MASTER

Dear Mr. Paulson:

As you know, our two agencies engaged in a year-long agreement to monitor water-level data in 16 observation wells located at the Hallam Nuclear Facility, Hallam, Nebraska. The data collection period started in September 1993, and continues through August 1994. As per agreement, the Nebraska District of the U.S. Geological Survey is to provide the U.S. Department of Energy with an interim summary of information collected following 6 months of data collection. Enclosed herewith is that summary, which consists of the following:

1. Description of the U.S. Geological Survey's monitoring program at the Hallam Nuclear Facility--September 1993 to February 1994.
2. Description of the collection of continuous water-level data.
3. Description of the collection of monthly water-level data.
4. Table of observation well number, latitude, longitude, and depth.
5. Table of monthly ground-water levels data.
6. Table of recorder wells, rainfall, and barometric pressure unit values (15-minute interval).
7. Table of recorder well, rainfall, and barometric pressure daily values:
 - daily maximum and minimum water levels for wells 1A and 1B
 - daily maximum and minimum barometric pressure in millimeters of mercury
 - daily total rainfall in inches

DISTRIBUTION OF THIS DOCUMENT IS UNLIMITED

DISCLAIMER

Portions of this document may be illegible in electronic image products. Images are produced from the best available original document.

8. Hydrographs of the following wells:

- 1A and 1B--daily values--maximum depth below land surface datum (in feet) from data recorder
- 2A and 2B
- 3A and 3B
- 4A, 4B, and 4C
- 5A and 5B
- 6A and 6B
- NPPD B-4, B-8, and B-10

9. Two diskettes containing tables of recorder data

- unit values (15-minute interval)
- daily maximum and minimum water levels
- daily maximum and minimum barometric readings
- daily total rainfall

Please note that the unit values for barometric pressure are in inches, while the daily values are in millimeters of mercury (mm of Hg).

If you have any questions, please feel free to contact Dan Fitzpatrick at our office.

Sincerely,

Linda S. Weiss
District Chief

Description of the U.S. Geological Survey's water level monitoring program at the Hallam Nuclear Facility — September 1993 to February 1994

A water-level collection program between the U.S. Department of Energy and the U.S. Geological Survey (USGS) was set up to measure water levels in 16 observation wells at the Hallam Nuclear Facility, Hallam, Nebraska. Thirteen of the 16 observation wells are owned by the U.S. Department of Energy and were installed by HWS of Lincoln, Nebraska, in June 1993. The other three wells existed previously and are owned by the Nebraska Public Power District.

All 16 observation wells are measured monthly using a steel tape. The accuracy of the water-level measurements is approximately ± 0.02 foot. During access of the wells, personnel wear clean disposable latex gloves. Directly following the measurement, the steel-tape is rinsed with distilled water. The three NPPD wells are measured last and the tape is cleaned and rinsed.

Two of the 16 observation wells (1A and 1B)) have pressure transducers to continuously monitor water levels, a barometric pressure gauge to record atmospheric pressure, and a rain gauge to record rainfall. The water levels computed by the pressure transducers, the barometric pressure readings, and the rainfall data are recorded electronically by an electronic data logger. The data recorded on the electronic data logger is downloaded monthly onto a laptop computer and processed in the USGS District office.

The water-level data was collected in these 16 observation wells from September 1993 through February 1994. During this time most of the water levels within the observation wells receded from the September and October highs. Water levels in the two recorder wells (1A and 1B) also show a general decline during the past 6 months (see enclosed hydrographs).

Description of the collection of continuous water-level data

During the first six months of water level, rainfall, and barometric data collection, most of the data was collected without incident. However, three instances of missing or errant data occurred during this interval.

- 1) Recording of water-level data from the two recorder wells (1A & 1B) was collected from October 1993 through February 1994. Prior to this period, the newly installed electronic data logger developed an electrical malfunction that caused a loss of data from the installation date (September 23, 1993) through the next inspection period (October 13, 1993).
- 2) Installation of a new electronic data logger was completed on October 13, 1993. However, during this time the sensors were programed incorrectly resulting in the need for datum corrections to be applied to both sensors from October 13, 1993 through November 19, 1993. The errant programming resulted from setting a mandatory offset for the wrong transducer.
- 3) On February 7, 1994 the electronic data logger was turned off accidentally during a site visit. This problem was rectified the following day upon returning to the site.

Description of the collection of monthly water-level data

Water level data was collected monthly at all 16 observation wells from September 1993 through February 1994, with three exceptions. During the October and January inspections, large 50,000 gallon containers used for cleaning the boilers at the Shelton Station blocked the access to wells 6A and 6B. On February 10, 1994, frozen solid coal dust covering well B-10 prevented the water level measurement from being made.

Observation Well Number, Latitude, Longitude, and depth— Hallam Nuclear Facility, Hallam, Nebraska

B-10	7N 6E 19ADCC1	40° 33' 37"	096° 47' 03"	

NOTE: The well numbers are based on the land subdivisions within the U.S. Bureau of Land Management's survey of Nebraska. The numeral preceding the N (north) indicates the township, the numeral preceding E (east) indicates the range, and the numeral preceding the terminal letters indicates the section in which the well is located. The terminal letters denote, respectively, the quarter section (160 acres), the quarter-quarter section (40 acres), the quarter-quarter-quarter section (10 acres), and the quarter-quarter-quarter-quarter section (2.5 acres). They are assigned in counterclockwise direction beginning with "A" in the northeast corner of each subdivision. If two or more wells are located in the same 2.5 acre tract, they are distinguished by adding a sequential digit to the well number.
