipal, district, and provincial government entities. Of the 13 ePRTs — nine are in Baghdad, three in Anbar, one in northern Babylon, one in southern Diyala, and one is in Wasit province.

While the new ePRTs are more focused on establishing stability, the other PRTs emphasize improvement of local governance. They work together with local community and Iraqi government representatives — forming Provincial Reconstruction Development Councils (PRDCs) — to identify projects that can be implemented and carried out with U.S. financing. It is anticipated that, as a result of this collaboration, local governments may be strengthened while U.S. projects achieve more lasting support. The PRTs also work closely with provincial governments to strengthen their capacities and enable them to better interact with the central government as well as to more effectively utilize the Iraqi government funds that have been allocated to each province.

At the disposal of all PRTs is a tool-box of projects that can be implemented at the grass-roots level. PRDC-identified projects tend to be focused on infrastructure — road and bridges, water and sanitation, schools, and health clinics — and usually are finished in one year. Although the Embassy must approve them, PRDC projects generally are implemented by the Army Corps of Engineers. In August 2007, a new Quick Response Fund (QRF) that mimics the flexibility of the CERP in funding local community projects was made available to the PRTs. They support local government, NGOs, and small businesses.

In addition to economic projects directly handled by the PRTs, USAID runs several programs, often in conjunction with the PRTs, that address local-level concerns. The Community Action Program (CAP) funds projects identified by local representative associations, stimulating democratic participation, while meeting local needs and creating short-term employment. The Community Stabilization Program (CSP) addresses economic needs in specific strategic cities, providing youth programs, micro and small enterprise support, and vocational training. The Local Governance Program (LGP) helps build management and knowledge skills of provincial government personnel. Complementing the work of the PRTs and USAID, although apparently provided independently, Commander’s Emergency Response Program (CERP) funding is also available to pacify the local population where PRTs reside. A large proportion of CERP projects support local, small-scale infrastructure construction, especially in the water and sanitation and electrical power sectors.

One problem with these multiple assistance programs is that they are implemented by different agencies, with different funding sources, and different authorities, raising concerns regarding coordination of program coherence. Among other criticisms of the PRTs are that they lack clear lines of authority, agreed missions, and measurable objectives.46

Security constraints may have negatively affected PRT performance. One reason there had been limited grassroots development work in the provinces up to the creation of the PRTs in 2005 is the lack of security. Although originally reluctant to divert the necessary manpower from its other responsibilities, the Department of Defense finally agreed to provide protection to the PRTs and a Memorandum of Understanding to this effect was signed in November 2006. However, according to an October 2006 SIGIR report, minimum “movement” by PRT personnel required three armored vehicles and eight “shooters.” Normal business was, therefore, difficult. The SIGIR reported that many PRT members could not regularly meet with local government officials to carry out their capacity-building chores.47 Further, a former PRT diplomat who left in January 2007 suggested that local Iraqis were too intimidated to meet with U.S. staff and that training sessions had been cancelled due to security concerns.48 In January 2007 congressional testimony, however, Secretary Rice indicated that civilian staff were able to meet regularly with local government personnel, and Ambassador Satterfield claimed in February 2007 that the SIGIR’s views on this issue did not reflect current reality. But a March 2007 article based on PRT foreign service officer reports indicated that the security problem had persisted.49 The October 2007 SIGIR report continued to find that PRT performance was impeded by security concerns, and its draft version even recommended that personnel be reassigned to better functioning PRTs until security improved. According to the SIGIR, the Embassy and military have promised new efforts to ensure that PRTs are not hindered by lack of appropriate security.50

The March 2007 article mentioned above also raised the concern that security obstacles facing PRTs might increase as U.S. troops protecting PRT staff hand responsibility for security over to Iraqi forces. In September 2007 testimony to Congress, a SIGIR official noted that there was little coordination between the PRTs and U.S. military in those cases where security has been handed to the Iraqis. As a result, the official suggested that U.S. civilians will be unable to move about freely and, consequently, PRTs may be unable to function in those areas where the U.S.

military steps down.\textsuperscript{51} Whether the ePRTs are to be dissolved or redeployed elsewhere following the draw-down on “surge” forces is not yet apparent.

The availability of qualified U.S. government civilian staff has been another obstacle to PRT success. Early reports of its first year of operations suggested that State was having difficulty enticing its personnel to volunteer for PRT posts. According to the SIGIR, DOD stepped in to provide military civil affairs personnel in place of the State posts, but required skills for such posts as local government, city management, business development, and agricultural advisers were not being fully met. That situation continued as the ePRTs were established. About 104 of the new ePRT posts were temporarily occupied by military personnel or civilians until State was able to recruit sufficient numbers of skilled individuals. Those recruited in specialized skills are mostly contract personnel, because such skills are not typically available from either the State or USAID foreign service. As many as 278 such personnel were expected to eventually be needed. According to the October 2007 SIGIR report, many PRTs were at half-capacity, there was a mismatch of skills to requirements, and there were only 29 bilingual Arabic-speaking cultural advisers of 610 personnel.\textsuperscript{52}

**The Role of Iraqi Private Sector in Reconstruction and DOD Business Task Force.** One facet of the U.S. reconstruction effort has been an attempt to encourage economic growth and decrease unemployment by trying to utilize Iraqis in the implementation of projects. In 2003-2004, this involved making Iraqi businessmen aware of contract opportunities and encouraging U.S. contractors to employ Iraqi firms. Although U.S. government requirements could be waived for Iraqi contractors, most work for Iraqi business came in the form of subcontracts under U.S. prime contractors.

When the State Department took over reconstruction in July 2004, however, greater efforts were made to contract project work directly with Iraqis. By 2005, the SIGIR estimated that about 70%-80% of new contracting was directly with Iraqis.\textsuperscript{53} A contributing factor in this effort was the deleterious impact of security on the activities of the large-scale contractors. In January 2005, Contrack International, holder of a $325 million roads and bridges construction contract, announced its withdrawal.\textsuperscript{54} Consequently, many bridge and road projects were then implemented directly with the Ministry of Construction, with estimated savings of between 30% 

\textsuperscript{53} Stuart Bowen, Testimony to House Foreign Operations Appropriations Subcommittee, September 7, 2005.

and 40%. As some U.S. contractors were shown to perform inadequate work, they were replaced by Iraqi contractors. The PCO claims that hundreds of Iraqi firms are currently working on U.S.-funded reconstruction projects, although these numbers are falling significantly as construction projects are completed. CERP and USAID Community Action Program grants are often designed to directly employ large numbers of Iraqis, many at the village level. About 121,120 Iraqis were reported to be employed under all U.S.-funded projects in mid-May 2008.56

In the past year, U.S. defense officials, seeking to create employment opportunities for Iraqi citizens, have begun rehabilitating some of the roughly 240 state-owned enterprises that composed a large portion of the Iraqi economy prior to the U.S. occupation. Soon after the occupation began, the CPA attempted to privatize them in an effort to open up a free market economy in Iraq, but officials gave up on what promised to be a politically unpopular endeavor when the turnover of sovereignty was accelerated.

To support this effort — entitled the Task Force to Improve Business and Stability Operations — Congress approved $50 million in the FY2007 supplemental and has approved an additional $50 million under the DOD Iraq Freedom Fund account in the second tranche of the FY2008 supplemental. Funds are being used to supply generators and other supplies. Roughly 53 factories have been started-up or had production increased: among them, one producing Iraqi uniforms, another armored vehicles, and another household ceramic bathware for domestic Iraqi consumption. A further Task Force effort directs U.S. military contracts to Iraqi business — $200 million worth each month to over 3,900 private sector businesses, according to the DOD. The Task Force also seeks international investment in the enterprises with a view to eventual privatization. More recently, the Task Force has sought to encourage the development of the private banking system, promoting formation of a consortium of these banks and assisting the adoption of electronic funds transfers.57

Skepticism had been expressed regarding the DOD program when it was launched. About 100,000 jobs have reportedly been created versus the original DOD employment goal of 150,000 jobs in 140 restarted factories by September 2008. Some have suggested that, unless well-managed, investments in SOEs might provide opportunities for corruption and political manipulation.58 DOD officials attributed

56 Department of State, Iraq Weekly Status Report, July 9, 2008.
early program problems to a lack of enthusiasm by U.S. companies, the Iraqi consumer’s preference for imported goods, the lack of electricity, and the uncertain political and security environment.59

**CERP.** Drawn from DFI and Department of Defense funds rather than IRRF or ESF appropriations, the Commander’s Emergency Response Program (CERP) contributes to the reconstruction effort by providing U.S. military commanders on the ground with “walking around money” intended to win hearts and minds throughout Iraq. Up to now, a total of about $3.9 billion — $548 million in CPA-provided Iraqi funds and at least $3.4 billion in U.S. DOD appropriations — has been made available for this purpose. Recently, the Iraqi government allocated $300 million to establish an Iraqi CERP to be managed by the U.S. military.

The CERP supports a wide variety of reconstruction activities at the local level, from provision of micro-grants to businesses to digging wells to painting schools, provided in the form of small grants. CERP also funds infrastructure efforts, such as repair or provision of electric generators and construction of water and sewer systems, roads, and schools. Commanders identify local needs and dispense aid with few bureaucratic encumbrances. Major subordinate commanders have authority to approve grants up to $500,000. The grants have been credited with helping the military better exercise their security missions, while at the same time meeting immediate neighborhood development needs, often much more quickly than equivalent efforts of the civilian reconstruction program. In addition to reconstruction, CERP funds are used for compensation payments to the families of killed or injured Iraqis.60 Recently, the CERP has been used to pay the salaries of the so-called Sons of Iraq (formerly known as the Concerned Local Citizens); this effort accounts for roughly one third of total FY2008 CERP obligations as of April 2008.

As the IRRF program has declined, the CERP program has grown as a major spigot of U.S. aid in Iraq. From its beginnings as a small-scale village program — the average grant in FY2004 was $67,000 — it is now the major source of U.S. infrastructure construction aid with an average grant in FY2006 of $140,000.

The SIGIR and others have raised some concerns regarding the CERP, most derived from the essentially different security and reconstruction objectives of military and civilian efforts, respectively. Among the SIGIR’s concerns is that there is no mechanism to measure the outputs and outcomes of CERP projects. Secondly, the high turnover of military personnel in Iraq means that there is little continuity in management and oversight of the projects. Third, little weight has been given to the handing-over of projects to Iraqis and insuring their sustainability. Other observers have noted that civil affairs officers and others allocating CERP grants are not

58 (...continued)

development specialists and have been provided little or no training on the selection and management of reconstruction activities. The program’s early rationale — that the military were the only ones able to conduct small-scale reconstruction in places where civilian U.S. officials and NGO aid personnel were unable to go — appears less strong now that civilian ePRT personnel are embedded in combat battalions. Further, the October 2007 SIGIR report on the PRTs points to cases where the use of CERP funds to meet local needs conflicted with PRT efforts to make local government assume responsibility for provision of local services and work with the provincial and national government, instead of the U.S. military, to address problems.  

**Security.** The successful conduct of reconstruction work is contingent on an environment of order and stability. Although recent reports suggest a lessening of violence in parts of the country, the cumulative effect on the reconstruction effort of years of continued instability has been manifold.

- The instability has hindered implementation of reconstruction projects. Security threats have prevented PRT personnel from communicating directly with local governments, construction workers from appearing at their jobs, and project managers from monitoring project work.

- Completed reconstruction projects and pre-existing infrastructure have been destroyed. For instance, in June 2007, eight of the twelve 400-kV transmission lines were out of service, greatly reducing the electricity supply to Baghdad. Major pipelines continue to be sabotaged, shutting down oil exports. Along with criminal activity and poor equipment, insurgent attacks are estimated to be responsible for the loss of $16 billion in oil revenue during a two year period from 2005-2006.

- Reconstruction costs rose substantially due to the need to provide for security and insurance for personnel. Estimates of the portion of project costs devoted to security have varied widely. A 2006 SIGIR survey of major U.S. contractors found security costs to range from

---

62 For example, the SIGIR reports that on March 24, 2006, a project manager received an e-mail threatening all employees — as a result, no one came to work the next day. SIGIR, Report to Congress, April 30, 2006, p. 12; SIGIR, Status of the Provincial Reconstruction Team Program in Iraq, 06-034, October 29, 2006.

a low of 7.6% to a high of 16.7%. Unanticipated security costs as well as the related need to shift $1.8 billion from water and power projects to the training and equipping of Iraqi forces has meant that infrastructure programs could accomplish less than originally anticipated.\footnote{Implementing organizations and personnel have fled. Fearing for their safety, many aid implementors have been withdrawn from the country. U.N. and bilateral aid donors have been reluctant to initiate projects of their own; many are running programs from Jordan or Kuwait utilizing Iraqi personnel to the extent possible.\footnote{The quality of aid has likely been negatively affected as implementors cannot meet with local people and design and monitor projects as they would in other countries. The pool of foreign expertise available to advise the government and NGOs is restricted to those few willing to endure the country’s hardships. U.S. agency personnel stay only a short time and therefore institutional knowledge is not maintained. Among the 2.4 million Iraqis who have fled the country are professionals necessary to successful reconstruction. More than 20,000 of 34,000 registered doctors have reportedly left. In 2006, more than 300 teachers and Ministry of Education staff were killed.}\footnote{In a broader sense, prolonged insecurity has undermined the trust of the Iraqi people in U.S. and now Iraqi government leadership to bring about a democratic and economic transformation in Iraq, opening the door to further political discontent and possible civil war.}}

There are two elements in the effort to provide the security that might allow political and economic reconstruction to take hold — U.S. and coalition peacekeeping forces and the training of Iraqi security forces to replace them. The

number of U.S. troops is roughly 145,000. There are also about 9,372 troops from 23 other nations.68

About $23 billion in U.S. appropriations has been aimed at building Iraqi security forces. According to the State Department, in early July 2008, there were 251,880 trained conventional Iraqi police and Ministry of Interior forces and 222,935 army and other defense forces, although the actual number of active duty soldiers has been said to be 65 percent of the total because of leave, attrition, and desertion, and reports by officials and observers have suggested that many fewer could be said to be capable of the most demanding jobs. In late 2007, the Iraqi government authorized a significant expansion of its security forces to a level of 539,749.69

During the past three years, poorly trained and equipped security forces, no-shows and desertions, dismissals of police for criminal behavior, bribe-taking for obtaining higher rank or for release of insurgent suspects, and infiltration of police and other units by sectarian militia groups have threatened U.S. plans to increase security using Iraqi personnel.70 The September 2007 Jones Commission report called for the breakup and reconstitution of the police due to the high level of corruption and sectarianism. U.S. commanders believe this step is unnecessary because of progress made in weeding out inappropriate personnel.71

While the September 14, 2007, Benchmark Assessment Report argued that the Iraqi forces were showing progress, it also noted that they were not making satisfactory progress toward increasing the number of units capable of acting independently of coalition partners. More recently, the DOD stated that 67% of all formed Iraqi Army combat units are able to plan and execute operations with “minimal or no assistance.” U.S. military officials point to “shortages of key personnel, equipment, weaponry, and logistical capabilities” as significant obstacles.72

---

Accountability, Waste, and Fraud

A lack of transparency in early contracting and numerous reports in the media suggesting that reconstruction funds were being squandered led to the establishment in November 2003 of an Inspector General for the CPA, now called the Special Inspector General for Iraq Reconstruction (SIGIR). To date, the SIGIR has issued more than 115 audits and 115 project assessments, and it has conducted 96 limited onsite inspections as well as dozens of investigations of possible criminal activity.\(^{73}\) It should be noted that many sectors and projects have not yet been subject to program audits or project assessments, including water projects, roads, and many traditional assistance programs, including those in democracy, governance, education, agriculture, and economic growth sectors. Recent expansion of SIGIR authority will likely facilitate increased oversight of the ESF and ISFF accounts that now compose the majority of U.S. assistance to Iraq.

Some of the most egregious examples of misconduct found to date appear to center on the CPA’s use of Iraqi funds during the year-long occupation. For instance, a January 2005 SIGIR audit found that the CPA “provided less than adequate controls” for $8.8 billion of DFI resources it moved through Iraqi ministries. An April 2005 audit concluded that CPA managers of DFI funds distributed in the South-Central region of Iraq could not account for more than $96.6 million in cash and receipts. An October 2005 audit found that South-Central personnel could not account for more than $20.5 million in Rapid Regional Response Program funds and made $2.6 million in excessive payments. In late 2005, several U.S. citizens were criminally charged with respect to the handling of these funds — and have since pled guilty. In February 2007, five more were indicted.\(^{74}\)

While some investigations of reconstruction programs utilizing U.S.-appropriated funds have raised the possibility of criminal activity, many more have produced evidence of poor project implementation and questionable management and oversight of projects, a large proportion of these the responsibility of the Army Corps of Engineers which runs the Embassy’s Project and Contracting Office. SIGIR auditors and project assessment teams with engineering, audit, and investigative experience have traveled to major U.S.-funded IRRF project sites to see if work is being performed properly. Although most conclude that projects were either carried out as intended or point out correctable quality control and structural deficiencies, the SIGIR has found some projects to be especially problematic, including the following:

- The Basrah Children’s Hospital, expected to cost $50 million, will run to at least $98 million and nearly a year behind schedule. Bechtel, the project contractor, was removed and the project will be

\(^{73}\) See SIGIR website, [http://www.sigir.mil/], for audit reports to date. SIGIR, Report to Congress, January 30, 2008, Section 3.

completed using local contractors. USAID, the agency responsible, failed to report the cost and delays, in part because it had only one contracting officer and one technical officer to oversee 20 projects worth $1.4 billion.  

- In September 2006, the SIGIR reported that the Baghdad Police College, a $75 million construction project implemented by Parsons, was riddled with deficiencies, including improperly fabricated wastewater plumbing which poses a health and structural hazard. Press reports in November 2007 indicate that the problems have still not been fixed by the contractor, despite promises made to Congress. The Mosul police headquarters, constructed by an Iraqi contractor at a cost of approximately $1 million, is similarly troubled.

- A $218 million first responders network was ineffective — communication was not possible between the three established zones of the system and Iraqi citizens could not call in to request emergency assistance, among other problems.

- After the expenditure of $186 million, only 6 of 150 planned primary health care centers to be constructed by Parsons were completed and only 14 more were expected to be finished. A contract was awarded to Iraqi firms to complete 121 partially constructed centers.

- A project to run 16 oil pipelines under the Tigris River failed amidst warnings from a geologist that the subsoil was not conducive to drilling, demonstrating a lack of appropriate oversight by the Army Corps of Engineers. Nearly $76 million in DFI funds were wasted.

- An examination of Task Force Shield, a program to train and manage an oil and electricity infrastructure protection force, found

78 SIGIR, Audit 06-020, July 2006.

it had been unsuccessful after the expenditure of $147 million. In part, this outcome was due to the absence of a clear management structure for the various U.S. agencies involved. Further, auditors, reportedly, could not determine how many Iraqis were trained or how many weapons were purchased.81

- An audit of “design-build” contracts that characterize many of the infrastructure projects found very high administrative costs in some cases. About 55% of KBR work on the RIO project and 43% of a Parsons oil project were consumed by overhead costs. Security is likely one factor in the high level of overhead found here, and enforced idleness while awaiting government direction to begin work is another. However, the audit also found inadequate accounting and billing systems to capture administrative costs in four of five contracts examined.82

- Roughly 370,000 weapons purchased with $133 million in IRRF funds for the use of Iraqi security forces were not accompanied by spare parts or technical repair manuals, and were not registered to insure accountability. (Some of these weapons have reportedly made their way to the black market.)83

- A DynCorp project to provide services to international police trainers spent nearly $44 million on a residential camp that was not used (including an Olympic-size swimming pool that was unauthorized) and about $36 million for weapons that cannot be accounted for. The audit found the State Department Bureau for International Narcotics and Law Enforcement (INL) and State Office of Acquisition Management provided poor contract administration.84

- A 2007 SIGIR financial review of the State Department’s DynCorp contract for training Iraqi police could not be completed, because documents were in disarray, invoices had not been validated, and INL did not know what it received for the $1.2 billion in expenditures.85

---

84 SIGIR, Audit 06-029, January 2007. An April 2008 review of INL progress in meeting SIGIR recommendations arising from the earlier audit found that a concerted effort was being made to implement them. SIGIR, Audit 08-014, April 2008.

85 SIGIR, Audit 07-016, October 19, 2007. See above footnote re April 2008 review of INL.
• A more than $38 million project to provide a new accounting system for the Iraq Ministry of Finance has been of limited use and has been suspended pending clarification of Iraqi government support for the effort.86

• A 2007 DOD IG audit of $5.2 billion in the Iraq Security Forces Fund found a lack of proper accountability for $1 billion in equipment purchase contracts.87

• A 2008 assessment of the $270 million Nassriya water treatment plant was producing water at one fifth its intended capacity, because the Iraqi government had failed over a four-year period to meet its promises to provide permanent power, repair leaks in the distribution system, and provide qualified staff to operate the facility.88

• A 2008 audit of the USAID Community Stabilization Program found potential fraud ranging from $6.7 to $8.4 million in one district of Baghdad, including possible diversion of funds to militia activities by means of overpriced trash collection contracts as well as phantom workers for cleanup campaigns. The project was suspended in that district.89

Assessments of Reconstruction

Dozens of reports and articles published during the past five years have sought to analyze, criticize, and recommend action regarding the progress of reconstruction aid.90 Many focus on the history of the aid program with a view toward explaining

86 SIGIR, Audit 08-001, October 23, 2007.
the current state of affairs. Others, like the Iraq Study Group report, seek to improve future outcomes. See the Appendix for a collection of critical views.

Another category of assessments are reviews of specific projects, some findings of which are noted in the previous section. Security concerns in Iraq have made it difficult for interest groups and the news media to produce the kind of expert and anecdotal reports they publish about other places. Most project assessments, therefore, have come from various U.S. government auditors.91 Even these, however, appear constrained by security in the number of site-visits they are able to undertake to review project results. The SIGIR is conducting some of its assessments by aerial imagery because of the risk to its personnel; while investigating for its April 2008 report on the Nassriya Water Treatment Plant, on-site inspections were limited to 30 minutes each. Government Accountability Office (GAO) investigators were not even able to visit Iraq while preparing a 2005 report on water and sanitation programs.92

Some observers have suggested that one problem with assessing the progress of economic reconstruction is that there is no “big picture” overview; by comparison, more comprehensive end-result assessments of security assistance appear to be regularly conducted by DOD.93 Responsible government agencies provide information regarding how many infrastructure projects are being started and

90 (...continued)

91 For a list of audits and inspections from all agencies, see SIGIR, Report to Congress, January 30, 2007, Appendices I, J, K, L.

93 Although observers may not agree on the meaning of what they find. In three assessments of the effort to train and equip Iraqi security forces released in September 2007, somewhat differing perspectives emerged. While the White House Benchmarks report found much progress in the development and operation of the Iraqi security forces — from growth in size to assumption of lead roles and independent planning — it also found the increase in the number of Iraqi security forces being capable of operating independently of U.S. troops to be unsatisfactory. The GAO, pointing out that the number of independent units declined between March and July 2007, bluntly chose to describe the objective as not being met. And the Iraqi Security Forces Independent Assessment Commission led by General James Jones found that, while the Iraqi Army is capable of taking over an increasing amount of day-to-day combat responsibilities, the Iraqi forces would be unable “to fulfill their essential security responsibilities independently over the next 12-18 months.” White House, Benchmarks Assessment Report, September 14, 2007; GAO, Iraqi Government Has Not Met Most Legislative Security and Economic Benchmarks, GAO-07-1230T, September 7, 2007; General James L. Jones, Chairman, The Report of the Independent Commission on the Security Forces of Iraq, September 6, 2007, p. 8.
completed — amounts of kilowatt hours produced and oil pumped — how many small-scale grants are being provided, and how many people are being trained, but there is little detail regarding to what degree the overall national need for drinking water, schools, health care, electricity, employment, and other requirements is being met by the expenditure of billions of dollars in U.S. resources — not to mention Iraqi and other donor resources — targeted at these needs. When such data have been gathered, they suggest that the needs are not being addressed to the extent required. For example, the GAO has estimated that it will take $50 billion in infrastructure investments to meet needs in the electricity and oil production sectors alone.  

The extent to which specific Iraqi needs are met is one way of assessing an assistance program. The extent to which U.S. policy objectives have been met is another. With the exception of a brief moment when what some would call an idealistic Administration appears to have sought to transform Iraq into a modern Western nation, the purpose of the U.S. assistance program has at the very least been to create a minimal level of stability in which a minimally functioning Iraq could take care of its own affairs. The strategies to accomplish this end have changed over time. While the strategy governing security assistance shifted from classroom military training to ever greater levels of cooperative U.S.-Iraqi troop operations, the strategy for economic assistance has moved from the construction of large-scale infrastructure, which chiefly characterized the period from 2004 through 2006, to technical assistance provided to encourage ministerial and local government capacities to manage and administer their own programs, small-scale employment initiatives, and hundreds of community-based projects meant to supplement and supplant the stabilization activities of the U.S. and Iraqi security forces.

The impact of these economic aid efforts, many underway on a smaller scale since 2003, is much more difficult to weigh than the infrastructure programs. They are individually too small and numerous perhaps to make an obvious dent on the larger political and economic picture in Iraq. Measurements for success of these economic aid programs are difficult to achieve. The seemingly most accessible potential measurement of success for the effort to enhance ministerial and local government capacities has been the rate of contracting and expenditure of capital investment — budget execution. In September 2007, the Administration touted a much improved level of budget execution over the previous year. However, a January 2008 GAO report suggested that figures employed to make that judgment were flawed and that the level of spending could not be established with then-current conflicting data. Ultimately, it may be the cumulative stabilizing impact of economic aid projects when brought to bear on a specific Iraqi region in conjunction with the military security assistance effort that will be the determinant of success. The merits of individual project activities may be impossible to isolate.

There has been no lack of criticism of the U.S. reconstruction program in Iraq. However, it is important to recognize that criticisms aimed at earlier efforts may not apply to current programs and strategies, especially if appropriate lessons have been learned. Included among the many suggestions from a wide range of sources of what went wrong in the Iraq reconstruction effort are the following:

- **Inadequate security.** As noted earlier in this report, lack of a secure environment in which to undertake reconstruction meant delays in project implementation and completion; destruction of completed projects; greatly increased costs which, in turn, drained funding from other projects; and a loss of foreign expertise and local participation that would have made projects more effective. Among widely circulated reasons were a failure to anticipate post-invasion security needs and the early decision of the CPA administrator to disband the Iraqi military. Initially, security forces received hurried and insufficient training.

- **No prior planning.** Planning for post-Iraq reconstruction has been generally characterized as inept. Military officials planned for a humanitarian crisis that never happened. Moreover, accounts suggest that efforts to plan for reconstruction were actively discouraged by the Pentagon leadership lest it raise potential obstacles to U.S. invasion. The State Department’s 2002 Future of Iraq Project, which utilized dozens of Iraqi experts to anticipate post-war concerns, including the possibility of widespread looting, was said to be studiously ignored by DOD.

- **Mismanaged transition to Iraqi governance.** Many critics have pointed to the slow pace of forming a publically approved Iraqi authority which could have provided Iraqis with a sense of ownership in the reconstruction and democratic process and discouraged disorder. In the first six months, foreign aid workers had no counterpart in the Iraqi ministries able to make decisions that might advance reconstruction. CPA-imposed de-Baathification disrupted the functioning of the Iraqi bureaucracy and meant the loss of skilled Iraqis from management positions. Further, large-scale reconstruction efforts were designed with little regard for Iraqi views and were originally meant to be implemented by U.S. contractors with Iraqis playing a secondary role.

- **Discouraging a U.N. and International Role.** The Administration sought at first to keep control of post-war reconstruction in U.S. hands, rather than internationalizing it as had been done in Kosovo and Bosnia. Critics asserted that, had the U.N. been in a position of greater responsibility, it would have deflected Iraqi criticism of the United States, legitimized occupation policies, and encouraged
financial and peacekeeping participation by bilateral donors. Donors were said to be unresponsive to U.S. pleas for either military or financial assistance, partly because they were not being offered a “seat at the table” in determining the future of Iraq. The decision to exclude some countries from competing for Iraq contracts, in the view of many, further alienated potential international support.

- **Inadequate U.S. civilian administration.** Early on, a British official was quoted as saying of the CPA, “this is the single most chaotic organization I have ever worked for.” Critics asserted the CPA was understaffed, lacking experience and knowledge of the country, in many cases with no background in assistance programs, and too isolated from the Iraqi people (with headquarters in a former palace and requiring a military bodyguard when they ventured outside). The level of aid expertise is seen as improving under State Department management, but security concerns continued to limit contact with Iraqis and insufficient staff numbers negatively affected project oversight as well as PRT implementation.

- **Excessive Reliance on the U.S. Military.** Observers note that although actual reconstruction is inherently a civilian effort, in Iraq much of it was implemented by military personnel. In January 2003, the President placed sole authority for reconstruction in the hands of DOD, rather than with development assistance or democracy experts at USAID and State. In June 2004, after the State Department was given the lead role, the Army continued to manage about $10 billion in infrastructure projects, insuring a continued lack of coordination between assistance entities. Utilizing the CERP program, military commanders on the ground continue to influence reconstruction at the grassroots level. Some assert that these are roles for which the military had not been prepared — there is a long learning curve and many mistakes were made — and which emphasize to the Iraqi people the “occupation” character of the U.S. presence. Instead, some critics suggested that a corps of civilian reconstruction specialists should have been deployed around the country. As early as July 2003, the Hamre Assessment Mission report recommended that 18 provincial CPA offices be established with 20-30 civilian staff in each. It was not until mid-2005, that the PRT program was launched. Its spread was delayed by military reluctance to provide security.

- **Poor Accountability.** As discussed earlier in this report, a number of projects were poorly implemented. In some cases, funds may have been misused. What unites many of these accounts, perhaps

---

most notably the CPA’s cavalier treatment of billions in Iraqi-owned funds, is the argument that they could have been prevented by more thorough oversight by government managers.

- **Ineffective Assistance.** Measurable objectives in critical sectors, such as oil production and electric power generation, were not met. But the full picture of the effectiveness of the reconstruction effort in most sectors is clouded by the impact of instability and conflict.

- **Inadequate Levels of Assistance.** The high cost of conducting reconstruction projects in Iraq: due to protective security spending and large overhead costs — amounting in some cases to a quarter or more of project totals — meant that amounts appropriated for economic reconstruction did not produce the equivalent in goods and services that one would expect in other aid recipient countries. In short, less bang for the buck. Further, funds originally intended for economic reconstruction, particularly water and electricity programs, were diverted to training of Iraqi security forces.

- **Too Broadly Dispersed Assistance.** Critics maintain that the aid effort attempted to do too much in too many sectors from health to electricity to microenterprise to roads. As a result, too few resources were scattered over too many projects to produce a significant impact in any one of them. They argue that assistance should have been concentrated more intensively in key areas such as oil production and governance so that Iraqi funds could have been generated and Iraqi managers could spend them.

- **Poor Contracting and Procurement Processes.** The SIGIR has looked at contracting actions from before the war through the CPA to the present. Among other problems, it points to the failure to involve contracting and procurement personnel in the planning stages of post-conflict reconstruction operations, the lack of emphasis given contracting for smaller projects, the use of sole-source and limited competition contracting, and the failure to give a single unified contracting entity the authority to coordinate all contracting activity.98
