HOW TO OBTAIN EIA PRODUCTS AND SERVICES

For further information on any of the following services, or for answers to energy information questions, please contact EIA's **National Energy Information Center**:

National Energy Information Center (NEIC)	(202) 586-8800
Energy Information Administration	(202) 586-0727 (fax)
Forrestal Building, Room 1F-048	TTY: (202) 586-1181
Washington, DC 20585	E-mail: infoctr@eia.doe.gov

Electronic Products and Services

EIA's **Internet Site Services** offer nearly all EIA publications. Users can view and download selected pages or entire reports, search for information, download EIA data and analysis applications, and find out about new EIA information products and services.

World Wide Web: <http://www.eia.doe.gov> **Gopher:** <gopher://gopher.eia.doe.gov> **FTP:** <ftp://ftp.eia.doe.gov>

EIA also offers a **listserve** service for EIA press releases and other short documents. Sign up on the EIA World Wide Web site.

EIA's **CD-ROM, *Energy InfoDisc***, contains most EIA publications, several databases, and an energy forecasting model. The ***Energy InfoDisc***, produced quarterly, is available for a fee from STAT-USA, Department of Commerce, 1-800-STAT-USA.

The **Comprehensive Oil and Gas Information Source (COGIS)**, a bulletin board service, contains data files from most of EIA's oil- and gas-related reports. It is available for a fee from STAT-USA, on 1-800-STAT-USA.

EIA's **Electronic Publishing System (EPUB)** bulletin board contains data files, directories, and forecasts from most EIA reports. It can be accessed free of charge by dialing (202) 586-2557.

Many of EIA's **data files and modeling programs** are available for sale on diskette, tape, or cartridge, through either the National Technical Information Service or the Office of Scientific and Technical Information, Department of Energy. Contact NEIC for information on specific products, sources, and media, and ordering instructions.

Printed Publications

EIA **directories** are available free of charge from NEIC. Recent **periodicals and one-time reports** are available from the Government Printing Office. Older reports are available from the National Technical Information Service:

Superintendent of Documents	National Technical Information Service
U.S. Government Printing Office	U.S. Department of Commerce
P.O. Box 371954	Springfield, VA 22161
Pittsburgh, PA 15250-7954	5285 Port Royal Road
(202) 512-1800; (202)-512-2250 (fax)	(703) 487-4650; (703) 321-8547 (fax)

International Petroleum Statistics Report

July 1998

Energy Information Administration
Office of Energy Markets and End Use
U.S. Department of Energy
Washington, DC 20585

This report was prepared by the Energy Information Administration, the independent statistical and analytical agency within the U.S. Department of Energy. The information contained herein should be attributed to the Energy Information Administration and should not be construed as advocating or reflecting any policy position of the Department of Energy or any other organization.

Preface

The International Petroleum Statistics Report is a monthly publication that provides current international oil data. This report is published for the use of Members of Congress, Federal agencies, State agencies, industry, and the general public. Publication of this report is in keeping with responsibilities given the Energy Information Administration in Public Law 95-91 (Section 205(a)(2)) that states:

"The Administrator shall be responsible for carrying out a central, comprehensive, and unified energy data and information program which will collect, evaluate, assemble, analyze and disseminate data and information ..."

The International Petroleum Statistics Report presents data on international oil production, demand, imports, and stocks. The report has four sections. Section 1 contains time series data on world oil production, and on oil demand and stocks in the Organization for Economic Cooperation and Development (OECD). This section contains annual data beginning in 1985, and monthly data for the most recent two years. Section 2 presents an oil supply/demand balance for the world. This balance is presented in quarterly intervals for the most recent two years. Section 3 presents data on oil imports by OECD countries. This section contains annual data for the most recent year, quarterly data for the most recent two quarters, and monthly data for the most recent twelve months. Section 4 presents annual time series data on world oil production and oil stocks, demand, and trade in OECD countries. World oil production and OECD demand data are for the years 1970 through 1997; OECD stocks from 1973 through 1997; and OECD trade from 1987 through 1997.

Data for the United States are developed by the Energy Information Administration's (EIA) Office of Oil and Gas. Data for other countries are derived largely from published sources, including International Energy Agency publications, the EIA International Energy Annual, and the trade press. (See sources after each section.) All data are reviewed by the International Energy Statistics Team of EIA. All data have been converted to units of measurement familiar to the American public. Definitions of oil production and consumption are consistent with other EIA publications.

General information about this publication may be obtained from W. Calvin Kilgore, Director, Office of Energy Markets and End Use, (202) 586-1617, and from Louis D. DeMouy, Director, Integrated Energy Statistics Division, (202) 586-6557. Detailed questions and comments concerning the contents of the International Petroleum Statistics Report may be directed to Michael J. Grillot, Team Leader, International Energy Statistics Team, (202) 586-6577, Patricia A. Smith (202) 586-6925, or H. Vicky McLaine (202) 586-9412; Oil Market Chronology - Douglas MacIntyre (202) 586-1831.

Oil Market Chronology - June 1998

The following chronology lists international events of potential significance for world petroleum markets. Sources include: Dow Jones (DJ), The New York Times (NYT), Reuters (R), The Washington Post (WP), and The Wall Street Journal (WSJ).

- June 1** The Russian government announces that it is reducing the price for a 75 percent stake in AO Rosneft. Prime Minister Sergei Kiriyenko says that the minimum bid for the state-owned oil company will be set at \$1.6 billion. The government was forced to cancel the sale last month after receiving no bids at the previous minimum price of \$2.1 billion. (DJ)
- June 2** S.M. Hosseini, Iran's Deputy Oil Minister for International Affairs, reports that Iran is seeking to increase its oil production capacity and capture at least 7 percent of the world crude oil market by 2020. Iran currently holds 5.7 percent of the world crude oil market. Hosseini says that Iran will accomplish its goal by using enhanced oil recovery (EOR) technologies, exploring new areas, and attracting foreign partners to previously discovered fields. Iran expects to recover an additional 20-30 billion barrels of oil using EOR technologies, and another 20 billion barrels from undeveloped areas in northwest and northeast Iran. (DJ) *(Editor's Note: The U.S. Energy Information Administration estimates Iran's share of world crude oil supply to be 5.4 percent for the first quarter of 1998.)*
- June 3** Russian gas company Gazprom announces that it is cutting in half its natural gas supplies to Yugoslavia due to that country's failure to pay for previous supplies. (DJ)
- June 4** Jordan awards a \$400 million contract to Amoco Corporation for the construction of a 168-mile natural gas pipeline, running from fields in Egypt's Nile Delta, across the Sinai Peninsula, and under the Red Sea to the southern Jordanian port of Aqaba. Beginning in 2001, the pipeline will transport 212 million cubic feet of gas per day, gradually increasing to 318 million cubic feet per day by 2006. (DJ)
- In a second attempt in recent months to raise world oil prices, Saudi Arabia, Venezuela, and Mexico agree, during a meeting in Amsterdam, to reduce their oil production by 450,000 barrels per day starting July 1, 1998. Under the agreement, Saudi Arabia will cut 225,000 barrels per day, Venezuela 125,000 barrels per day, and Mexico 100,000 barrels per day. These cuts are in addition to the reductions agreed to under the so called "Riyadh Pact" of March 1998. The three major oil exporters now will attempt to secure additional cuts from other oil exporters ahead of the June 16, 1998, meeting of the Gulf Cooperation Council and the June 24, 1998, meeting of the Organization of Petroleum Exporting Countries. (WSJ) (R) (DJ)
- June 6** Jordan completes a feasibility study on a 650-mile oil pipeline, to run between the Iraqi and Jordanian capitals. The proposed pipeline would cost approximately \$250 million, with a capacity of 100,000 barrels per day. Jordanian officials say that they expect to approach France, Italy, Germany, and Japan to help finance the line. (DJ)
- June 7** In support of the Amsterdam agreement reached by Saudi Arabia, Venezuela, and Mexico, Qatar pledges to cut its crude oil output by 20,000 barrels per day. This latest pledge is in addition to the 30,000-barrel-per-day cut Qatar announced in March 1998. (DJ)
- June 8** Nigeria's leader Gen. Sani Abacha dies after suffering a heart attack. Just hours after Gen. Abacha's death, Gen. Abdulsalam Abubakar is named the country's new head of state. (NYT) (DJ)

- June 9** In its *Oil Market Report* for May 1998, the International Energy Agency (IEA) lowers its forecast for world oil demand in the second quarter of 1998 by 0.51 million barrels per day. The revision is due to the continuing Asian economic difficulties and weak U.S. oil demand in April and May 1998. At the same time, the IEA estimates that crude oil production by all members of the Organization of Petroleum Exporting Countries (OPEC) in May 1998 averaged 28.07 million barrels per day, down 250,000 barrels per day from its revised April 1998 production estimate. By contrast, a *Dow Jones* survey of industry participants estimates that total OPEC crude oil output in May 1998 was 28.167 million barrels per day, an increase of 172,000 barrels per day from its April 1998 estimate. The IEA also updated and revised its estimates of OPEC compliance with the 1.245-million-barrel-per-day production reduction agreed to at the OPEC meeting on March 31, 1998. OPEC crude oil production in May 1998, excluding Iraq (whose production was not included in the agreement), was estimated to be 1.0 million barrels per day below that for February 1998, the baseline month for the reduction agreement. This 80 percent compliance in May, the IEA noted, was in contrast with their revised estimate for April, when only 660,000 barrels per day, or just over 50 percent, of the targeted reduction was achieved. (DJ)
- June 10** Six days after Saudi Arabia, Venezuela, Mexico pledged additional production cuts of 450,000 barrels per day effective July 1, 1998, Iran pledges additional cuts of 100,000 barrels per day. The new cuts are in addition to the 140,000-barrel-per-day reduction Iran pledged to make in March 1998. (DJ)
- June 12** U.S. President Bill Clinton extends by 10 years the ban on offshore oil drilling for much of the United States. The offshore drilling ban was first imposed by President George Bush in 1990. The extended ban prevents drilling for oil and natural gas in most parts of the Atlantic and Pacific coasts until 2012. It does not include areas off the Texas and Louisiana coasts, where extensive drilling has been going on for many years. (WP) (NYT)
- June 13** Cairn Energy announces that it has started production at the Sangu-1 natural gas field, Bangladesh's first operational offshore gas field. The initial flow rate from the field, located 30 miles southwest of Chittagong in the Bay of Bengal, has reached 20 million cubic feet per day, and is expected to increase to 160 million cubic feet per day over the next six to nine months. The field contains proven reserves of 850 billion cubic feet. Cairn holds a 55.25 percent stake in the field, with Halliburton holding 25 percent and Royal Dutch/Shell holding the remaining 19.75 percent. (DJ)
- June 15** Russia's gas monopoly Gazprom notifies Belarus that it will reduce natural gas exports to Belarus by 30 to 40 percent because of unpaid bills. Belarus owes Gazprom an estimated \$200 million for past natural gas supplies. (DJ)
- June 16** Shell Nigeria shuts in 129,000 barrels per day of Bonny crude oil output due to a combination of community unrest in the Nembe and Odeama regions of Nigeria and a pipeline leak near the Nun River flowstation. Shell has declared *force majeure* effective June 19, 1998, through the end of the month, affecting a total of six Bonny crude cargoes. The cargoes are expected to be delayed for one to two days. (DJ)
- At a meeting of oil ministers from the six-nation Gulf Cooperation Council (GCC), the United Arab Emirates (UAE) and Kuwait each pledge to cut their oil production by 75,000 barrels per day, while Oman pledges to cut its output by 20,000 barrels per day. These GCC cuts follow a second round of production cuts announced by Saudi Arabia, Venezuela, and Mexico on June 4, 1998. The latest production cuts from UAE, Kuwait, and Oman will take effect on July 1, 1998. (DJ) (WSJ)
- June 17** Boris Nemtsov, Russia's deputy prime minister, announces that Russia will cut oil exports by 63,000 barrels per day beginning July 1, 1998, to support efforts by other oil producers to boost world oil prices. Nemtsov says that the cut is equivalent to 1 percent of Russia's daily oil production. (DJ)
- June 18** Shell Nigeria reopens four of five Bonny crude oil flowstations in the Nembe and Odeama Creek regions. The flowstations were shut on June 8, 1998, due to local community unrest. A spokesman for the company says that resumption of operations at the flowstations means that the *force majeure* announced on June 16, 1998, for the rest of June, will only cause a delay of one day to cargo loadings. Six cargoes will be affected by the delay. (DJ)

June 18 U.S. President Bill Clinton nominates Bill Richardson to be the next Secretary of Energy, replacing Federico Peña, and nominates Richard Holbrooke to replace Richardson as the U.S. ambassador to the United Nations. (DJ)

Belgian oil company PetroFina SA announces its seventh oil and natural gas discovery offshore Vietnam. It is the company's second gas-only discovery, yielding 36 million cubic feet per day of natural gas. (DJ)

June 19 The United Nations (U.N.) Security Council unanimously approves a resolution allowing Iraq to spend \$300 million on spare parts for its oil industry. The funding is intended to help Iraq increase oil exports under the fourth phase of the U.N.'s oil-for-food program. The spare parts are expected to expand Iraq's oil export capacity from 1.6 million barrels per day to 1.8 million or 1.9 million barrels per day. (NYT) (DJ)

June 20 Egypt joins efforts by the Organization of Petroleum Exporting Countries (OPEC) and several non-OPEC nations to support sagging world oil prices by cutting 20,000 barrels per day from its own crude oil production. Egypt says the cut will take effect on July 1, 1998. However, Egypt also announces that its oil production will decline by 20,000 barrels per day by 1999 as a result of declining output from aging fields. (DJ)

June 23 Occidental Petroleum declares *force majeure* on the Cano Limon oil field in Colombia after five guerrilla attacks in four days on the Cano Limon pipeline, which carries crude oil out of the area. The field produces 152,000 barrels per day. Occidental last declared *force majeure* on the field in August 1997. (DJ)

June 24 The Organization of Petroleum Exporting Countries (OPEC) agrees, at its 105th ministerial conference, to another round of oil production cuts. In recent weeks oil prices have fallen to their lowest levels in more than a decade. OPEC members have agreed to cut production by 1.355 million barrels per day, effective July 1, 1998, bringing the group's total reductions since March 1998 to 2.6 million barrels per day. Together with promises from non-OPEC nations such as Russia, Oman, and Mexico, world oil producers have pledged to cut world-wide production by approximately 3.1 million barrels per day. (WP) (WSJ) (NYT)

Russia confirms that it will cut its oil production by 100,000 barrels per day effective July 1, 1998. (DJ)

June 29 Saudi Arabia calls for a new alliance of seven to nine major oil-producing countries, establishing an ad-hoc group that would work together to raise oil prices and reduce the glut of oil in the current market. Saudi Arabia, Venezuela, and Mexico currently are in high-level negotiations to create the new alliance, which may also include Iran, Iraq, Kuwait, United Arab Emirates, and possibly Libya and Norway. (WSJ)

Amoco announces plans for its TransCaspian Gas Pipeline System project which will transport natural gas from Turkmenistan to markets in Turkey and Europe. The \$2.4 billion, 750-mile pipeline will start near Turkmenbashi in western Turkmenistan, extending across the Caspian Sea basin, to a landing point near Baku, Azerbaijan. The line will continue across Azerbaijan and Georgia to Erzurum, Turkey, and link into the Turkish gas transportation grid. Construction is expected to take three years, and the pipeline will have an initial capacity of 350 billion cubic feet per year, eventually increasing to 1.225 trillion cubic feet per year. (DJ)

Mexico's state-owned oil company Petroleos Mexicanos (Pemex) receives a \$1 billion credit from the Export-Import Bank of Japan. Pemex says the money will be used to increase production at the Cantarell oil fields located in the Gulf of Mexico. (DJ)

June 30 Brazil's Petroleo Brasileiro SA (Petrobras) and five other companies sign an agreement to build a 373-mile natural gas pipeline between the Brazilian cities of Uruguayana and Porto Alegre. The pipeline is expected to be operational in December 2000 with a capacity of 424 million cubic feet per day. Petrobras' partners in the project are Total Global Gas Ventures, Nova, YPF SA, Techint SA, and Compania General de Combustibles SA. (DJ)

^{1/} Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1980 through July 1990 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia. In May 1998, Neutral Zone production by both Kuwait and Saudi Arabia totaled about 550 thousand barrels per day.

Notes: •OPEC=Organization of Petroleum Exporting Countries. •Monthly data are often preliminary and also may not average to the annual totals due to rounding.

^{1/} Other is a calculated total derived from the difference between "World" and the sum of production in "Total OPEC" (Table 1.1a) and all other countries listed (Tables 1.1b and 1.1c). The total "North Sea" is not subtracted from the world total, though Norway and the United Kingdom have been subtracted.

-- = Not applicable. R=Revised data. E=Estimated. PE=Preliminary estimate. RE=Revised estimate.

Notes: •Monthly data are often preliminary and also may not average to the annual totals due to rounding. See Section 4 for historical series.

1/ Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1980 through July 1990 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia. In May 1998, Neutral Zone production by both Kuwait and Saudi Arabia totaled about 550 thousand barrels per day.

Notes: •OPEC=Organization of Petroleum Exporting Countries. See Appendix A for countries in this group.

•Monthly data are often preliminary and also may not average to the annual totals due to rounding.

Sources: See end of Section 1.

^{1/} Supply includes production of crude oil (including lease condensate), natural gas plant liquids, other hydrogen and hydrocarbons for refinery feedstocks, refinery gains, alcohol, and liquids produced from coal and other sources.

^{2/} U.S. geographical coverage is the 50 States and the District of Columbia. See Explanatory Note 1 in Appendix B.

^{3/} The term Demand is used interchangeably with the terms Consumption and Petroleum Products Supplied. See Appendix C for definition.

^{4/} Stock draws are positive numbers, stock additions are negative numbers.

^{5/} This is computed as Total Demand minus the sum of Total Supply and Total Reported Stock Draw.

Note: Sum of components may not equal total due to rounding.

1/ The data for Germany are for the unified Germany, i.e., the former East Germany and West Germany.

2/ "Other Europe" consists of Austria, Belgium, Denmark, Finland, Greece, Iceland, Ireland, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, and Turkey.

3/ U.S. geographic coverage is the 50 States and District of Columbia.

4/ "Other" consists of Australia, New Zealand, and U. S. Territories.

5/ OPEC=Organization of Petroleum Exporting Countries. See Appendix A for countries in this group.

6/ The Persian Gulf countries are all members of OPEC, except for Bahrain.

Notes: •Imports include crude oil, natural gas liquids, and refined products, and are on a direct basis. •OECD=Organization for Economic Cooperation and Development. See Appendix A for countries in this group. •Negative numbers represent net exports.

•A dash (-) indicates no trade. •Zeroes (.000) indicate net imports of less than 0.0005 million barrels per day. •See Section 4 for annual data.

Sources: See end of Section 3.

^{1/} Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1970 through 1989 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia.

P=Preliminary.

Notes: •OPEC=Organization of Petroleum Exporting Countries.

Sources: See end of Section 4.

^{1/} Other is a calculated total derived from the difference between "World" and the sum of production in "Total OPEC" (Table 1.1a) and all other countries listed (Tables 1.1b and 1.1c). The total "North Sea" is not subtracted from the world total, though Norway and the United Kingdom have been subtracted.

-- = Not applicable. P=Preliminary.

^{1/} Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1980 through July 1990 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia.

^{1/} Data through December 1990 are for the former West Germany. Beginning with January 1991, the data for Germany are for the unified Germany, i.e., the former East Germany and West Germany.

^{2/} "OECD Europe" consists of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom.

^{3/} U.S. geographic coverage is the 50 States and the District of Columbia. In the United States in January 1975, 1981, and 1983, numerous respondents were added to bulk terminal and pipeline surveys affecting subsequent stocks reported. Using the new basis, the end-of-year U.S. stocks, in million barrels, would have been 1,121 in 1974, 1,425 in 1980, and 1,461 in 1982.

^{4/} "Other" consists of Australia, New Zealand, and the U.S. Territories.

P=Preliminary. R=Revised data.

Note: Oil Stocks - See Explanatory Note 2 in Appendix B.

Sources: See end of Section 4.

¹/ U.S. geographic coverage is the 50 States and District of Columbia.

²/ "OECD Europe" consists of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom.

³/ Data through 1990 are for the former West Germany.

Notes: •Imports include crude oil, natural gas liquids, and refined products, and are on a direct basis. •OECD=Organization for Economic Cooperation and Development. See Appendix A for countries in this group. •"Persian Gulf" consists of Bahrain, Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Arab Emirates. •Negative numbers represent net exports. •A dash (-) indicates no trade. •Zeroes (.000) indicate net imports of less than 0.0005 million barrels per day.

•Data for 1995 are preliminary.

Appendix A

Organizational and Geographical Definitions

Appendix A. Organizational and Geographical Definitions

International Energy Agency (IEA) countries are: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Japan, Luxembourg, Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States.

Organization for Economic Cooperation and Development (OECD) countries are: Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, South Korea, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States. Total OECD includes the United States Territories (Guam, Puerto Rico, and the U.S. Virgin Islands). Total OECD excludes data for Czech Republic, Hungary, Mexico, Poland, and South Korea which are not yet available.

OECD Europe countries are: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Poland, Portugal, Spain, Sweden, Switzerland, Turkey, and United Kingdom. OECD Europe excludes data for Czech Republic, Hungary, and Poland which are not yet available.

Organization of Petroleum Exporting Countries (OPEC) members are: Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela. As of December 31, 1992, Ecuador withdrew its membership in OPEC, and as of December 31, 1994, Gabon withdrew its membership. For consistency, Ecuador and Gabon are excluded in the historical series of OPEC totals.

Arab members of OPEC are: Algeria, Iraq, Kuwait, Libya, Qatar, Saudi Arabia and the United Arab Emirates.

Organization of Arab Petroleum Exporting Countries (OAPEC) are: Algeria, Bahrain, Egypt, Iraq, Kuwait, Libya, Neutral Zone, Qatar, Saudi Arabia, Syria, Tunisia, and the United Arab Emirates. In April 1979 Egypt was suspended from OAPEC membership. In May 1989 Egypt rejoined OAPEC. For consistency, Egypt is included in the historical series of the OAPEC totals.

Persian (Arabian) Gulf countries are: Bahrain, Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Arab Emirates.

The term "Former USSR" is being used in the International Petroleum Statistics Report as a purely geographical expression, referring to the Commonwealth of Independent States (CIS), Georgia, and the three Baltic States (Estonia, Latvia, and Lithuania).

Appendix B

Explanatory Notes

Appendix B. Explanatory Notes

Note 1: World Oil Supply

Supply includes production of crude oil (including lease condensate), natural gas plant liquids, other hydrogen and hydrocarbons for refinery feedstocks, refinery gain, alcohol, and liquids produced from coal and other sources. Beginning in 1993, U.S. data includes fuel ethanol blended into finished motor gasoline and oxygenate production from merchant MTBE plants.

Note 2: Oil Stocks

The International Energy Agency (IEA) assembles and reports total oil stock data for the member countries of the Organization for Economic Cooperation and Development (OECD). Oil stocks include crude oil (including strategic reserves), unfinished oils, natural gas plant liquids, and refined petroleum products. In its report titled Quarterly Oil Statistics and Energy Balances of OECD Countries, the IEA defines oil stocks as follows: "All non-military stocks held by importers (including all final consumers directly), refiners, Governments, major non-importing final consumers eligible under IEA/OECD commitments and by foreign entities in the following facilities: bulk terminals, refinery tanks, pipeline tankage, barges, intercoastal tankers (when port of departure and destination are in the reporting country), tankers in port (to the extent that their cargo is to be unloaded in the reporting country), and inland ship bunkers. Oil is reported regardless of the ownership of such storage facilities." IEA data exclude "oil held in pipelines, rail and truck tank cars, sea-going ships' bunkers, service stations, retail stores and tankers at sea." Also the IEA defines the United States to be the 50 States and the District of Columbia, and the U.S. Territories (Guam, Puerto Rico, and the U.S. Virgin Islands). The Energy Information Administration (EIA) does not include the United States Territories in its statistical definition of the United States. Further, the EIA includes oil in oil pipelines as part of its stock data. Tables 1.5, 1.6, 2.3, and 4.4 include oil stocks for the United States according to EIA definitions. Using IEA definitions, at the end of March 1998 United States (including territories) oil stocks totaled 1,438 million barrels.

Note 3: A Change to the Oil Balance in Section 2.

Prior to August 1992, Section 2 of the International Petroleum Statistics Report presented a balance of oil supply, demand, and stock change for the Market Economies, at quarterly time intervals. The communist countries, or Centrally Planned Economies (CPEs) were not included in the balance, mainly because good quarterly data for oil demand in these countries were not available. Net imports from the CPEs were included in the balance as part of total Market Economies supply. At present, the former Soviet Union and most of the countries of Eastern Europe are in transition from communism to market economies; because of this there are no longer good political or economic reasons to publish an oil balance only for the countries that have traditionally been market economies. Beginning with the August 1992 edition, Section 2 of the International Petroleum Statistics Report was changed from a Market Economies oil balance to a world oil balance.

The main data issues related to this change may be summarized as follows:

Supply Data. Monthly oil supply data are available for all countries of the world. These data are used to generate Tables 1.1 to 1.4; they were used to expand the Section 2 supply table (Table 2.2) to the whole world.

Demand Data. EIA has now developed quarterly figures for world oil demand, including demand in the former CPEs; these are published in Table 4 of EIA's Short-Term Energy Outlook. The procedures involved in developing quarterly world demand numbers may be summarized as follows:

Complete monthly data are available for the 24 OECD countries. Annual demand data for all countries (about 200 countries) are presented in EIA's International Energy Annual. In 1993, the OECD accounted for about three-fifths of total world demand, the 25 largest consumers outside of the OECD accounted for about one-third of the world total, and the remaining countries (about 150 countries) accounted for less than one-tenth of the total. The key problem, therefore, is to develop good figures for the 25 largest consumers outside the OECD.

Of these 25 countries, by far the largest consumer is Russia, which in 1993 accounted for about one-sixth of the demand in the group of 25. The next largest consumer is China, which in 1993 accounted for about one-seventh of the demand in the group. Thus in 1993 Russia and China accounted for one-third of the demand in the group of 25. For these 2 countries, data are available on oil production and net exports. The demand numbers shown in Section 2 are computed as production minus net exports. This is the same procedure used in the EIA Short-Term Energy Outlook, by the International Energy Agency in their Monthly Oil Market Report, and in other respected publications that deal with international oil markets. Note, however, that this method of computing demand ignores both refinery gain and stock changes.

For other major consuming countries outside of the OECD, quarterly demand data are developed based upon the latest available annual data, analytic judgment about current trends, and some seasonal adjustments. These are the same procedures used for the Short-Term Energy Outlook.

Stocks Data. Reliable stocks data are available for the OECD countries. Estimates of stocks for export and afloat, and of commercial floating stocks, are available. (See sources at the end of Section 2.)

For on-land stocks outside the OECD, there is little reliable data. Most estimates of on-land stocks outside the OECD are based on the theory that stocks are approximately equal to some number of days of demand. Demand figures (which themselves involve some degree of estimation) are then used to compute estimates of stock levels.

In the International Petroleum Statistics Report, it had been the practice for some time to estimate that on-land stocks in the traditional market economies outside of the OECD were equal to 55 days of demand. This was acceptable, mainly because the rule was used only to estimate a relatively small part of total stocks (about 16 percent).

When Section 2 was converted from a Market Economies oil balance to a world oil balance, there were important changes in the conditions that made it reasonable to estimate on-land stocks outside of the OECD using the rule of 55 days of demand. When the CPEs are included, the stocks that must be estimated are a considerably larger part of the total. In 1990, total oil demand in the former CPEs was more than 80 percent as large as demand in all of the non-OECD traditional market economies. Thus the quantity of stocks that would have to be estimated using a 55-day rule would nearly double, and the estimated components of stock levels and stock changes would become relatively large parts of the total. One consequence of this is that the statistical discrepancy (as shown in Table 2.1) would become less useful as an indicator of the overall consistency of the data. The statistical discrepancy is computed from supply, demand, and stock change. If a large part of the stock change is estimated, then the statistical discrepancy loses much of its significance.

As already noted, quarterly demands in the former Soviet Union and in China are computed as production minus net exports. This computation implicitly assumes a zero stock change. Demand in the former Soviet Union is falling. If we were to use a 55-day rule to compute stock levels, falling demand would imply falling stock levels. This would contradict the assumption of zero stock change which was used in computing demand.

In view of all this, the following approach has been adopted. Table 2.3 now shows levels of stocks for the OECD countries, levels of stocks for export and afloat, and levels of commercial floating storage. Stock changes based on these stock levels are shown in Table 2.1. At this time, no other stock levels are shown. Table 2.1 now has a single line labelled "Other Stock Draw and Statistical Discrepancy", which contains the computed values needed to make the table balance.

It may become possible in the future to obtain reliable information on certain categories of on-land stocks outside the OECD. If such data become available, they will be added to Table 2.3, and the corresponding stock change information will be added to Table 2.1.

Changes in Formats and Sign Conventions. There were several changes in Section 2 to make the International Petroleum Statistics Report more consistent with other EIA publications, especially with the Short-Term Energy Outlook. The numbers were changed from 1 decimal place to 2 decimal places. The word "consumption", as used before August 1992, was changed to "demand". The sign convention for stock changes in Table 2.1 was changed. Stock draws are now indicated by positive numbers, and stock additions are indicated by negative numbers. Table 2.1 also uses a new sign convention for the line labelled "Other Stock Draw and Statistical Discrepancy". The values in this line are now computed as Total Demand minus the sum of Total Supply and Total Reported Stock Draw. This is the reverse of the sign convention used before August 1992.

Summary. Section 2 was expanded from a Market Economies oil balance to a world oil balance. Supply data are tracked for all producing countries. Demand data are tracked for the 24 OECD countries, and for 25 large consumers outside of the OECD. Demand for the remaining countries (less than 10 percent of total demand) is estimated, for years that are not yet available in the International Energy Annual. The stock levels in these tables are based on reported data for the OECD and for stocks at sea. The line in Table 2.1 labelled "Other Stock Draw and Statistical Discrepancy" is a balancing item.

Appendix C

Glossary

Appendix C. Glossary

Alcohol. The family name of a group of organic chemical compounds composed of carbon, hydrogen, and oxygen. The molecules in the series vary in chain length and are composed of a hydrocarbon plus a hydroxyl group. Alcohol includes methanol and ethanol.

Demand (Consumption/Petroleum Products Supplied). Total petroleum products supplied is the sum of all petroleum products supplied. For each product, the amount supplied is calculated by summing production, crude oil burned directly, imports, and net withdrawals from primary stocks and subtracting exports.

Crude Oil. A mixture of hydrocarbons that existed in liquid phase in underground reservoirs and remains liquid at atmospheric pressure after passing through surface-separating facilities. Crude oil production is measured at the wellhead and includes lease condensate.

Government-Owned Stocks. Oil stocks owned by the national government and held for national security. In the United States these stocks are known as the Strategic Petroleum Reserve.

Lease Condensate. A liquid recovered from natural gas at the well or at small gas/oil separators in the field. Consists primarily of pentanes and heavier hydrocarbons (also called field condensate).

Natural Gas Plant Liquids. Products obtained from processing natural gas at natural gas processing plants, including natural gasoline plants, cycling plants, and fractionators. Products obtained include ethane, liquefied petroleum gases, (propanes, butane, propane-butane mixtures, and ethane-propane mixtures), isopentane, natural gasoline, unfractionated streams, plant condensate, and other minor quantities of finished products, such as motor gasoline, special naphthas, jet fuel, kerosene, and distillate fuel oil.

Oil Stocks. Oil stocks include crude oil (including strategic reserves), unfinished oils, natural gas plant liquids, and refined petroleum products. See Explanatory Note 2.

Other Hydrocarbons. Other materials processed at refineries. Includes coal tar derivatives, hydrogen, gilsonite, and natural gas received by the refinery for reforming into hydrogen.

Oxygenates. Any substance which, when added to gasoline, increases the amount of oxygen in that gasoline blend. They include: Fuel Ethanol, Methanol, and MTBE (Methyl tertiary butyl ether).

Petroleum Products. Petroleum products are obtained from the processing of crude oil (including lease condensate), natural gas, and other hydrocarbon compounds. Petroleum products include unfinished oils, aviation gasoline, motor gasoline, naphtha-type jet fuel, kerosene-type jet fuel, kerosene, distillate fuel oil, residual fuel oil, ethane, liquefied petroleum gases, petrochemical feedstocks, special naphthas, lubricants, paraffin wax, petroleum coke, asphalt road oil, still gas, and other miscellaneous products.

Processing Gain. The amount by which the total volume of refinery output is greater than the volume of input for given period of time. The processing gain arises when crude oil and other hydrocarbons are processed into products that are, on average, less dense than the input.

Processing Loss. The amount by which the total volume of refinery output is less than the volume of input for given period of time. The processing loss arises when crude oil and other hydrocarbons are processed into products that are, on average, more dense than the input.

Appendix D

Estimation Procedures

Appendix D. Estimation Procedures

Estimation procedures are used for demand numbers in many of the countries outside of the OECD, in cases where data from EIA's International Energy Annual are not yet available. Demand numbers for 1996 and earlier years, for all countries, may be found in EIA's International Energy Annual 1996, published in February 1998, which is the most recent published edition of the International Energy Annual. EIA's WORLD ENERGY database contains final demand data for all countries of the world for 1995, and preliminary demand data for all countries for 1996. Instructions for downloading this database may be found on EIA's home page (<http://www.eia.doe.gov/emeu/world/main1.html>). The status of the demand numbers shown in Section 2 of this current International Petroleum Statistics Report may be summarized as follows.

The OECD demand numbers are, as usual, based on the latest Quarterly Oil Statistics and Monthly Oil Statistics data from the International Energy Agency.

For countries outside of the OECD, the following approach is used. The numbers for 1996 and earlier years match the demand numbers in the WORLD ENERGY database on EIA's home page. Numbers for 1997 forward are the best available EIA estimates, based upon the best annual data currently available, analytic judgment about current trends, and some seasonal adjustments. These are the same numbers that appear in the international oil balance table in EIA's Short-Term Energy Outlook.

The two largest non-OECD oil consumers are the former Soviet Union and China. For these two countries, published data are available on production and net exports. Demand is computed as production minus net exports. This is the same approach used in the Short-Term Energy Outlook, by the International Energy Agency in their Monthly Oil Market Report, and in other major publications dealing with international oil data. Note, however, that because of this computation, the demand numbers for the former Soviet Union and China implicitly exclude stock draw and refinery gain.

Appendix E

Conversions

Table E1. Refined Petroleum Products Conversion Factors

Product	Barrels per Metric Ton
Asphalt	6.06
Distillate Fuel Oil	7.46
Gasoline, Aviation	8.90
Gasoline, Motor	8.53
Greases	6.30
Jet Fuel, Kerosene-type	7.93
Jet Fuel, Naphta-type	8.27
Kerosene	7.73
Liquefied Petroleum Gas (LPG)	11.60
Lubricants	7.00
Miscellaneous Products	8.04
Naphthas	8.22
Natural Gas Liquids (NGL)	10.40
Natural Gasoline	10.00
Paraffin Oil	7.14
Paraffin Wax	7.87
Petrolatum	7.87
Petroleum Coke	5.51
Residual Fuel Oil	6.66
White Spirits	8.50
