HANFORD SITE ENVIRONMENTAL DATA
REPORT FOR CALENDAR YEAR 1997

L. E. Bisping

September 1998

Prepared for
the U.S. Department of Energy
under Contract DE-AC06-76RLO 1830

Pacific Northwest National Laboratory
Richland, Washington 99352

ABSTRACT

Environmental surveillance at the Hanford Site, located in southeastern Washington State, is conducted by Pacific Northwest National Laboratory (PNNL), which is operated by Battelle for the U.S. Department of Energy. The data collected provide a historical record of radionuclide and radiation levels attributable to natural causes, worldwide fallout, and Hanford operations. Data are also collected to monitor several chemicals and metals in Columbia River water and sediment. In addition, Hanford Site wildlife samples were also collected for metals analysis. For more information regarding the 1997 sampling schedule for the Surface Environmental Surveillance Project (SESP) and Drinking Water Monitoring Project, refer to L. E. Bisping, Environmental Surveillance Master Sampling Schedule (PNNL-11464, Pacific Northwest National Laboratory, Richland, Washington).

PNNL publishes an annual environmental report for the Hanford Site each calendar year. The Hanford Site Environmental Report for Calendar Year 1997 describes the site mission and activities, general environmental features, radiological and chemical releases from operations, status of compliance with environmental regulations, status of programs to accomplish compliance, and environmental monitoring activities and results. Sections of the annual environmental report include tables and summaries of offsite and onsite environmental surveillance data collected by PNNL during 1997. This data report contains the actual raw data used to create those tables and summaries. In addition to providing raw data collected during routine sampling efforts in 1997, this data report also includes data from special sampling studies performed by PNNL during 1997.

For further information regarding environmental management activities and compliance issues, refer to R. L. Dirkes and R. W. Hanf, 1997, Hanford Site Environmental Report for Calendar Year 1997 (PNNL-11795, Pacific Northwest National Laboratory, Richland, Washington), Internet address: <http://hanford.pnl.gov/envreport>, or contact R. L. Dirkes, Pacific Northwest National Laboratory, P.O. Box 999, Richland, Washington 99352 (rl.dirkes@pnl.gov).

INTRODUCTION

The following sections provide tables of data on which PNNL's environmental surveillance summary information in the Hanford Site Environmental Report for Calendar Year 1997 was based. Information that may help the reader to understand these data tables is provided below.

GENERAL

Some degree of inherent uncertainty is associated with all analytical measurements. The total propagated analytical uncertainty for an individual result is 2 sigma counting error. For samples that are prepared or manipulated in the laboratory prior to counting, the total propagated analytical uncertainty includes both the counting uncertainty and the uncertainty connected with sample preparation and chemical separations. For samples that are not manipulated in the laboratory before counting, the total propagated analytical uncertainty only accounts for the uncertainty associated with counting the sample. The uncertainty associated with samples that are analyzed but not counted includes only the analytical process uncertainty.

Soil and natural vegetation samples have been collected on and around the Hanford Site for over 50 years. Data collected since 1971 for the SESP & Drinking Water Projects are retained in the Hanford Environmental Information System (HEIS) database. As a result of the large volume of historical analytical data available, routine soil or natural vegetation sampling are conducted on an as-needed basis in support of site cleanup activities and facility operation and are scheduled for routine collection every 3 to 5 years. There were no routine soil or natural vegetation samples collected by PNNL during 1997, however, PNNL did perform special sampling studies in which soil and natural vegetation samples were collected.

EXTERNAL RADIATION DATA

The thermoluminescent dosimeter (TLD) readings in this data volume are in milliroentgens per day (mR/day) and have been converted to mrem/year for presentation in the annual report.

INTRODUCTION (contd)

LOCATION NAMES

Some location names are different in this data volume than reported in the annual environmental report. The following is a list of corresponding names that are dissimilar or that might be confused:

<u>Media</u>	<u>Data Volume</u>	<u>Annual Report</u>
Air	Edwin Markham School Leslie Groves-Richland 200 Tel. Exchange	North Franklin County Richland GTE Building
Drinking Water	FFTF Firing Range	400 Area Patrol Training Academy

U - Analyzed but not detected or represented by the analytical detection limit.

J - Not detected or reported below analytical detection limit.

b - Detected amount of the analyte tested is less than the practical quantitation limit, but greater than or equal to the MDL.

B - Detected amount is less than 5 times the blank concentration.

C - Associated lab reagent blank result is non detect.

D - Analysis performed at a dilution factor other than the primary (secondary or greater).

CD - Associated lab reagent blank result is non detect. Analysis performed at a dilution factor other than the primary (secondary or greater).

UC - Analyzed but not detected or represented by the analytical detection limit. Associated lab reagent blank result is non detect.

(a) Three results are reported to EPA, this represents the average of the three results ± 1 standard deviation of the mean.

(b) EPA known concentration ± 1 standard deviation.

(c) Results not originally reported to EPA but later reported to PNNL 2/13/98.

Table Q-3. Quanterra Laboratory, Richland, WA, Performance Data on the DOE EML Quality Assessment Program Studies, 1997

Matrix	Radionuclide	True Value	Reported Value	Control Limit Evaluation
Water	Am-241	2.26E+01 pCi/L	2.03E+01 pCi/L	Acceptable
	Co-60	2.46E+03 pCi/L	4.46E+03 pCi/L	Not Acceptable
	Cs-137	1.89E+03 pCi/L	2.01E+03 pCi/L	Acceptable
	Gross Alpha	3.05E+04 pCi/L	2.67E+04 pCi/L	Acceptable
	Gross Beta	2.01E+04 pCi/L	1.53E+04 pCi/L	Acceptable
	H-3	6.76E+03 pCi/L	6.35E+03 pCi/L	Acceptable
	Mn-54	5.64E+02 pCi/L	3.89E+02 pCi/L	Not Acceptable
	Pu-238	3.49E+01 pCi/L	8.92E+00 pCi/L	Acceptable
	Pu-239	2.30E+01 pCi/L	2.24E+01 pCi/L	Acceptable
	Sr-90	6.27E+02 pCi/L	6.57E+02 pCi/L	Acceptable
	U-234	1.46E+01 pCi/L	1.73E+01 pCi/L	Acceptable
	U-238	1.49E+01 pCi/L	1.63E+01 pCi/L	Acceptable
	U-µg	4.40E-02 µg/mL	4.90E-02 µg/mL	Acceptable
Soil	Am-241	1.54E-01 pCi/g	1.61E-01 pCi/g	Acceptable
	Cm-244	6.30E-03 pCi/g	6.76E-03 pCi/g	Acceptable
	Co-60	2.86E-02 pCi/g	3.98E-01 pCi/g	Acceptable w/warning
