TIME OF TRAVEL OF SOLUTES IN SELECTED REACHES OF
OHIO STREAMS, 1973 and 1975

by Arthur O. Westfall

ABSTRACT

The basic field data for time-of-travel measurements on six streams in Ohio are presented. In general, additional data on stream cross sections, tributary inflows, and chemical analyses for mainstream and tributary flows are given. Insufficient data were obtained to establish time-distance or time-discharge relationships.

INTRODUCTION

The U.S. Geological Survey, in cooperation with the Ohio Environmental Protection Agency, made several time-of-travel measurements of Ohio streams in 1973 and 1975. The purpose of these measurements was to provide observations of velocity and other related data in stream reaches where the Ohio EPA was involved in water-quality modeling to predict the rate of movement and concentration of pollutants. On stream reaches where insufficient data were available to define average stream cross sections adequately, additional sections were obtained. In most reaches, tributary inflow was measured, and chemical and physical parameters of main stem and tributary flows were defined. These stream reaches, as well as stream reaches previously studied and reported separately, are shown on figure 1. The methods and equipment used were those described by Wilson (1968).

This report presents the basic data collected in the field. To obtain maximum areal coverage with the funds and time available, single time-of-travel runs were made through most reaches. This procedure resulted in insufficient data to obtain time-of-travel and velocity from time-discharge relationships and to construct time-distance graphs for various discharges.

The data for each stream reach measured are presented as separate sections in this report. Each section consists of a brief description of the stream, a schematic diagram of the reach showing the spatial relation of the data collected, and tables listing the data collected.

Definitions

Duration - the percent of time the given discharge was equalled or exceeded.

Leading edge - the most downstream boundary of the dye cloud.

Peak concentration - the point of maximum dye concentration in the dye cloud.

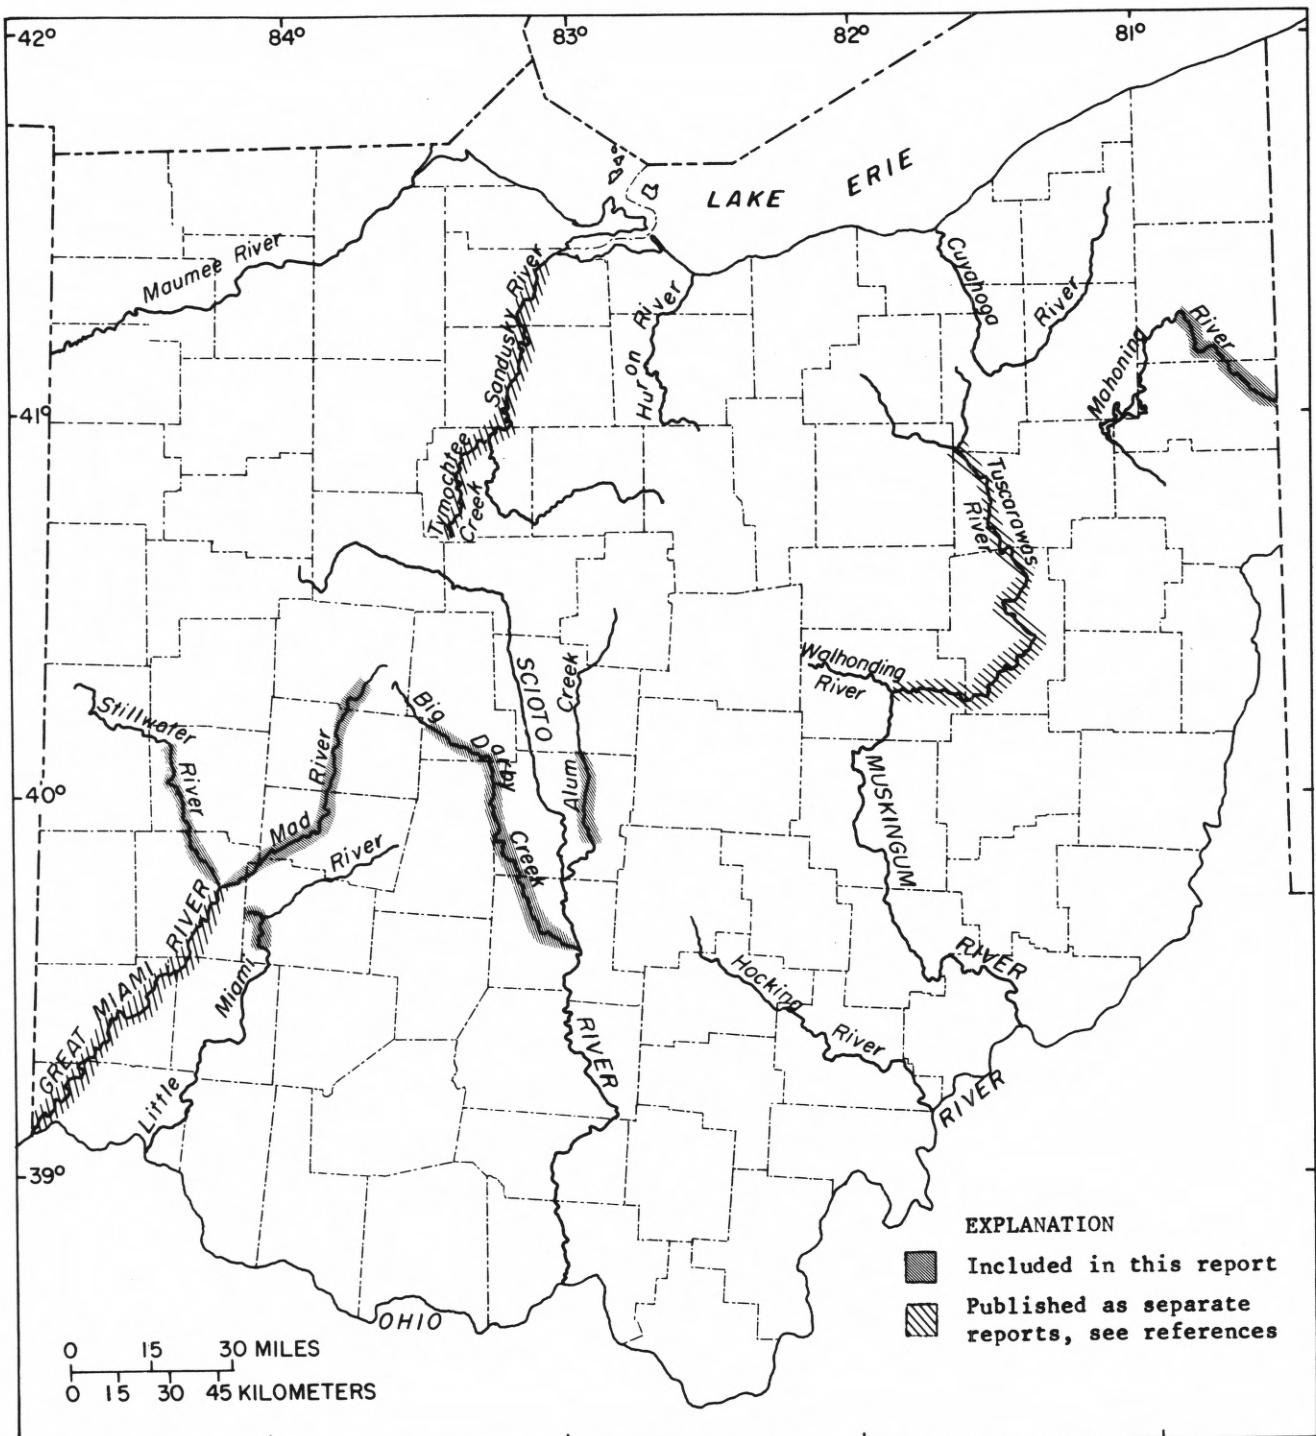

Figure 1.--Location of time-of-travel reaches in Ohio, 1973 and 1975.

ALUM CREEK

Tributary to: Big Walnut Creek
Total river length: 55.8 miles (89.8 km)
Elevation at source: 1120 feet (341 m) above mean sea level
Elevation at mouth: 715 feet (218 m) above mean sea level
Average fall: 7.3 feet per mile (1.07 m/km)

Reach measured: From Westerville Water Treatment Plant dam
at mile 20.4 (km 32.8) to Williams Road near
Obetz at mile 0.8 (km 1.3).

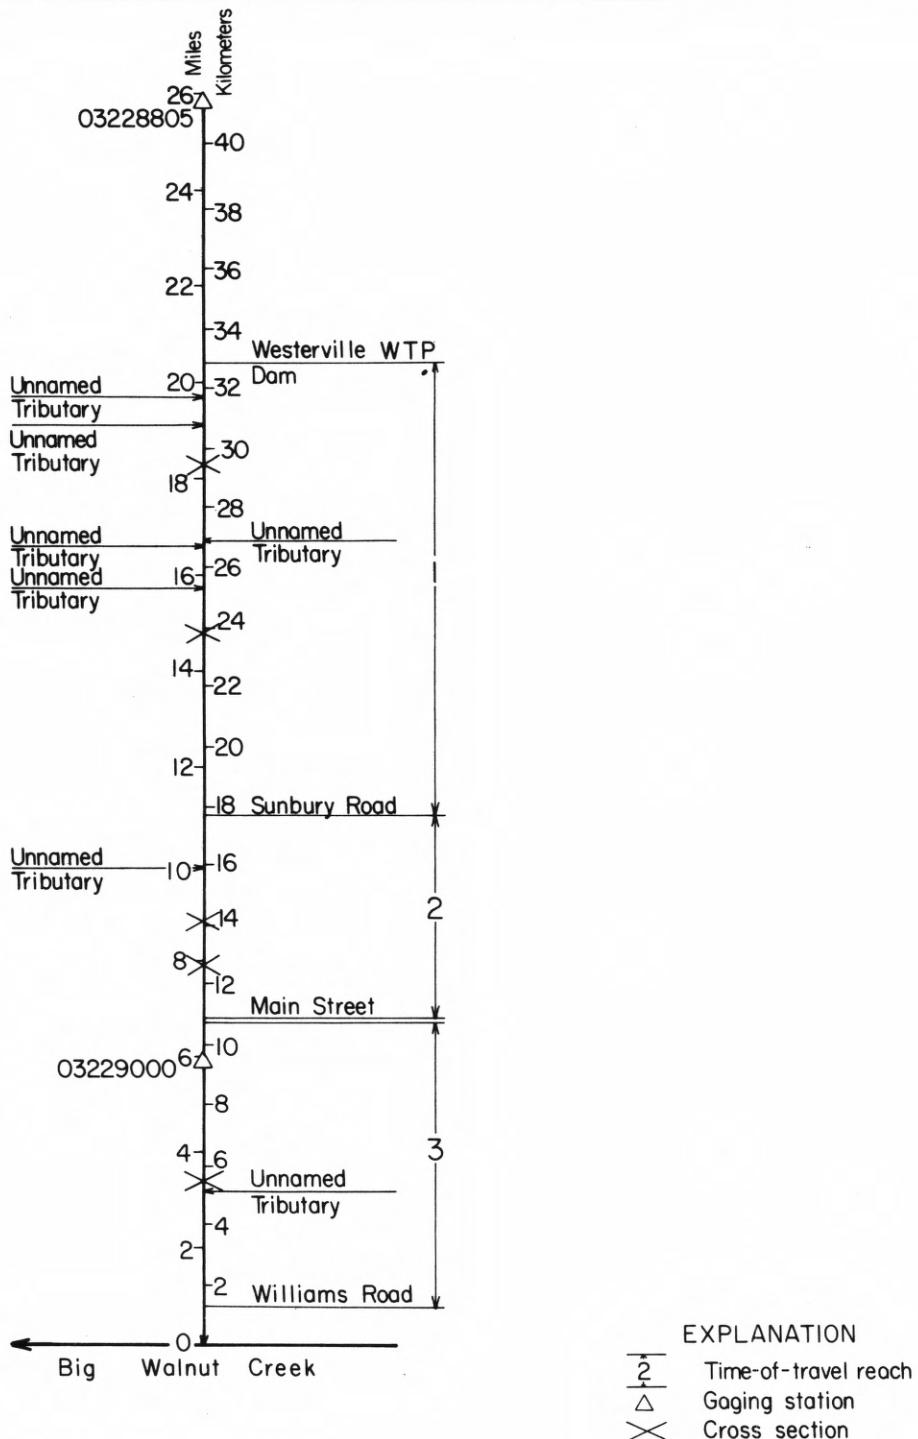

Figure 2.--Schematic drawing of Alum Creek showing time-of-travel reaches, cross-sections, and gaging stations.

BIG DARBY CREEK

Tributary to: Scioto River
Total river length: 78.7 miles (128 km)
Elevation at source: 1170 feet (357 m) above mean sea level
Elevation at mouth: 643 feet (196 m) above mean sea level
Average fall: 6.8 feet per mile (1.26 m/km)

Reach measured: From Spain Creek above North Lewisburg at Spain Creek mile 2.8 (km 4.5) to 0.1 mile (0.2 km) above mouth of Spain Creek; from State Route 245 at mile 74.4 (km 120) on Big Darby Creek to 0.1 mile (0.2 km) above mouth.

¹ Spain Creek river mile.

LITTLE MIAMI RIVER

Tributary to: Ohio River
Total river length: 105.5 miles (169.7 km)
Elevation at source: 1137 feet (347 m) above mean sea level
Elevation at mouth: 448 feet (136 m) above mean sea level
Average fall: 6.5 feet per mile (1.24 m/km)

Reach measured: From Montgomery County Sewage Treatment Plant at mile 4.6 (km 7.4) on Little Beaver Creek to Greene County Sewage Treatment Plant at mile 0.3 (km 0.5) on Beaver Creek; from Indian Ripple bridge at mile 72.7 (km 117) on Little Miami River to USGS gaging station near Spring Valley at mile 61.2 (km 98.5).

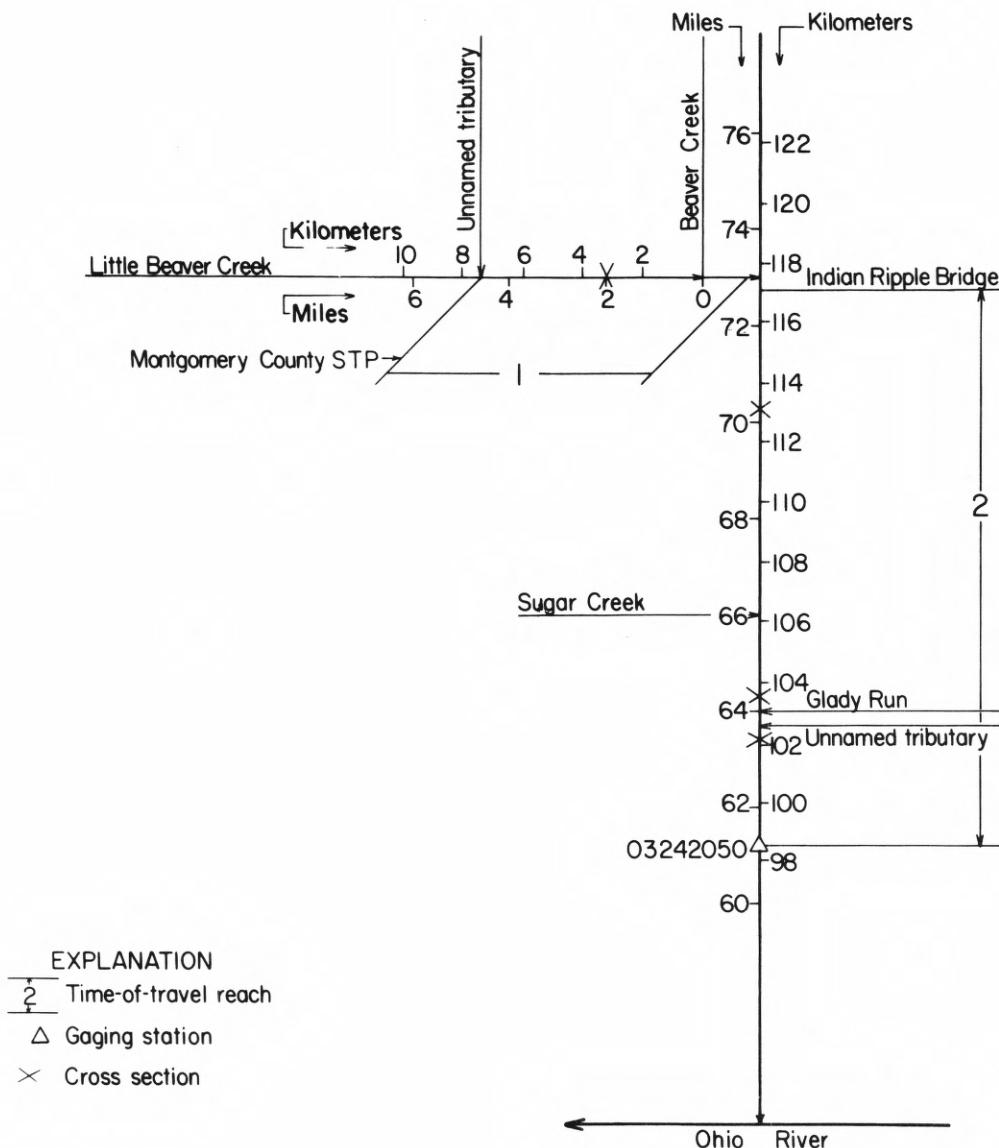

Figure 4.--Schematic drawing of Little Miami River showing time-of-travel reaches, gaging station, and cross-sections.

Table 9.--Time-of-travel and velocity, Little Miami River, 1975

MAHONING RIVER

Tributary to: Beaver River
Total river length: 108.3 miles (174.3 km)
Elevation at source: 1197 feet (365 m) above mean sea level
Elevation at mouth: 769 feet (234 m) above mean sea level
Average fall: 4.0 feet per mile (0.75 m/km)

Reach measured: From Market Street, Warren, Ohio at mile 39.3
(km 63.2) to State Route 108, Newcastle,
Pennsylvania at mile 1.7 (km 2.7)

EXPLANATION

- $\frac{2}{\text{--}}$ Time of travel reach
- \triangle Gaging station

³ At station 03099500 Mahoning River at Lowellville (mile 12.9) for period 1944-65.

STILLWATER RIVER

Tributary to: Great Miami River
Total river length: 67.2 miles (108 km)
Elevation at source: 1037 feet (316 m) above mean sea level
Elevation at mouth: 753 feet (230 m) above mean sea level
Average fall: 4.2 feet per mile (0.80 m/km)

Reach measured: From Covington-Bradford Road at mile 33.4
(km 53.7) to Siebenthal Road, Dayton at
mile 1.4 (km 2.3).

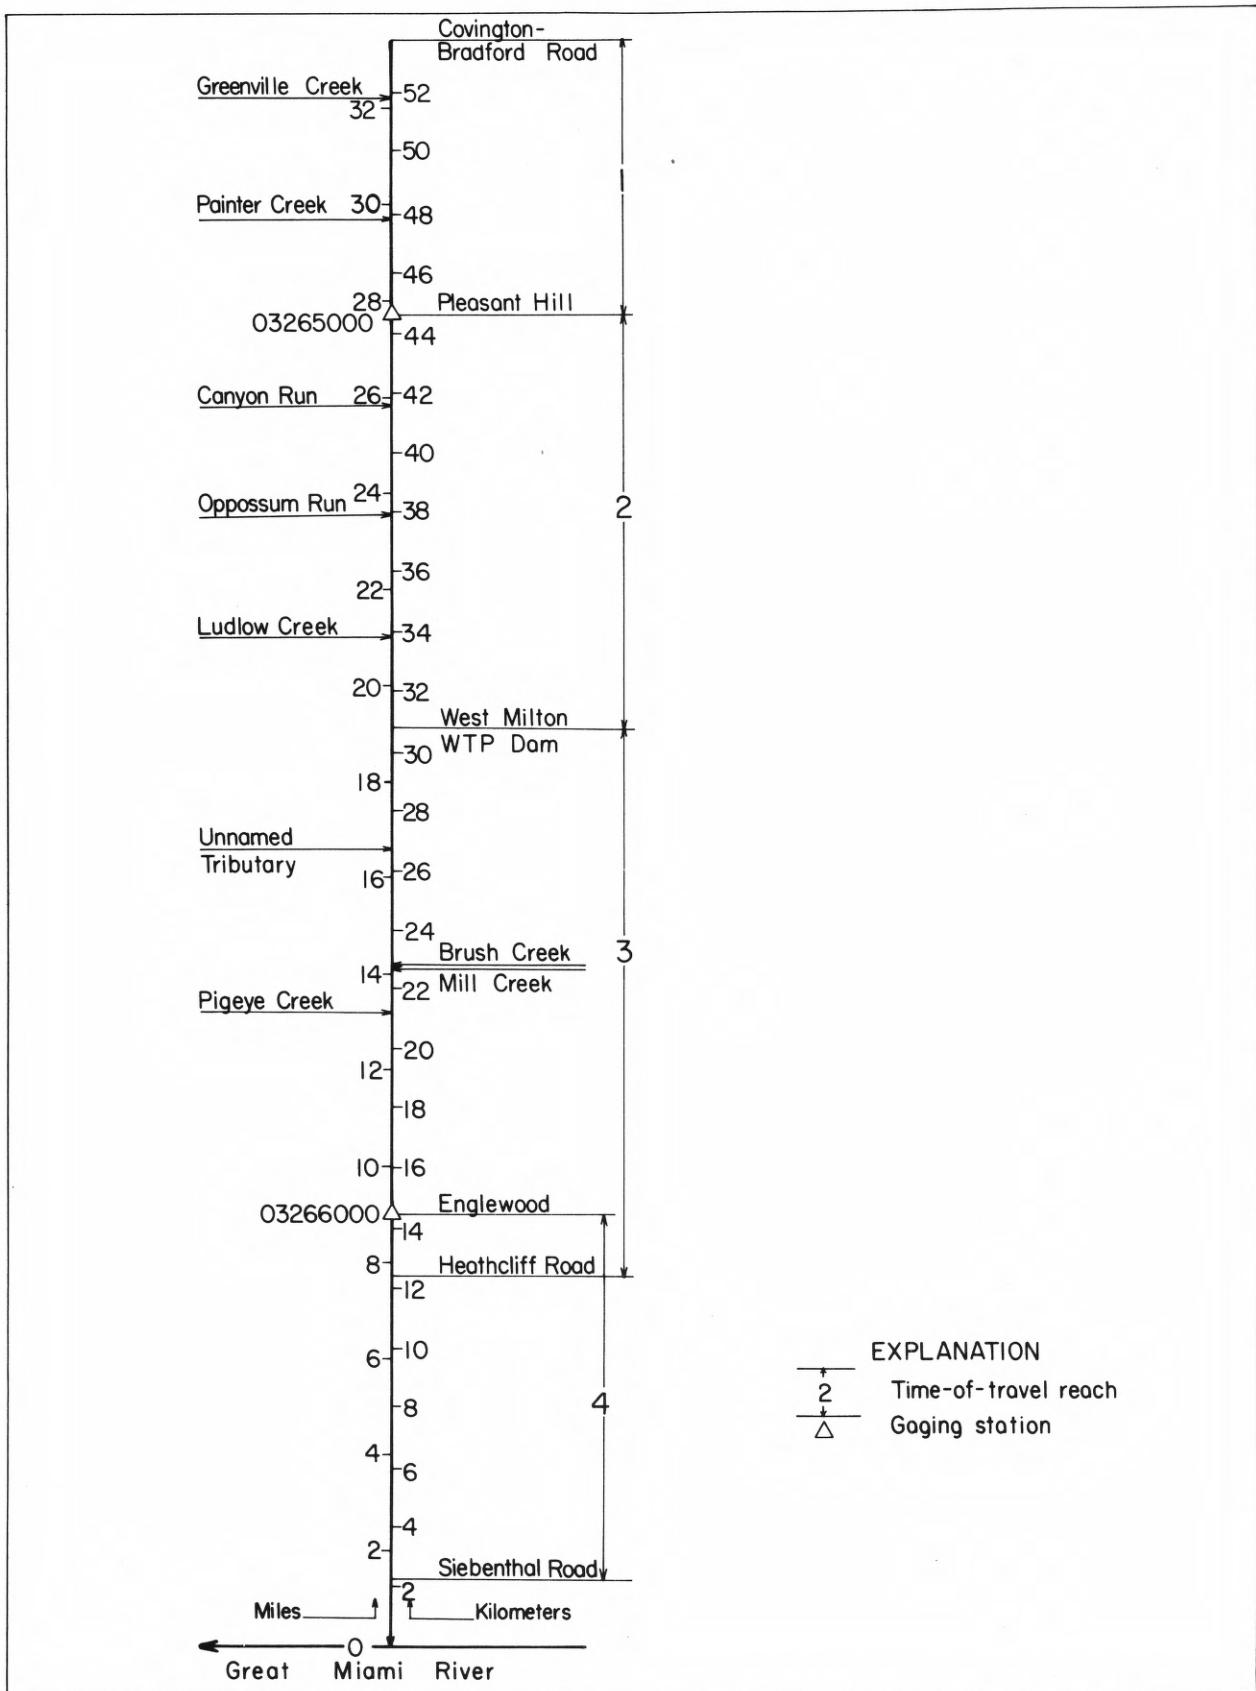

Figure 7.--Schematic drawing of Stillwater River showing time-of-travel reaches and gaging stations.
