Intrabeam scattering results for a
high frequency RF system

G. Parzen

7/6/88

BNL

The results given in this
note replace the results
given in the previous note,
AD/RHIC-AP-63.

(1)

Factors Leading to Growth

$$1) \frac{1}{\sigma} \frac{d\sigma}{dt} \sim (Q^2/A)^2$$

$$2) \frac{1}{\sigma} \frac{d\sigma}{dt} \sim N_b / 6\text{-dimensional Phase Space}$$

$$3) \text{ Distance from "Equilibrium State"}$$

$$\text{Invariant, } \sigma_E^2 - 2 \sigma_x^2 = \text{Constant}$$

$$\sigma_E = X_p \sigma_p$$

holds for $\gamma > \gamma_t$, cells only lattice

Complete coupling, bunched beams

$$a) t \rightarrow \infty, \sigma_E \sim 1.4 \sigma_x$$

$$b) \frac{1}{\sigma_p} \frac{d\sigma_p}{dt} = 2 \left(\frac{\sigma_x}{\sigma_E} \right)^2 \frac{1}{\sigma_x} \frac{d\sigma_x}{dt}$$

If $\sigma_E < \sigma_x$ at $t=0$, then σ_E will grow much faster than σ_x until

$$\sigma_E \sim 1.4 \sigma_x$$

Protons may show large growth in σ_E ,
 if $\sigma_E < \sigma_x$ at $t = 0$

$$\frac{1}{\sigma_x} \frac{d\sigma_x}{dt} \approx \frac{\sigma_E}{(\sigma_E^2 + \sigma_x^2)^{1/2}}$$

$$\frac{1}{\sigma_p} \frac{d\sigma_p}{dt} \approx 2 \frac{\sigma_x}{\sigma_E} \frac{\sigma_x}{(\sigma_E^2 + \sigma_x^2)^{1/2}}$$

High Frequency RF system

To get shorter σ_z suggests $f \sim 200 \text{ MHz}$

New Suggested Procedure

V varied with time so that bucket just contains the bunch, $\Delta_B = 2\sigma_p$ at all times.

For fixed σ_p/Δ_B , σ_z is constant.

$$\frac{\sigma_p}{\Delta_B} = \sin \phi/2$$

For $\Delta_B = 2\sigma_p$, $\phi = 60^\circ = \frac{1}{3}\pi$

$$\sigma_z = \frac{1}{3} l_B$$

(4)

Proposed RF System

$$f = 160 \text{ MHz}, \quad h = 2052$$

$$\sigma_L = 31 \text{ cm}, \quad A_0 = .3 \text{ eV-sec}$$

$$\Delta_B = 2 \sigma_P$$

frequency dependence

$$\text{Initially, } \sigma_L \sim 1/f, \quad \sigma_P \sim f, \quad V \sim f^3$$

$$\text{For final state, } V \sim f^{1.54} \text{ for one case}$$

Dependence on $f_B = \Delta_B / \sigma_P$

$$\text{Initially, } \sigma_L \sim 1/f_B, \quad \sigma_P \sim f_B, \quad V \sim f_B^4$$

$$\text{For final state, } V \sim f_B^{2.6} \text{ for one case.}$$
