Total Ore Processing Integration and Management

9th Quarterly Technical Progress Report
01 July - 30 September 2005

written by
Leslie Gertsch and Richard Gertsch

submitted
30 January 2006

DOE Award Number DE-FC26-03NT41785

University of Missouri-Rolla
Rolla, MO 65401

Abstract

This report outlines the technical progress achieved for project DE-FC26-03NT41785 (Total Ore Processing Integration and Management) during the period 01 July through 30 September of 2005.
Table of Contents

Executive Summary ............................................................................................... 5
Introduction ........................................................................................................ 6
Work in Progress ............................................................................................... 6
  Minntac Mine ................................................................................................... 6
  Hibtac Mine ................................................................................................... 6
Future Work ....................................................................................................... 6
  Minntac Mine ................................................................................................... 6
  Hibtac Mine ................................................................................................... 6
Dissemination and Outreach ............................................................................... 6
Executive Summary

This ninth quarterly report discusses the activities of the project team during the period 1 July through 30 September 2005.

Richard Gertsch’s unexpected death due to natural causes while in Minnesota to work on this project has temporarily slowed progress.

Work in Progress

Statistical analysis of the Minntac Mine data set for late 2004 is continuing. Preliminary results raised several questions that could be amenable to further study.

Detailed geotechnical characterization is being applied to improve the predictability of mill and agglomerator performance at HibTac Mine.

Future Work

The work listed above will continue.

Dissemination and Outreach

None to report this quarter.
Introduction

This ninth quarterly report discusses the activities of the project team during the period 1 July through 30 September 2005.

Richard Gertsch’s unexpected death due to natural causes while in Minnesota to work on this project has temporarily slowed progress.

Work in Progress

Minntac Mine

Statistical analysis of the Minntac Mine data set for late 2004 is continuing. Preliminary results raised several questions that could be amenable to further study.

Hibtac Mine

Detailed geotechnical characterization is being applied to improve the predictability of mill and agglomerator performance at Hibtac Mine.

Future Work

The work listed above will continue.

Dissemination and Outreach

None to report this quarter.
