INTRODUCTION

References to 811 publications on sodium and NaK technology cited in *Nuclear Science Abstracts* Volume 28 through Volume 30 are contained in this bibliography.

The references were retrieved from the *NSA* data base using the computerized RECON search system and were formatted for publication with indexes by computer.

References are arranged in order by the original *NSA* abstract number which approximately places them in chronological order. Sequence numbers appear beside each reference, and the indexes refer to these sequence numbers.

The scientific and technical journals in which much of the literature appears are available in many libraries throughout the United States. The report literature is on file as microfiche (small sheets of film each containing up to 96 text pages in micro-image form) at the libraries listed on the inside back cover of this publication. Reports can be purchased from the National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. If printed or full-size copies are available the price is according to the following schedule.

Reports containing up to 50 pages	\$ 4.00
51–150 pages	5.45
151–325 pages	7.60
326–500 pages	10.60
501–1000 pages	13.60
1001–up pages	negotiated

If printed copy is not in stock, full-size copy can be made from microfiche. The price for this service per report is \$4.00 up to 20 pages, adding \$0.25 for each 5-page increase above 20. Microfiche copies of all reports available from NTIS can be purchased for \$2.25 per title.

If problems are encountered in obtaining journals or reports, assistance will be provided by the U. S. Energy Research and Development Administration, Technical Information Center, P. O. Box 62, Oak Ridge, Tennessee 37830.

AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. Report numbers are given in parentheses at the end of the entry. For publications with multiple authors, an author entry is provided for each. Entries for the second and succeeding author give a reference to first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of descriptors selected from a controlled thesaurus of terms. Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR/QUALIFIER

Title (supplementary information), citation number (report number)

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. However, users of the index should consider synonymous or closely related terms.
