PREFACE

The *Title List of Documents Made Publicly Available* is a monthly publication. It describes the information received and published by the U.S. Nuclear Regulatory Commission (NRC). This information includes (1) docketed material associated with civilian nuclear power plants and other uses of radioactive materials and (2) non-docketed material received and published by NRC pertinent to its role as a regulatory agency. As used here, *docketed* does not refer to Court dockets; it refers to the system by which NRC maintains its regulatory records. This series of documents is indexed by a Personal Author Index, a Corporate Source Index, and a Report Number Index.

The docketed information in the *Title List* includes the information formerly issued through the Department of Energy publication *Power Reactor Docket Information*, last published in January 1979. NRC documents that are publicly available may be examined without charge at the NRC Public Document Room (PDR). Duplicate copies in paper, microfiche, or (selectively) diskette, may be obtained for a fee.

Standing orders for certain categories of documents are also available. Clients may search for and order desired titles through the PDR computerized Bibliographic Retrieval System (BRS), which is accessible both at the PDR and remotely. BRS also has some types of documents in full text. Other recent, selected documents, as well as information about the PDR, may be viewed/downloaded from an electronic bulletin board. The PDR is staffed by professional technical librarians, who provide reference assistance to users. See NOTES at the end of the preface for information about reaching the PDR. Microfiche of the docketed information listed in the *Title List* is available for sale on a subscription basis from the National Technical Information Service (NTIS). See NOTES at the end of the Preface for the complete NTIS address.

We encourage your comments, criticisms, and suggestions. In particular, if there are title descriptions that are not meaningful, please let us know so that we can correct the database. Insofar as possible, we would like this document to be a valuable part of your reference material.

DOCKETED ITEMS

Each utility or institution engaged in a nuclear activity licensed and regulated by the U.S. Nuclear Regulatory Commission (NRC) is assigned a docket number. As used by NRC, docket numbers refer to the particular system by which NRC maintains its regulatory records, not to law court dockets. The first two digits of a docket number identify the type of nuclear activity that NRC regulates. These docket categories are as follows:

- 27.—Low-Level Radioactive Waste Disposal Sites
- 30 —Byproduct Material Licenses
- 40 —Nuclear Source Material Facilities
- 50 —Nuclear Reactors and Fuel Reprocessing Plants
- 52 —Standard Design Certification, Early Site Permit, and Combined Licenses for Nuclear Power Plants
- 70 —Special Nuclear Materials

DOCKETED ITEMS (cont.)

71 --Design of Packages for Transport of Radioactive Material and Quality Assurance Programs

72 --Independent Spent Fuel Storage Installations

Except for Docket 27, these numbers correspond to the parts of Title 10 in the *Code of Federal Regulations* (10 CFR) that cover regulations pertaining to those types of licenses. The

remaining digits of a docket number uniquely identify a specific facility or institution. For example, Docket 50-317 identifies the Calvert Cliffs Nuclear Power Plant, Unit 1.

APPENDIX A

DEFINITIONS OF DOCKET CATEGORIES

DOCKET 27 – Low-Level Radioactive Waste Disposal Sites

The Docket 27 series contains documentation concerning the licensing of land disposal of low-level radioactive wastes. In the past, waste disposal licensees were assigned unique Docket 27 numbers. Unlike the other docket series, the first two digits of these docket numbers do not correspond to the part of 10 CFR that specifies NRC's authority for issuing these licenses and the regulations that these licensees must follow. The Docket 27 licenses were issued in accordance with Parts 30, 40, and 70 of 10 CFR in the absence of any final regulations governing the licensing of land disposal low-level radioactive wastes.

In the future, these licensing actions will be governed by 10 CFR Part 61, "Licensing Requirements for Land Disposal of Radioactive Waste." The prefix will then become Docket 61 followed by assigned numbers identifying a specific facility. Documents in these files include:

- Application for land disposal of low-level radioactive waste and supporting documents
- License and amendments
- Correspondence to and from the applicant regarding the application, license, and amendments
- Environmental report and supporting documents
- Inspection and enforcement reports and related correspondence
- Adjudicatory documents relating to proceedings before the Licensing Board and the Commission

DOCKET 30 – Byproduct Material Licenses

The Docket 30 series contains documentation on the possession or use of nuclear byproduct materials for medical, industrial, and academic purposes. **These documents are maintained in the PDR on microfiche only.**

Documents in this series include:

- Application for a license, license amendments, and license renewals or modifications to the byproduct material license and related correspondence
- Denial, revocation, and suspension of a license and related correspondence

DOCKET 40 – Nuclear Source Material Facilities

The Docket 40 series contains documentation concerning the domestic licensing of nuclear byproduct materials relating to source material licenses. Licenses issued in accordance with 10 CFR Part 40 cover the possession, use, and processing of ores (uranium and thorium) and possession and use of uranium and thorium in a refined form. Each license application is assigned a unique Docket 40 number.

Paper files are maintained in the PDR for only those Docket 40 licensees involved in the nuclear fuel cycle; that is, mines, mills, and research and development facilities. Material on other licensees, such as those for possession of material for medical and industrial uses, are available **on microfiche only**. Documents in these files include:

and papers submitted for Commission consideration on a specific docket, see the 10 CFR 9.7 and SECY nondocketed files.

NOTE: For transcripts of Commission meetings

DOCKET 50 – Nuclear Reactors and Fuel Reprocessing Plants

The Docket 50 series contains documentation concerning the domestic licensing of production and utilization facilities. Licenses issued in accordance with 10 CFR Part 50 cover commercial nuclear power plants; experimental, research, and test reactors; and fuel fabrication facilities. The NRC staff assigns Docket 50 number when it considers that the application and the Preliminary Safety Analysis Report (PSAR) submitted are complete for staff review. "Pre-docketed" material is assigned a project number and is filed in the applicant's project file.

Because of the large volume of documentation accumulated over the lifetime of a facility, each Docket 50 file is subdivided into the following categories that pertain either to different aspects of the licensing process or to document types.
