Low-Level Radioactive Waste Forum

Summary Report: Low-Level Radioactive Waste Management Activities in the States and Compacts

A supplement to LLW Notes

Volume 5, Number 2 • July 1997

Editor, Cynthia Norris

Contributing Writers: LLW Forum Participants and Alternate Forum Participants

Project Manager: Rick Gedden

Design: M. A. Shaker

Summary Report: Low-Level Radioactive Waste Management Activities in the States and Compacts is a supplement to *LLW Notes* and is distributed periodically by Afton Associates, Inc. to state, compact and federal officials that receive *LLW Notes*.

Members of the public may apply to DOE's National Low-Level Waste Management Program at the Idaho National Engineering and Environmental Laboratory (INEEL) to be placed on a public information mailing list for copies of the *Summary Report*.

Interested parties should contact Donna Lake, Senior Administrative Specialist, INEEL, at (208)526-0234. Back issues of the *Summary Report* are available from the National Technical Information Service, U.S. Department of Commerce, 5285 Port Royal Road, Springfield, VA 22161, (703)487-8547.

The *Summary Report* can also be found on the LLW Forum Internet site, located at <http://www.afton.com/llwforum>.

Recipients may reproduce and distribute the *Summary Report* as they see fit, but sections in the *Summary Report* must be reproduced in entirety and with full attribution.

The Low-Level Radioactive Waste Forum (LLW Forum) is an association of state and compact representatives, appointed by governors and compact commissions, established to facilitate state and compact implementation of the Low-Level Radioactive Waste Policy Act of 1980 and the Low-Level Radioactive Waste Policy Amendments Act of 1985 and to promote the objectives of low-level radioactive waste regional compacts. The LLW Forum provides an opportunity for state and compact officials to share information with one another and to exchange views with officials of federal agencies and other interested parties.

Compacts and Their Host States

Appalachian Compact

Governing Body Appalachian States Low-Level Radioactive Waste Commission

Member States Delaware, Maryland, Pennsylvania, West Virginia

Compact Established The compact was established February 19, 1986, and ratified by Congress on May 19, 1988. The commission's first organizational meeting was held April 30, 1990.

Current Waste Management As of July 1, 1995, waste may be shipped to the disposal facility in Barnwell, South Carolina. In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, wastes meeting Envirocare of Utah's license conditions are being shipped for disposal at the Envirocare facility. Certain NARM wastes meeting the State of Washington's conditions are being shipped to the commercial disposal facility in Hanford, Washington.

Host State: Pennsylvania

Regulatory and Program Responsibility Bureau of Radiation Protection, Department of Environmental Protection (DEP)

Siting Responsibility Chem-Nuclear Systems, Inc.

Other Involvement DEP Low-Level Waste Advisory Committee
Environmental Quality Board

Disposal Technology earth-mounded above-ground vault

Siting Pennsylvania has completed the final stage of a three-stage disqualification process. About 75 percent of Pennsylvania has been disqualified from further consideration. Pennsylvania is seeking one or more volunteer communities under its Community Partnering Plan approved in February 1996. During May 1996, Chem-Nuclear held nine open houses across the commonwealth to share information about the siting process and the Community Partnering Plan. The search for a volunteer community is expected to take about three years.

Licensing Chem-Nuclear is expected to submit a license application to DEP in 2000. Pennsylvania will be applying for full Agreement State status with NRC.

Development Costs To date: \$35 million. Estimated total cost including construction: not available.

Disposal Facility Operational Projected by 2002.

Compacts and Their Host States (continued)

Central Compact

Governing Body Central Interstate Low-Level Radioactive Waste Commission

Member States Arkansas, Kansas, Louisiana, Nebraska, Oklahoma

Compact Established The compact was established May 12, 1983. The commission's organizational meeting was held June 29, 1983.

Current Waste Management As of July 1, 1995, waste may be shipped to the disposal facility in Barnwell, South Carolina. In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, wastes meeting Envirocare of Utah's license conditions are being shipped for disposal

at the Envirocare facility. Certain NARM wastes meeting the State of Washington's conditions can be shipped to the commercial disposal facility in Hanford, Washington.

Siting Responsibility US Ecology, Inc.

Disposal Technology above-ground vault

Siting Property near Butte in Boyd County, Nebraska, was selected in December 1989.

Development Costs As of May 31, 1997: \$83.2 million. Projected total cost including construction: \$154.3 million.

Disposal Facility Operational The Butte facility is projected to be operational no later than autumn 1999.

Other Information On November 30, 1996, the compact commission adopted two motions calling for issuance of draft reports and a draft license decision before January 14, 1997, and for consolidated public hearing and comment periods. The host state sued the commission, challenging these actions, on November 27, 1996. The litigation is currently pending before the U.S. District Court for the District of Nebraska.

Host State: Nebraska

Regulatory and Program Responsibility Department of Environmental Quality
Department of Health

Licensing The Nebraska Low-Level Radioactive Waste Program is in the final phase of its technical review of US Ecology's license application. When complete, the state's evaluation documents will be made available to the public for review and comment. A public participation process has been established which maximizes public input in the form of two public hearing opportunities. US Ecology's license application was submitted in July 1990. In mid-July 1995, the state initiated its final review activities based upon US Ecology's confirmation that the state had received a complete package of US Ecology's final responses and application revisions.

Compacts and Their Host States (continued)

Central Midwest Compact

Governing Body Central Midwest Interstate Low-Level Radioactive Waste Commission

Member States Illinois, Kentucky

Compact Established The compact was established in September 1984, ratified by Congress effective January 1986, and most recently amended and ratified in October 1994.

Current Waste Management As of July 1, 1995, waste may be shipped to the disposal facility in Barnwell, South Carolina. In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, wastes meeting Envirocare of Utah's license conditions are being shipped for disposal at the Envirocare facility. Certain NARM wastes meeting the State of Washington's conditions are being shipped to the commercial disposal facility in Hanford, Washington.

Host State: Illinois

Regulatory Responsibility Illinois Department of Nuclear Safety

**Program and
Siting Responsibility**

Low-Level Radioactive Waste Task Group—develop siting criteria

Illinois State Geological Survey and State Water Survey—statewide screening including evaluation of volunteer locations and identification of locations likely to meet the criteria

facility developer—evaluation of the locations, selection and characterization of site, preparation of license application, and facility development

Illinois Department of Nuclear Safety—licensing agency

Disposal Technology above-grade, earthen-covered concrete vault

Siting The task group will develop siting criteria, and the Illinois Geological and Water Surveys will be responsible for screening the state and evaluating any volunteer sites in order to locate areas of at least 640 acres each that appear likely to meet the criteria. The contractor, using a volunteer site-selection process, will evaluate the areas identified by the Geological and Water Surveys, select one promising site for further study, and present findings to the task group. Following the task group's approval of the site, the contractor will begin full characterization.

Licensing A license application is expected to be submitted by 2009.

Development Costs To date: not available. Estimated total cost including construction: not available.

Disposal Facility Operational Projected by 2012.

Midwest Compact

Governing Body Midwest Interstate Low-Level Radioactive Waste Compact Commission

Member States Indiana, Iowa, Minnesota, Missouri, Ohio, Wisconsin

Compact Established The compact was established in October 1983 and was given the consent of Congress in December 1985. Compact amendments were enacted by Ohio and Wisconsin in 1995 and by Indiana, Iowa, Minnesota, and Missouri in 1996. These amendments will now be submitted to Congress for consent.

Current Waste Management As of July 1, 1995, waste may be shipped to the disposal facility in Barnwell, South Carolina. In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, wastes meeting Envirocare of Utah's license conditions may be shipped for disposal at the Envirocare facility. Certain NARM wastes meeting the State of Washington's conditions are being shipped to the commercial disposal facility in Hanford, Washington.

Other Information On June 26, 1997, the Midwest Compact Commission halted development of a regional disposal facility in Ohio. Citing significant declines in Midwest Compact waste volumes, the potentially high cost of developing new disposal capacity, and continued access to the Barnwell and Envirocare of Utah disposal facilities, the commission also relieved Ohio of its host state designation and its obligation to site and operate a regional facility. The commission plans to conduct a review of the Midwest Compact's functions during the year following the decision to halt development. The commission also will work with generators to examine options that provide a greater assurance of long-term access to existing disposal facilities.

Host State: None

Compacts and Their Host States (continued)

Northeast Compact

Governing Body Northeast Interstate Low-Level Radioactive Waste Commission

Member States Connecticut, New Jersey

Compact Established Congress ratified the compact in 1985, and it was signed into law by the President in 1986. Shortly thereafter, two of the four original member states—Delaware and Maryland—joined the Appalachian Compact. In 1987, the remaining member states of Connecticut and New Jersey were designated as dual host states.

Current Waste Management As of July 1, 1995, waste may be shipped to the disposal facility in Barnwell, South Carolina. In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, wastes meeting Envirocare of Utah's license conditions may be shipped for disposal at the Envirocare facility. Certain NARM wastes meeting the State of Washington's conditions may be shipped to the commercial disposal facility in Hanford, Washington.

Host State: New Jersey

Regulatory Responsibility NRC (New Jersey is not an Agreement State.)

New Jersey Department of Environmental Protection

Program Responsibility New Jersey Low-Level Radioactive Waste Disposal Facility Siting Board (Siting Board)

Siting Responsibility New Jersey Low-Level Radioactive Waste Disposal Facility Siting Board

Other Involvement New Jersey Radioactive Waste Advisory Committee (RWAC)

Disposal Technology State law precludes shallow land burial. The technology will depend on input from the volunteer community, site-specific requirements, and the ability of the technology to be licensed.

Siting The state's siting plan seeks a volunteer community to host a disposal facility and offers significant incentives.

Licensing Since New Jersey is not an Agreement State, the Siting Board will apply to the NRC for a license. No date has been set for license submittal.

Development Costs To date: \$4.8 million through June 30, 1996. Estimated total cost including construction: \$100 million.

Disposal Facility Operational In adopting a voluntary siting plan in 1995, the Siting Board chose to set no definitive dates or deadlines.

Other Information Since the voluntary plan was adopted, public discussions of possibly hosting the disposal facility have occurred in more than a dozen New Jersey towns. To date, none have chosen to volunteer. Siting efforts are funded through generator assessments.

Host State: Connecticut

Regulatory Responsibility	NRC (Connecticut is not an Agreement State.) Connecticut Department of Environmental Protection
Program Responsibility	Connecticut Office of Policy and Management—coordination Connecticut Hazardous Waste Management Service—program
Siting Responsibility	Connecticut Hazardous Waste Management Service
Other Involvement	Connecticut Siting Council Connecticut Department of Public Works
Disposal Technology	The Board of Directors of the Connecticut Hazardous Waste Management Service will select the technology in consultation with the volunteer community. The board has decided not to consider shallow land burial.
Siting The state's siting plan seeks a volunteer community to host a disposal facility and offers significant incentives. The state is prepared to use a statewide screening process if the volunteer approach does not produce a site that protects public health and safety.	
Licensing Connecticut's current projected date of license submittal to NRC is 2002–2004.	
Development Costs To date: \$12.7 million. Estimated total cost including construction: \$100 million.	
Disposal Facility Operational Projected by 2005–2008.	
Other Information Effective April 2, 1993, the Connecticut General Assembly approved the 1993 Low-Level Radioactive Waste Management Plan. The plan's volunteer siting approach is being implemented. Siting efforts are funded through generator assessments.	

Compacts and Their Host States (continued)

Northwest Compact

Governing Body Northwest Interstate Compact Committee

Member States Alaska, Hawaii, Idaho, Montana, Oregon, Utah, Washington, Wyoming

Compact Established The compact was established in 1981 and ratified by Congress in December 1985.

Current Waste Management In-region waste is disposed of at the regional commercial disposal facility in Hanford, Washington. Certain NARM wastes meeting the State of Washington's conditions are also being shipped to the Hanford facility.

Host State: Washington

Regulatory Responsibility Department of Health

Program Responsibility Department of Ecology

Disposal Technology shallow land burial

Siting The regional low-level radioactive waste disposal facility is located on the U.S. DOE Hanford reservation on 100 acres of land subleased by US Ecology from the State of Washington.

Licensing The site operator's current materials license was issued by the Washington State Department of Health on May 29, 1992. The license is currently under timely renewal.

Development Costs Not applicable.

Disposal Facility Operational The compact's regional disposal facility has been in operation since July 1965.

Other Information The compact's low-level radioactive waste disposal site is not permitted for mixed waste. The compact is working with other states and compacts to encourage DOE to provide for management of the compact's mixed waste.

In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, out-of-region low-level radioactive wastes meeting Envirocare of Utah's license conditions are provided access to the region for disposal at Envirocare. The Envirocare of Utah facility is licensed to accept mixed waste, low-level radioactive waste within Class A limits, NORM, and uranium and thorium mill tailings. Envirocare predominantly receives large volume, low activity waste from federal and commercial remediation projects throughout the United States. Envirocare is prohibited from receiving Class B and C low-level radioactive waste. Concentration limits for individual radionuclides are specified in the license.

Rocky Mountain Compact

Governing Body Rocky Mountain Low-Level Radioactive Waste Board

Member States Colorado, Nevada, New Mexico

Compact Established The compact was established in 1983 and ratified by Congress in December 1985.

Current Waste Management The Rocky Mountain Board has a contract with the Northwest Interstate Compact Committee and the State of Washington for disposal at the Northwest Compact's regional commercial disposal facility in Hanford, Washington. In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, wastes meeting Envirocare of Utah's license conditions are being shipped for disposal at the Envirocare facility. Certain NARM wastes meeting the State of Washington's conditions are being shipped to the Hanford facility.

Other Information Export authorization is required for all waste generated within the compact region that is sent outside of the region. Import authorization is required to bring out-of-compact waste into the region for management. One facility within the compact region is currently authorized to receive out-of-compact waste. The compact has jurisdiction (including import and export authority) over NORM/NARM.

Host State: None

Compacts and Their Host States (continued)

Southeast Compact

Governing Body Southeast Compact Commission for Low-Level Radioactive Waste Management

Member States Alabama, Florida, Georgia, Mississippi, North Carolina, Tennessee, and Virginia

Compact Established The Southeast Compact was established in 1983 and ratified by Congress in 1985. The compact law was amended in 1989.

Current Waste Management As of July 1, 1995, waste from all member states except North Carolina may be shipped to the disposal facility in Barnwell, South Carolina. In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, wastes meeting Envirocare of Utah's license conditions are being shipped for disposal at the Envirocare

facility. Certain NARM wastes meeting the State of Washington's conditions are being shipped to the commercial disposal facility in Hanford, Washington.

Since July 1995, waste in North Carolina has been stored at the sites of generation.

Host State: North Carolina

Regulatory Responsibility Division of Radiation Protection (DRP), North Carolina Department of Environment, Health and Natural Resources

Program and Siting Responsibility North Carolina Low-Level Radioactive Waste Management Authority (Authority)

Other Involvement Chem-Nuclear Systems, Inc.—future facility operation

Disposal Technology integrated vault

Siting In December 1993, the Authority selected a site in Wake County as its preferred site.

Licensing A license application was submitted by Chem-Nuclear to DRP in December 1993. It is expected that DRP will not issue the license before February 2000.

Development Costs To date: \$106 million. Estimated total cost excluding construction: \$139 million. Estimated total cost including construction: \$216 million.

Disposal Facility Operational Projected by August 2001.

Other Information The Governor of North Carolina has stated that the ban on North Carolina waste at the Barnwell facility is unconstitutional and may be challenged in court.

Compacts and Their Host States (continued)

Southwestern Compact

Governing Body Southwestern Low-Level Radioactive Waste Commission

Member States Arizona, California, North Dakota, South Dakota

Compact Established The compact was established in July 1988 and ratified by Congress in November 1988. North Dakota and South Dakota joined the compact in 1989.

Current Waste Management As of July 1, 1995, waste may be shipped to the disposal facility in Barnwell, South Carolina. In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, wastes meeting Envirocare of Utah's license conditions are being shipped for disposal at the Envirocare facility. Certain NARM wastes meeting the State of Washington's conditions are being shipped to the commercial disposal facility in Hanford, Washington.

Host State: California

Regulatory and Program Responsibility

Department of Health Services (DHS)

Siting Responsibility

US Ecology, Inc.

Other Involvement

U.S. Department of the Interior

Disposal Technology

enhanced shallow land burial

Siting The property designated as the preferred site by the state is currently owned by the federal government. The U.S. Department of the Interior announced in February 1996 that it would prepare a second Supplemental Environmental Impact Statement (SEIS) before deciding whether and under what conditions to transfer the property to the state. California considers the SEIS to be without legal or technical basis, is not participating in its preparation, and has sued the Department of the Interior to resolve the issue.

Licensing A license was issued by DHS on September 16, 1993, conditioned on DHS ownership of the land. On June 1, 1994, the Superior Court of the State of California ordered DHS to "reconsider its approval of the license." The Court of Appeal of the State of California, Second District, overturned the lower court decision and reinstated the license. On January 18, 1996, the Supreme Court of California denied the plaintiffs' petition to review the appellate court's decision. There are no further avenues for appeal available in the state court system.

Development Costs As of July 1, 1997: (reported by US Ecology) \$78 million. Estimated total development cost including construction: \$105 million.

Disposal Facility Operational Projected by early to mid-1999, contingent upon land transfer.

Other Information At the request of the U.S. Interior Secretary, a National Academy of Sciences committee reviewed seven technical issues related to the site and found no obstacles to proceeding with development. Based on this analysis, in May 1995 the Department of the Interior indicated willingness to transfer land for the facility to the state, subject to certain "enforceable commitments." In February 1996, the Department of the Interior changed its position. (See "Siting.") Members of the U.S. Congress support a legislative transfer of the land. The license issued by DHS does not include mixed waste disposal. The Southwestern Commission and DHS are working with other states and compacts to encourage DOE to provide for management of commercial mixed waste.

Compacts and Their Host States (continued)

Texas Compact (pending)

Governing Body Texas Low-Level Radioactive Waste Disposal Compact Commission

Member States Texas, Maine, Vermont

Compact Established In June 1993, the Governor of Texas signed into law legislation establishing a low-level radioactive waste compact with Maine and Vermont. Maine completed its approval process with the passage of a referendum on November 2, 1993. Vermont adopted the compact on April 25, 1994. The compact was submitted to the U.S. Congress for consent in the summer of 1994, but action was not taken. The compact was resubmitted in 1995 and brought up for a vote on the suspension calendar of the U.S. House of Representatives. On September 19, 1995, the House voted against the motion to suspend debate on the legislation and enact the bill. No action was taken in 1996, but new compact legislation was filed in early 1997.

Current Waste Management As of July 1, 1995, waste may be shipped to the disposal facility in Barnwell, South Carolina. In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, wastes meeting Envirocare of Utah's license conditions are being shipped for disposal at the Envirocare facility. Certain NARM wastes meeting the State of Washington's conditions are being shipped to the commercial disposal facility in Hanford, Washington.

Host State: Texas

Regulatory Responsibility	Texas Natural Resource Conservation Commission (TNRCC)
Program Responsibility	Texas Low-Level Radioactive Waste Disposal Authority (Authority)
Siting Responsibility	Texas Low-Level Radioactive Waste Disposal Authority
Other Involvement	Texas Department of Health
Disposal Technology	below-ground concrete canisters

Siting The Authority began statewide site-screening activities under newly enacted state law in 1983. Initial efforts identified several desirable sites in south Texas. In 1985, the Texas Legislature instructed the Authority to give preference in its site search to state-owned land. In 1987, the Authority identified several possible sites in Hudspeth County, Texas, including a site at Fort Hancock. El Paso County and others filed a lawsuit to enjoin the Authority from selecting the Fort Hancock site, and the site was abandoned in early 1991. In May 1991, the Texas Legislature amended the Authority's statute, to require the selection of a site in a 400-square mile area near Sierra Blanca in Hudspeth County. In February 1992, the Authority selected a site within this area on the Faskin Ranch for the state's proposed low-level waste disposal facility. The ranch was purchased and site characterization began. Site characterization concluded in November 1993.

Licensing The license application was submitted to the TNRCC in March 1992. The TNRCC issued a draft license and environmental assessment on April 1, 1996. Administrative hearings on the application began in August 1996.

Development Costs To date: \$47 million. Estimated total cost including construction: \$90 million.

Disposal Facility Operational Projected by late 1999.

Unaffiliated States

Massachusetts

Primary Regulatory Responsibility	Department of Public Health
Secondary Regulatory Responsibility	Department of Environmental Protection (DEP) Low-Level Radioactive Waste Management Board (Management Board)
Program and Siting Responsibility	Low-Level Radioactive Waste Management Board
Disposal Technology	Shallow land burial is prohibited in Massachusetts; the chosen technology must allow monitoring and package retrieval. After a site is selected, the disposal technology will be chosen by the sited community from methods certified by the Management Board.
Current Waste Management	As of July 1, 1995, waste may be shipped to the disposal facility in Barnwell, South Carolina. In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, wastes meeting Envirocare of Utah's license conditions are being shipped for disposal at the Envirocare facility. Certain NARM wastes meeting the State of Washington's conditions are being shipped to the commercial disposal facility in Hanford, Washington.

Siting As a result of the renewed access to the Barnwell disposal site in July 1995 and the expanded availability of the Envirocare facility, the Management Board voted in March 1996 to cease its activities involving statewide mapping and screening—the first major stage of its in-state siting efforts—and to monitor changes in the national low-level radioactive waste management situation. The board agreed, however, to continue various site-planning tasks so that they could be completed in case in-state siting becomes necessary in the future.

These site-planning endeavors include (1) finalizing a *Draft Siting Plan* that would serve as a “road map” to aid the public in understanding the various roles and responsibilities of federal, state, and local governments in the siting process; (2) completing a *Draft Statewide Mapping and Screening Protocol and Procedures* document, to be used if the Management Board returns to active in-state siting; (3) reviewing and establishing Management Board policies pertaining to the application of “conditional” and “preference” siting criteria in the siting regulations promulgated by DEP; (4) completing the plan for the Volunteer Sites Program; and (5) collecting data from all low-level radioactive waste generators and other sources to prepare a “source term” analysis that assesses the volume and activity of low-level radioactive waste requiring management in a licensed disposal facility and making that data available for negotiations with other states and compacts.

Licensing A projected date is not available.

Development Costs To date: not provided. Estimated total costs of preoperation and initial construction for a hypothetical above-ground vault facility without a cover have been developed based on four potential facility capacities: 35,000 cubic feet per year—\$47.5 million; 50,000 cubic feet per year—\$48.7 million; 80,000 cubic feet per year—\$49.8 million; 467,000 cubic feet per year—\$65.7 million.

Disposal Facility Operational A projected date is not available.

Unaffiliated States (continued)

Michigan

Regulatory Responsibility Michigan Department of Environmental Quality

U.S. Nuclear Regulatory Commission
(Michigan is not an Agreement State.)

Program and Siting Responsibility

Michigan Low-Level Radioactive Waste Authority
(Authority)

Disposal Technology

State law limits disposal technology to above- or below-ground vaults or above- or below-ground modular canisters. No final determination has been made on facility design.

Current Waste Management

As of July 1, 1995, waste may be shipped to the disposal facility in Barnwell, South Carolina. In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, wastes meeting Envirocare of Utah's license conditions may be shipped for disposal at the Envirocare facility. Certain NARM wastes meeting the State of Washington's conditions may be shipped to the commercial disposal facility in Hanford, Washington.

Siting A policy advisory board issued a series of recommendations in September 1995. The board's report included specific recommendations regarding the conduct of a volunteer host community process, revisions to state siting criteria, and consideration of compact options. Amendments to state law must be enacted before these recommendations can be implemented and a new siting process pursued.

Licensing A projected date for submittal of a license application is not available.

Development Costs To date: \$12.4 million. Estimated total cost including construction: not available.

Disposal Facility Operational A projected date is not available.

Department of Labor (DOL)

New York State Citizens Advisory Committee on Permanent Disposal Facility Siting and Disposal Method Selection

Current Waste Management As of July 1, 1995, waste may be shipped to the disposal facility in Barnwell, South Carolina. In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, wastes meeting Envirocare of Utah's license conditions may be shipped for disposal at the Envirocare facility. Certain NARM wastes meeting the State of Washington's conditions may be shipped to the commercial disposal facility in Hanford, Washington.

Disposal Technology State law bars shallow land burial; above-grade vaults identified as tentative preferred technology.

Siting New York's siting program is in transition. The State Budget for FY 1995-96 phased out the activities of the Low-Level Radioactive Waste Siting Commission, which was established in 1987 to select a site and disposal method. The state, under Governor George Pataki, is reevaluating its approach to low-level radioactive waste management. Several relevant proposals have been put before the state legislature, including one that would provide for a volunteer siting process. No new schedule has been developed. Regulations governing site and disposal method selection were adopted by DEC in 1987.

Licensing NYSERDA is responsible for obtaining a DEC permit to construct and operate a land disposal facility and a DOL radioactive materials license, once a site and a disposal method are selected.

Development Costs Through March 31, 1997, \$68.1 million has been collected through annual assessments on operating nuclear power plants (does not include surcharge rebates); \$59 million has been spent on siting, regulation development, public participation and related activities. Estimated total cost including construction: not available at this time.

Disposal Facility Operational The DEC issued financial assurance regulations in September 1991 and regulations for design, construction, operation, closure, post-closure and institutional control in March 1993. NYSERDA is responsible for construction and operation.

South Carolina

Regulatory Responsibility Division of Radioactive Waste Management, Bureau of Land and Waste Management, South Carolina Department of Health and Environmental Control

Program Responsibility Division of Radioactive Waste Management, Bureau of Land and Waste Management, South Carolina Department of Health and Environmental Control—for Barnwell site

Other Involvement Chem-Nuclear Systems, Inc.—facility operation

Current Waste Management Waste is disposed of at the disposal facility in Barnwell, South Carolina. In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, limited mixed wastes meeting Envirocare of Utah's license conditions are being shipped for disposal at the Envirocare facility. Certain NARM (radium) wastes meeting the State of Washington's conditions are being shipped to the commercial disposal facility in Hanford, Washington.

Disposal Technology below-grade vaults

Licensing A license authorizing possession and storage of waste at the Barnwell facility was first issued on November 6, 1969. On April 13, 1971, the license was amended to authorize disposal. The license has been renewed for a five-year period ending July 31, 2000.

Disposal Facility Operational The Barnwell facility has been in operation since 1969. (See above.)

Other Information As required by the FY 1995-96 Appropriations Act, the Governor appointed a Low-Level Radioactive Waste Compact Negotiating Committee. The committee is directed to negotiate with representatives of other states to establish a new low-level radioactive waste management compact, subject to conditions set forth in the statute.

New regulations affecting the Barnwell disposal technology became effective January 1, 1996.

◇DC

District of Columbia

- Regulatory Responsibility** Department of Consumer and Regulatory Affairs (DCRA)
- Program Responsibility** Service Facility Regulation Administration, Department of Consumer and Regulatory Affairs
- Current Waste Management** As of July 1, 1995, waste may be shipped to the disposal facility in Barnwell, South Carolina. In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, wastes meeting Envirocare of Utah's license conditions may be shipped for disposal at the Envirocare facility.
- Siting** Because of the dense population and geographic size of the District of Columbia, and because of the relatively low volume of low-level radioactive waste generated within the district, DCRA is not planning to site a facility.
- Other Information** The District of Columbia is continuing efforts either to join a compact or to contract with one.

NH

New Hampshire

- Current Waste Management** As of July 1, 1995, waste may be shipped to the disposal facility in Barnwell, South Carolina. In addition, subject to the Northwest Compact amended resolution and order of April 20, 1995, wastes meeting Envirocare of Utah's license conditions are being shipped for disposal at the Envirocare facility.

Siting New Hampshire has no plans to site a disposal facility due to the small amounts of low-level radioactive waste generated.

Other Information The Governor's Ad Hoc Committee, with the assistance of the State Radiation Advisory Committee, continues to welcome an opportunity to discuss contracts or compacts with any interested state.

PR
□

Puerto Rico

Puerto Rico is not planning to site a disposal facility. Further information is unavailable at this time.
