RADIOACTIVE LIQUID WASTES DISCHARGED TO
GROUND IN THE 200 AREAS DURING FIRST QUARTER 1973

J. D. Anderson

Waste Processing Section
Manufacturing Department
Chemical Processing Division

July 5, 1973

Operated for the Atomic Energy Commission by
Atlantic Richfield Hanford Company under Contract AT(45-1)-2130

INTRODUCTION

This document is issued quarterly for the purpose of summarizing the radioactive liquid wastes that have been discharged to ground in the 200 Areas. In addition to data for the first quarter of 1973, cumulative data since plant startup are presented. Also in this document is a listing of decayed activity to the various plant sites.

DISCUSSION

An overall summary is presented on page 1 giving the radioactive liquid wastes discharged to ground during the first quarter of 1973 and since startup (for both total and decayed depositions) within the Chemical Processing Division control zone (200 Area plateau). Overall summaries are also presented on page 2 for 200 East Area and on page 3 for 200 West Area. A summary is presented in Tables 1-A, 1-B, and 1-C for radioactive wastes discharged to individual ponds, cribs, and specific retention sites within the Chemical Processing Division during first quarter 1973. The volume of liquid discharged to ponds also includes major nonradioactive streams. The wastes discharged during 1973 to each site are detailed on a month-to-month basis in Tables 4 through 39.

An estimate is presented in Tables 2-A, 2-B, and 2-C of the radioactivity discharged to individual ponds, cribs, and specific retention sites from startup through March 31, 1973. These tables have Item No. 4 of the Bibliography as the basis.

An estimate of the decayed activities discharged to individual ponds, cribs, and specific retention sites from startup through first quarter 1973 is presented in Tables 3-A, 3-B, and 3-C. These tables have Item No. 4 of the Bibliography as the basis. The data is decayed through March 31, 1973.

The monthly maximum concentration and average concentration data will be found in the disposal site Tables 4 through 39, along with the remaining decayed activities. This places all of the important information on each active disposal site in one table.

The data presented in the tables are to be read as shown by the following examples:

$$.2411 + 07 = 0.2411 \times 10^7$$

$$.2411 - 07 = 0.2411 \times 10^{-7}$$

The 216-N-1, 216-T-9, 216-T-10, 216-T-11, 216-T-13, and 216-S-14 sites have been released from a radiation zone status which has resulted in dropping these sites from this report.

III

The 216-A-36B and 216-U-12 sites have been changed from active to inactive and the 216-S-6, 216-S-16, and 216-S-23 sites have been removed from service.
