CITY OF RICHLAND
INDUSTRIAL PRETREATMENT PERMIT APPLICATION

NOTE TO SIGNING OFFICIAL: Make sure all blanks in Sections I through III are completed. Information must be typewritten or clearly printed. Attach additional sheets keyed to section and item number if needed to provide complete information. Signing official must have authorization to provide such information on behalf of the company, corporation or partnership. Please complete a survey form for each facility that discharges to the City sanitary sewer system. Additional copies of this form are available from the Richland Wastewater Department Pretreatment Operations - Telephone 943-4384.

1. SECTION I -- GENERAL INFORMATION

1.1 INDUSTRIAL USER -- GENERAL

- 1.1.1 Company name U.S. Department of Energy, Richland Operations Office
- 1.1.2 Division name (if applicable) Environmental Assurance, Permits, and Policy Division
- 1.1.3 Mailing address:
- 1.1.3.1 Street or P.O. Box P.O. Box 550
- 1.1.3.2 City, State, Zip code Richland, WA 99352
- 1.1.4 Facility Address:
- 1.1.4.1 Street address 825 Jadwin Avenue
- 1.1.4.2 City, State, & Zip code Richland, WA 99352
- 1.1.5 Name, title, and telephone number of signing official
- 1.1.5.1 Name Mr. James E. Rasmussen
- 1.1.5.2. Title Division Director
- 1.1.5.3 Telephone number (509)376-2247

Note: There are two prime U.S. Department of Energy contractors, Battelle-Pacific Northwest Laboratories (PNL) and Westinghouse Hanford Company (WHC) that are responsible for the operation of most of the facilities within the 300 Area. Boeing Computer Services Richland (BCSR) and ICF-Kaiser Hanford (ICF-KH) are subcontractors to WHC. US West, which occupies an office building in the 300 Area, is a subcontractor to BCSR. Other prime U.S. Department of Energy contractors occupying space in the 300 Area include, Bechtel Hanford Company (BHI) which uses one mobile office building occupied by two employees, the Benton County Sheriff's Office (BCSO) which uses an office building occupied by seven employees, and the Hanford Environmental Health Foundation (HEHF) which staffs the 300 Area First Aid Station with one employee. In addition, the U.S. Department of Energy has one lessee, Richland Specialty Extrusions (RSE), a Division of Kaiser Aluminum and Chemical Corporation, which occupies part of the 313 Building with WHC. See Attachment 1 for the building list.

1.2 CONFIDENTIALITY

Please indicate those section of this questionnaire that you wish to remain confidential and your basis for requiring confidentiality.

None

I have personally examined and am familiar with the information submitted in this document and attachments. Based upon my inquiry of those individuals immediately responsible for obtaining the information reported herein, I believe that the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and/or imprisonment.

Date

Signature of Official (Seal if Applicable)

SECTION II -- WATER/WASTEWATER DATA

2.1 WATER SOURCES	Average Volume (gal per day)	Peak Flow/Est'd Duration (gal per minute/time)
2.1.1 Municipal system	14,400 gpd ¹	10 gpm - continuous
2.1.2 Recycled	N/A	N/A
2.1.3 Private wells	N/A	N/A
2.1.4 Other (specify) (315 Building Water Plant)	986,700 gpd	1,050 gpm/10-18 min
TOTAL	1,001,100 gpd	1,060 gpm - 10-18 min

2.2 WATER USAGE

2.2.1 Cooling Water	N/A	N/A
2.2.2 Boiler makeup	76,500 gpd	150 gpm/60-90 min
2.2.3 Process water	312,400 gpd	396 gpm/15-18 min
2.2.4 Sanitary purposes (5200 gal/emp/yr)	226,000 gpd	547 gpm/6-15 min ²
2.2.5 Other (specify) A)	99,700 gpd	130 gpm/90-120 min
2.2.6 Other (specify) B)	79,400 gpd	2,000 gpm/8-10 min
2.2.7 Other (specify) C)	207,100 gpd	No Estimate Available
TOTAL	1,001,100 gpd	No Estimate Available

2.3 WATER DISCHARGE/LOSS	Average Volume (gal per day)	Peak Flow/Est'd Duration (gal per minute/time)
2.3.1 Municipal sewer/sanitary		
a. Process	N/A	N/A
b. Sanitary	N/A	N/A
c. Cooling	N/A	N/A
2.3.2 Natural receiving water/storm drain	No Estimate Available	No Estimate Available
2.3.3 Waste hauler	N/A	N/A
2.3.4 Evaporation	No Estimate Available	No Estimate Available
2.3.5 Contained in product	N/A	N/A
2.3.6 Recycled	N/A	N/A
2.3.7 Other (specify)	No Estimate Available	No Estimate Available
TOTAL	N/A	N/A

2.4 DO YOU HAVE A NPDES PERMIT FOR A SURFACE WATER DISCHARGE? YES X NO
#WA-000374-3 and WA-002591-7 (Permits are for wastewaters other than those
addressed in this permit application.)

- Notes: ¹ - See Attachment 2 for 1994 water balance
² - High flow of 547 gpm is maximum flow measurable by flowmeter. High
flow caused by 337 Lift Station, which has a flow of approx 200 ppm.
A) - Irrigation
B) - 315 Building Filter Backwash
C) - Miscellaneous - See Attachment 2

2.5 LIST PLANT SEWER OUTLETS SIZE AND FLOW (assign sequential number to each sewer starting with No. 1)

Reference No.	Sewer Size (inches)	Descriptive Location of Sewer Connection or Discharge Point	Avg. Flow (GPD)
Lift Station 1	8 inches	300 Area N55285 E15265	176,700 ¹
Lift Station 2	8 inches	300 Area N53740 E16610	49,300 ¹
_____	_____	_____	_____
_____	_____	_____	_____

2.6 SCHEMATIC PROCESS DIAGRAM

Attach a schematic process diagram of your facility showing locations of sewers referenced in Section 2.5 above and the location of the SIC processes listed in Section 3.2. Show locations of possible sampling points for sewers and SIC process effluents. For reference and field orientation, include a North arrow and show location of building, alleys, and other pertinent physical structures. See Attachment 3 for Flow Diagram

2.7 DO YOU HAVE AUTOMATIC SAMPLING EQUIPMENT OR CONTINUOUS WASTEWATER FLOW METERING EQUIPMENT CURRENTLY IN USE OR INCLUDED IN FUTURE PLANS?

Current: Flow Metering yes X no _____ Sampling Equipment yes X no _____
 Planned: Flow Metering yes X no _____ Sampling Equipment yes X no _____

If so, please indicated the present or future location of this equipment on the sewer schematic and describe the equipment below:

The future flow meter stations will be located downstream of the lift stations that will discharge directly to the City of Richland Sewer System just inside the south 300 Area fence. Sampling equipment will be provided along with pH monitoring, temperature monitoring, flow monitoring, and conductivity monitoring. See Attachment 3, Section 1-E for proposed location of monitoring location.

2.8 DOES YOUR FACILITY PRETREAT ANY WASTEWATER PRIOR TO DISCHARGE TO A SANITARY SEWER?

yes _____ no X

Note:

¹ - Estimated value when connection to the City of Richland Sewer System is completed.

If so, please show location of pretreatment processes on attached schematic process diagram and describe below: N/A

2.9 DO YOU HAVE AN ACCIDENTAL SPILL PREVENTION PLAN (ASPP) FOR YOUR PLANT?
yes no X

2.10 DO YOU DISPOSE OF ANY CHEMICALS, SOLVENTS, SLUDGES, OR HAZARDOUS MATERIALS TO LOCATIONS OTHER THAN MUNICIPAL SEWERS OF SURFACE WATERS? (Example: landfill, hazardous wastesite, or chemical recyclers)

yes X no

If so, provide a description of each material, giving composition, solids content, annual quantity, means of disposal, and ultimate disposal location: See Attachment 4 for WHC, BCSR and ICF KH for listing of waste shipments in Calendar Year 1994. See Attachment 5 for PNL listing of waste shipments for Calendar Year 1994.

3. SECTION III -- PLANT/PROCESS DATA

3.1 PLANT OPERATIONAL CHARACTERISTICS

	Average	Seasonal Peak
3.1.1 Number of shifts per work day:	<u>3</u>	<u>3</u>
3.1.2 Number of work days per week:	<u>5</u>	<u>5</u>
3.1.3 Employee per shift:	Shift start times:	
1st <u>2,701</u>	<u>7:30</u>	am
2nd <u>37</u>	<u>3:30</u>	pm
3rd <u>37</u>	<u>11:30</u>	pm
TOTAL: <u>2,775</u>	<u>N/A</u>	

3.1.4 ARE MAJOR PROCESSES BATCH OR CONTINUOUS? N/A - Primarily Laboratory Support and office space.

AVERAGE NUMBER OF BATCHES PER 24-HOUR DAY: N/A

Note:

1 - 4 percent of population provides 7 day per week coverage

3.1.5 ARE YOUR PROCESSES SUBJECT TO SEASONAL VARIATION? N/A

If so, explain below, indicating month(s) of peak operation and products:

3.2 PRODUCT(S) OR SERVICE(S)

List all products manufactured or services provided by your facility, along with the corresponding SIC (Standard Industrial Classification) code. If you don't know what your SIC code is, you may find out from the City of Richland by calling 943-4384.

Product or service	4-digit SIC code	Product or service	4-digit SIC code
1. <u>Non Classifiable</u> ¹ (BCSO, BCSR, BHI, ICF KH & WHC)	<u>9999</u>	6. _____	_____
2. <u>Research & Development</u> (PNL)	<u>7392</u>	7. _____	_____
3. <u>Offices and Clinics</u> ² ...(HEHF)	<u>8049</u>	8. _____	_____
4. <u>Aluminum Extruded Products</u> (RSE)	<u>3354</u>	9. _____	_____
5. <u>Telephone</u> ³ ...(US West)	<u>4813</u>	10. _____	_____

3.3 DESCRIPTION OF PRODUCTION OR SERVICE PROCESSES

Provide a separate description of the individual processes used in your facility that result in a wastewater discharge to a sanitary sewer: The 300 Area serves as a U.S. Department of Energy research center of the Hanford Site in Washington State. Facilities located in the 300 Area include a powerhouse, warehouses, laboratories, and fabrication and maintenance shops. See Attachment 1 for the list of Buildings within the 300 Area. Some laboratory sinks and drains, and sanitary waste are routed to the sanitary sewer. Listed below are the laboratory sinks and drains which are routed to the sanitary sewer system. The estimated flow from all of the laboratory sinks and drains is estimated at 10 gallons per day.

1. 3720 Building - Room 101, 201, and 205 laboratory sink drain, and Room 201 funnel drain.

2. 331 A, B, D and H Buildings - Laboratory sinks

3. 329 Building - Rooms 1C, 2C, 3C, 4C, 6C, 7C, and 8C laboratory sinks.

Notes:

¹ - U.S. Government contractors do not have a SIC code, but services provided to the U.S. Government are similar to those described in the following codes;

- a) Electrical Services - 4911
- b) Detective, Guard, and Armored Car Service - 7381
- c) Testing Laboratories - 8734
- d) Fire Protection - 9224

² - Offices and Clinics of Health Practitioners, Not Elsewhere Classified

³ - Telephone Communications, Except Radiotelephone

- 3.4 RAW MATERIALS -- LIST ALL PRINCIPAL MATERIALS (cleaning agents, solvents, plating solutions, catalysts, process chemicals, etc.) that are regularly used in your facility and that might be present in your wastewater discharge to a sanitary sewer, including accidental spills.

Generic Type	Annual Use Amount	Principal Chemical Constituents (if known)

* The annual amount varies and is distributed in very small quantities throughout the respective laboratories and storage facilities. It is unlikely, but possible, that when working with a chemical in a glass container, that container could accidentally be broken in a sink which discharges to the sanitary sewer system. The amount entering the sewer system would be on the order of 50-500 milliliters and would be so diluted that when arriving at the sewage treatment plan it would be undetectable.

3.5 QUESTIONS, REMARKS, COMMENTS: See Attachment 6 for a complete listing of chemicals within the 300 Area for WHC, BCSR, and ICF KH.

See Attachment 7 for a complete listing of chemicals within the 300 Area for PNL.

Note: Gases were included in the listing since they can be adsorbed by water.

Note: If you are unable to identify the chemical constituents of products you use that discharged in your wastewater, attach copies of the materials safety data sheets for such products.

PRIORITY POLLUTANT INFORMATION:

Please indicate, by placing an "x" in the appropriate box by each listed chemical, whether it is "Suspected to be Absent", "Known to be Absent", "Suspected to be Present", or "Known to be Present" in your manufacturing, service activity or generated as a by-product. Also include any concentration information.

Notes:

Y - YES, Connected to the 300 Area Sanitary Waste System

N - NO, Not connected to the 300 Area Sanitary Waste System

A - Building abandoned

P - Proposed facility

N/A - Not applicable, structure is part of the 300 Area Sanitary Waste System

* - Contiguous part of parent structure

ATTACHMENT 2

OCTOBER 1993 THROUGH OCTOBER 1994 300 AREA WATER BALANCE

OCTOBER 1993 THROUGH OCTOBER 1994 WATER BALANCE FOR 300 AREA

Water Input to the System

	Gallons Per Year
315 Building Water Plant	360,133,700
City Connection	5,256,000
Total	365,389,700

Water Utilization

	Gallons Per Year
Steam Production	27,944,930 *
Sanitary Sewer	82,459,870
Process Sewer	114,016,300
315 Building Filter Backwash	29,000,000
300 Area Irrigation	36,380,000
<u>Miscellaneous</u> Fire Sprinkler Flushing Building Wash Down Fire Hydrant Testing Radioactive Liquid Waste System Construction Water Building Swamp Coolers Cooling Towers Ash Sluice	75,588,600 **
Total	365,389,700

* - Total water utilization for steam supply is based on total steam production with an estimate of 25% for condensate return.

** - The miscellaneous flow is estimated as the difference between the total input and known utilizations.

Physical Components:	Content Description
1. Introduction	Overview of the project, its purpose, and the scope of the report.
2. Methodology	Description of the research methods, data collection techniques, and analysis procedures.
3. Results	Summary of the findings, including key data points and trends.
4. Discussion	Interpretation of the results, comparison with existing literature, and implications for future research.
5. Conclusion	Summary of the main findings and the overall conclusions drawn from the study.
6. References	List of sources cited in the report, including books, articles, and online resources.
7. Appendices	Supplementary information, such as raw data, detailed calculations, or additional figures.

RE: Letter Report for Wastewater Sampling and Analysis, Sewer/Wastewater Line,
Hanford 300 Area, Richland, Washington.
Project No.: 194-3031

Dear Mr. Wright:

Huntingdon Environmental and Engineering (Huntingdon) is pleased to submit the following letter report of the limited environmental monitoring services performed at the above referenced site. The activities and findings outlined in this report were conducted to characterize the wastewater stream for various chemical compounds.

Scope of Services

The purpose of this project was to assist the City of Richland in properly collecting and analyzing wastewater samples for specified parameters. Huntingdon performed wastewater monitoring activities from which we evaluated the presence of potential contaminants. In order to make this evaluation, the following tasks were conducted:

- ♦ An environmental team was mobilized to the site with the appropriate equipment to perform wastewater monitoring and sampling activities.
- ♦ Wastewater samples were collected from the access vault. Wastewater samples were collected in accordance with Washington State Department of Ecology and EPA guidelines. During this stage of the project, Field Indicator Parameters data were collected. These parameters included:

Water level	6.55 feet	Specific Conductance	660 micro-ohm
Temperature	70° F	pH	10.0

- ♦ The collected groundwater samples were submitted to an approved laboratory for analysis of volatile organic compounds (VOCs, EPA method 8240), semi-volatile organic compounds (S-VOCs, EPA method 8270), and pesticides/polychlorinated biphenyls (Pest./PCBs, EPA method 8080).

City of Richland
December 19, 1994
Page 2

- ♦ This letter report was prepared to document the field activities performed and summarize laboratory results.

Field Observations

On November 28, 1994, an environmental sampling team from Huntingdon was mobilized to the site. For more information on site observations and field parameter results, please refer to the attached Wastewater Sampling Report.

Analytical Results

All samples were analyzed for the aforementioned parameters at the Analytical Technologies laboratory in Portland, Oregon. Laboratory results for selected compounds are summarized as follows while all results may be reviewed in the attached laboratory report.

VOCs 8240:

Concentrations of all compounds were below practical detection limits except the following compound:

Chloroform - 4.1 ug/l

SVOCs 8270:

Concentrations of all compounds were below practical detection limits except the following compound:

Phenol - 12 ug/l

PCBs/pest. 8080:

Concentrations of all compounds were below practical detection limits.

City of Richland
- December 19, 1994

300 AREA SANITARY SEWER SAMPLING RESULTS - DATED JANUARY 18, 1995

January 18, 1995

Mr. Roger Wright
City of Richland
P.O. Box 190
Richland, Washington 99352

HND0057R.ENV

**RE: Letter Report for Wastewater Sampling and Analysis completed on 12/19/94,
Sewer/Wastewater Line, Hanford 300 Area, Richland, Washington.
Project No.: 194-3031**

Dear Mr. Wright:

Huntingdon Environmental and Engineering (Huntingdon) is pleased to submit the following letter report of the limited environmental monitoring services performed at the above referenced site. The activities and findings outlined in this report were conducted to characterize the wastewater stream for various chemical compounds.

Scope of Services

The purpose of this project was to assist the City of Richland in properly collecting and analyzing wastewater samples for specified parameters. Huntingdon performed wastewater monitoring activities from which we evaluated the presence of potential contaminants. In order to make this evaluation, the following tasks were conducted:

- An environmental team was mobilized to the site with the appropriate equipment to perform wastewater monitoring and sampling activities.
- Wastewater samples were collected from the access vault. Wastewater samples were collected in accordance with Washington State Department of Ecology and EPA guidelines. During this stage of the project, Field Indicator Parameters data were collected. These parameters included:

Water level	6.75 feet	Specific Conductance	410 micro-ohm
Temperature	68° F	pH	8.83 (laboratory)

- The collected groundwater samples were submitted to an approved laboratory for analysis of volatile organic compounds (VOCs, EPA method 8240), semi-volatile organic compounds (S-VOCs, EPA method 8270), and pesticides/polychlorinated biphenyls (Pest./PCBs, EPA method 8080).

City of Richland
January 18, 1995
Page 2

- ♦ This letter report was prepared to document the field activities performed and summarize laboratory results.

Field Observations

On December 19, 1994, an environmental sampling team from Huntingdon was mobilized to the site. For more information on site observations and field parameter results, please refer to the attached Wastewater Sampling Report.

Analytical Results

All samples were analyzed for the aforementioned parameters at the Analytical Technologies laboratory in Portland, Oregon. Laboratory results for selected compounds are summarized as follows while all results may be reviewed in the attached laboratory report.

VOCs 8240:

Concentrations of all compounds were below practical detection limits except the following compounds:

Chloroform	11 ug/l
Acetone	140 ug/l

SVOCs 8270:

Concentrations of all compounds were below practical detection limits except the following compound:

4-Methylphenol	15 ug/l
----------------	---------

PCBs/pest. 8080:

Concentrations of all compounds were below practical detection limits.

City of Richland

ATI I.D. 412662

January 9, 1995

Paul Danielson
Huntingdon Engineers
2214 N. 4th Ave.
Pasco, WA 99301

Project Name / Number: City of Richland / 194-3031

Attention: Paul Danielson

On December 20, 1994, Analytical Technologies, Inc. received one water sample for analysis for the above listed project. The sample was analyzed with EPA methodology or equivalent methods. The results of these analyses and the quality control data, which follow each set of analyses, are enclosed.

Please note that the EPA 8270 analysis was networked to Analytical Technologies, Inc. in Pensacola, Florida.

If you have any questions or comments, please do not hesitate to contact us at (503)684-0447.

**RE: Letter Report for Wastewater Sampling and Analysis completed on 1/23/95,
Sewer/Wastewater Line, Hanford 300 Area, Richland, Washington.
Project No.: 194-3031**

Dear Mr. Wright:

Huntingdon Environmental and Engineering (Huntingdon) is pleased to submit the following letter report of the limited environmental monitoring services performed at the above referenced site. The activities and findings outlined in this report were conducted to characterize the wastewater stream for various chemical compounds.

Scope of Services

The purpose of this project was to assist the City of Richland in properly collecting and analyzing wastewater samples for specified parameters. Huntingdon performed wastewater monitoring activities from which we evaluated the presence of potential contaminants. In order to make this evaluation, the following tasks were conducted:

- ♦ An environmental team was mobilized to the site with the appropriate equipment to perform wastewater monitoring and sampling activities.
- ♦ Wastewater samples were collected from the access vault. Wastewater samples were collected in accordance with Washington State Department of Ecology and EPA guidelines. During this stage of the project, Field Indicator Parameters data were collected. These parameters included:

Water level	6.75 feet	Specific Conductance	370 micro-ohm
Temperature	62° F	pH	8.3 (field)

- ♦ The collected groundwater samples were submitted to an approved laboratory for analysis of volatile organic compounds (VOCs, EPA method 8240), semi-volatile organic compounds (S-VOCs, EPA method 8270), and pesticides/polychlorinated biphenyls (Pest./PCBs, EPA method 8080).
- ♦ This letter report was prepared to document the field activities performed and summarize laboratory results.

City of Richland
February 15, 1995
Page 2

Field Observations

On January 23, 1995, an environmental sampling team from Huntingdon was mobilized to the site. For more information on site observations and field parameter results, please refer to the attached Wastewater Sampling Report.

Analytical Results

All samples were analyzed for the aforementioned parameters at the Analytical Technologies laboratory in Portland, Oregon. Laboratory results for selected compounds are summarized as follows while all results may be reviewed in the attached laboratory report.

VOCs 8240:

Concentrations of all compounds were below practical detection limits except the following compound:

Chloroform	6.0 ug/l
------------	----------

SVOCs 8270:

Concentrations of all compounds were below practical detection limits except the following compound:

Phenol	15 ug/l
--------	---------

PCBs/pest. 8080:

Concentrations of all compounds were below practical detection limits.

We appreciate the opportunity of working with you on this project and hope that you are pleased with our services. If you have any questions or need any additional information, please contact me or our Division Manager, at (509) 547-1671.

Respectfully Submitted.

HUNTINGDON, INC.

Paul Danielson,
Project Manager

CASE NARRATIVE FOR EPA METHOD 8080

ORGANOCHLORINATED PESTICIDES / PCBs

ATI ACCESSION NUMBER 501664

A 1.0 liter aliquot of aqueous sample was extracted with methylene chloride by liquid:liquid continuous extraction (EPA method 3520). The methylene chloride was reduced and exchanged to hexane. Final volume was 10.0 mls.

The extracts were analyzed by Gas Chromatography (GC) using a DB-608 megabore capillary column and an electron capture detector (ECD). Confirmation was done on a DB-5 megabore capillary column and an ECD. Five and six point calibration curves were generated for each compound.

Endrin recovered very low for both the blank spike and the blank spike duplicate. Aldrin, lindane, dieldrin, and heptachlor also recovered low for the blank spike and lindane for the blank spike duplicate.

Brian Hennes

CASE NARRATIVE
ATI Accession #501664
EPA 8240

Five milliliters of sample was analyzed using a gas chromatograph equipped with a mass selective detector (MSD). Five or more point calibration curves were used for quantitation.

The method blank associated with ATI Accession #501664-1 had a methylene chloride result of 11 ug/L, above the MRL of 10 ug/L. Sample #501664-1 did not detect methylene chloride. Methylene chloride is a suspected lab contaminant.

Laura Dutt

Priority Pollutants - CFR 40 -- Inventory Summary Report (in lbs) - by Building

Building No	Chemical Hazard	CAS No	Phys State	MSDS No	Quantity
3730	1,1,1-TRICHLOROETHANE	71-55-6	L	1566	8.3640
3745B	1,1,1-TRICHLOROETHANE	71-55-6	L	1566	19.5159
	AMMONIA	7664-41-7	G	1039	3.0000
	COPPER	7440-50-8	S	2371	1.0000
	CYCLOHEXANE	110-82-7	L	1145	6.6696
	SILVER	7440-22-4	S	2983	.1101
	TOLUENE	108-88-3	L	1560	2.9736
3746A	1,1,1-TRICHLOROETHANE	71-55-6	L	1566	13.9400
	CADMIUM	7440-43-9	S	2232	1.0000
	CHLOROFORM	67-66-3	L	1128	13.1454
	NAPHTHALENE	91-20-3	S	2302	2.2026
	PHENOL	108-95-2	S	1422	7.7093
