

## **CRS Report for Congress**

# **National Flood Insurance Program: Treasury Borrowing in the Aftermath of Hurricane Katrina**

Rawle O. King  
Analyst in Industry Economics  
Government and Finance Division

### **Summary**

Claims and expenses related to the massive flooding caused by Hurricanes Katrina, Rita, and Wilma have financially overwhelmed the National Flood Insurance Program (NFIP). The program was self-supporting from 1986 until 2005, covering all expenses and claim payments out of cash flow of policy premiums and fees. The Federal Emergency Management Agency (FEMA), the agency that administers the NFIP, incurred liabilities estimated to total at least \$23 billion as a result of the 2005 Gulf Coast hurricanes, exceeding the \$2.2 billion in premiums earned annually and its \$1.5 billion borrowing authority from the U.S. Treasury. As a result of the catastrophic property losses under the NFIP from Katrina, Rita, and Wilma, in September 2005, the Congress passed and the President signed into law legislation to increase NFIP borrowing authority first to \$3.5 billion (P.L. 109-65) and then to \$18.5 billion (P.L. 109-106) in November, 2005, and finally to \$20.8 billion (P.L. 109-208) on March 23, 2006, to allow the agency to continue to pay claims.

FEMA estimates that the NFIP will need about \$3 billion in additional borrowing authority to cover the claims currently outstanding. Under current law, funds borrowed from the Treasury must be repaid. However, most disaster experts would agree that FEMA will not be able to repay the current debt.

Members of the 110<sup>th</sup> Congress will likely be called upon to assess the NFIP's current operations and accomplishments. They might also consider various alternatives to reform the program while retaining its original intent to keep rates affordable for people to buy the insurance, thereby contributing towards pre-funding their recovery from a flood disaster.

This report will be updated as events warrant.

## Introduction

Hurricane Katrina and the storm's aftermath will likely emerge as a pivotal event in the history of federal flood control policy.<sup>1</sup> The storm damage and subsequent massive flooding in the Gulf Coast and New Orleans from Hurricane Katrina, estimated to have caused over \$200 billion in damages and over 1,700 deaths, was the most costly disaster in recent U.S. history. Hurricane Katrina exposed the fact that the cost of floods has continued to rise, as has the number of major flood disasters. Flood-related property losses have risen to \$6 billion a year, from approximately \$3.3 billion in the mid-1980s.<sup>2</sup> Katrina also demonstrated the effectiveness of the National Flood Insurance Program (NFIP) in managing the nation's flood risk as well as its limitations in handling a catastrophic flood event.

Congress created the NFIP with the passage of the National Flood Insurance Act of 1968<sup>3</sup> to provide insurance as an alternative to federal disaster assistance for individuals living in flood-prone areas. The NFIP has dual missions of promoting positive land use decision making and of reducing the overall cost to government of recovery costs due to flooding. The NFIP provides incentives for communities to establish flood plain management programs to control development in flood plain and promote flood-resistant construction.

Under the NFIP, the federal government is required to take certain actions:

- identify and map areas subject to flooding;
- indemnify property owners against flood losses by making flood insurance widely available at actuarially sound rates or with legally mandated subsidies; and
- reduce future flood-related losses through community floodplain management measures.

Since 1973, homeowners have had to buy flood insurance if they have federally backed mortgages in flood zones. Today, the NFIP provides flood insurance to about 5.1 million homeowners, renters, and business owners in over 20,118 participating communities, and generates \$2.3 billion in premiums.

The NFIP has undergone major changes in response to significant flood events. For example, the program was created after Hurricane Betsy devastated the Gulf Coast in 1965. Hurricane Agnes in 1972 led to the mandatory flood insurance requirements in 1973 that were designed to increase participation in the program. The Midwest flood of 1993 provided the impetus for strengthening lender compliance requirements in the

<sup>3</sup> P.L. 90-448; 82 Stat. 573.

context of the mandatory purchase provisions in the 1994 National Insurance Reform Act.<sup>4</sup> Recognition of the impact of properties prone to repetitive flooding on the financial condition of the program led to the passage of the Flood Insurance Reform Act of 2004.<sup>5</sup> In the wake of Hurricane Katrina, a question has been raised as to whether the current model for financing the NFIP — through premiums, fees, and treasury borrowing in high-claim years — remains the best alternative.

The devastation in the Gulf Coast caused by Hurricanes Katrina, Rita, and Wilma, and predictions for more intense storms in the future, have raised broad public policy concerns about the future viability of the NFIP, particularly in the event of another catastrophic flood episode. A key policy issue for the 110<sup>th</sup> Congress is finding a way to balance the financial and regulatory need to strengthen the program and ensure its future viability and commitment to reduce the nation's flood risks without undermining the original intent of the program to keep rates affordable. Members of the 110<sup>th</sup> Congress will likely be called upon to assess the NFIP's current operations and accomplishments and consider various alternatives to reform the program. The options for NFIP reforms include eliminating the program, broadening its coverage from the 100-year flood plain to the 500-year flood plain, and enhancing both the program's actuarial soundness and the accuracy of flood maps. Economists note that these flood insurance reforms could affect the U.S. economy and have unintended impacts on home ownership, including property values and the cost of mortgage credit.

## **Katrina's Impact on the National Flood Insurance Program**

The massive flood losses from the 2005 hurricane season, especially Katrina and Rita, have financially overwhelmed the NFIP. The program had been self-supporting from 1986 until 2005, covering all expenses and claim payments out of income from premiums and fees. Operating losses occurred annually between 1972 and 1980 and in the years 1983, 1984, 1989, 1990, 1992, 1993, 1995, 1996, 2004, and 2005. The Federal Emergency Management Agency (FEMA), the agency that administers the program, expects to pay approximately \$23 billion in claims from Hurricanes Katrina, Rita, and Wilma. This figure is almost double the total amount paid out over the NFIP's 38-year existence. According to FEMA, between 1978 — when the program was transferred from the Department of Housing and Urban Development to FEMA — and 2004, the NFIP earned \$19.7 billion in premiums and paid out \$14.2 billion. Some 257,549 NFIP claims have been filed in response to Katrina, Rita, and Wilma. To place this number in context, prior to Katrina, the largest numbers of flood-related claims from previous floods were from the Louisiana flood of May 1995 (31,264), Hurricane Allison in June 2001 (30,296), and Hurricane Ivan in 2004 (28,137).<sup>6</sup>

## NFIP's Treasury Borrowing

One result of the catastrophic nature of flood losses from Hurricanes Katrina, Rita, and Wilma is that FEMA had to stop payments to NFIP policyholders for the first time since the flood insurance program began. Although the NFIP has been able to cover losses through the premiums charged to all policyholders, total income generated from insurance premiums and investments has at times been insufficient to pay claims in heavier loss years. In such cases, the program has borrowed from the U.S. Treasury to cover losses and other expenses in the short term.

**Table 1** shows the history of Treasury borrowing and repayments under the NFIP from 1981 to 2006. When flood losses exceed the program's revenue, the NFIP is authorized to borrow up to \$1.5 billion from the U.S. Treasury but must repay with interest what is borrowed.<sup>7</sup> In 2005, the program borrowed \$300 million from the U.S. Treasury, due primarily to the 2004 hurricane season. Hurricanes Katrina, Rita, and Wilma struck in the fall of 2005, after the 2006 fiscal year began.

**Table 1. History of Treasury Borrowing and Repayments  
Under the National Flood Insurance Program**  
(as of December, 2006)

Fiscal Year	Amount Borrowed	Amount Repaid	Cumulative Debt
Prior to FY1981 *	\$ 917,406,008	\$ 0	\$ 917,406,088
1981	164,614,526	624,970,099	457,050,435
1982	13,915,000	470,965,435	0
1983	50,000,000	0	50,000,000
1984	20,000,000	36,879,123	213,120,877
1985	0	213,120,877	0

**Note:** Borrowings through 1985 were repaid from congressional appropriations. Borrowings since 1994 have been repaid from premium and other income.

\* Balance forward from U.S. Department of Housing and Urban Development.

\*\* Of the \$100 million borrowed, only \$11 million was needed to cover obligations.

<sup>7</sup> P.L. 104-208; 110 Stat. 3009. The Omnibus Consolidated Appropriations Act of 1997 included a provision to increase the NFIP's borrowing authority for FY1997 to \$1.5 billion from \$1 billion.

In 2005, the NFIP incurred a \$1.04 billion net income loss. Total flood insurance losses from Katrina, Rita, and Wilma, estimated at \$23 billion, significantly exceeded the program's \$1.5 billion borrowing authority from the U.S. Treasury. Consequently, in September 2005, the Congress passed and the President signed into law legislation to increase NFIP borrowing authority to \$3.5 billion<sup>8</sup>. Subsequent legislation that further raised borrowing authority to \$18.5 billion was enacted in November, 2005.<sup>9</sup> On March 23, 2006, the U.S. Congress approved S. 2275 to increase the borrowing authority to \$20.8 billion.<sup>10</sup>

## Federal Response to Uninsured Flood Losses

Katrina's devastation has required an unprecedented response from federal, state, and local governments, as well as the private sector. Federal spending for post-disaster assistance now totals \$109 billion, plus more than \$8 billion in tax relief.<sup>11</sup> This \$109 billion amount includes \$89.6 billion in post-disaster assistance and \$19.3 billion in insurance claim payments under the NFIP. As of December 31, 2006, the NFIP had borrowed \$16.75 billion from the U.S. Treasury — an amount that far exceeds the aggregate amount of claims paid in the history of the program.<sup>12</sup> The \$89.6 billion appropriated by Congress includes \$11.5 billion in U.S. Department of Housing and Urban Development (HUD) Community Development Block Grant (CDBG) funds for five states (Alabama, Florida, Louisiana, Mississippi, and Texas) affected by Hurricanes Katrina, Rita, and Wilma.<sup>13</sup> The majority of the CDBG funds will be used to compensate homeowners in Louisiana and Mississippi for the value of their homes, up to their insured value or \$150,000, whichever is less. Grants are now available to thousands of homeowners outside of Special Flood Hazard Areas, commonly known as the flood plain or the flood zone, who were not required by federal law to purchase flood insurance.

In addition to stimulating calls to reform the NFIP, Hurricane Katrina has rekindled national debate as to whether the federal government should pay for catastrophe losses that are not covered by insurance either because the damage was caused by excluded perils, or because the insurance has become insolvent, or because the persons or entities suffering the losses were not insured. Because a future mega-catastrophic event could cripple the insurance industry's financial base and disrupt recovery after the next major

<sup>13</sup> The CDBG funds were allocated as follows among the Gulf states: Alabama, \$74.4 million; Florida, \$82.9 million; Louisiana, \$6.2 billion; Mississippi, \$5.1 billion; and Texas, \$74.5 million. For more information, see CRS Report RL33330, *Community Development Block Grant Funds in Disaster Relief and Recovery*, by Eugene Boyd.

disaster, there are renewed calls for federal disaster insurance. There is a lack of consensus, however, among state officials and insurance stakeholder groups about the viability of a federal catastrophe fund. Some segments of the insurance industry maintain a federal catastrophe fund is not needed because either the private sector remains capable of covering such risks or they are not willing to help with financial assistance to residents of coastal areas.<sup>14</sup> Supporters of this view argue that a government solution would amount to a coverage subsidy for coastal residents at the expense of those living further inland and increase the risk of taxpayers being forced to cover losses. On the other hand, other insurers and their trade groups say there is not enough capital in the catastrophe insurance market to handle a mega-catastrophe, and a federal-state catastrophe funding approach would be the most effective way to mobilize resources needed for disaster recovery and federal deficit reduction. Insurers and regulators are also exploring ways to allow for insurers to accumulate tax-deferred catastrophe reserves.

## Concluding Remarks

The NFIP is so deeply in debt from the 2004 and 2005 hurricane seasons that most insurance analysts would agree it will be challenging for FEMA to repay the money borrowed from the Treasury. The interest payments alone on NFIP's Treasury borrowing could reach \$1 billion per year, which is half the program's annual premiums, suggesting the unlikelihood that FEMA will be able to repay the borrowed funds. Most disaster experts and policymakers would agree that the program needs to be reformed, and some have suggested the program should be restructured to operate more like a private insurer. The 110<sup>th</sup> Congress is expected to act first to address solvency issues, particularly the NFIP's outstanding borrowing and repayment, and then undertake a legislative review and possible overhaul of the program.
